

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

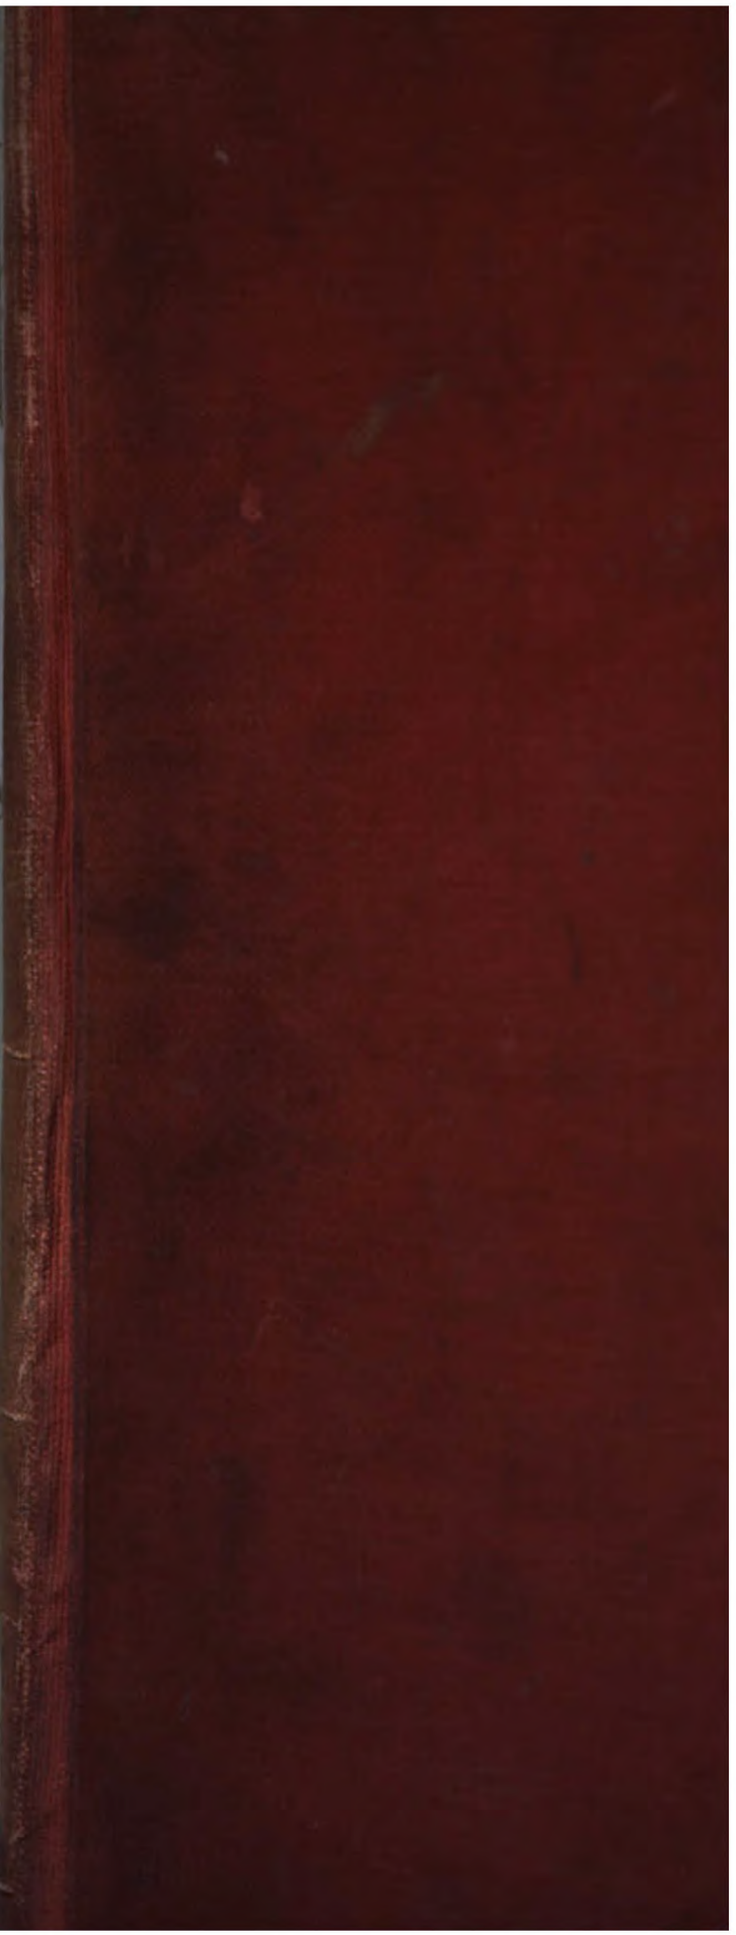
We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.



About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

THE "BEFORE SHOWS" ISSUE OF

549837

MOTOR WORLD

Vol. XXXIV
No. 1

New York, December 26, 1912

Ten cents a copy
Two dollars a year

TO MOTOR WORLD READERS:

Fore-knowledge is the knowledge worth while. It permits things to be seen in the light of today—not in the shadows of yesterday. It permits both intelligent planning and intelligent execution. It is the basic reason for this Advance Show Information Number.

It has long seemed that what show-goers most desire is information regarding what they *will see*, not what they *have seen*, and MOTOR WORLD has made a faithful effort to serve that purpose. Not all of the intending exhibitors have extended that co-operation which reasonably was to have been expected and where information is lacking, it is due to that cause alone. We ourselves exhausted every resource to obtain it.

It is issued sufficiently far in advance of the opening of the first of the National Shows to give to the dealer fore-knowledge that will truly light his way and assist his study of exhibits and facilitate his plannings and their consummation.

The new things, the improvements—the changes made by manufacturers—and the prices—and more than all else, the selling features of the respective wares are presented as they never have been presented before.

THE PUBLISHERS.

Through the courtesy of Gray & Davis, who are scheduled to appear as advertisers on this page, we are permitted to assist in addressing our readers. The four-page announcement of this firm will be found on pages 177, 178 179, 180

Push THIS Bumper Pocket BIG Profits

You pass up good—big—substantial profits if you do not put YOUR push back of the HARTFORD BUMPER.

Do you realize that out of the 900,000 cars sold—and in use today—NOT ONE came from the factory with a bumper as STANDARD EQUIPMENT?

And further, do you know that no bumper has ever met with as BIG and INSTANTANEOUS demand as the

Hartford FOUR LEAF FRICTION SPRING Bumper

Already over 3,000 HARTFORD BUMPERS have been sold—and we have yet to receive anything but bouquets. But 3,000 is only a BEGINNING. REMEMBER there are 900,000 cars on the roads today, not one of which was factory-equipped with a bumper. And this tremendous number will be further augmented with the advent of 1913's models. It will probably reach the ONE MILLION MARK.

Here's a proposition then, that gives the DEALER the biggest opportunity for cleaning up handsome profits on a car accessory that NO MANUFACTURER INCLUDES AS REGULAR EQUIPMENT.

For a long time to come the Bumper Field is the Dealer's Field—EXCLUSIVELY.

The HARTFORD BUMPER is the ONLY bumper that can be attached to the frame of the car WITHOUT DRILLING A SINGLE HOLE. An auto wrench is the only tool needed—and the attachment can be made IN FIFTEEN MINUTES. When "on" the Hartford bumper actually strengthens the frame.

Finished in Black, Brass or Nickel. Made in four sizes with special type for Ford cars and Underslung cars.

Large $20.00 **Medium $16.00** **Small $12.00** **Special Ford Type $12.00**

Write us today and have us send you full information about this new Hartford Agency Proposition.

HARTFORD SUSPENSION CO. EDW. V. HARTFORD President **Main Office and Factory** 164 Bay Street Jersey City, N. J.

"There's Where YOU Are Wise!

That Other Fellow is a Menace to Everyone's Safety"

Nine-tenths of all automobile accidents are caused by skidding and by foolish dependence on rubber alone. In these days of crowded streets and congested traffic, the motorist who does not take precaution to guard against every possibility of disaster is **next to criminal.**

"The ever-present danger that is quite as much of a terror to the experienced driver as it is to the novice is **skidding.** There is nothing that makes a man loose his nerve so thoroughly or dread a repetition of the experience so keenly as a bad skid that ends in a broken wheel against a curb, or that makes matters far worse by "side swiping" a moving trolley car. To feel the car start to slide from under you, aiming directly at the nearest obstruction, despite all manipulations of the wheel and brakes—well, once is too often."

Weed Anti-Skid Chains vs. Slipshod Traffic

Traffic policemen, by the hundreds, interviewed in all the large cities throughout the country, express the unanimous opinion that their work would be greatly reduced; that nearly all **skidding accidents would be eliminated** if motorists would take the precaution of always carrying WEED CHAINS, and putting them on when the roads and pavements are wet, slippery and uncertain, or covered with snow.

Some of these **guardians of public safety** go so far as to say that the time is not far off when State Legislatures will make **the use of WEED CHAINS compulsory,** for the protection of life and property.

Make Safety Yours

Take no chances. Fully equip your own car with WEED CHAINS and **insist,** for your own protection, that other drivers do the same.

On the Rear Tires

they afford perfect traction and adequate brake control.

On the Front Tires

they act as ladders to enable the front wheels to easily climb out of mud-ruts, car tracks and all uneven places in pavements or roads, always insuring absolute steering control, eliminating all chance of the front wheel skid.

If you haven't a set of **WEED CHAINS,** or if you have a pair for the rear tires only, **get a full equipment now.** Delay is dangerous. Stop at your dealers today and **WEED CHAIN your car to safety.**

MONOGRAM OIL

Remember This

¶ The cheapest oil is the one that costs you the least per year.

¶ A saving of 10 or 15 cents per gallon in the cost of oil is sure to be offset many times by greatly increased repair bills, undue wear, loss of power and the many other troubles arising from the use of poor oil.

¶ We know MONOGRAM is a good oil and it has been so considered since the very start of the automobile industry.

¶ If you do not care to purchase MONOGRAM OIL at least be sure you are getting one of the well-known standard brands when you ask your dealer for oil.

NEW YORK LUBRICATING OIL CO.

STUDY the illustrations! They show how you can double the efficiency and profit of your heavy service truck.

The upper cut shows the "traction" wave always formed in the ordinary continuous tire under heavy load. This wave, caused by the bulging of the rubber, works into the base and tears the tire from its fastenings. It can't be avoided in any ordinary way. Then, too, this wave forms a constant hill—the tire is always climbing, retarding progress, reducing power efficiency.

Showing traction wave in ordinary continuous tire. (A) indicates where wave forms. (B) indicates base where roll and tread separation occur.

Contrast this condition with the profit-making worth of—

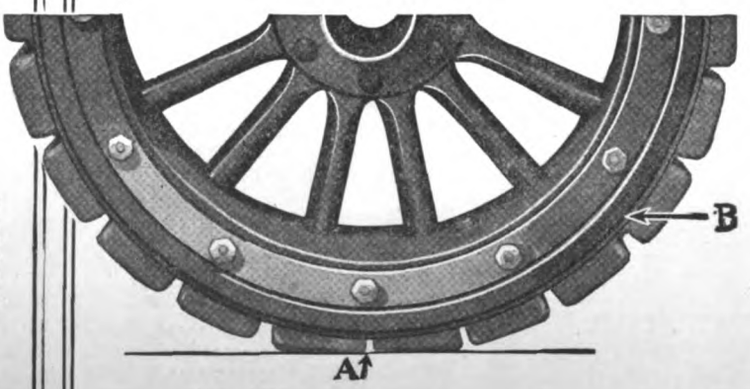
Firestone

Continuous Base—Notched Tread

Truck Tires

The lower cut shows how the Firestone Notched Tread overcomes the wave, by preventing its formation. This is *not* an individual block tire, with tread-tearing, metal-retaining plates. The Firestone continuous base is of the same tough, resilient compound as the tread. These tires hold the road, increase traction, absorb all vibration.

Get the full facts. They mean Economy and Increased Profits.



Firestone Truck Tires for Every Type of Car, Every Load, Every Road Condition

The Firestone Line of Truck Tires has in it the tire, solid or pneumatic, you need for your particular service. Get the books which tell the story. Ask, as well, for Quick Removable Rim facts. They are valuable.

The Firestone Tire & Rubber Co.

"America's Largest Exclusive Tire and Rim Makers"

Akron, Ohio—Service Stations Everywhere

Showing how Firestone Notched Tires overcome destructive traction wave. (A) indicates wave passing off into space between blocks. (B) indicates continuous base—assuring absorption of vibration in every direction.

RECEIVERSHIP FOR MATHESON TO ASSIST REORGANIZATION

Financial Stringency Leads to Action by Creditors—Second Time in Two Years—President is Made Receiver.

With the consent of its creditors, and as a means of relieving its financial stringency and of permitting reorganization, the Matheson Automobile Co. of Wilkes-Barre, Pa., was placed in the hands of a receiver on Friday last, 20th inst. Its president, W. C. Sherwood, was named by the court to serve in that capacity. It is the second time that he has acted in that role for the company, two years ago, when it became financially embarrassed, he was named receiver and finally took such a liking to the business that, when it was reorganized and taken out of court, he became its president.

For a period of three months the Matheson company has been feeling the pinch and has been entering into the considerations of its creditors. It was first thought possible to reorganize the company by bringing about a conversion of stocks and bonds in exchange for new stock, about 80 per cent. of the stockholders and 60 per cent. of the creditors being agreeable to the plan; but as it would have required considerable capital, and as not all of the stockholders and creditors displayed a friendly disposition, the plan was abandoned. Accordingly, at a meeting of the creditors on Thursday last it was deemed for the best interests of all that a receiver be appointed, which action was taken on the petition of the Bosch Magneto Co.

A committee of three also was chosen to act with the receiver in his efforts to straighten out the Matheson affairs; it is composed of G. Jahn, treasurer of the Bosch Magneto Co., who also acted as chairman of the creditors' committee; E. S. Fretz, president of the Light Mfg. & Foundry Co., and H. P. Jones, president of Phineas Jones & Co.

In round figures, the Matheson indebtedness is $600,000, apart from its outstanding capital stock of $2,500,000; its estimated assets are in excess of $1,000,000.

Mead Engine Men Enter Speedwell.

Several men identified with the Mead Engine Co. of Dayton, O., which manufactures a rotary valve engine, have acquired an interest in the Speedwell Motor Car Co., of that city, which, it is stated, probably will utilize the Mead engine, at least to a certain extent. As a result of the transaction, Adam Schantz, of Dayton, and George Sohngen, of Hamilton, O., will become directors of the Speedwell company. P. D. Schenck, president of the latter, who also is the head of the Dayton Malleable Iron Co., is understood to be desirous of devoting more time to the latter interests.

Sparks-Withington Takes up Horns.

Although it already has produced 7,000 of them, the Sparks-Withington Co. of Jackson, Mich. just has made public the fact that it formally has taken up the manufacture of electric horns. Heretofore it has confined itself chiefly to engine fans. Derived from portions of the company name, the Sparks-Withington horn is styled "Sparton." It is of the motor driven type, made in both dash and under-the-hood patterns. It is offered as the "first electric horn of real quality and efficiency sold at a quantity price," viz., $9, $12 and $15.

Pope to Secure Massachusetts Charter.

To carry out a move which it is known has been in contemplation for several months, the directors of the Pope Mfg. Co., of Hartford, have voted to take out "papers" as a Massachusetts corporation, in which state the chief ownership lies. The Connecticut charter, of course, will be surrendered, and the stockholders will be offered the privilege of exchanging their Connecticut stock for shares in the Massachusetts company on a share for share basis.

STEWART BUYS WARNER AND BIG CORPORATION RESULTS

Two Companies Combine with $11,000,000 Capital, but Will Market Speedometers Separately—Patents a Factor in Deal.

After a succession of small rumors, each of which was put to rout by the persistency with which pending patent litigation was pressed, the Stewart and Warner speedometer interests finally have become one, under the style Stewart-Warner Speedometer Corporation, which has been incorporated under the laws of Virginia with an authorized capital of $11,000,000.

The transaction is practically in the nature of a purchase of the Warner Instrument Co. of Beloit, Wis., by the Stewart & Clark Mfg. Co., of Chicago, and no secret is made of the fact that the merit of certain of the Warner patents covering the magnetic principle as applied to speedometers largely influenced the deal.

Specifically, the new corporation acquired not only the business of the two companies involved, but the patents owned by J. K. Stewart, of Chicago, and A. P. and C. H. Warner, of Beloit, which it believes places it in position to dominate the production of speedometers utilizing the magnetic principle.

Stewart, who is the present head of the Stewart & Clark Mfg. Co., will become head of the Stewart-Warner Speedometer Corporation, and C. B. Smith, also of the Stewart establishment, will be made secretary and treasurer. The vice-president and the directors have not yet been selected. It is officially stated, however, that the organization and management of both the Chicago and Beloit plants will remain unchanged and that the productions of each factory will be handled separately.

It is understood that the Warner brothers probably will retire from active participation in the business. Some time since they

Digitized by Google

acquired a gold mine in Mexico in which pay dirt was struck after a long period of discouragement, during which stock freely was offered with few takers. They now are said to be deriving more than handsome income from that source. They also are credited with having netted between $1,750,000 and $2,000,000 from the sale of their speedometer interests to the new Stewart-Warner Speedometer Corporation, but none of those in position to speak with authority will either confirm or deny these figures.

Of the capital stock of the Stewart-Warner Speedometer Corporation, $1,000,000 is represented by 7 per cent. cumulative preferred shares, redeemable at 110, and the remaining $10,000,000 by common stock. White, Weld & Co., bankers, of New York and Chicago, who financed the enterprise, will acquire all of the capital stock and a block of the common, at least some of which, in due course, will be offered to the investing public.

The new turn of affairs, of course, will terminate the suit for infringement which for more than two years has been pending in the Federal court in New York and which was brought by the Warner company against the Stewart & Clark company; it involves patent No. 823,237, and the case, as Motor World stated last week, is about due for retrial, the retrial being made necessary by the illness of the judge who first heard the case and whose disability is such as to make it impossible for him to render a decision.

Crescent Company to Continue Ohio Car.

The Northway interests, which recently purchased the plant and other assets of the bankrupt Ohio Motor Car Co., of Cincinnati, will continue the manufacture of the Ohio car under the style Crescent Motor Co., of which R. E. Northway is president. The Northway Motor Co. itself will produce engines for the trade in a portion of the former Ohio plant.

Peerless Adds $7,000,000 to Capital.

The Peerless Motor Car Co., of Cleveland, O., has filed notice of an increase in its capital stock from $3,000,000 to $10,000,000. Men already identified with the company recently largely increased their holdings, and the increase of capital is designed to carry out plans which they have in view.

Broadway Store to Change its Name.

Through Sidney Whittemore, its president, the Broadway Auto Accessories Store, Inc., of New York, has applied to the courts for authority to change its name to Whittemore-Sim Co., Inc. The change will be made early next month.

ZENITH CARBURETTER TAKEN INTO COURT BY STROMBERG

Chicago Maker Alleges Foreign Device Is an Infringement—Two Little Known Patents Brought to Bear.

Bringing to bear two little known patents, the Stromberg Motor Devices Co., of Chicago, has brought suit in the Federal court in Detroit against the Zenith Carburetter Co., of Detroit, which patents, of course, are claimed to be infringed by the Zenith instrument. The latter is of foreign origin, where it has attained a wide popularity. The American company was formed only about a year ago and gradually has been attaining headway.

The patents involved are one granted to G. V. Ahara in 1901 and the other issued in 1905 to E. C. Richard. The former patent describes what broadly is claimed to cover a carburetter producing a proper mixture of fuel and air automatically and without moving parts for all speeds.

The Richard patent covers a specific feature of construction claimed to be necessary to any "plain tube" carburetter; it describes a "U-shaped tube extending into the mixing chamber, the other end being exposed to atmosphere, combined with other features found in all modern carburetters." The Ahara patent is No. 684,662 and the Richard No. 791,501.

Ends Interference With Mercedes Owners.

Prosecution of Mercedes owners in America by the Daimler Mfg. Co., the American manufacturing licensee of the Daimler Motoren Gesellshaft, of Untertuerkheim, Germany was ended Monday last, 23rd inst., after a short period during which the American Daimler company had caused considerable ill feeling among owners by its efforts to exact a license fee from the possessors of the German cars which they themselves imported. When the parent company, in the Supreme Court for New York county, asked a permanent injunction preventing this demanding of fees, the American Daimler saw a light and consented that a temporary injunction be issued to the applicants.

This restrains the American Daimler from carrying on its license prosecutions during the pendency of the suit, and the representatives of the German company state that the American concern has agreed to submit to a permanent injunction, also, which will leave the owners free from molestation. The complaint of the parent corporation was based upon a clause in an importing contract which provided that American Mercedes owners who had made bona fide purchases were not to be molested and that if the American Daimler believed it had any cause for complaint it should take up such matters with the German company.

Referee Refuses to Confirm Lion Sale.

At a receiver's sale of the assets of the Lion Motor Car Co., of Adrian, Mich., on Friday last, the property was bid in by A. O. Dunk, of the Autoparts Mfg. Co., of Detroit, for $7,000. The referee in bankruptcy, however, refused to confirm the sale, considering the price insufficient, the property having been appraised at $32,000. Accordingly it was again offered for sale on Tuesday, when Samuel L. Wintermitz, of Chicago, tendered a bid of $12,250. The referee, however, withheld confirmation for one week, and has let it be known that no bid of less than $12,750 will be confirmed. It is stated that citizens of Adrian are so anxious to revive the Lion business that they will assure a bid of that amount, and also give a bonus of $10,000 to the purchaser provided he agrees to continue the business in their city.

Schrader Stops Another Gauge Maker.

On Wednesday, 18th inst., Judge Humphreys, in the United States District Court in Chicago, granted the preliminary injunction prayed for by A. Schrader's Son, Inc., of New York, against E. Edelmann & Co., of Chicago, restraining them from manufacturing, selling or in any way infringing the Twitchell tire gauge patent which is owned by Schrader's Son. The Schrader allegation, of course, is that the Edelmann "Economy" gauge infringes the Twitchell patent, No. 927,298, which is claimed to cover all pencil types of tire pressure gauges. In the Federal court circuit in New York, the New York Sporting Goods Co. already had been enjoined from selling the Edelmann.

Cartercar Establishes Southern Branch.

The Cartercar Co. of Pontiac, Mich., has established a depot at 242-244 Peachtree street, Atlanta, Ga., which will be in the nature of a Southern branch. It will control and supply all Cartercar agents in the South. It will be in charge of W. C. Mahoney, who for many years represented the Cartercar interests in the South.

Gibneys to Assume Company Title.

James L. Gibney & Bro., of New York, who market the Gibney solid tires and Elec-Trick vulcanizers, have applied to the Supreme Court for permission to change their name to Gibney Tire & Rubber Co., Inc. The personnel of the company, however, will remain unchanged.

EXPORT OF AMERICAN CARS SHOWS 69% GAIN IN OCTOBER

Surpasses Shipments of Year Ago by Good Margin—British Territory Lessens its Purchases—American Possessions Increase.

While it is possible, but not probable, that the British protest against the so-called invasion by American cars may be in some measure responsible for a falling off in shipments of cars from the United States to England and some of her possessions during October last, this retrogression in exports was more than made up in other quarters and, as a result, October, 1912, surpasses October, 1911, by 69 per cent. in number and 52 per cent. in valuation. Their respective gains were 660 cars and $540,719; the exports of October, 1911, were 952 cars valued at $1,043,093, and those of October last 1,612 cars with a valuation of $1,583,812.

As has been the case for many months past, Canada showed the greatest gain of any of the twelve geographic divisions into which the Federal statistics divide the world for export enumeration, its purchases of cars in October last being greater in number by 212 and the valuation showing $219,6 better than in October, 1911. While this is a gain of 110 per cent. in number and 77 per cent. in valuation, Germany ranks first on the percentage basis, its imports of October last increasing by 800 per cent. in number and 690 per cent. in valuation; this gain represents 40 cars and $39,688.

The United Kingdom came precariously close to being registered in the loss column both in number and valuation, but while its takings of American cars in the last October were 52 greater in number, a gain of 24 per cent., the valuation side of the table shows a decrease of $17,531, a loss of 7 per cent. This is accounted for by the fact that the average value of cars shipped to the United Kingdom in October, 1911, was $1,113, while in October, 1912, it fell to $828.

At the same time British Oceania territory showed a loss of $18,320, or 7 per cent., in value, and, with a gain of but 2 cars, or .7 per cent., nearly registered a decrease in number of cars taken. The only division which lost in number and value was Mexico, whose buying of American cars fell off 6, or 26 per cent., in number and $8,861, or 23 per cent., in value.

In percentage of gain in number Germany is followed in order by Other Countries, Asia and Other Oceania, Italy and France, and in the value percentage table by Asia and Other Oceania, Other Countries, Italy and South America.

Automobile parts, exclusive of engines and tires, to the value of $328,700, were exported in October, 1912, which is a gain of $15,409, or 5 per cent., over the $313,291 which the October, 1911, shipments cost the purchasers. The total value of cars sent to foreign countries for the first ten months of the present year, $19,836,111, showed better by $7,227,984, or 57 per cent., than $12,608,127, the figure for the same period of the preceding year.

Non-contiguous possessions of the United States received cars and parts to the amount of $211,267 in October last and $124,131 in the same month of 1911, an increase of $87,136, or 70 per cent. For the same periods the latter gained in number of cars by 92 or 142 per cent. Although Hawaii, with 42 more cars, leads in numerical gain in number of cars taken, the Philippines, with 39 more cars, forged upward by 1300 per cent. and by 1085 per cent., or $42,821, in the increased total valuation of its product. The order of the four possessions in number of cars taken is Hawaii, Philippines, Porto Rico and Alaska.

Alaska showed a loss, but the figures are not significant, since it dropped from two cars to one. The average values of cars shipped to these possessions for Octobers of 1911 and 1912 were, respectively: Hawaii, $1,860, $1,358; Porto Rico, $1,550, $1,062; the Philippines, $1,315, $1,113; Alaska, 805, $1,100. The figures in detail are shown by the subjoined table.

Veneer Makers Purchase Paterson Plant.

The New Jersey Veneer Co. has purchased the former Cardinal silk mill on East Railway avenue, in Paterson, N. J., in which city it will establish itself. The company produces high grade door panels and veneer for automobile use.

FRANCE FIGURES LARGELY IN OCTOBER IMPORT RECORD

Of 78 Cars Brought into United States, 51 Came from French Makers—Month, Nevertheless, Shows a Decrease.

October was not one of the noteworthy months in the matter of automobile imports, the total number of new cars brought in being 24 per cent. less in number than in October of 1911 and 13 per cent. less in value. The comparative figures are: October, 1911, 103 cars, valued at $207,059; October, 1912, 78 cars, $170,410, a loss of 25 in number and $26,649.

The standing of France, however, is interesting; in October, 1911, she sent 35 cars to America, which was 34 per cent. of the entire importations, but in October last her American shipments had risen to 51, a gain of 45 per cent. and the number being 65 per cent. of the whole.

At the same time all other countries lost heavily. For the first ten months of 1911, 773 cars valued at $1,657,281 were imported; for October, 1912, these statistics were 694 cars at $1,573,584, losses of 24 per cent. in number and 13 per cent. in value. The parts imported kept pace with the cars in the falling off, and from a valuation of $31,398 in October, 1911, the figure dropped to $18,528 for the same month a year later, a monetary loss of $12,870, or 40 per cent. The first ten months of 1911 and 1912 were responsible for respective imports of $266,992 and $241,262, a decrease of 10 per cent. The comparative October imports were:

	October, 1911.		October, 1912.	
France	35	$67,896	51	$105,754

To Exploit Multiple Drive Wheel Vehicle.

The American Motor Traffic Co., incorporated under the laws of South Dakota, has established an office in the Citizens' Bank building in Washington, D. C., where it proposes to exploit several automobile inventions, in particular, a pivoted spindle, multiple-wheel drive and steer truck, under what are described as the McFarren and Thomas patents. The officers of the company are E. S. Alvord, president Litttlefield & Alvord Express Co., president; S. J. McFarren, manager The Searching Co., first vice-president and acting manager; W. J. Moore, president The Moore Co., second vice-president; A. L. Kley, of New York City, secretary. These officers, with J. C. Muncaster, of Washington, and J. C. Menoher, of Pittsburgh, constitute the board of directors.

Buffalo Electric Acquires More Property.

The Buffalo Electric Vehicle Co. has absorbed the Buffalo Motor Vehicle Service Co. and taken over the latter's service station at 178 West Utica street, which immediately adjoins the Buffalo factory. As a result of the transaction, W. R. Huntley, assistant general manager of the Buffalo General Electric Co., and Robert W. Searle, vice-president of the Rochester Railway & Light Co.—both of which companies were affiliated with the Buffalo Motor Vehicle Service Co.—have been added to the board of directors of the Buffalo Electric Vehicle Co. Incidentally, the Empire State General Vehicle Co., which is closely affiliated with the Rochester Railway & Light Co., has taken the agency for both Buffalo cars and trucks. The Empire State company maintains and operates what many consider the finest garage and service station in Rochester.

Dead Windshield Company Loses Suit.

The Windshield Mfg. Co., a New Jersey corporation which went out of business since the action was filed, was unsuccessful in a suit again the Erie & Western Transportation Co. in New York City Court, the complaint being dismissed when the case was reached last week. The loss in transit of part of a carload of windshields consigned to the Reo Motor Car Co., at Lansing, Mich., in 1910 was the basis of a claim for between $500 and $600, the windshield makers claiming that the Erie company, which was one of three carriers to convey the shipment from New York City, was the one which lost the goods. The Erie company set up as a defense that it delivered the shipment to the next carrier in the link and was in no way liable and, taking other phases of railroad law into consideration, the judge ordered the suit out of court.

N. A. A. M. Opens an Office in Detroit.

In line with its policy of attempting not merely to further the interests of its members but to relieve the freight car shortage which threatens direful results, the National Association of Automobile Manufacturers has established an office in the Ford building in Detroit. It is in charge of L. A. Gardner, who previously was connected with the traffic department of the United States Motor Co. He, of course, will be subject to the direction of J. S. Marvin, general traffic manager of the association.

"35%" BEATEN IN LAWSUIT ON ADVERTISING CONTRACT

Jury Decided that Pedal Maker Correctly Interpreted "Famous" Agreement—Gets Full Amount and Interest, Too.

While it is not unusual for the 35% Automobile Supply Co., of New York City, to be involved in litigation, it is not common for the opposing party in the law actions to consider himself victorious when the matter at issue is based upon one of the "35 per center's" now famous advertising contracts wherein various manufacturers were accorded the privilege of handing the "35%" about $3,000 worth of goods in exchange for advertising; but the 35% was beaten Tuesday last, 24th inst., in the New York City Court and was directed by the jury to pay to the assignee of the now bankrupt American Pedal Co., $1,050.

The suit was similar to several others, in which the cut-rate supply company has been involved, and one of its advertising contracts was the beginning of the action. The Pedal company, in the latter part of 1910, made a contract with the 35% company which specified that the Pedal company was to pay to the 35% the sum of $2,800, with the option of making payment in merchandise, and in exchange the Pedal company's goods were to be advertised or illustrated in the 35% catalog, circular or whatever its classification may be.

The advertising was to be inserted monthly between and including January and October, 1911. But it was not long before a usual difference of opinion arose. The Pedal company shipped a bill of goods to the value of $965 and claimed it was extraneous to the contract and should be paid for, while the 35% claim was that it came within the contract and should not be paid for in money. The suit was to recover the $965 with interest. The defendants set up a counterclaim of $1,275 for goods not sent because the Pedal company broke off its agreement, but the jury found for the complainant.

The action was not brought by the Pedal company but by the Personalty Liquidating Co., to which Carleton S. Cooke, the trustee in bankruptcy for the Pedal company, has set over the claim.

Toledo Truck Acquires New Factory.

The Toledo Motor Truck Co., of Toledo, O., which manufactures the truck of that name, has acquired the plant on Spencer street which previously was occupied by the McCreery Engineering Co. It affords about 25,000 square feet of floor space.

New York, N. Y.—American Chain Co., under New York laws; authorized capital, $750,000; to manufacture automobile accessories. Corporators—Walter B. Lasher, Wm. W. Wheeler, F. T. Staples, all of Bridgeport, Conn.

New York, N. Y.—Carron & Co., under New York laws; authorized capital, $20,000; to manufacture motor car devices. Corporators—Arthur L. Carron, 141 West 136th street; Herman Behr and Karl H. Behr, 777 Madison avenue.

Brooklyn, N. Y.—Prospect Park South Garage, Inc., under New York laws; authorized capital, $5,000; to operate a garage. Corporators—Donald Rathbun, 158 Rogers avenue; Ada M. Hicks, 493 16th street; Sadie Plunkett, 365A Quincy street.

Richmond, Ind.—Pilot Car Sales Co., under Indiana laws; authorized capital $50,000; to deal in motor cars. Corporators—John E. Hays, Arnold Schaer, Herbert E. Bradford, Charles E. Hayes, Wm. D. Williams, Edward F. Goggins, Thomas F. Williams.

Sheldon Offers Choice of Bearings.

Despite the fact that Sheldon axles long since acquired a reputation, their manufacturer, the Sheldon Axle Co. of Wilkes-Barre, Pa., does not mean to stand on mere reputation, or to permit sentiment to stand in the way of it, which is another way of saying that the Sheldon company has completely revised its line of axles, brakes and jackshafts; besides which steel wheels have been added to the line.

For years it made use of its Empire ball bearings, a two-point adjustable bearing, but the demand for the non-adjustable type having arisen, the Sheldon people have gone the limit, so to speak, by taking the radical step of offering purchasers the option of almost any bearing they may desire. Included in the options are F & S, Hess-Bright, New Departure, Rhineland, Norma and Radax ball bearings and Bower and Standard roller bearings. They will be supplied either with hubs for wood wheels or with the steel wheels which the Sheldon company recently developed. Carrying the wide-open policy further, any of the bearings named are interchangeable with any of the Sheldon axles, steel wheels, or hubs for wood wheels, thus permitting a change of bearings without changing either axle, wheel or hub.

Also, the Sheldon Axle Co. has taken up the manufacture of a worm-drive axle. It is equipped with David Brown & Sons worm gears and is mounted on Rhineland double row annular bearings. The differential worm and gears are mounted on New Departure double row annular ball bearings.

PROMINENT MEN IN TRADE WHO ASSUME NEW DUTIES

Resignations and Promotions That Serve To Place Many Workers In New Places—Few Leave the Industry.

W. J. Ready, superintendent of the Lozier Motor Co. of Detroit, has resigned that position. He will become manager of the Star Motor Co. of Ann Arbor, Mich.

Edward R. Haybell has been appointed district manager of the Willys-Overland Co. for Texas and Mexico. Formerly he was a Southern traveler for the Studebaker Corporation.

Walter I. Jordan has been appointed Detroit manager for the Hoffecker Co., of Boston, Mass. Formerly he covered Western territory in the interests of the Flanders Motor Co.

B. J. Cline has been appointed superintendent of the Inter-State Automobile Co. of Munice, Ind. Previously he was factory superintendent of the American Motors Co. in Indianapolis.

J. M. Smith has been appointed production manager of the Henderson Motor Car Co. of Indianapolis. Previously he was factory manager of the Cole Motor Car Co., in the same city.

Charles Sargeant, mechanical engineer of the Remy Electric Co. and the American Rotary Valve Co., of Anderson, Ind., has relinquished those duties to become chief engineer of the Lyons-Atlas Engine Works, of Indianapolis. He will assume the duties about January 1st.

W. C. Gray, who was appointed manager of the Oakland Motor Co.'s branch which recently was established in New Orleans, has resigned that office and returned to his home in Buffalo. Temporarily the vacancy will be filled by A. B. Challinor of the Oakland branch in Atlanta, Ga.

G. D. Cairns is booked to sail from New York on Saturday next, 28th inst., to Buenos Aires, Argentine, where he will assume the management of the mechanical department of the Buick branch of the General Motors Export Co. in that South American city. Previously, Cairnes was associated with the Buick branch in Philadelphia in a similar capacity.

J. H. McDuffee has been appointed Western sales manager for the F. B. Stearns Co. and will have charge of the entire territory west of Denver, which includes the Pacific Coast. McDuffee is one of the best known automobile men in the West. He founded two companies which still bear his name, one in Denver, the other in Chicago, with neither of which, however, he now is connected.

Rockwell Produces Hydraulic Drive.

Stimulated, no doubt, by the extreme facility with which taxicab chauffeurs smash up gears and otherwise make junk of perfectly good public motor vehicles, A. F. Rockwell, president of the Yellow Taxicab Co., of New York, and of the New Departure Mfg. Co., of Bristol, Conn., has devised a novel hydraulic transmission that is expected to be practically fool-proof, to very considerably reduce the weight of the taxicab and do away with a number of parts, such as the gearset and clutch, that at present cause much trouble. It is understood that the new device differs considerably from other hydraulic transmissions, though the mechanical details have not yet been made public.

Silver Badges Reward for Long Service.

Not stripes or stars, such as are worn on coat sleeves by public employes, but applying the same idea, C. S. Mott, mayor of Flint, Mich., who also is president of the Weston-Mott Co., hereafter will reward Weston-Mott employes who have seen five years or more of service with silver service badges on which their names and their years of service will be engraved. The first of the badges were awarded last week, when 62 workmen were "decorated." At the same time, these Weston-Mott "veterans" were presented with insurance policies, the premium on which will be paid as long as the recipients continue in the employ of the company.

Eastern Plant for Holt Caterpillar.

The Holt Mfg. Co., of Peoria, Ill., which has an office in New York City, has purchased a tract of 17 acres on the Hackensack Meadows, near Newark, N. J., on which it immediately will begin the construction of a two-story concrete plant, 160 x160 feet. It will be utilized for the manufacture of the Holt "Caterpillar" tractor, the ingenious agricultural automobile which runs on self-laid tracks, a construction which makes the use of the tractor possible on very soft soil or uneven ground.

To Introduce Red Heads in Europe.

Krauss & Auerbach, 144 Queen Victoria street, London, E. C., have taken the foreign representation of the Red Head spark plug made by the Emil Grossman Co., of New York, the arrangement having been made by Emil Grossman himself during his recent visit abroad. He is authority for the statement that it presages an active campaign throughout all of Europe.

In the RETAIL WORLD

John Patterson has purchased the Cedarville Garage in Altura, Cal.

Harry Jordan has opened a garage and salesrooms in Coxsackie, N. Y.

The Black Hills Garage & Supply House, of Deadwood, S. D., is erecting a new garage.

The Barr Motorcycle Co., of Columbus, O., has taken on automobiles; it has the Franklin agency.

L. S. McNeal is arranging to open a garage and repair shop in Richmond, Ind., on North 7th street.

A garage has been opened in Saginaw, W. S., by J. P. Beck; storage will be a feature of the business.

Moore & Lennon plan to open a garage in Ovid, Ill., about January 1; the location is North and Van Buren streets.

A. H. Buell has established a garage and repair shop in New Haven, Conn. He is located at 111 Water street.

Wesley Rans is about to enter the trade at Nevis, Minn. He will operate a garage and supplies and handle Ford cars.

The Tarkington Garage on South Jefferson street, Marion, Ind., has been taken over by John F. Müller; Ford cars will be handled.

T. F. Corrigan has had plans prepared for the erection of a garage and repair shop at Milwaukee, Wis., on 30th street; it will cost $8,000.

Frank H. Osler and Fred Thompson of Pomona, Cal., will open a tire agency in Los Angeles; they will handle the Kelly-Springfield line.

The Cheesman Auto Co. has purchased the Casey Garage in Ogden, Utah; heretofore the Cheesman company has operated an agency only.

J. S. Krandall and W. O. Connor of Dallas, Tex., have arranged for the erection of a garage on Commerce street; the estimated cost is $15,000.

H. C. Smith is about to open up in Grand Rapids, Mich., under the style East End Garage; the location is at Wealthy street and Eighth avenue.

Newton Root, of Kalamazoo, Mich., has entered the trade as a dealer. He has the R C H agency for Barry, Kalamazoo and St. Joseph counties.

The Viaduct Garage in Union, N. J., has been taken over by Louis A. Chatterton and William L. Draffin; the former owner was William Moeller.

Charles J. Conohan, proprietor of the Lake Side Livery in Milwaukee, Wis., has erected a garage; he will operate it in connection with his livery.

W. L. Scholl, formerly in the automobile trade in Hutchinson, Kan., has purchased the M. & L. Garage in that city; he has assumed personal charge.

Ruebuckert & Witt, of Masillon, O., have changed the firm name to Motor Car Sales Co. The business is to be enlarged and a repair department added.

Richard Olson, who formerly was associated with Konrad Hegle in a garage business in Lisbon, N. D., has withdrawn; Hegle will continue alone.

Riley J. Warren and B. J. Weber have formed a partnership in Oneonta, N. Y., under the style Oneonta Sales Co. They have secured the Ford agency.

James Warden, formerly connected with the Studebaker agency in Salt Lake City, has organized a selling company in Elko, Nev. Apperson cars will be stocked.

John Peak, Walter Stingley and James Colt of Manhattan, Kan., have formed a partnership and will conduct an agency; they will handle several lines of cars.

The Firestone Tire & Rubber Co. of Akron, O., is making ready to establish a branch at 197 East Gay street, in Columbus, O. It will be in charge of G. A. Richards.

Edward Bell and William Ducharme will open a garage in Marquette, Mich., about January 1; a building 53 x 27 feet has been remodeled for their use. They will handle cars, also.

John V. Wilson, who has been connected with the accessory trade in Boston for some time, has branched out for himself; he has hung up his sign in the Motor Mart Building on Pleasant street.

Luckenbach Bros. are about to open a new garage in Allentown, Pa., at 5th and Union streets; they have secured the Franklin agency and temporarily are located on South Fountain street, near Jackson.

Paul W. Thiel, for some time a registrar of deeds in Fond du Lac, Wis., plans to conduct an automobile business after January 1, with headquarters in Ripon; he will handle Hupp, Jackson and Premier cars.

Having succeeded the Enterprise Garage Co., of 2211 North High street, Columbus, O., the High-Lane Garage has removed to larger quarters at 2119 the same street; the company consists of O. L. Bott, J. C. Langler and W. J. Bott.

Frank M. Foster, for some time connected with the Boulevard Auto Co., at Gratiot avenue and the Boulevard, Detroit, Mich., has taken over that company's salesrooms and has set up for himself; he will deal in Kissel cars under the style The KisselKar Agency.

The Wilmington (Del.) Automobile Co. has opened a new garage on West 11th street, which will be operated in connection with another garage owned by the company at Delaware avenue and West 10th street. The new building has 16,700 square feet of floor space.

The Bracken-Stanton Co. has been incorporated in Columbus, O., with $5,000 capital and will handle Lee and Walpole tires at 4th and Gay streets; the officers are: President, Thomas E. Curtin; vice-president, Walter F. Bracken; secretary-treasurer, Leo A. Stanton.

Claude Owens, one of the first automobile tradesmen in Red Oak, Ia., has re-entered the field for himself after having been an employed shop foreman for three years; he has purchased the repair and supply department of the Rumsey Rubber Co. and will add considerable equipment.

The Grimm Automobile Supply Co. has been formed by R. E. Grimm, who formerly dealt in supplies at 604 North Broad street, Philadelphia, Pa. The new company has taken over the premises at 236 North Broad street, formerly occupied by the Penn Auto Supply Co., and will conduct a supply house.

Recently incorporated for $25,000, the Des Moines (Ia.) Motor Co. is about to take over the premises at 912-14 Locust street, formerly occupied by the Herring Motor Co. The Herring company has a new building at 10th and Mulberry streets; the Des Moines company has secured the Studebaker agency. The proprietors are F. H. Hunter and O. F. Schee.

Digitized by Google

The Electric Mfg. Co., of St. Paul, Minn., has increased its capital to $50,000 and February 1 will occupy a new two-story building, 50 x 150 feet; it also has arranged to represent the Federal Rubber Co., in addition to its other lines of accessories and supplies. A. R. Burr and J. E. Olen, formerly officers in the C. J. Smith Co., have joined the Electric company.

The Northwestern Tire Co., with $50,000 capital, has been incorporated in Minneapolis, Minn., with the object of reorganizing the company and shortening the name of the Northwestern Tire & Repair Co., of 622 3rd avenue, South; the personnel of the old company is that of the new one and consists of Frank J. Kerner, A. A. Kerner and J. C. Rooney. The company has secured the agency for Lee tires.

The Universal Auto Repair Co., of Hartford, Conn., has reincorporated as the Universal Auto Co. and will maintain a repair department at High and Allyn streets, supply and used car sales department at Ford and Pearl streets, and new car sales department on Ford street. The officers are: President, Herbert P. Seymour; vice-president, James P. Grady; treasurer, John F. Daly; secretary, William J. Langdon.

Under the style Raymond & Raymond a new garage business has been opened at 34 Sumner avenue, Spafford, Mass. Its building is 45 x 100 feet and the floor is marked by an absence of posts, giving freedom in the movement of cars. G. Clark Raymond, one of the partners, has been employed as a tester by the Stevens-Duryea company, while the other, Clarence E. Raymond, has been in the rental and repair business.

Joseph S. Donovan, who conducts a used car and livery business in Boston, at 36 Ferdinand street, has organized the Donovan Motor Car Co. and acquired the Studebaker retail business at 889 Boylston street. The Studebaker business in New England will continue to be handled by the New England branch, at 100 Cummington street, of which Philip E. Hawley is manager. Also, Donovan will continue his used car and livery business, with Alexander D. Adams as manager.

Recent Losses by Fire.

Oak, Neb.—Fuller's Garage, destroyed. Loss not given.

Kelso, Wash.—Rebb & Co., garage damaged. Loss not given.

Shreveport, La.—Avery & Spence Garage, 114 Milan street, damaged. Loss, $1,000.

Milwaukee, Wis.—Garage Equipment Mfg. Co., 742-48 South Pierce street, plant destroyed. Loss, $75,000.

FLANDERS COMPANIES' PACT ORDERED BROKEN BY COURT

Unusual Agreement, Continued by Receiver of Bankrupt, Objected to by Creditors—Receiver Instructed to Consult Creditors.

What foresight can be displayed and what can happen when one man is president of two distinct corporations was indicated in the Federal court in Michigan last week, when it developed that on August 1st, four months previous to the failure of the Flanders Mfg. Co., of Pontiac, Mich., that company entered into a compact with the Flanders Motor Co., of Detroit, whereby, even in the event of a receivership, the Detroit company was given the right to operate certain of the Flanders properties and continue therein the production of particular parts of the Flanders Motor Co.'s six-cylinder cars.

It appears that the patterns, jigs, axles and other parts of the Flanders Motor Co.'s "six" were being made in the Pontiac factory, the work being done, it is stated, with machinery furnished by the Flanders Motor Co. and material provided by the Flanders Mfg. Co., the latter working on the basis that it was to receive a fixed percentage above cost.

As the receivership terminated this rather unusual agreement, the receiver, the Detroit Trust Co., generously carried out the spirit of the neat little compact, entering into an arrangement with the Flanders Motor Co. by which, in lieu of the compact under which that company had been working in the Pontiac plant, the Motor company was to continue in possession of the property, the consideration being the payment of all its current indebtedness to the Flanders Mfg. Co., and in addition to the sum of $5,000 in cash for the use of the plant, the agreement to remain in force until April 15th, next. Walter E. Flanders personally guaranteed the account, also the payment of two watchmen who were to guard the property.

The Flanders Motor Co. actually had entered into possession of the properties of the bankrupt company in Pontiac before all of its creditors became aware of the proceeding. Immediately they awakened to the situation, however, three of the largest creditors filed an objection to the plan as favoring the Flanders Motor Co., and the court at once ordered the receiver to dispossess the temporary tenants and to enter into no further contracts without consulting the committee of creditors.

The receiver defends its action as one "dictated by ordinary business prudence" and maintains that the agreement obviated the necessity of creditors advancing any cash. The Detroit Trust Co. was to advance it at 6 per cent.

Maxwell Indiana Creditors Grow Anxious.

While there is no doubt that the manufacture of the Maxwell motor car will be continued, just what the reorganizers of the United States Motor Co. will do with the several Maxwell-Briscoe plants when they take possession next month appears to be shrouded in considerable doubt.

As Motor World stated three weeks ago, the Maxwell plant in Auburn, R. I., already has been closed; the original factory in Tarrytown, N. Y., also is practically idle, and the other, in New Castle, Ind., is the only one that has been actively operated.

Rightly or wrongly, the report has gained currency that the production of Maxwells ultimately will be concentrated in New Castle. But meanwhile some of the Indiana creditors of the United States Motor Co. have taken cognizance of the situation and on Friday last asked the Federal court in Indianapolis to modify the order of sale, which is to occur on January 8th. These creditors desire that the New Castle plant be sold separately, in which event, and as a going concern, they believe that it will bring the full amount of its appraisal, $644,000, while if offered with the other property its value is likely to be affected. This Indiana application somewhat complicates the situation, and before a definite decision is reached the petition probably will reach the Federal court in New York in which the United States Motor receivership proceedings first were instituted.

Jury Solves a Used Car Problem.

A plea that he supposed the car was new and not used did not prevail with a jury in Richmond, Va., last week, when Dr. Benjamin H. Bloxton, trading as the Overland Motor Co., brought suit against J. L. Lindsay, Inc., for $1,055, the price of an Overland car; the jury, after reviewing the circumstances, decided that Lindsay must have known the car had been used. The belief was based upon the plaintiff's story, which was that the car was sold originally to Louis F. Gregory, who later was sent to jail as a defaulter, and that after this sensation had subsided Lindsay took over the car, knowing it was a used model.

Lear to Lead Columbus Dealers.

Oscar Lear, one of the veterans of the industry, was elected president of the Columbus Automobile Trade Association, which was organized last week in the Ohio city of that name. The other officers are R. F. Boda, vice-president; Ross Shaw, treasurer, and A. W. Gill, secretary.

THE SHOWS AND THE DEALER.

On the value of shows, there always has been dispute. There are those who maintain that if ever they served the automobile industry—and there is no doubt that they did so—such service is either no longer necessary or no longer possible, that the trade has outgrown its swaddling clothes and no longer requires to be coddled, paraded or amused.

Viewed from the Unfavorable Standpoint.

Those who hold to such opinions view the annual shows in the light of a detriment. Possessed of intimate knowledge, it is their belief that they are responsible for what amounts to a two-months' hiatus in manufacturers' affairs, that it disarranges all plans and alike upsets the production and sales organizations. They question whether the good influences of shows are sufficient to offset these bad effects.

Benefits That Offset Ill Effects.

On the other hand, there are those who as firmly believe that the good so far offsets the bad—that the stimulating effects are so great as to make the national shows worth all they cost. They maintain that, if not absolutely necessary, shows are extremely helpful to the dealer, and that whatever helps the dealer helps the manufacturer, from which latter dictum there will be no dissent. They contend that the shows of to-day are for the dealer, if not of the dealer; that if he has not already "signed up," they permit him to select his line under comparative and favorable conditions, or that if he already has selected it, or when he selects it, the stimulating effects of the show materially aid him in effecting sales, in which respect one of the most peculiar developments of late years, has been the number of dealers who bring their "prospects" to the shows as a decisive means of closing pending sales.

Awakening and Improvement of Dealers.

Whatever may be the true value of the annual shows, there remains no doubt of the value of the dealer himself. Appreciation of him has grown enormously during the past twelvemonth, and signs are not wanting of his appreciation of himself and of his mission, and that the way to fulfill it has increased and is increasing; which, in its way, is one of the most hopeful signs on the horizon. The dealer is bringing himself to understand that he is a merchant and that the study of merchandising plans and policies is necessary to the well-being of his future, which means that he is awakening to the value of all those things which constitute salesmanship—and there are many more of them than even many dealers yet have comprehended. Manufacturers are realizing that it is to their financial interest to further the awakening and to place at the disposal of the dealer more of those aids which contribute to the successful merchant.

Assisting Dealers to Become Merchants.

Without appearing boastful, we think we justly may say—and we believe the statement is amply borne out by its pages—that Motor World has contributed more than any other one factor to this much-to-be-desired state of things. We make bold to assert that no dealer, no garageman, no salesman who has read its pages with an eye to profiting by suggestion and by the experience of others, can fail to have been bettered, if the lessons have been turned to practical advantage.

Means of Increasing Shows' Usefulness.

The dealer's interests are Motor World's cornerstone, and as on occasion has been remarked, "that publication serves the manufacturer best which serves the dealer most." Motor World is unreservedly and wholeheartedly committed to that policy, and because of it repeats a suggestion offered long ago: that the national shows may be made of even more service to dealers, and, therefore, to manufacturers, if a part of the great buildings in which they are held are set aside for the display and exploitation of such aids to salesmanship as salesroom arrangement, window displays, lighting effects, advertising effects and all those other things which constitute what has come to be known as modern merchandising.

Reducing Show Evils to the Minimum.

The purposes they can be made serve are so far-reaching and bear such intimate relation to the well being of the entire trade structure, that even those who consider shows as necessary evils will feel that the evil has been reduced to a minimum.

IMPORTERS' SALON WILL INAUGURATE SHOW SEASON

Ten Car Exhibits Representing Six Nations to be Staged in Astor Ballroom—Canada There for First Time.

Once more the very first of the New Year's automobile shows is to be the Importer's Salon, which is slated for the nine days beginning and ending January 2d and January 10th, respectively, and once more it is to be held in the magnificent ball room of the Hotel Astor in New York City, where silken drapings and artfully placed potted plants will serve to "set off" the 10 or 12 foreign cars that are to have the stage. The ball room itself is so imposing that it scarce requires decoration.

To be strictly accurate, there will be just 10 foreign cars on view when the doors are thrown open, or at least such is the promise, though among them all there is not one that is likely to prove new to New Yorkers. Each of them is fairly familiar, with the possible exception of one, and nearly all can be seen almost any day in the week on Fifth avenue. The single exception is the Austrian Daimler, which is to be exhibited by Healy & Co. The rest of the list includes the following well-known makes: De Dion, Isotta-Fraschini, Lancia, Mercedes, Metallurgique, Minerva, Panhard & Levassor, and Renault.

Also, for the first time, a car manufactured in the Dominion of Canada will be exhibited on this side of the border. It is the Keeton and it scarcely will be unfamiliar to Americans for the reason that it is virtually a reproduction of a car of that name made in Detroit.

In addition, three American body builders also will exhibit specimens of their handicraft mounted on various chassis. They are Locke, Holbrook and Quinby. According to present indications, the forthcoming Salon will prove very nearly, if not quite, as productive of unusual body types as was the last, which was conspicuous for this reason and also for the reason that it housed several foreign brands of Knight engines, not to mention the Argyle sliding sleeve engine which made its initial American appearance at that time. At the least, the cars will be less brightly painted, for it would seem that the effort to popularize vivid shades has not been entirely successful; the majority of the cars will be finished in more somber tones, with grays predominating.

Among the new body styles that are scheduled to appear are a completely enclosed four-passenger inside-driven limousine, of the type which is increasing in popularity abroad, and a new two-passenger landaulet. In the former there is no division between the front seats, the arrangement being similar to what in America has come to be styled "Sedan." Some of the bodies of this type are fitted not with the regulation stationary seats but with revolving seats, which permit greater freedom of movement and therefore tend to eliminate much of the monotony of sitting still any length of time in one position. Bodies, generally, will be lower than they were last year, though the decrease in height will be at the expense of the headroom. Incidentally, the tendency toward curved roofs instead of the older straight roofs will be just as marked in the foreign productions as it has been in American made automobiles.

Engine Exports Still Expanding.

More than the average gains in number and valuation are shown by the automobile engines exported from the United States to foreign countries during the past October, as compared with the same month of the preceding year; in October, 1911, 381 motors valued at $43,228 were exported, while in October, 1912, the corresponding figures were 862 cars and $109,610. This is an increase of 481, or 126 per cent., in number and $66,382, or 153 per cent., in value. The average value in October, 1911, was $114, and in the later month, $127. Owing to the fact that all gasolene engines were grouped prior to July 1, 1911, it is not possible to compare numbers and values for the first ten months of this and last years; however, up to November 1 last 7,695 engines valued at $943,813 were shipped abroad, while from July 1 to November 1, 1911, 928 motors valued at $108,325 constituted the automobile engine shipments.

Two-thirds Gain in Exports of Tires.

The volume of tires exported from the United States during the month of October last marked a substantial gain over the same month of the previous year, the increase amounting to 66 per cent. The monetary gain was $112,149, the monthly figures for the two Octobers being $169,980 for 1911 and $282,129 for 1912. The first ten months of the present year also gained 30 per cent. over the same period of 1911; the latter shipments were valued at $3,307,865 and the former at $2,545,248, a gain of $762,617. The exports were distributed as follows:

	Oct., 1911	Oct., 1912
Foreign countries..	$138,744	$225,704
Hawaii	12,966	35,706
Porto Rico.....	8,945	15,452
Philippines	9,325	5,267
Total	$169,980	$282,129

January 2-10, New York, N. Y.—Importers' salon in Hotel Astor.

January 4-11, Montreal, Can.—Annual automobile show in the Drill Hall and Armory, under the auspices of the Automobile Club of Canada.

January 6-11, Cleveland, Ohio—Cleveland Automobile Show Co.'s exhibit in the Central Armory.

January 11-18, New York, N. Y.—Automobile Board of Trade's 13th annual show in Madison Square Garden and Grand Central Palace. Pleasure cars only.

January 20-25, Philadelphia, Pa.—Philadelphia Automobile Trade Association's exhibit in the First and Third Regiment Armories.

January 20-25, New York, N. Y.—Automobile Board of Trade's 13th annual show in Madison Square Garden and Grand Central Palace. Commercial vehicles only.

January 21-26, Toledo, Ohio—Annual show in the Exposition building under the auspices of the Toledo Automobile Shows Co.

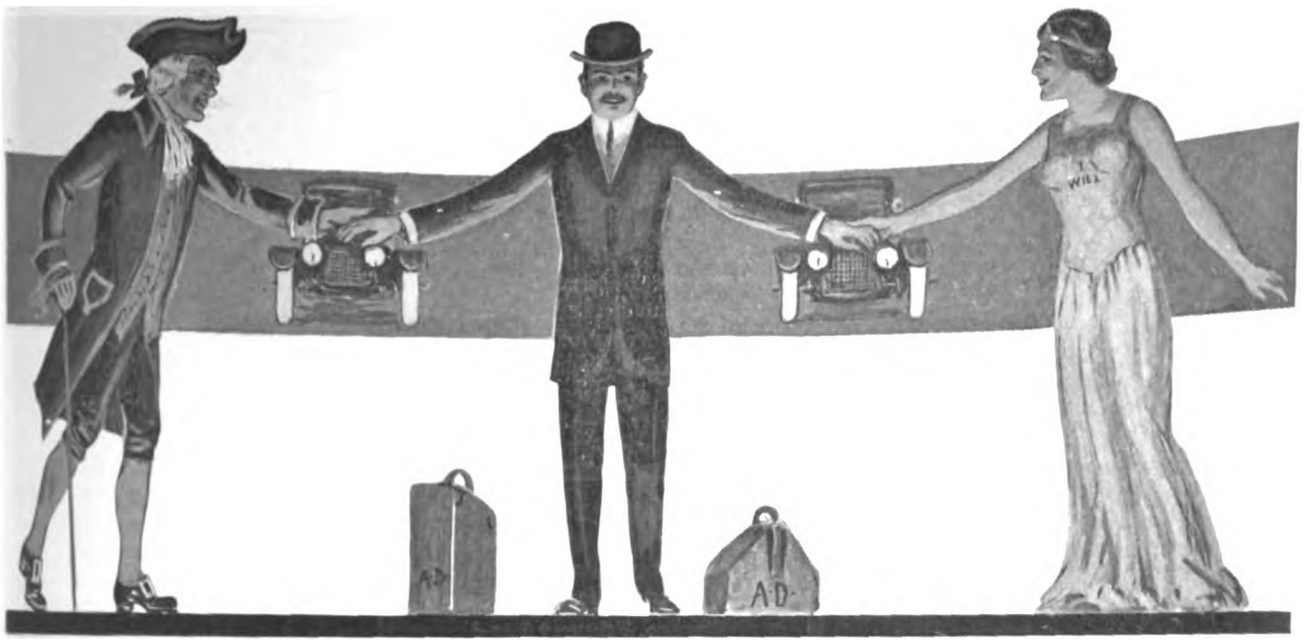
January 25-February 1, Providence, R. I.—Annual show of the Rhode Island Automobile Dealers' Association in the Providence State Armory.

January 27-February 1, Ottawa, Can.—Annual show of the Ottawa Valley Motor Car Association in Howick Hall.

January 27-February 1, Scranton, Pa.—Third annual show of the Scranton Automobile Dealers' Association in the 13th Regiment Armory.

January 27-February 1, Detroit, Mich.—Detroit Automobile Dealers' Association's Show in the State Armory.

February 1-8, Chicago, Ill.—National Association of Automobile Manufacturers' 12th annual show in the Coliseum and 7th Regiment Armory. Pleasure cars only.



February 3-8, Washington, D. C.—Washington Automobile Show Co.'s exhibit in Convention Hall.

February 8-15, Hartford, Conn.—Sixth annual show of the Hartford Automobile Dealers' Association in the State Armory.

February 10-15, Chicago, Ill.—National Association of Automobile Manufacturers' 12th annual show in the Coliseum and 7th Regiment Armory. Commercial vehicles only.

February 15-22, Newark, N. J.—New Jersey Exhibition Co.'s Sixth annual exhibit in the First Regiment Armory.

SPLENDOR OF NATIONAL SHOWS UNDIMMED

Settings for Both New York and Chicago Functions to be as Eye-pleasing as Ever and Exhibits as Numerous and Varied—Mirrors and Scenery to Embellish New York; Stained Glass for Chicago.

Many things happen in the course of the year as many things do not happen. Prior to this by no means startling statement of existence that at least one-half of the Thirteenth National Show in New York will be held in Madison Square Garden during the two weeks beginning January [illegible].

There never was a doubt that Grand Central Palace would be utilized for the Chicago show that that chapter of the national which is spread in Chicago would be presented as usual, in the Coliseum and the adjoining First Regiment Armory.

But a year ago the trade throat, figuratively, was choked with tears. Madison Square Garden was to be demolished.

The object had gone forth. It had been sold by the block, so to speak, and the buyers proposed razing it to the ground.

Perforce, everyone, or nearly everyone, called the "twelfth annual" the Garden's "good-bye show."

But one of the things that did not happen was the razing of the Garden.

The famous building still stands on the old spot on Madison avenue and 26th and 27th streets, and again will blaze with light and glory and reflect the polished bodies, the shining nickel and one thousand and one other things that go to make a national show.

In fact, it will reflect more than polished bodies, shining nickel and things; it will reflect men and women, young and old, handsome and otherwise. For the Garden, for the first time, will be so greatly be-mirrored as to earn for itself the designation "Crystal Palace."

Although in point of numbers he will be overshadowed by mere sight-seers, the dealer is the man who will be most heartily welcomed by the exhibitors. He is the most important man of the show season, although he does not always recognize the fact. He is the quantity buyer—the man who truly keeps the wheels of the industry moving. He moves the goods the factory produces. Consequently, both Father Knickerbocker and Miss Chicago are uncommonly glad to see him; the greater his number, the greater the measure of their gladness. The sponsors of two great shows are not loath to admit that their efforts are designed largely for the dealer's benefit by enabling him conveniently to select his line and place his orders, if he has not already done so, or, if he has "signed up," to assist him to dispose of his goods, and more of them, by bringing to bear that stimulation of public interest which grows out of public exhibitions and which is believed to be far-reaching in its effects.

When he reaches New York and first enters Madison Square Garden, the dealer is not unlikely to imagine that, instead of being razed, the building has grown enormously.

There will be mirrors here, there and

Digitized by Google

"The dealer is inseparably connected with the industry. . . . . The manufacturer cannot be successful unless his dealers are successful; their interests are so interwoven as to be identical."—George W. Bennett, vice-president, Willys-Overland Co.

everywhere—on the sides of the building and at the ends. The mirrors will lend simulated spaciousness to the already spacious interior of the building. It will look larger than ever before and there will appear to be very many more cars and very many more people than actually will be or ever were in the Garden during automobile show-time.

White will be the predominating color in the decorative scheme, but there will be a blue sky overhead—a "sky" which, it is promised, will be "soft and fluffy." Three immense crystal chandeliers and about 30 smaller ones will be suspended from the "sky." White lattice-work will predominate in the structural treatment and allegorical figures in white will appear to support the overhead galleries. Also, and as has been the case of late years, a white fountain, likewise of allegorical design, intermittently will play immediately within the main entrance to the arena proper. The railings and balconies will be festooned with flowers.

The other half of the New York show will be housed concurrently in Grand Central Palace, some 20 blocks further uptown on Lexington avenue. In other years, other shows have held the boards in both buildings at the same time but always under different management; but on the forthcoming occasion the Automobile Board of Trade will direct the destinies of both and, for the first time, one ticket will admit to both buildings.

As is the case with the Garden, the first week in the Palace will be given to pleasure cars and accessories and the second week to commercial vehicles and likewise accessories.

The Palace is not what might be termed an open structure; that is to say, it has no arena but, rather, a main floor and two galleries which form a deep court, or well. It is not a type of construction that readily admits of the use of a general decorative scheme. In fact, it scarcely requires more than incidental decoration, for the impressive grand stairway and the massive and imposing Corinthian columns on the main floor contribute a truly palatial effect that is not to be denied—cold and somewhat severe, perhaps, but not during show-time. For in the Palace also the decorative hand will have left its warming and artistic touch.

Landscapes and waterscapes and an open lattice scheme of decoration will impart the necessary warmth to the Palace. In the arched panels of the walls on the main floor the artist's brush will portray pleasing scenes drawn from Long Island, Delaware Water Gap, the Berkshire Hills and the Highlands of the Hudson. On the mezzanine floor a breath of the West will be felt; it will comprise views of the Grand Canyon and the Rocky Mountains, of prairies and ranches, and glimpses of California and its flowers. Higher up—that is, the balcony

—will be dedicated to the sunny Southland, for there will be hung paintings of the famous Florida beach at Ormond, of moss-hung roads in Georgia and other suggestions of Dixieland.

One week after the New York show will have closed its doors, the portals of Chicago will swing wide, and the activities of the automobile trade will be transferred to the metropolis of the West; there they will continue within the walls of the Coliseum and the First Regiment Armory during the two weeks, February 1st to 15th, the first week being devoted to pleasure cars and accessories and the second to trucks and their appurtenances.

Since first the uniform scheme of deco-

"The dealer is the most important single factor in the automobile industry."—J. J. Cole, president, Cole Motor Car Co.

"Automobile dealers are of more vital importance to both the manufacturer and the buyer than is the dealer in nearly any other line of business."—Hugh Chalmers, president, Chalmers Motor Co.

rative treatment was adopted, all New York shows have been attractive and, therefore, pleasing to the eye, and all Chicago shows attractive and, if anything, more attractively spectacular.

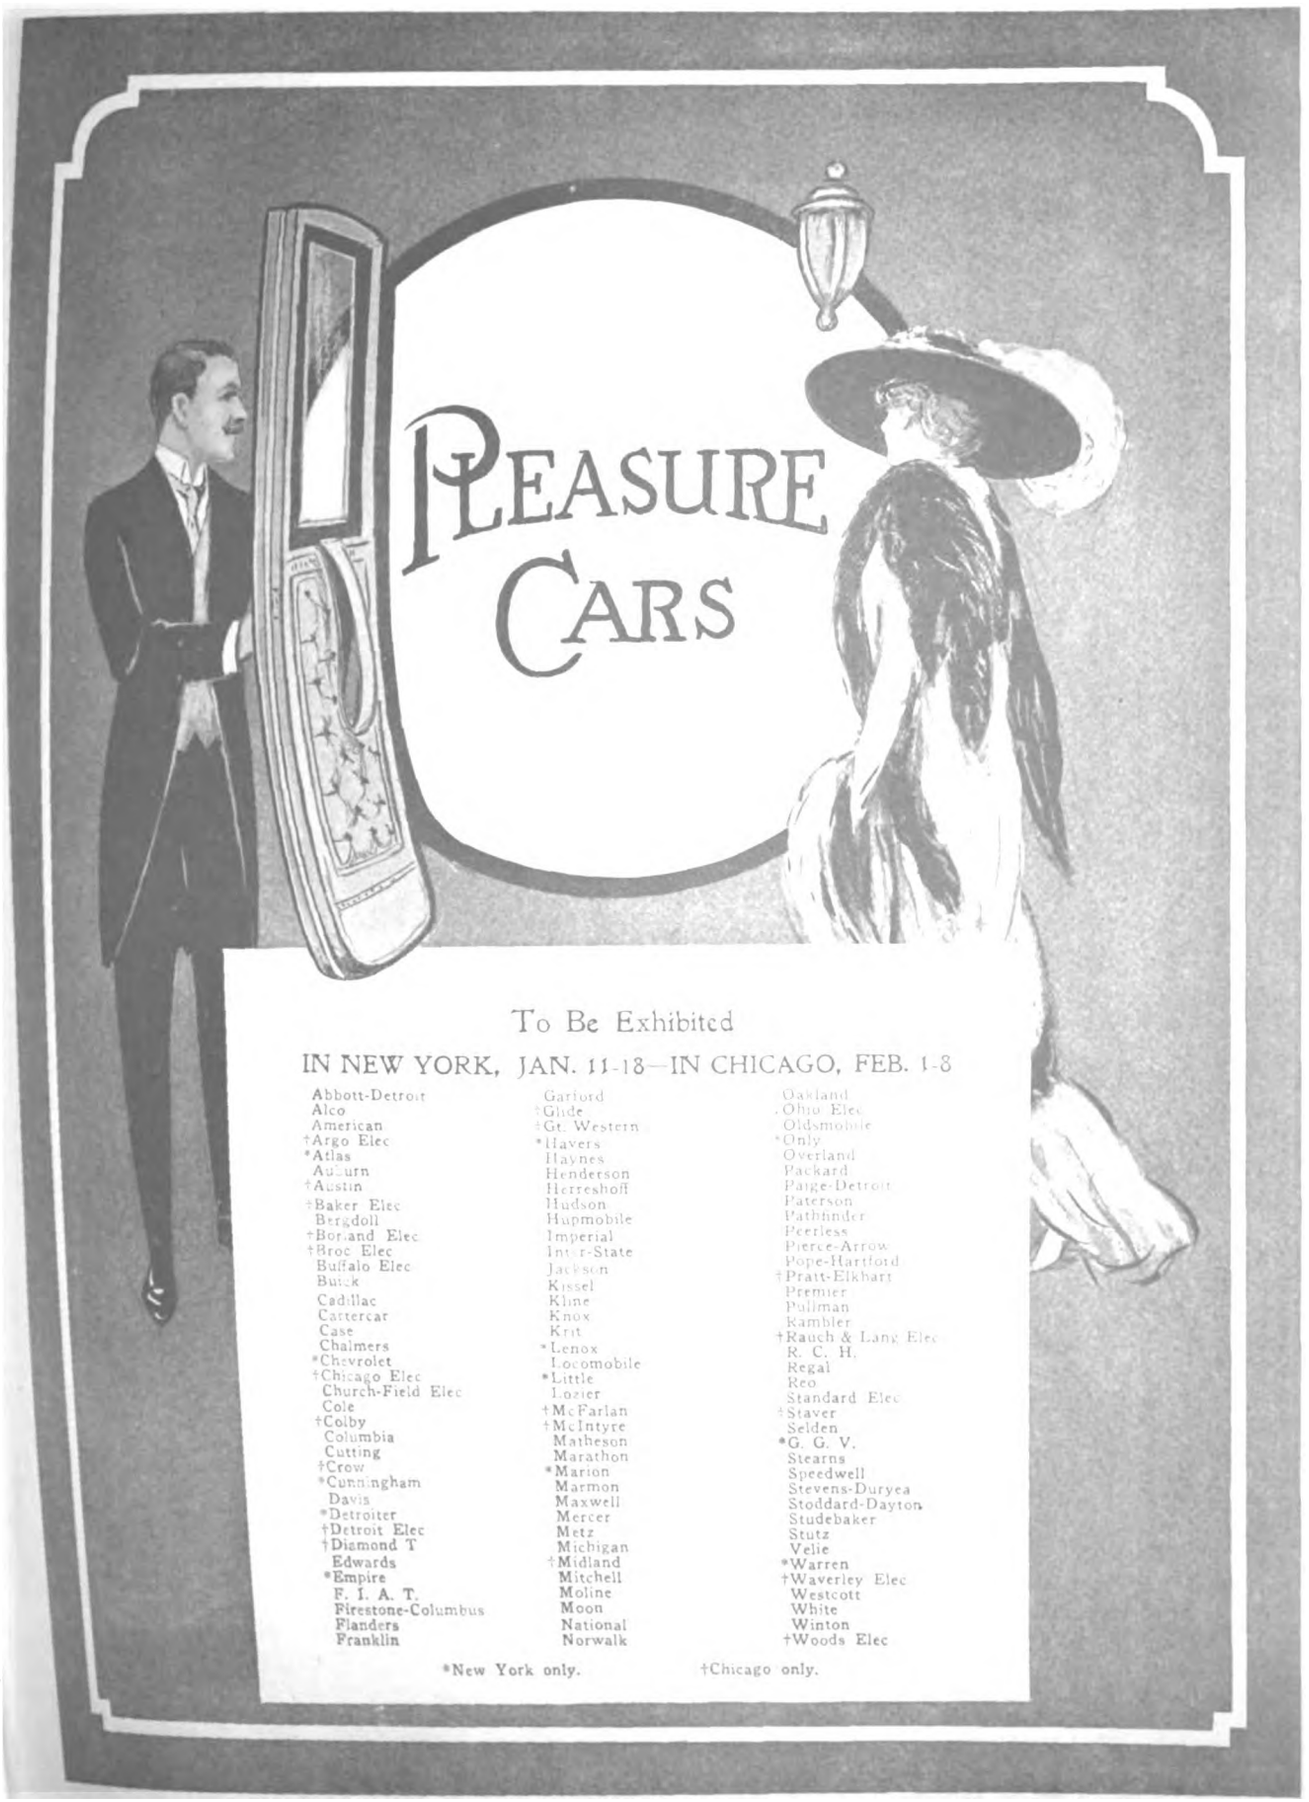
In New York, as nearly as possible the decorative treatment has been made subordinate to the exhibits; in Chicago, the decorative scheme has been as conspicuous as the cars themselves, when, indeed, it has not been more conspicuous.

The Chicago show is the automobile spectacle of the year; it is one of Oh's and Ah's and fills more than half the eye.

The decorative hand always is daring in its originality. The mosaic temple of last year, the Louis XV idea of the year before and the English country estate of a still earlier year are not easily forgotten.

The forthcoming show will be as eye-filling and as eye-pleasing, and as original, as those that have gone before.

There will be mirrors in Chicago, too—and many of them—for, unknown to each other, the same desire to obtain the effect of spaciousness inspired the decorators of the greatest cities of the East and West, respectively.



If New York had not pre-empted the designation, Manager Miles, of the National Association of Automobile Manufacturers, under whose auspices the show is being held, declares that it would not be inapt to describe the Chicago function also as "Crystal Palace."

As it is, or will be, it probably will go down to history as the "stained glass show."

Cathedral glass will be the predominating feature. In the roof of the Coliseum will be 26 stained glass windows, each 22 feet square and all of the same classical nature. The front of the balcony will be similarly treated, and in the wall panels and girders and on the railing of the overhanging balcony mirrors will be disposed extensively, but not offensively. The stained glass effect will distinguish the partitions which will divide the exhibits and the illuminated signs which will be reared in each space.

Into the First Regiment Armory, which adjoins the Coliseum, stained glass treatment also will be carried, but on a less elaborate scale. Nevertheless, the decorative treatment of the armory will be more than usually pleasing—somewhat of a compliment to the manufacturers of electric

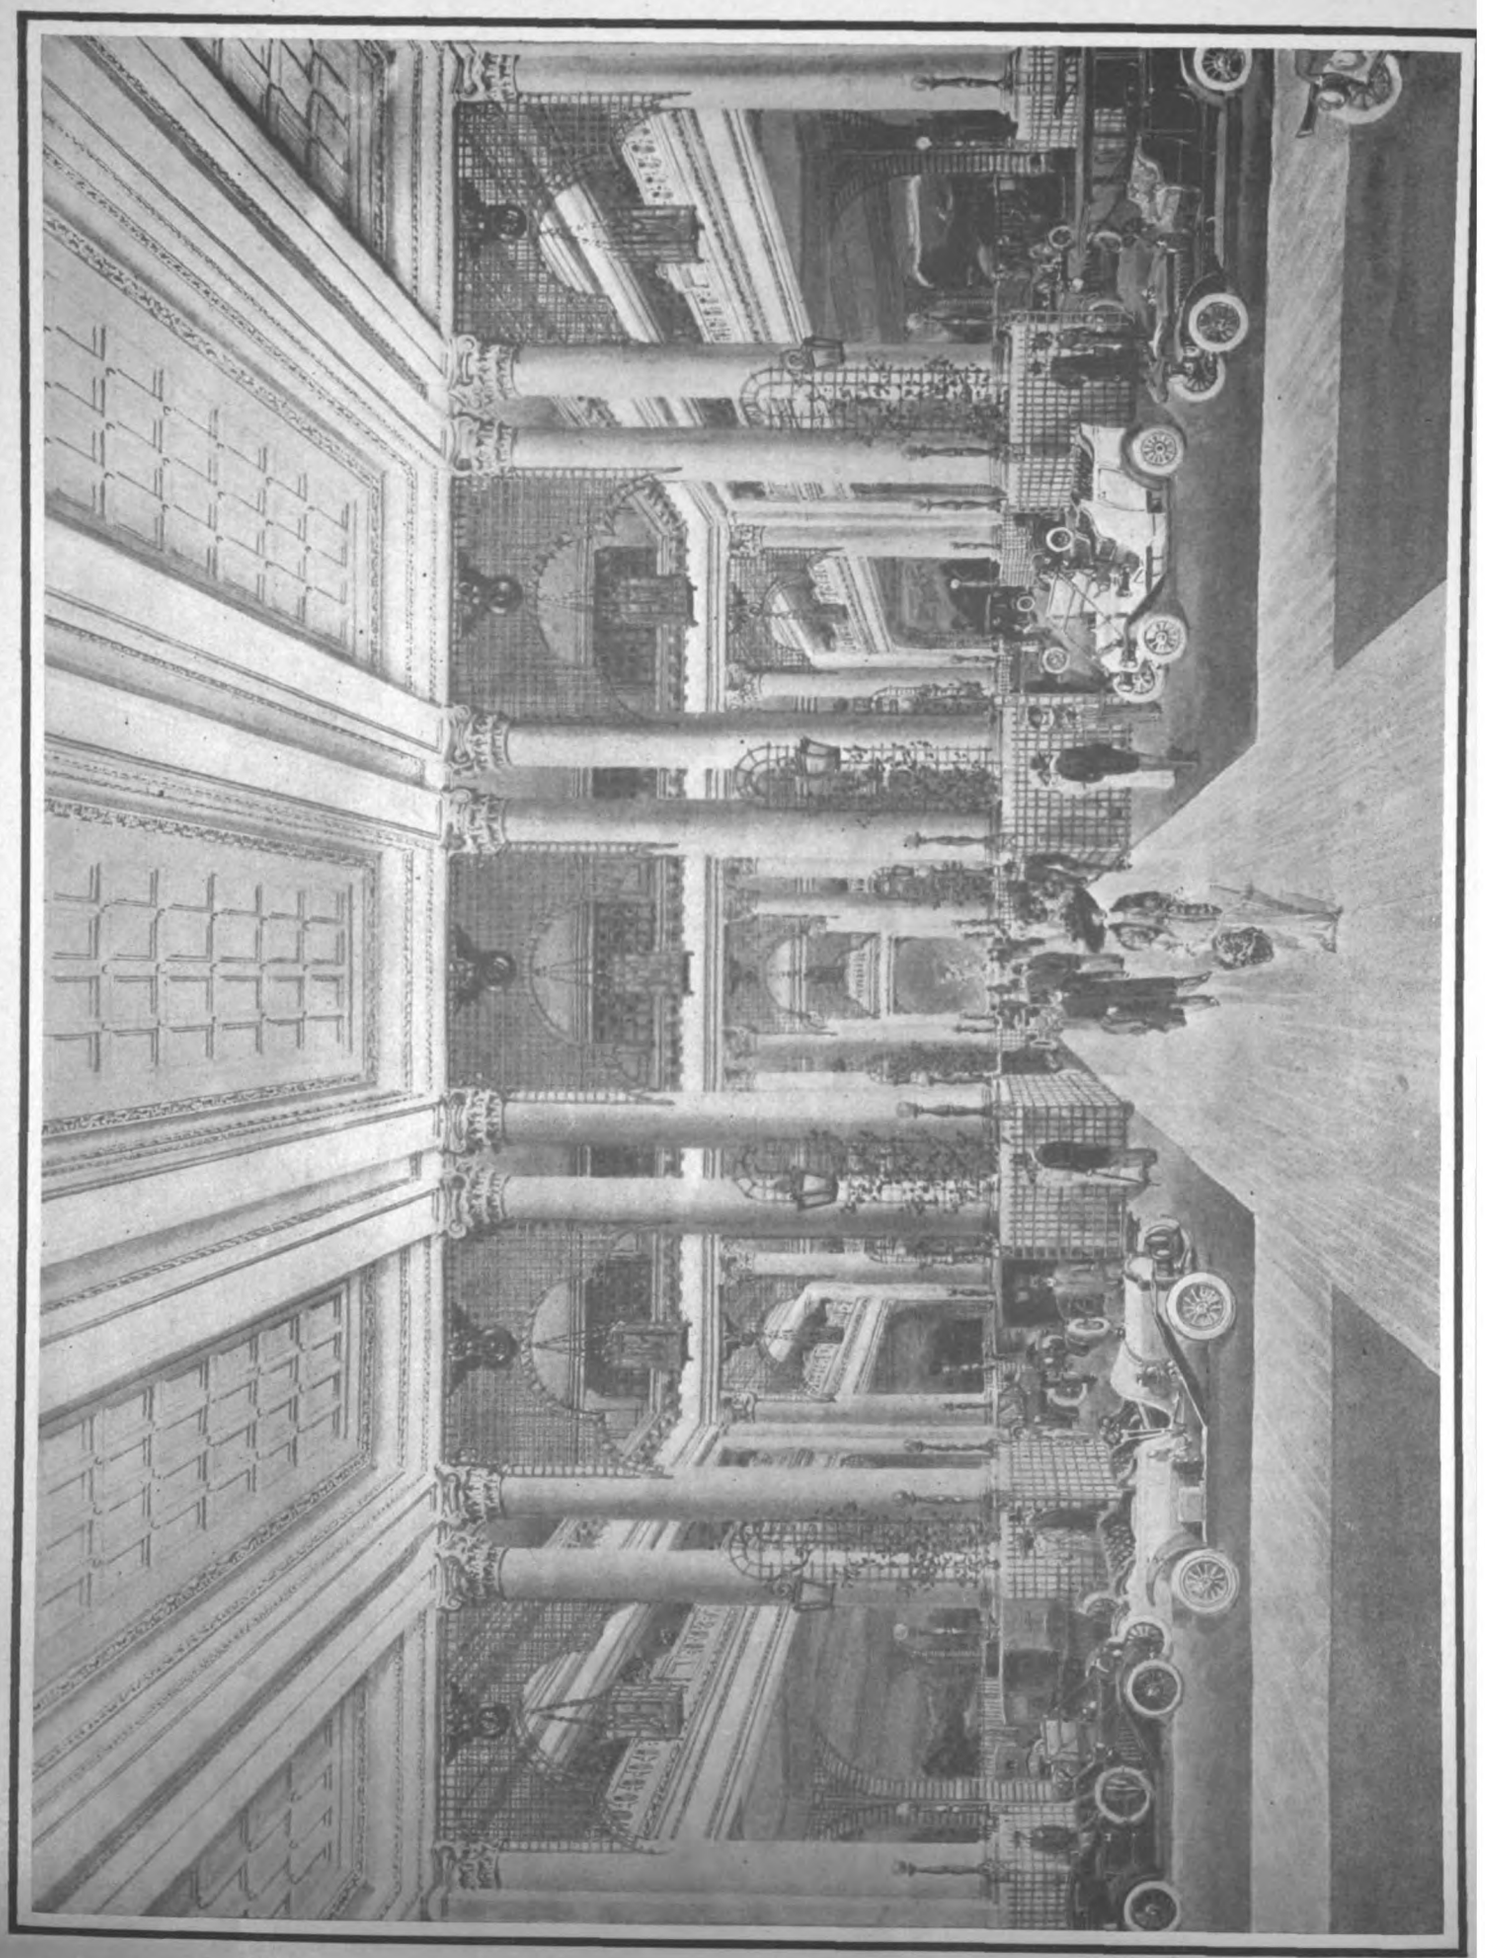
... below of doubt one of the ... developments of the automo... the great increase in the number of "sixes." Contrary to expectations, however, there has been no material reduction in the number of "fours," and it does not appear that a serious reduction is imminent. All told, there is more than a dozen new "sixes." Some of them are the products of conservative manufacturers whose "fours" long have been known and some are the products of brand new companies, though to none of them does the word "freak" apply in any sense of the meaning.

Studebaker, Cole, Crow, Herreshoff, Hudson, Marmon, Stearns, Stutz, Warren, Little—all these names and more now stand for "sixes" as well as for "fours." The Stearns is a Knight motor, of course, and its introduction has served to take away some of the glory garnered by the Stoddard-Dayton Camp as the only American producer of a six-cylinder Knight motor. That there would be an almost overwhelming demand for "sixes" was forecast last year in Motor World, and conditions as they exist at present indicate that manufacturers have not been slow in appreciating the steadily growing sentiment.

TRENDS OF THE TRADE



INCREASE OF "SIXES."
INCREASE OF LIMOUSINES.
FULLNESS OF EQUIPMENT.
ELECTRIC LIGHTING AND STARTING.
LONG STROKE BLOCK CAST MOTORS.
WIRE WHEELS.
DEMOUNTABLE RIMS.
LONGER WHEELBASES.
LONGER SPRINGS.
LARGER TIRES.
LEFT DRIVE WITH CENTER CONTROL.
DEEPER UPHOLSTERY.
V-TYPE RADIATORS.
CLEAR RUNNING BOARDS.
THREE-QUARTER ELLIPTIC SPRINGS.
COWL DASHBOARDS
COWL GAS TANKS.
DIRT-PROOF CONSTRUCTION
IMPROVED LUBRICATION SYSTEMS.
QUIETNESS OF MECHANISM.
"SILENT" CHAINS FOR CAM-SHAFT DRIVES.
MAGNETO WORM DRIVES.
NICKEL TRIMMINGS.

Number of "Little Sixes" Greatly Increased.

Many of the "sixes" already on the market and well established—such, for instance, as Premier and Packard, Knox and Franklin, Lozier and Kissel, and others—have taken unto themselves little brothers, or, rather, "little sixes"; in fact, the birth rate of "little sixes" has been high, though whether the increase can be traced to the stimulation afforded by a new crop of low and medium-priced "sixes" from out the factories where low- and medium-priced "fours" are born, or the reverse is the case, it is difficult to determine.

Suffice to say, the "little six" which is brother to the "big six," and the more numerous low- and medium-priced "six" either by itself or as a younger member of an erstwhile four-cylinder family, both are here, and here to stay. Among the medium-priced "sixes" which are firstborns, to continue the analogy, there are the Flanders and the Chevrolet, the Speedwell, the Firestone-Columbus and the Havers, all listing close to the $2,000 mark—a figure that was considered fairly low even for a "four" not so very long ago. And, of course, there are the really low-priced "sixes" that constitute one of the big features of the year—the Little, the Studebaker, and the Flanders, the former listing at $1,285 and the two latter at $1,550; the McIntyre, at $1,485, and the Herreshoff, which sells for $1,750.

Digitized by Google

Digitized by Google

Coincident with the increase in the ranks of the "sixes" there has come also an increase in the production and popularity of the limousine and landaulet. At the last show these two types of cars seemed likely to be challenged by the coupe, but apparently the lamp that lights the way to popularity has been shifted, and the coupe now stands in a shadow. Roadsters, too, which last year were almost revived, have also lost ground. The buying public seems to want passenger-carrying capacity.

This year the limousine's the thing, just the plain ordinary—no, not old-fashioned—limousine, and there are not a great many manufacturers who have not adopted them for their families. And it is fair to exclaim, Luxury, thy name is limousine! For verily it does not seem that cars can be made more luxurious than are most of the present day limousines.

"Completely Equipped" Wider in Meaning.

The phrase "completely equipped," which was heard so glibly and so often last year, will be heard a great deal more often next year and with a great deal more pride and appreciation, for it has taken on an entirely new significance. Most cars now are completely equipped in the real meaning of the words, with the accent on the "completely." Top, windshield, speedometer, detachable rims, tools, etc., no longer make "complete" as the word is defined by the manufacturers. The list now includes not only electric lighting apparatus and engine starters as well, in the majority of cases, but electric horns, clocks, power tire pumps and even tire vulcanizers have been added to lessen the owner's burden of upkeep. It would be difficult to discover a sufficient number of cars to count on the fingers of two hands, that are not "completely equipped." And this despite the fact that not only have prices not been advanced as would seem perfectly reasonable, but they have actually been reduced in a great many cases. Verily it will be a year of greater value."

Engine Starters of Proven Efficiency.

We know they really are items of equipment, the combined electric lighting and engine starting systems which, from a small beginning last year, have increased in use by great leaps and bounds, deserve a more prominent place—a place by themselves—for they are very nearly at the top of the heap of developments. The year 1913 may be the "engine starter" year, but it will be a vastly different kind of an engine starter from that for which last year was named. The inspiration that served for last year's booming evident at the time in the acetylene starter now scarcely is evident at all, and though there can be little doubt that the acetylene starter works and works well, it is so easy to combine the electric starter with the equipment that furnishes electric lights, and there is so great a demand for the latter, that the acetylene starter naturally has been forced afar into the background.

For similar reasons, electrical equipment has put a decided crimp in the popularity of other types of starters, and there appears nothing to dispute the sway of the apparatus that can trace its lineage clear back to Benjamin Franklin, if not further. Of the 100-odd brands of cars that will be exhibited in New York and Chicago, not less than 80 per cent. will be electrically lighted with a proper and complete dynamo system, and at least 70 per cent. will be equipped with an electric starter as well. In most cases, such equipment is standard; in others it is optional and will be supplied, if demanded, few manufacturers having been near-sighted enough to overlook the necessity for making provision for it, even if they do not regularly supply it.

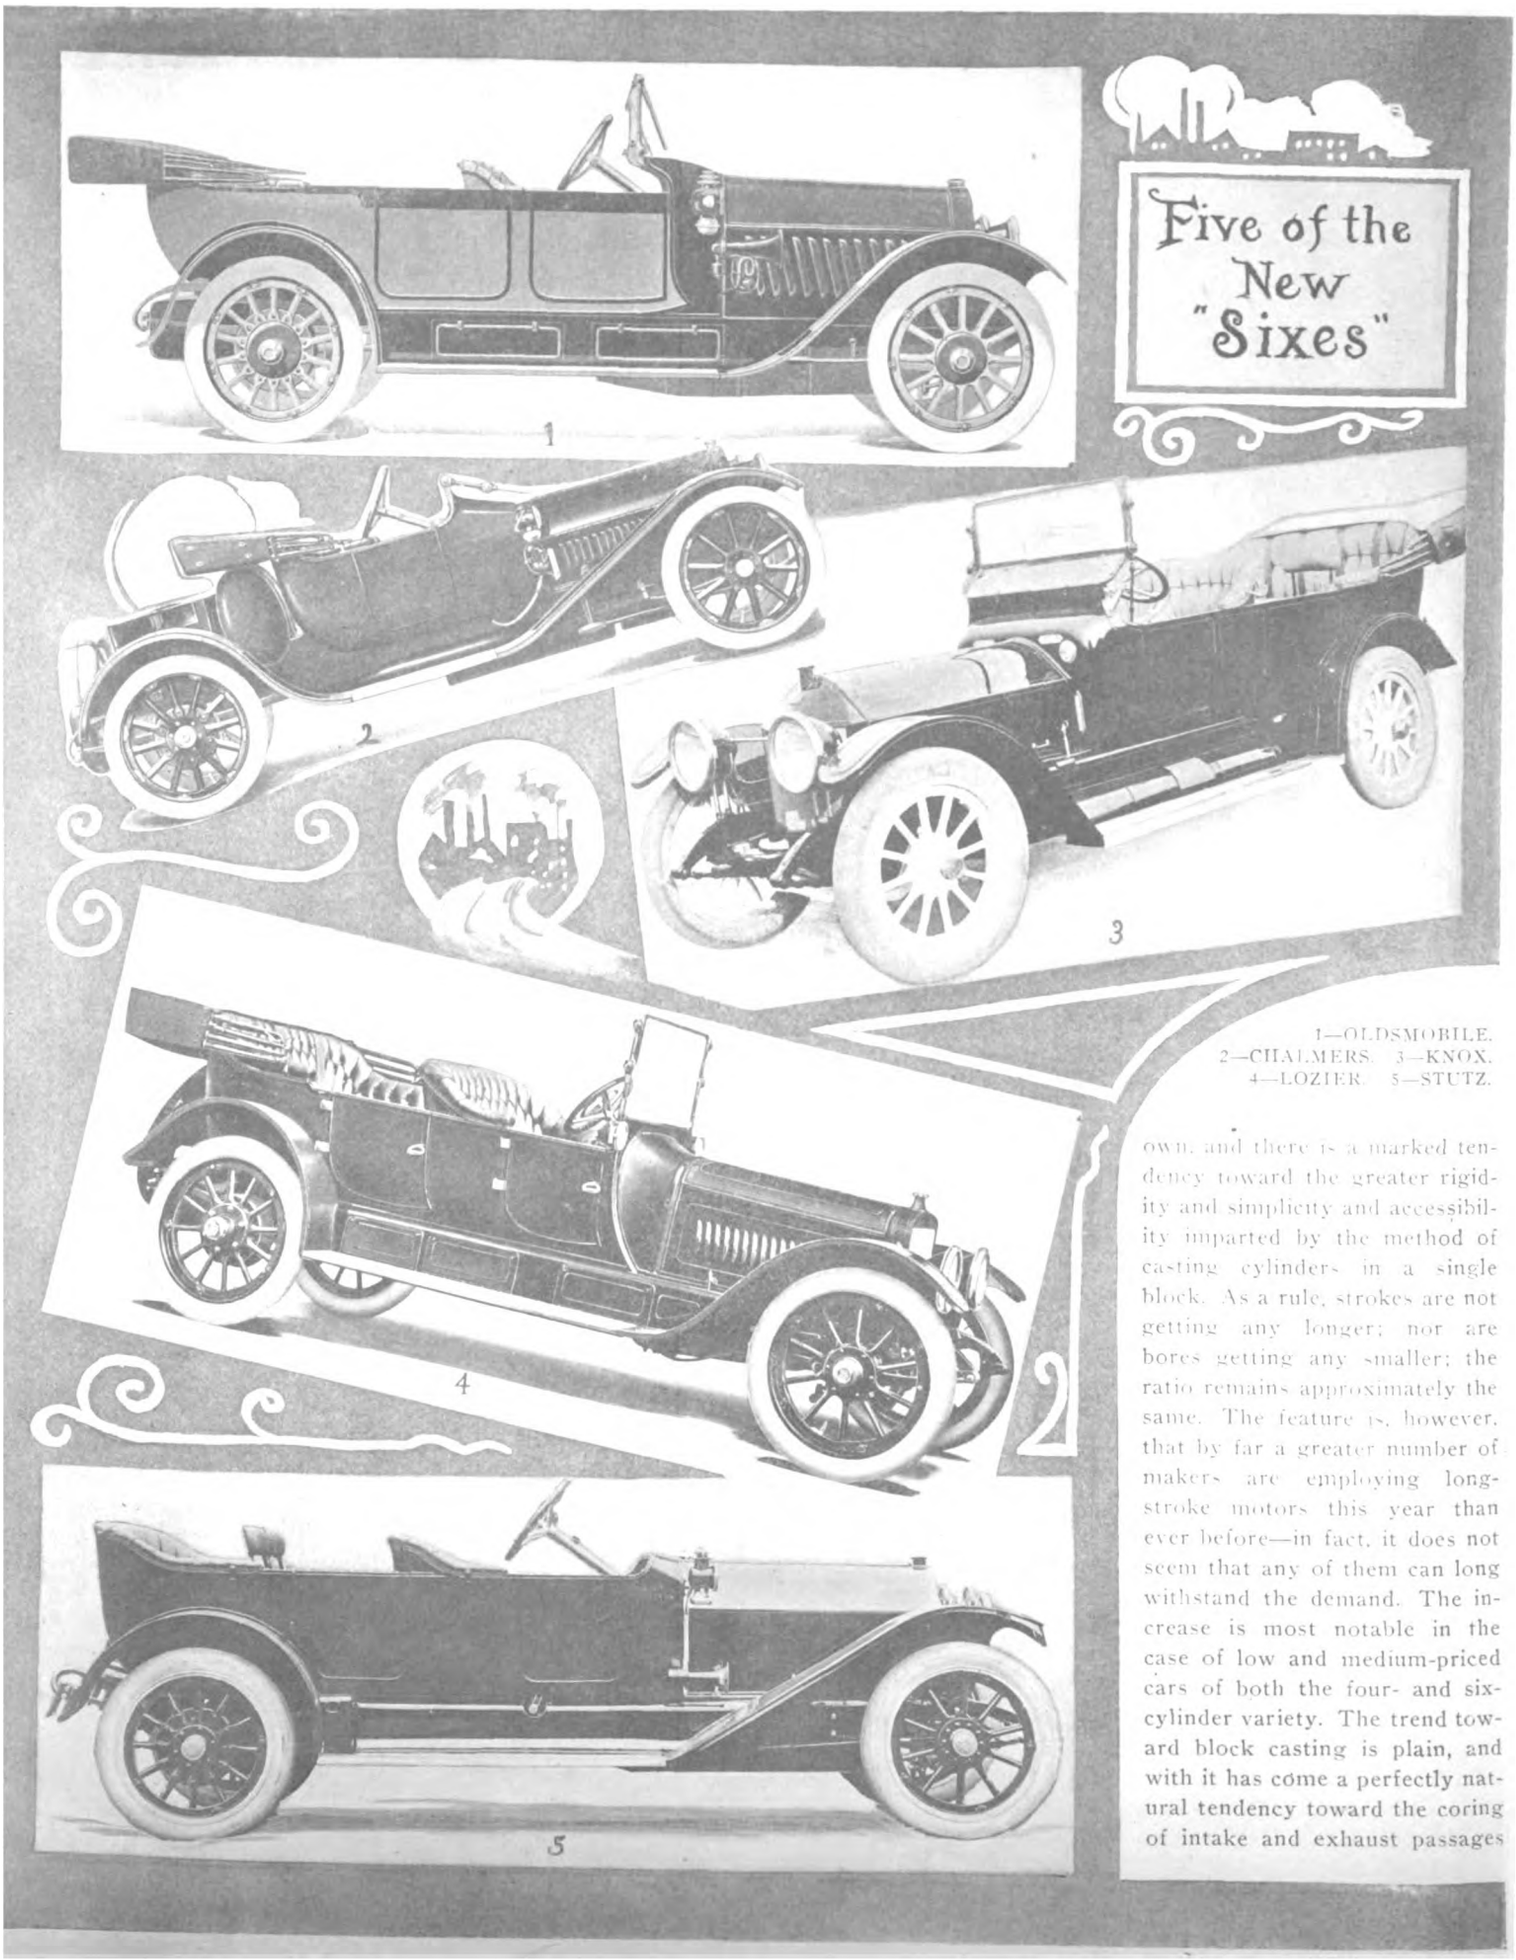
Now a Dozen Wire-Wheeled Cars.

Reminiscent of the pioneer days of the automobile, wire wheels, which may be styled a renewed development, bid fair soon to become an even greater factor in the automobile world than they have become in the past six or eight months. Last year wire wheels virtually were unknown; not one appeared on a car at any of the shows. In the interim, however, about a dozen car manufacturers have adopted wire wheels as standard equipment on at least one of their models, with wood artillery wheels optional, and more, to bring the grand total to over a score, give the option of wire wheels at a slight additional cost.

One of the more than ordinarily significant trends that will be very much in evidence, one which shows that a real problem has been attacked and solved probably for all times, is the clean sweep that has been made of running boards. At the last show the tendency to regulate tool boxes and battery boxes and other kinds of boxes to places less conspicuous was plainly apparent; some few manufacturers still used their running boards as conveniences for carrying equipment that better might be more advantageously "stowed," though most of them made a real "clean up." Next year the 'clean up" will be even more drastic in its effect on appearance; not only have tool boxes and battery boxes been removed from running boards, but there is a well-defined tendency as well to locate spare tires at the rear of the tonneau. In this respect, it is noteworthy that the carrying of tires at the back of the car serves in a great many cases to afford a measure of protection to otherwise unprotected gasolene tanks which in many cars have slid backward from under the seat to a place adjacent to the rear axle, with a consequent adoption of pressure feed

Lines Are Blended to Achieve Beauty.

In connection with the clearing of the running boards, there is another feature which is most apparent. It lies in the very evident attention which has been given fenders. From mere accessories, designed solely for the purpose of preventing the splashing of mud and water, they have become veritable things of beauty, with lines that "fit" and blend well with the lines of the car. Also, they are very much more substantial than they have been in the past and therefore exhibit less tendency to bend or rattle on slight provocation.



Another of the modern tendencies that it is impossible not to see is the general deepening of cushions and upholstery that has been made. When, at the last show, one or two manufacturers thought to have reached the limit of thickness and luxury with seat cushions 10 inches in depth—an unheard-of thickness at the time—it was fairly apparent that others soon would follow suit, though there were few who imagined that the deepening would be carried to the length it has been carried. Both 10- and 12-inch cushions now are common, and several manufacturers have adopted cushions of no less than 14 inches in thickness. Several others, however, whose conservatism is marked, prefer to stick to thinner cushions, on the theory that their wearing qualities are better and that they are less likely to become ill-shapen under extended service.

Development of Cowl Dash.

The practice of making of the cowl a sort of auxiliary dashboard mounting all the equipment that formerly occupied the shadow of the cowl on the real dash, is another development that was foreshadowed and forecast by the last show. It is only one of the tendencies toward the elimination of waste space which operates to increase the comfort of the motorist. More than a dozen cars now have their speedometers and switches, their carburetter adjustment and their oil gauges, etc., on a cowl dashboard, thus bringing them nearer the driver, where they are more easily visible and can be reached more readily. Cowls also are getting deeper, thus affording greater protection to the occupants of the front seats. In connection with the cowl dashboards, it is proper to note that the ignition coils which heretofore were prominent now almost without exception are placed behind the dash with nothing showing but a neat switch which really serves to beautify rather than to "clutter."

Among motors, the long-stroke holds its

1—OLDSMOBILE. 2—CHALMERS. 3—KNOX. 4—LOZIER. 5—STUTZ.

own, and there is a marked tendency toward the greater rigidity and simplicity and accessibility imparted by the method of casting cylinders in a single block. As a rule, strokes are not getting any longer; nor are bores getting any smaller; the ratio remains approximately the same. The feature is, however, that by far a greater number of makers are employing long-stroke motors this year than ever before—in fact, it does not seem that any of them can long withstand the demand. The increase is most notable in the case of low and medium-priced cars of both the four- and six-cylinder variety. The trend toward block casting is plain, and with it has come a perfectly natural tendency toward the coring of intake and exhaust passages

1—FRANKLIN
2—PREMIER
3—STODDARD-DAYTON
4—MITCHELL
5—STUDEBAKER

integral. Though there is much difference of opinion regarding the advisability of such construction, apparently the disinclination to cast the exhaust passages in the block has been overcome, and the dire consequences which were predicted by the conservative school have come to naught.

There are several other well-defined tendencies in engine construction, among which the attempt at dirt-proof construction is laudable. Not only are valves and valve parts enclosed, but in a great many cases ignition apparatus is more fully protected. Simplifying construction and increasing accessibility, quite a number of manufacturers have altered their magneto positions so that the instrument may be driven by a worm gear

Digitized by Google

from a transverse shaft at the front. It goes without saying, of course, that reciprocating parts have been lightened perceptibly and that notable advances have been made in balancing methods.

Another important feature which cannot escape notice is the extent to which lubricating systems have been perfected. Practically without exception, manufacturers have improved their oiling devices to reduce rack cut from steer, gears machine cut and the consumption of oil, and even if the improvement can be traced to the necessity for eliminating smoke—the police of some of the larger cities have been unusually active of late—the fact remains that the benefit is directly the owner's.

Silent Chains Replace Timing Gears.

Of course, every one who has acquaintance bordering on the intimate with the newer crop of cars cannot fail to have remarked their quietness; there can be no doubt that the superlative degree of the adjective quiet is perfectly applicable to very nearly every car as compared with its predecessor. In this connection, the increasing use of "silent" chains for camshaft drives undoubtedly has played an important part. During the past year probably a dozen manufacturers of poppet-valve engines have ousted timing gear wheels, either spur or spirally cut, and have replaced them with "silent' 'chains. The increase in the popularity of "silent" chains for such purposes is particularly noticeable in the low- and medium-priced cars, though it is by no means confined to this class. A number of cars that list well up on the price scale are equipped with "silent" chain driven camshafts for the first time this year, and its adoption in so many cases would seem to presage its much more general use in the future.

So far, only one new engine of the Knight type has put in an appearance, or, strictly speaking, two new ones, though the second is an enlarged version of a successful "four"—a "six"—and bears the well-known Stearns nameplate. The newcomer in the field is the Edwards, and is the product of the recently formed Edwards company of New York City. As is but natural, it exhibits a certain number of minor refinements in design, though in the end it is the Knight engine all over again and differs but little from others.

Beneficial Effect of Sleeve Valve Type.

With the two exceptions noted, engines of other than the good old reliable poppet-valve type have not made any advances that are calculated to set the world by its ears. There can be no doubt that the introduction of the Knight engine has had a beneficial effect in stimulating the betterment of poppet-valve engines, and though other types of sleeve and rotary and disk valve engines come and go like the tides, none of them seems to gain sufficient impetus to carry it over the breastwork of incredulity thrown by the poppet-valve constituents. Worm drive, which also is more or less of foreign origin—or, rather, development—has made no strides worth mentioning, though one car more now is worm driven—the Edwards.

In chassis there is a well-defined tendency to more solid construction and the elimination of the rattles and squeaks that previously have proven distressing. Better lubrication, apparent in almost universal provision for greasing the spring shackle bolts by means of integral grease cups is responsible for no small part of the improvement, and the remainder can be charged to better construction and better fitting of mechanical parts.

Straight Lines and Blended Contour.

That the straight-line body apparently has come to stay is clear. But whereas the straight-line body a few years ago, or even one year ago, was at best but a crude attempt to eliminate the curving lines of the old-time coaches, the bodies of to-day are distinctively automobile bodies that contain no suggestion of their forbears. Lines now are properly straight, from stem to stern, and greater attention has been paid to obtaining a more harmonious blending of lines at the hood and at the back of the tonneau. In this respect the general casting-out of outside door handles that is apparent has played an important part in enhancing appearance. Similarly, the almost general use of nickel-plated trimmings instead of the universal brass of a couple of years ago, cannot escape remark. Also, the open front touring car and roadster, or runabout, is no more. All cars now have the full complement of doors, a feature which makers were not slow to adopt.

Change to Left Drive not Sweeping.

Contrary to expectations, left-hand drive with center control has not quite fulfilled its promise to sweep the boards before it. It is true that a great many manufacturers have either adopted it in bringing out new models or have altered older models, though altogether not 50 per cent. of the number of makes of car produced are driven from the left-side, whereas a year ago it was more or less freely prognosticated that its adoption would be very much more general. At any rate, it is significant that even the manufacturers of cars of established repute selling at prices that cannot be called medium by any stretch of the imagination have taken kindly to left drive with center control and the probability of its more widespread use in the immediate future, if for no other reason, seems assured.

V-type Radiator Evinces Popularity

Another noticeable feature of the newer crop of cars is the tendency toward the adoption of the V-type radiator and the lowl-located dash, not that the two necessarily go together, for as a matter of fact they are not shown in combination. At the last show there was but one car with a V-radiator, the Abbott-Detroit, but at the forthcoming shows there will be a half dozen or more cars which will appear slightly more rakish—and "classy" to those of that opinion—for its presence. The cowl gasolene tank appears for the first time on several cars that heretofore have had their fuel tanks in more orthodox positions, and of the new cars that have been brought out the cowl position appears the preferred.

As a rule, the cars of the new year will ride more easily than have those of the past, for a great deal more attention has been paid to obtaining greater resilience and at the same time reducing the tendency toward side sway and violent rebound. In three or four notable instances, manufacturers of cars that rightfully belong among the "upper ten," so to speak, have replaced semi-elliptic rear members with three-quarter elliptic members, and there are few cases where the length and width of springs has not been increased. Similarly, wheelbases gradually are getting longer and tires are getting bigger, though the increase is in section and not in diameter; large diameter wheels, except on underslung cars and on cars that are so heavy as to require more adequate tiring than can be obtained with ordinary size wheels, have lost grace.

Many Things Make for "Greater Value."

Taken all in all, however, nothing has been lost in the concrete during the twelve-month just past; everything, or nearly everything, is a gain—it is a gain in actual value that will make next year "The Year of Greater Value" beyond the shadow of doubt.

Knowing all this, and particularly that the tendencies that have been outlined and the developments that have been pointed out, apply not to any one car but to many different brands of cars, there is perhaps some slight shade of logic in the supposition that all cars are more or less alike and that the features of one are the features of the other. But this is not so, most emphatically, and the surest and quickest way in which the erroneous impression can be cleared away and in its stead substituted a correct and truthful impression is by a car to car inspection under the guidance of one who knows them intimately and well.

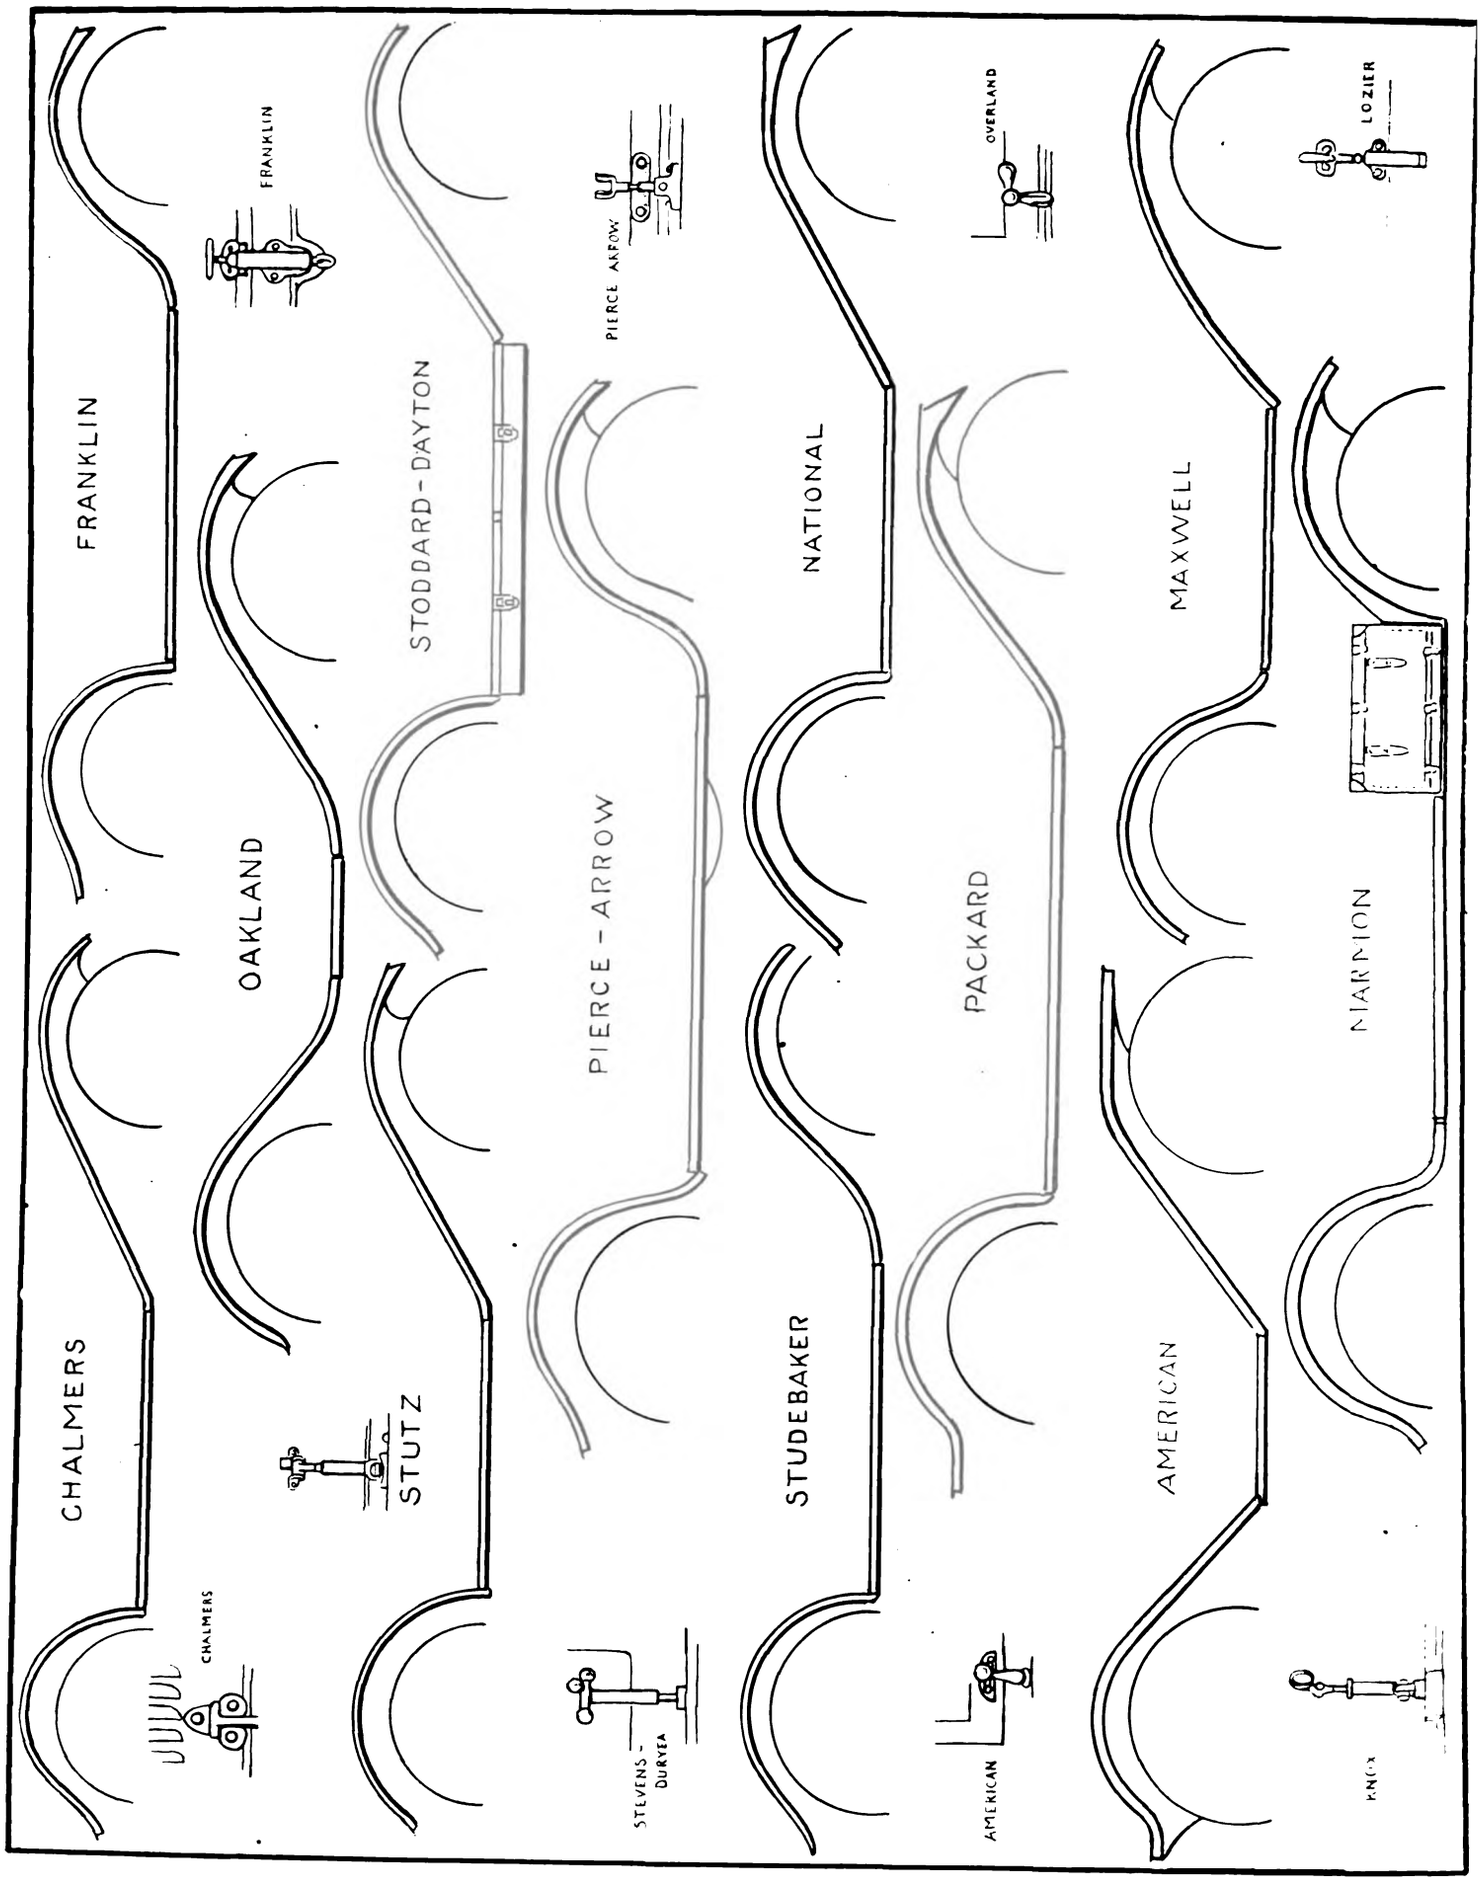
And look at the clean casting of that Studebaker, or of all of them, for that matter. None of your extraneous projections and pipes and wires that have marked cars of the past. Beginning to realize that there have been some improvements, after all?

Now, then, take a look at the Little engine. Quite a lot of difference, isn't there? Notice how the cylinders are cast in sets of three, each with the valves on the same side and fully enclosed. No chance for dirt to get in there, is there? And it makes the motors so much quieter. Now look at the way the Little magneto is driven—straight shaft through from the timing gear train with the lighting generator at the end. Neat arrangement—don't you think so? The Studebaker cylinders measure 3½ x 5 as against 3 5/16 x 4¼ for the Little. Not so very much difference in piston displacement, but look at the difference in stroke and bore ratio. Take a look at the intake and exhaust manifolds of the two engines. Note how they are cast integral with the Studebaker cylinders and how they are separate and afterward bolted on in the case of the Little.

The Herreshoff motor seems pretty long? That's easily explained. It is not all motor. Part of it is the clutch, which consists of 24 saw-steel disks, and the rest of it is the gearset. It looks long because it is all in one rigid unit. Another thing that makes it look long is the way the gear shift levers are mounted. Just examine that layout. Notice the vertical gate change. The whole arrangement is new all the way through, and have you ever seen anything simpler and more accessible? Both the Studebaker and the Little look simpler, you say? That's because you don't see quite so much in one look. The clutch is in the flywheel, of course, but the gearset is further back, in the waist of the chassis.

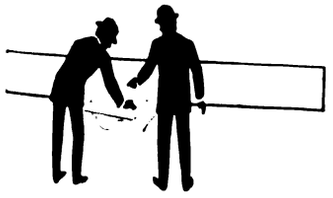


Step over to the McIntyre. Half a look reveals that though the cylinders are cast in a single block the arrangement is quite different. They are of the T-head type. Here again there is a difference in bore and stroke and a difference in stroke to bore ratio, too. The cylinders measure 3½ x 4½. That means 40 horsepower, easy. Not so bad for a "six" that sells for $1,485 completely equipped, is it? And what do you think of those transmission elements? Multiple disk clutch running in oil to give smoothness, four-speed selective gearset, full-floating rear axle. They're all points

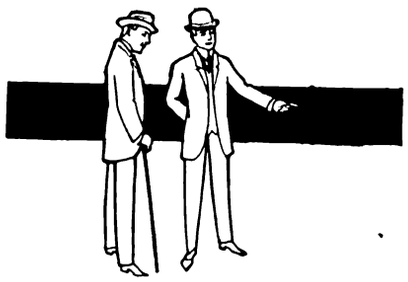
you never thought of finding in a $1,500 "six," are they not? But you can't dispute the evidence of your eyes. And how about the Flanders? Here's a motor that is different from the others. Six cylinders cast in a single block and measuring 3⅝ x 4½—that means 40 horsepower, too. Have a look at the gear shifting arrangement. It is selective, with the lever in the center, but there is no H-plate. Why isn't there one? Well, they don't need one, in the first place—simply a ball and socket joint that permits of a slight rocking movement. And look at the accelerator pedal; it's brand new. Notice the heel rest for the driver and the roller which obviates the necessity of shifting the foot. The clutch in the Flanders is a cone with plenty of engaging surface and spring inserts to ensure against gripping and slipping; the gearset is selective and provides three speeds and reverse. Ever see such variety before in a bunch of "sixes" that sell at really low prices?

Stand off, now, and take a long-distance perspective view of the five of them in a row. Notice that both the Studebaker and the McIntyre are steered from the right side, whereas in the Flanders and the Lit-

Digitized by Google



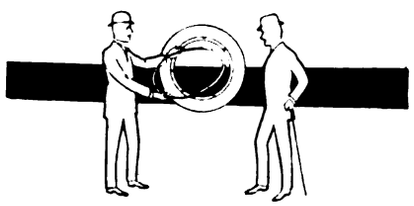
Digitized by Google



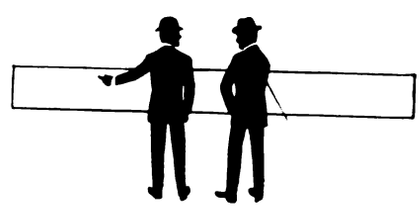
tle and the Herreshoff the driver sits at the left side. Both the Little and the Herreshoff, notice, have three-quarter platform rear springs, though they are unlike in nearly everything else. The other three have three-quarter elliptic rear springs, and all of them have semi-elliptic front members.

The Little and the Flanders come with five-passenger touring car, or an attractive limousine or as a coupe or roadster. Plenty of variety there. And all of them are fully equipped, as a matter of course.

What other models are there under the same name plates? Haven't heard of the new "four"? That's it over there, and it resembles its six-cylinder brother so closely that you'll have to look carefully to tell them apart. It's a roadster, too, though its "vitals" are much smaller than the "vitals" of the "six." It sells for $690, "all on," as the British say, for a fully equipped. It has only a two-speed gear in it, but this is selectively operated; it has a beautifully flexible motor that more than makes up for the absence of the third speed. And what about the Mercury? Never heard of that, either? You've been asleep. Why, the Mercury is the car upon which the Chevrolet organization has been built, and the cars have been built so well that there is still no room for improvement in the models. Look her over.



You have heard all about the new Chevrolet cars"—the ones that are so like the new "six"? You know that they have both the new "25" and the "50" exactly like the motor in the "6" but for the number of cylinders? You must have been reading a trade paper, in case, for it the only way you have heard out; the cars are only in the factory. Take particular notice of the "25" which sells for $885; note what has entered into construction; the gearset; the new semi-floating rear. Ever see more real value for the money before? And now cast your eye over the "35." It has a 4½ x 5 motor the same as the "six," except that the cylinders less. It sells for $1,- and is completely equipped, even to the lighting and engine starting system. The electrical equipment is one of the things you ought not to miss. It has been selected by the Studebaker engineers and the Wagner electric company's engineers—surely enough talent to ensure its being "right." A little pull on a flexible cable and the engine starts. That's all there is to it. Everything else is automatic.

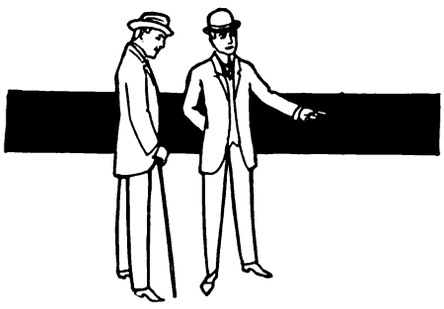


There's a four-cylinder Herreshoff you haven't seen yet, either. You saw it last year in the Palace, you say? No, you didn't. You saw a Herreshoff car all right but you didn't see one like this one. The designers have been at it since then, and they have made an even better job of it than it was before. It has a four-speed gearset now that it never had before, for one thing. You ought to see that. And another thing: it has a Westinghouse electric lighting and engine starting system that's new. But the price is very nearly the same. And, of course, you must see the other new Flanders "six," though having seen the smaller edition you will easily recognize the other. It's a little larger—has a 4 x 4¾ motor—but otherwise it has all the Flanders earmarks, including a Gray & Davis electric lighting and engine starting system. High-priced? Not at all, even if it does look like it. They're asking $2,250 for the seven-passenger touring car at your right, and the four-passenger car goes for $2,200. Well-blended lines in both bodies, aren't they? And how do you like those new folding tonneau seats?

What's that? Where's the car that was brought out simultaneously with the Little? Oh! you mean the Chevrolet. Right over here; you can usually identify it by that V-type radiator. Of course, other cars have V-type radiators, too, but they haven't got three-quarter platform springs in the rear as well. Let's have a look at the engine, but be careful you don't scratch the paint in lifting the hood. That paint is expensive—that's why it's so glossy; there are about 18 coats of it there, too. Rest the hood on that little catch that is put there just for the purpose. Now stand off and

glimpse the compact, clean-cut engine. Almost square, isn't it? That's because the manifolds are cast integral and the valves are all enclosed. Notice how the cylinders are cast in threes and the peculiar Y-shaped intake.

Why does the engine run with so little vibration at high speeds. Well, one reason is that the crankshaft is carefully counterweighted with semi-circular weights, and another reason is that the reciprocating parts are as light as it is possible to make them. What's the power of the engine? It's rated at 40, though it has a pretty long stroke—cylinders measure 3.9 16 x 5 —and probably generates more. Now get down on your hands and knees and take a peek at that engine starting system. Notice the twin-cylinder air compressor hung under the drive shaft and the way it is driven. Now look up forward at the flywheel. See that gearing cut in the periphery. The gear on the rotary air motor meshes with it, and when the air is turned on at the dash the motor "spins" a great deal faster than you or any one else can "spin" it by hand. It's pretty sure to start every time. Any more Chevrolets? No, not yet, though there will be another shortly. It's going to be a "50" and, like its predecessor, it is going to be a medium priced car. The "40" sells for $2,100.



Where are all the "little sixes," did you ask? There are some them across the hall—the Packard, and the Premier, and the Franklin; the Lozier and the Kissel and the Knox also are there—as fine a sextette of "little sixes" as you would ever want to see. Suppose we line 'em up, same as the other "sixes," and look them over side by side. That ought to give you another idea of just how much variety there is.

Take the Franklin, for instance. Every one knows that it has an air-cooled engine, and full-elliptic springs, and laminated wood sills. No, they have never been changed. They always have been exclusive Franklin features and, by the same token, the Franklin is the only air-cooled pleasure car at the shows. What's new in the "little six"? The motor, principally; everything else is just like the other Franklins and they haven't changed for a couple of years. The new motor measures 3⅝ x 4 and is rated at 30 horsepower, the valves being in the heads, of course, where they always have been.

What's the new electric lighting and en-

Digitized by Google

gine starting system that has been adopted for all the six-cylinder Franklins, you ask? It's the Entz, and it's one of the simplest on the market. Nothing to it but a combination motor and generator that is permanently geared to the engine; if the engine slows 'way down, or stalls, the engine starter doesn't have to be put in operation; it starts right in of its own accord and turns

the engine over till it starts again. When you are running along at touring speed, the motor-generator becomes a generator only and keeps the battery fully charged. That's simple enough, isn't it? Only one switch, too, and that one controls both the ignition and the starter. Have the other Franklins been altered much? Well, not so much that you can notice it Of course, there have been a number of refinements, and the equipment has been increased by the addition of a Warner auto-meter, but in the end they are very much the same Franklins that have rolled over the roads and given a good account of themselves in the past.

Inspecting New Six-Cylinder Lozier.

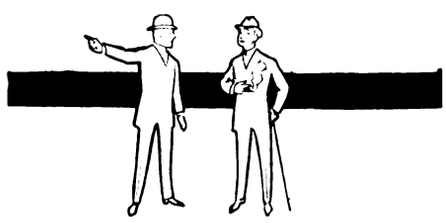
Have a look at this six-cylinder Lozier at $3,250. What say? Not a Lozier at that low price? Of course it is. Look at that Lozier squarish radiator and hood, that Lozier control and those Lozier hub caps. Couldn't mistake them anywhere for anything else, could you? Prices reduced? Not a bit of it. It's a new model—a Lozier "little six"—and it is so much like the big Loziers that you might have some difficulty in telling them apart. That is, from an external inspection. But if you lift the hoods you will see the difference. The motors are quite different. The "little six" has an L-head motor with cylinders cast in threes, and the older "big six" has a T-head motor with the cylinders cast in pairs. Now do you see the difference? Also, the big motor measures 4⅝ x 5½, as against 3⅝ x 5½ for the small one. The lubrication system on both of the motors is one of the things you don't want to miss. It is somewhat like that used on Knight motors. Little troughs under each connecting rod are tilted upward, feeding more oil as the throttle is opened. Yes, it's new this year on all the Loziers, or, rather, on both the Loziers, for there are only the two chassis constructed. Both of them are mounted with new lines of bodies and both of them are fully equipped.

Latest Knox Almost Entirely New.

That other car over there with the V-type radiator? That's the new Knox "little six." No wonder you scarcely recognized it as a brother to the older Knoxes. It's got altogether different lines, and it is very nearly new all the way through. Sure, there are Knox features in it. The valves are overhead, for instance, and are located in detachable cylinder heads, same as the other Knoxes, the "four" and the larger "six." Why is it called a "little six," you ask? Well, it is smaller than the big "six." it's cylinders measure 4⅜ x 5½ as against 5 x 5½ for the larger "six" and it is rated at 46 horsepower, whereas the bigger one is rated at 60 horsepower. Lots of power? Yes; and both of them develop considerably more than their ratings. Notice particularly that the Knox three-plate clutch and the selective three-speed gearset are retained, the reason being that no room for improvement could be found. Any new equipment? Sure! They've added acetylene engine starters and dynamo electric lighting systems to all.

Here are two more "little sixes" that have been brought out during the year, and they are just as different as different can be—the Premier and the Packard. Set 'em over there and let's have a look at their externals. Both of them are driven from the left side, which proves that great minds run in like channels. Otherwise they are quite different. The Premier control levers are at the right of the driver, and in the Packard they are at the left.

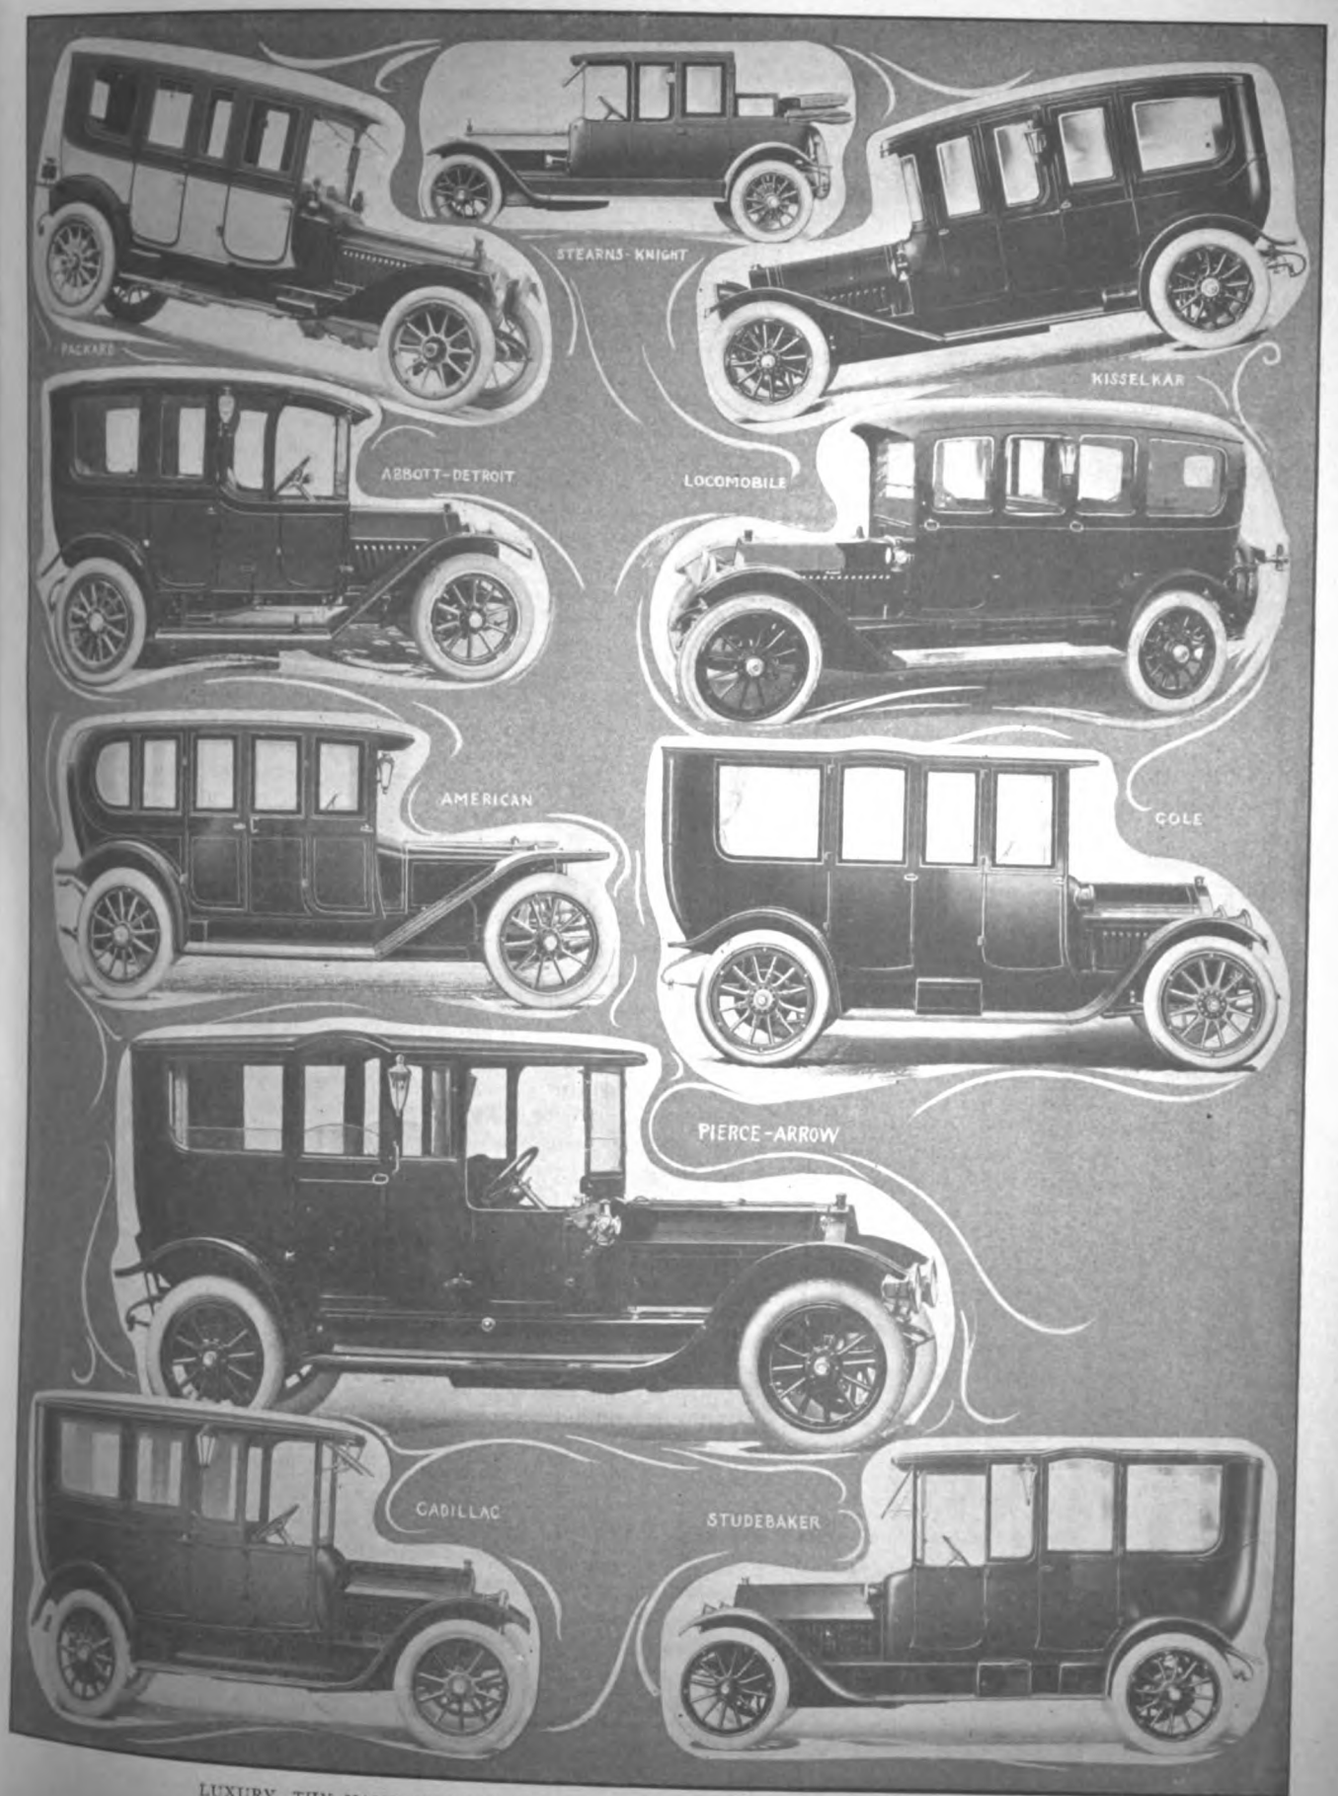
Packard and Premier Retain Past Practice.



If you raise the two hoods you will find that the Premier cylinders are of the T-head type and are cast in sets of three, whereas in the Packard they are of the L-head type and are cast in pairs. Also take note of the difference in bore and stroke in the two motors; the Premier measures 4 x 5 and the Packard measures 4 x 5½. Do they differ very much from the larger models in the same lines? No, they don't, and there are many reasons why they should not differ from their older brothers. Think! Their producers have worked out their designs and proven them, so what is the use of changing them?

The larger cars in both lines are much the same as they always have been. In the big "six" Premier the steering connections have been changed slightly to increase the factor of safety, and that is about the only change that has been made. The motor measures 4½ x 5¼. It is just about the same with the Packard. A new rear axle casing has been adopted, and that is about the only change that is noticeable other than the adoption of a new oiling system which is interconnected with the throttle. A complete electric lighting and engine starting system has been added to all Packard models, and the new Premier is electrically lighted with a dynamo system. Before you leave these two cars, take a look at the Packard steering column control panel. Clever idea, isn't it? Everything right at the driver's fingers — ignition switches, lighting switches, carburetter adjustment, starter switch, everything. No need for a dash lamp here.

Over here is the Kissel "six." Suppose we make the rounds and pick out the "sixes" first; in that way you will get a better idea of the variety in construction and it will be easier to pick out the "high spots" of each. Forgetting about the "fours"? Not at all; we can look at the fours at the same time and in that way save time; that is to say, the "sixes" and the "fours" of the same brands.



Kissel Has Been Improved and Refined.

Notice how this Kissel "six" has been enlarged since last it was on view; larger tonneau, deeper upholstery, and don't overlook the electric lighting and engine starting system. What other new features are there? Probably the most noticeable one is that the wheelbase has been lengthened. Another thing—Kissel cars won't smoke any more; they won't even emit the hazy vapor that is characteristic, for measures have been taken to prevent it. They're simple measures, too. Simply a question of beveling the top piston rings and drilling a few holes through the grooves. How does that prevent smoke? The oil is pushed up to the top piston rings and then finds it way back to the crank case through the holes. Very little can get into the combustion chamber. Now, take a look at those rear springs. Notice the extra leaves to prevent rebound and to help out the others when the car is heavily load-

ed. What's new in the "fours"? Not very much; there has not been much room for improvement. The valves are larger in the "30" and both that and the "40" have larger bodies; so has the "50." Motor sizes of the "fours"? Sure! The "30" measures 4¼ x 4¼, the "40" 4½ x 5¼, the "50" 4⅞ x 5 and the "60," which is a "six," measures 4½ x 5¼. Surely the Kissel is a varied line.

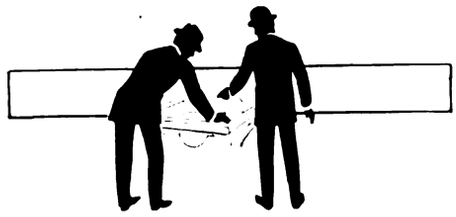
LUXURY, THY NAME IS LIMOUSINE! IMPOSING CLOSED CAR STRUCTURES

Digitized by Google



That distinctive-appearing tan and white car across the aisle is an Austin. You can nearly always identify the Austin by its color, if not by its rakish appearance. Lift up the hood and notice the individually cast cylinders with valve pockets on either side set at an angle. That's one of the exclusive Austin features, and the cylinders are cast that way to eliminate waste space and to get better shaped gas passages. Notice, too, the deep upholstery. It's probably the deepest in the show. No, nothing but "sixes" in the Austin line, the biggest of them rating at something like 72 horsepower. Oh! Yes; and that rear axle is new; it's a two-speed axle—something the Austins have just developed.

Alco Still Has the White Band.

Where's the Locomobile family? Just down the aisle a way; but don't let's pass the Alco without looking at it. What makes the Alco so easily distinguishabel among such a lot of cars? Why, that white band around the body. Sure! Some other cars have got it, but they don't seem to have it in exactly the same place as the Alco, and some how or other it doesn't look the same. The Alco engine, if you notice, is of the T-head type. It's a big, solid motor that delivers well over its rated 60 horsepower. Electric lighting generator? Of course; that's it on the left side; it's a Gray & Davis, and it is no wonder you almost missed it, for it is so small and it is painted to match the cylinders. Gearset? Four forward speeds with direct drive on the fourth. See how the clutch is enclosed in the flywheel housing? That's to keep out the dirt. Hard to get at for adjustment? Not at all; all you have to do is to remove a couple of small nuts and take off the top cover. Dry plates in the clutch, and it never needs lubrication. That's one of the little fine points of the Alco that not everyone sees. And look at the long, wide rear springs. Plenty of flexibility there. Another point—see how the gasolene tank is protected by the frame. Now, stand off and look at the bodies. Works of art, aren't they? Notice the way the lower end of the brake lever is housed and the "set" of the hood and the fenders.

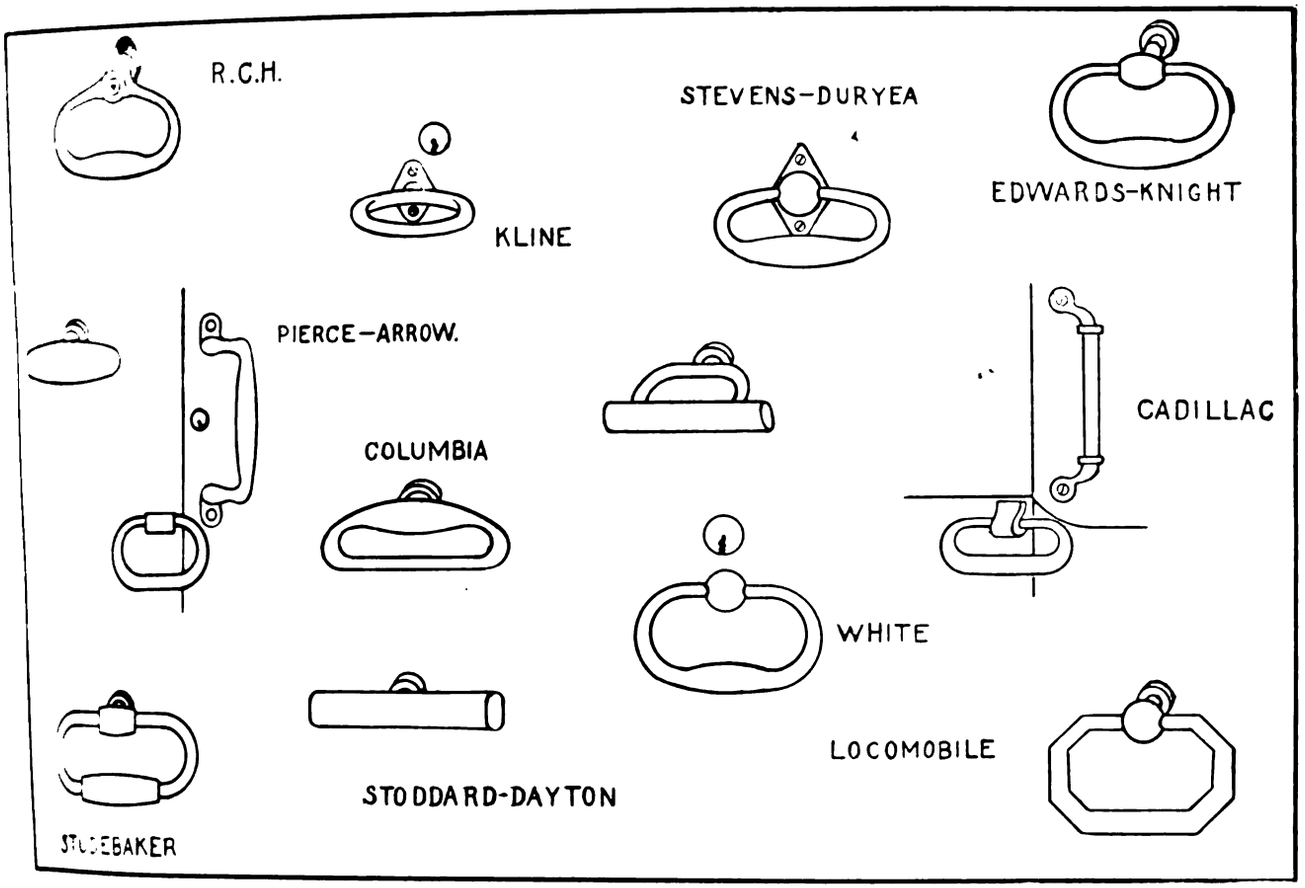
Roominess in Locomobile "Little Six."

Now for the Locomobile. Why is that one called a "little six"? Well, it is a little "six"; it's smaller than the big "six" over there. Doesn't look much smaller, you say? No, not in the body, unless you make a pretty close examination; there surely is plenty of room and to spare in it. Still using the characteristic manganese bronze crankcase and gear case? Yes, and it scarcely has changed at all. It's lighter than iron and stronger than aluminum. That's why it is used. How does the "little six" differ from the big one? It has smaller cylinders, for one thing—4¼ x 5—and is lighter all over. Otherwise it is not very different. It has all the well-known Locomobile features—four-speed gearset, with the distinctive gate control; liberal road clearance with low center of gravity. Its lowness, by the way, is one of the things that make it distinctive. Still making the "four," the "30" that made such a hit? Certainly, that's it over there, and it is just the same as it always was, except that it has a new set of bodies. And while you are looking at bodies, cast your eye over these new limousines and coupes with their rounded backs. Rather distinctive, aren't they? And notice the large windows and the liberal amount of elbow and leg room. Complete equipment? Sure!—the latest addition being an electric lighting system. No, no electric starter; a Disco does the trick, and it is about the simplest there is. Almost forgot to mention that the "big six" motor has been increased to 4½ x 5½, and it gives 82 horsepower now.

Didn't know the Pope-Hartford company made a small car, eh? Well, you know it now; that's it—the one you're looking at. Don't see how you mistook it for anything else with that curved radiator top and hood. Thought it was too small for a Pope, did you? Look at the room there is in the body and you won't think it is so small; no necessity for crowding with five passengers aboard. Is the motor the same as that in the other Popes? Of course, it is. Those overhead valves account for a good deal of the extra power that can be gotten out of the engine. That's why they are retained. Cylinders are in pairs, you notice, same as in the other Popes, but they are smaller, of course. Yes, they're the same size as those in the big "six-60"—4 5/16 x 5⅛. Forty horsepower for the "four" and 60 for the "six." The little Pope is new all the way through, but the others haven't changed very much. An electric lighting and engine starting system has been added, a few minor improvements have been made, and that is about all. Oh, yes!—bodies are larger and the cushions have been given the touch that makes them softer and more luxurious. Not much change, but it is one that counts, nevertheless.

That business-like looking car over there is another of the medium-priced "sixes" that is making such a hit. It's a Chalmers. Not medium priced last year? No, it was not, but this is not last year. What of it if 900-odd dollars have been lopped off the price? The car isn't any smaller; nothing has been skimped. As a matter of fact, the materials are even better than they were, and instead of reducing the amount of equipment, it really has been increased.

Value in the Chalmers Offering.



What does the seven-passenger car sell for? There's a catalog in front of you. What does it say—$2,600, with top and dynamo electric lighting system and compressed air starter and demountable rims and almost a hundred and one other accessories thrown in? Not so bad, is it? Alterations? Not many; the electric lighting system is new, of course, and the springs are longer and wider; also the steering mechanism has been made stronger, though it never gave any trouble in the past. Cushions are deeper, too—11 inches now; and there is a lot more room in the tonneau. Any "fours"? Sure there are "fours"! That's the "36" there; it sells for $1,950, that five-passenger torpedo does. Bodies look different, you say? They ought to, because they're all new. Notice the flush sides and the clever way the windshield is attached. The clean running boards are another thing you ought to take note of; nothing on them but the spare tires.

Cole, Too, Adds Two Cylinders.

Ever see a six-cylinder Cole? No? Didn't think you had, for this is the first time they have been exhibited. How do you like it's external appearance? Nice, well-blended lines, eh? Lift the bonnet and take a look at the motor. It measures 4⅛ x 4¾ and it delivers the biggest 60-horsepower you ever felt. Hard to start? No reason why it should be; it's fitted with the Delco lighting, starting and ignition system. Nothing to do but step on a pedal, and away it goes. Certainly, the system takes care of ignition, too. That's simple enough, isn't it? All you have to do is to put a little water in the battery once in a while—say, every month or so. Those are the Cole "fours" just behind you—the "40," which lists at $1,685, and the "50," which sells for $1,985 as a seven-passenger car. No, there has been very little alteration in construction. The "six" is new, of course—that's why you haven't seen it before—and the "fours" haven't needed much changing beyond a slight revision. They all have Northway unit power plants with the motor and the clutch and the gearset combined in a rigid unit that defies the disturbing influence of frame weaving.

Those well-finished appearing cars over there are the Fiats—three of them, the

No, you can't tell what it sells for unless you ask the salesman; prices are not given in the catalog. Continental motors used exclusively in these cars, both the "fours" and the "six"; guess there is no need for going over their fine points; they're too well known to need it. Notice that all the Firestones are left-hand drive, this year. That's new, and so is the placing of control levers in the center of the footboard where they are within easy reach.

Here's a Brand New Garford "Six."

That car with the unusual radiator? It's a Garford—a brand new Garford, and that is not such a queer-looking radiator, after all. Come over and look at it closely before you criticize it. Now, do you see what it is? Ever see a head lamp set into the top of a radiator that way before? No? Well, it's startling only because no one ever before mounted a lamp that way; it's a brand new feature. That one lamp is a powerful one; two are not needed; and it stands to reason that one lamp is less bother than two, no matter how little bother the two may be. Gives the car an unmistakably distinguished appearance, eh?

But don't go away with the idea that that is the only new feature in the car, because it isn't; the whole car is new all the way through and it fairly bristles with ideas. Take a look at the engine, for instance. Six cylinders in a single block and measuring 3¼ x 6. No doubt about it being a long-stroke motor, is there? Let's take off the cylinders and have a look at the internals. No, it's not hard to take them off. Just take off a couple of nuts and the cylinders lift up; that's one of the advantages of the block motor. Ah! there's the secret of it's vibrationless running. Notice the way the crankshaft is counterweighted, and the liberal bearing surfaces—four main bearings and all of them large. Now, observe the way the engine is supported in the chassis at four points and the compensating device which permits slight frame weaving without transmitting it to the motor. Big valves, too, aren't they?

Clutch? It's a cone with cork inserts to make it act smoothly. Of course, it has a four-speed gearset, but it differs from most others, however, in that direct drive is obtained on third. Take a look at that big, solid I beam front axle and the full-floating rear axle with its one-piece drop-forged casing; notice the liberal brakes and the way the pressure is applied. Bodies? They're made of steel and they're welded; Turkish cushions make the seats comfortable, and the price is out of all proportion to what

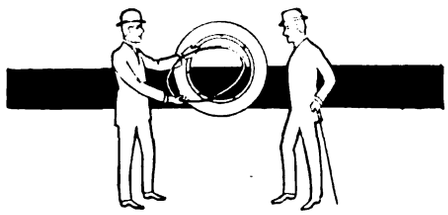
Digitized by Google

you'd think it is. The five- or seven-passenger car there, with complete equipment, including an electric lighting and engine starting system and an electric horn and everything else that goes to make up a well-equipped car, sells for $2,750. Look it over again; it will pay you to spend a little time here.

"Sixes" Selling for Less Than $2,500

Here's a couple more "sixes" that are new this year—never shown before—the Hudson and the Havers. The Havers is not a new "six"? No; the "44" isn't, but that big one there, the "55," is new. The Hudson, of course, is a new model, and a mighty attractive one, too. Let's put them side by side and compare them. Lift up the hoods first and let's see the motors. Both of the L-head type, are they? But notice that the Havers cylinders are cast in pairs and the Hudson in threes. Also, there's a little difference in size. Hudson cylinders measure 4⅛ x 5¼, and the Havers cylinders measure 4 x 5. Both cars have multiple disk clutches, you will notice, and both have three-speed selective gearsets. Otherwise they have few features in common, which is but natural. Any other Havers or Hudsons? Sure! There's the Havers "6-44" you noticed over there—it has a 3¾ x 5 motor—and the Hudson "37," which is a four-cylinder model which has many of the features of the "six." The cylinder dimensions are the same, for instance, and so are the clutch and gearset. Difference in price? Well, the Havers "6-55" sells for $2,250 as a five-passenger touring car and the Hudson "six" of the same kind sells for $2,450. Not so very much difference, at that. The Hudson "37"? Sells for $1,875; all of them have electric lighting and engine starting systems as regular equipment.

Kline's Convertible Roadster-Coupe.



Are there any "sixes" among those Klines? Yes, sir; two of them—a "50" and a "60." No, the Kline engineers have not found much room for improvement. The cars are pretty much the same as of old, though there have been notable increases in the equipment—there has been a Rushmore electric lighting system added, for one thing; and, say! do you see that nifty-looking coupe over there? Handsome, isn't it? Does the coupe part of the body lift off? Don't know why it should—but hold on a minute! Yes, it does, too. What do you know about that! Never know anything was missing with it lifted off, would you? What's left is an uncommonly good-looking roadster. And notice the clever way the two parts of the body are fastened together, so that the dividing line scarcely is visible, and it is impossible for dust or water to get in. What chassis is it mounted on? Any of them, except the "4-30," and that means both of the "sixes" and the other "four," which is rated at 40 horsepower. Expensive? Not so very; it costs $2,750 on the "40" chassis, $3,350 on the "6-50" and $3,750 on the "6-60." Yes, the price includes the top—of course; equipment, too.

The Lenox That Comes from Boston.

What say? Never heard of a Lenox "six"? The Lenox that comes from Boston? You don't know what you have missed, then. You see the Lenox "four" over there? Well, that's the "six" beside it. Don't see how you could miss it, because the two look so much alike. The "six" is larger and longer, of course, but still they look like brothers. What size motor in the "six"? It's 4 x 5 and is rated at 60 horsepower. Get down and take a slant at the gearset combined with the rear axle; it is selectively controlled and provides three forward and one reverse speeds. The price is $2,750 for a six-passenger touring car, and it includes complete equipment, which means an electric lighting and engine starting system, too. The "four"? It has a 4¼ x 5½ motor in it rated at 40 horsepower. Any of the open bodies except the speedster, which sells for $2,100, can be bought for $2,000. Equipment? Of course.

McFarlan and Its Block Motor.

While you are over here, have a look at these McFarlan "sixes." Another "six" you never heard of, eh? Where have you been for the last year? Put the three McFarlan models together and look at the motors. Model T, you notice—it's a new model, by the way—has a block motor, the cylinders measuring 4 x 6; model S, which also is a "six," has the cylinders cast in blocks of threes, the dimensions being 4 x 5; and model M has its cylinders cast in three pairs, with a bore and stroke of 4¼ x 5, respectively. All of them have multiple disk clutches, though in the T and S cars the gearset is on the rear axle; in the M cars, it is a unit with the motor. Any changes since last year? Not very many; Vesta electric lighting systems have been added to all of them and in the S cars, the motor is hung on three points instead of four. Another change in the "six" is that the air compressor for the starter now is driven directly by the motor instead of through gears. The equipment of all the cars also has been

increased and there is scarcely anything missing now.

Marmons With Gearsets in Rear.

This car is the Marmon "six," big brother to the famous Marmon "32." How old is it? It isn't old; it's new—this is it's first appearance. Notice it has the same kind of a T-head motor as the "four." The dimensions are different, however, the "four" measuring 4½ x 5 and the "six" 4½ x 6. Wish you could see that Marmon oiling system; the oil is forced through the hollow crankshaft right into the bearings under pressure. Easily clogged? Not a bit of it. You'd be surprised the pressure the oil is under; nothing that could ever get in would clog up those pipes. Here's a difference between the two cars: The "four" has a cone clutch and the "six" has a dry-plate multiple disk clutch. Both of them have their gearsets on the rear axle, however. The "four" looks different, you say? Well, it ought to, inasmuch as the steering wheel has been shifted over to the left side with the control levers in the center. The "six" is steered from the left side, too. Take a look at the trunk on the "six." Neat location for it, isn't it? By placing it there the manufacturers have utilized a little space that ordinarily goes to waste. Improves the appearance of the car a lot, too—don't you think so? Price of the "six"? Any of the open body styles list at $5,000. There is a new front axle on the "six," too, that you ought to see. The feature of it is that the spindle is placed directly in the center of the wheel plane. That makes for easy steering and a fairly short turning radius.

Distinctiveness of the Matheson.

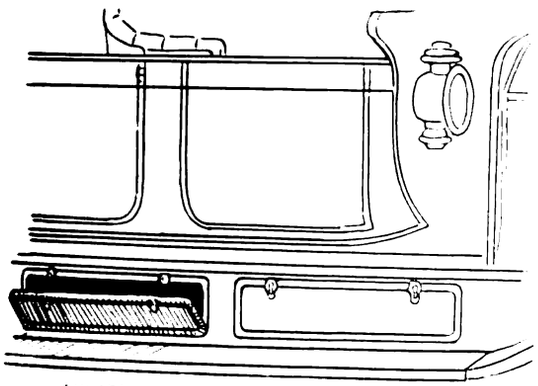
Here's the Matheson. You can't possibly say you have never heard of the Matheson "silent six." Know it anywhere, wouldn't you? There's no mistaking those overhead valves and that heavily reinforced frame. Anything new in the Matheson? Sure there is! There have been a number of changes made, but the motor is about the same—cylinders measure 4½ x 5, same as ever. But notice the rear axle, for instance. See how it has been increased in size and strength? It has larger bearings. The brakes, as well, have been increased in size—the service brake drum now is no less than 17 inches in diameter. The gearset, too, has been altered slightly, the first and third speeds having been reduced and the second increased. Now, go back to the motor and look at the new valve cages. A great deal simpler, are they not? They're rigid, too. The cooling system, also, has been enlarged; the flywheel now has fan blades instead of ordinary spokes; the pressure on the fuel tank now is maintained by means of a positively driven pump instead of by

Digitized by Google

exhaust pressure. And so on, all through the chassis little things have been changed here and there, though no really big changes have been made, unless the addition of a complete electric lighting and engine starting system can be called a change. Matheson "four," the "Big Four"? No, no more; the "six" is the only Matheson.

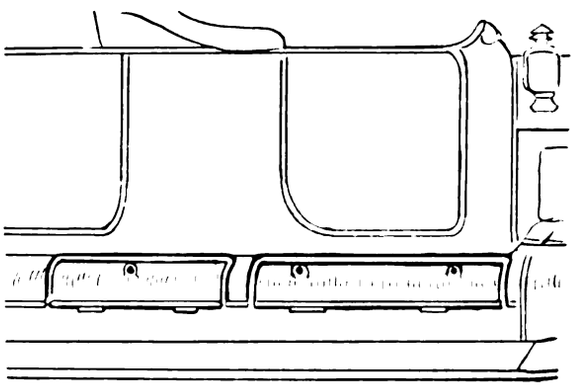
Norwalk Introduces a Racy Type.

Look at those two "sixes" over there; they are no more alike than are horses and cows. That low-slung, racy-looking car is the Norwalk, which bears the distinction of being the only six-cylinder underslung car on the market. The one beside it is a Mitchell. Quite a little difference, isn't there? Notice how low the Norwalk is. It's because the frame is hung beneath the axles instead of over them. If you look at the Mitchell you will see the difference. If you look under the Norwalk you can see how straight the drive is. See the Norwalk motor? It measures 4 x 5 and the cylinders, as you can see, are cast in sets of three. Different from the other Norwalk motors, you ask? It certainly is, for if you remember, Norwalk last year had an overhead valve motor with cylinders cast in pairs. Quite a little difference isn't there?



Mitchell Adopts "French-type" Body.

Now take a look at the Mitchells. Yes, those are Mitchells. No wonder you don't recognize them. They've been remodeled from stem to stern. In the first place, they have what the designers call "French-type" bodies with straight lines and deep cushions, while the motor is of the T-head type and it has an exceptionally long stroke—3¼ x 6 in the case of the 50-horsepower and 4¼ x 7 for both the four-cylinder 40 and the "six," rating at 60 horsepower. No, they are not the longest strokes in the show; several other motors have seven-inch strokes, but no other has such a long stroke combined with such a small bore. Notice particularly the forward construction of the motor, the fan and the magneto assembly. And then step behind and see the way the electric lighting generator is mounted over the propeller shaft and connected to it through a "silent" chain. Another feature about the Mitchell you don't want to miss—yes, it is common to all—is the gearset. Three speeds are provided, selectively obtained, and it is peculiar in that the reverse pinions are stationary except when reverse gear is engaged. Therefore the gearset is just about as quiet as it is possible to make one. What do the new Mitchells sell for? The "40" sells for $1,500, the "50" for $1,850, and the "60" for $2,500, and they are fully equipped at that price, too.



Put the Oakland and the Oldsmobile together and you will notice another startling difference. Oakland is not complete, you say? Yes, it is; the running boards are used to run the length of the running boards? Very evidently they're gone. In their place there are two lockers beneath the frame, out of the way, leaving the running boards perfectly clear. There's another new feature of the Oldsmobile you want to look at—the way all the control elements other than the levers have been placed on a cowl dash close to the driver. Not much of a stretch to reach them, is it? Any more Oldsmobiles? No; there is only the one model this year, though it may be had in a variety of body styles. Just cast your eye over them; they're all new, and they're thoroughly up to the Oldsmobile standard of excellence.

Oakland "Four" Resembles the "42."

Any four-cylinder Oaklands? Certainly, brand new. It's called the "35" and has there are. That little one behind you is

LOCATION OF OLDSMOBILE LOCKERS

MATHESON TOOL STORAGE SPACES

made that way purposely. A good part of the running boards never are used anyway, and, so those two aluminum steps are quite sufficient. And it reduces the weight and gives the car quite a distinctive appearance, too. Examine the V-type radiator with which the Oakland is equipped. It's made of German silver—another of the distinctive Oakland features.

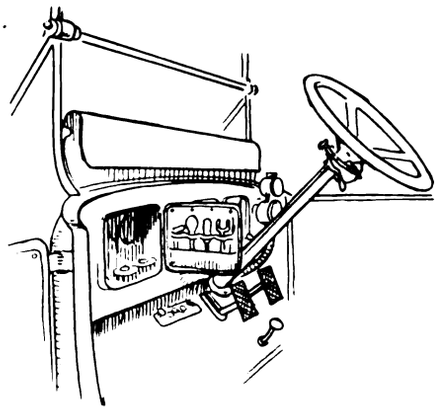
Now, let's compare the Oakland and the Oldsmobile "sixes." No Oakland "six," you say? O, yes there is. You may not have seen it yet, but if you will turn around you will see it now. It's just been brought out; that's why you haven't seen it before. Now, if you look at the motors you will see that both are cast in pairs, and that they have the same bore and stroke—namely, 4⅛ x 5¼. The Oldsmobile motor forms part of a unit power plant. Notice also that they both have cone clutches.

There have been few mechanical changes in the Oakland, but if you look closely at the Oldsmobile you will discover that it is new all the way through and that it bears little resemblance to any of the Oldsmobiles that have gone before. Where are the distinctive Oldsmobile tool boxes which been brought out as a sort of smaller brother to the larger "42." It is pretty much like the larger car, too, and there have been mighty few changes made in the older one. It's been refined, as a matter of course, and the equipment has been increased, too, though it is much the same car that it was.

Gray & Davis System in Peerless.

Now, lets's go over and take a look at the Peerless line and see how much more you can learn in a short space of time. Any new models? No, none; the old ones are continued with very few alterations beyond the addition of a Gray & Davis combined electric lighting and engine starting system; they had only electric lights last year. There they stand, the four of them—the "38-6," the "48-6," the "60-6," and the "40-4." Quite an impressive appearing group, don't you think? Now, suppose we delve into them and discover just what is new. The newest thing, of course, is the electrical apparatus. Outside of that, you will find a new butterfly throttle valve in place of the piston valve used in the past—it permits lower throttling; then you will find that dual ignition has been adopted in place of double ig-

Digitized by Google



nition. Why? Well, it was discovered that the battery plugs in the dual system were so little used and they sooted up so readily that thy were not worth retaining.

If you look still further, you will find that the sizes of the front tires on the "38-6" have been increased to 36 x 4½ to conform to the size of the front ones. That makes the carrying of two different sized spare tires unnecessary. The same change has been made in the "60-6," only the tire size is 38 x 5½. Pretty big tires, aren't they? Notice also that the side lamps have been taken off and that their place now is taken by imbedded lamps. Another thing—the windshield stays now slant backward instead of forward, leaving the front of the car unencumbered.

Force-Feed Oiling in Pierce-Arrow.

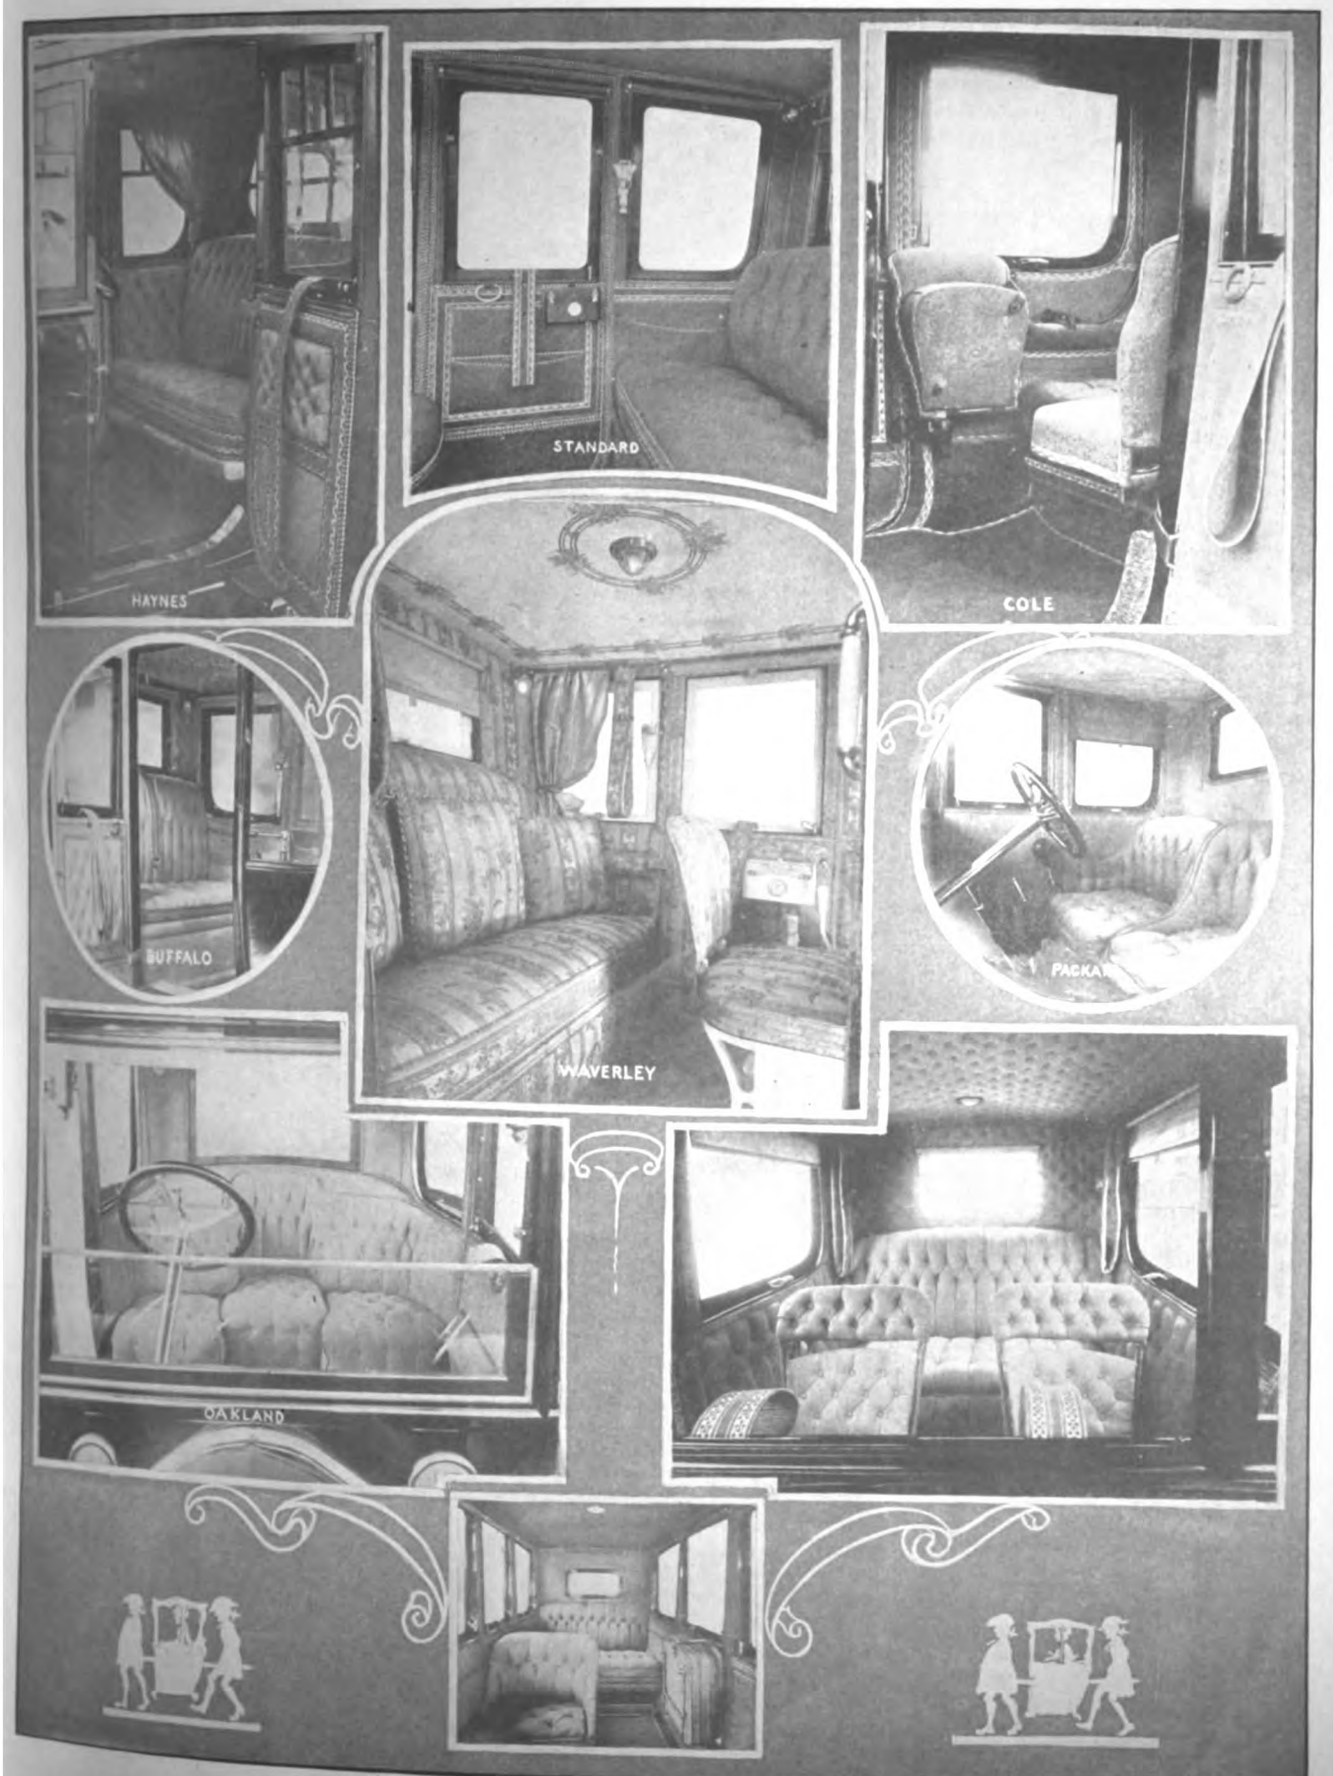
If you look straight across the hall until your eye encounters a gracefully arched limousine roof—arched at the door so as to give more head room in entering—you may be pretty sure it is a Pierce-Arrow. You're right; there are none better. That arch in the roof is one of the distinctive features of the Pierce-Arrow car, and the way it has been copied ought to warm the cockles of the designer's heart. Lift up the hood of the nearest car—the big "66." Surprised at the absence of the familiar oil tank on the side of the cylinders? No more will it have a place on Pierce-Arrow engines. Its place has been taken by a brand new force-feed oiling system, the heart of which is a powerful pump. The oil now is pumped direct to all the bearings. More efficient? Of course it is, for the supply of oil varies as the engine speed varies—the faster the engine runs the more oil it gets, and vice-versa. Notice, also, while you have the hood up, that leather universal joints now are used in the magneto coupling and that the fan bracket is made with a screw adjustment with which to tension the belt.

What is that pump for? That is to compress air for the starting system. Didn't know they used starters, eh? Well, they do. The pump stores air in a tank under 200 pounds pressure, and it is admitted to the cylinders in rotation by means of a rotary distributer. Take a look at the clutch, now, and notice that it is fitted with cork inserts, the German bronze having been eliminated. Another important change is that there now are two universal joints between the clutch and the gearset and that the gearset is 4½ inches nearer the rear, permitting more easy disassembling of the clutch. Never heard of a tubular propeller shaft you say? Well, here's a chance for you to look at one. The Pierce-Arrow propeller shaft is a tube instead of a solid bar as heretofore. Don't think it will be quite as strong? That shows what you know about machinery. It's actually stronger. If it was not you may rest assured that the Pierce-Arrow engineers never would have permitted it to be used. No, there have been no really radical changes in the line—the "38-C" motor dimensions have been increased from 4 x 5⅛ to 4 x 5½, but that is not a radical change—though when even the Pierce-Arrow engineers can find reason for small changes it is significant of the trend toward perfection.

PIERCE-ARROW DASH

Here's another new "six" that may have escaped you. It's a Pullman. Never heard of a Pullman "six," either? Well, that's pardonable, for it was only brought out a few months ago. Still, there are quite a few of them in the hands of owners, even though they are young. As a matter of fact, both the "six" and that "four" over there are new cars—brought out simultaneously, you know. Both have the same T-head, pair-cast motor with 4½-inch bore and 5½-inch stroke. The little one over there that is not so little after all is the "4-36"; it has not been changed very much. Take a look at the new 19-inch rubber steering wheels with which all the cars are fitted. And notice that the horn now is located beneath the hood, where it is out of harm's way and less likely to become clogged with road dirt. Also make a note of the fact that the springs are longer and wider, that the tire irons now are at the back of the tonneau, that the running boards now are perfectly clean and that the oil and carburetter adjustments have been brought up to the dash. One of the things you can't see, though you can learn about it, is that the motor and the gearset and the steering gear and very nearly every other part is made right at home in the Pullman shops. Another thing to make a note of is that the gearsets are unusually substantial. Prices? The "six" in seven-passenger touring form lists at $2,750, with complete equipment, too. The "4-44" and the "4-36" list at $2,-150 and $1,875, respectively, with five-passenger bodies.

GARFORD HEADLAMP



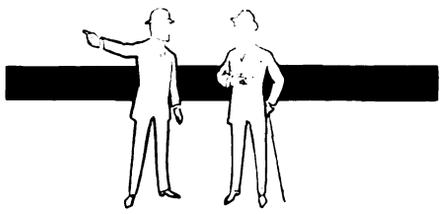
Debut of the Stearns-Knight "Six."

It's a good bet you never heard of a Stearns-Knight "six." Didn't think there was such a thing, did you? Neither did a whole lot of other persons, but there is the car, nevertheless. It's making its debut at the show. It has the very same white line on the radiator that has marked all Stearns cars for a good many years. That's one way you can always identify it. And, of course, it is one of the very few six-cylinder Knight engines on the American market—or any other market, for that matter.

Does it differ very much from the Stearns-Knight "four"? No, it is so much like it that you can scarcely tell them apart, except for the fact that they have not the same number of cylinders. "Four" looks just the same, you say? Of course it does, for the only changes that have been made in it are minor ones. The magneto is a Mea, for instance, and the design of the steering gear casing has been altered a little bit to make it stronger. The bodies have been changed considerably, however, and quite naturally they are better looking than ever before.

Here's a difference between the "four" and the "six," though it is a small one: The front of the "six" motor is supported on a steel arch which, in turn, is bolted to the side frames. It replaces the usual aluminum arms from the crankcase. Also, a separate cross-frame member at the front braces the frame and serves as a radiator mounting. Notice that the member can be removed with the radiator, leaving the whole front of the engine exposed for inspection. The clutch is the same as that used in the "four," and a four-speed selective gearset is used. New models? All the "sixes" are new, of course, and among the

Digitized by Google

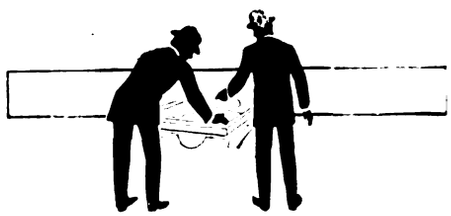


LUXURY AS TYPIFIED BY THE DESIGN AND UPHOLSTERY OF CLOSED CARS

Digitized by Google

"fours" a new seven-passenger touring model has been added.

The Speedwell over there is another brand new "six." It's new all the way

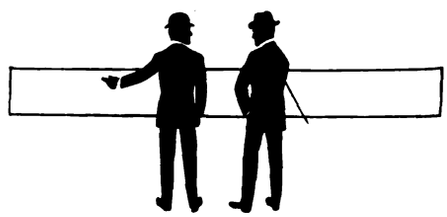


through and has very few features in common with previous Speedwells. Beginning to think there are quite a lot of new "sixes" after all? Take a look at that new six-cylinder Speedwell motor, with its L-head cylinders cast in blocks of three each. Pretty clean design, don't you think? Plenty of power, too; the cylinders measure 4⅛ x 5¼, and it is not the least bit difficult to get anywhere from 57 to 90 horsepower out of it. Notice the way the dry multiple disk clutch and the three-speed gearset are mounted in a unit with the motor and the substantial way the whole assembly is mounted in the frame. The model differs primarily from previous models in that it has a six-cylinder motor, of course, though another difference is in the three-quarter elliptic rear springs, the drop in the frame, the pressure-fed fuel supply and the completely enclosed construction. What say? Were other Speedwells driven from the left? No, this is the first of its kind to have the steering wheel at the left with the control levers in the center. It's equipped with an electric lighting and engine starting system, too, at the list price of $2,850 for a five-passenger touring car.

That bunch of cars over there with the gently tapered hoods and concave skuttle dashes are the Stevens-Duryeas. No wonder you scarcely recognized them, for they have been gone over with a fine-toothed comb and every little thing that does not harmonize combed out. Cast your eye over those new bodies. Beauties, aren't they? Not a thing outside to mar their clean appearance. Larger than the older bodies? Quite a bit larger, and there has been a corresponding increase in the size of the motor. So far, only one chassis is listed. It mounts a motor with L-head, pair-cast cylinders measuring 4⅝ x 5½, and, of course, the unit power plant supported at three points, which always has been a Stevens-Duryea feature, is retained. The dry multiple disk clutch is retained, also, as is the three-speed gearset with the distinctive method of mounting the gear shift lever. Very little change in these parts, but in the chassis proper a general enlargement is apparent. The wheelbase has been lengthened and a new method of hanging the rear springs adopted. They are below the axles now and consequently the body is quite a little bit lower. Electric lighting system? Of course; the Adlake system is standard equipment. Price of the seven-passenger touring car? $4,750. They're all styled Model "C-six," by the way, to distinguish them from their predecessors.

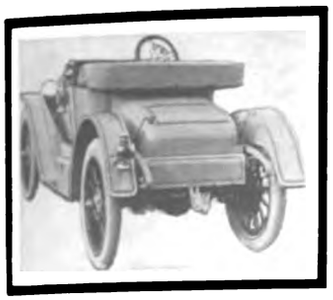
Another six-cylinder Knight engine? Yes, and it's the only other one. Only two made in America, you know, and as you've already seen the Stearns, this must be the Stoddard-Dayton. Not that you would have any particular difficulty in identifying it, for you can tell it almost anywhere by the left drive and center control. Also, notice the tool boxes under the running boards; they're another distinguishing mark. Other cars use them, too, you say? Yes, but they're not such big cars as the Stoddard.

Changes? None that amount to very much. There's a new I-beam front axle, for instance, that is very much like the axle used in Columbia cars, which, as you know, also are produced by the United States Mo-



tor Co. and which also have Knight motors—that is, some of them have. But to get back to the Stoddard-Dayton, the steering gear also has been improved and now is of the worm and sector type mounted on roller bearings. Radiator larger? Don't know how you guessed it, for there has been so little increase that it scarcely can be detected without a measure. The fenders also have been altered slightly. Notice how much better they hug the wheels and how much better the lines are? Now, if you had said the bodies look larger you would have been nearer right, for there has been a substantial increase in size; there's a great deal more room in them now. Also, take note of the way the electric side lamps have been set into the dash. Any other Stoddards? Oh, yes; there are three four-cylinder poppet valve engined models right behind you—the "30," the "38" and the "48." No, they have not been changed even a little bit, as far as their mechanical construction goes. Their bodies have been refined, however, and little finishing touches put here and there.

Here we have the sturdy Stutz family; the "four" is the car that made good in a day on the Indianapolis track two years ago and has been making good in the hands of owners ever since, and the "six" is brand new, of course. But it retains all the Stutz characteristics, with emphasis on the rear axle system around which the car is built. Get down and take a look at that rear axle. Notice the sturdy way it is built, the compact gear case. You can see that the "six" axle is slightly larger than the axle in the "four," though it is exactly the same design. One of the features of the axle is that the outer ends of the axle shafts are carried in large annular bearings, construction which is common to the best of American and foreign cars, if you don't know it. Yes, the smaller Stutz is pretty much the same as it was before. The intake manifold has been water jacketed to ensure a more homogeneous mixture of the gas, the wheelbase has been increased about four inches, and that's about all. Price? The roadster lists at $2,250 and the six-passenger touring car at $2,300.



Here's another new "six" that you probably haven't heard much about. It's the Warren, and it's brand, spanking new. The manufacturers style it a "specialized" automobile for the reason that most of it is made up of parts which come from the factories of specialists. The Bosch magneto, for instance; Timken and Hyatt and R. I. V. bearings, Spicer joints, Gemmer steering gear—all these parts enter into the Warren cars, both the "four" and the "six."

The motor? Lift up the hood and glimpse the motor, with its L-head cylinders. One of the things that ought to be impressed upon you by a look at the chassis is the simplicity of the make-up. Notice the way the brake rods are fastened to the cranks on the rear axle. Pretty neat? Nothing that could be left off has been put on, and the result is that the chassis looks unusually "clean." The motor measures 4 x 5 and there are two "fours" mounting motors measuring 4¼ x 4¾ and 4⅛ x 4½. Plenty of variety in that line, isn't there? Changes? Not in the "six," of course, for it is new all the way through. Nothing to speak of in the "fours," either, now that you mention it. No, original construction has proved quite good enough. There has been refinement, of course; that is to be expected, but there has been no radical change.

Now, let's go over and take a look at the White family. They're all equipped with block motors, from the little four-cylinder 30-horsepower model right up to the six-cylinder model, which means the four-cylin-

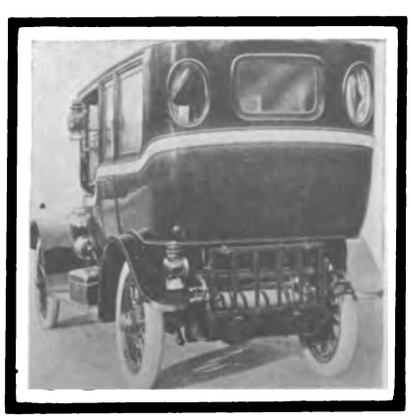
Tired of looking at so many "sixes," you say? Hadn't ought to be, for they're nearly all new and they're interesting, if for no other reason. But let's switch over to the "fours" for a while. Take this bunch over here, for instance—Maxwell, Krit, Buick, Hupmobile, R. C. H., Detroiter, Metz, Little, Regal, Overland, Studebaker, Empire—you can buy any one of them for less than $1,000, and mighty good value, at that. Look at that little Metz. Wouldn't think it sold for as low as $395, would you? But it does, all right; and, what is more to the point, it is fully equipped at that price. What makes it so quiet? Well, one reason is that there are no gears in it. It has a friction transmission; it's as smooth as silk

STEARNS KNIGHT REAR

and not any noisier, either. Another point—it has multiple disk brakes. Ever hear of them? They're right in the wheel hubs.

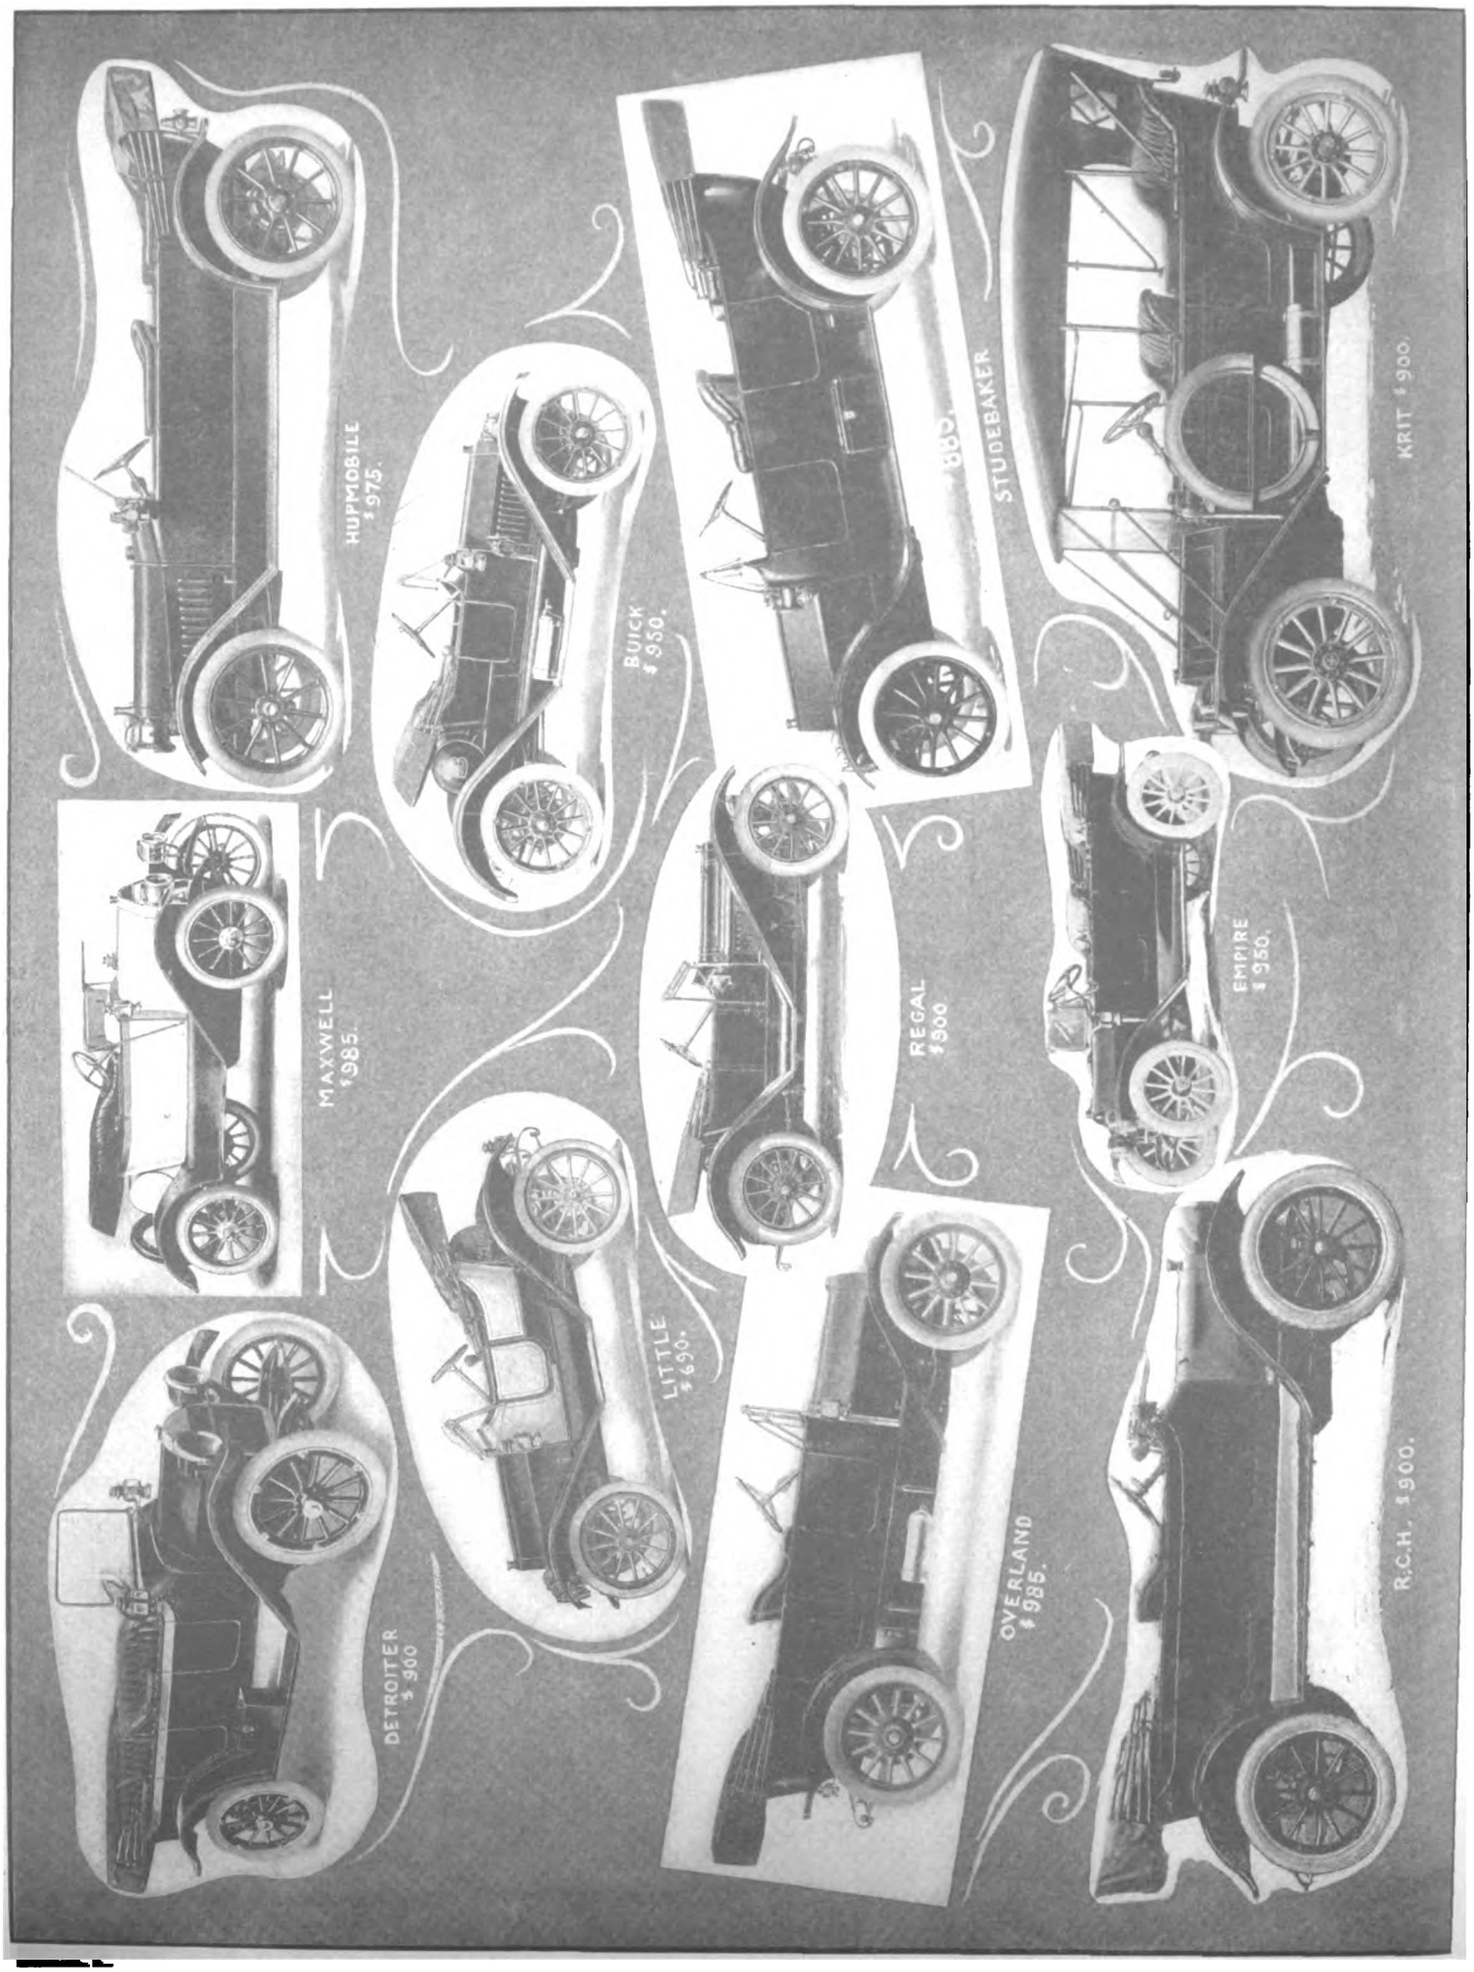
Studebaker and Little you have already looked at, though may not have noticed that the smallest Studebaker, there—the "25"—costs only $885. Noticed it, you say? Isn't it a great value? Look at the clean-cut engine and the roomy body with the well-blended lines. And make a note of the fact, too, that it is fully equipped.



Take a slant at the Detroiter, there. Which one is it? The one with the white band around the top of the body. Adds quite a touch of distinction, doesn't it? Now, lift up the hood and notice the compact unit power plant and the neat gear shifting arrangement with its lever terminating in a plain knob. Pretty compact design, eh? Look at the way the magneto is driven from the timing gears at the flywheel end of the engine instead of at the front end. Yes, that's one of its distinctive features. Nine hundred dollars is the price of the five-passenger car, and it includes full equipment, too.

Those cars over there with the squarish radiators and hoods are the R. C. H. family. Look quite British, don't they? Sure! they're in the low-priced group; you can buy that touring car for $900, and there is plenty of room for five persons in it, too. Ever notice what a long-stroke engine the R. C. H. car has? It measures 3¼ x 5, and all the cylinders are cast in a single block that is beaten by few for neatness and simplicity. What power? Twenty-five horsepower, she pulls, and quite easily, too. The long stroke is responsible for that. Yes, they make a roadster. Classy looking little car, too, and the price is the same as for the touring car—$900.

Here's another little car that is a big one in reality—the Hupmobile. Remember when it first made its appearance in its present form last show-time? Well, it is just the same now. Price has gone up a little, it is true, but then look at the extra equipment you get. Still, the car sells for $25 less than $1,000. Ever notice that Hup engine with the magneto mounted over the flywheel and driven by a "silent" chain? And take a look at the dash arrangement, with the spark coil and throttle and carburetter air levers on a cowl dash. The Hup was one of the first to bring out a dash of the type. What makes the cowl so deep? That's because the gasolene tank is in it. Makes a steady flow of gasolene to the carburetter sure. No need for pressure feed. Make a note, too, that the steering gear is at the left side, with the gear shift lever in the center.



This car here is the Krit—another classy looking little machine that lists at considerably less than $1,000. Sells for only $900 and, of course, it is fully equipped. This is another car that has an unusually attractive unit power plant. Notice how the oil filler pipe, for instance, is in the flywheel housing and the way the hot air intake to the carburetter is arranged. Look at the chassis over there and notice that the rear springs are full elliptic to give the greatest possible resiliency. Yes, it's driven from the left side and the control levers are in the center.

Here's the Empire. It sells for $950, though you might think it cost a whole

ALCO "MARINE" WINDOWS

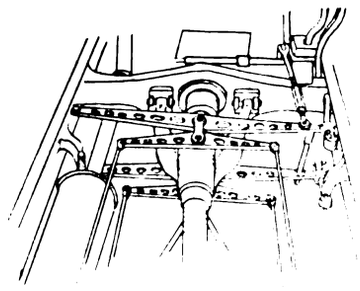
[illegible] Another low-priced car with a rear appearing unit power plant rated at [illegible] horsepower. Long-stroke motor? Of course the long-stroke motor's the thing this year, if it ever was. Take a look at that empire rear construction. It's sturdy, and if you could only see inside of it you wouldn't have to wonder why it wears so well and runs so quietly. It's mounted on the finest roller bearings. No, only the one model is made—a five-passenger tour-[illegible]



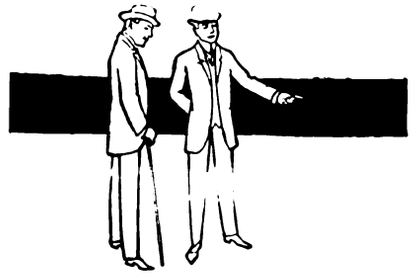
Variety Found in Regal Line.

[illegible] very low cars over there? They [illegible] the Regals. Surely you know the interesting Regal. O, that one that's not [illegible] low as the others? That's a new one that has just been brought out. The [illegible] are hung beneath the axles, and [illegible] the body is not quite as low as the [illegible] it still is pretty low. That under-[illegible] touring car there sells for $950. Cer-[illegible] has a long-stroke motor—meas-[illegible] just 3¼ x 4½. One of the beauties [illegible] Regal line is that there is such vari-[illegible] Both underslung and overslung, and [illegible] them is high priced enough to take [illegible] the real low-priced class.

The Buick line over there is another that [illegible] complete—cars that range in [illegible] the way from $950 up to $1,650. [illegible] the $950 car? It's that roadster [illegible] the gasolene tank behind the seats. [illegible] have not been many alterations [illegible] the Buick line, unless the addition [illegible] new model can be called a change. [illegible] the new one, there—the "40." It [illegible] $1,050, and it's fully equipped, too. [illegible] distinctive in the Buicks? Well, [illegible] for instance. It's the very same [illegible] always has been used, with the [illegible] overhead, which location permits a [illegible] symmetrical combustion chamber [illegible] course, increases efficiency. That's [illegible] can always get so much more [illegible] out of a Buick motor than you ex-[illegible] you soon get to expect it, though, for [illegible] it is there if you want it.

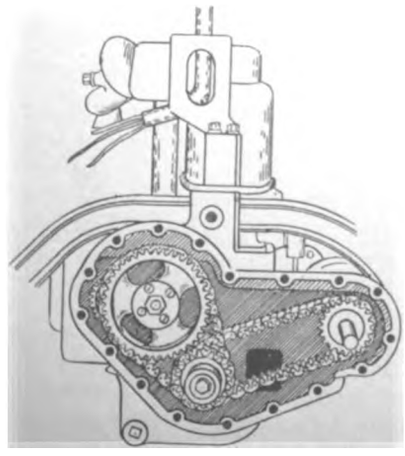
Maxwell Adds 22-Horsepower Model.

Maxwell is the only one left in that par-[illegible] "less than $1,000 group"? Pretty [illegible]—though there may be one or two [illegible] in the hall somewhere. Take a good [illegible] at that little 22-horsepower Maxwell, [illegible] instance. Never saw it before? Noth-[illegible] very funny about that, either, because [illegible] new. Never shown before? Yes, it [illegible] much like the other Maxwells. It [illegible] the same distinctive unit power plant [illegible] the same left-hand drive with centrally [illegible] gear shift lever. Price? It sells [illegible] $785 and it's very near the bottom of [illegible] price ladder, too. Of course, it is [illegible] equipped, just the same as all the other



CUTTING BRAKE EQUALIZERS

Maxwell cars are. Others? Sure! There's the "30" and the "40"—both of them four-cylinder models selling at comparatively low prices and both retaining all the marks that serve to make the Maxwell distinctive.



Only Stroke-Bore Ratio Remarkable.

And glimpse that Only car over there. It is the car with the really remarkable stroke-to-bore ratio. Cylinders measure no less than 4¼ x 7⅞. Think of it—nearly twice as much bore as stroke! Another distinctive

feature of the car is the straight-line drive and the low-hung appearance. The long-stroke motor gives considerable flexibility, it is claimed, to say nothing of the fact that 30 miles to the gallon of fuel and 75 miles an hour both are guaranteed by the manufacturers.

Nationals? Sure, they're right behind you—that classy looking bunch of cars with

CADILLAC CAMSHAFT DRIVE

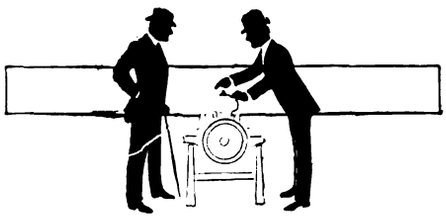
their steering gears at the left. New models? Certainly. That's a new one, that "Speedway" roadster, there. Looks as if it had plenty of speed, doesn't it? Before you leave the Nationals, notice the way the power tire pump is mounted at the front end of the crankcase casting and the way it is driven from the timing gears. There's a positive clutch there now instead of the friction clutch used in the past. What's the motor? T head, of course, with the cylinders cast in pairs and measuring 4⅞ x 6; no trouble to develop 40 horsepower with those cylinders, and yet that is all they are rated. Prices? All the way from $2,750 to $3,000.

An American Underslung Limousine.

Here are some more underslung cars—a whole line of them, from a clever little roadster right up to a full-sized underslung limousine. Never saw an underslung limousine? Probably no one else ever did, either, until these Americans put in an appearance. Take a slant at the distinctive lines at the backs of those limousines. Look almost submarine, as well as limousine, don't they? But, then, the American company always did have a way of bringing out distinctive-appearing cars that it was the despair of others to copy. Conventional cars in the American line? Surely; there's the "Traveler," for instance. It has its frame above the axles, and it is fitted with an uncommonly good-looking six-passenger body. Price? They're asking $6,000 for the new underslung limousine, there, the one that accommodates six persons, and $4,500 for the "Traveler." The little one there? That's the Scout model, and it sells for as little as $1,475. One of the things you want to notice in the American line is the straight-line drive that is obtained.

One More in Abbott-Detroit Family.

Anything new in the Abbott-Detroits? Of course there is. That small car, there, is new all the way through. No, it is not a revision of the previous small car; it is altogether different—it's new. Notice, in the first place, that the smaller models and the larger ones are mechanical duplicates. Both have long-stroke Continental motors, and they're both equipped with electric lighting and starting systems. Now, get down and take a look at the way the springs are hung beneath the axles. That makes for greater stability. Make note of the fact, also, that all the bodies have been enlarged; there's more room in them now than there ever was, and no one ever was crowded in an Abbott-Detroit.



Here are a couple of new models that have been added to the Auburn line—a new "four" and a new "six." Both of them have long-stroke motors quite as a matter

Digitized by Google

of course, the "six" cylinders measuring 3¾ x 5¼ and the "four" measuring 4¼ x 4¾. No, the new four has a block motor and the "six" is cast in pairs. Other Auburns? Of course there are; there is the 40-horsepower four-cylinder model and the six-cylinder "50." Changes? Scarcely one, though a few refinements have been made, of course.

Little Room for Improving Bergdoll.

And now we come to the Bergdolls—the "30" and the "40"—both having four-cylinder motors which give evidence of careful designing. Also there is a new "40" with a long-stroke motor and a four-speed gearset, though otherwise it is much like the older "40" that already has been increased slightly, and they have a longer hood to make room for the U. S. L. electric lighting and engine starting system with which they are equipped. No, the "30" is in just about its original form. Little room for improvement could be found.

Remember when the Cadillac first came out with the Delco electric lighting and engine starting system? Well, there's the latest Cadillac over there, and you will still find the Delco system on it. It has been refined, of course, and made still more automatic. Also, the engine has been increased in size and now is rated at 40-50 horsepower; the copper water-jackets are retained but the timing gears have given away to a "silent" chain. Incidentally, the wheelbase has been lengthened and a whole raft of other minor refinements have been made, not the least important of which is to be found in the increase in tire sizes. How much does the touring car sell for? Completely equipped it lists at the reasonable price of $1,975.

Cunningham, Too, Remains Unchanged.

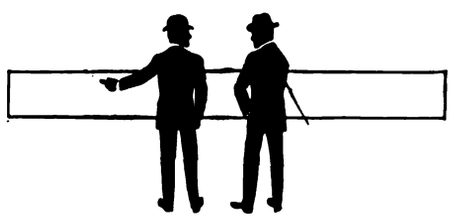
That car there with the hood up, showing the distinctive enclosed overhead valve mechanism, is the Cunningham. Saw it in New York last year? Guess again! You may have seen it in Chicago—most likely you did—but not in New York. And if you did see it in Chicago, or anywhere else, last year you ought to recognize it quite easily, for it has scarcely been changed a bit. Does not have to be changed, if you ask the Cunningham engineers why. And it is a pretty good reason, too. Bodies, of course, have been refined and the upholstery has been given the touch that makes for greater comfort.

Cutting cars, made by the Clarke-Carter Automobile Co.? Not by a long shot, they're not. If you read the trade papers you would know that the name of the company became Cutting Motor Car Co. a little while ago. What's that got to do with the cars? O, not so very much, only it shows that the makers are proud enough of their products to want to exploit its name coming and going, so to speak. But to get down to brass tacks, you want to take a look at the new Cutting unit power plants. Also make a note of the fact that a substantial increase in power has been made and that the wheelbases have been considerably lengthened. Tires are bigger, too, and so are the bodies.

Case Refines and Adds to Line.

Here's a new model Case that ought to draw your attention. Model N, it is called, and it is new all the way through. Doesn't take much delving to discover, however, that it has all the Case earmarks. Look at the gearset and the rear axle and the steering gear. Wouldn't you think they belonged to a much more expensive car? Haven't mentioned the price? Beg pardon; it sells for $1,500. Complete equipment, of course. Quite a few changes have been made in the larger car. Wheelbase longer, tires larger, Westinghouse electric lighting system installed, gasolene tank put close to the rear axle, new windshield. All these are new features.

Back to Columbia cars again. Well, well! Remember, we just glanced at them some time ago. Sure! Those are the Columbia-Knight models with the left-hand drive, and these with the right-hand drive are the poppet valve Columbias. Any changes in construction? None that are noticeable, though it is fair to assume that a big company like the United States Motor Co. surely would find a few small things to make better. Ever notice the way the generator is mounted on the Columbias—down on the gearset? It is protected in that position, though it is quite accessible.



Cartercar Keeps Friction Drive.

Here's another unusual car. It's the Cartercar, and it is one of the few friction driven cars in the shows. See that big rotating plate that looks like a flywheel? Well, the other one, there—the one that is set transversely to it—is brought up against it and the friction between the two is sufficient to transmit all the power of the motor to the road wheels. Does away with gears which might or might not be noisy. Sure! Merely by shifting the driven disk you can get an almost unlimited number of speeds. That long case? That's the case the transmission chain runs in. It is a "silent" chain and it runs in oil, thus practically eliminating wear. Notice that the gasolene tank is located on the chassis. It's a little point, but it makes for greater stability.

Crow List Includes Two "Sixes."

Lift up the hood of that Crow-Elkhart there at your elbow and notice the compact six-cylinder motor, with its T-head cylinders cast in pairs, and then come back here and examine the dash and, in particular, the two little lockers in the seat riser that serve to house the tools and the batteries. Didn't know there was a Crow "six"? As a matter of fact, there are two of them—the "6-60" and the "6-50"—not to mention the four-cylinder 38-horsepower model. If you look closely at the older cars, you will notice the new front and rear axles, the larger brake drums, the heavier frames and reinforced spokes in the wheels. There are a host of other small refinements, too.

What is that other new underslung car

over there? It's a Colby, if you mean that low car with the rakish body, but it's not so new, after all. It was brought out last year and exhibited for the first time in Chicago. Thought you'd remember it. Looks pretty much the same, does it not? That's simply because you can't see all the little refinements that have been made in the motor and in the chassis. Many of them scarcely would be discernible, anyway, because they are in the materials.

Davis and Diamond T from West.

The Davis—that's it, the roadster over there with the turtle deck aft, to use a nautical expression—is another car that seldom gets to New York—at a show, that is. Of course, there are lots of them running around the streets, and maybe the reason they don't attract attention is because they are thoroughly orthodox in appearance. Nothing in the least bit freakish about them. Notice the motor, for instance. It's a Continental, block-cast motor, with all the valves on the one side and neatly encased. The gearset, if you notice, is arranged for center control, the arrangement being particularly simple. See the way the quadrant is bolted directly to the top of the gear case? Make note of the fact, also, that all the Davis cars have cowls that are a little longer this year than they were last year. That provides more protection for the occu-

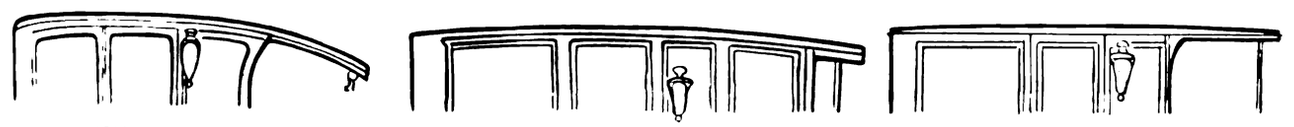
Edwards Has Several Novel Points.

... a brand new car that is fairly ... unusual features—Knight en- ... drive, Lanchester springs, are ... its features. Yes, you've ... it's the Edwards, built by ... Motor Car Co., of New York ... come over here and take a good ... rear springs, for they are the ... the kind in the shows. Notice ... what do you think they have done this year? Simply made the car a bigger car and a better one throughout, added a whole lot of equipment never listed before, and calmly lopped $265 off the price. Yes, it sells for $1,585 now. Kind of surprising, is it not? Lift up the hood and take a look at that motor. No trouble developing 40 horsepower with those cylinders. They measure 4¼ x 5½—long stroke, too, you see. Yes, it has a Presto engine starter this year that it did not have last year, and a Stewart speedometer and electric lights and an electric horn—altogether, the list is nearly as long as your arm. Sturdier axles, too, and a higher factor of safety everywhere.



See the wire-wheeled car over there—the one with the deep skuttle and the cowl dash? It's the Henderson, that was christened by the Mayor of Indianapolis last Decoration Day with a peck of new potatoes. Let's go over and "dig into" it. What's new? Why, it's all new; there is not an old thing in it. Notice the motor. It is a block casting and develops 44 horsepower. Then notice the rear system with the gearset hung on the axle, practice that has made many a famous car famous. The steering wheel is at the left, you notice. Can't find the gear shift lever? No wonder. That's it—that little knob sticking up between the front seats. It certainly is out of the way of the driver, though it is easily within reach. Electric lights from a dynamo system, of course, and very nearly ever other convenience that the modern owner demands.

Wherein Haynes Has Been Bettered.

How do you know the Haynes? One good way to tell it is by the contracting band clutch. Take out the floor boards of that Haynes there and examine the clutch; one of its features is that it can be adjusted quickly. Steel against steel now, though instead of steel against bronze. Now, take a look at the new Haynes electric lighting and engine starting system. Notice how the generator and the motor are separated, the former being above the frame and the latter beneath the frame. If one gets out of order that does not prevent the other being used. Another of the things that are new in the Haynes cars is the upholstery. It's 12 inches thick in the rear seats and nearly as thick in front. The new model L Haynes is a radical departure from previous practice. See the difference? It has an L-head motor, whereas Haynes cars always have had T-head motors in the past. The cylinders measure 4½ x 5½. The clutch and gearset are the same as in the other model. Incidentally, the new model has left-hand drive and center control.

Imperial Has Northeast System.

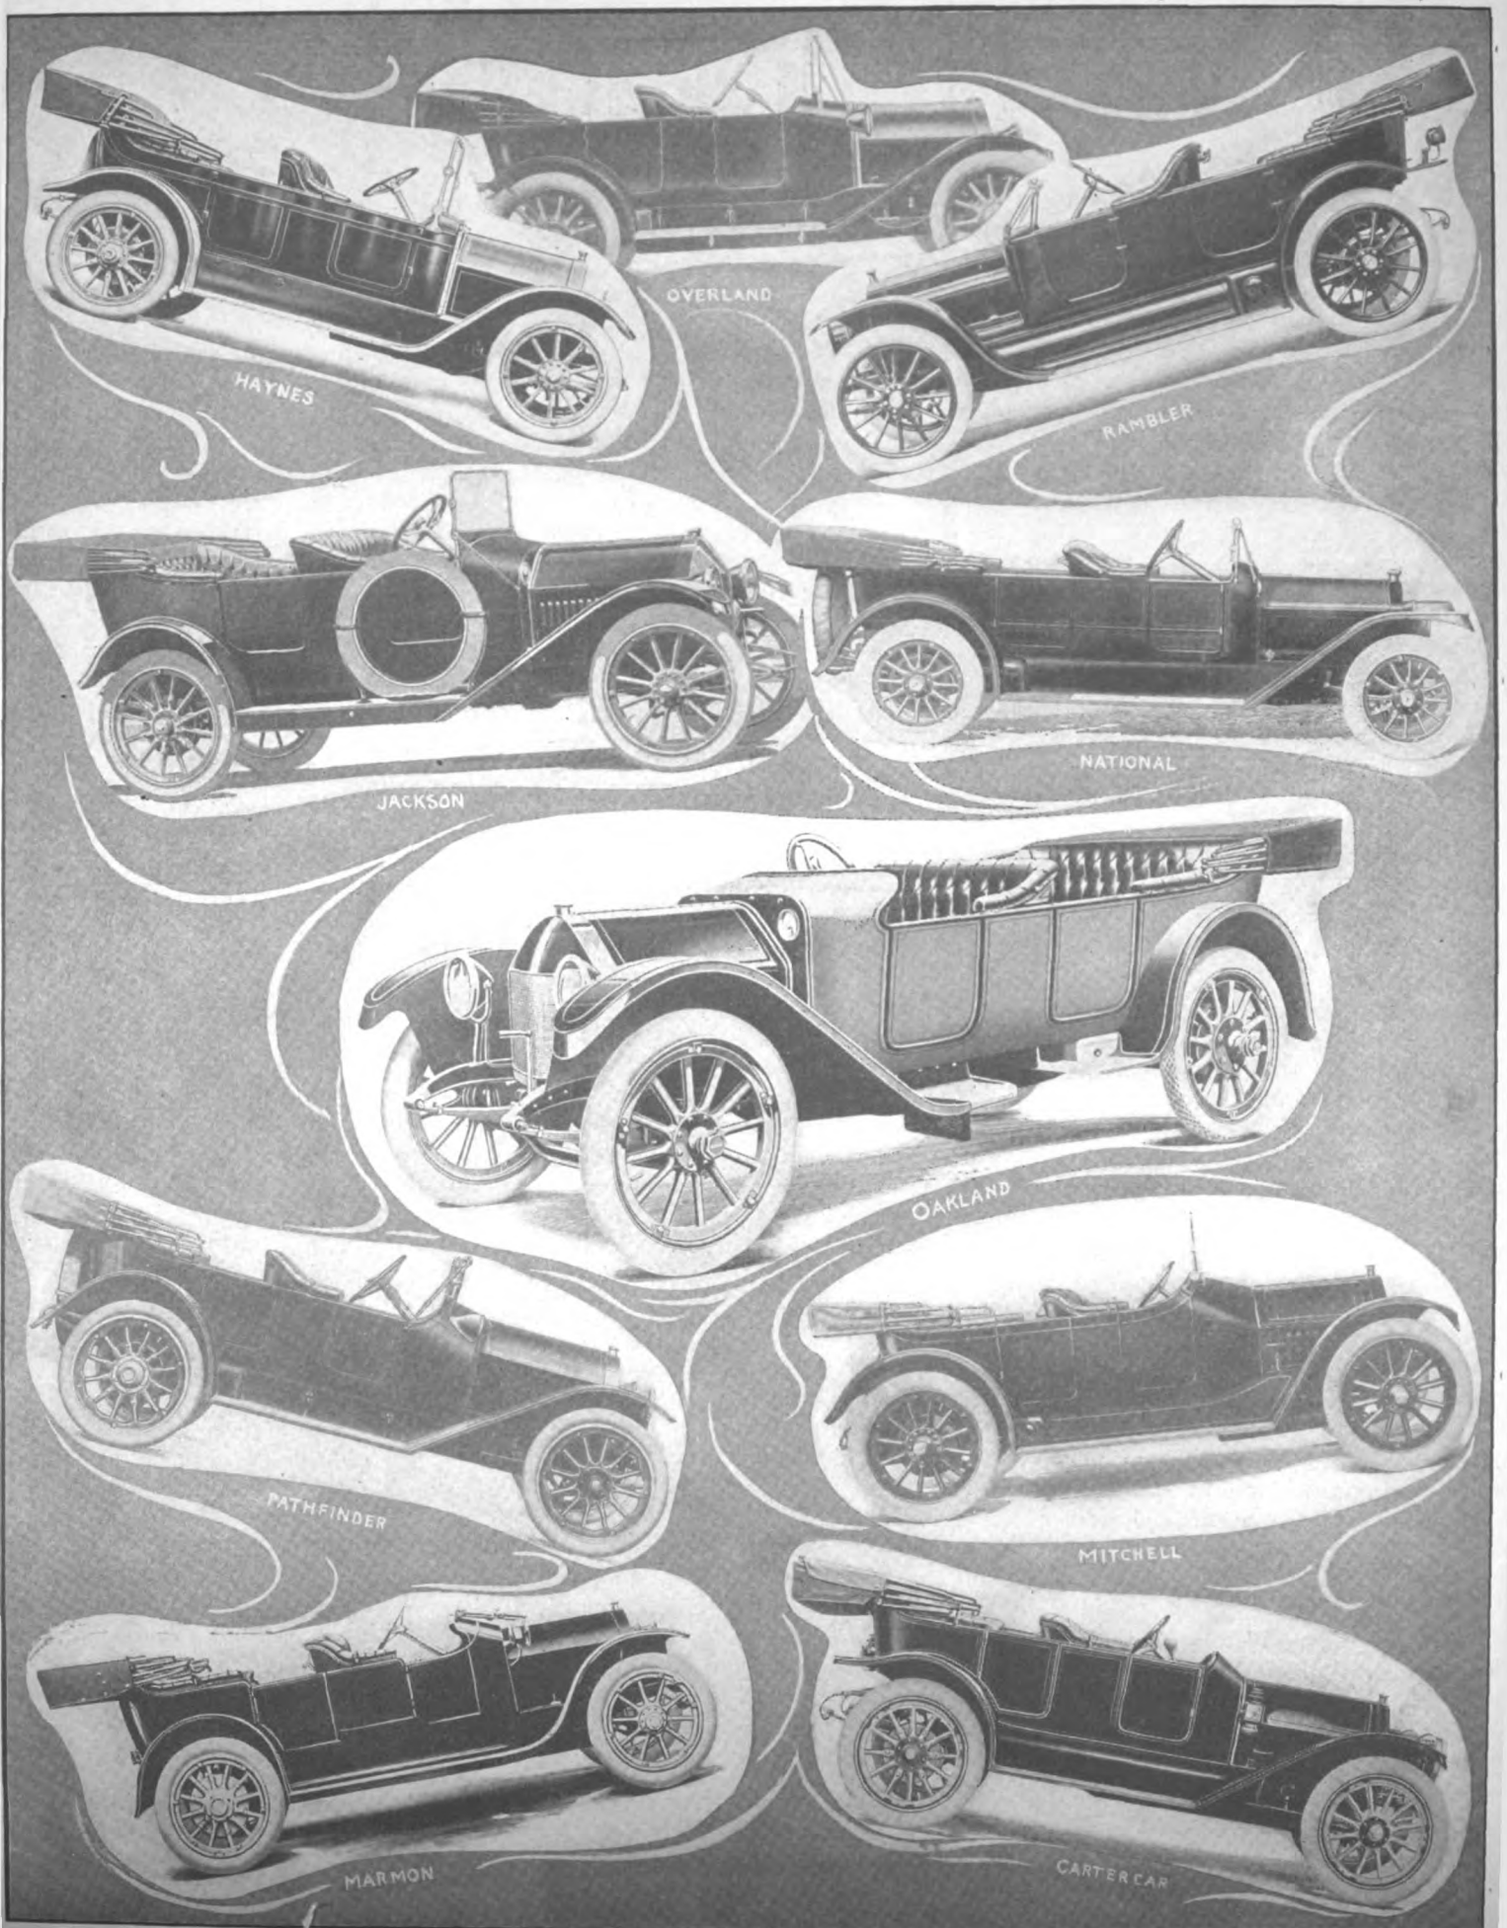
Price was $1,850 last year; and ance in the last twelvemonth. Make note of the new straight-line bodies that are mounted on the four chassis in the line. Two of the models, the "44" and the "34," have the Northeast electric lighting and engine starting system for the first time this year, and a number of other alterations calculated to render smoother and easier the action of the cars have been made.

Inter-State's Far-Reaching Changes.

Didn't know there was an Inter-State "six," either, eh? Well, there was none until now, but there it is. It's one of the few block-cast "sixes" in the shows. Dimensions? Cylinders measure 4 x 5 and the motor is rated at 45 horsepower. The whole car is quite different from any of the other Inter-States. It has left drive with center control, for instance, and a four-speed gearset. Price? Twenty-seven fifty, with complete equipment, which also means an electric lighting and engine starting system.

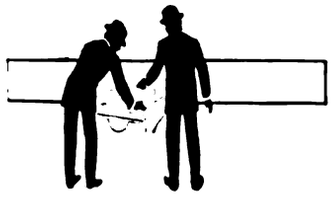


Not a Jackson—that car with the V-type

KISSELKAR ALCO GARFORD

LINES IN LIMOUSINE TOPS, SHOWING VARIETY OBTAINABLE IN DESIGN

Digitized by Google

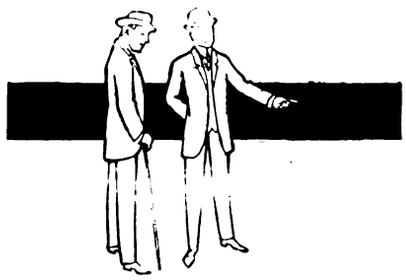


SOME OF THE "FOURS" WHICH PROVE THAT "SIXES" HAVE NOT MONOPOLIZED THE IMPROVING HAND

Digitized by Google

radiator. Of course it is, though it is a Jackson you never saw before. It is a new one. The Jackson line has been most thoroughly reconstructed, you would hardly recognize it now. There is a Jackson "six" now, too. That's the one, there; it is styled the "Sultanic." Lift up the hood and glimpse the pair-cast cylinders and the clutch and gearset, mounted in a unit with the motor. Cylinders measure 4⅛ x 4½, and the engine is rated at 55 horsepower. Notice, also, the position of the electric lighting and engine starting system. Yes, it's the first time the Jacksons have had one. Sure, the new "four" has the same system—that is to say, the larger one has. Another of the little features that mean so much is that the gasoline tank is carried at the rear of the tonneau, with the fuel under pressure and fed to a gravity tank under the shroud.

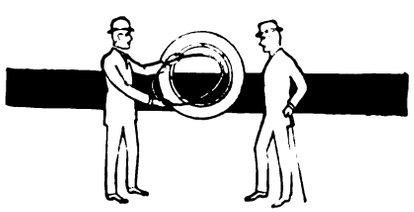
Moline Models on One Chassis.



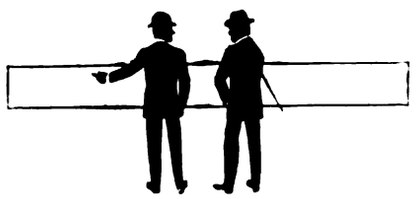
Here is the Moline—the one to which pretty "Dreadnought" is added. No, only one chassis in the Moline line.

You can have your choice of several bodies. Any change in construction? Yes. The wheelbase is 10 inches longer; the bore of the cylinders has been increased from 4 to 4⅛, the stroke remaining as before, the brakes now measure 16 inches; there is an auxiliary tank under the rear seat, with the main tank in the cowl; electric lighting and engine starting system have been added, demountable rims have been added, and there has been a number of other small refinements.

Reconstruction by Michigan Makers.



The Maxwell is one, just across the way from us, and our line that has been most thoroughly reconstructed and appreciably improved in the reconstruction. About the most important of the changes which have been made is to be found in the gearset. It provides for four speeds ahead now instead of three. Direct drive on third speed? No, no! Not by a long shot. Haven't you seen the long paper that Engineer Cameron prepared and published, setting forth the advantages of direct drive on fourth speed? Well, you ought to get it and read it; it is an education in itself. O, no! The Michigan fourth speed is direct drive, not the third; so don't make any mistake about it. Any other changes? Surely, there are. There is left drive and center control, for one thing; that's a radical departure from previous Michigan practice, as you probably know. Also, there has been a noteworthy increase in the size of the bodies, and the tires—in fact, the cars both are larger all over.



What's new in that group of Marions, over there? Not very much, it seems. The only material changes you can find are refinements—the use of a deep cowl over the dash, a lowering of the chassis, the use of new English steel springs, an increase in brake capacity and new brake cams, and an alteration in the throttle and spark levers, eliminating the ratchet devices. Oh, yes! An electric generator and complete lighting system has been added, and the cars are fitted with Disc primers. Any new models? That roadster, over there, is a new one. It's pretty much like the "Bobcat," only it has been built to give the occupants a little more comfort and a little less speed. It's pretty speedy, though, at that. There are still fewer changes apparent in the Marathon line, over there. Yes, still making the three chassis they have had right along, and very little room for improvement has been found. Motors? They are 4 x 5½, 4¼ x 4½, and 3½ x 4½.

Mercer Records Warrant No Change.

Come over and have a look at the newer series Mercers. How many chassis? Two—one with a 4½ x 5 motor and the other with a 4⅛ x 5 motor. Why have there been so few changes made? Haven't you followed the performance of the Mercer cars during the past year? If you had you would know that a car that can give such a good account of itself scarcely requires changing. It's a pretty good time to "let well enough alone," as the old proverb goes. What's new? Well, all the cars now have four-speed gearsets and an electric lighting and engine starting system is standard on all but the raceabout. Lighting and starting units are separate.

There have not been any extensive changes made in either the Moon or Midland cars, across the aisle. How many models of each? Well, there are three Moons and two Midlands. The Moons mount T-head motors, two "fours" and a "six." What, didn't you know there was a Moon "six," either? Well, you have learned a lot. Yes, the Moon "six" is rated at 65 horsepower and has its cylinders cast in pairs. Notice the rear axles on all the Moons. They're a special type—full-floating, of course. Also make a note of the fact that electric lighting and engine starting systems have been added. As for the Midlands, there's a "six" in that family, too. Cylinders measure 4 x 5 and the rating is 50 horsepower. Notice particularly that Midland motor suspension. See how it provides for a certain amount of frame weaving without danger of damage to the engine? That's one of the Midland features. Unit power

plants, of course, and you have already seen the three-point suspension.

Paige-Detroit Builds New Model.

There's a brand new Paige-Detroit over there that is totally different from any other Paige-Detroit you ever saw. What's different? Why, everything is different. The whole car is new from stem to stern. Notice the new unit power plant, for one thing, and the way the cam and pump shafts are driven by "silent" chain. Notice that the car is steered and controlled from the left side, after the approved fashion. Take a look at the cork insert multiple disk clutch, the gearset, the full-floating rear axle, the Gray & Davis electric lighting and engine starting system and all the other fine points, and then wonder how it is possible to produce the car and sell it with complete equipment for $1,275. Get that—$1,275. The other Paige? Very little change in it. In fact, no changes whatsoever. The Pratt-Elkhart—don't confuse them with the Crow-Elkhart cars—line is another in which there has been found very little room for improvement. Yes, they're still continuing the three chassis, all three of them "fours." Bodies have been altered, of course, and they are roomier and better looking, thus speaking volumes for their greater value.

See that nifty-looking roadster with a projection like a dorsal fin on its after deck? Get up a little closer, and you can

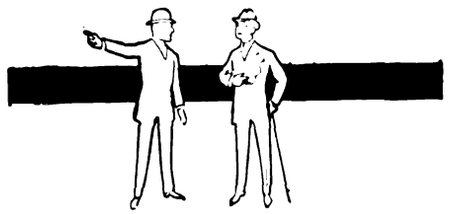
Digitized by Google

read the name on it—Pathfinder. That roadster and the Martha Washington coach are the two new models in the Pathfinder line this year. Did you notice the "boat-like" appearance of the roadster? That's where it gets is name, "Cruiser." Look at the graceful lines and the "midship cockpit," so to speak. Looks pretty comfortable, eh? No, there have not been any material alterations in the Pathfinder mechanical construction during the past year. Just a few refinements to bring them more thoroughly up to date. Any changes in the Paterson line, over there? None to speak of in either of the two chassis, though the equipment has been increased considerably. Yes, Deaco electric lighting is standard on that model 43 car; an electric starter is put on the same car, too; naturally it increases the price slightly. How much? Well, the 43 sells for $1,600, with electric lights, and for $1,685 with electric lights and electric starter, both.

Rambler Enlarges Its Equipment.

Those cars down the aisle with the distinctive appearing radiators? They're the Ramblers. How many? Well, there are several models, but they are all built on the one four-cylinder chassis. Lift up the hood and glimpse the distinctive separately-cast cylinders, though you won't have any way of telling that the stroke has been increased to five inches unless you ask the salesman. No, it is not in the catalog just yet. As a matter of fact, this is the first time it has been shown. Except that a U. S. L. electric lighting and engine starting system has been added as a regular equipment, few other alterations have been made. Oh, yes! the equipment is more complete. All the open cars now have a top, a windshield, and a speedometer that they did not have before. Very little change in the Reo, either, except that the bearings have been increased in size, as have the tires, and a few minor improvements have been made here and there.

The Staver, the Velie, the Selden, the S. G. V., the Westcott—in none of them have there been made any alterations of a startling nature. They are all cars that have been "well brought up," so to speak, and they never have required extensive corrections. Quite naturally, a number of smaller changes have been made, though it is doubtful if you could find them without a very diligent search. Velie cars, for instance, now all have the "silent" chain camshaft drive originally brought out on the smaller model last year. In the Westcott there have been no changes at all, though the "six" is a new car all the way through.



Guiding the Dealer Through the Realm of Electric Pleasure Cars

What's new in electrics? What's the biggest development of the year? In the fewest possible number of words it is: All seats facing forward. Practically without exception, every manufacturer of electric pleasure vehicles has either added a new model of the kind or redesigned an old one to meet that call. There is another development, but it isn't new: it simply has grown more conspicuous—the tendency to make the electric roadster, or any other kind of an electric car, look as much like "gasoleners" as possible. Cast your eye over that collection. Some of those cars almost smell of gasolene. But the tendency toward making all the seats face forward is the greater of the two, however.

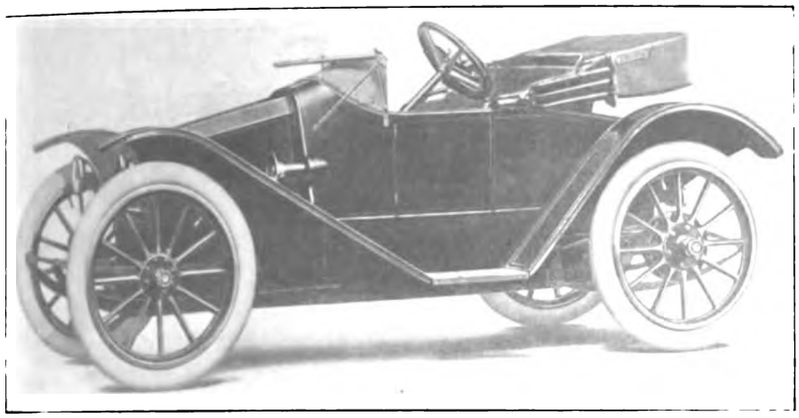
"Clear Vision" a Detroit Feature.

Look at that Detroit "Clear Vision" brougham, for instance. It's a brand new model in which all the passengers face front. And here's another new Detroit, a little smaller than the other, in which all the passengers face forward. As you pass through the show you will notice the very same effect everywhere. By the way, have you ever looked at the direct shaft drive that is used in the Detroits? Get down there and look up at the shaft and the way it is bolted to the motor at one end and to the rear axle at the other. Not the slightest need for universal joints and, of course, none are used. Anything new in the Detroit line. Well, not very much that is apparent to the casual observer. For instance, there are a lot more drop-forgings used than in the earlier models and, of course, that reduces the weight. And all the cars have adjustable pedals, this year, too.

In the Broc electrics, across the way there, the front seats revolve so that the passengers may face in almost any direction, either forward or sideways, which ever they choose. How many models in the

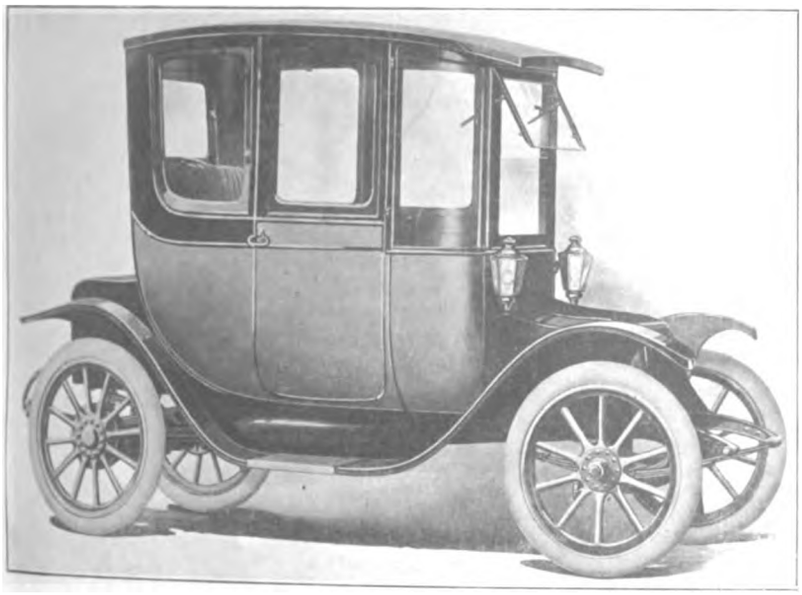
Broc line? A Stanhope, which sells for $2,000, three broughams and a victoria. Pretty representative line, don't you think? What are the Broc engineers "strong" for? Suspension, principally, though every other part as well has been worked out with a great deal of care. But look at those three-quarter elliptic springs in the rear. Notice that the leaves are fairly thin. That makes the car ride easily when it is loaded lightly.

Wire Wheels on Buffalo Electric.



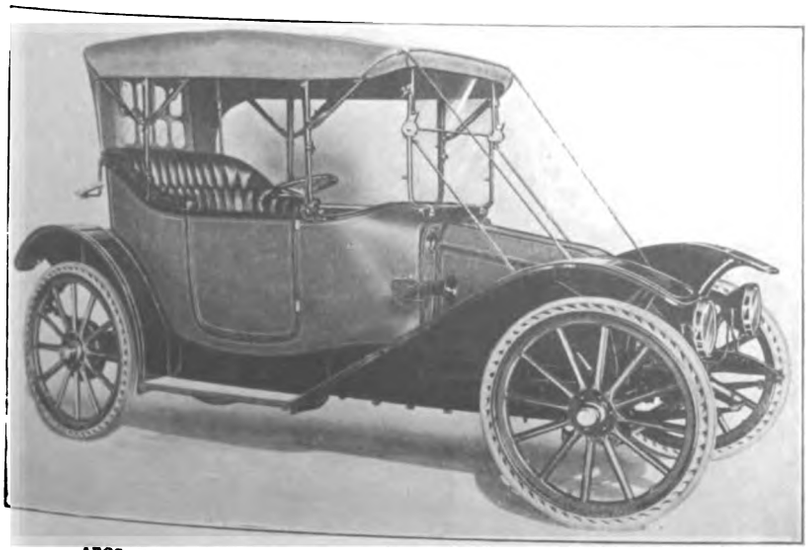
Speaking of "gasolenish" looking roadsters, just glimpse that Buffalo—the one with the wire wheels on it. Ever see a better resemblance to a gasolene car? It has wheel steer, tires at the side, and pretty nearly everything else that goes to make a gasolene roadster look the part. Are the wire wheels standard equipment? Optional—take 'em or leave 'em, just as you like, though most persons are likely to take them, because they add a touch of distinction to the car. There's a new shaft drive in that Buffalo you ought to see, and there are a number of other refinements that have been made, too. For instance, there is direct shaft drive with single reduction, foot control and three-point motor suspension. Makes the car a little bit more like a "gas" car, doesn't it? Any new models? Certainly. There is the vis-a-vis coupe, for instance, and the four- or five-passenger forward drive coupe. And there's a big bundle of energy and money behind those Buffalo cars, too.

Radiator Imitated on Woods Car.



Here's another electric roadster that looks distinctly "gasoleney." It's the Woods. Notice the way the battery is carried up forward under a hood, just the same as a motor is carried in a gasolene car. Why has it a radiator? Radiator? Ha, ha! That may look like a radiator, but it isn't one just the same. It's merely painted to represent one. Notice the lines of the body, too, and the closeness with which they approximate the lines of the typical gasolene roadster. No, there have not been very many changes made in the Woods cars during the past year. As a matter of fact, none of the electric manufacturers has made any really extensive changes. If you will notice, designs appear to be fairly well standardized. Transmission of the Woods? Shaft drive? Of course; make a point of noting the motor suspension.

Come over here and take a look at the front control on the Argo. Isn't it simple? Nothing to it but one pedal. To start, you let the pedal come up; the higher up you let it come the faster the car travels. Then if you want to stop, all you have to do is to push the pedal down again. The action automatically turns off the power and at the same time applies the brakes. The motor in the Argo, notice, is mounted directly on the rear axle and forms a rigid unit with it. Another feature of the Argo is its long



Digitized by Google

CHURCH-FIELD ELECTRIC ROADSTER WITH PLANETARY GEARSET

THREE-QUARTER FRONT VIEW OF STANDARD ELECTRIQUE COUPE

ARGO ROADSTER—AN ELECTRIC WITH "GASOLENISH" LINES

wheelbase—110 inches, in the case of the brougham.

Church-Field Has Planetary Gearset.

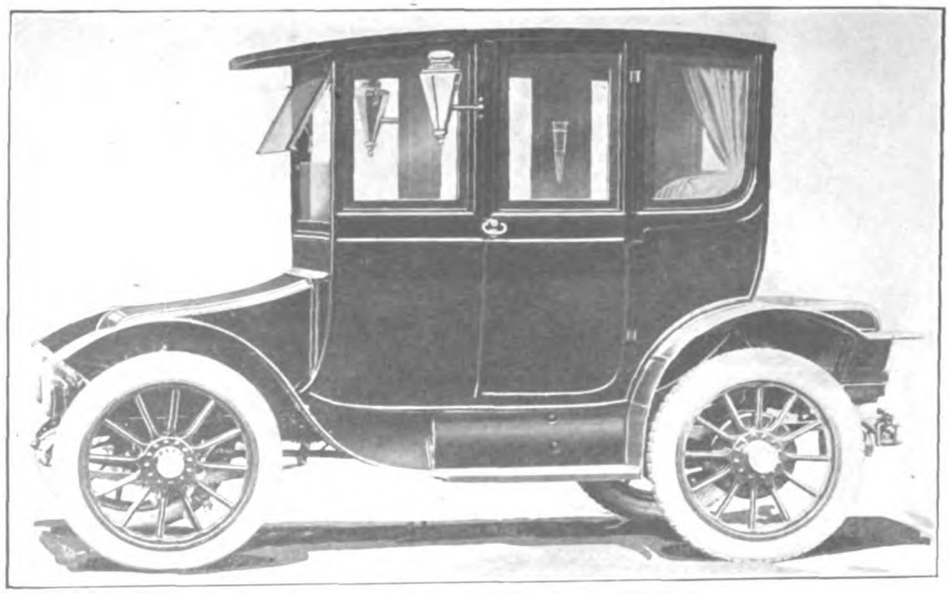
Ever see an electric car with a two-speed planetary gearest in it? No? Well, come over and take a look at this Church-Field. Not new, you say? Yes, it is; it's brand new. Never was anything like it before the Church-Field put in an appearance. What good is the gearset? Well, it permits the motor to "turn up" faster when the going is hard, and therefore it uses less current. Also, it is useful in climbing hills and in traffic work where it is necessary to drive very slowly. In combination with the controller you see, it gives 10 speeds. Get down on your hands and knees and see the way the gearset is mounted in a unit with the motor. And, while you are down there, notice that the frame of the car is underslung and that the rear springs are full-elliptic. There was a lot of brains put into that car. Is there a Church-Field roadster? Of course, there is. That's it over there. Small wonder you mistook it for a gasolene car, what with that sloping "bonnet" and the wheel steer and levers on the wheel. The Ohio is another electric that has a lot of original features all its own. Notice the motor suspension, for instance, and the way the drive chain is arranged. See how the whole unit virtually is mounted on a pivot so that it is free to move? And notice the neat little controller on top of the steering handle. Why is it so small? That's because it has very little work to do. The Ohio control is electric, you know. Yes, the fingers that make the battery connections are contained in a dirt-proof case on the chassis.

What say? All those cars over there can't be Borlands? Why not? Thought they were made only in one model? So they were up to a short time ago, but the way the line has grown would surprise you. There are no less than seven models now, not the least impressive of which is that limousine with the two seats outside for the driver and the "flunkey." Pretty big car for an electric, isn't it? Yes, it has a fairly long wheelbase—123 inches. Battery? It is 44 cells of 19-plate Exide, and it gives a speed of 25 miles an hour. The roadster beside it is another new model, and it looks a great deal like a "gas" car, too—doesn't it?

Those other cars over there are the Chicago electrics. They are newcomers, but the men who designed 'em are old in the business. Yes, both cars are Chicagos—both the four-passenger car and the five-passenger clear-vision car. In the latter, you will notice, all the passengers face forward and the driver's vision is unobstructed. Batteries are equally divided front and rear, you can see. Why? Well, it gives a little

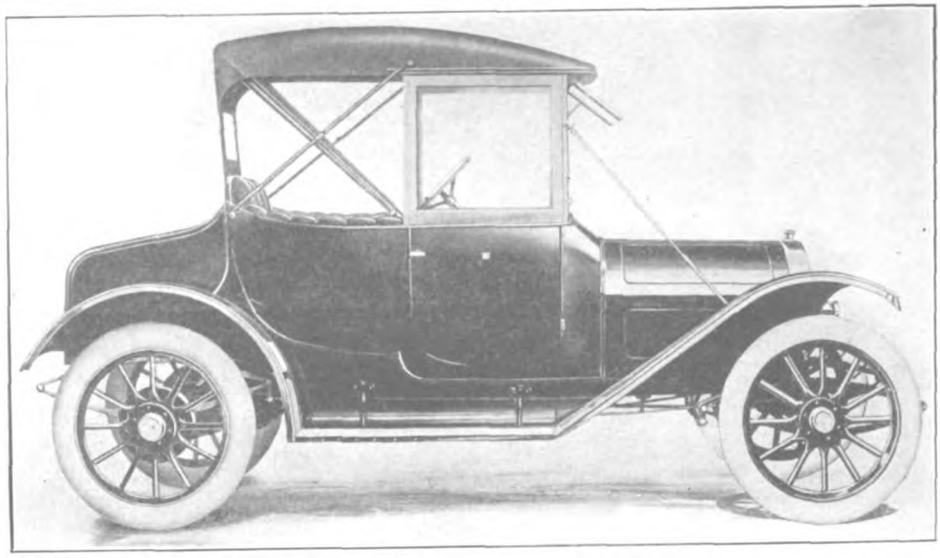
Digitized by Google

better weight distribution, for one thing, and it makes them easier to handle.



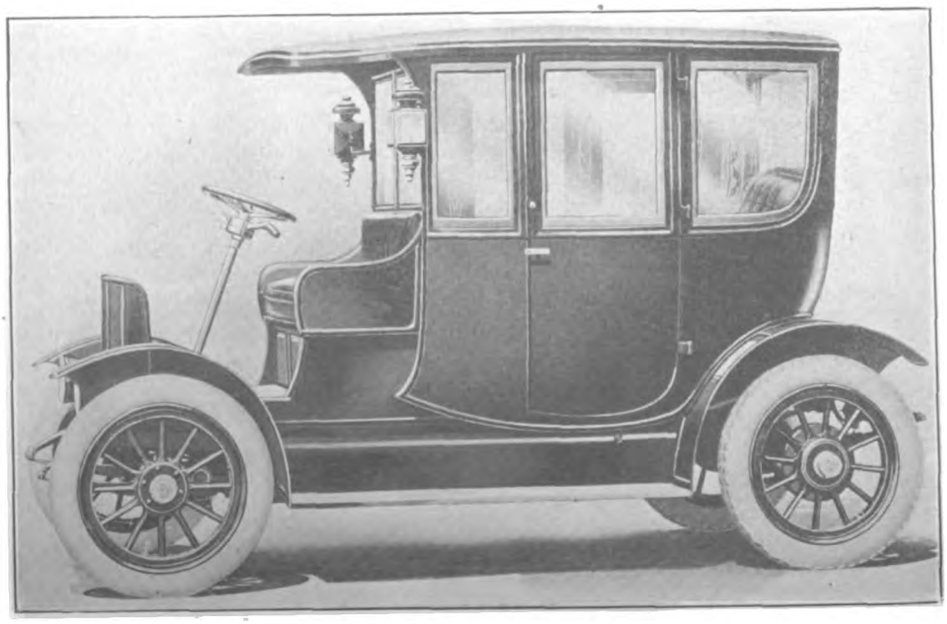
Come over here and take a slant at the Standard Electrique. Look at the chassis, there, and notice the way the motor is suspended in a trunnion and prevented from altering its relationship with the rear axle by means of those strut rods. Surely, the drive is by shaft to a double reduction gearing on the rear axle, which is a combination spur and bevel arrangement. No, it is not the only car that uses that particular reduction arrangement, but the other is a gasolene truck. Been using it for years, too. And, by the way, the Standard is one of the very few electric cars that sells for less than $2,000. The price? It sells for $1,885.

The Rauch & Lang cars, across the aisle, are pretty much the same as they always have been, as you can see with half an eye. New models? Yes, that's one, right there, and, as you can see, it's a model in which all the passengers face forward.



Here's another very "gasolenish" appearing electric roadster, the Waverley. No, you never saw it before, for the very good reason that it has only just been brought out. It's their model 90, and it is built right along the lines of the gasolene roadster, even to the incorporation of a folding top. While you're here, take a look at this other brand new Waverley model; it's quite different from anything else of its kind. How? Well, the lines are different in the first place. Notice the curved roof, for one thing. The principal difference, however, is in the seating arrangement. Open the door and notice the way the driver's seat and the corresponding seat at the opposite side are set slightly forward with a third seat between them, the three seats being, as the soldiers "in echelon."

Baker electrics? Of course they're here. You will find them at every show of importance. Anything new? Not very much in a mechanical way though the larger brougham there has a new method of hanging the transmission and mounting the motor. Notice the way the motor is attached to the forward end of a long tube which surrounds the drive shaft. The coupe there is a new model that makes its first appearance. Notice that all the seats face forward and the car is roomier and lower than most others. Take a slant at the limousine back of it, too. Yes, that one's equipped with lever steel, but you can have either lever or wheel. And don't overlook that semi-colonial top; it's designed so that water never will be shed down the sides of the car. Notice also, how low the front and front quarter windows are so as not to obstruct the driver's view.



Accessories? Oh, there's an ocean of 'em. But you've seen enough to last you for a while. Where's the cafe? . . .

TABLOID REVIEW OF THE CARS TO BE EXHIBITED

Wherein Not Merely Their Prices and Principal Specifications Are Presented but Equipment, Improvements, and Selling Features Summarized as Never Before Crystalized Evidence that "More for the Money" is Obtainable than a Year Ago.

ABBOTT-DETROIT.

Abbott Motor Co., Detroit, Mich.

Models—Seven models built on two chassis, the "44-50" and the other the "34-[illegible]". The larger chassis has a pair cast L-head [illegible] measuring 4½ x 5½ inches, [illegible] horsepower, dry multiple disk [illegible]-speed selective gearset, full-[illegible] axle, 121-inch wheelbase on [illegible] tires, the smaller chassis is [illegible] except that the motor is [illegible] cylinders 4⅛ x 5¼ and the [illegible] tires are 34 x 4.

Prices—44-50 [illegible] closed roadster, $2,150; [illegible], $1,975, seven-passen[illegible] limousine, $3,050. "34-[illegible]" [illegible] $1,700; five-passenger [illegible]

Changes from Previous Construction—[illegible] new car all the way through [illegible] smaller edition of the [illegible]; the changes are few [illegible] a refinement of the [illegible] of the springs [illegible] to hangers below [illegible]

Selling Points—Unit [illegible] long stroke [illegible], electric lighting and [illegible] system; dry multiple disk [illegible] gear shifting device; three-[illegible] gearset; full-floating rear [illegible] wheelbase, heavy artillery [illegible] specially treated spokes; grease [illegible] spring bolts; drive taken [illegible] transmitting spring shackling [illegible] underslung spring construc[illegible] body; Turkish roll cush[illegible] and tufted dash; piano [illegible]; running operations; pockets in all [illegible] radiator tube radiator

Equipment—[illegible] complete, self-contained [illegible] and engine starting system; [illegible] body side curtains; rain [illegible] windshield; Stewart [illegible] clock combination; gaso[illegible] electric lights, including [illegible] tire repair kit; Booth de[illegible] and horn

ALCO

American Locomotive Co., New York.

Models—Four models built on one six-[illegible] cylinders cast in pairs, [illegible] rated at 53.4 horsepower; [illegible] four-speed selective gear[illegible] floating rear axle; 133½-inch wheel[illegible] x 4 front and 37 x 5 inch rear tires

Prices—Five- and seven-passenger touring, $6,000; Colonial limousine, $6,750; Berline limousine, $7,250.

Changes from Previous Construction—New type of clutch; universal joint between clutch and transmission; upper half of crankcase extended to rear of clutch; new type of fan; brake shoes divided in center to give two shoe effect; lower center of gravity; wider tonneau seats; wider doors; electric lighting system throughout; unobstructed running boards; three-quarter elliptic rear springs; Truffault-Hartford shock absorbers.

Selling Points—Long, straight line body effect; quality of upholstery; quality of metals; luxury of interior and exterior finish; appointments; illuminated step; electric searchlight on cowl; long life; silent operation of mechanism; power; spontaneity and flexibility of motor; quick acting brakes; one piece rear axle forging; inside control

Equipment—Windshield; top with side curtains; illuminated Sears Cross speedometer; slip covers; electric lighting system; electric dome light in top; electrically illuminated step; Klaxon warning signal, trunk rack; foot rest; robe rail; invisible tool box filled with tools; tire brackets; Truffault-Hartford shock absorbers. The closed cars have electric dome light; Pullman lights in rear of tonneau; speaking tube; toilet cases

AMERICAN.

American Motors Co Indianapolis, Ind.

Models—Eight models built on three four-cylinder chassis: American Traveller, American Tourist and American Scout. The Traveller chassis has an L-head pair-cast motor measuring 5⅜ x 5½ and rating 60 horsepower, cone clutch, four-speed selective gearset, full-floating rear axle, 140 inch wheelbase on 41 x 4½ tires. The Tourist chassis has a T-head block motor measuring 4½ x 5 and rating 48 horsepower, inverted cone clutch, three-speed selective gearset, full-floating rear axle, 124-inch wheelbase on 34 x 4 tires. The Scout chassis has a T-head block motor measuring 4 x 5 inches and rating 30 horsepower, cone clutch, three-speed selective gearset, full-floating rear axle, 105-inch wheelbase on 36 x 3½ tires.

Prices—Traveller: Four-passenger touring, $4,250; six-passenger touring, $4,500; limousine, $6,000. Tourist: Four-passenger and roadster, $2,350. Scout: Roadster, $1,475; coupe, $2,000.

Changes from Previous Construction—All models remain substantially the same except the Scout, in which the motor dimensions have been increased from 3¼ x 5 to 4 x 5 inches.

Selling Points—Underslung construction, silent efficient motors, unit power plant in the Scout, large wheels, straight line drive, low center of gravity, long tire life, flexible semi-elliptic springs, selective sliding gearsets, unusually strong artillery wheels, grease cups integral with spring bolts, drive through torsion tube relieving springs, deep upholstery, hand buffed leather, full equipment including electric lighting systems on the two larger models, beautiful finish.

Equipment—On the Traveller, complete electric lighting and engine starting system, top with envelope and side curtains, $90 [illegible] speedometer, windshield demountable [illegible] with two extra rims, horn, jack, and tool kit; Tourist has the same, except that a Delco starter replaces the electric starter, and the speedometer is a $50 instrument; only on extra Q-D demountable rim is furnished. Scout equipment is the same as that listed for the Tourist.

BERGDOLL

Louis J. Bergdoll Motor Co., Philadelphia.

Models—Nine models built on three chassis, all being "fours." The standard 40-horsepower chassis has an L-head block motor, measuring 4 x 5 15/16 inches, multiple disk clutch, three-speed selective gearset, 115-inch wheelbase and 36 x 4 tires; the "Fairmount" 40 is the same, except that it has a four-speed gearset, with direct drive on third speed, and 121-inch wheelbase; the "30" has an L-head block motor measuring 4 x 4½ inches, three-speed selective gearset, multiple disk clutch, 115 inch wheelbase and 34 x 4 tires.

Prices—All "Fairmount" open types are listed at $2,000; standard "40's" at $1,800; the "30" sells for $1,600. In limousine form the three models list at $3,250, $2,600 and $2,400, respectively.

Changes from Previous Construction—The "Fairmount" model is new, though beyond the longer wheelbase and new bodies, it is mechanically identical with the "40" of last season. The standard "30" and "40" remain unchanged except that tire sizes in the case of the "30" have been increased from 3½ to 4 inches; metal bodies are used on the "30" instead of wooden ones.

Selling Points—Real long-stroke motor; four-speed gearset with direct on third; U-S-L electric engine starting and lighting

Digitized by Google

system; Continental demountable rims; full-floating rear axle; Schwarz wheels; Bosch magneto; Schebler carburetter; honeycomb radiator; two Spicer universal joints; silicon springs; 10-inch upholstery; metal shell-back bodies.

Equipment—For the "30" and the standard "40": Top, windshield, tire irons, Prest-O-Lite tank, five lamps; tools and horn. For the "Fairmount" models: The same, including a complete dynamo electric lighting and engine starting system.

CHEVROLET.

Chevrolet Motor Co., Detroit, Mich.

Models—One model built on one six-cylinder chassis, the motor being of the T-head type cast in threes and measuring 3 9-16 x 5, rating 40 horsepower. Transmission elements include cone clutch, three-speed selective gearset and full-floating rear axle. Wheelbase is 120 inches on 36 x 4½ tires.

Price—Six-passenger touring car, $2,100.

Changes from Previous Construction—The car is new throughout.

Selling Points—Long-stroke motor cast in threes; unusual flexibility and lack of vibration, counterweighted crankshaft, English system compressed air engine starter, dynamo electric lighting system, substantial frame, power-driven air compressor, three-quarter platform rear springs, liberal bearing surfaces, exhaust heated carburetter, leather-faced cone clutch, selective gearset, V-type radiator, distinctive appearance, low center of gravity, left drive with center control, special type emergency brake lever, superior finish, deep upholstery, complete equipment.

Equipment—Mohair top with envelope and side curtains, windshield, speedometer, demountable rims with one extra, dynamo electric lighting system, compressed air engine starter, power-driven air compressor, complete complement of tools, jack, horn, tire repair kit.

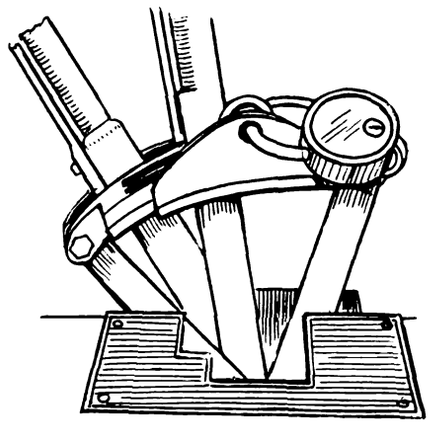
COLE.

Cole Motor Car Co., Indianapolis, Ind.

Models—Four models on three chassis each, two of which are "fours" and one is a "six." All employ pair-cast L-head motors, the "40" and the "50" measuring 4⅛ x 4¾ and 4½ x 5¼, respectively; the "six" measures 4⅛ x 4¾. All have cone clutches, three-speed selective gearsets and full-floating axles. Wheelbases are 116 for the "40" and 122 for the "50," both on 36 x 4 tires, and 132 for the "six" on 37 x 4½ tires.

Prices—Model "40," roadster or touring car, $1,685; model "50," open bodies, $1,985; coupe, $2,500; Berlin, $3,250. Model "60" (six), open bodies, $2,485; coupe, $3,000; cab side limousine, $3,750.

Changes from Previous Construction—Model 60, which is the "six," is new throughout and the alterations which have been made in the others apply principally to body refinements.



Selling Points—Northway unit power plant, working parts enclosed, Delco electric lighting, starting and ignition unit; Timken axles, Mayo cellular radiator, straight-line bodies with deep hand-buffed upholstery, large tonneau, pressure feed gasoline from rear tank, tire irons at rear of body.

Equipment—Delco ignition, lighting and starting system; silk mohair top with side curtains and dust envelope; clear-vision ventilating windshield, speedometer-gradometer, Firestone demountable quick-detachable rims with one extra; tools, horn, jack, pump and tire repair kit.

CHALMERS.

Chalmers Motor Co., Detroit, Mich.

Models—Six models on two chassis each, one chassis being a "four" and the other a "six." Both motors are of the L-head type

CHALMERS LEVER LOCK

and both measure 4¼ x 5½, the "four" having cylinders cast in pairs and the "six" having cylinders cast in threes. Both have multiple disk clutches running in oil and four-speed selectively operated gearsets. The wheelbases are: For the "36," 118 on 36 x 4 tires and for the "six," 130 inches on 36 x 4½ tires.

Prices—For the "4-36": Five-passenger touring, four-passenger torpedo and roadster, $1,950; seven-passenger touring, $2,150; coupe, $2,250; limousine, $3,250. For the "6-54": Five-passenger touring, four-passenger torpedo and roadster, $2,400; seven-passenger touring, $2,500; coupe, $2,700; limousine, $3,700.

Changes from Previous Construction—A flange drive in the rear axles has been substituted for the crab drive used in the past; in the starting system, pressure now is obtained by means of a Kellogg four-cylinder air compressor; bodies are larger; cowls are deeper and mount the various dash accoutrements; the fillerboard between the body and the windshield has been eliminated; a complete Gray & Davis dynamo electric lighting system has been added.

Selling Points—Long stroke motor, four-speed gearset, smoke-preventing pistons, compressed air engine starter, large braking surface, metal bodies with 21 coats of paint; heat treated axles, Gray & Davis electric lighting system; pressure feed gasolene system, nickel-plated trimmings, Turkish cushions, long springs, silk mohair top, concealed door hinges and locks, power tire inflator, over-size tires.

Equipment—Gray & Davis electric lighting system, silk mohair top with side curtains and envelope, compressed air engine starter, Continental demountable rims, jewelled magnetic speedometer, power tire pump, gasolene pressure system, tire irons, floor covers, jack, tools, tire repair kit and horn.

CUNNINGHAM.

Jas. Cunningham & Son, Rochester, N. Y.

Models—Four models on one four-cylinder chassis. The motor is of the valve in the head type, with cylinders cast in pairs and measuring 4¾ x 5¾; rated 40 horsepower; cone clutch with cork inserts, three-speed selective gearset, full-floating rear axle. Wheelbase is 124 inches on 36 x 4½ tires.

Prices—Roadster, $3,250; seven-passenger touring, $3,500; seven-passenger limousine, $4,500; seven-passenger landaulet, $4,500; seven-passenger Berline, $4,600.

Changes from Previous Construction—Left-hand steer with centrally located control levers; fuel tank and tire brackets located in rear. Other changes are slight, and tend to increase accessibility.

Selling Points—Long-stroke motor with offset cylinders, unit power plant, enclosed valves, self-contained electric starter and generator system, central control levers, full floating rear axle, roller bearing knuckle heads in front axle giving easy steering, long wheelbase, grease cups integral with spring bolts, individual body design, with concealed door hinges and handles, no screws on finishing mouldings, deep upholstering, special windshield, speedometer, gauges and all accessories mounted on filler board in plain view of the operator, clean running boards with tool box concealed in filler, battery slung underneath tonneau floor.

Equipment—Complete combined electric starter and generator, quick-detachable demountable rims, two spare rims, top with envelope, Warner speedometer, rain vision and ventilating windshield, electric lights in all lamps, tools and tire repair kit.

COLUMBIA.

Columbia Motor Car Co., Hartford, Conn.

Models—Eleven models on two four-cylinder chassis, one the Columbia Knight with sliding sleeve valve motor and the other the Cavalier with poppet valve motor. The Knight motor measures 4⅞ x 5⅛ and is rated 38 horsepower; transmission elements include multiple disk clutch, four-speed selective gearset and full-floating rear axle; wheelbase is 129 inches on 36 x 4½ inch tires. The Cavalier motor measures 4⅞ x 5½ and the transmission elements are the same, except that a cone clutch and a three-speed gearset are employed. The

Digitized by Google

wheelbase is 128 inches on 36 x 4½ inch tires.

Prices—Knight models: Roadster, close coupled roadster, six- or seven-passenger touring, $4,500, limousine, $5,800; landaulet, $5,900. Cavalier models: Roadster or four-passenger touring, $3,300; six-passenger touring, $3,400, seven-passenger touring, $3,500; limousine, $4,800.

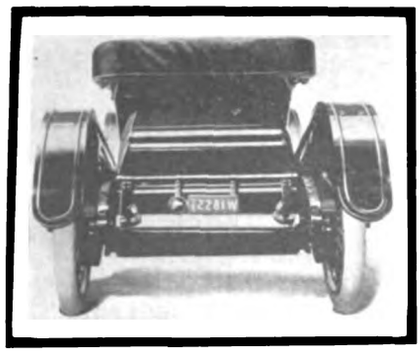
Changes from Previous Construction—None.

Selling Points—Knight motor; silent chain camshaft drive, bolted-on cylinder heads, large bearings, trough lubrication, Bosch ignition system, selective four-speed gearset with center control, silent full-floating rear axle worm and sector steering gear with four roller bearings; 36-inch wheels drop-forged hubs, dynamo electric lighting system, power driven tire pump.

Equipment—Mohair cape top with envelope and side curtains, rain vision windshield, Jeffrie 4-inch dial speedometer, complete dynamo electric lighting system, Truffault-Hartford shock absorbers; electric and bulb horns, demountable rims with one extra and tire irons, power tire pump, trunk rack, rear storage hamper, set of tools and special tools. Roadsters—compartment trunk. Closed cars—Electric interior lighting, annunciator, speaking tube, robe rail, cock, mirror, cigar lighter, bouquet holder.

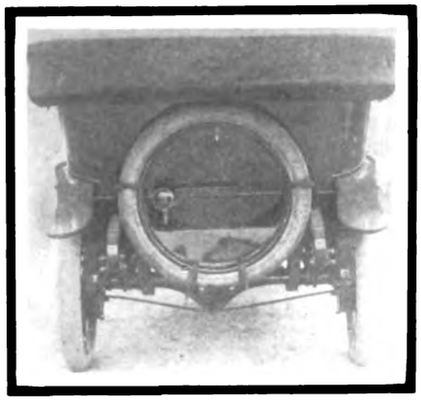
CUTTING.

Cutting Motor Car Co., Jackson, Mich.



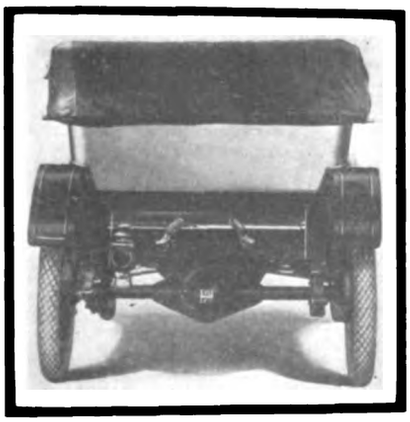
Models—Two models built on the same four-cylinder chassis, the motor being of the T-head L-head type, measuring 4 x 5 and rating 40 horsepower. Transmission elements include 15-plate multiple disk clutch and three-speed selective gearset and semi-floating rear axle. Wheelbase is 120 inches on 36 x 4 tires.

Prices—Roadster, $1,475; five-passenger touring car with Hanna acetylene engine starter $1,475, with electric lighting and engine starting system both list at $1,625.

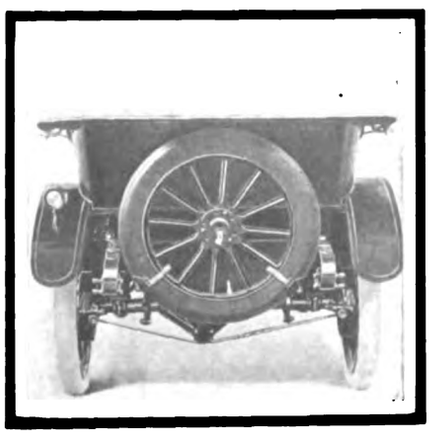


Changes from Previous Construction—New power plant supported at three points on frame, wheelbase increased, roomier bodies, new positive brake equalizing system.

Selling Points—Price, 40-horsepower motor, 120-inch wheelbase, engine starter, electric lights, 15-plate disk clutch running in oil, floating of propeller shaft by double universal swivel torsion yoke, Westinghouse equalizing brake system, heavy artillery wheels with 1¼-inch spokes, self-contained storage feed oiling system, genuine square tube radiator in connection with the centrifugal pump, spring suspension, locking of all spring bolts in spring shackle so bolt operates in bushings of springs, concentrating wear directly on bushing instead of bolt and shackle; 10-inch upholstering, 36 x 4-inch tires, large roomy bodies.



Equipment—Cutting mohair top, dust cover, side curtains; rain-vision windshield, Prest-O-Lite tank, demountable rims and extra rim, tire holders, Hanna gas starter, gas headlights, dash flash lighter, electric side and tail lights, robe rail, foot rail, horn, tools, pump, tire repair outfit, cocoa mat for tonneau.



MITCHELL

HAYNES

R. C. H.

RAMBLER

CADILLAC.

Cadillac Motor Car Co., Detroit, Mich.

Models—Seven models built on the same four-cylinder chassis. Motor has separately cast L-head cylinders measuring 4½ x 5¼ and rates 40-50 horsepower. Transmission elements include large cone clutch with special spring ring in flywheel, three-speed selective gearset and Timken full-floating rear axle. Wheelbase is 120 inches on 36 x 4½ tires.

Prices—Roadster, phaeton, four and five-passenger touring, $1,975; six-passenger touring, $2,075; coupe, $2,500; limousine, $3,250.

Changes from Previous Construction—Bore and stroke of motor increased, gears for camshaft drive replaced by "silent" chain, valves enclosed, new carburetter, automatic spark control adopted, wheelbase increased from 116 to 120 inches, Delco electric lighting, ignition and engine starting system perfected and made smaller, tires increased from 36 x 4 to 36 x 4½, top and windshield added to equipment.

Selling Points—Long-stroke motor with copper water jackets; "silent" chain camshaft drive, enclosed valves, longer wheelbase, lighting and ignition and starting system simplified and improved, automatic spark control, new carburetter, larger tires, accessible cone clutch, selective gearset, full-floating rear axle, three-quarter platform rear springs, deep upholstery.

Equipment—Cadillac mohair top with envelope and side curtains, rain vision, ventilating windshield, Delco electric lighting, engine starting and ignition system, 130 ampere hour storage battery, Gray & Davis lamps, Hans gasolene gauge on dash, Warner speedometer, robe and foot rails, cocoa mat in all tonneau except closed cars, tools, tire repair kit, demountable rims with one extra, tire irons, pump, horn and jack.

CASE.

J. I. Case T. M. Co., Racine, Wis.

Models—Two models built on two four-cylinder chassis each. The smaller motor has block-cast L-head cylinders measuring 4⅛ x 5¼ and rating 30 horsepower, and the larger has pair-cast T-head cylinders measuring 4½ x 5¼ and rating 40 horsepower. The larger has a single disk and the smaller a multiple disk clutch, and both have three-speed selective gearsets and full-floating rear axles. Wheelbases are 115 for the smaller on 34 x 4 tires and 124 for the larger on 37 x 4½ tires.

Prices—40-horsepower: Roadster, $1,985; five-passenger touring, $2,050; seven-passenger touring, $2,400. 30 horsepower: Roadster, $1,435; five-passenger touring, $1,500.

Digitized by Google

Changes from Previous Construction—The "40" is a new car throughout, and the changes in the smaller model are largely in the way of detail refinements.

Selling Points—Engine supported at four points, selective sliding gearset, disk clutches, full-floating rear axles, three-quarter elliptic rear springs, large tires, extra large diameter brakes, roller bearings in the wheels, nut and screw steering gear, central control on smaller model, right-hand control on the others; cowl-located gas tank in the smaller; electric lighting and engine starting systems; complete equipment.

Equipment—English mohair top with envelope and side curtains, rain vision windshield, complete electric lighting and engine starting system, demountable rims with one extra rim, complete set of tools, jack, tire repair kit, pump, and horn.

CROW.

Crow Motor Car Co., Elkhart, Ind.

Models—Ten models built on four chassis,two of which are "fours" and two are "sixes." Both 'sixes" have T-head, pair-cast cylinders, the "55-60" measuring 4⅛ x 5¼ and the "45-50" measuring 3 1/9 x 5; of the "fours," the "35-40" has T-head, block-cast cylinders measuring 4⅛ x 5 and the "33" has L-head, pair-cast cylinders measuring 4 x 4½ inches. All have multiple disk clutches, three-speed selective gearsets and floating rear axles. Wheelbases are 136 inches for the "55-60," 122 inches for the "45-50," 114 inches for both the "35-40" and the "33."

Prices—(Comparative as listed in catalog) "55-60," seven-passenger touring, $3,000; "45," seven-passenger touring, $2,750-$3,000; "33," five-passenger touring car, $1,400-$1,500; "45," five-passenger touring, $2,250-$2,500; "45," roadster, $2,000; "35-40," five-passenger touring, $1,650-$1,750; "33," roadster, $1,400-$1,500.

Changes from Previous Construction—Both "sixes" are new throughout, and other than a few refinements no alterations have been made in the fours.

Selling Points—Quiet running motors, plenty of power, multiple disk clutch in oil, three-quarter and full-floating rear axles, six spokes in rear wheels bolted to hub flange, adding strength; "sixes" electrically lighted and started; long wheelbases, adequate braking surface.

Equipment—For the "fours": Mohair top with envelope and side curtains, Stewart speedometer, demountable rims, Prest-O-Lite tank, complete complement of tools and spare parts, jack, horn, pump, and tire repair kit. "Sixes" have, in addition, Deaco electric lighting system and Rexo electric horn.

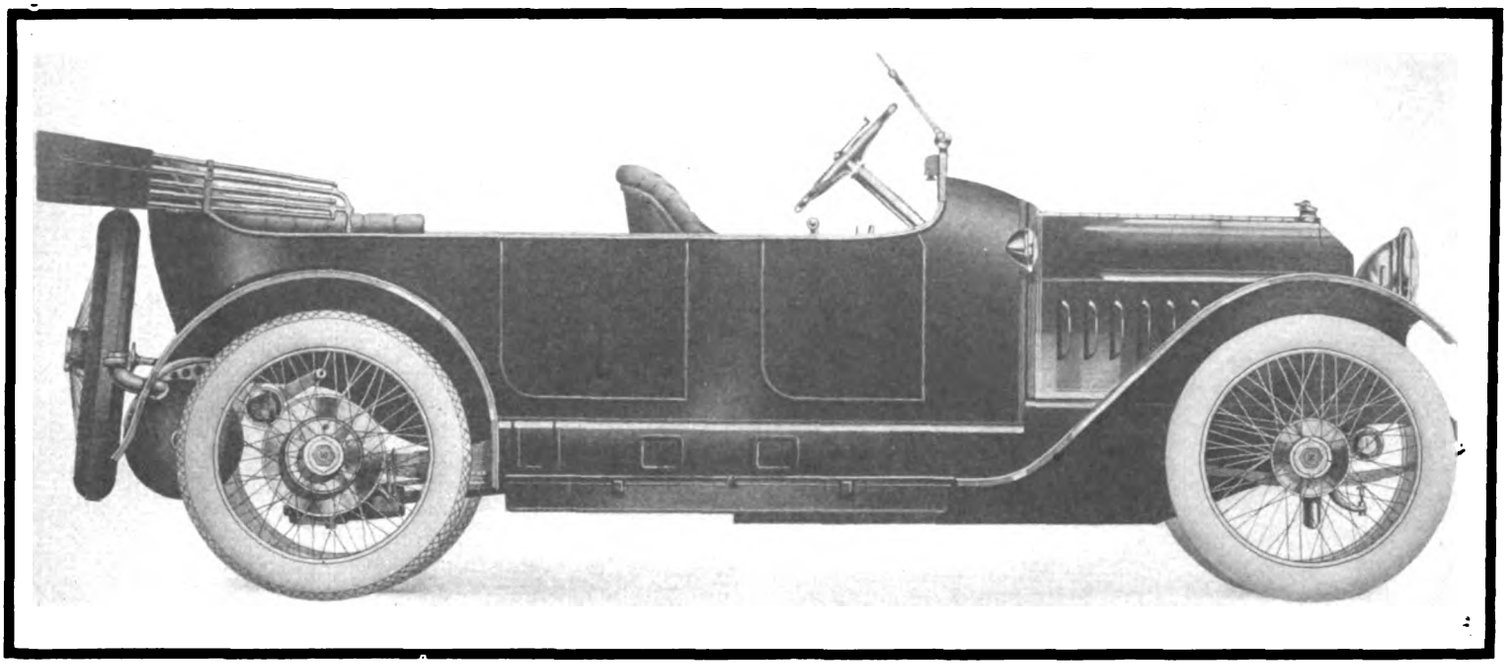
DAVIS.

George W. Davis Carriage Co., Richmond, Ind.

Models—Four models on two four-cylinder chassis. Both motors are L-head, the larger having pair cast cylinders measuring 4½ x 5½ and rating 50 horsepower, and the smaller having block-cast cylinders measuring 4⅛ x 5¼ and rating 40 horsepower. Both chassis have cone clutches, three-speed selective gearsets with center control and full-floating rear axles. Wheelbases 118 inches on 36 x 4 tires for both.

Prices — 40-horsepower, roadster, four- and five-passenger touring, $2,000; 50-horsepower five-passenger touring, $2,100.

Changes from Previous Construction—The 50-horsepower model is new throughout, though it is exactly similar to the older model except in size. The 40-horsepower model has not been changed except in minor details.



Selling Points—Continental long-stroke motors, large and strong gearsets with center control, heavy gears and shafting, imported Rhineland bearings, full-floating axles, three-quarter platform rear springs, complete Gray & Davis electric lighting and engine starting system, high tension magneto ignition, complete equipment.

Equipment—Best quality mohair top with envelope and side curtains, ventilated windshield, combination speedometer and clock, demountable rims, foot and robe rails, tire repair kit, tools, pump, jack, and horn.

EDWARDS-KNIGHT.

Edwards Motor Car Co., New York.

Models—Six models on one four-cylinder Knight engined chassis. Cylinders are cast in pairs and measure 4 x 5½, the rating being 25 horsepower. Transmission elements include dry multiple disk clutch, four-speed gearset and direct drive on third speed., full-floating rear axle with worm drive. The wheelbase is 120 inches on 4½-inch tires.

EDWARDS-KNIGHT FIVE-PASSENGER TOURING CAR WHICH HAS WORM DRIVE AND LANCHESTER SPRINGS

Prices—Roadster, speedster, four and five-passenger touring cars, $3,500; seven-passenger limousine and landaulet, $4,600 and $4,700, respectively.

Changes from Previous Construction—The car is new all the way through and is exhibited for the first time.

Selling Points—Knight type motor with new oiling system, unit dry multiple disk clutch and four-speed gearset in which third speed is direct drive, full-floating rear axle, worm drive, Lanchester rear springs, U. S. L. electric lighting and engine starting system completely enclosed, wire wheels standard equipment, center control with left drive, complete equipment.

Equipment—Golde "one man" top with envelope and side curtains, special one-piece adjustable windshield, specially designed

Digitized by Google

shock absorbers, U. S. L. electric lighting and engine starting system, robe and foot rails, speedometer, bulb and electric horn under hood, wire wheels, one extra wire wheel, quick-detachable rims, power tire pump, full set of tools, tire repair kit, hand pump and jack. Closed bodies have also electric dome and other interior lights, and toilet fittings.

HENDERSON.

Henderson Motor Car Co., Indianapolis, Ind.

Models—Two models, both built on the same four-cylinder chassis. The motor is an L-head block casting with cylinders measuring 4⅛ x 5¼ inches and rates at 44 horsepower. Transmission elements include pressed steel leather-faced cone clutch, three-speed selective rear axle gearset Stutz rear system; wheelbase is 116 inches on 34 x 4 tires.

Prices—Touring car, $1,385; roadster, $1,-285

Changes from Previous Construction—The car is new throughout.

Selling Points—Long-stroke motor, unit power plant supported at three points, shaft driven magneto and dynamo, Ward-Leonard electric lighting system, engine starter, left drive with center control, gear shift lever between front seats, low appearance, clear running boards, gasolene tank in cowl cowl, gasolene tank gauge, Stutz rear system, embedded dash lamps, nickel plated trimmings Renault type cooling.

Equipment—Ward-Leonard electric lighting system, Disco engine starter, demountable rims with an extra rim, gasolene gauge, tire irons, horn, robe rail, pump, jack, complete tool and tire repair outfit.

FLANDERS.

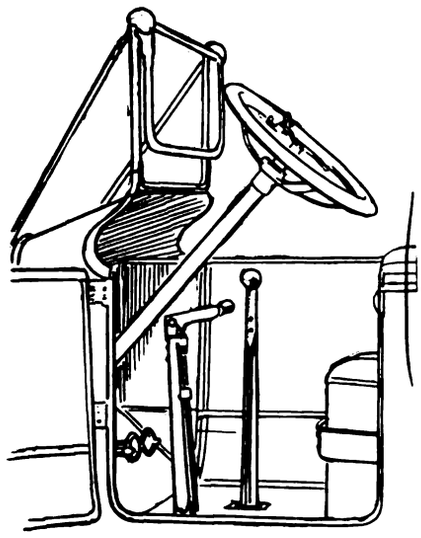
Flanders Motor Co., Detroit, Mich.

Models—Two models on two six-cylinder chassis each, the larger styled "40-six" and the smaller styled "50-six." Both motors are block cast, the larger measuring 4 x 4¼ and rating 50 horsepower and the smaller measuring 3⅞ x 4½ and rating 40 horsepower. Both have cone clutches, three-speed selective gearsets and floating rear axles. Wheelbases are 115 inches for the "40-six" on 34 x 4 tires and 130 inches for the "50-six" on 36 x 4½ tires.

Prices—"50-six" four-passenger touring, $2,250, seven-passenger touring $2,250. "40-six" five-passenger touring, $1,550.

Changes from Previous Construction—Both cars are new throughout.

Selling Points — Six-cylinder motors, block castings, balanced pistons, positive oiling system, Splitdorf dual ignition, Gray & Davis electric lighting and engine starting system, reserve gasolene supply, selective gearsets operating without use of H-plate, roller accelerator pedal of new type, large diameter cone clutch, resilient springs, exceptionally roomy bodies, front seats divided, glove and goggle compartments provided, 130-inch wheelbase, deep upholstery and complete equipment.



Equipment—Mohair top with envelope and side curtains, clear vision windshield, Warner speedometer, electric horn, Gray & Davis electric lighting and engine starting system, trouble lamp, cigar lighter, tire irons, tools, pump, and jack.

LITTLE.

Little Motor Car Co., Flint, Mich.

Models—Two models on two chassis, one a "four" and the other a "six." Both have L-head motors, the "four" being pair-cast, measuring 3½ x 3⅜ and rating 20 horsepower, and the "six" being cast in threes, measuring 3 5/16 x 4¼ and rating 40 horsepower. Both have cone clutches, floating rear axles, the "four" being fitted with two-speed selective and the "six" with three-speed selective gearsets.

Prices—For the "four," which is made only in roadster, $690; for the "six" five-passenger touring car, $1,285.

LITTLE CONTROL LEVERS

Changes from Previous Construction—Both cars are new throughout.

Selling Points—Long-stroke motors, cone clutch, selective gearsets, floating rear axles, complete equipment, easy riding and comfortable, simple, three-quarter elliptic rear springs on "four," three-quarter platform springs on "six," nickel plated trimmings, low price, no brass to polish, electric lighting system on "six."

Equipment—For the "four": Top with envelope and side curtains, windshield, five lamps, Prest-O-Lite tank, horn, jack, pump, tools, tire repair kit. For the "six": The same, except that gas tank is replaced by dynamo electric lighting system.

FRANKLIN.

H. H. Franklin Mfg. Co., Syracuse, N. Y.

Models—Five models on four chassis, two of which are "fours" and two are "sixes." All motors are of the separately cast, valve in the head, air-cooled type, the two "fours" measuring 3⅛ x 4 for the "18" and 4 x 4 for the "25," and the "sixes" measuring 3⅝ x 4 for the "30" and 4 x 4 for the "38." All chassis have multiple disk clutches running in oil, three-speed selective gearsets and semi-floating rear axles. Wheelbases are 100 inches on 32 x 3½ tires for the "18," 103 inches on 32 x 4 tires for the "25," 116 inches on 34 x 4 tires for the "30," 123 inches on 36 x 4½ front and 37 x 5 rear tires for the model D "38," 126 inches on 37 x 5 tires for the model H "38."

Prices—Model M "30" two-passenger Victoria-phaeton and five-passenger touring, $2,900; model D "38" four-passenger torpedo phaeton and five-passenger touring, $3,600; model H "38" seven-passenger touring, $3,850; seven-passenger limousine, $4,-850; model G "25" five-passenger touring, $2,000; model G "18" roadster, $1,650.

Changes from Previous Construction—Except for the addition of the Entz electric lighting and engine starting system, there have been no alterations.

Selling Points—Air-cooled motor, Entz electric lighting and engine starting system, light weight, laminated wood sills, full-elliptic springs, economical of fuel, oil and tires; silence, flexibility, power, beautiful finish, policy of incorporating improvements as they are made, re-circulating oil system with dash sight feed, automatic spark control, needle valve dash control, Franklin carburetter, multiple disk clutch in oil, tubular axles, large tires.

Equipment—Extension top with envelope and side curtains, windshield, Warner speedometer, demountable rims with one extra, electric lighting and engine starting system on six-cylinder models, full tool equipment, pump, jack and tire repair kit.

FIAT.

F. I. A. T., Poughkeepsie, N. Y.

Models—Six models on three chassis each, two of them "fours" and the other a "six." All have block cast L-head motors, the "fours" measuring 4⅜ x 6 and 5⅛ x 6¾ and rating 35 and 55 horsepower, respectively, and the "six" measuring 4⅜ x 6 and rating 50 horsepower. All have Fiat multiple disk clutches, four-speed selective gearsets and semi-floating rear axles; wheelbases are 123 inches for the "4-35" on 36 x 4½ tires; 128 inches for the "4-55" on 36 x 4½ front and 37 x 5 rear tires, and 135 inches for the "six" on the same size tires.

Prices—Model 54, "4-35" touring and convertible roadster, $4,000; limousine, $5,000; landaulet, $5,100. Model 55, "4-55," touring or convertible roadster, $4,500; limousine, $5,500; landaulet, $5,600. Model 56 "six," touring and convertible roadster, $5,000; limousine, $6,000; landaulet, $6,100.

Changes from Previous Construction—Model 55 is a new car all the way through, though in it are retained all the distinctive Fiat features; it differs from the others only in that it has a compression release. The

Digitized by Google

other models are virtually without mechanical change, though body lines and appointments have been improved.

Selling Points—Block motor with intake exhaust manifolds cast integral and water jacketed; only two timing gears; magneto and water pump on transverse front shaft driven by spiral gears; positive force-feed lubrication, smoke eliminated, radiator hung on Fiat patented trunnions, multiple disk clutch in oil, wheel fan, four-speed selective gearset, long wheelbase, easy riding springs, semi-floating rear axle in Fiat patented two-piece housing eliminating radius and torsion rods, luxurious upholstery, beautiful body lines and complete equipment.

Equipment—Top of best English mohair with side curtains and envelope; special Fiat windshield, complete Gray & Davis lighting system, 100-mile Stewart & Clark speedometer-gradometer with Seth Thomas clock, large Klaxon, bulb horn and tube, Q. D. demountable rims, trunk rack, tire irons, robe and foot rail, wheel-puller, complete set of tools, pump and jack.

HAYNES.

Haynes Automobile Co., Kokomo, Ind.

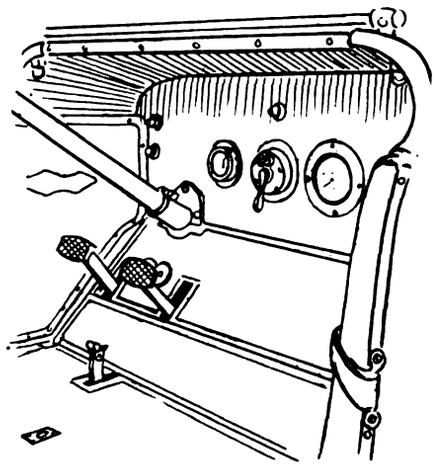
Models—Nine models built on two four-cylinder chassis, one the Model 24 and the other the Model 22. The larger chassis is equipped with T-head motor, cast in pairs, cylinders measuring 4½ x 5½ inches, rated at 40 horsepower; clutch, a contracting steel band on a steel drum; three-speed selective gearset, a full-floating rear axle, 120-inch wheelbase on 36 x 4½-inch tires. The smaller chassis has an L-head motor, cylinders cast in pairs, 4¼ x 5½ inches, same clutch and gearset, 116-inch wheelbase, full-floating rear axle, 34 x 4-inch tires.

Prices—Five-passenger touring Model 24, $1,785; four-passenger touring and two-passenger roadster, same; Model 22 five-passenger and four-passenger touring, $2,250; three-passenger coupe, $2,750; seven-passenger limousine, $3,400; seven-passenger Berline, $3,500.

Changes from Previous Construction—Model 24 has an L-head motor, center control and left-hand steering. In general construction this chassis design is similar to the Model 22. The latter shows but few changes over preceding models, except for refinements in design, construction and quality.

Selling Points—Haynes T-head motor, independent unit system, electric starting and lighting outfit, 12-inch upholstery, extra large touring body, Haynes clutch, Timken roller bearings throughout, combined rigid-flexible motor suspension, three-quarter elliptic spring suspension, very flexible and long springs, long wheelbase.

Equipment—Silk mohair top, top cover; two large Edmunds & Jones electric head lights, glass front, electric side lights, electric tail light, electric cowl lamp, electric starter, electric generator, 100-ampere-hour storage battery, Warner 60-mile autometer, standard bumper, horn, coat and foot rails, tire irons, full equipment tools, etc., one extra demountable rim.



HERRESHOFF.

Herreshoff Motor Co., Detroit, Mich.

Models—Three models on one four- and one six-cylinder chassis. Both chassis have unit power plants with T-head cast motors, cylinder dimensions being 3⅛ x 4½ in both. Ratings are 30 and 36 horsepower, respectively. Both have multiple disk clutches, four-speed selective gearsets and semi-floating rear axles. Wheelbases are 110 inches for the "four" on 32 x 3½ tires and 124 inches on 34 x 4 tires.

Prices—The 30-horsepower roadster, $1,250; touring, $1,350. The 36-horsepower "six" touring car, $1,700.

Changes from Previous Construction—The "six" is a new car throughout. Changes in the "four" include enclosed valves, four-speed gearset, aluminum crank, clutch and

HERRESHOFF CONTROL ELEMENTS

gear case, extra large tires, lighting and starting system, shrouded dash bodies, complete equipment added.

Selling Points—Long-stroke block motor, unit power plant, multiple disk clutch, four-speed selective gearset, left-hand drive, right-hand control, full platform springs, shrouded dash, nickel and black trimmings, electric lighting and engine starting system.

Equipment—Top with envelope and side curtains, speedometer, windshield, complete Westinghouse electric lighting and engine starting system, combination oil and electric lamps, demountable rims with one extra, horn, tools, tire repair kit, pump, and jack.

HUPMOBILE.

Hupp Motor Car Co., Detroit, Mich.

Models—Four models on one four-cylinder chassis mounting an L-head block-cast motor with cylinders measuring 3¼ x 5½ and rating 32 horsepower. Transmission elements include multiple disk clutch, three-speed selective gearset and full-floating rear axle; chassis is built in two wheelbase lengths—106 and 126 inches—tires being 32 x 3½ on small cars and roadsters and 33 x 4 on larger cars and coupe.

Prices—Roadster and four-passenger touring car, $975; three-passenger coupe, $1,350; six-passenger touring car, $1,175.

Changes from Previous Construction—Body lines have been refined and nickel plated trimmings adopted; all models are painted a uniform Hupmobile royal black.

Selling Points—Small bore, long-stroke motor, unit power plant, cylinders cast in a single block, all working parts enclosed, pressure feed system of lubrication, Bosch high tension magneto, Zenith carburetter, multiple disk clutch, three-speed selective gearset, full-floating rear axle, rear shock absorbers, quick-detachable rims, full equipment, low cost of upkeep, easy riding qualities by reason of low hung construction, center control, both doors accessible, right-hand drive, heavy artillery wheels; speed, 4 to 55 miles an hour; distinctive appearance by reason of body construction.

Equipment—Silk mohair top with envelope and Jiffy curtains, clear vision windshield, Prest-O-Lite tank, quick-detachable rims, tools, horn, rear shock absorber. Coupe body fitted with electric lights and horn fed from 100-ampere-hour storage battery; combination speedometer and clock.

HAVERS.

Havers Motor Car Co., Port Huron, Mich.

Models—Five models built on two six-cylinder chassis. Both motors have L-head pair-cast cylinders, the larger measuring 4 x 5 and rating 55 horsepower and the smaller measuring 3¾ x 5 and rating 44 horsepower. Both have multiple disk clutches, three-speed selective gearsets and floating rear axles. Wheelbases are 122 inches and 128 inches for the smaller and larger models, respectively, tires being 36 x 4 on both.

Prices—"Six-44" in roadster, four- and five-passenger touring form, $1,850; "six-55" in roadster and five-passenger touring form, $2,250.

Changes from Previous Construction—The "six-55" is a new car throughout and differs from the older model only in the size of the parts; alterations in the "six-44" are largely in the nature of detail refinements.

Selling Points—Unit power plant, multiple disk clutch in which both sides of driving disks are Raybestos faced, three-speed selective gearset, full-floating rear axles, exceptionally roomy tonneau and front compartments, quality of upholstering and finish, electric lighting and engine starting on the "six-55." Disco starter on the "six-44."

Equipment—Top with envelope and inside curtains, patent adjustable windshield, speedometer and grade indicator; electric lighting and engine starting system on the "six-55"; Disco starter on the "six-44"; Gray & Davis lamps, horn under hood, tools, tire repair kit, jack, and pump.

KISSEL.

Kissel Motor Car Co., Milwaukee, Wis.

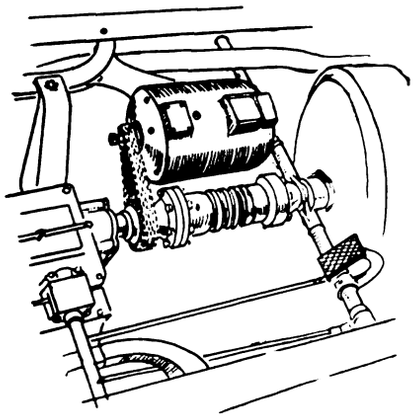
Models—Twelve models on four chassis, one a "six" and the other three "fours." All motors are of the L-head type with the cylinders cast in pairs, the dimensions being 4½ x 4¼, 4½ x 5¼, 4⅞ x 5 and 4½ x 5¼, respectively, for the "30," "40," "50" and "6-60". All have cork insert cone clutches and all but the "30" have four-speed selectively operated gearsets; the "30" has a three-speed gearset. Wheelbases are 116, 121, 132 and 140 inches, respectively, on 34 x 4, 35 x 4½, 36 x 4½ and 37 x 5 inch tires.

Prices—For the "6-60": Touring and roadster, $3,150; limousine, $4,650; enclosed limousine, $4,900. For the "4-50": Touring, $2,500; limousine, $4,000; enclosed limousine, $4,250. For the "4-40": Semi-touring, $2,000; coupe, $3,000. For the "4-30": Semi-touring, $1,700; semi-racer, $1,700, coupe, $2,450.

Changes from Previous Construction—Electric lighting and engine starting system added, strokes increased, anti-smoke device added, timing gears now driven by "silent" chain, larger valves, more easily operated clutch pedals, wider springs, roomier upholstery, roomier tonneaux.

Selling Points—Diversity of models, long wheelbase, deep upholstery, wide springs, wide and low seats, unusually high factor of safety complete electric lighting and engine starting system, easy control, simple operation, new body lines which eliminate angles, absence of vibration.

Equipment—Mohair or Pantasote top with side curtains and envelope, glass front, electric lighting and engine starting systems, shock absorbers front and rear, demountable rims with an extra rim, Stewart & Clark speedometer, double tire irons, Solar lamps, robe and foot rails, horn, jack, tire repair kit.



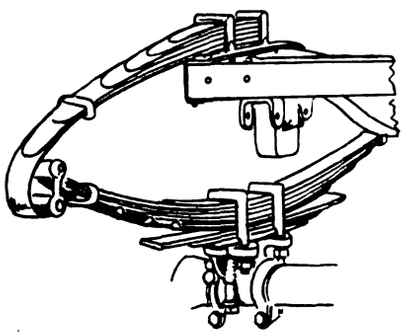
KLINE.

Kline Motor Car Corp., Richmond, Va.

Models—Four models each on four chassis, two of which are "sixes" and two are "fours." In the "6-60" the motor is T-head pair-cast and measures 4½ x 5½; the "6-50" is T-head separately cast and measures 4⅜ x 5, both four-cylinder motors are T-head, the "40" being pair cast and measuring 4¼ x 5½ and the "30" being separately cast and measuring 4 4⅜. All have cone clutches and four-speed selectively operated gearsets with direct drive on third speed. Wheelbases are, for the "6-60," 132 inches on 37 x 5 tires; for the "6-50," 126 inches on 36 x 4½ tires; for the "4-40," 118 inches on 36 x 4 tires; for the "4-30," 115 inches on 34 x 4 tires.

Prices—For the "6-60": Touring, $3,500; roadster, $3,250; coupe-roadster, $3,750; Speed car, $3,250. For the "6-50": Touring and roadster, $2,850; coupe-roadster, $3,350; Speed car, $2,800. For the "4-40": Touring and roadster, $2,250; coupe-roadster, $2,750; Speed car, $2,200. For the "4-30": Touring and roadster, $1,850, with Ever Ready starter, or $1,750 with Prest-O-Lite starter.

Changes from Previous Construction—Mechanically, all the models are without change; otherwise, the cushions have been



KLINE DYNAMO POSITION

increased in thickness to 10 inches, 25 candlepower lamps take the place of the less powerful head lamps, auxiliary shock absorbers have been added, electric lighting and engine starting systems have been added to all, and tire sizes have been increased.

Selling Points—Wide latitude for choice in purchasing, long-stroke flexible motor, smokeless pistons, long wheelbase, deep cushions, large tires, simplicity of control, Rushmore lighting system, large baggage carrying space, careful finish.

Equipment—Semi-Duquesne silk mohair top with side curtain and envelope, adjustable rain-vision windshield, demountable rims, Rushmore electric lighting system,

KLINE AUXILIARY SPRINGS

engine starter, speedometer, horn, foot rail, coat rail, tire repair kit, pump, jack, tools.

KNOX.

Knox Automobile Co., Springfield, Mass.

Models—Four models on two four and two six cylinder chassis. All motors are pair-cast with the valves overhead in removable cylinder heads without cages, both "fours" measuring 5 x 5½ inches and rating 40 horsepower. The "Little Six" motor measures 4⅜ x 5½ inches and rates 48 horsepower, and the other "six" measures 5 x 5½ and rates at 66 horsepower. Transmission elements are the same in all and include: Knox three-plate clutch with cork inserts, three-speed selective gearset, full-floating rear axle; wheelbases of the four models are 122, 126, 130 and 134 inches, respectively, and the tire sizes are 36 x 4½, 37 x 5, 38 x 5 and 38 x 5½.

Prices—Model 44: Raceabout, $3,300; four-passenger torpedo $3,400; five-passenger torpedo, $3,450; touring car, $3,500; limousine, $4,400, and landaulet, $4,450. Model 45: Raceabout, $3,600; six-passenger torpedo, $3,700; touring car, $3,800; limousine, $4,700; landaulet, $4,750. Model 46: Raceabout, torpedo and touring car, $4,350; limousine, $5,350; landaulet, $5,400. Model 66: Raceabout, torpedo and touring car, $5,000; limousine, $6,400; landaulet, $6,450.

Changes from Previous Construction—The "Little Six" "46" is a new car throughout. On the other models, spirally cut gears are used instead of spur gears in the gearsets, cellular type radiator instead of tubular is used; all metal universal joints used instead of leather covered ones; three- instead of two-bladed fan; dash lamps imbedded; electric lighting and starting systems have been added.

Selling Points—Unit power plant with flexible three-point support, valves in detachable cylinder heads without cages, two independent ignition systems, compact and strong three-speed selectively operated gearset put together without lock washer or cotter pins, dry three-plate clutch, De Dion type circulating lubrication system, full-floating rear axle with special provision for making adjustments, three-quarter elliptic springs with extra long span, center control with option of either right or left drive, straight line drive with average load. On the "Little Six" model camshaft is driven by "silent" chain; extra large valves and water-jacketed manifold, absence of radius roads while permitting perfect spring action, unusual appearance lent by V-shaped radiator, deep cushions, careful finish. Six-cylinder models are equipped with electric lighting and acetylene engine starting systems.

Equipment—Top, with jiffy side curtains and envelope, glass windshield, Jones speedometer-clock, combination Klaxonette bulb and electric horn, motor driven tire pump, Fisk demountable rims with an extra rim, tire carriers, jack, hand tire pump, tire repair kit, full set of tools, usual complement of lamps. Four-cylinder models have automatic head lamp lighters and Prest-O-Lite tank. Model 46 has electric lighting system. Electric starting system installed on all models for $150 extra.

LENOX.

Lenox Motor Car Co., Boston, Mass.

Models—Seven models on two chassis, one a "four" and the other a "six." The

Digitized by Google

"six" motor is of the T-head type, with cylinders measuring 4 x 5 and rating 60 horsepower; the "four" motor is of L-head type with cylinders 4¼ x 5½ and rating 40 horsepower. Both have cone clutches, three-speed selective gearsets and floating rear axles. Wheelbases are 130 inches on 36 x 4½-inch tires for the "six" and 118 inches on 36 x 4-inch tires for the "four."

Prices—For the "six": Six-passenger touring, $2,750; limousine, $4,050. For the "four": Speedster, $2,100; four- and five-passenger touring, $2,000; limousine, $3,300.

Changes from Previous Construction—The "six" is a new car throughout; in the "four" the bore has been increased ⅛ inch and the stroke ¼ inch; the wheelbase is 2 inches longer, bodies have been refined and fitted with one-piece windshield in place of two-piece; top material altered.

Selling Points—Long-stroke motor, electric lighting and starting system, full-floating rear axle, heavy wheels with 12 spokes in each, all springs bushed and lubricated with integral grease cups, deep Turkish upholstery, complete equipment

Equipment—Top with envelope and side curtains, windshield, speedometer, electric lighting and starting system, demountable rims with one extra, tire irons, full complement of tools, foot and robe rails.

DETROITER.

Briggs-Detroiter Co., Detroit, Mich.

Models—Four models built on the same four-cylinder chassis mounting a unit power plant with L-head cylinders cast in a block measuring 3⅜ x 4¾ and rating 25 horsepower. Transmission elements include multiple disk clutch, three-speed selective gearset and full-joating rear axle. Wheelbase is 104 inches on 32 x 3½ tires.

Prices—Model A standard touring car, $850; Model A1 touring car with more complete equipment, $900; roadster in two models, $900.

Changes from Previous Construction—The car is new throughout and is exhibited for the first time.

Selling Points—Straight-line bodies, long-stroke motor, unit power plant, multiple disk clutch, three-speed selective gearset, full-floating rear axle, left-hand steering with center control, emergency brake operated by pedal, three-point suspension, ball-bearing transmission, double brakes, high-tension magneto.

Equipment—Model A: Top with envelope and side curtains, windshield, gas and oil lamps, generator, tire and repair tool kit, jack, and horn. Model A1, A2, A3, A4: Same, including Prest-O-Lite tank, quick-detachable demountable rims, Stewart speedometer tire irons and robe rails.

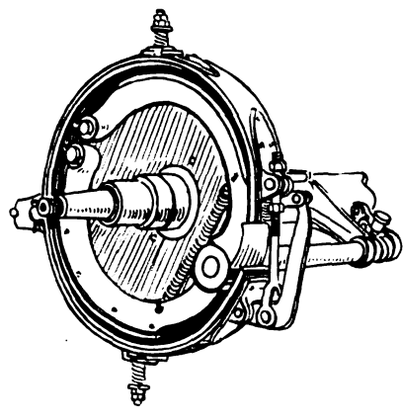
FIRESTONE-COLUMBUS.

Columbus Buggy Co., Columbus, O.

Models—Eight models built on three chassis, two of which are "fours" and the third is a "six." The four-cylinder motors measure 4⅛ x 5¼ and 4½ x 5½ and the "six" is rated at 68 horsepower. Wheelbases are 122 inches for the "four" and 130 inches for the "six."

Prices—Not publicly quoted.

Changes from Previous Construction—Steering gear shifted to the left side, with the control levers in center of footboard.



Selling Points—Continental motors, electric lighting and starting system, high-tension magneto, imported annular bearings, left-hand steering with central control, extra tires suspended at rear of body, electric lighting and engine starting system, complete equipment.

Equipment—Silk-faced mohair top, ventilating windshield, speedometer, robe rail, foot rail, tire and license brackets, the usual assortment of tools and spare parts, tire repair kit, pump, jack, and horn.

OVERLAND.

Willys-Overland Co., Toledo, O.

Models—Eight models built on two four-cylinder chassis. Both motors have separately cast cylinders, the smaller measuring 4 x 4½ and rating 30 horsepower and the larger measuring 4⅜ x 4½ and rating 45 horsepower. Both have cone clutches, three-speed selective gearsets and three-quarter-floating rear axles. Wheelbase of the smaller is 110 inches on 32 x 3½-inch tires for all except the coupe, which has 33 x 4 tires.

OVERLAND BRAKE MECHANISM

Prices—For the smaller: Five-passenger touring car, $985; five-passenger touring car with cowl dash and four-passenger torpedo, $1,010; roadster, $985; coupe (equipped with electric lighting and engine starting system), $1,500. For the larger roadster, four-passenger torpedo and five-passenger touring car, $1,475.

Changes from Previous Construction—The smaller has a longer wheelbase; complete equipment, electric lighting and engine starting system on some models, three-quarter-floating rear axle, new and larger brakes, roomier body, and minor improvements in motor. The larger models have longer wheelbases and substantially all the other improvements.

Selling Points—Five-bearing crankshaft motor with offset cylinders, acetylene engine starter, gearset combined with rear axle, three-quarter-floating rear axle of new design, 12 spokes in each wheel, long wheelbase, grease cups on spring bolts, oversized brakes, pumpless thermo-siphon cooling system, center control, special front door ventilation; model 71 also has electric lighting system and full-floating rear axle.

Equipment—All are equipped with top with side curtains and envelope, windshield, speedometer, gas lamps, horn, robe rail, foot rail, tire carriers, tools, tire repair kit, jack, pump, etc. The coupe has, in addition, electric lighting and engine starting system and an electric horn; the larger models have dynamo electric lighting system; all have acetylene engine starters; the U. S. L. electric lighting and engine starting system will be fitted to any at an extra cost.

HUDSON.

Hudson Motor Car Co., Detroit, Mich.

Models—Eleven models on one four- and one six-cylinder chassis, both motors measuring 4⅛ x 5¼ and rating 37 and 54 horsepower, respectively. Both have multiple disk clutches, three-speed selective gearsets and full-floating rear axles. Wheelbases are 118 inches on 36 x 4 tires for the "four" and 127 inches on 36 x 4½ tires for the "six."

Prices—For the "four-37": Touring, torpedo or roadster, $1,875; coupe, $2,350; limousine, $3,250. For the "six-54": Five-passenger touring, torpedo or roadster, $2,450; seven-passenger touring, $2,600; coupe, $2,950; limousine, $3,750.

Changes from Previous Construction—Both cars are new throughout and are exhibited for the first time.

Selling Points—Delco electric lighting and engine starting system, multiple disk clutch, three-speed selective gearset, full-floating rear axle, long wheelbase, simple and beautiful flush-sided bodies, 12-inch Turkish upholstery, A No. 1 hand-buffed leather, cellular type radiator, co-operation of 48 engineers in design.

Equipment—Top with envelope and side curtains, rain-vision windshield, speedometer-clock combination, demountable rims, tire repair kit, tools, tire irons, jack, pump, horn, etc.

CARTERCAR.

Cartercar Co., Pontiac, Mich.

Models—Four models built on the same four-cylinder chassis mounting an L-head motor measuring 4⅛ x 4¾. Friction transmission is employed and the rear axle is of the three-quarter-floating type. Wheelbase is 116 inches on 36 x 4 tires.

Prices—Roadster, $1,600; five-passenger touring, $1,700; coupe, $1,900; Sedan, $2,000.

Changes from Previous Construction—Gasolene tank has been placed in cowl dash; frame has been lowered slightly.

Selling Points—Cartercar patented friction transmission, eliminating the use of

Digitized by Google

gears and giving an unlimited number of speeds, "silent" chain running in oil-tight case delivering maximum power to rear axle; great flexibility; both transmission and chain absolutely noiseless in operation, long wheelbase, accessibility, grease cups on all, spring shackles and steering connections, efficient cooling by honeycomb radiator, deep upholstery.

Equipment—Complete self-contained electric lighting and engine starting system, mohair top with envelope, one-piece ventilating windshield, 60-mile combination speedometer, electric lamps, dash lamp inverted horn, robe rail, foot rail, nickeled and black enamel trimmings throughout, five demountable rims, trunk rack and rebound straps, storage battery, tire pump, jack, tire repair kit, full set of tools and tire irons.

LOCOMOBILE.

Locomobile Co., Bridgeport, Conn.

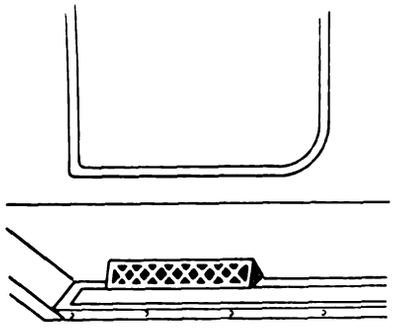
Models—Seven models built on three chassis, two of which are "sixes" and the other a "four." All three motors are of the L-head pair-cast type, the "four" measuring 4 x 4, and rating 30 horsepower, the "light six" measuring 4¼ x 5 and rating 48 horsepower, and the "Big six" measuring 4½ x 5½ and rating 48 horsepower. The "four" has a leather-faced cone clutch while the two "sixes" have multiple disk clutches, all have four-speed selective gearsets and floating rear axles. Wheelbases are 120 inches for the "four" on 36 x 4 tires, 128 inches for the "Little six" on the same size tires, and 136 inches for the "Big six" on 36 x 4½ front and 37 x 5 rear tires.

Prices—For the "four": Roadster, touring car, torpedo $3,000. For the "Little six": Roadster torpedo and touring, $4,300; coupe $5,350; landaulet, $5,450; berline coupe $5,550; berline landaulet, $5,650. For the "Big six": Roadster, torpedo touring, $5,000; limousine, $6,000; landaulet $6,100.

Changes from Previous Construction—The "four" and the "Little six" remain practically unaltered, though a number of changes have been made in the "Big six." Motor bore has been increased, new carburetter adopted, oil pump driven from inlet instead of exhaust side, cooling system, including pump, radiator and jackets, is larger, new valve lifters have been adopted, fan is larger and has new mounting, all cars now have aluminum cowl dashes.

Selling Features—Long-stroke six-cylinder motors flexibility; positive, smokeless oiling system; manganese bronze crank and gear case unit multiple disk clutch, four-speed selective gearset, seven-bearing crankshaft, complete electric lighting system, Disco engine starter, 10-inch upholstery, deep cowl dashes, careful finish, wide latitude for choice in models.

Equipment—Silk mohair top with envelope and side curtains, rain vision windshield, dynamo electric lighting system, Disco engine starter, power driven air compressor, demountable quick-detachable tires with one extra, tire carriers at back of body, robe rail, foot rest, tools, horn, jack, pump, and tire repair kit.



BUICK

Buick Motor Co., Flint, Mich.

Models—Five models built on three four-cylinder chassis, the "24-25," the "30-31" and the "40." All motors are of the valve-in-the-head type, the "24-25" measuring 3¾ in. square and rating 28 horsepower, the "30-31" measuring 4 in. square and rating 32 horsepower, and the "40" measuring 4¼ x 4½ and rating 40 horsepower. All have cone clutches, three-speed selective gearsets, with full-floating rear axle on the "40" and semi-floating in the others. Wheelbases are 105 for the "24-25" on 32 x 3½ tires; 108 inches for the "30-31" on 34 x 3½ tires; 115 inches for the "40" on 36 x 4 tires.

Prices—"24" roadster, $950; "25" touring car, $1,050; "30" roadster, $1,125; "31" touring car, $1,285; "40" touring car, $1,650.

Changes from Previous Construction—Model "40" is new all the way through,

BUICK PAINT PROTECTOR

though it embodies the essential Buick features common to all; front axles in all cars now are of I-beam section, drop-forged.

Selling Points—Valve-in-the-head motor; semi-elliptic and three-quarter elliptic rear springs of strength and resilience; deep cushions; graceful contour permitting maximum of leg room; integral windshield without brass dividing line; well-fitting tops.

Equipment—Mohair top with side curtains and rubber envelope; Disco engine starter; demountable rims; combination oil and electric lights on the "40" connected to "6-60" storage battery; oil lamps with acetylene head lamps and Prest-O-Lite tank on others; horn; jack; tools; tire repair kit; spare parts; robe and foot rail.

JACKSON.

Jackson Automobile Co., Jackson, Mich.

Models—Three models on three chassis, two of which are "fours" and the other a "six." All motors are of the L-head type, with cylinders cast in pairs; dimensions of the smaller "four" and the "six" are 4⅛ x 4¾ and the ratings are 35 and 55 horsepower, respectively; the larger four measures 4½ x 5¼ and rates 45 horsepower. In all, cone clutches, three-speed selectively operated gearsets and full-floating rear axles are used. Wheelbases are 138 inches on 36 x 4½ inch tires for the "six"; 124 inches on 36 x 4 tires for the "4-45," and 115 inches on 34 x 4 tires for the "4-35."

Prices—For the "six," which is styled "Sultanic," five-passenger touring, $2,500; seven-passenger, $2,650; for the "4-45," which is styled "Majestic," $1,850 ($1,975 with electric lighting and starting system); for the "4-35," styled "Olympic," $1,500.

Changes from Previous Construction—All three models are new throughout.

Selling Points—Comfort, obtained by means of full-elliptic springs front and rear and deep upholstery; roomy tonneau and front compartments, unit construction motor, clutch and gearset; ball bearing mounted transmission shafts; pressure gasolene feed to gravity tank under cowl. Disco engine starter on the "fours," electric starter on the "six"; dynamo electric lighting system on the Sultanic and the Majestic, Olympic equipped with electric device for lighting head lamps; black and nickel plated trimmings.

Equipment—Mohair top with side curtains and envelope, speedometer, windshield, Firestone demountable quick-detachable rims with an extra rim, tire irons, foot and robe rails, tools, tire repair kit, pump, jack, and horn. The Sultanic and the Majestic also have electric lighting systems, the former having an electric starter.

MATHESON.

Matheson Automobile Co., Wilkes-Barre, Pa.

Models—Two models built on the same six-cylinder chassis mounting a pair-cast valve in the head motor measuring 4½ x 5 and rating 50 horsepower. Transmission elements include multiple disk clutch in oil, three-speed selective gearset and full-floating rear axle. Wheelbase is 135 inches on 36 x 4½ front and 37 x 5 rear tires.

Prices—Series "B": Five-passenger touring, $3,750; seven-passenger touring, $4,000. Series "C," differing from model "B" mainly in body types and equipment and some further chassis refinements, seven-passenger touring car, $4,800.

Changes from Previous Construction—Running boards one inch wider and 1¾ inches lower, edged with aluminum; new tool boxes, control lever lower ends enclosed in aluminum housing, all equipment removed from dash, rear axle and gearset housing increased in size and fitted with partition permitting use of separate lubricants, single-cylinder power tire pump added, brakes increased in diameter and face, one oil filler replaces two formerly used, oil level gauge provided, new design oil reservoir, gear ratios in gearset changed slightly, new design valve cage domes, larger fan and pump, fan-spoked flywheel adopted, constant pressure fuel supply by plunger pump instead of exhaust pressure.

Selling Points—Silent operation, light weight per horsepower, large bearing sur-

Digitized by Google

faces, great flexibility of motor, great mileage per gallon of fuel and oil, great mileage on tires, multiple disk clutch, irreversible steering gear, easy riding qualities, strong gearset, straight-line drive, interlocking device on gearset, handsome and luxurious bodies, electric lighting and engine starting system, efficient braking system, complete equipment.

Equipment—Dynamo electric lighting and engine starting system, inspection electric lamp with 10 feet of cord, extension top with envelope, clear-vision folding glass front, Warner speedometer, Klaxon horn with storage battery, reed horn, power air pump and pressure gauge for inflating tires, gasolene gauge, two shock absorbers on rear springs, tire carriers attached to rear of car, quick-detachable demountable rims, coat and blanket rail, folding foot rest, Yale locks with Universal key for tool and storage compartments and hood, spacious lockers for tools and equipment between frame and running boards, two soleleather suitcases in compartment under front seats, foot scrapers, three oil cans attached to motor base, oil gun, tire pump, jack, and full set of tools.

PEERLESS.

Peerless Motor Car Co., Cleveland, O.

Models—Five models on four chassis each, three of them being "sixes" and the other a "four." Motors are all of the T-head type, with cylinders cast in pairs, the measurements being 4 x 5½ for the "38-6," 4½ x 6 for the "48-6," 5 x 7 for the "60-6," and 5 x 5½ for the "40-4." All have internal expanding cork insert clutches, four-speed selective gearsets and arched full-floating rear axles. Wheelbases are 125 inches on 36 x 4½ tires for the "38-6," 137 inches on 36 x 4½ front and 37 x 5 rear tires for the "48-6," 140 inches on 38 x 5½ tires for the "60-6," and 125 inches on 36 x 4½ front and 37 x 5 rear tires for the "40-4."

Prices—For the "38-6": Roadster, touring and torpedo, $4,300; coupe, $5,000; limousine, $5,300; landaulet, $5,400; berline limousine, $5,500. For the "48-6": Open bodies, $5,000; limousine, $6,000; landaulet, $6,100; berline limousine, $6,200. For the "60-6": Open types, $6,000; limousine, $7,000; landaulet, $7,100; berline limousine, $7,200. For the "40-4": Open types, $4,300; limousine, $5,300; landaulet, $5,400; berline limousine, $5,500.

Changes from Previous Construction—Complete Gray & Davis electric lighting and engine starting system adopted; a butterfly throttle replaces the piston valve, dual ignition replaces double ignition, tire sizes of the "38-6" and the "60-6" have been increased, side lamps have been imbedded in dash.

Selling Points—Long stroke six-cylinder motors that are flexible and powerful at low flywheel speeds, four-speed gearset mounted in center of frame, thus distributing weight and reducing amount of unsprung weight; rear axles arched and rear wheel dished, Gray & Davis electric lighting and engine starting system, unsually wide and roomy bodies, careful paint work, concealed door hinges and latches, complete equipment, extra long wheelbases and exceptionally resilient springs.

Equipment—Peerless mohair top with envelope and side curtains; Gray & Davis electric lighting and engine starting system, folding windshield, universal demountable quick-detachable rims with one extra, four-cylinder power driven tire pump, locks for ignition, tools, and tire holders, tire carriers, coat rack, foot rest, tool equipment, horn and jack.

PULLMAN.

Pullman Motor Car Co., York, Pa.

Models—Eleven models built on three chassis, two of which are "fours" and the third is a "six." All have T-head, pair-cast cylinders, the "6-66" and the "4-44" measuring 4½ x 5½ and the "4-36" measuring 4 1/16 x 5. All have cone clutches, four-speed selective gearsets and full-floating rear axle, wheelbases being 138, 122 and 118 inches, respectively, on 36 x 4½, 36 x 4 and 34 x 4 tires.

Prices—For the "6-66" seven-passenger touring, $2,750; "4-44" five-passenger touring, $2,150; "4-36" five-passenger touring, $1,875.

Changes from Previous Construction—Nineteen-inch rubber steering wheel adopted, horn placed inside hood, longer springs, rear tire irons, broader fenders, clear running boards, oil control and carburetter primer placed on dash.

Selling Points—Motor, gearset and steering gear made in Pullman shops, electric lighting and engine starting system, spring insert cone clutch, four-speed selective gearset, full-floating rear axle, heavy artillery wheels with bossed spokes in rear, grease cups integral with spring bolts, extra strong gearset, gearsets on "fours" and "sixes" interchangeable.

Equipment—Top with envelope and side curtains, rain-vision windshield, Stewart speedometer, complete electric lighting and engine starting system, tools, tire repair kit, electric vulcanizer, Firestone demountable rims, pump, jack, and horn.

PACKARD.

Packard Motor Car Co., Detroit, Mich.

Models—Nine models on two chassis, both "sixes." Both have L-head pair-cast cylinders, the "38" measuring 4 x 5½, and the "48" measuring 4½ x 5½. All have dry plate clutches, three-speed semi-selectively operated gearsets; wheelbases of the standard chassis are 134 for the "38" with 36 x 4½ tires all around, 133 for the "48" with 36 x 4½ front and 37 x 5 rear tires.

Prices—For the "38": Phaeton, $4,150; runabout, $4,050; limousine, $5,200; landaulet, $5,300; imperial limousine, $5,400; brougham, $5,200; coupe, $4,500; imperial coupe, $4,900. For the "48": Runabout, $4,650; touring, $4,850; phaeton, $4,750; limousine, $5,850; landaulet, $5,950; imperial limousine, $6,050; brougham, $5,800; coupe, $5,100.

Changes from Previous Construction—The "38" is a new car throughout. In the "48" a new engine oiling system has been adopted, a new coupling between the exhaust manifold and the muffler pipe is used, three-quarter elliptic rear springs replace the semi-elliptic ones, the gas tank has been placed at the back of the body, an electric lighting and engine starting system and an acetylene primer have been added, bodies have been made roomier.

Selling Points—Conservative motor rating, auxiliary oiling system, hydraulic engine governor, unit motor and clutch construction, dry plate clutch, semi-selective gearset on rear axle, electric lighting and engine starting system, steering column control mechanism, roomy bodies, wide latitude for choice.

Equipment—Packard extension cape cart top with side curtains and envelope, on touring cars and phaetons; runabout equipped with Victoria top, curtains and envelope. Packard storm-tilt windshield on all models; electric lighting and engine starting system, acetylene primer, demountable rims, tools, tire irons, spare parts, etc.

MICHIGAN.

Michigan Motor Car Co., Kalamazoo, Mich.

Models—Four models built on two four-cylinder chassis. Both motors are of the L-head block type, the smaller measuring 4 1/16 x 4½ and rating 33 horsepower and the larger measuring 4¼ x 5¼ and rating 40 horsepower. Both chassis have multiple disk clutches, the "40" having four-speed selective gearset with direct drive on fourth and full-floating rear axle, and the "33" having three-speed selective gearset with three-quarter floating rear axle. Wheelbases are 118 inches for the "40" on 35 x 4½ tires and 114 inches for the "33" on 34 x 4 tires.

Prices—For the "40": Roadster and five-passenger touring, $1,585. For the "33": Roadster and five-passenger touring car, $1,400.

Changes from Previous Construction—Both cars are practically new throughout, though the Michigan characteristics have been retained. Timing gears now are lubricated from the oiling system; lower piston rings are beveled and their grooves drilled to obviate smoke; left-hand drive with center control is new, frame is deeper, brakes are larger, bodies are roomier, tire sizes have been increased; full-floating rear axle in the "40."

Selling Points—Electric lighting by generator as regular equipment, big easily operated cone clutch, over-size tires, left-hand drive with center control, 14-inch Turkish cushions, 80-horsepower rear axle, extra wide, easy riding springs; adjustable steering equipment, generous dimensions, rear seat 50 inches wide, 22 coats of paint and varnish, running boards clear of boxes, tool

Digitized by Google

chests underneath, genuine cellular radiator, foot rest accelerator.

Equipment—Best grade of mohair top with envelope and side curtains, built-in windshield, electric lighting system, electric horn, $50 4-inch speedometer, Firestone universal demountable quick-detachable rims, special foot rail, swing robe rail, rear tire irons, complete tool equipment, jack, and pump.

OLDSMOBILE.

Olds Motor Works, Lansing, Mich.

Models—Three models on one six-cylinder chassis Motor is a unit power plant with L-head cylinders cast in pairs and measuring 4⅛ x 4¼, the rating is 50 horsepower. Transmission elements include cone clutch, three-speed selective gearset and full-floating rear axle. Wheelbase is 135 inches on 36 x 4½ tires.

Prices—Four-passenger and five-passenger touring, $3,200; seven-passenger touring $3,350.

Changes from Previous Construction—The car is new throughout and is exhibited for the first time.

Selling Points—Light weight, graceful body lines, 12-inch upholstery, 60-inch three-quarter elliptic rear springs, Delco electric lighting, engine starting and ignition system, power tire pump, combination Klaxon signal, clear-running boards, beautiful finish, restful reclining position afforded by seats, low price compared with previous Oldsmobile "sixes."

Equipment—Top with envelope and side curtains, clear vision windshield, combination Warner speedometer and Waltham 8-day clock, Delco electric lighting, ignition and engine starting system, demountable rims with an extra rim, double tire irons at back, tools, jack, tire repair kit, power tire pump.

O. N. L. Y.

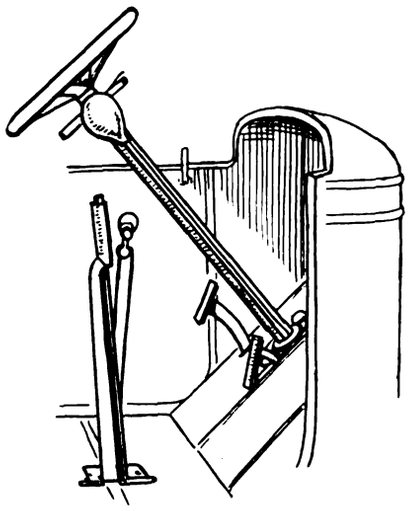
Only Motor Car Co., Port Jefferson, L. I., N. Y.

Models—Two models on the same four-cylinder chassis. Motor is T-head, block-cast, with cylinders measuring 4¼ x 7⅞ inches, rating 30 horsepower; transmission elements include leather-faced cone clutch, three-speed selective rear axle gearset and floating rear axle. Wheelbase of both models is 112 inches on 32 x 3½-inch tires.

Prices—Touring, $1,250; roadster, $1,000.

Changes from Previous Construction—There have been no alterations other than a few minor changes.

Selling Points — Exceptionally long stroke, with 90 pounds compression and low horsepower rating; T-head construction, speed of 75 miles an hour guaranteed, 30 miles to the gallon of fuel guaranteed, three-jet carburetter, center of gravity of car in plane of wheel hubs, thermo-siphonic water circulation, Renault type rear axle, mounted on R. L. V. ball bearings; straight-line bodies and low, flush sides.



Equipment—Two oil side lamps and one tail lamp.

MAXWELL.

United States Motor Co., Maxwell-Briscoe Division, New York City.

Models—Three models on three four-cylinder chassis. All three chassis have unit power plants with T-head motors, the two smaller ones being pair-cast and the larger separately cast The three motors measure 3¼ x 4, rating 22 horsepower; 4 x 4⅝, rating 30 horsepower, and 4¼ x 5¼, rating 40 horsepower. All have multiple disk clutches and three-speed selective gearsets, the two smaller models have semi-floating rear axles and the larger model has a full-floating rear axle. Wheelbases are 93 inches on 30 x 3½ tires for the "22," 106 on 32 x 3½ tires for the "30," and 115 inches on 36 x 4 tires for the "40."

Prices—"22" roadster, $785; "30" roadster and touring, $1,100 and $1,145, respectively; "40" touring, $1,675.

MAXWELL CONTROL ELEMENTS

Changes from Previous Construction—The "22" remains substantially without change. In the "30" the motor stroke has been increased, connecting rods are longer, cylinders are not offset, plunger oil pump, bearing diameters increased, pistons redesigned for lightness and strength, integral camshafts, frame lowered, longer wheelbase, new spring suspension, new fenders, new front axle, new steering knuckles, new fan, roadster running board lengthened, additional grease cups, bottom of control levers boxed in. In the "40" the pistons have been made lighter and the connecting rods longer, compression has been lowered, stuffing box on valve push rods, small relief valves on motor, new inlet manifold, single water discharge pipe, three narrow rings on pistons, new style fan and radiator, larger gears and shafts, larger bearings, center control with left-hand steer, interlock on clutch removed, new accelerator pedal, bodies made larger and fitted with ventilators, thicker upholstery, gasolene tank mounted on frame, new dash, plain sides to bonnet, brakes adjustable.

Selling Points—Applying to the "40": Left-hand drive, center control, selective gearset, full-floating rear axle, three-point suspension, thermo-syphon cooling, T-head motor, multiple disk clutch, thorough lubrication system, demountable rims, electric lights, engine starter, deep Turkish upholstering, accessibility of parts, simplicity, Maxwell single adjustment carburetter, long-stroke motor, flexibility and economy. Applying to the "30": Designed as family touring car; abundant power and strength, multiple disk clutch, T-head motor, sliding gears, semi-floating rear axle, dual ignition, long-stroke motor, new design spring suspension, drop-forged front axle. Applying to the "22": Left-hand drive, center control, sliding gears, compact power plant, three-point support, multiple disk clutch, semi-floating rear axle, dual ignition, single adjustment carburetter, engine starter, full equipment, power beyond rating, vestibuled and ventilated body, large capacity tank, strong tire carriers, luggage deck.

Equipment—On the "22": Top with envelope and side curtains, engine starter, windshield, Prest-O-Lite tank, lamps, tools, horn, jack, pump, tire repair kit. On the "30": The same On the "40": The same, including 60-mile speedometer, ventilators, tire carriers, combination oil and electric lights, demountable rims.

S. G. V.

The S. G. V. Co., Reading, Pa.

Models—Two models built on two four-cylinder chassis each. Both motors have block cast L-head cylinders, the smaller rating 25 horsepower and designated as models A and B, measuring 3¼ x 4¾, and the larger, rating at 35 horsepower, measuring 4 x 5¼. Both have multiple disk clutches, four-speed selective gearsets and full-floating rear axles. Wheelbases are 116 inches on 34 x 4 tires for the smaller and 118 on 35 x 4½ tires for the larger.

Prices—Model A four-and five-passenger touring car, $2,500; landau brougham, landaulet, limousine and coupe, $3,500. Model B roadster, $2,500. Model D touring car, four-and five-passenger, $3,250. Landau brougham, landaulet, limousine and coupe, $4,000. Model E roadster, $3,000.

Changes from Previous Construction—Models D and E are new throughout, though they retain the distinctive S. G. V. features, and are about 3 inches longer in the wheelbase. The only difference is in the engine, in which the bore and stroke have been increased.

Selling Points—Long-stroke, high-speed motor, multiple disk clutch with hardened and ground disks, block cast cylinders, valves fully enclosed, perfect balance, fan in flywheel, self contained oiling system, furnishing proper amount of oil at all speeds, four-speed gearset direct on fourth, noiseless shifting mechanism, imported ball

Digitized by Google

bearings through front and rear axles and transmission, Fahrig metal engine bearings, chrome nickel frames, axles, propeller shafts, crank shafts, etc., genuine cellular tube, Mercedes type radiator, unit type power plant, hard rubber covered steering wheel and control lever handles, cast steel rear axle housings, rigid construction cast steel flywheel, throttle control incorporated in steering wheel spoke, spark control at center of wheel, clean dash with only oil and air pressure gauges, pressure feed gasolene system, 30-gallon tank on the rear, double rear tire irons, Bosch magneto with set spark on 25-horsepower models.

Equipment—Prest-O-Lite tank, tools, horn, tire kit and jack, license tag bracket, front and rear, demountable rims.

STODDARD-DAYTON.

United States Motor Co., Stoddard-Dayton Division, New York City.

Models—Four models on four chassis each, three of which are "fours" and the other is a Knight motor "six." The two smaller motors, rated at 30 and 38 horsepower, respectively, have L-head block-cast cylinders measuring 4 x 4½ and 4½ x 5⅛, respectively; the 48-horsepower motor has overhead valves and pair-cast cylinders measuring 4¾ x 5; the Knight engine has its cylinders cast in threes and measuring 4½ x 5½; it rates at 70 horsepower. All four chassis have cone clutches, three-speed selectively operated gearsets and floating rear axles. Wheelbases are 112 inches for the "30" on 33 x 4 tires, 114 inches for the "38" on 36 x 4 tires, 123 inches for the "48" on 36 x 4½ tires and 133 inches for the Knight model on 36 x 5 tires.

Prices—Model "30" roadster, $1,350; touring, $1,450. Model "38" roadster, $1,750; touring, $1,850; limousine and landaulet, $2,750; coupe, $2,350. Model "48" roadster, $2,700; touring, $2,800; limousine, $3,900. Knight model roadster, $4,900; touring, $5,000; limousine, $6,250. (With wire wheels, $50 extra.)

Changes from Previous Construction—There have been no changes of consequence in the three poppet valve models. In the Knight model there is a new improved I-beam front axle; improved worm and sector steering gear; larger radiator, larger wheel hub bearings, new design fenders, simplification of control system, longer touring body, electric side lamps built into dash.

Selling Points—For the "30," "38" and "48": Positive force feed oiling system, cone leather-to-iron clutch, bevel drive with one universal joint, heavy artillery wheels, metal bodies. For Knight model: Silent Knight six-cylinder motor, movable dam lubrication system, intake coreways in crankcase, carburetter adjustment from seat, "silent" chain camshaft drive, seven-bearing crankshaft, left-hand drive, center control, adjustable front seats, disappearing tonneau seats, engine driven dynamo, power tire pump, large tires, large gas tank, large brakes, simplicity of brake adjustment, spring suspension proportionate to weight and loads, deep upholstering, rubber cushions between frame and body; compartment body on roadster.

Equipment—With all cars: Mohair top with envelope and side curtains, full set tools, tire repair kit, horn, pump and jack; the "38" has, in addition, windshield and demountable rims. The "48" has, in addition, shock absorbers, combination electric and oil lamps. The Knight models have, in addition, trunk rack, ventilators, speedometer, electric horn, complete electric lighting system, and power driven tire pump.

VELIE.

Velie Motor Vehicle Co. Moline, Ill.

Models—Five models on two four-cylinder chassis. The small motor L-head block-cast type, with cylinders measuring 3¾ x 5½ and rating 32 horsepower, and the larger is of the L-head type with pair-cast cylinders measuring 4½ x 5¼ and rating 40 horsepower. Both have three-plate dry clutches, three-speed selective gearsets and full-floating rear axles. A third chassis much the same as the "32," except that a cone clutch is used, also is produced; it is not equipped with electric lighting and starting system. Wheelbases are 118 inches on 34 x 4 tires for the "40" and 113 inches on 34 x 4 tires.

Prices—For the "40": Four-passenger torpedo or five-passenger touring car, $2,000; limousine, $3,000; limousine with extra touring body, $3,400. For the "32": Roadster, $1,450; five-passenger touring, $1,500. Model W, which mounts the 32-horsepower motor but has cone clutch and no electric lighting and starting system, in five-passenger touring form, $1,350.

Changes from Previous Construction—The "32" models remain unchanged, and in the "40" models the timing gears have been replaced with "silent" chains; the magneto position has been altered and the instrument now is worm driven; Bosch dual ignition has been adopted; carburetter has been elevated and a pressure fuel system adopted; Gray & Davis electric lighting and engine starting system has been added.

Selling Points—Long-stroke motors with "silent" chain, camshaft and worm driven magnetos, pressure fuel system, high carburetter, Bosch dual ignition, three-plate dry disk clutch, three-speed selective gearset, full-floating rear axles, hand-buffed leather upholstery, deep cushions, complete equipment, Gray & Davis electric lighting and engine starting system, easily handled by ladies by reason of the starter, beautiful finish of bodies, liberal latitude for selection.

Equipment—Top with envelope and side curtains, speedometer, windshield, demountable rims with one extra, electric horn, Gray & Davis electric lighting and engine starting system (except in case of model W), tools, tire carriers, tire repair kit, pump, and jack.

MOLINE.

Moline Automobile Co., East Moline, Ill.

Models—Two models on the same four-cylinder chassis. Unit power plant, with cylinders measuring 4⅛ x 6 and rating 40 horsepower. Transmission elements include leather-faced cone clutch, three-speed selective gearset and floating type rear axle. Wheelbase is 114 inches for the roadster and 124 inches for the touring car.

Prices—Both models, $1,950.

Changes from Previous Construction—Bore of motor increased ⅛ inch, wheelbase increased 10 inches; main gasolene tank under cowl, auxiliary tank under front seat; roadster has oval gasolene tank on rear.

Selling Points—Long-stroke motor, unit power plant supported at three points, electric lighting and engine starting system, double independent ignition system, cone clutch with leather face and cork inserts; selective gearset, heavy artillery wheels, rear spokes bolted to brake drums, adequate braking surface, 12-inch upholstery, Turkish roll cushions, cellular tube radiator, straight line flush side bodies.

Equipment—Top with envelope and side curtains; one-piece windshield, complete electric lighting and engine starting system, five demountable rims, gasolene gauge on dash, tools, tire repair kit, jack, pump, and horn.

OAKLAND.

Oakland Motor Car Co., Pontiac, Mich.

Models—Twelve models on three chassis, two of which are "fours" and the third is a "six." The "six" and the larger "four" have L-head, pair-cast cylinders, the former measuring 4⅛ x 4¾ and rating 60 horsepower and the latter measuring the same and rating 42 horsepower; the smaller "four" mounts an L-head block motor, measuring 3½ x 5 and rating 35 horsepower. All have cone clutches, three-speed selective gearsets and full-floating rear axles. Wheelbases are 134 inches on 34 x 4½ tires for the "six"; 116 inches on 34 x 4 tires for the larger "four"; 112 inches on 32 x 3½ tires for the smaller "four."

Prices—For the "six": Roadster, four-, five- and seven-passenger touring car, $2,400. For the larger "four": Two- or three-passenger roadster, four- and five-passenger touring car, $1,600; coupe, $2,500; limousine, $3,000. For the smaller "four": Three-passenger roadster, $1,000; five-passenger touring car, $1,075.

Changes from Previous Construction—Both the "six" and the smaller "four" are new throughout and are exhibited for the first time; a number of refinements have been made in the larger "four."

Selling Points—Powerful motors, selective sliding gearsets, full-floating rear axles, underslung springs, low center of gravity, stability, unit power plants, cold pressed steel frames, liberal bearings, extra long springs, beautiful finish, aluminum steps, 18 coats of paint, deep upholstery, hand-buffed

Digitized by Google

leather complete equipment, V-type German silver radiator.

Equipment—The equipment is the same for all except that the two larger cars are equipped with the Deaco electric lighting and ignition system; the "six" also has a Klaxon horn and an air engine starter. All have demountable rims, complete tool kit, tire repair kit, pump, jack, and horn.

SELDEN.

Selden Motor Vehicle Co., Rochester, N. Y.

Models—Five models built on the same four-cylinder chassis mounting a pair-cast motor measuring 4¾ x 5 and rating 40 horsepower. Transmission elements include a plate multiple disk clutch, three-speed selective gear-set and full-floating rear axle. Wheelbase is 125 inches on 36 x 4 tires.

Prices—Roadster, four-passenger torpedo and five-passenger touring, $2,500; seven-passenger touring, $2,750; limousine, $3,[illegible].

Changes from Previous Construction—The principal change is in the rear axle, which has been equipped with new style brakes. Formerly, brakes were both internal, whereas now the emergency brake is of the internal expanding type, and the foot brake external contracting. An electric starting and lighting system has been added.

Selling Points—Selden powerful, efficient motor with enclosed valve mechanism, dry plate clutch, full-floating rear axle with powerful and positive brakes, luxurious upholstery, extremely easy springs and beautiful finish, complete equipment. Gray & Davis electric starting and lighting system.

Equipment—Complete electric starting and lighting system, with full set of lamps, speedometer, top, windshield, tire carriers, tools, etc.

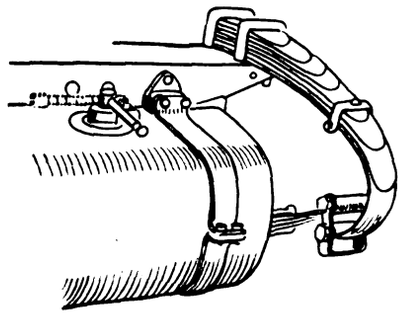
REO.

R. M. Owen & Co., Lansing, Mich.

Models—Four models on the same four-cylinder chassis, mounting a T-head pair-cast motor measuring 4 x 4½ and rating 30 actual horsepower. Transmission elements include multiple disk clutch, three-speed selective gearset and semi-floating rear axle. Wheelbase is 112 inches on 34 x 4-inch tires.

Prices—Roadster, $1,000; touring car and roadster with tonneau, $1,055; town car, $1,750.

Changes from Previous Construction—Roller bearings have replaced some of the former ball bearings; quality of materials has been increased and size of tires has been increased.



Selling Points—Flexible motor with large valves and liberal water jacketing, large camshaft, liberal bearing surfaces, efficient lubricating system, multiple disk clutch, three-speed selective gearset, semi-floating rear axle, nickel-steel drive shaft, I-beam front axle, double-acting wrapping brakes of large surface, dash carburetter adjustment, double ignition, light weight, long tire life, resilient springs, simple and strong steering gear, complete equipment; can handle gear-shifting mechanism; center control, left-hand steering, number of body styles.

Equipment—Tools, tire repair kit, demountable rims, horn, jack, and pump.

STEARNS-KNIGHT.

F. B. Stearns Co., Cleveland, O.

Models—Six models on two Knight engined chassis, one a "four" and the other a "six." Both motors have their cylinders cast in pairs, the "four" measuring 4¼ x 5½ and rating 28.9 horsepower and the "six" measuring 4¼ x 5¼ and rating 60 horsepower. Both chassis have dry multiple disk clutches and full-floating rear axles, the smaller being equipped with selective three-speed gearset and the larger with a four-speed gearset. Tire sizes are 36 x 4½ in all except closed types, which take 35 x 7 for the "four" on either 116, 121 or 127 inch wheelbase; the "six" has 37 x 5 tires on either 134 or 140 inch wheelbase.

STEARNS FUEL VALVE

Prices—For the "four": Roadster, four- or five-passenger touring, $3,750; seven-passenger touring, $3,900; limousine, $5,000; landaulet, $5,100. For the "six": Roadster, four- or five-passenger touring, $4,850; seven-passenger touring, $5,000; limousine, $6,100; landaulet, $6,200.

Changes from Previous Construction—The "six" is a new car throughout and incorporates all of the Stearns characteristics, with few variations. Except for the addition of an electric engine starter, the substitution of a Mea magneto for the one previously used and a slight alteration in the shape of the steering gear case, the "four" is substantially the same.

Selling Features—Knight type sleeve-valve motor, "silent" chain drive for eccentric and magneto shaft drives, complete electric engine starting and lighting system, tonneau and auxiliary lamps, flush dash lamps, combined tail lamp and license plate holder, straight line flush side bodies, clear running boards with tires carried at rear, wide range of color options, hand buffed leather upholstery, long drawn curled hair and pillow springs, wide range of models and complete equipment.

Equipment—Silk mohair top with envelope and side curtains Warner speedometer, Klaxon and bulb horns, demountable rims with two extra, auxiliary gasolene tank, tire carriers, ventilator door hooks, robe rail, foot rest, complete tool and tire repair equipment, including pump and jack.

STUDEBAKER.

Studebaker Corporation, Detroit, Mich.

Models—Four models on three chassis each, two of them mounting four-cylinder motors and the other a "six." All three motors are of the L-head block type measurements of the "six" and the "25," which is the smaller of the "fours," being 3½ x 5, and of the "35," 4⅛ x 5. All three have cone clutches, three-speed selectively operated gearsets, and the two larger models have full-floating rear axles; the "25" has a semi-floating axle. Wheelbases of the three are 120 inches for the "six" on 34 x 4 tires, 116 inches for the "35" and the "25," the former on 34 x 4 tires and the latter on 32 x 3½ tires.

Prices—For the "six": Touring, $1,550; limousine, $2,500. For the "35": Touring, $1,290; coupe, $1,850; sedan, $2,050. For the "25": Touring, $885.

Changes from Previous Construction—All three cars are new throughout.

Selling Points—Long stroke flexible motor, block casting, magneto mounted at front on transverse shaft, automatic oiling system, manifolds cored integral, rear axle three-speed selectively operated gear-set, new type full-floating rear axle, great number of drop forgings used, Wagner electric lighting and engine starting system on larger models, acetylene primer on the "25," new body styles, including limousine, Sedan and coupe models; complete equipment.

Equipment—Top with side curtains and envelope, ventilating windshield, bulb horn, electric horn under hood, Wagner electric lighting and starting system on larger models, acetylene starter on the "25," demountable rims with an extra rim, full complement of lamps, tools, spare parts, jack, tire repair kit, foot and robe rails.

STUTZ.

Ideal Motor Car Co., Indianapolis, Ind.

Models—Five models built on two chassis, one a "six" and the other a "four." Both motors are of the T-head pair-cast type, the "four" measuring 4¾ x 5½ and the "six" 4¼ x 5. Both have multiple disk clutches, three-speed selective rear axle gearsets and floating type rear axles. Wheelbases are 124 inches for the "four" roadster, 124 inches for the "four" four- and six-passenger touring cars and the "six" roadster, and 130 inches for the "six" touring car; tires are 34 x 4½ for all.

Prices—For the "four": Roadster and four-passenger touring car, $2,000; six-passenger touring car, $2,050. For the "six": Roadster, $2,250; six-passenger touring car, $2,300.

Changes from Previous Construction—The "six" is new throughout and is exhibited for the first time; it is almost exact-

Digitized by Google

ly similar to the "four." In the "four" the intake manifold has been water-jacketed and the wheelbase of the touring car increased four inches.

Selling Points—Electric light generator with full lighting equipment, larger Stutz rear system, with several important improvements, heavy wheels, large size tires, Timken front axle with Timken bearing and steering knuckles, low-slung, racy bodies, convertible four- and six-passenger touring cars, all straight-line bodies.

Equipment—Esterline electric lighting system, full lamp equipment, tools, spare parts, tire repair kit, horn, jack, and pump.

MARATHON.

Marathon Motor Works, Nashville, Tenn.

Models—Nine models built on three four-cylinder chassis. Motors are all of the L-head, pair-cast type and measure 3½ x 4½ for the "25," 4¼ x 4½ for the "35" and 4½ x 5⅛ for the "45." All have multiple disk clutches in oil, three-speed selective gearsets and full-floating rear axles. Wheelbases are 104 inches on 32 x 3½ tires for the "25," 116 inches on 34 x 4 tires for the "35," 123 inches on 36 x 4 tires for the "45."

Prices—For the "25": Roadster, $875; touring, $950 coupe, $1,050. For the "35": Roadster, $1,275; touring, $1,350; coupe, $1,600. For the "45": Roadster, $1,675; five-passenger touring, $1,750; seven-passenger touring, $1,800.

Changes from Previous Construction—Except for a number of refinements, there have been no material alterations in any of the models.

Selling Points—Simplicity of construction, few number of parts, unit power plants devoid of water and oil pumps, all moving parts enclosed, seat covers as regular equipment on all models, pockets in all doors, front doors open on either side, heavy artillery wheels, luxurious upholstery.

Equipment—Silk mohair top with envelope and side curtains, windshield, speedometer, seat covers, demountable rims with one extra, tire irons and straps, Prest-O-Lite tank, pump, tire repair kit, jack, foot and robe rails.

PAIGE-DETROIT.

Paige-Detroit Motor Car Co., Detroit,

Models—Three models on two four-cylinder chassis. Both chassis have unit power plants with L-head block cast motors, cylinder dimensions being 3¾ x 4 for the smaller and 4 x 5 for the larger, the ratings being 25 and 36 horsepower, respectively. Both have cork insert multiple disk clutches, three-speed selective gearsets and floating type rear axles. Wheelbases are 104 inches on 33 x 4 inch tires for the "25" and 116 inches on 34 x 4 tires for the "36."

Prices—The "25" roadster and five-passenger touring car, $1,000; coupe, $1,500; sedan, $1,600. The "36" touring car, $1,275.

Changes from Previous Construction—The "36" is a new car throughout and the alterations in the "25" are largely in the manner of detail refinements.

Selling Points—For the new model: Unit power plant, "silent" chain camshaft drive, cork insert multiple disk clutch, long wheelbase, enclosed valves, selective gearset, full elliptic rear springs, gasolene tank under dash, 10-inch upholstery, all dash equipment imbedded in dash; Gray & Davis electric lighting and engine starting system, roomy bodies, concealed door latches, complete equipment, wide doors.

Equipment—Top with envelope and side curtains, Stewart speedometer, demountable rims, adjustable windshield, Gray & Davis electric lighting and engine starting system, robe and foot rails, tools, tire repair kit, license brackets, pump, jack and horn.

PRATT.

Elkhart Carriage & Harness Mfg. Co., Elkhart, Ind.

Models—Three models on three four-cylinder chassis, all having unit power plants. The larger motor measures 4½ x 5¾ and rates 50 horsepower; the intermediate motor measures 4½ x 4¾ and rates 40 horsepower, and the smaller measures 4 x 4½ and rates 30 horsepower. The "40" has a cone clutch and the other two have multiple disk clutches; all have three-speed selective gearsets, the two larger models having full-floating rear axles and the "30" having a three-quarter-floating rear axle. Wheelbases are 122 inches for the "50" on 36 x 4 tires, 120 inches for the "40" on 36 x 4 tires, and 114 inches on 34 x 3½ tires for the "30."

Prices—"30," "40" and "50" in five-passenger touring model, $1,400, $1,950 and $2,150, respectively. Seven-passenger "40," $1,950; seven-passenger "50," $2,300.

Changes from Previous Construction—Other than the addition of a Gray & Davis electric lighting and engine starting system, there have been no extensive alterations.

Selling Points—French type motor, unit power plant, three-speed selective gearsets, cone and multiple disk clutches, Bosch dual ignition, Holly carburetter, irreversible steering gear, adequate braking surface, long wheelbases, resilient springs, 11-inch Turkish upholstery, Gray & Davis electric lighting and engine starting system, liberal equipment, graceful lines, beautiful finish.

Equipment—Top with envelope and side curtains, windshield, speedometer, demountable rims, complete tool equipment, tire repair kit, robe and foot rails, pump, jack, and horn. On the two larger models, Gray & Davis electric lighting and engine starting is standard. The smaller is equipped with combination Deaco lighting and ignition system and Prest-O-Lite tank.

NATIONAL.

National Motor Vehicle Co., Indianapolis, Ind.

Models—Five models built on the same four-cylinder chassis, mounting a T-head pair-cast motor measuring 4⅞ x 6 and rating 50 horsepower. Transmission elements include leather-faced cone clutch, three-speed selective gearset and full-floating rear axle. Wheelbase is 120 inches on 34 x 4½ tires for the roadster and 128 inches for the open and closed bodies on 36 x 4½ and 36 x 5 tires, according to the body.

Prices—Roadster, $2,750; small tonneau touring, $2,900; five-passenger touring, $2,9000; seven-passenger touring, $3,000; three-passenger coupe, $3,250; limousine, $3,400.

Changes from Previous Construction—Lubrication system improved, steering gear provided with spring take-up for wear, electric lighting and engine starting system added, frames strengthened, tire pump now driven by positive clutch, valve cam shapes refined.

Selling Features—Long-stroke flexible motor with enclosed valves, left-side drive with center control, Gray & Davis electric lighting and starting system, Bosch dual ignition, 12-inch Turkish upholstery, full heavy nickel trimmings, electric horn, large baggage carrying compartment, powerful and reliable brakes, spacious interior, power driven tire pump, 128-inch wheelbase, multiple jet carburetter, tire carrier at rear, full-floating rear axle, resilient springs, pressure fed gasolene supply, easy riding qualities, positive oiling system, complete equipment.

Equipment—Silk mohair top with envelope and side curtains, Hoffecker speedometer, adjustable rain vision windshield, Gray & Davis electric lighting and engine starting system, demountable rims with one extra and tire carriers, power tire pump, robe rail, foot rest and mat, tools, tire repair kit, electric horn, jack, and spare parts.

PATHFINDER.

Motor Car Mfg. Co., Indianapolis, Ind.

Models—Five models built on one four-cylinder chassis. The motor is of the L-head block type, the cylinders measuring 4⅛ x 5¼ inches and rating 40 horsepower; transmission elements include cone clutch, three-speed selectively operated gearset and full-floating rear axle. Wheelbase is 120 inches on 36 x 4 inch tires.

Prices—Torpedo cruiser, $2,000; armored roadster, $2,160; four-passenger phaeton and touring car, $2,185.

Changes from Previous Construction—Two new body styles have been added, one a "Martha Washington" coach and the other a "cruiser" roadster. Practically no mechanical alterations have been made other than the lengthening of the wheelbase to 120 inches and the addition of a Gray & Davis electric lighting and engine starting system.

Selling Points—Long-stroke Continental motor, electric lighting and engine starting system, irreversible worm and full wheel steering gear, unusually strong frame, shackle bolts ground and provided with liberal sized grease cups, long and resilient springs, option of wire wheels on "Cruiser"

Digitized by Google

model, hand buffed leather upholstery over curled hair and springs, 10-inch cushions.

Equipment—Mohair top with envelope and side curtains, rain vision and ventilating windshield, Stewart & Clark speedometer, grade indicator, gasolene tank gauge, demountable rims with one extra, tire carriers, tire pump, jack, horn, tire repair kit.

WHITE.

The White Co., Cleveland, O.

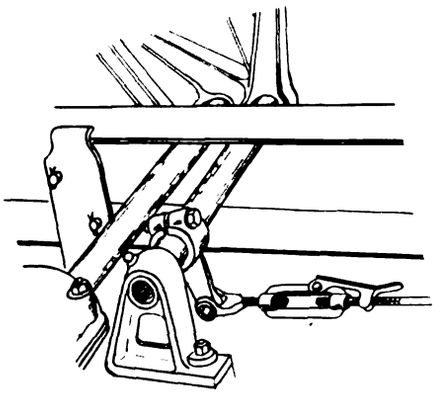
Models—Five models on three chassis, two of which are "fours" and the other a "six." All three motors are of the L-head pair-cast type, the smaller "four" measuring 3¼ x 5⅛ and rating 30 horsepower, the larger "four" measuring 4¼ x 5¼ and rating 40 horsepower and the "six" measuring 4¼ x 5¼ and rating 60 horsepower. All three chassis have cone clutches, four-speed selective gearsets and floating type rear axles. Wheelbases are 110 inches for the "30" on 34 x 4 tires; 120 inches for the "40" on 36 x 4½ tires, and 132 on 37 x 5 tires for the "six."

Prices—For the "30": Roadster and five-passenger touring, $2,500; coupe, $3,250. For the "40": Roadster and five-passenger touring $3,300; seven-passenger touring, $3,500, coupe, $4,100, berline limousine, $4,400. For the "six": Roadster, $4,800; five- and seven-passenger touring, $5,000; berline limousine, $6,300.

Changes from Previous Construction—Except that the "30" has been changed from right to left-hand drive with center control becoming uniform with all the other models, and that the electric lighting and engine starting system now is standard on all models, no alterations have been made.

Selling Points — Long-stroke motors, L-head castings with intake and exhaust passages cored integral, economy in fuel consumption, absence of wiring, dynamo electric lighting and engine starting system operating at slow speed, left drive with center control, deep and luxurious upholstery, complete equipment, wide latitude for choice in models, beautiful lines in closed models, absence of angles in all models.

Equipment—Complete electric lighting and engine starting system, combination Klaxon and bulb horn, White power tire pump, robe rail, foot rail, tire holders, license brackets, complete set of tools, demountable rims with one extra, hand pump, tire repair kit, and jack.



LOZIER.

Lozier Motor Co., Detroit, Mich.

Models—Twelve models built on two six-cylinder chassis. The larger, designated as type 72, has T-head pair-cast cylinders measuring 4⅛ x 4½ and rating 51 horsepower, multiple disc clutch, four-speed selective gearset, full-floating rear axle, 131-inch wheelbase on 36 x 4½ front and 37 x 5 rear tires. The smaller, designated the "Light Six," has L-head cylinder cast in threes measuring 3⅜ x 5½ and rating 36 horsepower, multiple disc clutch, selective three-speed gearest, full-floating rear axle, 127½-inch wheelbase on 36 x 4½ tires.

Prices—Type 72: Roadster, four-, five and seven-passenger touring, $5,000; berline limousine and landaulet, $6,500. "Light Six": Roadster and five-passenger touring, $3,250; three-passenger coupe, $3,850; six-passenger limousine and five-passenger enclosed limousine, $4,450.

Changes from Previous Construction—The "Light Six," type 77, is a new car throughout, exhibited for the first time. In the type 72 car, motor dimensions remain the same, though the design has been altered slightly to permit of left-hand position of the steering wheel; a new oiling system and a new ignition system have been adopted.

LOZIER BRAKE ADJUSTMENT.

Selling Points—On "Big Six": Triple ignition with two sets of spark plugs, automatic-level oiling system ensuring smokeless exhaust at all speeds, four-speed selective transmission, direct drive on third; speed on high, 60 miles per hour and upward; ball-bearing crankshaft, with ball-bearings throughout the motor and transmission; multiple disc clutch—steel against steel—running in oil-tight case. On "Light Six": Bosch magneto and dual system of ignition, trough system lubrication combined with force feed to crankshaft bearings, combination electric starting and lighting system; starter will run the six-cylinder motor for 30 minutes; long wheelbase, combined with turning radius of 19 feet; deep Turkish upholstery and quick attachable storm curtains regulated from seat; from 3 to 50 miles per hour on direct drive.

Equipment—"Big Six" models are equipped with Gray & Davis electric lighting system, complete with headlights, dash and tail lamps; Warner speedometer, electric horn, clock, robe rail, foot rest, trunk rack, brass tire holders, a tool box and a complete set of special and regular tools, water bucket, jack, tire repair outfit, extra demountable rims, top and windshield. "Light Six" equipment includes Gray & Davis electric starter and lighting system, Warner speedometer, Waltham eight-day clock, electric horn, silk mohair top, patent quick-attachable curtains, windshield, patent tire carrier on the rear, extra rim, robe rail, foot rest and tool kit; tools are carried in a special compartment between the running board and frame, allowing clean running boards; all closed cars have electrically illuminated running boards.

PIERCE-ARROW.

Pierce-Arrow Motor Car Co., Buffalo, N. Y.

Models—Ten models on three six-cylinder chassis each. Motors are all of the T-head type, with cylinders cast in pairs, dimensions being 4 x 5½ (rating 38 horsepower), 4½ x 5½ (rating 48 horsepower) and 5 x 7 (rating 66 horsepower). All have large diameter cone clutches, four-speed selective gearsets and semi-floating rear axles. Wheelbases are 132 inches on 36 x 4½ inch tires for the "38" 142 inches on 36 x 4 front and 37 x 5 rear tires for the "48," and 147½ inches on 37 x 5 front and 38 x 5 rear tires for the "66."

Prices—For the "38": Roadster, four- and five-passenger touring, $4,300; brougham and landaulet, $5 200. For the "48": Roadster, four- and five-passenger touring, $4,850; seven-passenger touring, $5,000; brougham, landaulet, suburban and landau, $6,100; vestibule landau and suburban, $6,300. For the "66": Roadster, four- and five-passenger touring, $5,850; seven-passenger touring, $6,000; brougham, suburban, landaulet and landau, $7,100; vestibule landau and suburban, $7,300.

Changes from Previous Construction—The "38" engine dimensions have been increased from 4 x 5⅛ to 4 x 5½; in all motors the carburetter and magneto now are on the right side with the electric generator, oil pump, air starter and distributer on the left side; leather disk couplings used instead of metal for magneto and pump shaft; adjustment has been provided for the fan; screw caps over the valves in place of cover plates and screws; crankshafts are larger in diameter; connecting rod cap bolts are larger; new force-feed oiling system adopted; compressed air starter adopted; four-cylinder air compressor on the gearset; clutch now has cork inserts instead of Bronze; double universal joint between the clutch and gearset, the propeller shaft is tubular instead of solid; rear axles improved, making them readily demountable.

Selling Points—Six-cylinder motors exclusively, long stroke, positive oiling system, compressed air starters, four-speed selective gearset, screw and nut steering gear, cork insert cone clutch of large diameter, Pierce-Arrow demountable rims, electric lighting dynamo with storage battery and complete equipment of electric lamps, equalized brakes, large braking surface, three-quarter elliptic rear springs, long wheelbase, tool compartments in dash, gasolene and air pressure gauges in plain sight, integral ventilating windshields, liberal amount of room in bodies, beautiful lines and finish of bodies, great variety.

Digitized by Google

Equipment—Best quality mohair top with envelope and side curtains, Pierce-Arrow ventilating and adjustable windshield, demountable rims, speedometer, compressed air engine starter, dynamo electric lighting system, power tire pump, license brackets, tire carriers, tools, tire repair kit, pump, jack, horn, robe and foot rails, etc.

GARFORD.

The Garford Co., Elyria, Ohio.

Models—Three models on the same six-cylinder chassis, mounting an L-head, block-cast motor measuring 3¾ x 6 inches and rating 60 horsepower. Transmission elements include cone clutch; four-speed selective transmission, direct on third. Wheelbase is 128 inches on 36 x 4½-inch tires.

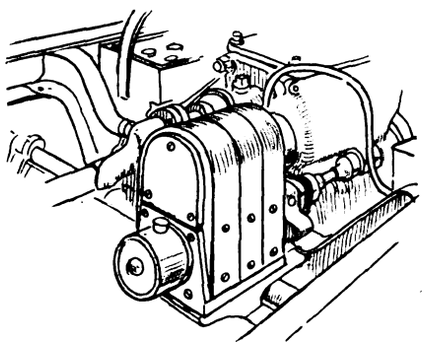
Prices—Touring car and roadster, $2,750; town car, $3,750.

Changes from Previous Construction—This is a new car throughout.

Selling Points—Motor of unrivaled flexibility; cylinders have detachable heads, allowing for easy and accurate machining; uniform combustion chamber, tungsten high-speed steel valves, deep channel section frame, full-floating rear axle; rear axle housing is a one-piece drop-forging; center control and left-hand drive, even distribution of weight, combination priming cup and combustion indicating device, tire pump built into motor, efficient oiling system, electric engine starter and lighter, electric heater, high-tension water-proof type magneto, ejector type manifold, tubing used instead of rods for control connections, long springs, rear springs under axle; one-piece, all-steel body welded without the use of a single piece of wood; full equipment, large tires, single head light in radiator, side lights set in dash.

Equipment — Electric engine starting, lighting and heating system, storage battery, ammeter, top and top cover, quick-folding side curtains, one-piece rain-vision, clear-vision windshield, speedometer of special design, gasolene tank gauge, electric lights, including inspection lamp and dash lamp, tools, tire repair kit, jack, horn, power tire pump, bumper, number bracket, robe rail, foot rest, tire carrier, and other similar equipment.

MITCHELL.

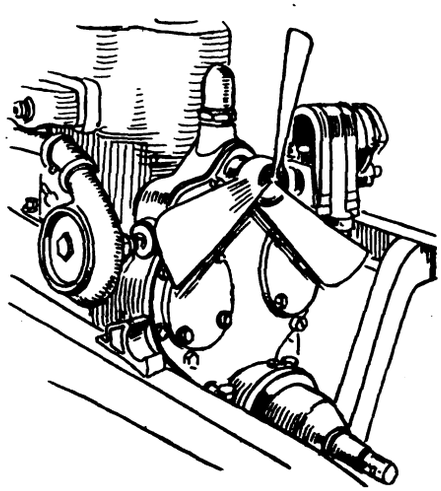


Mitchell-Lewis Motor Co., Racine, Wis.

Models—Five models built on one four- and two six-cylinder chassis. All motors are of the T-head pair-cast type, the "four" measuring 4¼ x 7 and rating 40 horsepower, the smaller "six" measuring 3¾ x 6 and rating 50 horsepower and the larger "six" measuring 4¼ x 7 and rating 60 horsepower. All have cone clutches, three-speed selective gearsets and full-floating rear axles. Wheelbases are 120 inches on 36 x 4 tires for the "40." 132 inches on the same size tires for the "50" and 144 inches on 36 x 4½ tires for the larger "six."

Prices—The 40-horsepower four-cylinder cars in roadster and five-passenger form, $1,500; smaller "six" in same form, $1,850; larger "six" in seven-passenger touring, $2,500.

Changes from Previous Construction—All three cars are new throughout.



Selling Points—Exceptionally long-stroke T-head motors, complete electric lighting and engine starting system, cone clutch, noiseless three-speed gearsets, no gears in

MITCHELL DYNAMO POSITION

mesh at neutral, reverse gears stationary, except when in use, long wheelbases, ⅞ elliptic rear springs, Timken and Hyatt bearings, Rayfield carburetter, Bosch high-tension duplex ignition system, 10-inch Turkish upholstery, full-floating rear axle, drop-forged one-piece front axle, substantial wheels, 472 square inches of braking surface.

Equipment—Top with envelope and side curtains, speedometer, windshield, complete electric lighting and engine starting system, lock switch, gasolene and air gauges, Firestone demountable rims, one

FRONT VIEW MITCHELL ENGINE

extra rim, tools, pump, jack, tire repair kit, horn, foot and robe rails, tire carriers.

MARION.

Marion Motor Car Co., Indianapolis, Ind.

Models—Three models on two four-cylinder chassis, one mounting a 30-40 horsepower motor and the other a 48 horsepower motor. Both motors are of the L-head pair-cast type. The "30-40" measures 4 x 5 inches and the "48" measures 4⅛ x 5½ inches. Both chassis have cone clutches and three-speed selectively operated rear axle gearsets; the smaller has a semi-floating rear axle and the larger a full-floating axle. The wheelbases of the two chassis are 112 inches on 34 x 4 tires for the "30-40" and 120 inches for the "48" on 36 x 4 tires.

Prices—Model 48A (48 horsepower): Touring, $1,850. Model 37A (30-40 horsepower): Touring, $1,475. Model 36A (30-40 horsepower): Bobcat roadster, $1,425.

Changes from Previous Construction—A deep cowl has been added over the dash, tool boxes have been taken off the running boards, chassis has been lowered 1¼ inches new English steel springs have been adopted, brake cams have been enlarged, wood trimmings now are mahogany, steering wheel is fluted, spark and throttle controls are of the friction retained type.

Selling Points—Three point support of motor, gearset located on rear axle, Raybestos-faced cone clutch with spring inserts, exceptionally large braking surface, extra strong steering gear, low-hung chassis, new body lines, roomy tonneau, slanted seats, deep upholstery over coil springs and curled hair, Disco starter, electric light equipment.

Equipment—Mohair top with side curtains and envelope, Zig Zag windshield, Warner speedometer, electric generator for five electric lamps, Disco engine starter, storage battery, electric horn, bulb horn, foot and robe rails, tire repair kit, jack and pump.

REGAL.

Regal Motor Car Co., Detroit, Mich.

Models—Five models built on three chassis all mounting four-cylinder motors; two chassis are underslung and the third is conventional overslung. Smaller underslung chassis mounts block motor measuring 3¾ x 4½ and the larger mounts pair-cast 4¼ x 4½ motor. Overslung model mounts block 4 x 5 motor. All have leather-faced cone clutches, three-speed selective gearsets and floating axles. Wheelbases are 108 inches on 32 x 3½ tires for the smaller underslung, 118 inches for the larger underslung on 34 x 4 tires, and 116 inches on same size tires for the overslung.

Prices — Smaller underslung chassis: Roadster, $900; small touring, $950; large touring, $1,400; coupe, $1,250; overslung touring, $1,250.

Changes from Previous Construction—The overslung model is a new car throughout, incorporating all of the distinctive Regal features. Alterations in the underslung models are few and are embraced only in a general refinement of body lines, trimming and finish.

Selling Points—Flexibility of long stroke motors, enclosed valves, underslung construction, straight line drive, elimination of side lash on springs and tires, comfortable riding qualities, large roomy bodies, deep

Digitized by Google

upholstering of finest hand-buffed leather, piano finish.

Equipment—Nickel plated trimmnigs, electric lights and storage battery, with option of gas head lamps, oil side and tail lamps and Prest-O-Lite tank, full set of tools, tire repair kit, demountable rims, horn, rack and tire pump. Additional standard equipment on the large underslung and overslung cars consists of top, windshield and speedometer.

SPEEDWELL.

Speedwell Motor Car Co., Dayton, O.

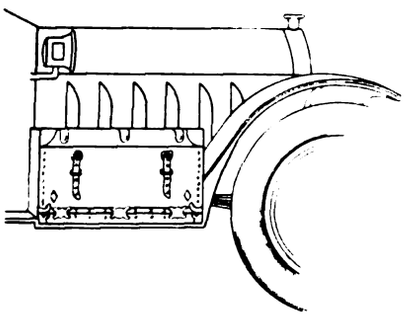
Models—Three models built on one six-cylinder chassis mounting an L-head motor casting threes and measuring 4⅛ x 5¼; ratings 57 to 60 horsepower. Transmission elements include multiple disk clutch, three-speed selective gearset and full-floating rear axle. Wheelbase is 135 inches on 36 x 4½ tires on the smaller models and 37 x 5 tires on the larger models.

Prices—Four- and five-passenger touring, $2,850; seven-passenger touring, $2,950.

Changes from Previous Construction—The car is new throughout and is exhibited for the first time.

Selling Points—Six-cylinder, long-stroke motor, three-point suspension, unit power plant, unusually stout frame, ample provision for easy mechanical adjustment, windshield as a part of the body, free and clear running boards with tool box built into the mud apron, emergency gasolene tank, Timken roller bearings in the steering knuckle, tie rod of extremely heavy section above and behind the front axle, adapted for road obstructions; dependable electric lighting and starting system, with current furnished by dynamo; extra deep underslung and very easy riding springs, running boards of built-up type to prevent sagging, extremely heavy and substantial fenders with front fender apron extending forward, protecting the lamps; rear-axle countershaft drives through six splines instead of the ordinary square section, chrome nickel steel is employed for the gearsets, drive shafts and axle ends; extremely fine body finish, obtained by special drying kilns; pockets in all doors, and all operative from the inside, with rubber and nickel knobs.

Equipment—Electric lighting and electric starting system, electric horn and electric lamps, mohair top, top curtain and cover with Bair patent bow separators and holders; folding foot rail; robe rail, speedometer with gradometer attachment; demountable rims and one extra, tire carrier, tire repair kit and tool kit inclosed in rear tool box.



MARMON.

Nordyke & Marmon Co., Indianapolis, Ind.

Models—Six models on two chassis each, one a "four" and the other a "six." Both cars are of the T-head type with pair-cast cylinders, the dimensions being 4½ x 5 for the "32" and 4½ x 6 for the "six," which rates at 48-80 horsepower. The "four" has a cone clutch and the "six" a dry plate multiple disk clutch, and both have three-speed selective gearsets mounted on floating type rear axles. Wheelbases are 120 inches on 35 x 4½ tires for the "32" and 145 on 36 x 4½ front and 37 x 5 rear tires for the "six."

Prices—For the "four": Roadster, $2,900; four- and five-passenger touring, $3,000; speedway type roadster (without top, windshield or dash lamps but with extra tire carrier and shock absorbers front and rear), $2,850; limousine, $4,000; landaulet, $4,100. For the "six": Open bodies, $5,000; limousine, $6,250; berline limousine, $6,450; landaulet, $6,350.

Changes from Previous Construction—The "six" is a new car throughout and retains all of the Marmon characteristics. In the "32" the steering gear has been changed

MARMON RUNNING BOARD TRUNK

to the left side; an electric lighting and engine starting system has been added, complete equipment added; body lines have been altered to conform to those of the "six."

Selling Points—Liberal powered long-stroke motors, rear axle gearsets, new type of front axle, automatic forced feed oiling system, distinctive type rear axle, twin expanding brakes, long wheelbases, irreversible steering gear, full-elliptic rear springs, trunk on running board, dynamo electric lighting and engine starting system, roomy bodies with graceful lines, beautiful finish.

Equipment—Top with envelope and side curtains, windshield, speedometer, demountable rims, clock, shock absorbers, electric horn, tire carriers, robe and foot rails, trunk, tools, tire repair kit, pump, jack, horn, etc.

WARREN.

Warren Motor Car Co., Detroit, Mich.

Models—Three models on three chassis, two of which are "fours" and the third is a "six." All three motors are of the L-head type, the "six" measuring 4 x 5 and the two fours measuring 4¼ x 4¾ and 4⅛ x 4½, respectively. All have cone clutches, three-speed selective gearsets, and floating type rear axles. Wheelbases are 130 inches for the "six" on 35 x 4½ tires, 116 inches for the larger "four" on 36 x 4 tires, and 112 inches for the other "four" on 34 x 4 tires.

Prices — Seven-passenger "six" touring car, $2,500; five-passenger "40" touring car, $1,800; five-passenger "35" touring car, $1,500.

Selling Points—Long-stroke motors, new "six," cone clutches, three-speed selective gearsets, floating type rear axles, large roomy bodies, right-hand steering and control, flush-side bodies, fine finish.

Equipment—Top with envelope and side curtains, windshield, demountable rims, electric horn, tire pump, tire repair kit, jack, tools and spare parts.

WESTCOTT.

Westcott Motor Car Co., Richmond, Ind.

Models—Four models built on two chassis, one a "six" and the other a "four." The "six" has a T-head block motor measuring 4 x 6 and rating 50 horsepower, and the "four" has separately cast L-head cylinders measuring 4½ x 5 and rating 40 horsepower. Both have cone clutches, three-speed gearsets and full-floating rear axles; wheelbase of the "six" is 127 inches on 37 x 4½ tires; wheelbase of the "four" is 120 inches on 36 x 4 tires.

Prices—Four-cylinder chassis with roadster, four-passenger torpedo or five-passenger touring body, $1,975; six-cylinder chassis with five- or seven-passenger touring body, $2,475.

Changes from Previous Construction—The "six-50" is new throughout, though it is quite similar in design and construction to the "four," in which the changes are slight and are embraced in a refinement of body lines and the addition of an electric lighting and starting system.

Selling Points—Long-stroke motors, electric lighting and starting system with positive drive to the crankshaft, cone clutch and three-speed selective gearset, long wheelbases, extra large tires, extra long springs, good weight distribution and balance, luxurious upholstery over the best curled hair and springs, hand-buffed leather.

Eqiupment—Top with envelope and side curtains, windshield, speedometer, gasolene tank gauge, electric lighting and starting system, Firestone demountable rims, tools, tire repair kit, pump, jack, and horn.

INTER-STATE.

Inter-State Automobile Co., Muncie, Ind.

Models—Seven models built on three chassis. Model 45 mounts a six-cylinder, block-cast motor, bore and stroke 4 and 5 inches, respectively, rated at 45 horsepower, combined in a unit with a multiple disk clutch housed in the flywheel and a four-speed selective gearset. Wheelbase is 132 inches on 36 x 4½ tires. The other two chassis are four-cylinder models with motors rated at 50 and 40 horsepower, respectively, and with dimensions of 5 x 6 and 4½ x 5½ inches; the larger has pair-cast cylinders, on the smaller the cylinders are block-cast; valves all on the same side in

Digitized by Google

both cases. The transmission elements include a multiple disk clutch mounted in the flywheel, selective gearset and full-floating rear axle. Wheelbases are 124 inches for the "50" and 118 inches for the "40."

Prices—"45," seven-passenger touring car, $2,750; "50," seven-passenger touring car or roadster, $3,400; "40," five-passenger touring car, four-passenger demi-tonneau or two-passenger roadster, $2,400.

Changes from Previous Construction—The "45" is an entirely new production. Improvements in the smaller models have been in the way of body refinements and added equipment, which now is complete.

Selling Points—Left-hand drive and center control on the "45," noiseless rocker gear shifting device, four-speed gearset and full-floating rear axle, electric starting and lighting system, full equipment.

Equipment—Mohair top, windshield built in the body, adjustable and ventilated; speedometer and clock combination, Aplco electric engine starting and lighting system, trouble lamp, usual complement of tools, horn, tire repair kit, and jack.

MERCER.

Mercer Automobile Co., Trenton, N. J.

Models—Built in seven models on two chassis, similar except for dimensions. The larger chassis mounts a T-head, pair-cast cylinder motor with bore and stroke of 4½ and 5 inches, respectively, rated at 32.4 horsepower. The smaller motor, which is rated at 30.6 horsepower, has respective dimensions of 4⅜ and 5 inches. The transmission elements of both chassis are identical and embrace a multiple disk clutch with 44 disks operating in an oil bath in a compartment integral with the gearset housing; a four-speed selective gearset and a full-floating adjustable rear axle.

Prices—Range from $2,600 to $2,900.

Changes from Previous Construction—Four-speed gearsets instead of three; separate electric lighting and starting systems on all models save the receabout; minor changes noticeable chiefly in the line of the bodies.

Selling Points—Generous sized valves, 2½ inches in diameter; concentric piston rings, freedom from vibration due to abnormally long connecting rods, 12½ inches from center to center, ball bearing cam shafts, removable from front, with cams forged integral and driven with spiral gears running in oil; combination force and splash lubrication, double spark Bosch ignition, four-speed gearset direct drive on fourth speed, full-floating rear axle, independent electric starting and lighting systems

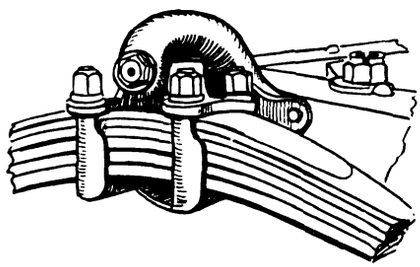
Equipment—Bosch magneto, usual complement of lamps, horn, jack, tire repair kit, electric lighting and engine starting systems.

BENZ.

Benz Auto Import Co., New York.

Models—Two four-cylinder chassis, the smaller mounting a block-cast motor measuring 95 mm. x 140 mm. and rating 35 horsepower, and the larger having pair-cast cylinders measuring 125 mm. x 150 mm. and rating 50 horsepower. Both have cone clutches and four-speed selective gearsets. Wheelbases are 124 inches for the "35" on 35 x 4½ tires, and 131½ inches on 35 x 5 tires for the "50."

Prices—Chassis only: "35," $3,750; "50," $5,250.



Selling Points—Long-stroke block and pair-cast motors, cone clutches, four-speed selective gearsets, semi-floating rear axles.

Equipment—Tires, spare parts, demountable rims and tools.

R. C. H.

R. C. H. Corporation, Detroit, Mich.

Models—Two models on one four-cylinder chassis, the motor being of the L-head type with block-cast cylinders, bore 3¼ inches and stroke 5 inches, rated at 25

R. C. H. SPRING HANGER

horsepower. The transmission elements include leather-faced cone clutch, selectively controlled three-speed gearset mounted on the rear axle and bevel gear final drive. The wheelbase is 110 inches. Tires 32 x 3½ front and rear.

Prices—Either roadster or touring car, $900.

Changes from Previous Construction—Except for a few minor alterations and refinements, including a hand brake and a hand throttle on the steering wheel column, there are no changes.

Selling Points—Powerful and economical long-stroke motor, roomy English type body, easy riding due to long wheelbase, and noiseless gear shifting device.

Equipment—Touring car: Five electric lamps with battery, speedometer, horn, robe rail, top, top slip cover, Jiffy curtains, rear vision mirror, tools, pump, and tire repair outfit. For the roadster: The same, with the addition of extra demountable tire and rim, locking tire holder, trunk and trunk cover.

McFARLAN.

McFarlan Motor Car Co., Connersville, Ind.

Models—Seven models on three six-cylinder chassis. The smallest motor is of T-head type, with cylinders cast in threes and measuring 4 x 5; multiple disk clutch, selective gearset, full-floating rear axle; wheelbase 124 inches on 37 x 4½ tires. The intermediate motor has pair-cast cylinders measuring 4¼ x 5 and is a unit power plant with multiple disk clutch and full-floating rear axle; wheelbase is 128 inches on 37 x 4½ tires. The largest motor has T-head cylinders measuring 4 x 6; same transmission elements as the smallest chassis. Wheelbase is 124 inches on 37 x 4½ tires.

Selling Points—Long-stroke, Six-cylinder motors, all moving parts enclosed, unit power plant in one model, extra fast roadster capable of 95 miles an hour, air-starting system, multiple disk clutches running in oil, rear axle gearsets in two models, selective gear changes, great variety in body styles, complete equipment.

Equipment — Engine starter, electric lighting system, dash light, top of silk mohair, dust hood, jack, pump, tools, demountable rims with one spare rim, tire carrier, hose for pumping tires from starting system, rain vision windshield, speedometer with gradometer, electric horn; tail light designed so license plate may be hung on it.

STEVENS-DURYEA.

Stevens-Duryea Co., Chicopee Falls, Mass.

Models—Eleven models on one chassis, built in two wheelbase lengths. Six-cylinder motor with cylinders of the L-head type, cast in pairs, 4 5/16 x 5½ inches bore and stroke. Transmission through multiple disk clutch, three-speed selectively controlled gearset and propeller shaft to full-floating rear axle. Wheelbase, 131 and 138 inches. Tires, 37 x 4½ front and rear on the roadster and five-passenger cars on the 131-inch wheelbase; 37 x 4½ front and 37 x 5 rear on seven-passenger car on 131-inch wheelbase and also on the seven-passenger car on 138-inch wheelbase.

Prices—On 131-inch wheelbase, roadster and five-passenger touring car, $4,500; six-passenger convertible phaeton and two-passenger coupelet, $5,000; seven-passenger limousine, $5,500; five-passenger demi-Berline, $5,550; seven-passenger Berline, $5,700. on 138-inch wheelbase, seven-passenger touring car, $4,750; seven-passenger convertible phaeton, $5,250; seven-passenger limousine, $5,750; seven-passenger Berline, $5,950.

Changes from Previous Construction—Increased bore and stroke of motor, longer wheelbase, newly designed spring suspension, new series of bodies.

Equipment—For both open and enclosed models, electric lighting and starting system, electric horn, bulb horn, speedometer with electric light, clock, foot and robe rails, pockets, power driven air compressor, tire carrier trunk rack, set of tools, electric trouble light, extra rim, and jack. Additional for open cars, top with side curtains and windshield.

AUBURN.

Auburn Automobile Co., Auburn, Ind.

Models—Six models on five chassis, three four-cylinder and two "sixes." Five-

Digitized by Google

passenger touring car and roadster on four-cylinder chassis; motor 3¾ x 5¼ inches bore and stroke; wheelbase 112 inches. Five-passenger touring car on four-cylinder chassis; motor 4¼ x 4¼ inches bore and stroke; wheelbase 115 inches. Five-passenger touring car on four-cylinder chassis; motor 4½ x 5 inches bore and stroke; wheelbase 122 inches. Five-passenger touring car on six-cylinder chassis; motor 3¾ x 5¼ inches bore and stroke; wheelbase 130 inches. Seven-passenger touring car on six-cylinder chassis; motor 4⅛ x 5¼ inches bore and stroke.

Prices—Smallest touring car and roadster, $1,250; the two larger four-cylinder five-passenger cars, $1,525 and $1,800, respectively; the five-passenger six-cylinder car, $2,150; seven-passenger six-cylinder, $2,500 and $3,000.

Equipment—Four-cylinder models: Top, windshield, gas headlights, oil side and tail lamps, speedometer and tools. Six-cylinder models the same, with electric lighting throughout, current supplied by an automatic dynamo.

GREAT WESTERN.

Great Western Automobile Co., Peru Ind.

Models—Four models on the same four-cylinder chassis, mounting an L-head motor measuring 4½ x 5½ inches and rating 40 horsepower. Transmission elements include full-floating rear axle; wheelbase is 118 inches on 36 x 4 tires.

Price—$1,585.

Changes from Previous Construction—Nickel-plated trimmings throughout, numerous body refinements, upholstery deepened, electric lighting and Presto-Starter added.

Selling Points—Long-stroke motor, accessible unit power plant, enclosed valves all on one side, 118-inch wheelbase, gasoline tank gauge, deep upholstering, with hand-buffed leather, invisible coil with lock switch, full-floating rear axle with large New Departure and Hyatt bearings, large and powerful double internal expanding brakes, tie rod behind front axle, cellular front radiator, latest Remy magnetos with lock switch, easy riding Vanadium steel springs, handsome body, 18 processes of body finish.

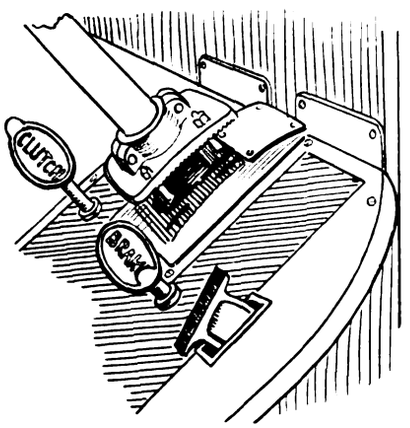
Equipment—Silk mohair top with side curtains and envelope, Stewart speedometer, rain vision ventilating windshield, demountable rims, Typhoon electric horn, foot and robe rails, tools, tire repair kit, jack, and pump.

McINTYRE.

W. H. McIntyre Co., Auburn, Ind.

Models—Several models on one four- and one six-cylinder chassis. The "six" mounts a unit power plant in which the motor cylinders are cast in a block and measure 3½ x 4½, rating is 40 horsepower. Transmission elements include multiple disk clutch in oil, four-speed selective gearset, full-floating rear axle. Wheelbase is 120 inches on 34 x 3½ tires.

Prices—Five-passenger "six" touring car, $1,485.



Selling Points—Long-stroke block motor, all moving parts enclosed, engine starter, multiple disk clutch running in oil, four-speed gearset, single lever center control, right-hand steering and complete equipment.

Equipment—Top with envelope and side curtains, folding windshield, speedometer, electric signal, automatic head lamp lighter, gas engine starter, demountable rims with one extra, eight-day dash clock, tire pump, jack, license brackets, tire carriers, tools, spare parts, foot and robe rails, dust cover for entire car.

RAMBLER.

Thomas B. Jeffery Co., Kenosha, Wis.

Models—Five models built on the same four-cylinder chassis. Cylinders are separately cast L-head and measure 4½ x 5, rating 42 horsepower. Transmission elements include cone clutch, three-speed selective gearset and floating rear axle. Wheelbase is 120 inches on 36 x 4 and 37 x 4½ tires.

RAMBLER ADJUSTABLE COLUMN

Prices—Roadster, $1,815; four- or five-passenger touring, $1,875; sedan coupe, $2,575; Gotham limousine, $2,825; special five-passenger, with 37 x 4½ tires, $2,075.

Changes from Previous Construction—Upholstery deepened to 10 inches, turning radius reduced, countershafts for brakes and gear shift combined, bodies roomier, finish in nickel plate, paintwork improved.

Selling Points—Electric lighting and starting system combined in unit with motor; separately cast cylinders, multiple disk clutch with spring inserts, three-speed selective gearset, Rambler floating rear axle, deep, strong frame, low center of gravity, drive shaft, gearset and axle in unit, demountable wheels, wide doors, deep upholstery, large windows in closed cars, 96 per cent. of all parts made in Rambler factory, guaranteed 10,000 miles, beautiful finish, distinctive appearance.

Equipment—Mohair top with envelope and side curtains, windshield, speedometer, complete dynamo electric lighting and engine starting equipment (U. S. L. system), electric head, side and tail lamps, complete tool equipment, hinged robe rail, adjustable foot rail; roadster, trunk, with two suit cases.

EMPIRE.

Empire Automobile Co., Indianapolis, Ind.

Models—One model on one four-cylinder chassis. Motor, 25 horsepower, with cylinders cast in pairs. Transmission system includes disk clutch, three-speed selectively controlled gearset and shaft drive to semi-floating rear axle. Wheels 32 inches in diameter.

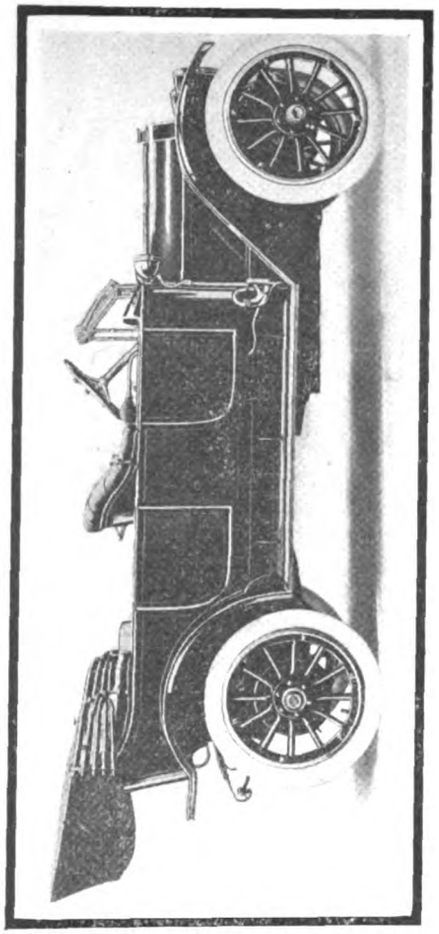
Price—Five-passenger touring car, $950.

Selling Points—Simplicity of construction and ease of control, set spark, centrally placed gear-shift lever, inside door handles, complete equipment.

Equipment—Top and top cover, side curtains, windshield, speedometer, gas tank head, side and tail lamps, horn, and full set of tools.

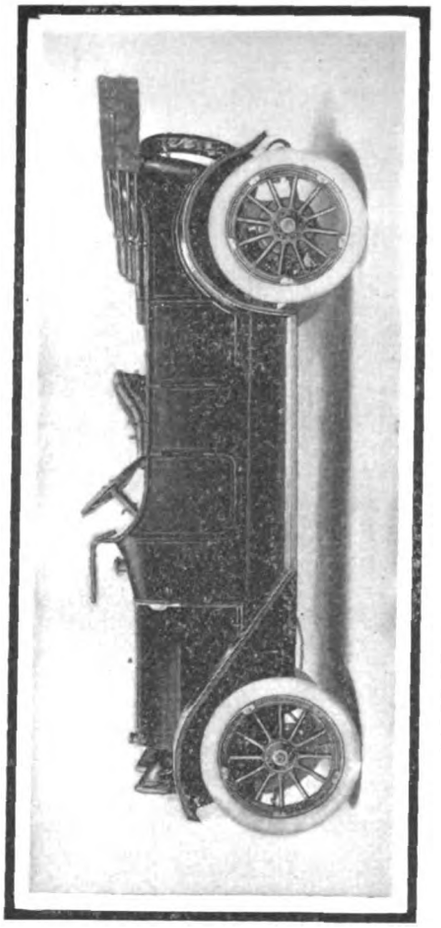
POPE-HARTFORD.

Pope Mfg. Co., Hartford, Conn.



Models—Nineteen models, built on three chassis, two of which are four-cylinder and one a six. The smallest four-cylinder motor is of 40 horsepower and measures 4 5/16 x 5⅛, and the larger of 50 horsepower and measures 4 5/16 x 5⅝. The "six" is of 60 horsepower, the dimensions being 4¾ x 5½. Transmission elements in all three chassis models include cone clutch, four-speed selectively controlled gearset and final drive by shaft and bevel gears. Wheelbases, smaller "four," 118 inches, with 56-inch tread; larger "four," 124 inches, 56-inch tread; and the "six," 133 inches, with 56-inch tread. Tires on both four-cylinder models, 36 x 4½ front and rear; on the "six," 37 x 5 inches front and rear.

Prices—On the small four-cylinder chassis, five-passenger touring car, four-passenger phaeton and roadster, $2,250; five-passenger limousine, $3,250; three-passenger coupe, $2,850. On the larger "four," five-passenger touring car, $3,250; seven-passenger touring car, $3,500; five-passenger phaeton and roadster, $3,250; seven-passenger limousine and seven-passenger landaulet, $4,300; seven-passenger Berline, $4,550; on the six-cylinder chassis, seven-passenger touring car, five-passenger phaeton and roadster, $4,250; seven-passenger limousine and seven-passenger landaulet, $5,300; three-passenger coupe, $4,800; seven-passenger Berline, $5,550.



Changes from Previous Contsruction—Lower hung frame; side members narrowed at front, permitting shorter turning; new four-speed roller bearing gearset; stronger and better rear axle.

Equipment—Top curtains and top cover, windshield, electric head, side and tail lamps, electric starting and lighting system, with separate motor and generator units, horn, foot and robe rails, trunk rack,

MOON.

Moon Motor Car Co., St. Louis, Mo.

Models—Three models on three chassis identical save as to dimensions. The "65," the largest, mounts a T-head motor, 4 x 5¼ inch bore and stroke; transmission elements include a multiple disk clutch, selective three-speed gearset and full-floating rear axle. Wheelbase is 132 inches on 36 x 4 tires. The "48" has bore and stroke of 4 x 5 inches; wheelbase, 121 inches on 34 x 4 tires. The "39" has a 116-inch wheelbase on 34 x 4 tires.

Prices—"65," five-passenger touring or four-passenger torpedo, $2,500; "48," five-passenger touring or four-passenger touring, $1,985. "39," five-passenger touring or four-passenger torpedo, $1,650.

Selling Points—Full-floating rear axle with extra strong differential mounted on Timken bearings; special cold pressed wire wheel-size spokes, quick detachable demountable wheels, quality of upholstering, spring mounting, Moon-Wagner electric lighting and starting system.

Equipment—Complete complement of [illegible] tools, tire repair kit, jack, quick detachable demountable rims, electric starter and lighting system.

PREMIER.

Premier Motor Mfg. Co., Indianapolis, Ind.

Models—Two models on two six-cylinder chassis, both mounting T-head motors; the larger measures 4½ x 5¼ and is pair cast, while the smaller measures 4 x 5 and is cast in sets of three. Both have multiple disk clutches and three-speed selective gearsets; rear axle of smaller car is three-quarter floating. Wheelbase of the "Little Six" is 132 inches on 36 x 4½ tires, and of the "Big Six" 140 inches on 37 x 5 tires.

Prices—"Big Six," $4,000; "Little Six," $2,[illegible]

Changes from Previous Construction—The "Little Six" is a new car throughout; [illegible] alterations have been made in the older model.

Selling Points—Six-cylinder motors with [illegible] cylinders; extremely large crankshaft; 48 horsepower at 1,400 revolutions a minute; complete dynamo electric lighting system; pneumatic engine starter; 132-inch wheelbase; power tire inflator; luxurious equipment, clear running boards; gasolene tank filler between front seats.

Equipment—Dynamo electric lighting system, pneumatic engine starter; power tire inflater; Firestone demountable quick detachable rims; tools; tire repair kit; jack [illegible]

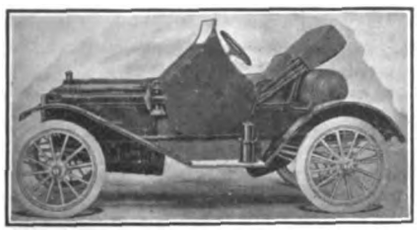
MIDLAND.

Midland Motor Co., East Moline, Ill.

Models—Two models built on two chassis. The larger, a six, has a T head motor, with bore and stroke dimensions of 4 and 5 inches respectively; full floating rear axle. Wheelbase is 135½ inches on 36 x 4 inch tires. The smaller, the "4-40," mounts a T head motor with bore and stroke of 4½ x 5 inches, and has a wheelbase of 122 inches on 34 x 4 inch tires.

Prices—"6-50," $2,385; "4-40," $1,685.

Changes from previous construction—The six cylinder model is a new production. On the four the most notable improvement is the addition of the Gray & Davis motor starting and lighting system and chassis and body refinements.



Selling points—Unit power plants; three point suspension; demountable rims, left-hand drive and center control, full floating rear axle, electric lighting and starting system and equipment.

Equipment—Electric head, side and tail lamps; Gray & Davis electric starting and lighting system; usual complement of tools; tire repair kit and horn, jack, demountable rims, with one extra.

METZ.

Metz Co., Waltham, Mass.

Models—One model on one four-cylinder chassis mounting a block motor measuring 3¾ x 4 and rating 22 horsepower. Transmission by Metz friction system; wheelbase is 90 inches on 30 x 3 tires.

METZ, THE LOWEST PRICED CAR, $395

Price—Roadster model, $395.

Changes from Previous Construction—It is a new car throughout.

Selling Points — Thermo-spihon water cooling, Bosch high-tension magneto, constant level oiling system, left-hand drive with center control, friction transmission, eliminating gears and permitting unlimited speed changes; heavy artillery wheels, full-elliptic springs, accessibility, simplicity, satisfaction, economy, good hill climber, complete equipment.

Equipment—Top with envelope, windshield, gas lamps and generator, Bosch magneto, dash lamps, tail lamp, tools, horn, tire repair kit, pump, and jack.

GLIDE.

Bartholomew Co., Peoria, Ill.

Models—Ten models on two four-cylinder chassis. The larger mounts a motor with separately cast L-head cylinders measuring 4¾ x 5 and rating 45 horsepower, and the smaller has a block L-head motor measuring 4⅛ x 5¼ and rating 36-42 horsepower. Both have multiple disk clutches, three-speed selective gearsets and floating type rear axles. Wheelbases are 120 inches for the "45" on 36 x 4½ tires, and 118 inches on 34 x 4 tires for the "36-42."

Prices—For the "45":Five-passenger torpedo, $2,150; seven-passenger touring car, roadster, and four-passenger touring car, $2,000; seven-passenger torpedo, $2,250; limousine, $3,000; landaulet, $3,000; coupe, $2,500. For the "36-42": roadster or five-passenger touring car, $1,690.

Changes from Previous Construction—In the "36-42," motor dimensions increased from 4¾ x 5 to 4⅛ x 5¼; wheelbase increased 4 inches; electric lighting system added; power driven air pump added; heavier steering gear; new pressed steel rear axle housing; bevel gears increased in size. No changes in larger model.

Selling Points—Combined water and air cooling in the larger motor; and in the smaller car: automatic dynamo lighting system; motor driven tire pump; left side drive with center control; narrow fore frame permitting short turning radius; new improved long-stroke motor; enclosed valves; electric side lamps set into dash; engine starter; unit power plant; 118-inch wheelbase; Baker bolted on demountable rims; Goodyear tires.

Equipment—Top with envelope and side curtains; windshield; Stewart speedometer; power driven tire pump; electric lighting system; Baker demountable rims and one spare; tire carriers; grade indicator; tools; tire repair kit; jack and horn.

IMPERIAL.

Imperial Automobile Co., Jackson, Mich.

Models—Five models on four chassis, three four-cylinder and one "six." Roadster and five-passenger touring car built on 114-inch wheelbase; motor four-cylinder, 40 horsepower, L-head cylinders cast in pairs, 4⅛ x 5½ inches bore and stroke. Another five-passenger touring car is built on a 118-inch wheelbase, with motor of 4½ x 5¼ inches bore and stroke, pair-cast, L-head cylinders. A wheelbase of 122 inches carries a third five-passenger touring car, the motor being four-cylinder, 4¾ x 5¼, with pair-cast L-head cylinders. The six-cylinder model has a motor of 4 inches bore and 5½ inches stroke, wheelbase 137 inches. Multiple disk clutches running in oil and three-speed selectively controlled gearsets are found in all models.

Prices—Roadster and small touring car, $1,285; five-passenger touring cars on 118 and 122-inch wheelbases, $1,650 and $1,875, respectively; six-cylinder car, $2,500.

Equipment—Top, windshield, speedometer, tire holders, demountable rims, lamps, horn, and tools.

PATERSON.

W. A. Paterson Co., Flint, Mich.

Models—Three models on two four-cylinder chassis. Both motors have pair-cast L-head cylinders and unit construction, the

Digitized by Google

smaller measuring 4¾ x 4⅛ and rating 40 horsepower and the larger measuring 4½ x 5¼ and rating 45 horsepower. Both have cone clutches, three-speed selective gearsets and full-floating rear axles. Wheelbases are 116 inches on 34 x 4 tires for the smaller and 120 inches on 36 x 4 tires for the larger.

Prices—Model 41, 40-horsepower, five-passenger touring, $1,500; equipped with acetylene starter and Deaco electric lighting system, $1,600; equipped with Deaco electric lighting and starting system, $1,685. Model 47, 45-horsepower, seven-passenger touring, $1,985.

Changes from Previous Construction—Model 41 is a new car throughout and is the same as model 43 except that the latter is equipped with electric lights and electric starter and the former with electric lights and gas starter. Model 47 remains unchanged, except that an electric lighting and engine starting system has been added to the equipment.

Selling Points—Unit power plant construction, three-point support, fully enclosed and adjustable valve mechanism, control levers arranged to give free access to both front doors; long wheelbases; attention paid to proper upholstering; comfort and good riding qualities.

Equipment—Mohair top with envelope and side curtains, Deaco electric lighting system on model 43, Deaco lighting and engine starting on model 47; speedometer, demountable rims, horn, jack, tools, tire repair kit, jack and pump.

KRIT.

Krit Motor Car Co., Detroit, Mich.

Models—Three models built on the same chassis, which mounts an L-head block-cast motor measuring 3¾ x 4 inches; transmission elements include multiple disc clutch, three-speed selective gearset and floating rear axle. Wheelbase is 106 inches on 32 x 3½ inch tires. Also one "six," details and prices of which have not yet been fully decided.

Prices—Five-passenger touring or roadster model, $900.

Changes from Previous Construction—Valves have been enclosed and fitted with adjustable tappets, grease lubrication replaces oil lubrication in gearset, motor is provided with an integral oil reservoir in the crankcase, brass parts now are nickeled and the touring body is of the shrouded dash type. The "six" is a new car throughout.

Selling Points—Ball-bearing motor, extra large crankshaft with liberal-sized connecting rod bearings, self-adjusting multiple disc clutch in oil, three-speed selective gearset, unusually large gears with shafts mounted in ball bearings, completely enclosed unit power plant with positive oiling system, underslung spring construction, high tension magneto, external contracting service brakes protected by housing forged integral with axle, thereby eliminating clips; large braking surface.

Equipment—Mohair top with envelope and side curtains; rain-vision windshield; option of Prest-O-Lite tank or Stewart speedometer and generator; Detroit demountable rims with one extra and tire irons, tools, tire repair kit, pump, jack and horn.

STAVER.

Staver Carriage Co., Chicago, Ills.

Models—Three models on three chassis, two of which are "fours" and the third is "six." The four-cylinder motors are rated at 45 and 55 horsepower respectively., and measure 4½ x 5 and 4½ x 6 inches, and the "six" is rated at 70 horsepower and measures 4 x 6. All have multiple disk clutches and three-speed selective gearsets; rear axles are full-floating. Wheelbases are 138 inches for the "six" on 37 x 4½ tires; 120 inches for the "4-55" on 36 x 4 tires; and 118 inches for the "4-45" on 34 x 4 tires.

Prices—"Six" six-passenger touring car, $2,750; "4-45" five-passenger touring car, $1,875; "4-55" five-passenger touring car, $2,250.

Changes from previous construction—Both the "six" and the larger "four" are new throughout.

NORWALK.

Norwalk Motor Car Co., Martinsburg, W. Va.

Models—Five models on two six-cylinder chassis, both motors being of the T-head type with the cylinders cast in threes. The larger measures 4¼ x 5½ and the smaller 4 x 5. Both have multiple disk clutches, the smaller having a three- and the larger a four-speed selective gearset; both have full-floating rear axles. Wheelbases are 127 inches on 38 x 4½ tires for the smaller, 136 inches for a special model built on the smaller chassis and equipped with 40 x 4½ tires, and 144 inches on 41 x 5 tires for the larger "six."

Prices—For the smaller chassis: Roadster and five-passenger touring car, $2,750; special model four-passenger "tourer," $3,000; six-passenger "tourer," $3,100. For the larger chassis: Four-passenger, $3,650; six-passenger, $3,750.

Changes from Previous Construction—Former L-head, pair-cast motor replaced by unit power plant with T-head cylinders cast in pairs; new pressed steel rear axle.

Selling Points—Only six-cylinder underslung car; long stroke motor, complete electric lighting and engine starting system, low center of gravity, great stability, four-speed gearset, full-floating rear axle, center control, complete equipment, straight-line drive, three-point suspension of motor, extra large equalized brakes.

Equipment—Top with envelope and side curtains, Zig-Zag windshield, speedometer and clock, Gray & Davis electric lighting and starting system, demountable rims, tools, tire repair kit, foot and robe rails, pump and jack.

WINTON.

Winton Motor Carriage Co., Cleveland, O.

Models—Six models built on the same six-cylinder chassis. The motor has L-head pair-cast cylinders measuring 4½ x 5 inches and rates at 48.6 horsepower. Transmission elements include oil bath multiple disc clutch, four-speed selective gearset and full-floating rear axle; wheelbase is 130 inches on 36 x 4½ inch tires.

Prices—Roadster, $3,000; touring, $3,000; small tonneau touring, $3,000; three-quarter limousine, $4,250; enclosed limousine, $4,500: landaulet, $4,500.

Selling Points—Six cylinders, compressed air starting and tire inflating system, high ratio of power to weight, large tires, low maintenance cost, readily adjustable control pedals, screw and nut steering gear, three quarter elliptic rear springs.

Changes from Previous Construction—Body lines have been refined and smoothed down and three-quarter elliptic springs have been substituted for the semi-elliptic members used heretofore.

Equipment—Two gas head lamps, two electric side lamps, one electric tail lamp, gas tank or generator; 6-volt 60-ampere-hour storage battery, demountable rims. Top, windshield, speedometer, etc., are extra equipment

Electric Pleasure Cars

ARGO ELECTRIC.

Argo Electric Vehicle Co., Saginaw, Mich.

Models—Two models built on the same chassis. Drive is by shaft, the motor being mounted directly on the rear axle. Battery equipment consists of 30 cells 15-plate Exide. Wheelbase is 110 inches for the brougham on 36 x 4 tires and 86 inches for the town car on 34 x 3 tires.

Prices—Brougham, $2,800.

Selling Points—Westinghouse motor, long wheelbase, resilient springs, roomy bodies, shaft drive, unit motor and rear axle assembly, substantial construction, simplicity, non-arcing constant torque controller.

Equipment—Ampere hour meter with totalizing and trip dials, properly sealed against tampering; odometer giving trip and total miles, trip and total hours; electric horn, complete toilet and card case, complete outfit of tools, and jack.

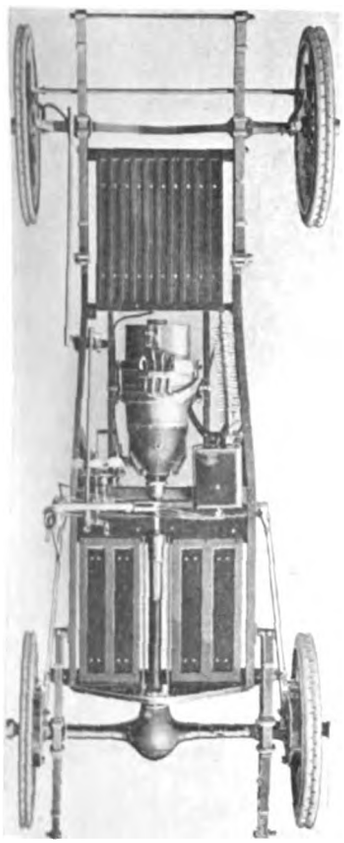
DETROIT ELECTRICS.

Anderson Electric Car Co., Detroit, Mich.

Models—Eight models on one electric chassis. Drive is direct by shaft to bevel gear on rear axle, which is of the floating type; lever steer and control.

Digitized by Google

Prices—Clear Vision Brougham, $3,000; Model 37 brougham, $3,600; Extension brougham, $2,850; Model 36 brougham, $2,700; roadster coupe, $2,500; limousine, $5,000; roadster, $2,350; victoria, $2,300.



Selling Points — Horizontal controlier lever, five speeds and reverse, special Detroit motor, electric brakes, two sets hub brakes, direct shaft-driven chainless power plant, lead or nickel batteries, aluminum window sashes.

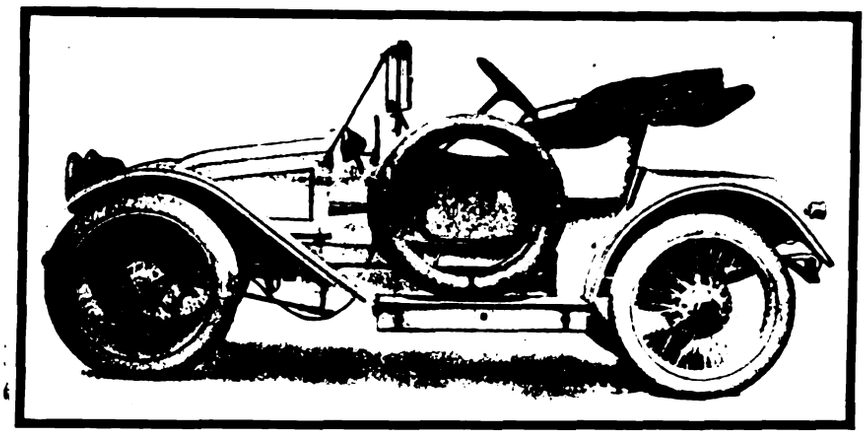
Equipment—Head and side lamps, tail and inspection lamps, hub odometer, complete outfit of tools, flower vases and toilet cases.

CHURCH-FIELD ELECTRIC.

Church-Field Motor Co., Sibley, Mich.

Models—Two models built on the same electric chassis, mounting a Wagner motor

CHURCH-FIELD ELECTRIC CHASSIS



and equipped with either 24 cells of 19-plate, WTX of 26 cells of 17-plate, WTX Philadelphia battery; Exide, Exide Hycap, Ironclad Exide, or Edison battery furnished at slight additional cost. Drive is by shaft through a two-speed planetary gearset and straight shaft to bevel gearing on the rear axle, which is of the boating type. Tires are solid, 36 x 4, on the brougham, and 36 x 4 special pneumatic for the roadster.

Prices—Roadster, $2,300; four-passenger, brougham, $2,800.

Changes from Previous Construction—Minor refinements only, the car being exhibited for the first time.

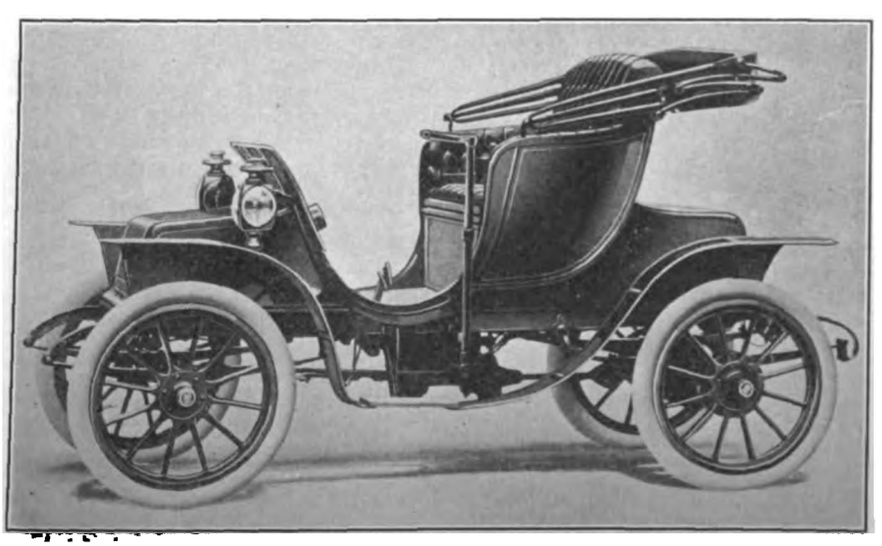
Selling Points — Two-speed planetary transmission, arrangement of transmission clutches and brakes, ten-point speed control, arrangement of current and speed levers in both roadster and brougham, safety locking and interlocking devices on the current control lever, current dial, convenient arrangement of electric light control, exclusive Church-Field springs (reverse three-quarter elliptic), scientific distribution of weight, beauty and distinction of design, smaller refinements and conveniences in equipment, underslung frame.

Equipment — Brougham: Two focusing head lights, two Colonial pillar lamps, two inside dome lights, one tail lamp, Klaxonet horn (electric bell optional), volt-ammeter, odometer, ladies' toilet case, gentlemen's smoking case, cut glass flower vase, eight-day Swiss clock, charging plug, tool case, jack, and oil can. Roadster: Windshield, mohair top with boot, two focusing head lights, one tail lamp, Klaxonet horn, volt-ammeter, speedometer, eight-day Swiss clock, charging plug, tool case, pump, tire repair outfit, jack, and oil can.

BUFFALO ELECTRIC ROADSTER EQUIPPED WITH WIRE WHEELS

BUFFALO ELECTRICS

Buffalo Electric Vehicle Co., Buffalo, N. Y.



Models—Three models built on the same chassis, which is equipped with a Diehle 20-horsepower motor and 42 cells of 15-plate Philadelphia battery. The three models are the same, except that the coupes have lever steer as standard equipment, with wheel steer optional, and the roadster is equipped with wheel steer; lever steel is optional. The chassis has a single reduction shaft drive and the rear axle is of the full-floating type.

Prices—Roadster, $2,600; model 29, four-passenger coupe, $3,300; model 30B, four or five-passenger coupe with all seats facing forward, $3,400.

Changes from Previous Construction—Except for a new type of rear axle and a new sloping hood over the front battery tray, the chassis is substantially without alteration.

Selling Points—Single reduction shaft drive; foot control; irreversible steering with either lever or wheel; aluminum body construction; French type hood; deep cushions; resilient springs; full equipment.

Equipment—Model 29 has a complete electric lighting equipment, including head, side and tail lamps; windshield, speedometer; top, side curtains and envelope; volt and ammeters; Klaxonette horn; detachable or demountable rims; McCue wire

BROC ELECTRIC VICTORIA SHOWING STRAIGHT SHAFT DRIVE

Digitized by Google

wheels optional; tools, tire repair kit, and jack. The coupe equipment is the same, except that no head lamps are spuplied and the warning signal is a bell; vases and slip covers for the cushions are provided.

BORLAND ELECTRIC.

Borland-Grannis Co., Chicago, Ill.

Models—Five models on the same electric chassis mounting a General Electric motor and driven by shaft. Battery consists of 40 cells of 9-plate Exide for all except the roadster model, which has 42 cells of 11-plate Exide, and the limousine, which has 42 cells of 19-plate Exide. Wheelbases are 93 inches for the brougham and semi-Colonial coupe on 34 x 4 pneumatic or cushion tires; 96 inches for the Colonial coupe and the roadster on 34 x 4 tires, and 123 inches for the limousine.

Prices—Brougham, $2,500; roadster, $2,550; semi-Colonial coupe, $2,700; Colonial coupe, $2,900; limousine, $5,500.

Changes from Previous Construction—All except the Brougham are new models throughout, though changes of only minor importance have been made in the chassis.

Selling Points—Wide range for choice in body styles; high efficiency General Electric motor; continuous torque six-speed controller, interlocking device on current control, liberal battery capacity, great mileage, beautiful lines, complete equipment.

Equipment—All closed cars: Head and side and tail lamps, odometer, volt and ammeters, complete outfit of tools, hydrometer, flower vase, toilet case, umbrella to match upholstery, skid chains. Roadster: Windshield, Klaxonet horn, chains. Limousine: Adjustable top to protect driver.

RAUCH & LANG ELECTRIC.

Rauch & Lang Carriage Co., Cleveland, O.

Models—Six models on three chassis. Brougham, colonial brougham, club roadster and roadster on 92-inch wheelbase with tires 33 x 4½ cushion or 32 x 4 pneumatic. Battery, 40 cells, 11 plates. Coach, 103-inch wheelbase, same tire and battery equipment. Demi-brougham, 86-inch wheelbase, same tire equipment; battery, 40 cells, 9 plates.

Prices—Brougham, $2,900; colonial brougham, $2,900; coach, $3,100; club roadster, $2,800; roadster, $2,600; demi-brougham, $2,800.

Equipment—Side, head and tail lamps, dome light, rain vision shield, odometer, flower vase, toilet case, and set of tools.

BROC ELECTRIC.

Broc Electric Vehicle Co., Cleveland, O.

Models—Four models on two electric chassis, which are the same except in wheelbase length, one measuring 84 inches and the other 96 inches. Lever steer is standard on all with wheel steer optional on the roadster. All are equipped with 40 cells of 11-plate Exide battery except the roadster, which has 28 cells. Tires may be either 34 x 4 special electric pneumatic or 36 x 4 cushion, except on the roadster, which is equipped with either 32 x 3½ pneumatic or 34 x 3½ cushion tires.

Prices—Stanhope open, $2,000; Victoria open, $2,050; brougham, $3,000; brougham with revolving driver's seat, $3,100; forward drive brougham, $3,100.

Changes from Previous Construction—Except for minor improvements, there have been no alterations in construction.

Selling Points—Lever steer; well designed and properly located seats, new locking device on current control, perfect spring suspension, high efficiency motor, complete equipment.

Equipment—Open and closed cars: Klaxet or electric bell, storm curtain and apron, two each side and head lamps, meter lamp, charging plug, odometer, volt and ammeter, pump, tire repair kit, and tools. Closed cars have, in addition: Cylinder door locks, cut glass flower vase, toilet case with mirror, memorandum book, bottles, and brush.

STANDARD ELECTRIQUE.

Standard Electric Car Co., Jackson, Mich.

Models—One model on one electric chassis mounting a Westinghouse motor and 30 cells of 11-plate Exide battery; controller is of continuous torque type and provides six forward and three reverse speeds; drive is straight shaft with double reduction to bevel gearing. Wheelbase is 96 inches on 32 x 3½ Motz or 34 x 3½ tires at additional cost.

Price—$1,885.

Selling Points—Straight-line drive without universal joints; method of supporting motor and transmission elements, double-reduction drive, reduction gear built in the axle, light weight, high efficiency motor, liberal battery equipment, continuous torque controller, pedal control, twin expanding brakes, flexible and resilient springs, tiller type non-vibrating steering mechanism, Yale locks on doors, 20 coats of paint, ventilators, clear-vision windshield, dropped frame.

Equipment—Two front lamps, one tail lamp, complete toilet case, cut glass flower case, burglar proof locks on doors.

CHICAGO ELECTRIC.

Chicago Electric Motor Car Co., Chicago.

Models—Two models on the same electric chassis. Drive is through shaft with single reduction to bevel gear on rear axle. Tires are 36 x 4 cushion, and the battery equipment consists of 40 cells of Hycap Exide.

Prices—Four-passenger brougham, $2,800; five-passenger forward drive brougham, $3,100.

Selling Points—Five speeds up to 22 miles an hour, horizontal lever control, brake and propeller shaft connected with controller handle; reverse by wheel pedal without taking hand from controller handle, foot brakes operating 14 x 2½ expanding brakes on hubs, complete interlock system between foot brake reverse and controller, so that neither brake can be set without having power shut off; reverse cannot be applied without a braking operation.

Equipment—Full tool equipment and charging plug, Weston ammeter and voltmeter, eight-day Phinney-Walker keyless clock.

OHIO ELECTRIC.

Ohio Electric Car Co., Toledo, Ohio.

Models—Made in seven models; Models X, K, G and D are broughams and have wheelbases of 102, 90, 90, and 80 inches, respectively, on 34-inch wheels; Models T, Q and F are Victorias, all with wheelbases of 90 inches on 34-inch wheels. General Electric series wound motors are used in all models. Shaft drive obtains in all models.

Prices—Model X, $4,000; K, $2,900; G, $2,700; D, $2,600; T, $2,400; Q, $2,400; F, $2,300.

WAVERLEY ELECTRICS.

Waverley Co., Indianapolis, Ind.

Models—Eight models on the same electric chassis, mounting an 80-volt motor and equipped with 40 cells of 11-plate battery. Drive is by transverse shaft through double reduction spur and herringbone gears to the rear axle. Wheelbases are from 89 to 109 inches on 34 x 4 cushion or pneumatic tires.

Prices—Limousine five, $3,500; limousine four, $2,900; Georgian brougham, $3,250; Empire brougham, $2,800; Colonial brougham, $2,375; two-passenger coupe, $2,150; victoria-phaeton, $1,850; sheltered roadster, $2,250.

Changes from Previous Construction—Except for body refinements and the addition of one new model, the limousine four, there have been no mechanical alterations.

Selling Points—Wide range for choice; several models in which all seats face forward; low cost of maintenance; full-elliptic springs both front and rear; straight line shaft drive with driving shaft parallel to axle, eliminating necessity for transmitting power around a corner; double reduction gearing; high efficiency motor; knife-blade type controller; lever steer; good weight distribution; accessibility; simplicity.

Equipment—Lamps; charging plug; meters; flower vases; toilet articles.

WOODS ELECTRIC.

Woods Motor Vehicle Co., Chicago, Ill.

Models—Four models built on the same chassis. Transmission elements include shaft drive with reduction at the motor; controller is of the horizontal constant torque type, giving five forward and reverse speeds. Battery, 40 cells, 11-plate MV.

Prices—Extension brougham, $2,700; five-passenger extension brougham, $3,600; double victoria, $2,500.

ADVANCES INDICATED BY THE TRUCK EXHIBITS

Development That Has Been Steady Though Unproductive of Startling Innovations—Worm Drive and Left Side Steering Gain Slightly and Governors a Growing Feature—Betterment of Light Trucks Pronounced.

Whatever an exhibition of commercial motor vehicles might have been about the time those machines were kicking themselves free of their shells, metaphorically speaking, and were metallic embodiments of the extremely unsettled states of mind of their respective creators, each of whom disagreed with each of the others on nearly all points save that the wheels undoubtedly ought to be round—whatever a motor truck show might have been in what people sometimes are pleased to refer to as the "good old days," it is beyond contradiction that the imminent annual functions, the National Shows, will be far, far from resembling transient museums of mechanical mistakes.

Differences Have Dwindled Into Details.

There was a time, as there must be in the youth of every industry, when people were trying to find out the right way to build burden-bearing automobiles, and, heaven knows, they tried practically all the wrong ways there were before hitting upon the correct ideas. And while it may be very well to ask, in all seriousness, if the right ideas really have been arrived at, it is not without significance that, notwithstanding strenuous and earnest efforts on the part of most manufacturers to be distinctly individual and yet turn out better machines than their competitors, practically all have accepted the same broad principles and differences are yearly becoming chiefly matters of detail. And yet—who knows what these same designers may think of their present work twenty-five years hence?

Similarity and "Class" That Prevails.

All of which moralizing, or philosophizing, or philandering, or whatever it may be termed, is the direct result of a prophetic view of the coming shows, so far as their commercial car aspects are concerned. Two things are certain. never was there in this country an assemblage of machines that so closely resembled each other, and never was there so much downright "class" to a truck show as to those in New York and Chicago. The fact, patent from a review of the specifications and features of the machines on exhibition, that there are no daringly new things shown, may well be considered an indication of progress of the most substantial and satisfactory sort; for, taken in conjunction with the fact that many makers are working methodically along the same general lines, it indicates a certain concord of opinion of trained minds and that "pulling together" spirit that is so infinitely more productive of results than the more flashy and spectacular individualities that have been intimately connected with that worn-out expression "revolutionize the industry" in the good old days already referred to.

Newcomers and Newness A-plenty.

There are several answers to the inevitable question, "What's new?" at the big shows. There will be the big 6-ton Smith-Milwaukee, the heaviest of the worm-driven contingent, which takes the place of last year's 5-tonner of the same design; the La France, with Manly hydraulic transmission of power; the Stewart and the Gramm-Bernstein — new machines built by men whose names are by no means new in the annals of motor truck manufacturing; the Natco, a machine that has behind it both backing and brains; the Brown, which has every appearance of being what its makers say it is—a "real car"; and, among the electrics, the Atlantic, which is seen for the first time at the national shows, though it was exhibited at the Electrical Show last fall; the Urban, built by a firm of old-time carriage manufacturers; the M & P, in which the motor and its accessories are grouped under the driver's seat and drive to the jackshaft is by the propeller shaft. A striking machine is the new Baker tractor—short, thick-set and powerful looking. A big 5-ton truck with shaft drive has been added to the Waverley line. A small truck, with worm drive, makes the third member of the Diamond T family.

Influence of Parts Specialists Revealed.

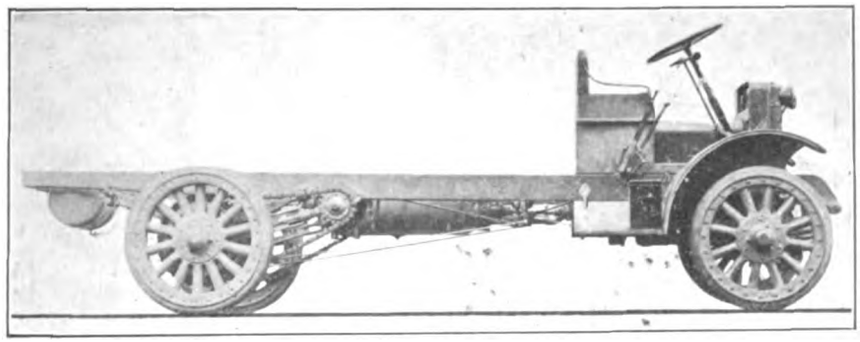
Because of its low price, to say nothing of the engineering prestige of its builders, the new Gramm 1,500-pound wagon that makes its first appearance "on any stage" at the National show in New York, is the focus of no small amount of interest. Its four-cylinder motor, three-speed selective gearset and side chain drive are built for real work and are worthy, apparently, of bigger figures to the right of the dollar mark.

It is in no wise discreditable to manufacturers of commercial vehicles to point out that an enormous burden has been lifted from their collective shoulders by the many specialists who throw all their energies each into the production of some special line of parts, and thus are enabled to furnish makers of complete machines with parts that not only are far better than most factories can produce incidentally to the construction of cars as a whole, but also at less cost. That the specialist has the advantage in every way of the small "generalizer," so to speak, is now so widely recognized that, far from being ashamed of the fact that they do not themselves make some part or parts of their trucks, manufacturers are "pointing with pride" to the specialties incorporated in their machines, and right here is seen one of the vast advantages of the "pulling together" idea.

Assembled Machines as Excellent Examples.

Carrying this principle to its logical conclusion, there are trucks that are built wholly of purchased parts—assembled machines, as they are called—and if there is any fault to be found with the trucks produced by this system, it is a problem to discover what it may be. Of course, there are many makers who make more or less extended use of purchased parts without saying very much about it one way or the other; but, on the other hand, there are those who do not hesitate to come out boldly and logically in favor of assembling. The builders of the Standard gasolene truck, for instance, have no apologies to make for the use of parts built by specialists, and certainly the truck itself needs nothing of the sort.

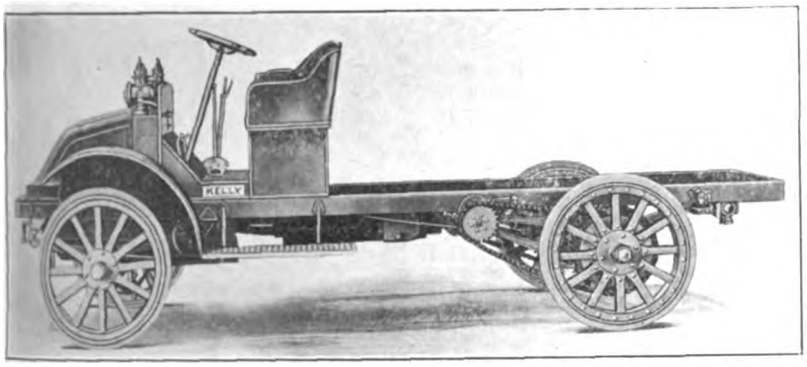
Of the manufacturers who do not go outside their own factory walls for anything except such standard parts as tires, ignition apparatus, wheels, and so on, it is necessary only to say that they usually are established on such a huge scale that they are in reality multi-specialists. The departments are virtually separate factories under a common management, and operations are carried on in such a large way that there are not the limitations that would hamper concerns trying to do the same thing on a small scale.



Number of Exhibits To Be Staged.

As far as appearances are concerned, there is ample opportunity to get a good idea of what the American motor truck industry amounts to by an inspection of the

Digitized by Google



exhibits of 60 concerns in New York and 71 in Chicago, such being the sum totals of exhibitors, according to the latest returns, as the politicians express it. As was the case last year, Chicago has a little the best of it in the matter of numbers, due to the fact that the breezy burg attracts a considerable number of manufacturers from the Middle West who do not go as far afield as the Mecca of the Easterners. Of the total number of firms that help to bulge the walls of the Coliseum and the First Regiment Armory in Chicago and the good old Garden and the splendid Grand Central Palace in New York—there will be some 86 of them—48 will "double up," having exhibits in both cities, while New York will have 18 exhibitors who will forego the delights of Chicago, and Chicago will entertain—or be entertained by—20 who will eschew the January ocean breezes in New York.

To get down to brass tacks—with motor trucks in the role of brass tacks for the

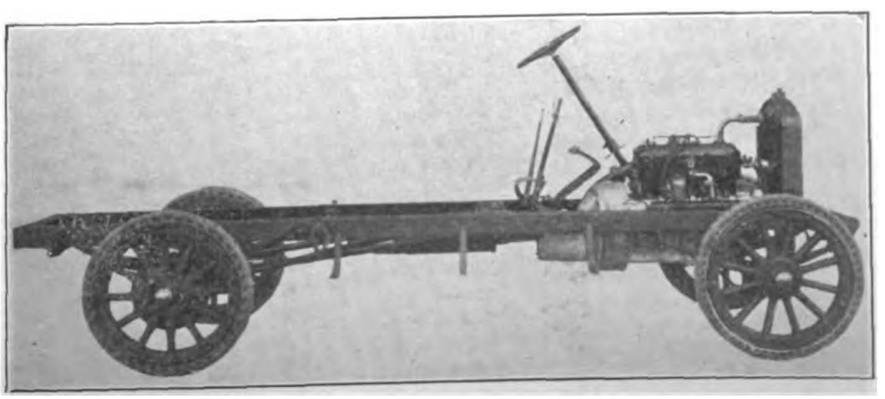
NEW GRAMM-BERNSTEIN 3½-TON TRUCK CHASSIS

others; and in a few instances it has blossomed out—if such things can be said to blossom—into commercial existence. The old and the new worm-driven trucks taken together make up quite a little band, including the Pierce-Arrow, which is a veteran in worm transmission; the Smith-Milwaukee, the Rowe, the Universal, the Blair,

KELLY ONE-TON CHASSIS, SHOWING SLOPING HOOD

nonce—the most conspicuous tendency of the industry probably is the utter absence of anything like what used to be labeled with that term. There is nothing visible in the shape of a mad rush in any direction; no radical features have been "played up" to such an extent as to make a big, thick mark on the records; 1913 is not any particular kind of a "year"; there is nothing in sight that either threatens or promises to "revolutionize the industry."

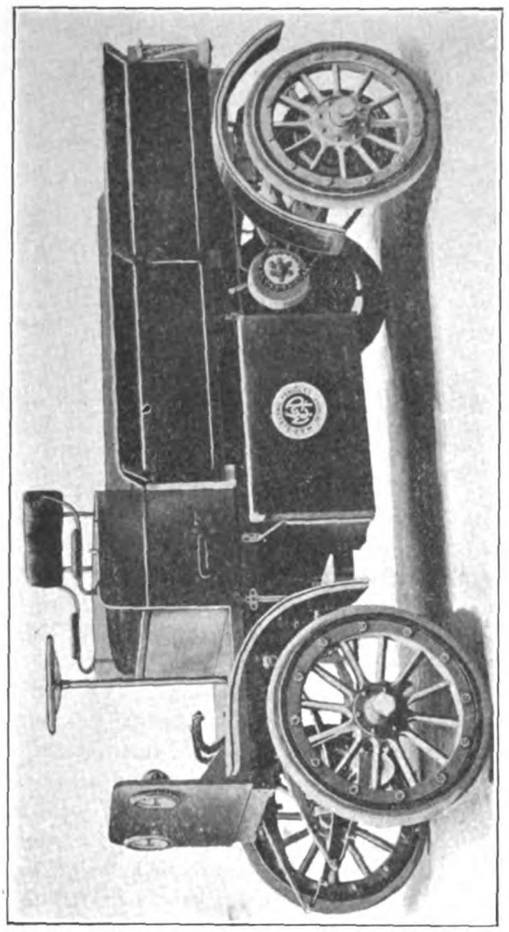
"Worm Drivers'" Ranks Increased.



There are not lacking, however, indications that some of the promises of last year are being fulfilled, to some extent at least. Worm drive, which a year ago gave promise of considerable growth, has only partly fulfilled the promise. This silent, slippery transmitter of power has been tentatively and, let it be said, very cautiously taken up by a number of truck concerns, and experimental and test work has been carried on with a quietness that has amounted to secrecy in some instances. By some it has been abandoned; it still is in the probationary period on the test machines of the Schacht and the Diamond T. It is evident that, though the somewhat wild predictions that have been made as to the immediate future of the worm drive were rather wide of the mark, for the system has by no means taken the market by storm, genuine progress has been made—progress that is all the more satisfactory because it is not of the kind that is likely to take backward steps. The Smith-Milwaukee truck, with a carrying capacity of 6 tons, is the heaviest of all of the worm-driven machines.

Advances Made by Left Drive.

Somewhat more pronounced has been the accession to the ranks of users of left side steering, for almost a third of the exhibitors, taking all the shows together, have cars in which the driver's position will be on the "near" side. Some makers still are straddling the fence, so to speak, building cars with both right and left steer, while others have boldly gone over to the other side of the seat, including some who were in the hesitating class last year. It is a peculiarity of left side control that drivers who have become thoroughly accustomed to it do not seem to care to go back to steering on the right side. The electrics always were prominent in this matter of left control, but the gasolene cars, once having taken the hint, have taken it to some purpose, and this fact is very clearly brought out in the cars exhibited.



More General Use of Governors.

Another of last year's promises that is being carried out relates to the very important matter of governing the motors of gasolene trucks. The irresistible impulse of the average driver to "hit 'er up" whenever there is a good opportunity, as well as often when the time is anything but opportune, has led to so much trouble that the governor inevitably has come to the rescue.

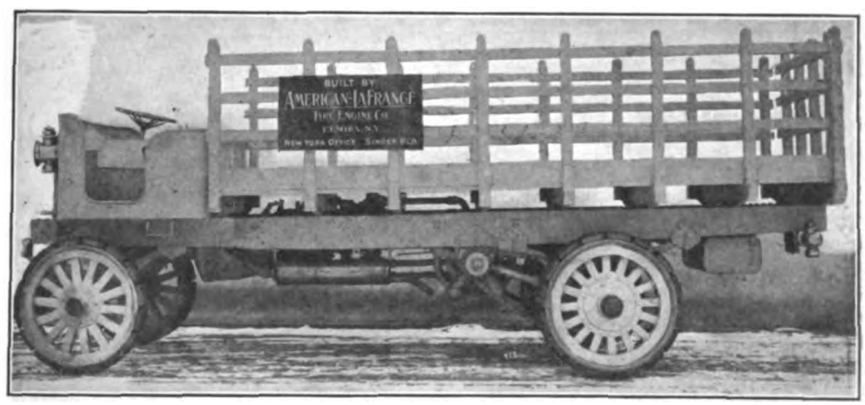
SCHACHT ONE-TON WORM-DRIVEN STAKE BODY TRUCK

It is now so well known as to be axiomatic that commercial vehicles cease to be economical and reliable when they are driven above certain critical speeds, for though a little time may be saved in getting over the road, much more is lost, in the long run, in repairing the damage caused by this speeding, and deterioration and wear and tear, to say nothing of the item of tire expense, tend to make matters very hard for the dealer whose guarantee is back of the machine as well as the owner who, with good reason, has been led to believe that the expense will be less than the amount he finds he has to pay out.

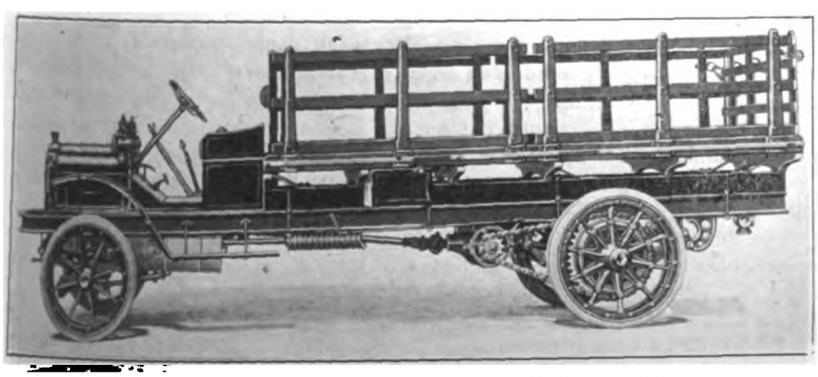


Air Cooling Remains Stationary.

So it is for the protection of both dealer and user that the maker has taken to putting the engine under automatic control. And, further, owing to the diabolical ingenuity of some drivers in tinkering with governors that are susceptible of such delicate attentions, the tendency is to enclose all governor parts in casings that are tinker-proof—or, at least, they are designed to be tinker-proof. It may be that some drivers will manage to surmount the difficulties so placed in the way of indulgence in speed madness, but there can be no question that at the very worst the trouble will be much mitigated. However that may be, the fact remains that somewhere between 25 and 30 per cent. of the exhibits include trucks with governed engines.

Air-cooled cars come and air-cooled cars go with the regularity of the ebb and flow of the tide. There is something peculiar about air-cooling; occasionally some maker hits upon the right combination of dimensions and areas and so on, and his motors run along with a reliability and efficiency that is tantalizing to the less fortunate ones who find in the use of the atmosphere as a heat-abstracting agent nothing but trouble. A few there be that like air, find it agrees with them and stick to it, in which connection the Chase car must not be forgotten; its success has been marked, whether it is on account of its air-cooling and its two-cycle principle or—as some unkindly ones have suggested—in spite of them. Air-cooling is employed also in the I. H. C., the Schacht and the Mercury machines. Missing from the ranks of air-coolers are the big Kelly and the little Sanford, which have taken the plunge, so to speak, and now are invested with ample and well-designed water jackets. The Mercury, which is water-cooled, and the Chase, which is air-cooled, will have the honor of representing the two-cycle principle of motor operation. The Four-Wheel drive car is alone in the class which is indicated by its name; but the performance of this machine in the army trials during the past year or so has marked it as a car to be reckoned with, and one qualified to uphold the honor of its kind.

The Lambert is prominent, as usual, as an example of power transmission without gears—that is to say, friction transmission—exploiting, as does the Commerce car, also, the type of transmission in which but two disks are employed.

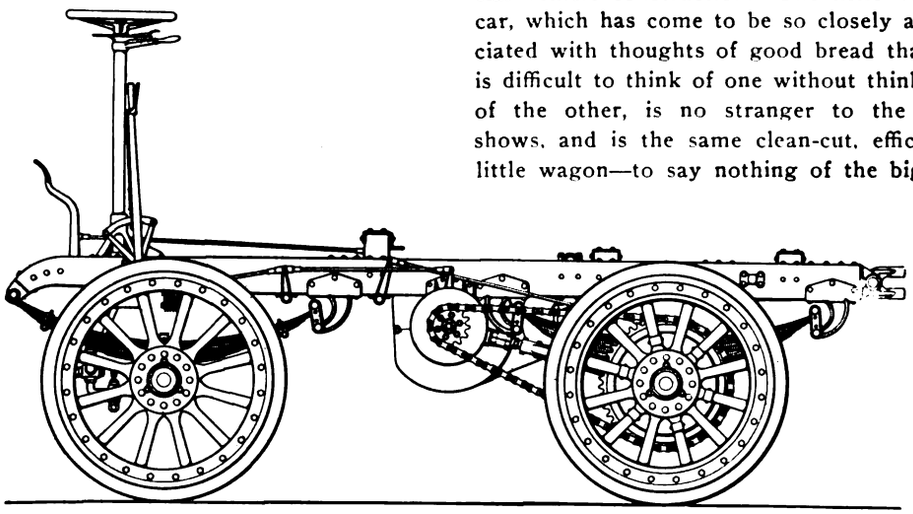


One of the minor tendencies, but one that carries with it a very strong appeal to those who know something of the practical part of motor trucking in "mean" weather, is toward the fitting of cabs over driver's seats. Quite a number of makers are specifying these little shelters as part of standard construction; the cabs range all the way from mere roofs with side and front curtains for use in stormy weather to complete enclosures, in which any weather can be set at naught. The Lauth-Juergens is a familiar example of this sort of consideration for the driver.

AMERICAN LA FRANCE WHICH HAS MANLY HYDRAULIC DRIVE

Few Changes in Well-Known Trucks.

The "old timers" will be out in full force, as usual. Pierce, Packard, Peerless—the three P's are hard to separate—Sampson, and the three Internationals—Hewitt, Saurer and Mack—the big Knox family, Speedwell, and all the rest of them; but for the most part they are so little changed that a good deal more than a superficial examination is needed to detect what is altered, and in not a few instances there is absolutely nothing different. Alco, White, Garford, Buick, Velie, Reo—they are as they were; the big, capable looking Locomobile 5-tonner that made its initial appearance last year is just the same, and so it goes all along the line, with here and there an exception and here and there a new arrival.



THREE-TON WHITE WITH STANDARD PLATFORM BODY

Digitized by Google

such as the sturdy Natco, the aristocratic Stewart, the business-like Gramm-Bernstein and the Brown. The Lippard-Stewart's accessibility is as striking as ever, and the shimmer of its gold-plated chassis is as effective a magnet for drawing crowds as it was at the Palace last year.

Unusual Construction Adds "Spice."

Though there is a grateful lack of the mechanically bizarre, it does not follow that there is nothing of interest outside of the lines laid down by orthodox engineering practice. The La France truck, in which is incorporated the Manly hydraulic drive; the Walker electric, in which the rear axle structure encloses an electric motor driving through gears enclosed in the pressed steel wheels, and the worm driven machines—all are sufficiently unusual to furnish a mild spicing to flavor the mass of exhibits, so to speak, though none of these systems is a stranger. The La France truck, as a whole, is a newcomer, however, and its wonderfully simple system of control and its positive transmission of power are features that mark it for more than ordinary interest and attention.

BAKER ELECTRIC TRACTOR—CAPACITY EIGHT TONS

Falling just short of an even dozen exhibits, the noble army of manufacturers of electrical commercial cars is strongly represented; and, be it said, the exhibits represent a degree of stability of design and standardization of construction that speaks eloquently of the years of development that have brought about these much to be desired results. Taking up the business man's burdens so early in the history of motor transportation that the success of the electric truck was temporarily set back by its very earliness, the lost ground has been more than regained, and the electric is in a sort of class by itself, when it comes to short distance work, either heavy or light —and, further, the "short distance" is yearly creeping up, mile by mile, as the combined efforts of makers of batteries, motors, tires and bearings bear fruit in the increase of power for weight, efficiency of operation, greater durability and easier driving and decreased friction.

Newcomers in this class include the M & P, which, though it has been on the market for the better part of a year, is being exhibited at a National show for the first time, and is a good example of the application of shaft drive to an electric vehicle. The Urban truck, shown for the first time by a concern that already has made a name for itself in the manufacture of horse-drawn vehicles—the Kentucky Wagon Mfg. Co.—is only nominally new, for it shows unmistakable appreciation on the part of its designers of what is best in electric commercial vehicle construction. The little Ward car, which has come to be so closely associated with thoughts of good bread that it is difficult to think of one without thinking of the other, is no stranger to the big shows, and is the same clean-cut, efficient little wagon—to say nothing of the bigger Wards, which are less conspicuous only because they are less numerous. The Atlantic, the Baker, the G. M. C., the General Vehicle, Lansden, Studebaker and Waverley are readily recognized by their individual characteristics, which they retain in every case, plus numerous examples of the detailed refinements that are so freely spoken of as "the only changes made since the last shows."

Engine Starters Make Slight Advances.

Despite the prognostications that have been made with regard to the use of motor starting devices for gasolene trucks, it does not appear that much has been done in this direction. The Schacht and the Gramm-Bernstein are putting out models in which electric starting and lighting systems are part of the regular equipment; but apart from some makers who fit starters as special equipment and some who doubtless are keeping starters "up their sleeves" for show surprises, these two form a somewhat lonely pair. This situation is rather difficult to account for, as some of the bigger motors are hard to start, and any motor that runs when it might just as well be standing still is using up gasolene, lubricating oil and wearing its parts unnecessarily. There is not much question as to the ability of a starting device to pay for itself before it is worn out, in some classes of service, at least, and why the lead of the pleasure car in the use of means for eliminating the use of the crank has not been more generally followed by truck builders is not apparent, though doubtless they have reasons that are considered good and sufficient.

Better Construction Is Apparent.

There probably never was a time when any doubt existed as to the necessity for using good material and careful workmanship in the construction of heavy trucks. The mere idea of carrying the loads that the big fellows have to get away with is enough to impress one with the indispensability of plenty of strength. When it came to light loads, however—loads that could be compared with the weights carried by small horse-drawn wagons—things seem to have been looked at in another light. Perhaps some of the people who built, say, 500-pound or 1,000-pound motor wagons, had in mind the sort of horse-drawn wagons that would carry similar loads; perhaps there were other reasons. However, it is a fact that at one time there were a great many machines turned out that seemed, to mechanical eyes, far from equal to their tasks; they were rough affairs, put together cheaply of cheap materials, with little or none of the painstaking care that always has been more or less a feature of the big machines and, for that matter, the little ones, too, of the better kinds.

Wherein Light Trucks Have Improved.

The present output of small machines is clearly indicative of a shift of viewpoint on the part of some of the builders, if not all, who still are doing business. The idea that any old combination of motor, gearset, axles and so on would do to carry a light load has been dispelled, and if the truth were known, doubtless it has been dispelled to the accompaniment of breaking frames, flopping tires, snapping chains, balking motors, springing axles and the thousand and one other evil things that a truck born of a mistaken idea can do. There is no doubt that the makers of motors, gears, frames, axles and other parts have had much to do with the improvement that is so noticeable in the small fry as a class, for by making really first-class components available at a time when many builders were learning by experience the shortcomings of inferior stuff, the manufacture of really fine little kagons was encouraged. The new crop of small wagons is in every way a sharp contrast to the crop of a few years ago. The machines have every appearance of being

Digitized by Google

what a designer might call a "real engineering job" and not a jumble of patch-work. Take them just as they come, there is a great uplifting of quality in the ranks of the little fellows that are designed to carry the light loads.

In commercial vehicles of all types there is a decided tendency to meet the purchaser in the matter of wheelbases and other details, such as battery equipment in the case of electrics. There is such obvious discouragement to the would-be purchaser who sees something that is almost, but not quite, what he wants, but is told that he must take what there is or do without, that a number of makers have adopted the plan of giving considerable latitude in different dimensions. To be sure, there are makers who have done this almost from the beginning; but the point is that the practice is gaining in favor, much to the benefit of the man who pays and who wishes to do his own choosing.

Considering the commercial vehicle shows as one, there is nothing to do but to make the orthodox assertion that it is better than anything of the kind that has gone before. And while it would be nothing short of treasonable to say anything else, and would call for an unsual amount of courage to express such an opinion if there was reason for it, the truth really is that the machines brought together indicate an existing state of affairs—that American motor trucks never were improving more rapidly and rationally.

THE TRUCKS AND WHAT THEY WILL HOLD FORTH

Individual Characteristics and Originalities That Serve to Distinguish Each Make—Prices, New Models, Improvements and Selling Points Made Plain.

ATTERBURY.

Atterbury Motor Car Co., Buffalo, N. Y.

Models—Four chassis models; capacity 1500 pounds, 1, 2 and 3 tons. Chassis weights, 1 ton, 3,500 pounds; 2 ton, 4,700 pounds; 3 ton, 5,600 pounds. Wheelbase of 1-ton, 128 inches; 2-ton, 144 inches; 3-ton 153 inches. Motors of the L-head type, with cylinders cast in pairs; bore and stroke of motor in 1-ton truck, 4 x 4½ inches; 2-ton truck, 4⅛ x 5½ inches; 3-ton truck, 4⅞ x 5½ inches. Automatic sealed governors, disk clutches, three-speed selectively controlled gearsets and side chain final drive in all models. Wheels on all models, 36 inches front and rear. Tires, 1-ton, 3½-inch front and 4-inch rear; 2-ton, 3½-inch single front and 3½-inch dual rear; 3-ton, 4-inch single front and 4-inch dual rear.

Prices—1,500-pound delivery wagon, $1,250; 1-ton truck, $1,750; 2-ton truck, $2,600; 3-ton truck, $3,600.

Selling Points—Specially designed strut or radius rod, swivelling on rear axle with double universal action between jackshaft and axle, relieving machine of undue strain from this direction. Heavy cushion springs on front end of rod to take up starting jar and jerks. Double ignition with two sets of plugs.

Equipment—Three oil lamps, jack and set of tools.

AUTOCAR.

The Autocar Co., Ardmore, Pa.

Models—One chassis model; capacity 3,000 pounds; wheelbase 97 inches; tread 58 inches. Motor, two horizontal opposed cylinders, bore 4¼ inches, stroke 4½ inches, horsepower 18 (A. L. A. M. rating). Multiple dry disk clutch, three-speed sliding gears and shaft drive. Front springs semi-elliptic, rear springs platform. Tires, optional, 34 x 3½ inches front and 34 x 4 inches rear solids, or 36 x 5 pneumatics front and rear, with two extra inner tubes.

Prices—Chassis, $2,150; bodies from $275 to $750 extra.

Selling Points—Simple and reliable motor with ball-bearing crankshaft, full-floating rear axle and Autocar patented double gear reduction, roller bearing gearshafts, substantial construction throughout.

Equipment—Acetylene headlights and gas tank, three oil lamps, horn, full kit of tools, storm apron, front and side curtains.

ALCO.

American Locomotive Co., New York.

Models—Four chassis, of following capacities: 2 ton, 3½ ton, 5 ton and 6½ ton. Two-ton motor, 4½ x 5½ inches, rated at 32.4 horsepower, 112-inch standard wheelbase on solid tires, 36 x 4 inches single front, 36 x 3 inches dual rear; 3½-ton motor, 5 x 6 inches, rated at 40 horsepower; 126-inch standard wheelbase on solid tires, 36 x 5 inches single front, 36 x 4 inches dual rear; 5-ton motor, 5 x 6 inches, rated at 40 horsepower; 144-inch standard wheelbase, on solid tires, 36 x 5 inches single front, 42 x 5 inches dual rear; 6-ton motor, 5 x 6 inches, rated at 40 horsepower; 144-inch standard wheelbase, 164-inch special, on solid tires, 36 x 7 inches front, 42 x 6 inches rear. Dry plate clutch on all models, three-speed selective gearset. Side chain final drive.

Prices—Two-ton chassis in the lead, $2,950; 3½-ton, $3,650; 5-ton, $4,750; 6½-ton, $5,200.

Changes from Previous Construction—Refinements throughout. Chief change is new enclosed dry plate clutch, with the pressure reduced.

Selling Points—Unusual size and strength of parts; superior heat-treated materials, factor of safety of 5, one-piece front and rear axles, steel driver's cab and tool box, substitution of steel for wood wherever practical, honeycomb radiator, motor simple, powerful and dustproof, with valves inclosed; carburetter adjustment under seat, improved clutch, thorough and automatic oiling system, with sight feed on dash; transmission fool-proof; gusset plates reinforcing frame; positive, quick-acting brakes; improved spring hangers.

Equipment—Steel tool box, with tools and spare parts, side and tail oil lamps, bulb horn.

AVERY.

Avery Co., Peoria, Ill.

Models—Three chassis models; capacity 2, 3 and 5 tons. Two-ton and 3-ton built in two wheelbase lengths each, 128 inches and 140 inches; 5-ton, 128 inches only. Frames built in two types, one having flat steel bars and the other steel channels. Treads, 2- and 3-ton, 62 inches front and 68 inches rear; 5-ton, 62 inches front and 70 inches rear. Chassis weights, 2-ton, 5,500 pounds; 3-ton, 5,700 pounds; 5-ton, 7,200 pounds. Same motor in all models; four-cylinder, 45 horsepower, L-head cylinders individually cast, 4¼ x 5 inches bore and stroke. Multiple disk clutches, three-speed selectively controlled gearsets and side chain final drive in all models; 36-inch wheels front and rear on 2-ton model, with 4-inch single front and 3½-inch dual tires rear; 38-inch wheels front and rear on both the other models; tires on 3-ton, 5-inch single front and 4-inch dual rear; on 5-ton, 6-inch single front and 5-inch dual rear. Gasolene capacity of two smaller models, 23 gallons; of larger model, 30 gallons.

Prices—Chassis, 2-ton, $2,700; 3-ton, $3,200; 5-ton, $4,500.

Changes from Previous Construction—New throttle control governor, improved clutch of greater durability; improvements in many details.

Selling Points—Individually cast cylinders, five-bearing crankshaft, simple and effective lubricating system, governed motor, clean-out plugs on tops of cylinders for removing carbon easily, compact and substantial gearset; 5-ton has forward-tipping

Digitized by Google

seat, a construction which gives access to motor.

Equipment—Three oil lamps, jack and set of tools.

BESSEMER.

Bessemer Motor Truck Co., Grove City, Pa.

Models—Three chassis models; capacity, 1,000, 2,000 and 3,000 pounds, respectively; wheelbases, 102, 120 and 136 inches. Motor in 1,000-pound model, 25 horsepower, block-cast cylinders, 3¾ x 4½ inches bore and stroke, enclosed valves. Motor in both other models has cylinders of 3¾ bore and 5¼ stroke, block-cast. All three models have cone clutches, three-speed selectively controlled gearsets built in units with jackshafts, and side chain final drive. Wheels in all models, 34 inches in diameter front and rear; tires on 1,000-pound, 2-inch front and 2½-inch rear, solid; on 2,000-pound, 3-inch front and 3½-inch rear; on 2,000-pound, 3½-inch front and 4-inch rear.

Prices—Chassis, 1,000-pound, $1,200; 2,000-pound, $1,800. 3,000-pound, $2,700.

Selling Points—Stability of construction and accessibility of all working parts; uniform design throughout the line; standard power and transmission units; spring mounted radiator of honeycomb type.

Equipment—Three oil lamps, horn and set of tools.

BROWN.

Brown Commercial Car Co., Peru, Ind.

Models—One chassis model; capacity, 1,500 pounds. Wheelbase, 122 inches; tread, 56 inches. Motor, L-head, with four block-cast cylinders, 3¾ x 5¼ inches bore and stroke, 25 horsepower. Dry disk clutch, three-speed selectively controlled gearset and final drive by propeller shaft to rear axle and through pinions on axle shafts to internal gears on driving wheels. Tires, 34 x 3½ front and 34 x 4 rear, cushion; pneumatic optional.

Price—Chassis, $1,650.

Selling Points—Internal gear final drive, with jackshaft carried on dead rear axle; triangular torque-rod arrangement, with ball joint at the apex; tubular propeller shaft unit power plant; left steer; radiator mounted on coil springs.

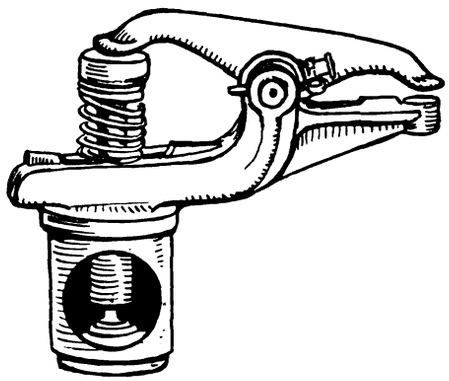
COMMERCE.

Commerce Motor Car Co., Detroit, Mich.

Models—One chassis model, capacity 1,000 pounds. Chassis weight, 1,600 pounds. Wheelbase, 96 inches. Motor, four-cylinder, 20 horsepower, cylinders cast in pairs; three-bearing crankshaft. Friction transmission with one driving and one driven disk; single chain drive from disk shaft to rear axle. Wheels, 32 inches, with 3½-inch pneumatics; option is given of 34 x 2½-inch solids.

Prices—Chassis price, $700.

Changes from Previous Construction—None.



Selling Points—Friction transmission giving any speed desired, no gears and no clutch, simplicity of construction throughout, ample power, high-tension magneto, set spark.

Equipment—Three oil lamps, horn, tools, pump and tire repair outfit.

BUICK.

Buick Motor Co., Flint, Mich.

Models—Two chassis models, one of 1,500 pounds capacity and the other a light parcel wagon. Wheelbase of 1,500 pound model, 92 inches or 110 inches; tread, 56 inches. Chassis weight, 2,200 pounds. Motor, horizontal, two opposed cylinders, placed under body. Cylinders 4½ x 5 inches bore and stroke; 22 horsepower; cone clutch, two-speed planetary gear and side chain final drive. Wheels 32 inches front and rear, with 4-inch tires, either solid or pneumatic. Gasolene capacity, 10 gallons.

BUICK VALVE CAGE

Prices—Short wheelbase, $965; long wheelbase, $980.

Changes from Previous Construction—None in 1,500 pound car. Parcel wagon new throughout.

Selling Points—Simple and compact motor of well tried design and of high power for its size; rugged and substantial construction of the whole machine; planetary transmission well proportioned and accurately built.

Equipment—Three oil lamps, horn, jack, pump, tools, and tire repair outfit.

DART.

Dart Mfg. Co., Waterloo, Iowa.

Models—Three models, of 750 to 1,000 pounds, 1,000 to 1,500 pounds, 2,000 to 3,000 pounds. Wheelbase, 85, 114 and 130 inches, respectively. The motor for the 750 to 1,000 pounds capacity is double opposed, four-cycle type, 4¼ x 5 inches. The motors for the 1,000 and 2,000-pound trucks are both four-cylinder, 4 1/16 x 4½ inches and 4¼ x 5½ inches, respectively. The smallest model truck is 18 horsepower, the 1,000 to 1,500-pound is 30 horsepower, and the 2,000 to 3,000-pound is 40 horsepower. Chain drive entirely on the small model, shaft to jackshaft chains to rear wheels on the two larger models. Solid steel axles on all three trucks; solid tires are equipment on all models.

Prices—750 to 1,000-pound, with open express body, $750; 1,000 to 1,500-pound, with open express body, $990; 2,000 to 3,000-pound, with seat only, body to be built according to order, extra, $1,790.

Selling Points—Left-hand drive, center control, transmission and jackshaft in unit; extra heavy construction throughout, all parts tested with the greatest care, both in the rough and in the assembled states.

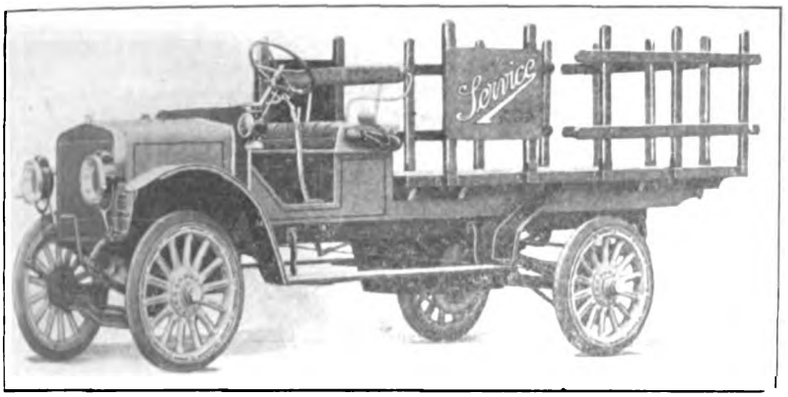
DAYTON.

Dayton Auto Truck Co., Dayton, O.

Models—Three chassis models; capacity, 2, 3 and 5 tons. Wheelbase of 2-ton, 120 inches; of 3-ton, 136 inches, and of 5-ton, 150 inches. Weight of 2-ton chassis, 4,825 pounds; of 3-ton, 6,575 pounds; of 5-ton, 8,650 pounds. Motors in all models have pair-cast cylinders; 2-ton has 35 horsepower, 4¼ x 5 inches bore and stroke; 3-ton has 45 horsepower, 4¾ x 5½ bore and stroke; and 5-ton has 60 horsepower, 5¼ x 7 bore and stroke. Multiple disk clutch, three-speed selectively controlled gearsets and side chain drive, all models. Gasoline capacity, 17 gallons on 5-ton, 16 gallons on both the smaller models.

Prices—Chassis, 2-ton, $2,650; 3-ton, $3,400; 5-ton, $4,500.

Changes from Previous Construction—Round gasolene tanks on all chassis; S. A. E. bands on demountable rims.



Equipment—Three oil lamps, horn and set of tools.

CHASE.

Chase Motor Truck Co., Syracuse, N. Y.

Models—Five chassis models; capacity, 500 pounds, 1,000 pounds, 1, 1½ and 2 tons. Chassis weights, 500-pound, 1,500 pounds; 1,000-pound, 2,300 pounds; 1-ton, 2,700 pounds; 1½-ton, 3,600 pounds; 2-ton, 4,400 pounds. Wheelbases and treads, 500-pound, 84 inches and 58 inches; 1,000-pound, 100 inches and 58 inches; 1-ton, 106 inches and 58 inches; 1½-ton, 112 inches and 62 inches; 2-ton, 120 inches and 62 inches. Motors in all models, two-cycle, air-cooled, individually cast cylinders. Two-cylinder, 12-horsepower motor, with 4⅛-inch bore and 4-inch stroke, in 500-pound model; three-cylinder 20-horsepower motor in 1,000-pound model, 4⅛-inch bore and 4-inch stroke; motor in 1-ton same as in 1,000-pound model; 1½-ton and 2-ton models have three-cylinder 30-horsepower motor, 4½-inch bore and 5-inch stroke. Planetary transmission in the three smaller models and three-speed selective sliding gears in the two larger; final drive by side chains in all models. Wheels in smallest car, 34 inches front and 36 inches rear; in all others, 36 inches front and 38 inches rear. Tires on two smallest cars, 2 inches all round; on 1-ton, 2½ inches front and 3 inches rear; on 1½-ton, 3 inches front and 3½ inches rear; 2-ton, 3½ inches front and 4 inches rear.

Digitized by Google

MODEL M SERVICE STAKE BODY TRUCK LISTING AT $1,750

Prices—With open express bodies, 500-pound wagon, $500; 1,000-pound car, $900; 1-ton, $1,250; 1½-ton, $1,750; 2-ton, $2,200.

Changes from Previous Construction—None.

Selling Points—Simple construction, air-cooled motor without valves or water-cooling apparatus, no lubricating mechanism, as oil is mixed with gasolene.

Equipment—Three oil lamps, horn, and set of tools.

FEDERAL.

Federal Motor Truck Co., Detroit, Mich.

Models—One chassis model made in two wheelbase lengths, 110 inches and 144 inches; capacity 1 ton. Tread, 56 inches. Motor four-cylinder L-head type, with cylinders cast in pairs; 4¼ x 4½ inches bore and stroke, 36 horsepower. Throttle control by accelerator pedal. Leather-faced cone clutch with metal lining, three-speed selectively controlled gearset and final drive by side chains. Wheels 36 inches in diameter front and rear, tires 3½-inch front and 4-inch rear. Gasolene capacity, 21 gallons.

Prices—Chassis, either wheelbase, $1,800.

Changes from Previous Construction—None.

Selling Points—Left-hand drive, high-tension ignition with set spark and foot control of throttle, handling extremely easy to master, enabling green men to be broken in quickly; unit system of construction, with each unit removable without disturbing others.

Equipment—Three oil lamps, horn, oil can, jack, and set of tools.

CLARK.

Clark Delivery Car Co., Chicago, Ill.

Models—One chassis model; capacity, 1 ton. Wheelbase, 100 or 120 inches; tread, 56 inches. Motor, 25 horsepower, four block-cast cylinders, 3¾ x 5 inches bore and stroke. Dry plate multiple disk clutch, three-speed selectively controlled gearset of the individual dog clutch type with gears always in mesh; final drive by shaft and bevel gears. Tires, 36 x 3 front and 36 x 3½ rear.

Price—Chassis, $2,000.

Selling Points—Gears always in mesh and all idle on high speed; option of 120-inch wheelbase, with motor under hood in front or under floor; well braced frame; heavy rear axle and torque rod; sufficient power and strength to haul a trailer.

KELLY.

Kelly-Springfield Motor Truck Co., Springfield, O.

Models—Two chassis models, 1 ton and 3 ton capacity; the 1-ton is made in two wheelbase lengths, 120 inches and 144 inches; wheelbase of 3 ton truck, 144 inches. Motor of 1-ton truck has 4 cylinders, block-cast, of the L-head type; bore and stroke, 3¾ x 5¼, 30 horsepower. Cone clutch, three-speed selectively controlled gearset and side chain final drive. Tires are 36 x 3½ front and 36 x 4 rear. Tread, 56 inches front and 60 inches rear. The 3-ton truck has a four-cylinder motor of the T-head type with pair-cast cylinders, 4½ x 5½ inches bore and stroke, 38 horsepower. Transmission system the same as the 1-ton truck. Tires, 38 x 5 single front and 42 x 5 dual rear.

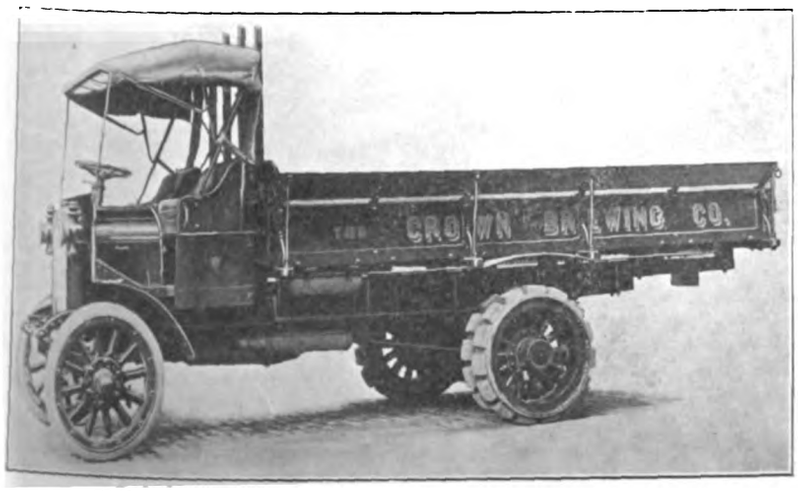
Prices—One-ton chassis, $2,000.

Changes from Previous Construction—Both models new throughout. All motors water-cooled instead of air-cooled.

Equipment—Lamps, horn, jack, and set of tools.

GARFORD.

The Willys-Overland Co., Garford Dept., Toledo, O.



Models—Three chassis models; capacity, 1½, 3 and 5 tons, respectively. Wheelbases, of 1½-ton, 145 inches; of 3- and 5-ton models, 128 inches. Tread of 1½-ton, 56 inches; of 3-ton, 61¾ inches front and 63 inches rear; of 5-ton, 61¾ inches front and 71½ rear. Weights, 1½ ton, with body, 4,322 pounds; of 3-ton chassis, 6,800 pounds; of 5-ton chassis, 7,650 pounds. Motor of 1½-ton truck, four-cylinder, T-head, with cylinders cast in pairs; bore and stroke, 3¾ x 5¼ inches, 36 horsepower. The same motor is used in the 3- and 5-ton trucks; four-cylinder L-head type motors with block-cast cylinders; bore and stroke, 4¼ x 5¼ inches, 28.9 horsepower. All models have cone clutches and selective sliding gears; four speeds in 5-ton truck and three in the smaller models. Shaft drive in 1½-ton and side chain drive in the 3- and 5-ton trucks. Wheels of 1½-ton truck 36 inches in diameter, front and rear; pneumatic tires, 4½-inch single front and 4½-inch dual rear. Wheels of 3-ton truck, 36 inches front and 40 inches rear; tires, solid, 5 inches single front and 4 inches dual rear. Wheels of 5-ton truck, 36 inches front and 40 inches rear. Tires, 6-inch single front and 6-inch dual rear. Gasolene capacity, 23 gallons, all models.

Selling Points—In light truck, pneumatic tires and powerful motor, permitting safe speed of 30 miles an hour; motor in front under hood. In heavier types, motors under driver's seat and footboard, permitting short over-all length in proportion to loading space. Four-speed gearset in 5-ton truck. Large rear wheels, 40 inches, on two larger trucks.

LAMBERT.

Buckeye Mfg. Co., Anderson, Ind.

Models—Three chassis models: 1,500-pound delivery wagon, 1-ton truck and 2-ton truck. Chassis weights, 2,650, 3,500 and

BLAIR WORM-DRIVEN TRUCK WITH OPEN TYPE BODY

Digitized by Google

4,250 pounds, respectively. Wheelbases of two smaller cars, 114 inches and of larger car 120 inches. Additional wheelbase length to order at an additional cost of $25 per foot. Tread 56 inches in all cases. All motors of the same type with L-head cylinders cast en bloc and enclosed valve stems. Motor of smaller car, 20-24 horsepower, bore and stroke 3½ x 4¼ inches; of the two larger cars, 35 horsepower, cylinders 4⅛ x 4½ bore and stroke. Lambert friction drive with two disks and final drive by side chains. Front axle on small car, tubular; on larger cars, I-beam. All rear axles solid steel. Tires on small car, pneumatic, 33 x 4 front and rear. Tires on 1-ton truck, solid, 36 x 3 front and 36 x 3½ rear. Tires on 2-ton truck, solid, 36 x 3½ front and 36 x 4 rear. Gasolene tanks under driver's seat. Capacity in small car, 10 gallons; in larger cars, 12 gallons each.

Prices—Delivery car chassis, $1,125; with stake or express body, $1,200; with enclosed body, $1,375; One-ton truck chassis, $1,700; with stake of express body, $1,800. Two-ton chassis, $2,100; with stake or express body, $2,200.

Selling Points—Friction transmission, giving very wide range of speeds without gears; no clutch; jarless starting and smooth, quiet running. Compact ball-bearing motors. Springs shackled at both ends, giving free action. Driving stresses taken by radius rods. Stiff frame, unusually well braced. Foot brake automatically releases friction disks; engagement of disks automatically releases brake.

Equipment—Lamps, horn and tools.

FLINT.

Durant-Dort Carriage Co., Flint, Mich.

Models—Two chassis models, capacity 1,000 and 1,600 pounds. Wheelbases, 76 inches and 100 inches, respectively. The 1,000 pound model has motor with two horizontal opposed cylinders mounted under floor; the 1,600 pound model has a four-cylinder mounted on a sub-frame in front under a hood. Transmission in the smaller model is by friction gear with final drive by side chains and in the other by three-speed sliding gearset and shaft and bevel gears to live rear axle.

Prices—Of 1,000 pound model, with full panel body, $875.

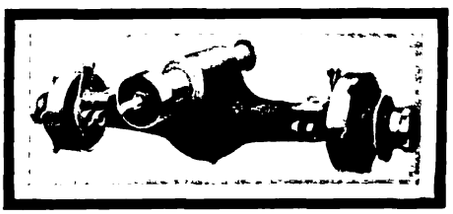
Selling Points—Simplicity in construction and in operation, and economy. In friction driven model, no gears and no clutch and no differential.

Equipment—Three combination oil and electric lamps, horn, jack and tools.

STEWART.

Stewart Motor Corporation, Buffalo, N. Y.

Models—One chassis model; capacity 1,500 pounds. Wheelbase, 126 inches. Motor, four-cylinder, under hood in front, block-cast cylinders, L-head type, 3¼ x 5¼ inches bore and stroke, 30 horsepower. Dry disk clutch with 11 plates, three-speed selectively controlled gearset and final drive by propeller shaft and bevel gears. Wheels 34 inches in diameter front and rear; tires 4-inch front and 4½-inch rear, pneumatic.



Price—Chassis, $1,650.

Selling Points—Extreme accessibility and simplicity; cleanly designed block-cast motor; blades on flywheel make separate fan and its drive unnecessary; radiator behind the motor, where it is protected.

BLAIR.

Blair Mfg. Co., Newark, Ohio.

Models—Three chassis models of 1½, 2½ and 3½ tons capacity, wheelbases of 114 and 121 inches on 1½-ton, 121 to 144 on 2½-ton, and 130 to 144 on 3½-ton models. Chassis weights, 4,200 pounds on 1½-ton, 5,000 on 2½-ton and 6,150 on the 3½-ton model. All motors L-head type, four-cylinder, 35-horsepower on 1½-ton and 40 horsepower on other models. Bore and stroke of 1½-ton motor, 4⅛ x 5¼, and on the others 4½ x 5½. All models worm

BLAIR WORM-DRIVE AXLE

driven by direct shaft. Drop-forged front axle and full-floating type worm drive rear axle on all models. Solid tires single in front and dual in rear.

Prices—1½-ton chassis, $3,000; 2½-ton, $3,250; of 3½-ton, $3,750.

Selling Points—Accessibility, demountable unit construction, silent worm drive, three-point suspension of sub-frame carrying entire power plant and insuring absolute alignment under all conditions; short wheelbase, with full length loading space, without sacrificing accessibility due to arrangement of seats; pressed steel heat-treated frames, absolute interchangeability of all parts.

Equipment—Two oil dash lamps, oil tail lamp, horn and set of tools.

IDEAL.

Ideal Auto Co., Ft. Wayne, Ind.

Models—Five chassis models, one of 1,500 pounds capacity, two of 1 ton capacity, one of 1½ tons and one of 2 tons. Wheelbases and treads: On 1,500-pound, 100 and 56 inches; on 1-ton, Model H, 115 and 58 inches; on 1-ton, Model H-2, 124 and 58 inches, and the same on the 3½-ton truck. Chassis weights: 1,500-pound car, 2,700 pounds; 1-ton, Model H, 3,000 pounds; 1-ton, Model H-2, 3,500 pounds; 1½-ton, 4,000 pounds. Motor in 1,500-pound, four cylinders, pair-cast, 3½ x 4½ inches bore and stroke, 25 horsepower; in 1-ton, model H, the same motor; in 1-ton, model H-2, block-cast motor, with 3¾ x 5½ inches bore and stroke, 30 horsepower, or, at extra cost, 4⅛ x 5¼ motor of 42 horsepower; in 1½- and 2-ton, same motor as special for 1-ton. Three-speed gearsets and side chain final drive in all models. Tires on 1,500-pound, 36 x 3 front and 36 x 3½ rear; on both 1-ton models, 36 x 3½ front and 36 x 4 rear; on 1½-ton, 36 x 4 front and 36 x 5 rear; and on 2-ton, 36 x 5 single front and 36 x 3½ dual rear.

Prices—Chassis, 1,500-pound, $1,500; 1-ton, model H, $1,750; 1-ton, model H-2, $2,000; 1½-ton, $2,250.

Selling Points—Accessibility, correct distribution of weight, short wheelbase in comparison to loading space, special radiator suspension, automatic differential lock.

Equipment—Three oil lamps, horn, jack, and set of tools.

HUPMOBILE.

Hupp Motor Car Co., Detroit, Mich.

Models—One chassis model, capacity 800 pounds; wheelbase 106 inches; four-cylinder motor, L-head type, bore and stroke 3¼ x 5½ inches, 32 horsepower; multiple disk clutch, three-speed selectively controlled gearset and shaft drive. Front tires 32 x 3½ and rear tires 33 x 4, pneumatic.

Prices—With delivery body, $950.

Changes from Previous Construction—Minor improvements in body lines, black and nickel trimmings and Hupmobile Royal black painting.

Selling Points—Unit power plant, long-stroke motor with block-cast cylinders and all working parts enclosed, pressure feed lubrication, high-tension magneto, full-floating rear axle, shock absorbers in rear, Q. D. rims, complete equipment, low-hung body which, however, has 9½ inches road clearance; center control with both doors available for use.

Equipment—Two-piece windshield, acetylene tank, gas headlights, oil side and tail lights, tools and horn.

LOCOMOBILE.

Locomobile Co. of America, Bridgeport, Conn.

Models—One chassis model, capacity 5 tons; wheelbase, 140 inches; tread, 65 inches front, 70 inches rear; motor, four-cylinder, cylinders cast in pairs, T-head type, 5 x 6 inches bore and stroke; 45 horsepower. Multiple dry disk clutch, four-speed selectively controlled gearset and side chain final drive. Wheels, cast steel or wood, optional. Tires, 40 x 6 inches single in front, 40 x 6 dual in rear.

Prices—Chassis, $4,800.

Changes from Previous Construction—Minor details only.

Selling Points—Extremely substantial construction throughout and powerful, heavy, long-stroke motor; four-speed gearset, chains enclosed in cases that permit lengthening of distance between sprocket centers, differential lock for use on slippery

Digitized by Google

road surfaces, driving stresses taken by cast steel channel section radius members, frame of chrome nickel steel throughout, automatically governed motor, motor bearings accessible from beneath by removing pan, crankcase and gearcase of bronze, gears accessible without disturbing load on truck.

Equipment—Two side lamps, one tail lamp, horn, hub odometer and tool kit complete, including tool bag and spare parts.

PACKARD.

Packard Motor Car Co., Detroit, Mich.

Models—Three chassis models of 2, 3 and 5 ton capacity; wheelbases, 2-ton, 10 feet standard chassis, 12 feet long chassis; 3-ton, 10½ feet short chassis, 12 feet standard chassis, 14 feet long chassis, 16 feet extra long chassis; 5-ton, one chassis, 14 feet. All motors are of the T-head type, four cylinders; 2-ton, 26 horsepower, bore 4 1/16 inches, stroke 5⅛ inches; 3-ton, 32 horsepower, bore 4½ inches, stroke 5½ inches; 5-ton, 40-horsepower, bore 5 inches, stroke 5½ inches. Drop-forged steel front and rear axles on all models. Drive on all models by jackshaft and sprockets through chains to rear wheels. Solid tires on all models, rear tires dual. Gasolene capacity, 2-ton, 18 gallons; 3-ton, 21 gallons; 5-ton, 30 gallons.

Prices—Two-ton, $2,800; 3-ton, $3,400; 5-ton $4,500, for chassis only.

Selling Points—Highly developed motor with control of governor; high-grade materials throughout the truck; choice of wheelbases; Packard service.

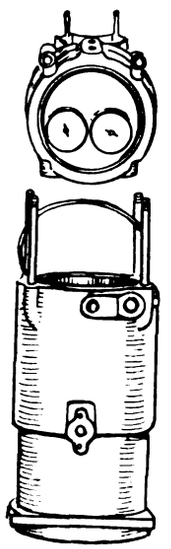
Equipment—Two oil dash lamps, oil tail lamp, horn, jack, and complete set of tools.

PEERLESS.

Peerless Motor Car Co., Cleveland, O.

Models—Three chassis models; capacity 3, 4 and 5 tons. Chassis weights, 3-ton, 6,-[illegible] pounds; 4-ton, 6,855 pounds; 5-ton, 7,-[illegible] pounds. Wheelbases are alike in all [illegible]—151 or 174 inches. Treads, 3-ton, [illegible] inches front and 69½ inches rear; 4-ton, [illegible] inches front and 71½ inches rear; 5-ton, [illegible] inches front and 73½ inches rear. The [illegible] motor is used in all models; A. L. A. M. rating, 32.4 horsepower; 4½ x 6½ inches bore and stroke; cylinders cast in pairs, T-head type. Cone clutches, four-speed selectively controlled gearsets and side chain final drive, all models. Wheels on 3 and 4-ton trucks, 36 inches front and 40 inches rear; on 5-ton model, 38 inches front and 42 inches rear. Tires, 3-ton, 4 inches single front and 4-inch dual rear; 4-ton, 5-inch single front and 5-inch dual rear; 5-ton, 6-inch single front and 6-inch dual rear. Gasolene capacity, all models, 25 gallons.

Prices—Chassis prices, 3-ton, $3,700; 4-ton, $4,000, 5-ton, $4,500.



Selling Points—Four-speed gearsets, with lowest gear giving great power for emergency work; long-stroke governed motor; gears hard, yet tough, steel in sprockets; 80 per cent of load on rear wheels, ensuring traction; interchangeable bushings in all wearing points.

Changes from Previous Construction—None.

KNOX.

Knox Automobile Co., Springfield, Mass.

Models—Seven chassis models, three of 2 tons capacity and one each of 3, 4, 5 and 6 tons capacity. Two-ton models differ chiefly in wheelbases and treads; with 145-inch wheelbase, the tread is 60 inches front and 64 inches rear; with 103-inch wheelbase the tread is 69 inches front and rear, and with 127-inch wheelbase the tread is 59 inches front and 63 inches rear. All other models have 149-inch wheelbase. Treads in

KNOX CYLINDER

the 3-ton and 4-ton are 67 inches front and 68¼ inches rear; 5-ton, 67 front and 73 rear; and in the 6-ton, 70¼ front and 73½ rear. Tires on the 2-ton, 145-inch wheelbase, 34 x 4 single front and 34 x 4 dual rear; 2-ton, 103-inch wheelbase, 34 x 5 single front and 34 x 4 dual rear; 127-inch wheelbase, 36 x 5 single front and 36 x 4 dual rear. Tires on 3-ton, 36 x 5 single front and 36 x 5 dual rear; 4-ton, 36 x 4 single front and 36 x 6 dual rear; 5-ton, 36 x 6 single front and 40 x 6 dual rear; 6-ton, 36 x 7 single front and 42 x 7 dual rear. Two-ton chassis weights: 145-inch wheelbase, 4,800 pounds; 103-inch wheelbase, 4,600 pounds; 127-inch wheelbase, 5,400 pounds; 3-ton, 6,500 pounds; 4-ton, 7,000 pounds; 5-ton, 8,000 pounds; 6-ton, 8,800 pounds. Motors in 2-, 3-, 4- and 5-ton trucks, 45 horsepower; in 6-ton, 50 horsepower. All motors have individually cast cylinders with valves in heads; heads are removable. The 45-horsepower motor has bore and stroke of 5 x 5½ inches; 50-horsepower motor has bore and stroke of 5½ x 5½ inches. Unit power plants in all models; three-speed gearsets, selectively controlled; three-plate dry disk clutches; final drive by side chains.

Prices — Two-ton, 145-inch wheelbase, $3,000; 103-inch wheelbase, $3,200; 127-inch wheelbase, $3,500; 3-ton chassis, $3,-700; 4-ton, $4,000; 5-ton, $4,500; 6-ton, $5,-000. Knox Martin tractor, with 40-horsepower motor, $2,750; with 50-horsepower motor, $3,250.

Changes from Previous Construction—Spiral gears in place of spur gears on main driving set of gearset; long-stroke motors in 2-, 3-, 4- and 5-ton models, all metal universal joints instead of leather-covered; three-bladed instead of two-bladed fans; heavier jackshafts, larger rear tires on 3-, 4- and 5-ton models.

Selling Points—Motors with individually cast cylinders and removable heads, giving easy access for cleaning carbon; valves in head, giving maximum power; heavy gearsets, spring mounted radiators. In the tractor, adaptability to all kinds of bodies, short turning radius and easy control; compact construction.

SPEEDWELL.

Speedwell Motor Car Co., Dayton, O.

Models—Three chassis models, of 2 tons, 4 tons and 6 tons capacity, respectively; wheelbase, 115 inches, 115 inches with option of 139 inches, and 139 inches, respectively; chassis weights, 4,900 pounds, 6,600 pounds and 7,200 pounds, respectively; all motors of L-head type, four-cylinder, water cooled; 2-ton truck motor cylinders are block-cast with enclosed valves; bore, 4⅛ inches; stroke, 5¼ inches; 35 horsepower, with governor; 4- and 6-ton motor cylinders cast in pairs, 5 x 5, 40 horsepower, with governor. Final drive by side chains to rear wheels. Eiseman magneto, automatic spark advance on all models; front axle and rectangular dead rear axle on all models; tire sizes, 36 x 4 inches solid in front, 36 x 3½ inches solid dual, with option of 36 x 6 solid single in rear on two-ton truck; 36 x 5 inches solid front, 36 x 5 solid dual rear on 4-ton truck; 36 x 6 inches solid front and 36 x 6 inches solid dual rear on 6-ton truck; gasolene capacity, 20 gallons on all models.

Prices—Chassis, 2-ton, $2,850; four ton, $3,750; 6-ton, $4,400, which includes a three-passenger driver's seat with top over seat.

Changes from Previous Construction—Diagonal cross members at rear end of frame added for strength; wood bumper continuous with front of frame; new style jackshaft bracket with separate anchorage for radius rods where formerly radius rods were anchored to the jackshaft; gasolene tank now at rear of seat cage; new type hot air carburetter on all models; addition of a governor on all models; brakes on ends of jackshaft on the 2-ton model, where it was formerly a single emergency brake on the differential; all former motor suspension was rigid, motor with transmission is now mounted on a sub-frame with double coil springs forward, which pivots at the rear.

Selling Points—Motor under seat, which permits shorter wheelbase without loss of

Digitized by Google

loading space and allows shorter turning radius; swinging seat cage, which allows easy access to motor; flexible power plant suspension; short wheelbase obviates long shafts in the drive line, doing away with vibration and twisting strains; auxiliary spring over the rear axle, coming into play only when truck is loaded nearly to its full capacity.

Equipment — Three-passenger driver's seat with tufted, pleasure-car-type cushions; three-bow folding top, storm front and side curtains, side and tail oil lamps, horn and complete set of tools, jack and oil can in large tool box.

MOGUL.

Mogul Motor Truck Co., Inc., Chicago.

Models—Four chassis models; one of 2 tons, one of 4 tons and two of 6 tons capacity each. Wheelbases: 2-ton, 118 inches; 4-ton, 142 inches; 6-ton short, 154 inches, and 6-ton long, 188 inches. Chassis weights: 2-ton, 4,700 pounds; 4-ton, 8,600 pounds; 6-ton short, 10,000 pounds, and 6-ton long, 11,000 pounds. Tread of 2-ton, 56 inches; of all other models, 62½ inches. Motor in 2-ton, 33 horsepower, L-head type, cylinders cast in single block; bore and stroke, 4⅛ x 5¼ inches. Motor in 4-ton, 60 horsepower, L-head type, cylinders cast in pairs; bore and stroke, 5 x 5¾ inches. Motor in both 6-ton models, 60 horsepower, L-head type, cylinders cast in pairs; bore and stroke, 5¼ x 5¾ inches. Clutches on all models, single dry disk type. Gearsets in 4-ton and in both 6-ton models, three-speed, progressive type; in 2-ton, three-speed, selectively controlled. Final drive by side chains in all models. Tires on 2-ton, 36 x 3½ single front and 36 x 5 dual rear; on 4-ton, 36 x 6 single front and 36 x 5 dual rear; on both 6-ton models, 36 x 6 single front and 40 x 6 dual rear. Gasolene capacity, in 2-ton, 19 gallons; all others, 25 gallons.

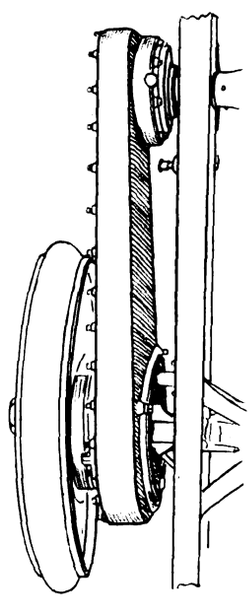
Prices—Chassis, 2-ton, $2,800; of 4-ton, $3,800; of 6-ton, short wheelbase, $4,400; and of 6-ton, long wheelbase, $4,700.

Selling Points — No freakishness—only standard engineering practice in construction; very large brakes, heavy tires, motor under seat and floor, giving short over-all length in proportion to wheelbase.

M'INTYRE.

W. H. McIntyre Co., Auburn, Ind.

Models—Five chassis models; capacity, 1,000 pounds (two types), 1,500 pounds, 1½, 3 and 5 tons. Wheelbases and treads, 1½-ton, 120 or 144 inches and 56 inches; 3-ton, 144 or 168 inches and 62 inches; 5-ton, 144 or 168 inches and 70 inches. Chassis weights, 3,600, 5,000 and 6,200 pounds, respectively, for 1½-, 3- and 5-ton trucks. One of the 1,000-pound models has a two-cylinder motor and the other a four-cylinder motor. Motor of 1½-ton and 3-ton, L-head type, block-cast cylinders, 4⅛ x 5¼ inches, bore and stroke. Motor of 5-ton, L-head type, pair-cast cylinders, 4½ x 5½ inches, bore and stroke. Dry disk clutches, three-speed selectively controlled gearsets and side chain final drive in the three larger models. Tires 1½-ton, 34 x 3½ single front and 36 x 3 dual rear; 3-ton, 36 x 4 single front and 36 x 4 dual rear; 5-ton, 36 x 5 single front and 36 x 5 dual rear.



Prices—Chassis, 1,000-pound, two-cylinder, $600; 1,000-pound, four-cylinder, $800; 1½-ton, $1,500; 3-ton, $3,200; 5-ton, $4,250.

Equipment—Lamps, horn, tools and steel tool box.

NATCO.

National Motor Truck Co., Bay City, Mich.

Models—One chassis model, capacity 1 ton. Chassis weight, 2,700 pounds. Wheelbase 104 inches. Cylinders of the L-head type, block-cast; bore and stroke 3½ x 5

NATCO CHAIN CASE

inches, 20 horsepower. Three-speed selective gearset and final drive through side chains. Solid rubber Q. D. tires, 36 x 3½ inches, front and rear. Motor under footboard. Gasolene capacity, 15 gallons.

Prices—Chassis, $1,925.

Changes from Previous Construction—S. A. E. steel equipment adapted.

Selling Points—Compact and simple long-stroke motor accessibly located, roller and annual ball bearings at important points, neat and substantial cases with removable doors, left drive and center control, driver's seat accessible from both sides and only 37 inches from ground, short wheelbase, equal distribution of weight and moderate overhang, encased chains.

Equipment—Windshield, side and tail lights, horn, jack, and tools.

KOEHLER.

H. J. Koehler S. G. Co., New York.

Models—One chassis model; capacity 1,600 pounds. Weight, 2,000 pounds. Wheelbase, 86 inches; tread, 58 inches. Motor is two-cylinder opposed, horizontal, placed under body with cylinders crosswise; horsepower, 22 to 24; bore, 5¼ inches; stroke, 4 inches. Planetary transmission with side chain final drive. Wheels, 36-inch front and 38-inch rear, with 2-inch tires. Gasolene capacity, 16 gallons.

Prices—With open body, $750.

Changes from Previous Construction—None.

Selling Points—Simplicity, good construction, good materials, reasonable price.

SMITH-MILWAUKEE.

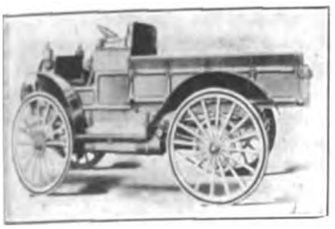
A. O. Smith Co., Milwaukee, Wis.

Models—Two chassis models; capacity, 3½ tons and 6 tons. Wheelbase and tread same in both, 168 inches and 68 inches. Both motors of the T-head type with pair-cast cylinders; in the smaller truck 50 horsepower, 5 x 5¾ inches bore and stroke; in the larger, 60 horsepower, 5¼ x 5¾ inches bore and stroke. Both motors governed. Three-plate dry disk clutches, three-speed selectively controlled gearsets, with herringbone gears and final drive by worm in both models. Individual clutch system of rear control. Tires, 3½-ton truck, 36 x 5 single front and 36 x 5 dual rear; 6-ton truck, 36 x 6 single front and 40 x 6 dual rear. Gasolene capacity, 26 gallons, both models.

Selling Points—Worm drive to full-floating rear axles, motors under governor control, herringbone gears, always in mesh and idle on high speed; cast steel wheels, substantial, hard-service construction throughout.

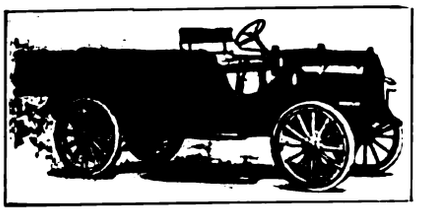
Equipment—Storage battery, electric head and tail lights, exhaust horn, and tools.

KISSEL.



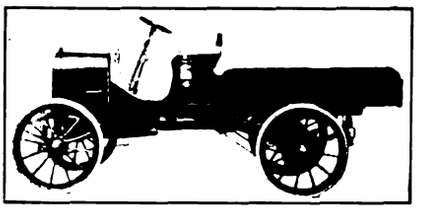
Kissel Motor Car Co., Hartford, Wis.

Models—Six chassis models of 1,500 pounds, 1, 2, 3, 4 and 5 tons capacity, respectively; wheelbases, 120, 132, 140, 144 and 156 inches, respectively, the wheelbases of the 4 and 5 ton trucks being the same. Chassis weights, 2,500, 3,000, 4,500, 5,300, 5,700 and 6,000 pounds, respectively. All motors of the L-head type, four-cylinder; 30 horsepower on 1,500 pound car, 40 horsepower on 1 and 2 ton trucks and 50 horsepower on the three larger. Bore and stroke of 30 horsepower, 4¼ x 4¼; of 40 horsepower, 4½ x 5¼; and of 50 horsepower, 4⅞ x 5. Shaft drive on two smaller models; chain drive on all others. Forged steel front axles on all models; rear axles full floating in shaft driven models and solid steel in chain models. Solid tires on all models; rear tires dual on chain driven models. Gasolene capacity, 20 gallons in three smaller models and 25 gallons in three larger.



Prices—1,500 pound, $1,500; 1 ton, $2,000; 2 ton, $2,750; 3 ton, $3,350; 4 ton, $3,650; 5 ton, $4,350, all without bodies. With standard stake bodies, $125 extra on two smaller models and $150 extra on all others.

Changes from previous construction—



Digitized by Google

I. H. C.

SANFORD

SULLIVAN

Heavier differential and gearset in 3 ton model, jack or auxiliary spring on 4 and 5 ton models. S. A. E. bands on demountable rims. Larger cooling fans and larger motor bearings all around.

Selling Points—Four-speed gearset on all but smallest model, permitting reasonable speed without racing engine when running light. Differential lock on four larger trucks, permitting the locking of driving wheels to assist in getting out of holes, etc.; operated from driver's seat. Vanadium steel in all vital parts. Heavy, substantial framing and construction throughout, with ample margins of safety. Particular attention is given to service facilities, branches having specially equipped service buildings.

Equipment—Two oil dash lamps, oil tail lamp, tool rack and complete set of tools.

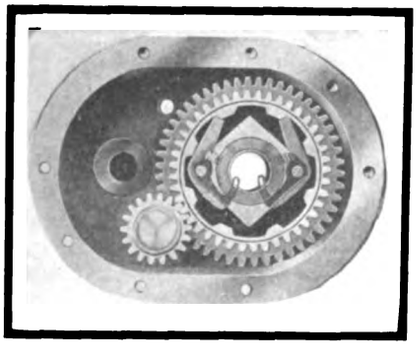
SERVICE.

Service Motor Car Co., Wabash, Ind.

Models—Three chassis models: 1,500 pounds, 1 ton and 1½ tons capacity. Wheelbase of two smaller models, 115 inches; wheelbase of larger model, 130 inches. All motors four-cylinder, block cast L-head types of the same design, differing in dimensions. The two smaller models 30-horsepower motors with bore and stroke 3½ x 5½ inches; the larger model 40-horsepower, bore and stroke 4 x 5½ inches. No clutch; transmission through enclosed balanced friction disk system, steel disks with shafts on ball bearings. Final drive by side chains on 1,500-pound car, 36 inches diameter with 3-inch solid clincher tires; on 1-ton model, 34 inches front and rear with 3-inch front and 3½-inch rear solid tires; wheels on 1½-ton model, 34 inches front and rear with 3½-inch front and rear solid tires. Gasolene capacity, models, 23 gallons.

Prices—Chassis, 1,500 pounds capacity, $; 1 ton capacity, $1,475; 1½ tons capacity, $.

Changes from Previous Construction—Radiators suspended on springs, roller and imported ball bearings throughout, hand forged rear axle in 1½-ton truck, nickel and black trimmings on all cars.



Selling Points—Double balanced friction drive, no clutch, no gears and any speed desired. No differential No malleable iron castings; high grade material throughout.

Equipment—Two large acetylene headlights, bull's-eye side lamps, tail lamp, gas generator, tools, jack, extra chain links and oil can on all models.

I. H. C.

International Harvester Co. of America, Inc., Chicago.

Models—Two chassis models, each of

I. H. C. GEARSET

1,000 pounds capacity, differing only in motor cooling system and in cylinder bore and wheel diameters. Both motors have two horizontal opposed cylinders and both rated at 20 horsepower. Air-cooled motor, 5 x 5 inches bore and stroke; water-cooled motor, 4½ x 5 inches bore and stroke. Engine under body. Wheelbase 90 inches. Frame, wood re-enforced, with angle iron sub-frame. Two-speed gearset with individual dog clutches and internal ratchets; single chain drive from gearset to countershaft and side chains to rear wheels. Wheels 38 inches front and rear, with 2-inch side wire tires, or 38 inches front and 42 inches rear with 1¾-inch side wire tires. Gasolene capacity in both models, 10 gallons.

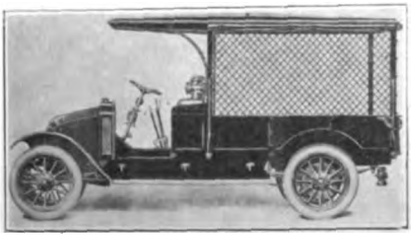
Changes from Previous Construction—Minor details only.

Selling Points—Simple single lever control, double ignition system, motor simple, durable and accessible. Service branches at 101 branch houses in the United States and Canada.

Equipment—Two gas headlights and gas generator, three oil lamps, horn and tools.

POPE-HARTFORD.

The Pope Mfg. Co., Hartford, Conn.



Models—Two chassis models of 3 and 5 tons capacity. Wheelbases of 3-ton truck, 138½ inches on standard 12 or 14-foot chassis, 160 inches on 16-foot chassis; wheelbases of standard 14 or optional 12-foot chassis, 140 inches; special 16-foot chassis with wheelbase of 160 inches. All motors Pope-Hartford long-stroke 50-horsepower, mounted on a sub-frame at forward end of chassis, where it is readily accessible for inspection and adjustment. Drive by side chains. Front axle solid forging I-beam type of extra heavy construction; rear axles solid forging, rectangular section of especially heavy construction. Tires solid single tread front, dual tread rear. Gasolene capacity, 20 gallons.

Prices—Chassis, 3-ton, $3,350 to $3,475, according to wheelbase; 5-ton, $4,350 to $4,475, according to wheelbase.

Changes from Previous Construction—Five-ton truck an entirely new model, built on same general principle as 3-ton truck. Motors increased from 40 horsepower to 50 horsepower; four-speed selective sliding transmission instead of three-speeds; larger front tires; two heavy duty auxiliary coil springs over rear axle in place of cross spring, to provide for overload; wheelbases increased by a foot or more and additional lengths provided; front axle dropped to permit lower engine position; brake sur-

BROWN

STEWART

BROWN

Digitized by Google

faces increased; gasolene tank increased in size.

Selling Points—Ease of operation and control, left side drive, right hand control, short turning radius, accessibility of motor and all other parts, oversize wheels and tires, powerful, long-stroke engine, low gasolene and oil consumption, powerful brakes, large loading space compared to length of truck, large fuel, oil and water supply.

Equipment—Top, storm curtains, horn, oil side and tail lights, hub odometer, tool box and full set of tools.

STERNBERG.

Sternberg Mfg. Co., Milwaukee, Wis.

Models—Four chassis models, of 2, 3, 4 and 5 tons capacity. The two smaller trucks are equipped with a four-cylinder L-head motor with cylinders cast in pairs, having a bore of 4¼ inches and a stroke of 6¾ inches. The 2-ton has a wheelbase of 116 inches or longer for special bodies, and has 34 x 4-inch tires on front wheels and 36 x 5-inch single or 36 x 3½-inch duals in rear. The 3-ton is equipped with 36 x 4-inch tires in front and 40 x 4-inch duals in rear, and has a wheelbase of 130 inches. The 4- and 5-ton trucks have a motor of four cylinders, cast in pairs, L-head, with a bore of 4½ inches and a stroke of 6¾ inches. The 4-ton has a wheelbase of 144 inches and 36 x 5-inch tires in front and 40 x 5-inch duals in rear. The 5-ton also has a 144-inch wheelbase, but 36 x 6-inch tires in front and 42 x 6-inch duals in rear.

Prices—Chassis, 2-ton, $2,800; 3-ton, $3,400; 4-ton, $4,000, and 5-ton, $4,500.

Selling Points—Motor, clutch and transmission, together with jackshaft, all carried in a sub-frame of channel steel which, in turn, is suspended in the chassis at three points, preventing disalignment due to warping of the frame in passing over obstructions.

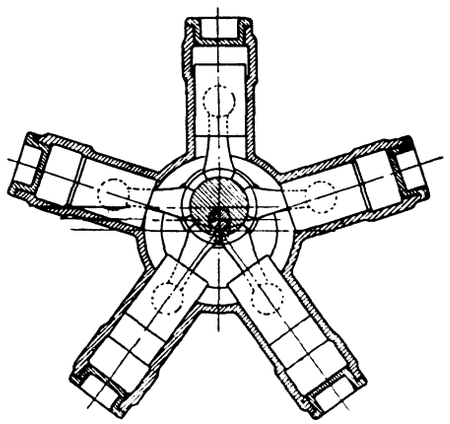
Equipment—Seat and cushions, 8-inch electric head lights and tail light, storage battery, Klaxonet horn, hub odometer, and tools.

MODERN.

Bowling Green Motor Car Co., Bowling Green, O.

Models—Three chassis models; capacity, 1,000 pounds, 1,500 pounds and 1½ tons. Wheelbases: 1,000-pound, 112 or 120 inches; 1,500-pound, 120 or 136 inches; 1½-ton, 136 inches. Motor in 1,000-pound, 25 horsepower, four block-cast cylinders, bore and stroke, 3¾ x 4½; in 1,500-pound, block-cast cylinders, 3¾ x 5¼ bore and stroke. 35 horsepower. Motor in 1½-ton, same as 1,500-pound. All have motors under hoods in front. All models have cone clutches, three-speed selectively controlled gearsets and final drive by side chains. The 1,000-pound model is also with shaft drive. Tires, 1,000-pound, 33 x 3½ front and rear; 1,500-pound model, 36 x 3 front and 36 x 3½ rear; 1½-ton, 36 x 3½ front and 36 x 4 rear.

Prices—Chassis, 1,000-pound, chain drive, $1,225; shaft drive, $1,325; 1,500-pound, $1,625; 1½-ton, $1,850.



Changes from Previous Contsruction—Radius rods free to give to strains tending to bend them instead of being rigid; improved ignition system; all gears ⅛ inch wider face; full-floating jackshaft; working parts formerly open now are all enclosed.

Equipment—Three oil lamps, horn, jack, and set of tools.

LA FRANCE.

Hydraulic Truck Sales Co., New York.

Models—One chassis model; capacity, 5 tons. Wheelbase, 143 inches; tread, forward wheels, 66 inches; rear wheels, 68 inches. Chassis weight, 8,000 pounds. Motor, 48 horsepower, bore and stroke 5½ x 6 inches; cylinders cast in pairs. Transmission, Manly hydraulic, any speed, single lever control. Final drive by side chains from jackshaft. Tires, block type, 36 x 5 inches front and 38 x 9 inches rear. Gasolene tank capacity, 22 gallons.

MANLY PUMP

Selling Points—Hydraulic transmission, giving any speed between minimum and maximum with greatest power at lowest speed; single lever control of all speeds, with simple forward and backward movement; no gears to shift; transmission acts as a brake; extremely substantial construction of the truck throughout.

MAIS.

Mais Motor Truck Co., Indianapolis, Ind.

Models—Four chassis models of 1½-, 2, 2½- and 3-ton capacity, respectively. Wheelbases of 119, 132, 145 and 160 inches. Wheelbase of the 1½-ton optional, either 119 inches or 132 inches. Wheelbase of 2-ton optional, either 132 or 145 inches. Chassis weights, 5,100, 5,200, 5,300, 5,400, 5,500 and 5,600 pounds, respectively, according to their various wheelbases. All motors of the T-head type, four-cylinder, 40 horsepower, bire and stroke 4 x 5¼ inches. Unit power plant. Final drive through internal gears in rear wheels.

Prices—1½-ton, 119-inch wheelbase, $2,750; 1½-ton, 132-inch wheelbase, $2,800; 2-ton, 132-inch wheelbase, $2,950; 2-ton, 145-inch wheelbase, $3,000; 2½-ton, 145-inch wheelbase, $3,200; 3-ton, 160-inch wheelbase, $3,400.

Changes from Previous Construction—I-beam axle in place of tubular on 2-ton and 3-ton trucks; centrifugal water pump in place of the gear pump; pressed steel frame on the 2-, 2½- and 3-ton models, heavier motor and transmission support for torque tubes, heavier differential on 2½-ton and 3-ton models, increased size of spindles on the 2-, 2½- and 3-ton models; governor on transmission setting the speed at from 12 to 15 miles per hour, 5-inch dual tires on the 3-ton truck and a few minor changes necessitated by the use of the pressed steel frames.

Equipment—Two oil lamps, one oil tail lamp, jack, and complete set of tools and spare parts and pressed steel tool box.

LAUTH-JUERGENS.

Lauth-Juergens Motor Car Co., Fremont, O.

Models—Three chassis models; capacity 1, 2 and 3 tons. Wheelbase of 1-ton, 105 inches; of both larger models, 120 inches. Tread, 56, 58 and 62 inches, respectively. Chassis weights, 1-ton, 2,800 pounds; 2-ton, 5,200 pounds; 3-ton, 5,700 pounds. Motors of all models of the L-head type with separately cast cylinders. Motor in 1-ton has 4 x 4 inches bore and stroke; in 2-ton, 4½ x 5 inches bore and stroke; and in 3-ton, 4¾ x 5 inches bore and stroke. Power transmission in all three cars through three-plate disk clutches, four-speed selectively controlled gearsets and side chains to rear wheels. Tires on 1-ton, 36 x 3½ front and 36 x 4 rear; on 2-ton, 36 x 4 front and 36 x 5 rear; on 3-ton, 38 x 5 single front and 38 x 4 dual rear.

Prices—Chassis, 1-ton, $1,950; 2-ton, $2,700; 3-ton, $3,300.

Selling Points—Special gearset and jackshaft built in the factory; four forward speeds, giving low speed for heavy pulling in emergencies; extremely substantial construction throughout; cab over driver's seat.

Equipment—Lamps, horn, speedometer, jack and tools.

WALTER.

Walter Motor Truck Co., New York.

Models—Six chassis models; capacity 1½, 2, two of 3, 3½ and 5 tons. The 1½, 2, and both 3-ton models have motors of 30-35 horsepower, 4 x 5 bore and stroke. One of the 3-ton models has the motor under a hood and the other has the motor under the seat. Motors in 3½ and 5-ton models, 35-40 horsepower, 4½ x 6 inches bore and stroke. All models have side chain final drive; the two larger have special gearsets of the individual clutch type with friction clutches, three forward speeds. In other models, three-speed selectively controlled gearsets

Digitized by Google

and expanding cone clutches. Wheelbases, 1½-ton, 120 to 144 inches; 2-ton, 132 to 156 inches; 3-ton, with motor under hood, 136 to 180 inches; 3-ton, with motor under seat, 132 to 166 inches; 3½-ton and 5-ton, 156 to 180 inches. Tires, 1½-ton, 36 x 4 front and 36 x 5 rear; 2-ton, 36 x 5 front and 36 x 3½ dual rear; 3-ton models, 36 x 5 front and 38 x 5 dual rear; 3½-ton, 36 x 5 single front and 42 x 5 dual rear; 5-ton, 38 x 6 single front and 42 x 6 dual rear.

Prices—Chassis, 1½-ton, $2,800; 2-ton, $3000, 3-ton, both models, $3,400; 3½-ton $3,700; 5-ton, $4,500.

Changes from Previous Construction—Left drive and center control; service brake placed on differential and extra large emergency brakes on rear hubs; rear springs semi-elliptic and underslung; these flanges apply to the 3½-, 5- and 6-ton models.

Selling Points—Large wheels and tires on all models; Westinghouse continuous clutch type gearset on larger models, giving perfectly smooth action; gears always in mesh; great strength for weight in all models.

Equipment—Three oil lamps, horn, and set of tools.

KREBS.

Krebs Commercial Car Co., Clyde, O.

Models—Two chassis models, which differ [illegible] only in the matter of final

KREBS DELIVERY WAGON

[illegible] capacity, 1,500 pounds; wheelbase, [illegible] inches. Motor is 2-cylinder 2-cycle vertical under hood in front; 18 horsepower, [illegible] x 5 inches bore and stroke. Cone clutch [illegible] selectively controlled gearset, drive by propeller shaft in one [illegible] by side chains in the other. [illegible] 34 inches in diameter in both models, 3 inches front and in rear in [illegible] car and 4 inches front and [illegible] driven model.

Prices—Chassis, either style of drive, $1,-[illegible]

Selling Points—Simple motor, two-cycle, [illegible] extension magneto and thermo-siphon cooling system; light weight chassis, [illegible] final drive, governed motor.

Equipment—Three oil lamps, jack, horn and set of tools.

SAURER.

International Motor Truck Co., New York.

Models—Two chassis models, 4½ tons and 6 tons capacity. Wheelbase, 153 inches and 159 inches, respectively; tread, 67 inches in both models. Chassis weights, 4½-ton, 5,700 pounds; 6½-ton, 6,900 pounds. The same motor used in both models; 37 horsepower, cylinders 4⅜ x 5½ bore and stroke, T-head type, cylinders cast in pairs. Cone clutch, three-speed selective gearsets and side chain final drive, both models. Wheels, 36 inches front and 42 inches rear; single tires front and dual rear.

Changes from Previous Construction—None.

Selling Points—Light weight in proportion to carrying capacity, great strength owing to scientific distribution of high-grade material, special method of using motor for powerful air-brake, double-jet carburetter of great economy.

REO.

Reo Motor Truck Co., Lansing, Mich.

Models—Two chassis models; capacity, 1,500 pounds and 2 tons. Wheelbases 90

REO TWO-TON TRUCK

inches and 130 inches, respectively. Motor of light car, single cylinder horizontal, placed under the body; bore, 4¼ inches; stroke, 6 inches; horsepower, 10 to 12. Multiple disk clutch, planetary gearset and side chain final drive. Motor of 2-ton truck, four-cylinder cast in pairs, valves in heads; bore, 4 inches; stroke, 4½ inches. Dry multiple disk clutch, selectively controlled three-speed gearset and final drive by side chains. Tires on light car, 2-inch front and 2½-inch rear. Tires on 2-ton truck, 36 x 4 single front and 36 x 3 dual rear, solids.

Prices—1,600-pound model with open body, $760; 2-ton truck, chassis only, $1,-800.

Selling Points—The simplest possible type of four-cycle motor in the light truck; moderate price; reliability. Two-ton, up-to-date construction throughout; heavy tire equipment, governed motor, accessibility of all parts.

Equipment—Light model, three oil lamps, horn and set of tools. Two-ton, gas headlights, gas tank, oil side and tail lights, horn, and set of tools.

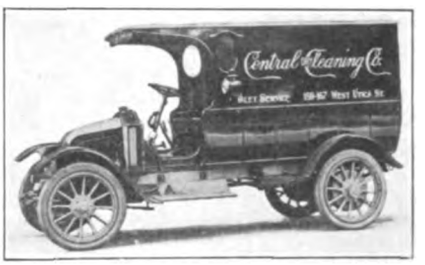
SELDEN.

Selden Motor Vehicle Co., Rochester, N. Y.

Models—One chassis model; capacity 1 ton. Chassis weight, 2,000 pounds. Wheelbase, 125 inches; tread, 56 inches front and 60 inches rear. Four-cylinder motor under hood in front; block-cast cylinders, 3¾ x 5¼ inches bore and stroke; unit power plant; dry disk clutch, three-speed selectively controlled gearset and side chain final drive. Wheels, 36 inches with 3½-inch front and 4-inch rear tires, solid. Gasolene capacity, 23 gallons.

Price—Chassis, $2,000

Selling Points—Long stroke motor under control of governor, weight well over rear wheels, giving traction; unit power plant; magneto runs at crankshaft speed; low hung frame, easy springs, and comfortable upholstery.



Equipment—Three oil lamps, jack, horn, and set of tools.

LIPPARD-STEWART.

Lippard-Stewart Motor Car Co., Buffalo, N. Y.

Models—One chassis model, capacity 1,-500 pounds; wheelbase 115 inches or 125 inches, optional. Tread 56 inches. Four-cylinder block-cast motor of the L-head type, 30 horsepower; cylinders, 3¾ x 5¼ inches bore and stroke. Leather-faced cone clutch, three-speed selectively controlled gearset and shaft drive. Pneumatic tires, 35 x 4½ front and rear. Gasolene capacity, 14 gallons.

Prices—Price, with express, stake or open box body, $1,650.

LIPPARD-STEWART TRUCK

Changes from Previous Construction—Motor 30 horsepower instead of 22; cone clutch instead of multiple disk; clutch unit separated from gearcase; longer rear springs, front springs semi-elliptic instead of full-elliptic; heavier frame and steering gear, pneumatic tires 35 x 4½ instead of 34 x 4. Gasolene capacity 14 gallons instead of 10.

Selling Points—Extreme accessibility of motor due to back-tilting hood and removable front member of frame radiator back of motor in protected position, left drive, center control and fixed ignition point, easy riding and minimum vibration due to the use of large pneumatic tires, fan-blades on flywheel rim, making separate fan and its driving means unnecessary; auxiliary rear springs backing up main springs when car is loaded; unusually good finish, with nickel trimmings.

Equipment—Three oil lamps, horn, tool kit, tire pump and repair outfit. Special equipment is furnished with specially constructed bodies.

Digitized by Google

DIAMOND T.

Diamond T Motor Car Co., Chicago, Ill.

Models—Three chassis models; capacity, 1½, 3 and 5 tons. Motor of 1½-ton, 30 horsepower; 3-ton, 4½ x 5½ inches bore and stroke; 5-ton, 5 x 5½ inches bore and stroke. Transmission elements in 1-ton, multiple disk clutch, three-speed selectively controlled gearset and final drive by worm. In the two larger models the same type of clutch and gearset, but final drive is by side chains. Tires, 1½-ton, 26 x 4 front and 36 x 5 rear; in 3-ton, 36 x 5 single front and 36 x 5 dual rear; in 5-ton, 36 x 6 single front and 36 x 6 dual rear.

Prices—Chassis: 1½-ton, $2,250; 3-ton, $3,250; 5-ton, $3,500.

Selling Points—Special truck type motors of ample power; worm drive in smallest model, with English imported worm; heavy tire equipment.

Equipment—Three oil lamps, horn, jack and set of tools.

UNITED STATES.

United States Motor Truck Co., Cincinnati, O.

Models—Two chassis models, 2 tons and 3 tons capacity. Two-ton truck has motor with bore and stroke of 4⅛ x 5¼ inches, block-cast cylinders, motor speed under control of automatic governor. Three-ton truck has motor with cylinders of 4½ x 5½ inches bore and stroke, cylinders cast in pairs; automatic speed governor. Change-speed gearset of the sliding clutch type, in both models, with gears always in mesh; selective control. Final drive by side chains. Demountable solid base tires on all models, S. A. E. rims, single on front wheels and dual on rear.

Prices—Chassis, with seat, painted, two-ton, $2,800; three-ton, $3,500.

Changes from Previous Construction—Former 1½-ton model discontinued and replaced by the new 2-ton model. All lamps hung on spring brackets.

Selling Points—Engine on sub-frame with three-point suspension, two of the points being on coil springs. Three-point support for gearcase, with 5-inch ball-and-socket joints. Special protection against distortion throughout chassis. Radiator on springs. Specially effective brake equalizers.

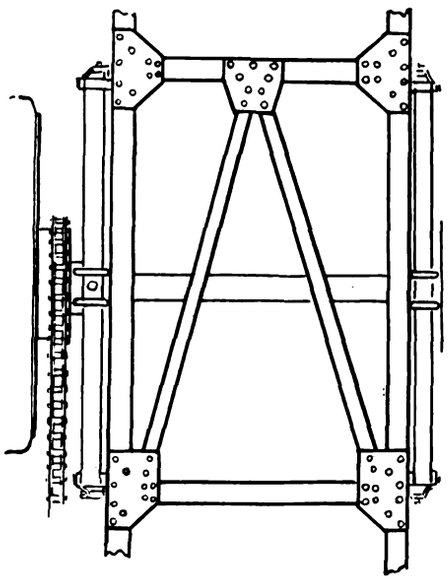
SANFORD.

Sanford Motor Truck Co., Syracuse, N. Y.

Models—One chassis model, capacity 1 ton; weight with body, 3,100 pounds. Wheelbase, 106 inches; tread, 56 inches. Motor of the unit power plant type on three-point suspension. Cylinders of the L-head type, cast in pairs; bore and stroke, 4 x 4½ inches. Clutch, 16-disk, dry type, enclosed with flywheel in casing that connects motor and gearcase. Gearset, three-speed selective; final drive by side chains. Wheels, wood artillery, special square-spoke type. Tires, solid, 36 x 3½ front and rear. Right-hand steer and control. Gasolene capacity, 14 gallons.

Prices—Chassis, $1,600 with stake or flare-side body, $1,750.

Changes from Previous Construction—Wheel spokes made square instead of oval.



Selling Points—Well balanced construction and consequent even distribution of weight on tires, prolonging tire life. Chains, sprockets and roller bearings extra large throughout; the chains are of the size generally used for 1½- and 2-ton trucks. Large loading space and short wheelbase; the truck is easy to handle in traffic, rides well and runs quietly.

Equipment—Two side lamps, tail light and complete set of tools.

VELIE.

Velie Motor Vehicle Co., Moline, Ill.

Models—Four chassis models; capacity, 1,500 pounds, 1 ton, 2 tons and 3 tons.

VELIE REINFORCED FRAME

Wheelbases, 1,500-pound, 115 inches, 2-ton and 3-ton, either 148 or 172 inches. Motor in 1,500-pound, 40 horsepower, four cylinders, 4½ x 5¼ inches bore and stroke; in 2- and 3-ton, 4½ x 5½ inches bore and stroke; cylinders cast in pairs. Disk clutches and selectively controlled three-speed gearsets in all models; shaft drive in 1,500-pound and side chains in 2- and 3-ton models. Tires on smallest model, 34 x 4 pneumatic front and rear; on 2-ton, 36 x 5 single front and 36 x 3½ dual rear, pneumatic or cushion; on 3-ton, 35 x 5 single front and 40 x 5 dual rear, solids. Gasolene capacity of 2- and 3-ton, 15 gallons.

Prices—1,500-pound with open body, $1,600; 2-ton chassis, $2,800; 3-ton chassis, $3,350.

Changes from Previous Construction—None.

Selling Points—Concentration of weight on rear wheels, outside spring suspension which lowers frame, unusually heavy framing throughout, spring supported cradle for radiator; pedal operated differential lock; short turning radius.

Equipment—Lamps, horn and tools.

SAMPSON.

United States Motor Co., New York.

Models—Four chassis models; capacity, 1,000 pounds, 1½ tons, 3 and 5 tons; chassis weights, 2,000, 4,200, 5,700 and 8,500 pounds respectively. Wheelbases, 1,000-pound, 94 inches; 1½-ton, 110 inches; 3-ton, 140 inches; 5-ton, 155 inches. Treads, 56, 58 and 66 inches, respectively, for the three smaller sizes; on the 5-ton, 68 inches front and 72 inches rear. Motor in 1,000-pound, two-cylinder horizontal, opposed type, 18 horsepower, 4¾ inches bore and stroke; in 1½-ton, 25 horsepower, 4 cylinders cast in pairs, 4 x 5 inches bore and stroke; in 3-ton, 33 horsepower, cylinders cast in pairs, 4½ x 5½ inches bore and stroke; in 5-ton, 40 horsepower, cylinders cast in pairs, 5 x 5½ inches bore and stroke. Power transmission on 1,000-pound, dry disk clutch, three-speed selective gearset and shaft drive; on 1½-ton, disk clutch running in oil, three-speed selective gearset and side chains; on 3-ton, disk clutch running in oil, three-speed selective gearset and side chains; on 5-ton, cone clutch with cork inserts, four-speed selective gearset and side chain drive. All side chains in metal casings. Tires on smallest model, 34 x 4 inch, pneumatic, front and rear; on 1½-ton, 32 x 4 front and 34 x 5 rear solids on 3-ton, 34 x 4 single front and 36 x 4 dual rear; on 5-ton, 36 x 6 single front and 36 x 6 dual rear. Gasolene capacity of 1,000-pound, 15 gallons; of two next larger, 19 gallons; on 5-ton, 30 gallons.

Prices—Chassis, 1,000-pound, $1,400; 1½-ton, $2,200; 3-ton, $3,400; 5-ton, $4,700.

Changes from Previous Construction—None.

Selling Points—Encased side chains, differential locks, gear-shifting interlock, unusual strength and accessibility of all parts, motor and radiator on heavy spiral springs, gearset and differential units on three-point suspension, very large bearings throughout.

MERCURY.

Mercury Mfg. Co., Chicago.

Models—One chassis model; capacity, 1,000 pounds. Motor, two horizontal opposed cylinders, 14 horsepower, 4¼ inches bore and 4 inches stroke. Planetary change-speed gear in unit with motor; single lever control. Final drive by side chains. Front wheels, 38 inches and rear wheels 40 inches in diameter; solid tires. Gasolene capacity, 6 gallons.

Prices—With open express body, $750.

Changes from Previous Construction—Roller instead of ball bearings for wheels.

Selling Points—Interchangeability of all parts, guaranteed low tire cost, simplicity of car throughout, high-grade alloy steels employed.

Equipment—Two oil dash lamps, tail lamp, set of tools.

Digitized by Google

WHITE.

The White Co., Cleveland, O.

Models—Four chassis models; capacity, 1,500 pounds, 1½ tons, 3 tons and 5 tons, respectively. Wheelbases, 120, 144, 144 and 162 inches, respectively. Tread, 56 inches in two smaller models; in 3-ton truck, 65¾ inches front and 61½ inches rear, measuring to centers of inside tires; in 5-ton truck, 69¼ inches front and 61¾ inches rear, measuring to centers of inside tires. All motors of the same construction, with block-cast cylinders of the L-head type. The same motor is used in the three smaller models; bore and stroke, 3¾ x 5⅛ inches. Motor of 5-ton truck 4¼ x 5¾ inches, bore and stroke. Four-speed gearsets in all models; shaft drive in two smaller machines and side-chain drive on two larger. Wheels of 1,500 pound model, 34 inches, with 4½-inch pneumatic tires front and rear, of 1½-ton model, 36 inches front and rear with pneumatic tires, 4½-inch single front and 4½-inch dual rear; of the 3-ton model, 36 inches front with 5-inch solid tires and 40-inch rear with 4-inch dual tires; and of 5-ton model, 36 inches front with 5-inch single tires and 40 inches rear with 6-inch dual tires. Gasolene capacity of 1,500-pound model, 14½ gallons; of 1½-ton, 3-ton and 5-ton, 18 gallons.

Prices—Chassis, 1,500 pound model, $2,-500; 1½-ton model, $3,000; 3-ton model, $3,-750; of 5-ton model, $4,500.

Selling Points—Steel wheels on two larger models; pneumatic tires on two smaller models. Four-speed gearsets on all models. Compact and clean motors with block-cast cylinders; valve mechanism is completely enclosed.

Equipment—Smallest model, acetylene headlights and gas tank or generator, oil side and tail lamps, horn, jack and tools. Other models, seat and cushion, side and tail oil lamps, horn, jack, full tool equipment.

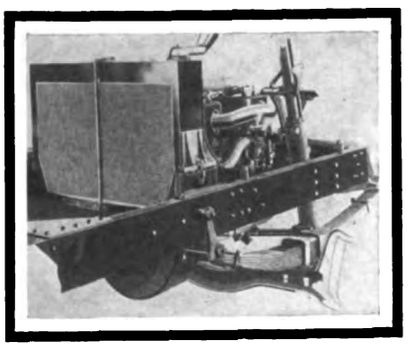
STANDARD.

Standard Motor Truck Co., Detroit, Mich.

Models—One chassis model: capacity 3 tons; chassis weight, 6,100 pounds. Wheelbase, standard, 144 inches; longer and shorter lengths to order. Motor, 40 horsepower, L-head type, bore and stroke 4½ x 5½ inches, unit power plant. Multiple dry disk clutch, three-speed selective gearset, final drive through side chains. Wheels 36 inches in diameter all round with single 5-inch tires front and double 5-inch tires rear. Tread of rear wheels, 71⅛ inches; of front wheels, 65 inches.

Prices—Chassis, $2,750.

Changes from Previous Construction—None.



Selling Points — Standard parts used throughout. No radical features. Governed motor, located under seat. Choice of three wheelbase lengths besides standard (at extra cost). Unit power plant. Center control

Equipment—Oil side and tail lamps, horn, tools, tool box, jack and oil can.

UNIVERSAL.

Universal Motor Truck Co., Detroit, Mich.

Models—Three chassis models; capacity 1, 2 and 3 tons. Wheelbases, 1-ton, 124 inches; 2-ton, 120 or 132 inches, optional; 3-ton, 132 or 150 inches, optional. Motor, 1-ton, cylinders of the L-head type, cast in a single block, 3¾ x 5 inches bore and stroke, 30 horsepower. The 2-ton and 3-ton trucks have the same 36-horsepower motor with T-head cylinders cast in pairs, 4 x 5½ inches bore and stroke, and also the same dry disk clutch, three-speed selectively controlled gearset and side chain final drive. The 1-ton truck has a single plate dry disk clutch, three-speed selective gearset and worm drive, to full-floating rear axle. Wheels, 1-ton truck, 34 inches diameter with 3½-inch tires front and 5-inch rear. Wheels on 2-ton, 36 inches in diameter with 4-inch single tires front and 3-inch duals rear. Wheels of 3-ton, 36 inches in diameter, with 5-inch single tires front and 4-inch duals rear. Gasolene capacity, all models, 22 gallons.

UNIVERSAL RADIATOR MOUNTING

Prices—Two-ton chassis, either wheelbase length, $2,750; 3-ton chassis, either wheelbase length, $3,400.

Selling Points—In two larger models, radiator is placed back of engine, where it is protected; motor is easy of access. Motors under control of automatic governors built into the crankcase and inaccessible to drivers; in all models, compact, clean-designed motors hung on three-point suspensions; silent worm drive on 1-ton model, eliminating chains and chain noises.

Equipment—Three oil lamps, horn, jack, and set of tools.

G M C

General Motors Truck Co., Pontiac, Mich.

Models—Three chassis models, capacity 1¼, 2 and 3½ tons. Wheelbases, 126, 142 and 138 inches, respectively; chassis weights, 4,070, 5,050 and 6,500 pounds, respectively. Motor in 1¼-ton, four cylinders, block-cast, T-head type, 4 x 6 inches bore and stroke. Motor in 2-ton, four cylinders, block-cast, valves in heads, 3½ x 5¼ inches bore and stroke. Motor in 3½-ton, four cylinders cast in pairs, L-head type, 5 x 5 inches bore and stroke. Three-speed gearsets and side chain final drive in all models. Tires on 1¼-ton, 34 x 3 inches front and 36 x 4 rear; on 2-ton, 34 x 4 single front and 36 x 3½ dual rear; on 3½-ton, 36 x 5 single front and 36 x 4 dual rear.

Prices—Chassis, 1¼-ton, $2,075; 2-ton, $2,750; 3½-ton, $3,700.

Equipment—Three oil lamps, horn, jack, and set of tools.

HEWITT.

Hewitt Motor Co., New York.

Models—Ten chassis models; capacity, in tons, 1, 1½, 2, 2½, 3½, 4½, 5½ long and short, 7, and 10. Wheelbase and tread of 1- and 1½-ton, 106 inches and 60 inches; 2-ton, 112 inches and 60 inches; 2½-ton, 136 inches and 60 inches; 3½-ton, 128 inches and 68 inches; 4½- and 5½-ton, 138 or 140 inches and 68 inches; 7-ton, 138 inches and 68 inches, and 10-ton, 138 to 164 inches and 68 inches. Motor in 1- and 1½-ton, four-cylinder, 17 horsepower, 3¼ x 4¾ bore and stroke; in 2- and 2½-ton, horizontal, two opposed cylinders, 24 horsepower, 5½-inch bore and 5-inch stroke; in 3½, 4½, 5½, 7 and 10-ton, four-cylinder, 40 horsepower; bore and stroke, 4¼ x 6. Three-speed selective gearsets and cone clutches in 1, 1½, 3½, 4½-ton and longer wheelbase in 5½-ton models. Two-speed planetary in 2 and 2½, short wheelbase in 5½, 7 and 10-ton. Final drive by side chains in all models. Wheels and tires, 1-ton, 36 x 3½ front and 36 x 4 rear; 1½-ton, 36 x 4 front and 36 x 4½ rear; 2-ton, 34 x 4 front and 34 x 3½ rear, latter dual blocks; 2½-ton, 34 x 5 front and 34 x 4 dual blocks rear; 3½-ton, 34 x 3½ front and 40 x 4 dual rear, all block type; 4½-ton, 34 x 4 front and 40 x 5 rear, all dual blocks; 5½-ton, longer wheelbase, 34 x 5 front and 40 x 6 rear, all dual blocks; 5½-ton, shorter wheelbase, 36 x 4 front and 36 x 6 rear, all dual blocks; 7-ton, 36 x 5 front and 36 x 7 rear, all dual blocks; and 10-ton, 36 x 5 front and 44 x 7 rear, all dual blocks.

Prices—1-ton chassis, $1,800; 1½-ton, $2,-100; 2-ton, $2,500; 2½-ton, $2,700; 3½-ton, $3,500; 4½-ton, $4,000; 5½-ton, either wheelbase, $4,500; 7-ton, $5,000; 10-ton, $5,-500.

Changes from Previous Construction—None.

Selling Points—Wide range of models, including 10-ton capacity; extremely strong construction; heavy duty planetary transmissions, powerful and unusually efficient and economical motors.

Equipment—Three oil lamps, horn and tools.

PIERCE-ARROW.

Pierce-Arrow Motor Car Co., Buffalo, N. Y.

Models—One chassis model; capacity 5 tons. Wheelbase 156 inches, tread 69 inches.

Digitized by Google

Motor, 38 horsepower, A. L. A. M. rating, four pair-cast cylinders of 4⅞ x 6 inches bore and stroke. Cone clutch, three-speed selectively controlled gearset and worm drive to rear axle. Tires, 36 x 5 single front and 40 x 6 dual rear. Gasolene capacity, 25 gallons.

Price—Chassis, $4,500.

Changes from Previous Contsruction—Only in minor details.

Selling Points—Worm drive, flexible frame with power plant and gearbox mounted on three-point support, load balanced over rear wheels, with front wheel load practically constant, making easy and uniform steering; noiseless running, exceptionally good material employed.

Equipment—Three oil lamps, horn, jack, and set of tools.

GRAMM-BERNSTEIN.

Gramm-Bernstein Co., Lima, O.

Models—Two chassis models; capacity 2 tons and 3½ tons. Wheelbase of 2-ton truck, 128 inches; tread, 64 inches front and 67½ inches rear. Wheelbase of 3½-ton truck, 140 inches; tread, 67 inches front and 69½ inches rear. Chassis weights, 5,300 pounds and 7,000 pounds, respectively. The same motor is installed in both models. Cylinders of L-head type are cast in pairs; bore and stroke, 4½ x 5½ inches; fitted with governor which holds the speed down to a maximum of 1,000 revolutions per minute. Multiple dry disk clutch and three-speed individual dog-clutch gearset. Final drive by roller side chains. Transmission system the same in both cars except for dimensions. Wheels in both models 36 inches front and rear. Tires on 2-ton truck, 4 inches single front and 3½ inches dual rear; on 3½-ton truck, 5 inches single front and 5 inches dual rear. Gasolene capacity in both models, 20 gallons; tanks hung at rear of chassis.

Prices—Two-ton chassis, $2,600; 3½-ton chassis, $3,400.

Changes from Previous Construction—Both entirely new models.

Selling Points—Long-stroke governed motor, individual clutch gearset with roller and ball bearings throughout; gears always in mesh. Motor mounted on spring-supported sub-frame; motor starter, eliminating cranking.

Equipment—Gray & Davis electric starting and lighting system, electric lamp with extension cord, electric horn, set of tools, and jack.

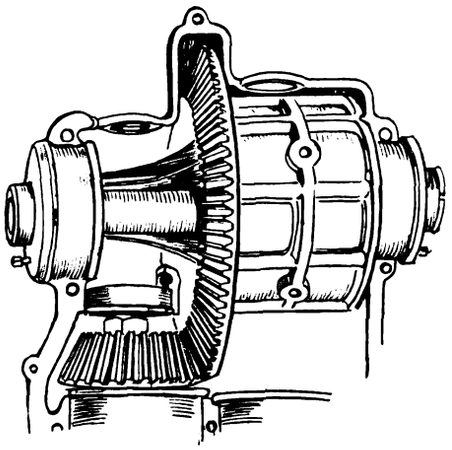
TRANSIT.

Transit Motor Truck Co., Louisville, Ky.

Models—Four chassis models of 1, 2, 3½ and 5 tons capacity. Wheelbase of 1 ton chassis, 110 inches; all other models, 144 inches. Chassis weights, 1 ton, 3,700 pounds; and 5-ton, 6,200 pounds. All motors of the L-head type, four cylinders. One-ton and 2-ton trucks have 30 horsepower motor with bore and stroke of 3¾ x 5¼ inches; 3½-ton truck has 45 horsepower motor with bore and stroke of 4½ x 5 inches, and 5-ton truck has 55 horsepower motor with bore and stroke of 4¾ x 5½ inches. Final drive by side chains in all models.

Prices—One-ton chassis, $1,850; 2-ton chassis, $2,850; 3½-ton chassis, $3,500; 5-ton chassis, $4,500.

Changes from Previous Construction—Auxiliary springs on all models, S. A. E. bands on demountable rims, and larger rear wheels on the 5-ton truck.



Selling Points—Three-point radiator, sub-frame and jackshaft suspension, supplementary springs front and rear, sealed governors on all motors, enclosed steel cab for the driver.

Equipment—Three oil lamps, horn, jack and set of tools.

MACK.

International Motor Co., New York.

Models—Seven chassis models; capacity, 1, 1½, 2, 2½, 3½, 5 and 7 tons. Three

MACK RIBBED BEVEL GEAR

smaller sizes built with wheelbases optional, ranging from 126 to 162 inches. Motor in three smaller trucks, four cylinders, pair-cast, 4½ x 5½ inches bore and stroke. Mack gearset in all models; selective control, gears always in mesh. Final drive by side chains.

Selling Points—Unusually wide range of sizes and capacities, providing trucks for all classes of service; heavy and extremely substantial gearset; very strong construction throughout.

Equipment—Three oil lamps, horn, jack, and full set of tools, spare valves, springs, spark plugs, bolts and nuts, etc.

ADAMS.

The Adams Bros. Co., Findlay, O.

Models—Two chassis models; 1 ton and 1½ tons capacity. Wheelbase, 121 or 136 inches, optional, the same in both models. Tread, 56 inches. The same 30-horsepower motor is used in both models, which are alike except in strength and weight of load-carrying parts. Cylinders of the L-head type, block-cast; bore and stroke, 3⅞ x 5 inches. Clutch, dry disk. Three-speed selective gearset and side chain final drive. Left steer and center control. Wheels on 1-ton truck, 36 inches front and rear; tires, 3½-inch front and rear. Wheels on 1½-ton model, 36 inches front and rear; tires, 3½-inch single front and 3-inch dual rear. Gasolene capacity, 15 gallons, both models.

Prices—One-ton chassis, either wheelbase length, $2,100; 1½-ton chassis, either wheelbase length, $2,300.

Changes from Previous Construction—Practically none.

Selling Points—Accessibility of motor due to radiator being placed behind; hood, of Renault type, opens backward; radiator protected and engine kept clean; left steer and center control; clutch will start the car gradually, even if let in suddenly. Magneto and water pump at front of motor driven by cross shaft; combined oil filler and gauge at front.

Equipment—Three oil lamps, set of tools, jack and horn.

PATHFINDER.

Motor Car Mfg. Co., Indianapolis, Ind.

Models—One chassis model; capacity, 1,500 pounds. Wheelbase, 120 inches; tread, 56 inches. Motor placed under hood in front; 40 horsepower; four block-cast cylinders, L-head type; 4⅛ x 5¼ inches bore and stroke. Motor, clutch and gearset combined in unit plant. Cone clutch, three-speed selectively controlled gearset and shaft drive. Wheels, 34 inches front and rear, with 4-inch pneumatic tires.

Price—With panel body, $2,000.

Selling Points—Advantages of pleasure car construction combined with the sturdiness required to carry a load of 1,500 pounds at good speed. Very attractive finish.

OLD RELIABLE.

Old Reliable Motor Truck Co., Chicago, Ill.

Models—Three chassis models; capacity, 2, 4 and 5 tons, respectively; wheelbase of 4- and 5-ton, 126 inches; tread, 66 inches. Motor in 2-ton, T-head type, bore and stroke 4¼ x 5 inches; on the two other models, T-head type, cylinders cast in pairs, bore and stroke, 4¾ x 5½ inches, 45 horsepower. Motors located under footboards. Multiple disk clutches, selectively controlled three-speed gearsets and side chain final drive in all models. Tires of 5-ton truck, 36 x 6-inch single front and 36 x 6 dual rear. Gasolene capacity of 4- and 5-ton, 30 gallons.

Prices—Chassis, 2-ton, $2,750; 4-ton, $4,000; 5-ton, $4,500.

Selling Points—Substantial construction along standard lines; moderate over-all length in proportion to wheelbase; cab for driver; powerful long-stroke motors.

SULLIVAN.

Sullivan Motor Car Co., Rochester, N. Y.

Models—Two chassis models; capacity, 1,000 pounds and 1,500 pounds, respectively.

Digitized by Google

wheelbase of smaller car, 93 inches; the larger model is built in four wheelbase lengths—93, 105, 111 and 117 inches. Motor is horizontal, with two opposed cylinders, placed under hood in front with cylinders across; bore and stroke each 4½ inches; horsepower 18. The same motor is used in both models, as well as the same cone clutch two-speed planetary gear shaft drive to jackshaft, and side chain final drive. Wheels in both models, 36 inches in diameter with 2½ 3-inch solid tires in front and 3 inches rear.

Prices—1,000-pound chassis, $925; 1,500-pound chassis, with 93-inch or 105-inch wheelbase, $925; 1,500-pound chassis with 111-inch or 117-inch wheelbase, $950.

Changes from Previous Construction—Heavier axles, large Raymond brakes on jackshaft, double universal joint between motor and jackshaft instead of single joint, transmission bolted to jackshaft, larger tires on rear wheels.

Selling Points—Simplicity of construction and accessibility of all parts, ample power for loads carried, choice of various wheelbase lengths; builders have been in the carriage business for 30 years and furnish bodies of all kinds.

Equipment—Three oil lamps, horn and tools.

SCHACHT.

Schacht Motor Car Co., Cincinnati, O.

Models—Six chassis models, 1,500 pounds, 1,800 pounds, 1, 2, 3 and 4 tons capacity. Wheelbases, 1,500-pound, 120 inches; 1,800-pound and 1-ton, 138 inches; 2-ton, 132 inches; 3-ton and 4-ton, 144 inches. The same motor is used in all models. Horsepower, 45 to 50; bore and stroke, 4¼ x 5½ inches; block-cast cylinders. The two smaller models are shaft driven, the 1-ton truck worm driven and the 2, 3 and 4-ton trucks and driven by side chains and jackshaft.

Prices—1,500-pound, with delivery body, $1,600; 1,800-pound, with delivery body, $2,000; 1-ton chassis, $2,300; 2-ton chassis, $2,800; 3-ton chassis, $3,100; 4-ton chassis, $3,300.

Changes from Previous Construction—Larger and more powerful motor; three-bearing instead of 2-bearing crankshaft; cellular radiators and left-hand steer. The worm drive 1-ton truck is a new model.

LITTLE GIANT.

Chicago Pneumatic Tool Co. Chicago, Ill.

Models—One chassis model; capacity 1 ton; weight, 2,100 pounds; wheelbase, 91 inches. Motor, two-cylinder horizontal, opposed cylinders, 18-20 horsepower; bore, 5 inches; stroke, 4 inches. Multiple disk clutch, planetary gearset and final drive by side chains. Wood wheels, with 2-inch tires front and 2½-inch rear, solids. Gasolene capacity, 8½ gallons.

Prices—With open flare body, $1,100.

Selling Points—Simple and powerful motor, adaptability to various bodies and classes of service, efficient lubricating system, with piston pump for circulating oil.

Electric Commercial Vehicles

ATLANTIC.

Atlantic Vehicle Co., New York.

Models—Four chassis models; capacity, 1, 2, 3½ and 5 tons, respectively. Wheelbases, 103, 115½, 135 and 144 inches, respectively. Chassis weights with regular battery equipment, 4,400, 5,700, 7,700 and 9,200 pounds, respectively. Single motor drive in all models; transmission, motor to countershaft by silent chain, encased, and jackshaft to rear wheels by roller chains. Standard battery equipment, 1 ton, 44 cells, 13 plates; 2-ton, 44 cells, 17 plates; 3½-ton, 44 cells, 21 plates; 5-ton, 44 cells, 25 plates. Exide batteries regular equipment; other batteries to order. Wheels and tires: 1-ton, 34 x 4 front and 36 x 4 rear; 2-ton, 34 x 4 front and 36 x 3 dual rear; 3½-ton, 36 x 5 front and 40 x 4 dual rear; 5-ton, 36 x 6 front and 40 x 5 dual rear.

Prices—Chassis with battery, 1-ton, $2,-[illegible]; 2-ton, $3,000; 3½-ton, $3,500; 5-ton, $4,0[illegible]

Selling Points—40-inch rear wheels on [illegible] models; irreversible, very easy working steering gear on all models; maximum [illegible] on rear wheels; exceptionally [illegible] springing.

Equipment—Ampere-hour meter, side and [illegible] lamps, electric bell and set of tools.

FOUR-WHEEL DRIVE.

Four-Wheel Drive Auto Co., Clintonville, Wis.

Models—Two chassis models; capacity, 2 and 3 tons. Wheelbase, 1½-ton, 124 inches, 3-ton, 125 inches; tread 56 inches on both. Motor in smaller model, 29 horsepower, T-head type, cylinders 4¼ x 5 inches. In 3-ton, 36 horsepower, T-head type, cylinders 4¼ x 5½. Governors on both motors. Drive from motor through multiple disk clutch to three-speed gearset of the individual jaw clutch type, with gears always in mesh; silent chain to longitudinal shaft which drives both front and rear axles through bevel gears; differential inside chain case on longitudinal shaft and also on both live axles. Tires on 1½-ton, 36 x 4 inches front and rear; on 3-ton, 36 x 5 inches front and rear.

Prices—Chassis, 1½-ton, $3,600; 3-ton, $4,000.

Selling Points—Drive through all four wheels, giving maximum traction; weight equally distributed and all weight available for traction; gears always in mesh; full-floating axles front and rear; two separate sets of brakes for each pair of wheels; braking effort equally distributed over all four wheels.

Equipment—Three oil lamps, jack, horn, and set of tools.

STUDEBAKER.

Studebaker Corporation, Detroit, Mich.

Models—Six standard electric models with four different power plant equipments for each; one gasolene light delivery car on 20-horsepower pleasure chassis. Electric cars not rated according to ordinary capacity ratings, but the line includes vehicles capable of carrying from 500 pounds to 5 tons. Single motor drive with gear first reduction and final drive through side chains in all models. Tires on the various models are as follows Model 25 (smallest), 36 x 2½ front and 42 x 2½ rear; model 26, 36 x 3 front and 42 x 3 rear; model 27, 36 x 4 front and 42 x 4 dual rear; model 28, 36 x 5 single front and 42 x 3½ dual rear; model 23, 36 x 6 single front and 42 x 4 dual rear; model 24, 36 x 7 single front and 42 x 4 dual rear. Wheelbases, 74, 92, 111, 113, 113 and 112 inches, respectively.

Changes from Previous Construction—None.

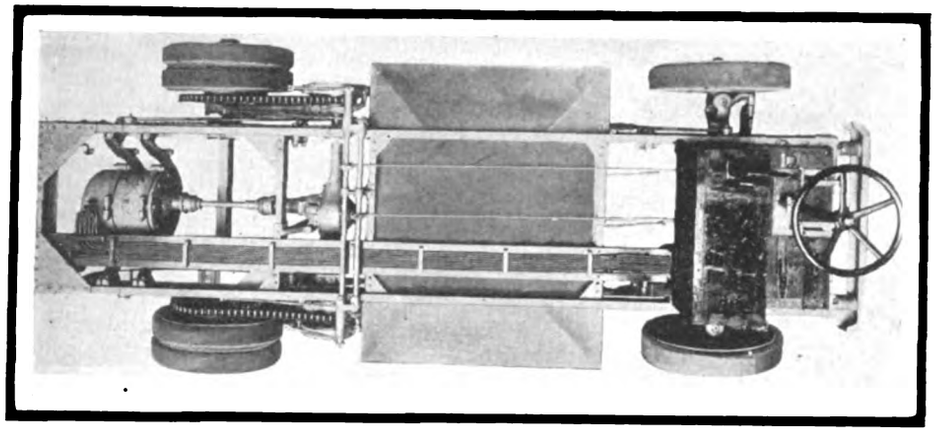
Selling Points—The line is sufficiently comprehensive to give any carrying capacity within the limits; any desired speed or mileage can be had by varying the battery equipment, for which special provision is made; all parts made in the Studebaker factory; simplicity is a special feature; large wheels in all models.

GENERAL VEHICLE.

General Vehicle Co., Long Island City, N.Y.

Models—Six electric chassis models; capacity, 750 pounds, 1,000 pounds, 1 ton, 2 tons, 3½ tons and 5 tons. Wheelbase and tread, of 750-pound wagon, 74 and 52 inches, respectively; of 1,000-pound wagon, 81½ and 55 inches; of 1-ton wagon, 102 and 60 inches; of 2-ton truck, 111½ and 61 inches; of 3½-ton truck, 126 and 65 inches; of 5-ton truck, either 130 or 139 and 69 inches. Single G. E. motor in all models, driving by silent chain to countershaft and side chains to rear wheels; motor, first reduction, chain and countershaft enclosed. G. E. continuous torque controller.

Changes from Previous Construction—None.



Selling Points—All models standardized. Twelve years experience building electric trucks; all parts readily accessible; only one motor to care for; economical operation and simplicity of control.

BAKER.

Baker Electric Vehicle Co., Cleveland, O.

Models—Five chassis models; capacity, 500 pounds, 1,000 pounds, 1, 2 and 4 tons. Wheelbases: 500-pound, 85 inches, 56-inch tread; 1,000-pound, 102 inches, 56-inch tread; 1-ton, 120 inches, 64-inch tread; 2-

Digitized by Google

FIVE-TON WAVERLEY ELECTRIC TRUCK CHASSIS

ton, 135 inches, 68-inch tread. The largest model is a tractor and is designed for hauling trailers. Wheelbase to suit conditions. All models have single motor, driving through silent chain, encased, to jackshaft, and by side chains to rear wheels. Batteries in all but tractor, 42 cells; number of plates per cell, 9 for the two smaller sizes and 13 and 17, respectively, for the 2- and 4-ton; for the tractor, battery is installed to suit working conditions. Tires, 500-pound, 34 x 3-inch solid all round; 1,000-pound, 36 x 3½ solid all round; 1-ton, 36 x 4 single front and 36 x 3 dual rear; 2-ton, 36 x 6 single front and 36 x 3½ dual rear. On tractor, to suit service.

Prices—Chassis, 500-pound, $1,800; 1-000-pound, $1,900; 1-ton, $2,200; 2-ton, $3,-100; 4-ton (tractor), $3,500.

Selling Points — Conservative design, without radical features; uniform design throughout the line; single motor, affording the simplest power equipment; quiet and efficient driving system; accessibility of working parts.

Equipment—Lamps, horn, hub odometer, and tools.

M & P

M & P Electric Vehicle Co., Detroit, Mich.

Models—Two chassis models; capacity, 1,000 and 2,000 pounds. Weight, with panel bodies, 3,000 pounds and 3,900 pounds, respectively. Wheelbases, 100 inches and 112 inches; tread, 56 inches in both models. Same motor in both models; 80 volt, 30 ampere, ball-bearing armature shaft. Motor located under driver's seat, driving to jackshaft through propeller shaft with two universal joints; final drive by side chains. Wiring, resistance, switches and connections under driver's seat, near motor. Battery, 40 cells, 9 plates, in 1,000-pound; 40 cells, 13 plates, in 2-000-pound. Wheels and tires, 33 x 3 solid front and rear on 1,000-pound; 34 x 4 solid front and rear on 2,000-pound.

Prices—Chassis, 1,000-pound, $1,450; 2,-000-pound, $1,850.

Selling Points—Motor, wiring and all electrical connections very accessible; weight equally distributed; easily handled battery; car made from standard parts throughout; short wiring, the longest wire being 36 inches long; special spring construction.

WAVERLEY.

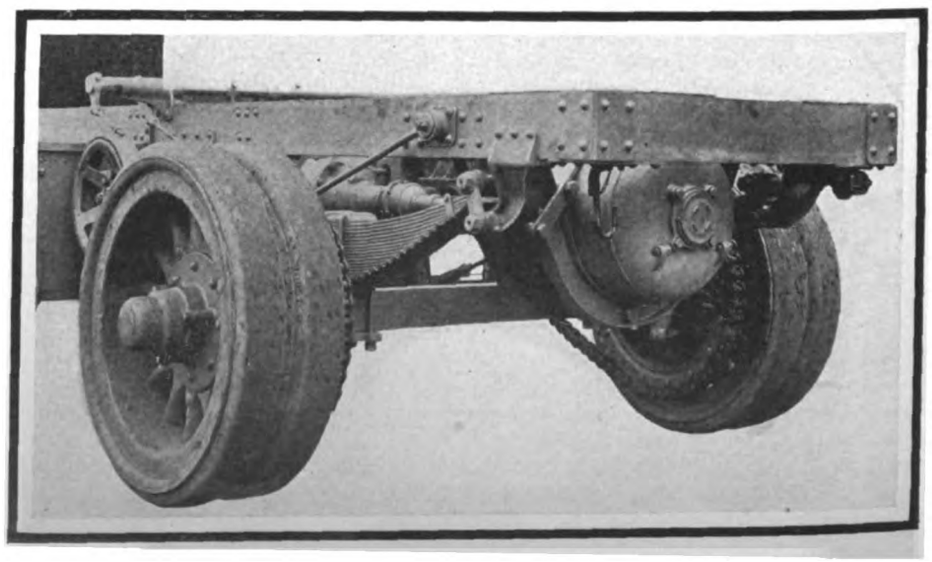
The Waverley Co., Indianapolis, Ind.

Models—Six chassis models; capacities, 600 pounds, 1,000 pounds, 1 ton, 2 tons, 3¼ tons and 5 tons. Chassis weights, 1,000 pound truck, 2,975 pounds; 2-ton truck, 5,-200 pounds; 3½-ton truck, 7,200 pounds; 5-ton truck, 9,700 pounds. Wheelbases, 600-pound, 87 inches; 1,000-pound and 1-ton, 97½ inches; 2-, 3½ and 5-ton, 114, 118 and 136 inches, respectively. Tires: 600-pound, 32 x 2½ front and rear; 1,000-pound, 32 x 3 front and 36 x 3 rear; 1-ton, 32 x 3½ front and 36 x 3½ rear; 2-ton, 36 x 4 single front and 36 x 3½ dual rear; 3½-ton, 36 x 6 single front and 36 x 3½ dual rear; 5-ton, 36 x 7 single front and 36 x 5 dual rear. Single motor drive in all models. The three smaller models have silent chain drive from motor to jackshaft and herringbone gear drive from jackshaft to full floating rear axle. The 2-, 3½- and 5-ton trucks have propeller shaft and bevel gear drive to countershaft and side chains to rear wheels. Standard lead battery equipment, 600-pound, 28 cells, 13 plates; 1,000-pound, 42 cells, 11 plates; 1-ton, 42 cells, 13 plates; 2-ton, 42 cells, 17 plates; 3½-ton, 42 cells, 21 plates; and 5-ton, 42 cells, 25 plates.

Prices—With battery and panel body, 600-pound wagon, $1,800; 1,000-pound wagon, $2,250; 1-ton wagon, $2,400; or $2,-250 with stake body; 2-ton truck chassis, $3,000; 3½-ton chassis, $3,500; 5-ton chassis, $4,000. Special battery equipment at special prices.

Changes from Previous Construction—Single motor drive instead of two motors in larger models, new construction of transmission mechanism and new motor positions, longer contact surfaces in controller switches.

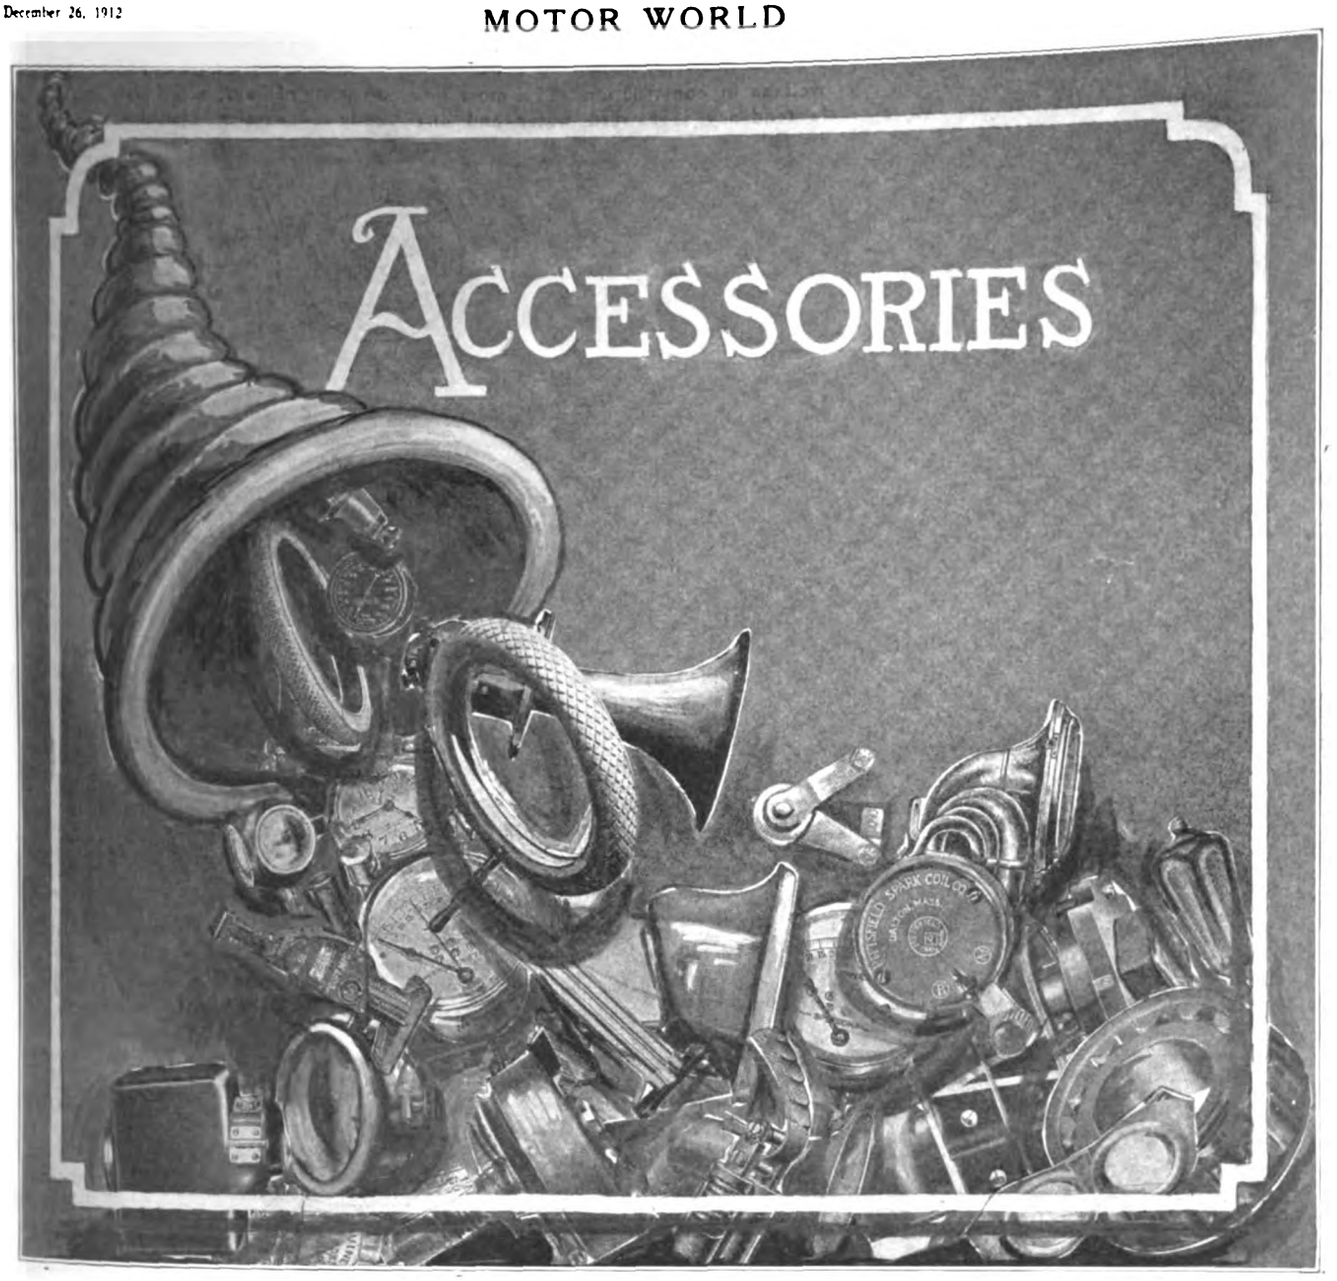
Selling Points—Light models have improved silent, efficient drive, completely enclosed, and full-floating axles; all parts protected, rear axle cannot be thrown out of line, all models are of extremely substantial construction and built of the best materials, ball-bearing armature shafts, bridge construction under battery cradles, ample braking surfaces, and facility of operation; very high mileage per battery charge.



Equipment — Heavy trucks, electric gong, electric lights and tools. Light models, electric bell, electric lights, storm front and side curtains, and tools.

WALKER.

Walker Vehicle Co., Chicago.



Models—Five chassis models; capacity, 1,000 pounds, 1 ton, 2 tons, 2½ tons, and 3½ tons. Wheelbase, tires, battery equipment and other details to suit requirements of service. Single motor drive; motor enclosed in rear axle and driving to internal gears in rear wheels through balanced system of gears.

Selling Points—Balanced drive which is extremely efficient, because side thrust and friction are practically eliminated; all working parts enclosed, the motor in the axle and the gearing in the wheels, which are oil-tight and dustproof; high mileage capacity because of high efficiency of drive; accessibility of motor and gearing; ball-bearing hollow armature shaft; adaptability of the machine to all classes of service.

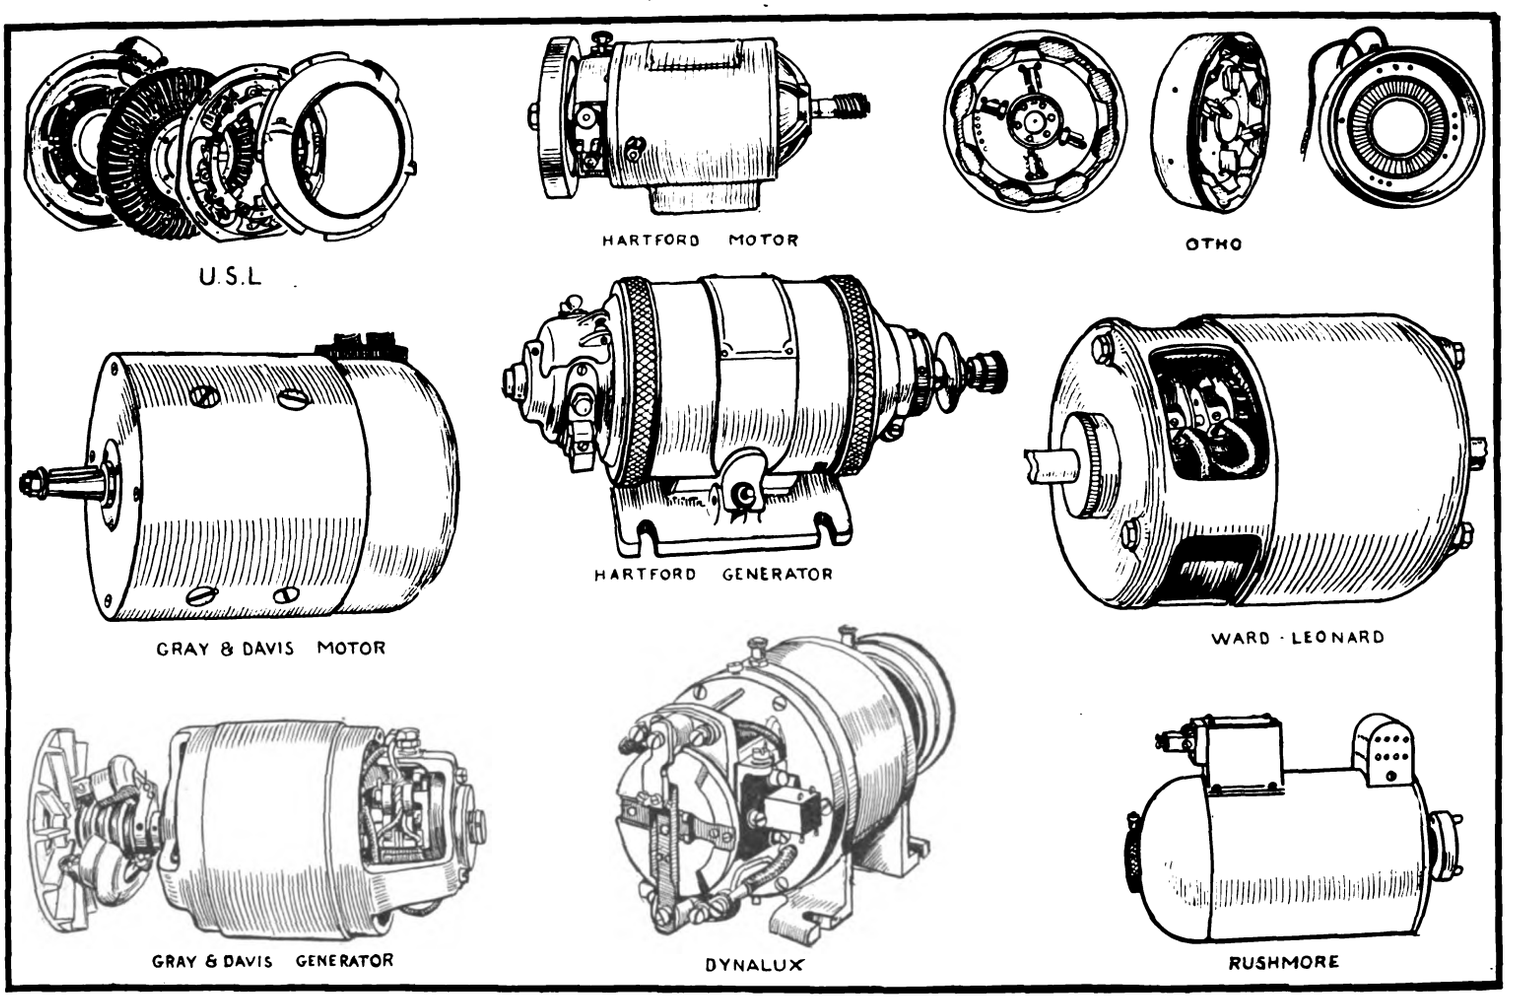
WAVERLEY REAR CONSTRUCTION, SHOWING MOTOR SUSPENSION

Digitized by Google

Engine Starting and Lighting Devices

To those who last year viewed the shows with a discerning eye, the great development which is apparent in electric lighting and engine starting systems very likely will be considerably less of a surprise than it will be to others who were inclined to discount over plainly apparent tendencies on the theory that enthusiasm for the then comparatively new equipment of the kind was running just a little bit too high to be perfectly healthy. And yet the past year has seen no little back-sliding in the ranks of the manufacturers of acetylene and air and mechanical starters, and the advances which have been made by the manufacturers of electrical equipment are out of proportion to the retrogression of the others.

It is needless to point out that everything next year will be electric lighting and starting—apparently there will be little place for other equipment designed to perform the manifold functions of the electrical apparatus. Notable advances have been made, of course, in the production of electric lighting apparatus alone—several new systems, among which are the Bijur and the Disco, have been developed within the year—though the most notable feature is the greatly increased number of electric engine starting systems which have been brought out.



In several instances these new systems are of the combined electric lighting and engine starting type and are new throughout, such, for instance, as the Otho and the Bijur, the Elyria-Dean and the Disco, though in an equally great number of cases, the addition of electric starting equipment to an already well established line of lighting apparatus marks the advance which has been made.

Prominent among the new electric engine starting systems that have been developed within the year and added to electric lighting equipment long since well known, is the Gray & Davis, the Esterline, the Auto-Liter, the Rushmore, the Remy and the Ward Leonard. All of these systems are of the two-unit type with the motor and the generator separate, though in at least one case, that of the Remy Electric Co., a new system of both single and two unit types has been added.

Coincident with the development of electric lighting systems there has come also a stimulation of the production of electric

Digitized by Google

lamps and a general refinement of designs which is having no particular difficulty in keeping step with the demand for lamps that are exclusively electric in appearance as well as in construction. The most notable tendency is toward water and dirt proof construction, the end being attained in a variety of ways; nickel plate finish apparently is increasing in popularity.

SEVEN OF THE COMBINED ELECTRIC LIGHTING AND ENGINE STARTING SYSTEMS

AUTO-LITER.

Electric Auto-Liter Co., Toledo, O.

Models—Two models, one a plain electric lighting generator and the other a lighting and starting system of the two-unit type in which generator and motor are separate.

Features—The generator is of the permanent magnet type, regulation being effected by governing the speed of the armature, a centrifugally operated friction clutch being employed for the purpose; the cut-out is of the electro-magnet type and is contained in a housing within the arch of the magnets. In the lighting and starting system, the motor is of the series wound type.

BRIGGS.

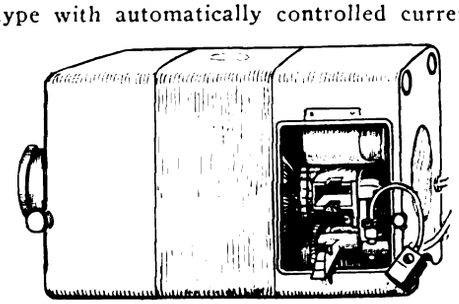
Briggs Magneto Co., Elkhart, Ind.

Models—Three models, one each combined lighting and ignition, combined lighting and starting and combined lighting, starting and ignition.

ADLAKE.

Adams & Westlake Co., Chicago, Ill.

Models—One model electric lighting system, consisting of dynamo, regulator, fuses, switches, etc.



Features—Dynamo is a compact shunt wound machine in which current regulation is obtained by a combined electric and mechanically operated rheostat which inserts resistance in the field to maintain the current output constant.

BIJUR.

Bijur Motor Lighting Co., New York City.

Models—One model combined electric lighting and engine starting system in which the motor and the generator are separate units.

Features—Dynamo is of the shunt wound type with automatically controlled current

BIJUR GENERATOR UNIT

by means of a vibrator contained within the casing, the purpose of which is to maintain the current strength constant by momentarily inserting resistance in the field. Both current controller and automatic cut-out are of the electro-magnetic type; dynamo may be driven from any convenient rotating shaft and is provided with integral gearing to ensure proper speed. Motor is of the plain series wound type and is connected to the gasolene engine through gearing cut in the periphery of the flywheel. The system is new throughout.

ELYRIA-DEAN, OTHO, DYNALUX.

Dean Electric Co., Elyria, O.

Models—Two models of combined electric lighting and engine starting systems and one electric lighting system.

Features—In the Dynalux system, which is for lighting only, the output of the generator is maintained practically constant by governing the speed of the armature; up to certain speeds the armature is positively driven; when the speed becomes excessive the connection between the engine and the generator automatically is broken

Digitized by Google

temporarily until the speed is reduced. The cut-out is of the centrifugal type. In the Otho system, which is for combined lighting and starting, the principal unit takes the place of the ordinary flywheel and serves both as generator and motor; it is distinctive in that there is no rotating wiring, the brushes and the pole pieces being the only rotating parts. Regulation is effected through the medium of an outside device which automatically inserts resistance in the field as the current strength builds up. In the Elyria-Dean lighting and starting system the generator and the motor are separate units, the former being driven at crankshaft speed, preferably from the pump or magneto shaft, and the latter driving the gasolene engine through the intermediary of gearing on the flywheel or the crankshaft. The motor is of the series type and is supplied in two sizes (both operating on six volts), for motors up to 30 horsepower and for larger motors. Regulation of the generator is obtained by differential winding and the cut-out is contained within the generator casing.

DEACO.

Detroit Electric Appliance Co., Detroit, Mich.

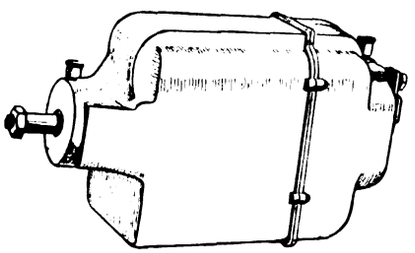
Models—Two models, one a combined high tension magneto and electric lighting generator and the other a plain lighting generator.

Features—The generator is of the combined permanent magneto and electric-magnet type, regulation being effected by "bucking" one field against the other, for which purpose electro-magnets contained in a housing within the arch of the magnets are employed; the cut-out is of the electro-magnet type. The combined generator and high tension magneto is essentially the same as the generator except that it is fitted with a distributer and the usual timer, contact breaker and condenser.

HARTFORD.

Hartford Suspension Co., Jersey City, N. J.

Models—Two models, both two unit combined electric lighting and engine starting systems, one is to be built in place and the other may be attached to any existing car without material mechanical alteration.



Features—The dynamo is the same for both systems and is of the constant speed type, a centrifugally governed friction clutch being employed. The motor also is the same for both systems, though the method of attachment differs. In either, the motor is connected to the gasolene engine through the intermediary of a double reduction combined spur and worm gearing, the ratio being approximately 125 to 1. In the built-in system, the motor is connected to the engine either through gearing cut in the periphery of the flywheel or to the crankshaft; in the other and new system the starting motor is attached to the chassis frame and drives the gasolene motor through the same type gearing attached directly to the crank spindle. Both systems operate on six volts. Both motors are equipped with miniature flywheels, which assist in maintaining their speed (which is about 7,000 revolutions a minute) during the moments when the pistons pass compression dead center.

DISCO.

Ignition Starter Co., Detroit, Mich.

Models—Two models, one an acetylene engine starter and the other an electric lighting and engine starting system in which the generator and motor are separate units.

Features—Disco gas starter consists essentially of a rotary distributer valve to be mounted on the dash, suitable piping and check valve petcocks for insertion in the engine cylinders. The distributing valve has

DISCO DYNAMO

been improved to make it more positive and the engine valves now serve as priming cups as well, and are so constructed that they are self-cleaning. The electric system is of the two-unit type in which the motor and the generator are separate, though they are identical in external appearance. They are exceptionally narrow to facilitate easy mounting in places where space is restricted; regulation is an inherent function of the dynamo. The motor is of the series type and is designed to operate on 12 volts, at which pressure it is calculated to "spin" heavy motors at the rate of 150 revolutions a minute.

ESTERLINE.

Esterline Co., Lafayette, Ind.

Models—One model combined electric lighting and engine starting system in which the generator and the motor are separate units.

Features—The starting portion of the system is new. The generator is of the combined permanent magnet and electro-magnet type and regulation is effected by balancing the effect of one against the other. Three sizes of generators are made, running at 1½, 2 and 2½ times crankshaft speed; 10 seconds running of the generator after normal starts is sufficient to replenish the battery to its original state of charge. The starting motor is geared to the gasolene engine through double herringbone gears of the Weiss type, which will operate dry without noise. The system operates on six volts.

GRAY & DAVIS.

Gray & Davis, Boston, Mass.

Models—Two models combined electric lighting and engine starting system, both of the two-unit type, in which the motor and generator are separate.

Features—Both systems operate at six volts pressure; in both, dynamo regulation is obtained by governing the speed of the armature, the method embracing a centrifugally operated friction clutch; as the generator is of the shunt wound type, the output automatically is regulated according to the load. The motor is of the series wound type in which the torque increases with the load and operates on the nominal pressure of six volts. The cut-out is of the electro-magnetic type. The starting motor is geared to the gasolene motor through the intermediary of gearing cut in the periphery of the flywheel.

MOTSINGER.

Motsinger Device Mfg. Co., Lafayette, Ind.

Models—One model low tension electric lighting generator and sundry coils, switches, ignition apparatus and electric bulbs.

Features—The generator is of the plain, low tension, shunt wound type and is driven by friction from the rim of the flywheel. Current regulation is effected by governing the speed of the armature, the clutch being opearted centrifugally. The generator may be employed either in conjunction with a storage battery or it may be used for the lights directly, regulation being sufficiently positive to ensure against the lamps either flickering, or burning out at excessive engine speeds. The Motsinger charging board is a simple device combining a meter and a switch for connecting and disconnecting the dynamo and the storage battery.

NORTH EAST.

North East Electric Co., Rochester, N. Y.

Models—One model combined electric lighting and engine starting system of the single unit type in which the motor and generator are combined.

Features—The principal unit serves alternately as generator and motor and is geared to the engine through spur gearing which automatically is altered by magnets to give the proper ratios for starting and for charging. The motor-generator is driven and drives through the intermediary of a "silent" chain to the crankshaft.

REMY.

Remy Electric Co., Anderson, Ind.

Models—Four models, one plain lighting system, one combined lighting and ignition system and two combined lighting and engine starting systems, one of the two-unit

Digitized by Google

and one of the single unit type with combined generator and motor.

Features—The lighting dynamo is designed to carry a heavy lighting load at low speed and to operate without the necessity for gearing. Regulation is an inherent characteristic of the machine and requires no outside mechanical or electrical devices; the combined lighting and ignition system consists of the same generator equipped with a contact breaker and distributor; a separate coil is used to transform the low tension current. In the two-unit type lighting and starting system the same generator is employed, the separate motor being geared to the engine in a suitable manner. In the single unit system the motor and generator are combined in a single machine which is geared to the gasolene engine through the intermediary of a "silent" chain. The dynamo portion of the unit is self-regulating and entirely automatic. Two sizes are supplied for engines of different powers and each size is made in both round and rectangular shapes to facilitate mounting.

SPLITDORF.

Splitdorf Electrical Co., Newark, N. J.

Models—One model electric lighting system consisting of generator, fuse box and ammeter.

Features—The generator is of the combined permanent magnet and electro-magnet type in which current control is obtained electrically by means of differential windings contained in a housing within the arch of the magnets. The cut-out is of the electro-magnet type; the battery is "floated on the line."

RUSHMORE.

Rushmore Dynamo Works, Plainfield, N. J.

Models—Two models, one a plain electric lighting system and the other a combined electric lighting and engine starting system in which motor and generator are separate units.

Features—The Rushmore generator is of the shunt wound type in which output regulation is governed by a "bucking" coil, the insertion of which in the field, in turn, is governed by the temperature, and therefore the resistance of a small coil of iron wire contained in a housing on the top of the generator. In the combined lighting and starting system the motor is separate and is geared to the gasolene engine through the flywheel. Its gears are automatically thrown in and out of engagement by the depression of a button.

U. S. L.

United States Light & Heating Co., Niagara Falls, N. Y.

Models—One model single unit combined electric lighting and engine starting system.

Features—The single unit is a combined generator and motor and is designed to take the place of the ordinary flywheel, making the latter unnecessary. The unit, therefore, is direct connected, thus eliminating any and all forms of gearing. Current regulation is obtained by varying the pressure on a carbon pile. U.S.L. storage batteries (formerly National) for ignition, lighting and starting and commercial vehicle work also are produced in a variety of sizes and types.

WARD LEONARD.

Ward Leonard Electric Co., Bronxville, N. Y.

Models—Two models, one a plain lighting system and the other a combined electric lighting and engine starting system.

Features—The Ward Leonard dynamo is a plain shunt wound machine in which current regulation is effected by momentarily inserting a single step of resistance in the field when the current passing through it becomes 10 amperes; immediately the current drops to 9.9 amperes the resistance is removed and the current strength becomes greater again causing the resistance to be inserted. The fluctuations are so rapid, however, as to cause no appreciable flickering in the lamps. The starting motor is a plain series wound machine. The remainder of the system consists of a simple combined rotary switch and junction box.

WESTINGHOUSE.

Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa.

Models—One combined electric lighting and ignition system, an electric vulcanizer, a mercury arc rectifier and a mechanical or vibrating alternating current rectifier.

Features—The combined lighting and ignition generator is distinctive in that it employs a centrifugal cut-out switch and a new type of ignition contact breaker in which two contacts are employed. The electric vulcanizer is of the orthodox pattern, as is the mercury arc rectifier. The mechanical rectifier is designed for use in charging three-cell storage batteries, such as are used for ignition and starting. It consists essentially of a polarizing relay acted upon by two alternating current magnets in such a way that it vibrates in synchronism with the alternations in the current and therefore reverses the direction of the current reverses so that pulsating direct current is obtained at the terminals.

WARNER.

Warner Gear Co., Munice, Ind.

Models—One model spring engine starter constructed under the Gardner patents.

Features—The starter consists essentially of a heavy steel spring assembled in the clutch housing and operated with clutch pedal and gear shift lever.

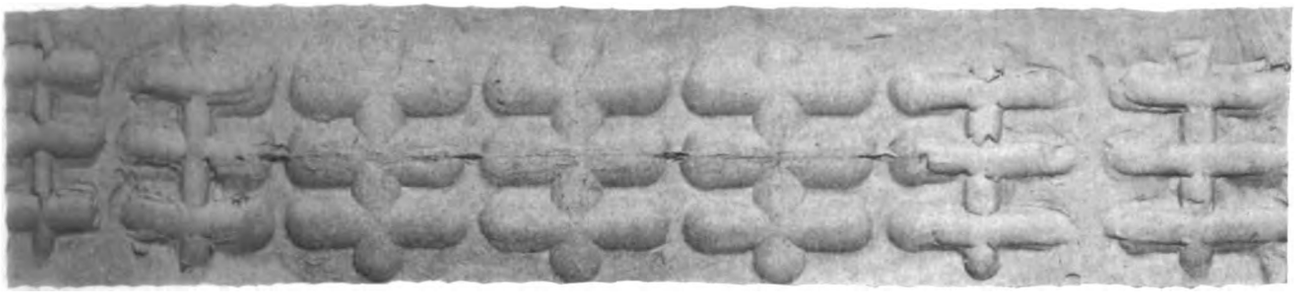
Tires and Appurtenances

Non-skids, non-skids and still more non-skids, best represents the development of the year so far as tires are concerned. With practically no room left for the improvement of the tires themselves, it has appeared as if the factory wise men almost have lain awake nights in their endeavor to evolve something useful or ornamental, or both, in the way of non-skid treads; they have become almost epidemic.

No line is complete without at least one, and so far as the tire exhibits at the shows are concerned, nine-tenths of the novelty will be contained in the varying designs of non-skid treads, unless the Pennsylvania oilproof tire and the Diamond and Goodrich cord tires be excepted; and, as a matter of fact, the Diamond cord tire was privately displayed at last year's show. All that has been said, of course, applies to pneumatics; for the development of special cushion tires, or special solid tires for electric pleasure cars, has been sufficiently plain at least to justify remark.

In the matter of inner tubes, there seems to be a distinct inclination toward the use of red rubber. The only new thing in the line of tubes, however—and that is not wholly new—is the Brown non-deflating tube. There have been several "self-vulcanizing" patches evolved but the most novel "healing" medium probably is the Goodrich inner tube plug, which will be presented for the first time. It makes use of the puncture-closing principle employed with single tube bicycle tires.

FISK TIRES.



Fisk Rubber Co., Chicopee Falls, Mass.

Types—Fisk Clincher, Fisk Q. D., Fisk Bolted-On and Fisk Dunlop, with plain, Bailey or Town Car treads. Para inner tubes.

Features—The Bolted-On tire is the distinguishing member of the Fisk line, it being so constructed that unless the bolts which hold the retaining flange are removed the tire cannot come off the rim, thus affording a factor of safety. At the same time, ease of removal and replacement is claimed. The Town Car tread is shown new. It consists of three rows of buttons, the two outer rows being set upon a raised surface which leave a wearing surface even after the buttons are worn away.

The Fisk Clincher is designed to fit a one-piece clincher rim. The Fisk Q. D. is made for use on a quick-detachable rim with removable side flanges; this type differs from the clincher in that it has a stiffer

GOODRICH TIRES.

B. F. Goodrich Co., Akron, O.

Types—Clincher, Q. D. and straight-side ... metal-studded or Bailey tread. ... Pneumatic, wireless, and block ... Special electric tires.

Features—Safety straight-bar tread and ... qualities. Cord tires, cord re... the fabric of ordinary construction. ... are demountable or pressed-on, ... in method of application only; the ... is especially designed for this-class of service. A new development is a Permanent Puncture Plug, which looks and is inserted like a collar button, instantly and permanently closing punctures. Another new production is the Self-vulcanizing Patch, which consists of a dollar-shaped gray patch, of which one side is cured and the other uncured. It is applied by pressing the uncured side to the gasolene-cleaned surface of the tube, after which the tube is inserted and inflated, the heat of the tire completing the vulcanizing of the patch to the tube. Price, $1 a dozen.

EMPIRE TIRES.

Empire Tire Co., Trenton, N. J.

Types—Red and Gray, Clincher, Q. D. and Straight-side, with plain or non-skid tread.

Features—The distinguishing feature of the Empire line is a new red rubber non-skid tire with a new non-skid tread; the red rubber, it is claimed, gives greater resiliency, heats less quickly and wears better than a gray tire and is distinctive in appearance; the tread is made up of four grooves running circumferentially around the tire and cut at intervals by diagonal grooves. Peerless red, extra heavy inner tubes are of heavier build than the Standard Empire tube. Besides the new red tire, there is the regular line of gray tires with the new non-skid tread.

DIAMOND TIRES.

Diamond Rubber Co., Akron, O.

Types—Clincher, Q. D. and Fisk Heavy Car Bolted-On, with smooth, studded, Bailey or Squegee treads; Silvertown cord tires. Solid tires; inner tubes.

Features—Safety tread and Silvertown cord tires; the former consists of successive series of five finger-like projections each, lying side by side and joined at their centers by a narrow strip of rubber. The name is derived from the likeness of the tread's action to that of a Squegee street cleaner. The Silvertown cord tire is made up of two layers of overlying cords which are fastened to wire hooks embedded in the head. Between each layer of cords is a layer of rubber. Lightness, resiliency and lively action of a car are claimed for this type. The other Diamond types are in plain, studded or Bailey tread. The Bolted-On is similar to the Fisk of that design, after which it is named. Several sizes and types of truck tire are presented.

FIRESTONE TIRES.

Firestone Tire & Rubber Co., Akron, O.

Types—Clincher, Q. D. Clincher and Q. D. Straight Side, with plain or "Non-Skid" treads. Special Electric (Pleasure); for trucks, Continuous Base Notched Tread, Hard Base Channel, Hard Base European, Heavy Duty and Clincher Cushion. Red inner tubes.

Features—Red inner tube of high quality rubber is new. Line is distinguished by tread made up of the words "Non-Skid." This and the plain tread comprise the Firestone tire surfaces. Firestone cushion tires for electric pleasure cars have double tread and internal cavities. Firestone notched tread tires are on a continuous base, the latter feature being designed to eliminate side abrasion from metal retaining plates, such as are used in block tires. Hard Base Channel type tires consist of a tough tread united with a hard base and the whole vulcanized into a channel with saw-tooth base. The European type is similar to the Hard

"CHAIN" TREAD NON-SKID EMPLOYED BY UNITED STATES TIRE CO.

Digitized by Google

NON-SKID TREAD DESIGN UTILIZED BY THE SHAWMUT COMPANY

Base Channel kind, but is vulcanized to a flat sub-base with dovetailing projections on the surface. The Heavy Duty tire is made strong by cross and side wires at the base. Firestone Cushion tires have either clincher or straight sides and have a dual, round, plain tread. The Special Electric is solid, with side and cross wires at the base.

UNITED STATES TIRE CO.

United States Tire Co., New York City.

Types—Clincher, Q. D. and straight-side with Nobby, Chain or plain tread. Block and solid, single or dual, demountable truck tires.

Features—Following the combination of United States, G. & J., Morgan & Wright, Hartford and Continental tires in the United States Tire Co., all except the first two brands have been dropped from the list, and with them go the treads which served to distinguish them. The two United States types, Nobby and Chain treads, are featured now, while the G. & J. is retained as a special dealers' tire. The best constructional features in the discontinued tires have been incorporated into the brands retained. An extra large Nobby tread, 38 x 8, is built for truck use. To the line is added this year a block truck tire designed to meet standard S. A. E. wheel specifications. Special tires for electric vehicles also are produced.

REPUBLIC TIRES.

Republic Rubber Co., Youngstown, O.

Types—Clincher and Q. D. pneumatics, plain or Staggard tread; electric pneumatic, with Staggard tread; European type truck tire, single or dual. Black-line red inner tubes.

Features—Staggard tread, which consists of several circumferentially running rows of finger-like projections upon the tread, so set that the space between two projections comes opposite the center of another, thus affording gripping and non-skidding ability. The Staggard feature is continued in solid and pneumatic electric car types, wherein the projections are larger and not so numerous. In the heavy truck type the Republic company has brought out a new European type with rounded tread and the base of the rubber set upon a corrugated metal base with dovetailing projections. Black-line red rubber inner tubes are marked with a narrow black line which extends spirally about the tube.

KELLY-SPRINGFIELD TIRES.

Kelly-Springfield Tire Co., Akron, O.

Types—Pneumatic tires with smooth, Bailey or Kant-Slip treads; Sectional or Block, Endless, and Side Wire, solid truck tires; Kelly pure gum inner tubes.

Features—Kant-Slip tread is a new design; it consists of a bead running around the tire's greatest circumference with small raised crosses at each side and at close intervals, affording gripping power. Other pneumatic types in plain and Bailey treads, and for Clincher or Q. D. rims.

The Kelly block or sectional tire is a feature of the truck line; it consists of a number of rubber blocks attached to the rim in close proximity, in a single or in a double row. Ease of renewal when a section gives out and greater length of life through the absence of creeping or "bunching" are advantages claimed.

Endless is a new truck tire; it has within the body and close to the wheel band several canvas-covered wires which cause the tire to hug the wheel and are intentioned to prevent creeping. Bolted flanges at each side prevent side movement.

The Side Wire differs slightly from the Endless. This has wires which pass across through the tire's base and are borne down upon by circumferential wires at the sides, but within the rubber.

WALPOLE TIRES.

Walpole Rubber Co., Walpole, Mass.

Types—Clincher and Q. D.

Features—Guarantee against stone bruise and defective workmanship during 4,000 miles of travel. The construction which is the basis for the stone bruise guarantee consists of placing a gum breaker strip or cushion between the fabric and the tread, 1/8 inch thick at the tread and tapering to 3/32 inch at the bead; also the tread is heavy, being especially strong at the tire sides, and measures 1/8 inch at the bead. The use of pure Para rubber with this method of building is claimed to give to the tire sufficient resiliency and stretching ability or pliability to enable it always to remain in contact with the fabric under blows from stones.

SWINEHART TIRES.

Swinehart Tire & Rubber Co., Akron, O.

Types—Pneumatic — Keaton Depression non-skid or plain tread clincher and Q. D. Solid—Flanged, Clincher, Cellular and Special Electric Cellular truck tires.

Features—Keaton Depression tread for pneumatic tires and the electric cellular tire are new.

Keaton Depressions are symmetrical, kite-shaped depressions in the tread with a

LETTERED NON-SKID TREAD USED BY FIRESTONE TIRE AND RUBBER CO.

Digitized by Google

straight-line cut across the shorter diagonal. The claim is made for this construction that chains are unnecessary.

The electric cellular tire consists of a series of tread-deep quarter-inch holes in the solid tire, molded at an angle to the surface of the tread so that suctional gripping power is available as the tread is forced down upon the roadbed. This is similar to the larger and heavier cellular truck tire, in which the depressions are considerably larger. Economy of current is claimed for both.

OILPROOF VACUUM CUP TIRES.

Pennsylvania Rubber Co., Jeannette, Pa.

Types—Clincher and Q. D., with Oilproof vacuum cup or smooth treads. Demountable truck tires, with vacuum cup tread.

Features—Originators of the vacuum cup tread, the Pennsylvania company also evolved the method of oilproofing tires. It employs a composition of rubber and other materials made by a secret process, which fortifies the rubber slightly red and is claimed to make it impervious to the action of oil. This tread is combined with the vacuum cup design wherein small, round cups are placed upon the tread and are claimed to afford unusual gripping and non-skidding qualities. Besides these there is a plain tread tire. Truck tires dual and single are made with the vacuum cups. In the latter the demountability is a feature, a split center wedge ring permitting both tires to be removed from the same side of the wheel. The truck tires are guaranteed for 10,000 miles under specified conditions and the pneumatic vacuum cup tire for 4,000 miles.

LEE AND LEELAND TIRES.

Lee Tire & Rubber Co., Conshohocken, Pa.

Types—Clincher, Q. D. and straight-side, with plain or Zig-Zag tread; also puncture-proof.

Features—Lee tires are made by a one-cure wrapped tread process, the object being to reduce the danger of "pinching" and overcuring; the Zig-Zag tread is a distinguishing design and consists of circumferential lines of protruding rubber projections, cut by zig-zagging cross projections. The puncture-proof construction consists of several layers of small, round metal disks embedded in the tread and which overlap but do not touch, being separated by rubber. They are designed to prevent an entering object from puncturing the tread. These types are guaranteed for 3,500 miles. Leeland tires have not the metal disks and are marketed without a warranty. Inner tubes are of red Para rubber.

RACINE TIRES.

Racine Rubber Co., Racine, Wis.

Types—Quick detachable and Dunlop, with plain or non-skid treads, including Trusty tread.

Features—Trusty tread is new; it consists of three rows of elongated rubber studs, the center row being aligned with the circumference of the tire and the two outer rows being set irregularly and so that the breaks between studs in the inner and outer rows do not come opposite each other. Tractional and non-skidding qualities are claimed for this construction, with a continual road-bearing surface. Other members of the Racine line have plain and non-skid treads, as used in previous years.

NON-SKID TREAD EMPLOYED BY THE GOODYEAR TIRE & RUBBER CO.

AJAX TIRES.

Ajax-Grieb Rubber Co., Trenton, N. J.

Types—Clincher and Q. D.

Features — Five-thousand-mile guarantee, which is claimed to be 1,500 miles greater than the guarantees given with other tires. Thick treads and wearing ability are strong selling points. Great road gripping power is claimed for the non-skid tread, which consists of crossed cuts in the rubber; the other Ajax-Grieb type has a plain tread.

PORTAGE TIRES.

Portage Rubber Co., Barberton, O.

Types—Clincher and extra heavy truck and limousine tires, with plain or Daisy non-skid treads. Pure gum tubes. Tube protecting flaps.

Features—The heavy pneumatic tire for light truck or limousine use is the distinctive part of the Portage product; it is built in 4 and 5-inch sizes, the former having 8 plies of Sea Island rubber and the latter 10, which is claimed to be from 2 to 4 more than in the average pneumatic tire. Durability and not speed is claimed for this type. In addition there are the lighter Clinchers. Portage tubes are sold in individual sealed boxes, assuring delivery in the same condition as when the tube leaves the factory. The Portage Loose Flap is a protector which fits between the rim and the tube and prevents pinching and other damage.

SEAMLESS TIRES.

Seamless Rubber Co., New Haven, Conn.

Types—Clincher and Q. D., with plain, Safety or Nutty tread. Red and gray Seamless inner tubes.

Features—Nutty tread is new; it is offered with straight-side or clincher tires and consists of a collection of studs of hexagonal nut shape so grouped that vacuum depressions are formed as the studs are compressed in travel. Straight-side tire also is new; it is supplied either in the old or the new tread. The Seamless Safety tread of former years consists of a series of cuts or depressions at each side of the center of the tread, in appearance much like a scaling ladder.

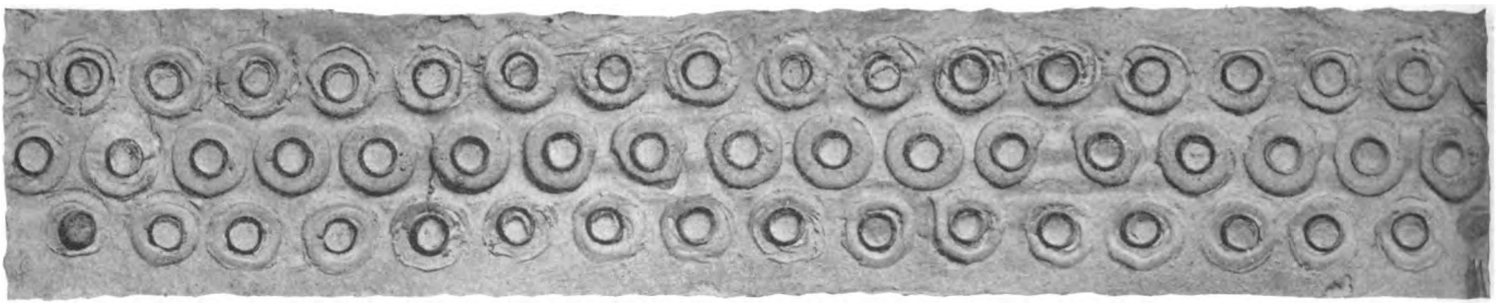
Seamless tubes are featured as being built without a seam and are of red and gray rubber.

FEDERAL TIRES.

Federal Rubber Mfg. Co., Milwaukee, Wis.

Types—Clincher, Q. D. Clincher and Straight-Wall Detachable, with plain or Rugged tread.

Features—The Rugged tread is the chief features which distinguishes the Federal product; it consists of three rows of strong studs set equidistant upon the carcass of the tire. Excellent road-gripping ability is claimed.



TYRIAN TIRES.

Tyer Rubber Co., Andover, Mass.

Types—Clincher, Q. D. and straight-side with Hold-Tite and anti-skid or plain treads. Inner tubes.

Features—The maker, who is new in the tire field, has for many years been engaged in the manufacture of other rubber goods of high quality, and claims the same quality for its tire. The Hold-Tite tread

Digitized by Google

"VACUUM CUP" TREAD UTILIZED BY PENNSYLVANIA RUBBER COMPANY

consists of a row of T-shaped depressions, the heads of the T's abutting on an uncut section which extends circumferentially about the casing. Gripping and vacuum qualities are claimed.

CARSPRING TIRES.

New Jersey Car Spring & Rubber Co., Jersey City, N. J.

Types—Clincher and Q. D., with plain or Clingtite tread.

Features—Clingtite tread is a depression instead of a projection construction, having variously formed gripping cavities; the depressions are cup-shaped with protruding centers at the middle of the tread, while at the sides they are semi-circular. The cups with raised bottoms are designed to form a vacuum as the rubber is pressed against the roadbed, and the claim is that, as the pressure is released, the convex bottom automatically breaks the vacuum and releases the grip in time to prevent the tire being held to the road as it tends to revolve.

BRAENDER TIRES.

Braender Rubber & Tire Co., Rutherford, N. J.

Non-skid type with special built-up tread. Braender red inner tubes.

Features—The Braender tire is distinguished from others by its Bull Dog tread, which is of peculiar design. Upon the carcass are built up bars of rubber which run diagonally across the tread and are claimed to afford non-skidding ability of a high degree and also strong tractional power, in that the bars clutch the roadbed and the spaces between form a vacuum, which holds the tire to the road. Braender red inner tubes are of Para rubber and have a three-ply reinforcement about the valve bases; the process of manufacture is such that freedom from bloom is claimed.

MOTZ TIRES.

Motz Tire & Rubber Co., Akron, O.

Types—Cushion and Solid, with smooth and non-skid treads, for pleasure or commercial cars.

Features—Undercut sides and slantwise bridges are distinguishing marks in Motz tire construction; undercutting of the sides and the leaving of a slantwise bridge between cuts is claimed to give greater resiliency than would be the case were the sides of the tires left solid. The treads also are cut for the purpose of affording anti-skidding ability. The various types are fitted for use on clincher, Q. D., or demountable rims.

THERMOID AND NASSAU TIRES.

Thermoid Rubber Co., Trenton, N. J.

Types—Clincher and Dunlop, with plain tread. Merit red inner tubes.

Features—The Thermoid De Luxe is the Thermoid leader and is guaranteed for 4,000 miles; it is furnished for any standard type of rim and comes only in plain tread. The Nassau tire carries a 3,500-mile guarantee. The company's red tubes bear the trade name of Merit.

PROWODNIK TYRES.

Russian Tyre Sales Co., New York.

Types—Clincher and Q. D., with flat, steel-studded or Columb "tough tread" non-skid treads.

Features—"Tough tread," just introduced, consists of a section of tough black rubber at the wearing point of the tire. India rubber, giving a pliable and enduring construction. Impregnated fabric. High quality as compared with cost, due to low price of labor in Russia.

MARATHON TIRES.

Marathon Tire & Rubber Co., Cuyahoga Falls, Ohio.

Types—Clincher and Q. D. Inner tubes.

Features—The entire Marathon line is new, the company being a late entry into the tire field. Its line is marked by the Angle tread, which is designed for non-skidding purposes; plain treads also are furnished. The company's inner tube is of red rubber, for which so much is claimed by tire makers as an inner tube material.

MILLER TIRES.

Miller Rubber Co., Akron, O.

Types—Clincher and Q. D.

Features—A new tread has been developed; it consists of angle-shaped depressions arranged in two rows, one on each side of the center of the tread. Manufacture is by the one-cure wrapped tread process, which it is claimed gives an enduring tread.

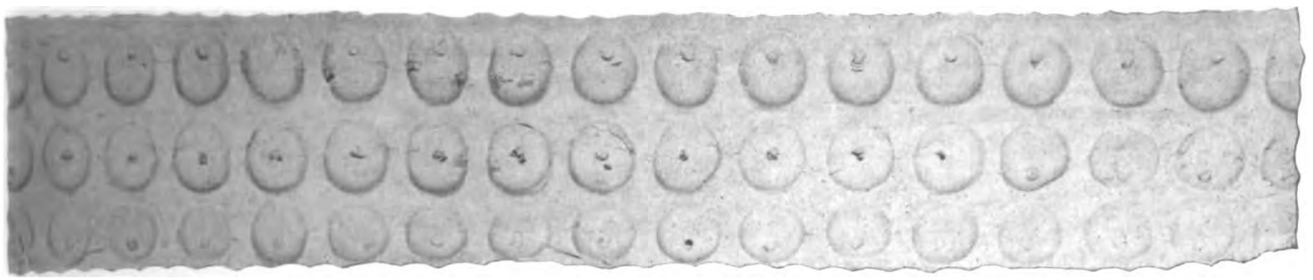
CONTINENTAL-ERIE TIRES

Continental Rubber Works, Erie, Pa.

Types—Clincher, Q. D. and Straight-side, with plain or non-skid tread.

Features—Quality of construction and wearing ability; tires are marketed under the trade names Continental-Erie, Liberty and Tribune.

POLACK TRUCK TYRES.



Polack Tyre Co., Bridgeport, Conn.

Types—Solid, single or dual, with American or European profiles.

NON-SKID TREAD DESIGN ADOPTED BY REPUBLIC RUBBER COMPANY

Digitized by Google

NON-SKID TIRE TREAD EMPLOYED BY FEDERAL RUBBER COMPANY

Features—From 27 to 72.8 per cent. more rubber in Polack tyres than in the average wire or flat-tread tire is claimed by the the Polack makers. Tires have a rounded tread which, in the European profile, varies with the width of the tire, whereas the American profile does not increase in depth proportionately as the width is increased. Quantity and quality of rubber claimed to give exceptional resiliency and endurance. Guarantee is 8,000 miles, to be made within 12 months.

ENGLEBERT TIRES.

Englebert Tire Co., New York City.

Types—Clincher and Q. D., with flat, Chevron non-skid or leather steel-studded tread.

Features—The flat tread, which, of course, presents a flat surface to the road. The leather steel-studded tread is a part of the tire itself and is claimed to be an excellent preventive of skidding, as is the Chevron. Tires are made in Belgium.

GLOBE TIRES.

United & Globe Rubber Mfg. Cos., Trenton, N. J.

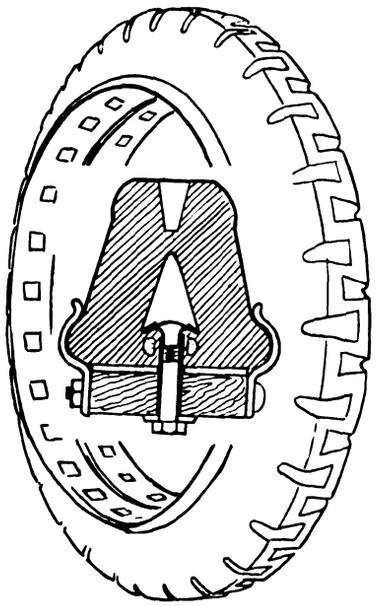
Types—Clincher and Q. D. Inner tubes.

Features—Quality and a new red inner tube for which is claimed a tensile strength of [illegible] pounds to the square inch; the tube is guaranteed against deterioration for one year from date of shipment from the factory.

BATAVIA TIRES.

Batavia Rubber Co., Batavia, N. Y.

Types—Clincher and Q. D., with plain or [illegible] tread. Inner tubes.



Features—The Security non-skid tread, which has been in service for five years. Inner tubes and a method of protecting them from punctures are other features.

OVERMAN CUSHION TIRES.

Overman Tire Co., 250 West 54th street, New York City.

Types—Pleasure and commercial.

Features—Tire is retained at the bead by flanges and has in the center near the base a triangular cavity which permits a flow of rubber inwardly under pressure. The tread is cut with alternate wedge-shaped depressions at the sides which is claimed to afford non-skidding ability and also room for the flow of rubber. The tire requires a special rim carrying square locking nuts which fit into depressions in the tire base. The tire is locked to the rim by bolts which pass through the felloe and band and screw into small plates in the tire base. Resiliency is claimed to compare favorably with pneumatic tire.

OVERMAN CUSHION TIRE

FAVARY CUSHION TIRE.

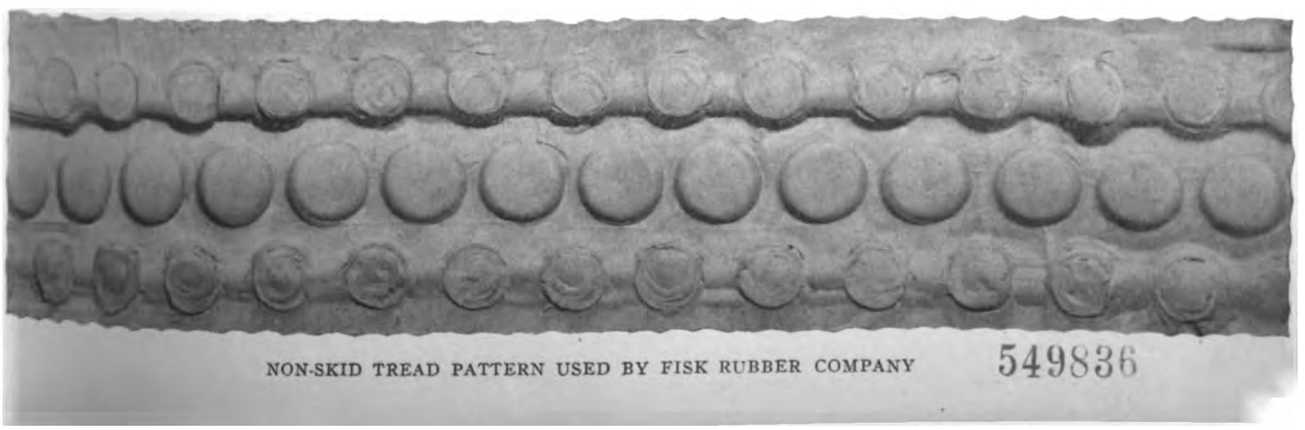
Favary Tire & Cushion Co., New York City.

Type—Support and band, for all standard rims, both pleasure and commercial.

Features—Tire is new; it is made up of bands of fabric spaced apart by small supports which are so placed that a support rests upon the fabric midway between two other supports this is designed to take up the road shock. Fabric is used in the pleasure car types only; in the truck tires the bands are chains.

INTERLOCK INNER TIRES.

Double-Fabric Tire Co., Auburn, Ind.



Types—One type.

Features—Inner tire is made to be placed between the inner tube and the shoe; it consists of a substantial casing-like structure, which has a thicker portion where the Interlock comes in contact with the shoe and at the beads has two wide, overlapping flaps which serve to lock the device when the tube is inflated. It is endless and has two complete flaps.

BROWN TUBES.

Voorhees Rubber Mfg. Co., Jersey City, N.J.

Brown Scientific Non-Deflating tube is made in some respects similar to a tire; it is built upon a canvas tube and has a greater thickness of rubber on one side, as has a

NON-SKID TREAD PATTERN USED BY FISK RUBBER COMPANY

549836

Digitized by Google

tire. After being made, with the canvas inside, it is turned inside out, thus placing the rubber inside; the rubber thereby is compressed to such an extent that when a puncturing object is withdrawn the rubber tends to contract and close up the hole.

Flex-O-Fill Tire Filler.

Flex-O-Fill Core Co., New York City.

Features—Filler molded upon a diameter smaller than that of the average wheel, so that when the filler is placed in a tire the stretching of the surface, if any, is on the side of the filler next to the rim; this causes the outer edge to be compressed so that, should the shoe be perforated and the surface of the filler broken it will tend to close up again and not pull more widely apart, as would be the case were the filler molded in a straight bar. It is guaranteed to last a year if not removed from the casing.

Dayton Airless Tires.

C. J. Cross & Co., New York.

Types—Dayton Airless, in clincher and Q. D. Brown scientific tubes.

Dayton airless construction consists of a tier of rubber blocks, spaced apart within the casing and supporting the tire; freedom from puncture and blowout is claimed without loss of resiliency. Brown tubes are formed upon a canvas casing and then turned inside out, causing the rubber, which is on the inside, to be compressed and to close a puncture immediately following the withdrawal of the object which caused the puncture.

Newmastic Tire Filler.

Newmastic Co., New York City.

Principal ingredients, glue, glucose and glycerin. The placing of the filler in fabric tubes is a late development, as is an arrangement whereby the tubes may be attached to certain forms of Q. D. rims by means of rings and clamps. Non-melting qualities are claimed. Company claims priority in the new over-rim filler field, and probably justly.

American Tubes.

American Tire & Rubber Co., Akron, O.

Features—Patented reinforcement on the side which comes next to the rim, the rubber being considerably thicker at that point, which affords protection against possible injury from pinching or friction with the rim. Tubes are of red and gray rubber. A new type of solid tire is about to be added to the line.

Gibney Truck Tires.

James L. Gibney Rubber Co., Philadelphia.

Types—Solid.

Features—Absence of wires in construction.

Endurance Tires.

Endurance Tire & Rubber Co., New Brunswick, N. J.

Type—Red rubber.

Feature—Quality and color of rubber.

Detroit Puncturine.

Detroit Puncturine Co., Detroit, Mich.

A puncture filling fluid, designed to flow into perforations in the rubber and seal them.

NON-SKID DEVICES.

Woodworth Tire Grips and Treads.

Leather Tire Goods Co., Niagara Falls, N.Y.

Types—Grips, chain and bar; treads, leather and metal studs.

Features—Whereas the former Woodworth treads were not designed for travel upon ice or snow, a new tread, the Double grip, has been added, with the claim that it it is especially adapted for this service and therefore is suitable for use all the year. The new tread consists of a leather covering for the tire, in which are the rivet studs formerly used, which are supplemented by higher studs near the center of the tread. In both old and new treads there are two arrangements, center-studded for smooth travel and full-studded where ruts are likely to be encountered. The tire grips, styled Kant-Skids, consist of linked cross-bars and side chains. Single Kant-Skids are similar to the regular type, except that they consist of individual linked sections which strap around the tire. Prices, each: Full studded, 26 x 3 to 40 x 5½, $11.70 to $41; center studded, 26 x 2 to 40 x 5½, $5 to $31; Double Grips, the same. Kant-Skids, per pair: 28 x 3 to 40 x 6, $4 to $15. Single Kant Skids, 3 to 5½ inches, 50 cents to 75 cents each. Repair boots, studded, $1 to $2.75. Emergency straps, $1.25 each.

Never-Skid Tire Grips.

Never-Skid Mfg. Co., New York.

Type—Bar and center chain, for dual truck tires.

Features—Consist of chain running circumferentially between tires with winged links lying across tread; truck does not have to be jacked up to adjust; creep on tires and do not wear in one spot; joints will stand five tons shear; always one link on the ground; adjusted in five minutes and detached in two; no wear on felloe or rim; no complicated parts. For tires 30 to 42 inches in diameter, with 2- to 6-inch tread. Prices, $30 to $52, for two rear wheels.

Federal Tire Grips.

Federal Chain & Mfg. Co., Springfield, Mass.

Types—Bar and side chain.

Features—The Federal grip is a newly developed product, is made of nickel steel and is designed for use on single, solid truck tires. It is made of several units, each of which is a flat steel circular band bent to ride the tire like a saddle, the sides which touch the tread having rounded edges to prevent cutting of the rubber. The units are connected by side chains and are fastened into position by a hand-operated locking lever. Gaylor grips, for solid dual tires, are of chrome vanadium steel and consist of four round bars, which extend diagonally across the tread, the ends of the bars being bent down toward the rim. Four side chains connect the four grips, the whole forming a continuous line. The locking device is the same as in the Federal grip.

Weed Tire Grips.

Weed Chain Tire Grip Co., Bridgeport, Conn.

Type—Chain.

Features—Grips consist of cross-chains and side-chains, the latter linked to the ends of the cross-chains and extending circumferentially around tire near rim; chains creep and do not wear in one spot; chains afford tenacious gripping qualities. Sizes, 28 x 3 to 40 x 6; prices, $4 to $15 per pair. Rid-O-Skid tire chains, similar to regular Weed grips; sizes, 28 x 3 to 37 x 5½; prices, $2.40 to $5.40 per pair. Weed chain adjusters, consist of chain and spring arrangement lying within the place of the side chain and holding grips tightly upon tires; sizes, 28 to 40 inches in diameter; prices $1 to $1.50. Cross-chains, for repairing broken grips; 2½ to 6 inches; prices, 5 to 18 cents each.

Eureka Tire Grips.

Eureka Non Skid Mfg. Co., Brooklyn, N. Y.

Type—Chain and plate, for dual solid tires.

Features—Gripping qualities are found in toothed, drop-forged steel frames of diamond shape attached to a chain which extends around the tire between the two treads. The province of the chains is only to connect the plates; the latter do the gripping. The device is designed essentially for heavy truck work.

Universal Tire Protectors.

Universal Tire Protector Co., Angola, Ind.

Type—Leather and metal studs.

Features—Tough leather casing for tread, studded with metal projections which grip road. Treads fasten to tire with wire which extends circumferentially around tire at the edge of the tread and the ends of which fasten with a bolt and nut.

TIRE PUMPS.

Skinner Tire Pumps.

Mayo Mfg. Co., Chicago, Ill.

Types—"Spark Plug" and hand.

Features—The "Try before you buy" principle is feature in the marketing of Mayo products. The spark plug pump, the

Digitized by Google

leader of the line, is inserted into the spark plug hole and pure air is furnished for inflation by an intake valve in the pump. Price, $10; with gauge, $2 extra. In the hand pump line the two smallest are the Skinner single-acting and the compound type; prices, respectively, $1.75 and $3.50. The Skinner compound lever pump is adapted for garage use and consists of a lever, two cylinders and 6 feet of tubing; price, $12.50, pressure gauge attached, $2 extra. Skinner pressure indicating pump is the same as the compound model, except that a gauge is attached with the dial at the foot and turning upward toward the operator; price $5

Minimax Tire Pumps.

Herz & Co., New York City.

Types—Electric, gear or belt and friction driven.

Features—The Minimax, which operates by means of a small motor set upon the outfit, is mounted on wheels so that it can be rolled where desired; the machine consists of an air compressor, ¼-horsepower motor, tank, safety valve, connecting wire and steel armored hose. Direct or alternating current can be used. Tank is 24 by 9 inches. Price, for direct current, $135; for alternating, $135. A "B. B." pump consists of a cylinder, piston, tubing and chuck arrangement, power to be furnished from a shaft or motor; price, $30. A "Tandem" pump is equipped with a handle and a chuck for the operator gripping the handle and holding the wheel against any part of the car, thereby operating [illegible] price, $20.

Kellogg Air Pumps.

Kellogg Mfg. Co., Rochester, N. Y.

Type—Four-cylinder, silent-chain or gear driven.

Features—The purpose of the Kellogg pump has been doubled; whereas it formerly was available as a tire inflator, it now is equipped with a disk distributor and serves as an engine starter, also. The motor is started by pressing the foot upon a button on the dash, which causes air to pass from a storage tank, through the distributor and to the proper cylinder. The pump may be operated from the dash, and when the storage tank, which also may be used for tire inflation, has 150 or 200 pounds pressure the pump is thrown out of operation. The apparatus weighs 40 pounds.

National Tire Pumps.

National Motor Supply Co., Cleveland, O.

Type—"Spark plug."

Feature—Pumps only pure air into the tire. It consists of a cylinder and piston, with piston rings, a threaded pipe which screws into a spark plug hole, a valve which admits pure air into the pumping chamber, a tube leading to the tire and a pressure gauge in this tube. The piston is operated by the compression in the engine cylinder, exerted through the spark plug hole. Air spaces at each end of the pump cylinder prevent noise. Weight, five pounds. Price, complete, $15.

Hartford Tire Pumps.

Hartford Machine Screw Co., Hartford, Conn.

Type—Gear operated.

Features—The distinctive feature of this pump is in its internal construction; compression is obtained through a tightly fitting piston and cylinder, the piston being operated by a connecting rod which is actuated by a toggle mechanism wherein the piston is attached to one end of the actuating arm and the crankshaft applies its power at the center, giving a piston stroke twice as long as the throw of the pump's crankshaft.

Turner Air Pumps.

Turner Brass Works, Sycamore, Ill.

Type—Double-cylinder and hand lever.

Features—Pump consists of two cylinders at opposite ends of base and operated by vertical hand lever. Designed for garage service. Price, $10.50; with pressure gauge, $11.50.

Imperial Air Pumps.

Ingersoll-Rand Co., New York City.

Type—Portable, motor driven.

Features—Small single-acting air-cooled cylinder, with but one valve, the discharge; mounted on a dustproof frame. Six feet of ½-inch hose and 20 feet of lamp cord. Two sizes, for private and public garages.

TIRE GAUGES.

Mayo Tire Gauges.

Mayo Mfg. Co., Chicago, Ill.

Types—Pencil and dial.

Features—The dial type of gauge is capable of measuring 200 pounds overload in excess of the highest common tire pressure, obviating the necessity of resetting the hand when the operator causes fluctuations by quick, jamming motion of the pump. The device attaches to the valve stem. Price, $2. The Little Gem, pencil type gauge, is 3½ inches long and sells at 50 cents.

Edelmann Pressure Gauges.

E. Edelmann & Co., Chicago, Ill.

Types—Tube and dial.

Features—In the Edelmann gauge No. 1, which is attached to the valve by pressing tube into place, the dial is made this year with a red indicating hand, which gives easy reading and remains at the reading until reset. Price, $1.50. No. 3A is a new product and sells at $1.75. No. 4, for use on power pumps, is designed for use in a hose line and is new. Price, $1.50. An automatic air chuck, designated as No 47, has a valve, which opens when applied to air valve and closes as soon as removed. Suitable for free air service. Parts are interchangeable. Price, $1. A pump connection, No. 46, has a tapered nipple taking several sizes of tubing. Price, 25 cents.

United States Tire Gauges.

United States Gauge Co., Bridgeport, Conn.

Types—Dial.

Features—The Invincible gauge, which is a feature of the United States line, resembles a watch except that at the bottom is a projection for attachment to the valve; resetting is accomplished by pushing a small button. Price, $2. Other dial-type gauges are included.

Schrader Tire Gauges.

A. Schrader's Son, Inc., 28-32 Rose street, New York City.

Type—Pencil.

Feature—Small and compact, 2½ inches long, reading remains fixed until gauge is readjusted, this being done by pressure of finger. Price $1.

National Pressure Gauge.

National Motor Supply Co., Cleveland, O.

Type—"Honest" gauge; pencil type.

Features—Registers pressure after being removed from the tire. Pressure on valve causes pressure to register and plunger is pushed back into place for further readings. Price, $1.

VULCANIZERS.

Shaler Vulcanizers.

C. A. Shaler Co., Waupun, Wis.

Types—Electric, alcohol and gasolene, portable and stationary.

Features—New model, the Vul-Kit, just introduced, is portable and consists of round, metal, closed receptacle with detachable handle, gasolene generator, which distributes flame over bottom of vulcanizer, asbestos pad on which tube rests, and clamp which holds heated surface to tube. Claimed to vulcanize all the way through and not just on surface. Type B, portable, electric, uses direct or alternating current; designed for garage use; iron model, $20; nickel-plate aluminum, $25. Type C, exclusively for outer casings; with thermostat, alternating current, $20; with rheostat, direct current, $25. Type E vulcanizes from 1 to 6 tubes at a time; with thermostat, alternating current, $25; with rheostat, direct current, $30. Type D, portable, electric, designed for car owners; iron model for direct current, $12.50; for alternating, the same; nickel-plate models for both currents, $15. Type

Digitized by Google

J is heated by alcohol lamp and sells for $10.

Gibney Vulcanizers.

James L. Gibney Rubber Co., Philadelphia.

Types—Eleck-Trick, Rheostat and Steam; portable and stationary.

Features—Efficiency and quickness of work; low operating expense. Eleck-Trick, with rheostat, wired for 110 or 220 volts, alternating or direct current; fitted with 10 feet of cord, plug for lamp socket, asbestos pad and bracket for tube work, clamp, thermometer, cement, repair materials and tools, $15. Rheostat vulcanizer, rheostat, which is for heat regulation, also can be attached to wall with bracket which is furnished, wired for 110 or 220 volts, same equipment as with Eleck-Trick, $18. Steam vulcanizer, can be used in any position or at any angle, fire box is removed from vulcanizer proper and is suspended on a projecting pipe, alcohol fire pot in swivel acting basket, adjustable ventilator for regulation of heat, same equipment as with Eleck-Trick, $15. Garage tool kit, consisting of stitcher, awl, shears, wire buffing brush, pliers, knife and cement brush, $3. Multiple tube vulcanizer, accommodates six tubes at same time, heated on thermostatic principle and has thermometer at each end, $25.

National Vulcanizers.

National Motor Supply Co., Cleveland, O.

Types—Steam garage and portable and Mascot gasolene portable.

Features—Simplicity of operation is claimed as the chief feature for the garage vulcanizer. It consists of a steam chamber, gauge and three vulcanizing plates, all operable simultaneously. Machine generates its own steam and is said to cost 1 cent an hour for operation; will vulcanize space 4 x 8 inches; casing molds are curved both ways; tube plate, 7 x 16 inches. Weight, 80 pounds. List price, complete, $60; discounts to garages.

The steam portable type consists of a hollow metal body filled partly with water and sealed, never having to be refilled. A small alcohol lamp generates steam and a thermometer tells the temperature; vulcanizing can be done, it is claimed, in 15 or 20 minutes; surfaces are curved or flat. The weight is 5 pounds and it sells for $12.

The gasolene portable consists of a chamber in which gasolene is placed and burned, the device being clamped against the part to be vulcanized. Weight, 3 pounds. Price, $5. Vulcanizing materials.

TIRE SUNDRIES.

Essex Rubber Goods.

Essex Rubber Co., Trenton, N. J.

Inner sleeves, $1 to $2; blowout patches, style B, 40 cents to 50 cents; style C, 48 cents to $1; style D, 50 cents to 70 cents; tire sleeves, style A, 35 cents to 50 cents; unvulcanized shoe liner, style E, 28 cents to 70 cents; plaster, style H, 12 cents to 36 cents; Hook-On outer boot, with style H plaster, $1.50 to $2.50; laced outer boot, $1.20 to $1.80; Perfection rubber goggles, $72 per gross, extra amber lenses, 10 cents per pair; Standard reliner, sizes 28 x 3 to 38 x 5, $3.30 to $7.45; Perfection reliner, sizes 28 x 3 to 38 x 5, $5.20 to $11.78; asbestos metallic gasolene engine packing, 78 cents and 80 cents; Pyramid matting, white, black or red; red rubber generator tubing; red rubber lamp connections, 14 inches long, $48 per gross; flexible metal gas lamp connections, 14 inches long, $48 per gross; pump and radiator hose; asbestos brake lining, 1 inch to 4 inches wide, ⅛ to ¼ inch thick, 32 cents to $1.88; rubber spring bumpers, 55 cents, 90 cents and $1.25; round rubber spring bumpers, 50 cents, 65 cents and 90 cents.

Narco Tire Repair Materials.

National Rubber Co., St. Louis, Mo.

The National line includes: Narco noninflammable, triple-strength rubber cement, sold in 4-ounce can, 25 cents; 4-ounce tube, 25 cents, and pint can, $1. Narco tire-cut filler, a liquid in collapsible tubes, $1 Rubber reviver and refinisher, a liquid rubber varnish for rejuvenating and refinishing, 50 cents to $2.

Young Tire Repair Materials.

O. W. Young, Newark, N. J.

The Young line includes: Fill gum, $1; blowout patches, with flexible flap, $1; Blanco tire repairers, of rawhide, $1.50; Waterproof tire repairers, $1.50; corrugated semi-cured patches, 50 cents per dozen; tire chalk, in tube, 25 cents; self-vulcanizing patch outfit, consisting of eight patches, sandpaper and cement, $1.

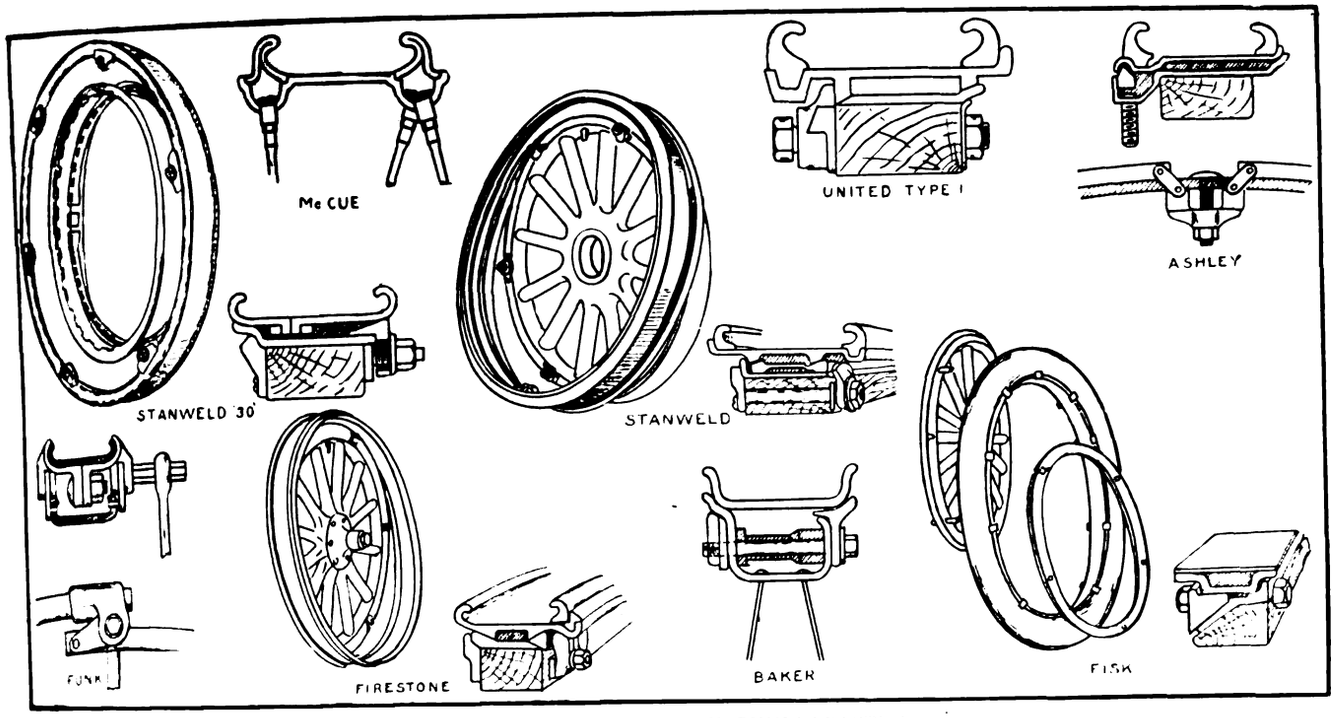
Dykes's Vulcanizing Materials.

John L. G. Dykes Co., Chicago, Ill.

The Dykes line includes: Reliners, two styles, prices, $4.25 to $15; Never Kreep inner shoes, $1.25 to $1.90; Double Lock inner shoes, 70 cents to $1.90; tire boots, $1 to $2; repair gums; bolted-on outer boots, $2.25 to $4.25.

Wheels and Rims

Prophecies of twelve months ago that the quick detachable and other fixed rims were destined soon to be superseded by the demountable type have not been fulfilled, for while the demountable rim has made substantial progress it has not swept the quick detachable before it and both retain the attention of manufacturers. There is nevertheless a distinct trend toward demountability, which has been responsible for several new types, notably the "Stanweld," brought out by the Standard Welding Co., of Cleveland, O., and others offered by the Baker Rim Co., of Akron, O., the General Rim Co., of New York, and the Newmastic Co., of the same city. In the demountable class there also is a marked favoritism shown for such a rim in connection with wire wheels.



Wire wheels, too, have made marked progress since last year's show, when one of them occupied an inconspicuous corner of the booth of the McCue Co., of Buffalo, N. Y. Retaining pride of priority, the McCue Co. has gone a step further and has developed a Q. D. rim wherein fewness of parts is obtained through combining the felloe and rim base as one piece New arrivals in the wire wheel field are E-C Sales Co., of Chicago, the Baker Rim Co., of Akron, O., and the General Rim Co., of New York, the last two of which have evolved demountable rims for wire wheel use.

The Baker is minus the conventional felloe, having a special construction and locking device, while the General company's wire demountable, the Ashley, has a felloe but is marked by an original and quick locking device. The E-C company has gone further yet in demountability and removes the entire wheel, a few simple operations being all that are required. E-C wheels, also, are of wire or wood. Quick detachable rims are as numerous as heretofore, but the newness in the field centers mainly in the demountables.

The tendency to avoid complication and weight has resulted in the Newmastic Co.'s "No-Felloe" rim, which rests in clamping devices into which each spoke is tenoned and each clamp and rim rest is a separate part. Consideration is given to straight-side tires by the rim makers and in the new products provision for this equipment is common. Making it easier for the one who has to manipulate the rim is a primary object and the United and Funk rims, the latter made by the General Rim, are split and the ends are made to overlap when it is desired to remove a tire, thus shrinking the rim base and forcing a tightly stuck casing to loosen. Quick-detachable-demountable combinations have been worked out in several instances, designed doubly to meet demands.

Metal wheels, designed primarily for truck use, also are receiving more notice than usual, the wheel of that type produced by the Sheldon Axle Co., of Wilkes-Barre, Pa., being the most notable development of the year.

Digitized by Google

RIMS THAT EXEMPLIFY WIDELY VARYING PRACTICE.

STANWELD RIMS.

Standard Welding Co., Cleveland, O.

Types—Detachable and demountable, for passenger and commercial cars.

Features—The Stanweld Demountable rim is comparatively new, and is distinguished by its locking construction. The rim consists of flanges, rim base, adjusting ring, felloe band and locking clamps; the rim locks by pressure of six clamps against the adjusting ring, which is a wide band having bearing surfaces at each side of the rim. The operation of the nuts in these clamps locks and unlocks the rim, and when locked the lateral position of the rim base cannot change.

Stanweld detachable rims are locked by a unique device, consisting of a double-sided cam which, when the wide portions are with the circumference of the wheel, catches into slots in projections on the split ring, the projections setting into holes in the rim base. The cams are operated by a spring steel lever which, to lock, swings inside the outer edge of the rim base and fastens. All types are fitted for clincher and straight-side tires.

UNITED RIMS.

United Rim Co., Akron, O.

Type—Quick Detachable, Demountable and Quick Detachable-Demountable.

Features—Types are exhibited under the company nomenclature of Nos. 1, 2, 3 and perhaps 5, the first three both demountable and Q. D.; No. 5 a new type, now in the hands of the makers, and certain internal problems govern as to whether it will be shown. No. 1 quick detachable has a base which is shrunk permanently onto the wheel rim and takes tires of the clincher or straight-side type; locking of the inner side ring, which is the part that holds the device together, is accomplished by means of two L-shaped lugs and a T-bolt. The front side ring of No. 2 quick detachable is secured by means of an L-shaped split locking ring, engaging a groove in the rim base. No. 3 quick detachable is circumferentially split and is held together by a series of bayonet hooks and lugs or frets. Opposite rotary motion of the sections locks and unlocks the rim. In the demountable types, No. 1 consists of side rings, rim base and locking nuts, the base being solid. This rim is built for all straight-side and clincher tires, as is No. 2, which is similar to No. 1. No. 3 demountable has a split base, which is held together by a flange on one side of the felloe band and a nut clamp and wedge on the opposite side. Different forms of base permit of the use of every different type of tire.

Endless side rings constitute a feature of all United rims.

FISK REMOVABLE RIMS.

Fisk Rubber Co., Chicopee Falls, Mass.

Types—Two, for single and dual tires.

Features—Exceptional ease of removal and a continual bearing surface. The rim has but three essential parts—wheel rim, tire rim and expanding ring. The tire rim is flat and hollow, eliminating considerable weight; the wheel rim is beveled on one side and the expanding ring has a beveled side to meet the bevel of the wheel rim. The ring is drawn into place by five bolts which pass through the expanding ring, wheel rim and felloe, the tightening of the nuts locking the tire rim into place. An angle valve eliminates the necessity for a valve hole in the rim.

ASHLEY AND FUNK RIMS.

General Rim Co., Broadway and West 64th street, New York City.

Types—Demountable. Also Ashley wire wheel with demountable rim.

Features—These products are of recent origin. The Ashley wire wheel has a demountable rim which is carried upon a felloe band, as on a wood wheel, but the novelty of the device is its locking scheme. The Ashley rim is pushed onto the felloe band, where it rests upon a raised bead at the back; the front side of the rim contains a groove and in the felloe band, fitting into this groove, is a split ring which is contracted or expanded by the turning of one toggle nut. When expanded it holds the rim in place and when contracted permits easy release.

The Funk rim is split across and is removed from the tire by the application of an operating tool which causes the rim ends to separate and overlap by several inches, thus compelling the tire to loosen. The rim is bolted on.

BAKER RIMS.

Baker Rim Co., Chicago, Ill.

Types—Demountable. For wood and wire wheels.

Features—The newest Baker rim is a demountable for wire wheels, which differs from the ordinary demountable construction in that essential parts are reduced to a minimum, there being no flat felloe band which is the regular form of support in demountable construction. The wire spokes

Digitized by Google

attach to channeled band of special construction and the rim rests directly upon this, being locked with bolts and locking plates. Another Baker type is the Bolted-On, for which, as in the case of the wire wheel rim, is claimed ease of handling lightness, simplicity and waterproof qualities. Either clincher or straight-side tires may be used by the reversal of side rings. The Bolted-On rim is split across, which makes the removal of a tire simple; the split is covered by a valve stem spreader, protecting the tube. The rim is held together by an anchor plate into which fit four driving studs on the rim, two on each side of the split, the plate being held to the rim by a lock nut. The valve stem protrudes through a hole in the rim and anchor plate.

McCue Rims and Wire Wheels.

McCue Co., Buffalo, N. Y.

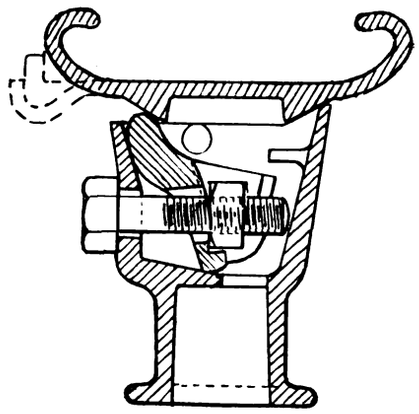
Types—Rims, Q. D. with reversible flanges.

Features—Fewness of parts and ease of operation are factors in the McCue rim, the former helping to accentuate the light weight which is claimed for wire wheel construction. The rim, which is new, consists merely of one band, which takes the place of both felloe band and rim base and which, at the outer edges, has two grooves containing the ends of the wire spokes. These grooves also serve to seat the flanges, which will take either Q. D. or straight-side tires by the reversal of the flanges. The McCue wheels are designed to fit the McCue or any other axle.

Peck Wheels.

Peck Wheel Co., Chicago, Ill.

Type—Spring and cushion.



Features—Piston spokes, pivoted at rim and hub, are the sources of resiliency; wheels are made in Models A and B, the latter, a new design, differing from the former in that it is equipped with an airless instead of a pneumatic tire. The load is supported by the upper spokes of the wheel at all times; the spoke consists of a cylinder and piston, the latter obtaining its first springing power from a spiral spring within the cylinder and latterly from an air cushion at the head of the spoke. The spokes of the lower half of the wheel are not called upon to sustain any of the load. The pivoting of the spokes is designed to afford a flexible drive similar to drive through the springs, the axle, in starting, turning ahead of the rim. Parts are interchangeable; noiselessness and ability to operate without necessity for adjustment are claimed.

Newmastic Rims.

Newmastic Co., New York City.

Type—"No-felloe" demountable.

Features—Made under the Gibson patents, covers a demountable rim with no felloe; the spokes are tenoned to receive a clamp which, at its outer end, consists of a channel-like cavity of which the inner edge is 7/32 inch higher than the outer. The rim is fitted with angular surfaces, the one at

the inner side resting upon the higher edge of the clamp while the angular surface at the outer edge is pressed upward and toward the inner side of the wheel by a short arm, operated by a bolt. In case it is desired to use other types of rims with the clamps, the angular surfaces can be riveted into place. Claims for this construction are: Economy of construction, strength and security, the wheel being expanded into the rim instead of vice versa; light weight, facility of operation.

Firestone Rims.

Firestone Tire & Rubber Co., Akron, O.

Types—Quick Detachable - Demountable, for single or dual tires.

Features—Rim and tire can be removed or tire can be removed without removing rim from wheel; rim base is not split, which prevents water getting into the tire through this part; operations are simple and easy; parts are few and do not rust together; no rim tools. The rim consists of clincher side ring and locking ring, clamping ring, rim base and nut clamp. The clamping ring makes the rim adaptable to variations in wheel sizes.

Sewell Cushion Wheels.

Sewell Cushion Wheel Co., Detroit, Mich.

Cushion wheels which are made very resilient by the use of two bands of rubber—the usual tire on the rim and a second rubber cushion between the inside of the rim and the periphery of the wheel proper. The inner band of rubber is clamped to both wheel and outer rim. Tire and inner band are solid rubber.

Features—Long life under hard usage; resilience equal to that of pneumatic properly inflated; none of the troubles that occur to pneumatic tires.

E-C Demountable Wheels.

E-C Sales Co., Chicago, Ill.

Types—Wood and wire.

Features—Drive through an irregular taper, all wheels are interchangeable; method of lacing the spokes from the inside of the hub to the outside of the rim and from the outside of the rim to the inside of the hub permits of the use of a short hub on the wire wheels without sacrificing anything in the way of lateral strength.

Jones Wood Wheels.

Phineas Jones & Co., Newark, N. J.

Types—All sizes of wood artillery wheels built on the wedge principle are stocked. Heavy wheels for use on commercial vehicles also are shown.

Features—Second growth hickory, well seasoned, used in the construction of the wheels; greatest care exercised in the fitting.

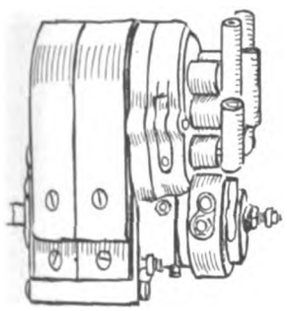
Wood Wheels.

Schwartz Wheel Co., Philadelphia, Pa.

Wood wheels built on the wedge principle are made in all sizes. Second growth hickory, well seasoned, enters into the construction.

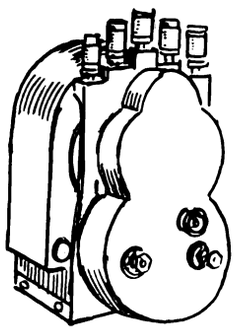
Ignition Apparatus

In the matter of ignition, development for the better part has been carried along lines indicated by past experience. At two points, however, the line of development has swerved to paths more or less radical in nature. The Hi-Fre-Co system, for instance, which has been taken up by the Dean Electric Co., of Elyria, Ohio, is an innovation which marks a distinct departure from the practice of igniting the fuel in the cylinders of internal combustion motors—the use of currents which are not only high at potential, but which also have a short period of oscillation—in other words, high frequency currents. The Dean system is not at all complicated; mechanically it is equally as simple as the ordinary magneto system; it embraces the use of a low-tension magneto incorporating a distributer. A series coil, or "kick" coil, is inserted in the path of the current between the distributer and the plug; on the plug the coil which is the very heart of the system is placed—a Tesla transformer, which not only raises the potential of the current to a point where it will jump the air gap, but also causes rapid oscillation which instills into the current properties or characteristics which are foreign to the ordinary high-tension spark and make for easier ignition of



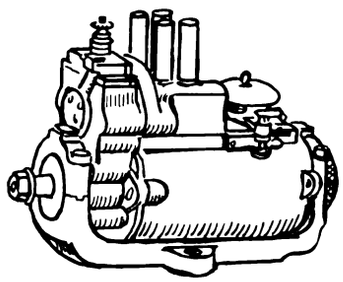
Digitized by Google

the compressed gases within the cylinders. The second radical departure from orthodox practice is examplified by the V-ray spark plug, produced by the V-Ray Spark Plug Co., of Marshalltown, Iowa. While in practically every other brand of plug on the market, and plugs are legion, the presence of a chamber around that part of the insulating material which enters the engine is claimed to prevent the formation of carbon and shields, to a greater or less extent, the electrode from the excessive heat, is deemed necessary; in the V-Ray plug, however, no chamber is provided. The insulating material, which is lava at the lower end and mica above, fits snugly into the shell and is rounded off to meet the sides of the shell. The construction, it is claimed, puts the spark where the spark should be, and by virtue of the very great heat—the lava insulation is capable of withstanding high temperature without disintegration—the accumulation of carbon is prevented, for it is immediately burned.

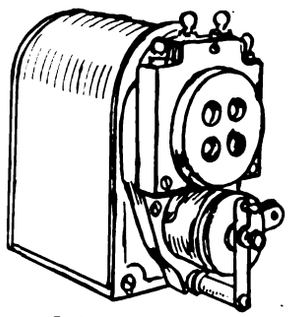


In the matter of spark plug improvement, development has taken three courses—the methods of mounting the insulators so as to allow for expansion and contraction under change of temperature without incurring rupture, and of packing the joint so as to prevent leak, have been altered somewhat; cognizance has been taken of the fact that alloys suitable for use with battery ignition are not capable of withstanding for long periods the high temperature of the magneto spark, and in several instances harder alloys and in one case platinum tips have been used for plug electrodes; combinations of plugs with priming cocks for the injection of gasolene into the cylinders in cases where priming cups are absent, and with ports provided with ball checks for the admission of gas in connection with ignition type of engine starter have appeared in a variety of forms. Combinations of porcelain or lava, which are ideal as insulators under high temperature and do not absorb oil and grease, and mica, which is not easily broken and more suitable for use outside the cylinder, in the insulation of plugs are now on the market.

Changes in magneto design have been more in the way of preventing the ingress of dirt and moisture than in the direction of increasing the sparking efficiency of the devices, and this practice, which has resulted in the enclosure of the magnets by plates and the elimination of corners and projections which are liable to collect dirt, is responsible for the clean-cut appearance of the devices taken as a whole. Automatic advance of the spark still holds its own, though with the manufactures of ignition outfits it is not being pushed to any great extent.



The more general use of the electric type of engine starter has given increased impetus to the development of quick break timers and distributers and unit spark systems for use in connection with the dynamos and batteries which must needs be carried; the under the hood location for spark coils and the development of coils of the "kick" switch type have made long strides.



KINGSTON

BRIGGS

MEA

CONNECTICUT

FOUR DIFFERING TYPES OF MODERN MAGNETOS

Remy Magnetos.

Remy Magneto Co., Anderson, Ind.

Models—Made in ten models: Models RF and RD are similar and are made in three sizes for use with either two-, four- or six-cylinder motors; Models L, S and T are made for use with either two-, four- or six-cylinder motors.

Features—Inductor type, no wires attached to revolving member; durable and efficient.

Prices—Models RD and RF, for two-cylinder motors, $46; four-cylinder motors, $50, six-cylinder motors, $52.

Splitdorf Magnetos.

Splitdorf Electrical Co., Newark, N. J.

Models—Made in seven models for motor cars and two models for motorcycles. Model B is for four-cylinder motors of the heavy duty type; Model D is for light four-cylinder motors; Model G is for two-cylinder motors; Models S and SS are for six-cylinder motors; the latter is for heavy motors; Model L is intended for use in connection with make-and-break ignition systems; Models O and T are for four-cylinder motors where the space is limited; model T has a vertical distributer block. Two new models incorporating the secondary winding in the armature are being made, but are not yet listed.

Features—Hot spark at low speeds; best of materials and workmanship.

Prices—Model B, $125; Model D, $100; Model G, $80; Model S, $125; Model SS, $140; Model L, $40; Model O, $90; Model T, $100.

Mea Magnetos.

Marburg Bros., Inc., New York City.

Models—Built in 22 models, two for single-cylinder motors, three for double cylinders, two for three cylinders, four for four cylinders, four for six cylinders, and one for eight cylinders in the single spark instruments; for dual ignition three models are built for four-cylinder motors and three for six cylinders. The respective models are styled as A1, BE1, A2, BE2, BD2, BK3, BH3, A4, BK4, BH4, CH4, A6, BK6, BH6, BH8, BK4 Dual, BH4 Dual, CH4 Dual, BK6 Dual, BH6 Dual, CH6 Dual. In each group the types listed last are for medium and heavy motors.

Features—Rotatable bell magnet insures the production of a spark which does not vary in intensity as the spark is advanced and retarded.

Prices—A1, $40; BE1, $58; A2, $48; BE2, $58; BD2, $73; BK3, $75; BH3, $98; A4, $60; BK4, $75; BH4, $98; CH4, $136; A6, $90; BK6, $105; BH6, $120; CH6, $155; BH8, $145; BK4 Dual, $115; BH4 Dual, $140; CH4 Dual, $180; BK6 Dual, $150; BH6 Dual, $165; CH6 Dual, $200.

Kent Unisparker.

Atwater Kent Mfg. Works, Philadelphia, Pennsylvania.

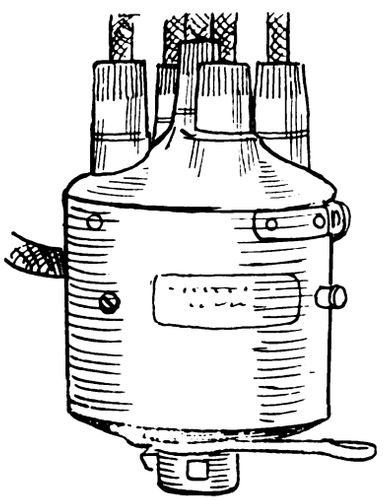
Models—Seven models, the two smaller of which are for single-cylinder and two-cylinder opposed motors and are without a distributer; the other models for 2, 3, 4, and 6 combining an automatic timing advance; all include a distributer.

Features—One spark instead of a shower

Digitized by Google

of sparks; very rapid break, which gives a hot spark and conserves electrical energy; moving parts very light, so that wear is reduced to a minimum; adaptable to all motors.

Prices — Single-cylinder with standard coil, $18; double opposed, with standard coil, $20; two-cylinder with standard coil, $27; with kick switch coil, $30; three-cylinder with standard coil, $30; with kick switch coil, $33; four-cylinder with standard coil, $30; with kick-switch coil, $33.



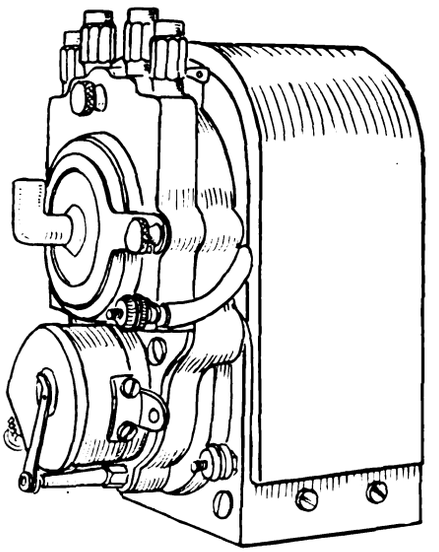
Hi-Fre-Co Ignition Systems.

Dean Electric Co., Elyria, O.

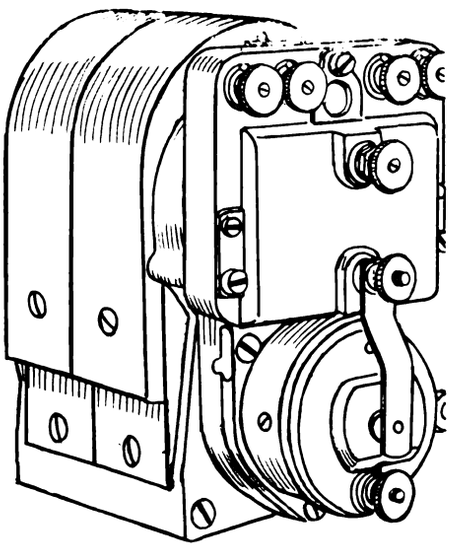
Models—One model for use in connection with a four-cylinder motor and comprising a long-tension magneto, a set of series coils, a set of spark plugs provided with Tesla coils.

Features—The use of high-frequency current for the ignition of gases; not subject to short circuiting, since all wiring right up to the plug carries low-tension current; large range of spark plug openings; freedom from burning of plug electrodes; non-fouling of plugs.

Price—$75.



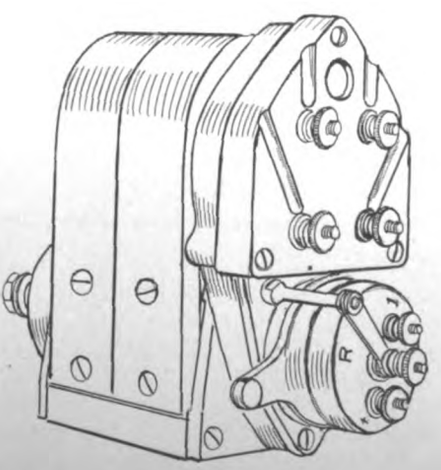
KENT UNISPARKER



Kingston Magnetos, Coils and Plugs.

Kokomo Electric Co., Kokomo, Ind.

Models—Kingston magnetos built in three models. Model B is designed for use either with two- or with four-cylinder motors. Model C is for use with single- or double-cylinder motors. Model D is similar to Model B, save that an extra magnet has been added by way of increasing its efficiency, and it has been made quite a little heavier for use on heavy-duty, slow-speed motors. Coils in a variety of models are made, the more important being the dash coil with switch, which is put out for 1-, 2-, 3-, 4- and 6-cylinder motors; the dash coil with back terminals, which is put out in similar sizes; open box coils made for motors with from one to four cylinders inclusive; covered box coils made in similar sizes and a special four-cylinder coil made for Ford cars which embraces the use of a master vibrator. The Kingston mica plug is built in three sizes, ½-inch, A. L. A. M. standard, and metric.

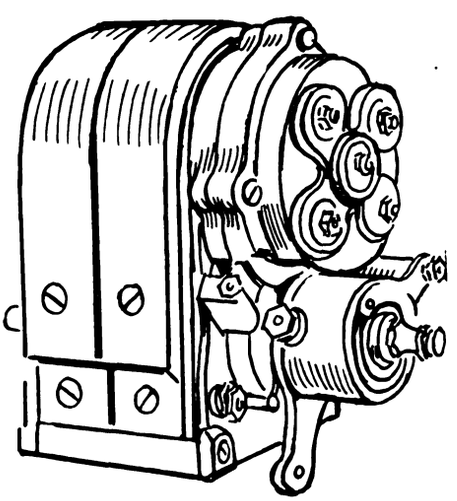


REVISED REMY

ELYRIA-DEAN HI-FRE-CO

Features—On the magnetos, ball bearings

SIMMS



are used throughout, all parts requiring attention are readily accessible without the use of tools. On the coils, the secondary terminals are protected by special imported black glazed porcelain.

Prices—Magnetos: Model B, $60; Model C, $40; Model D, $75. Prices include transformer coils. Dash coils: 1-cylinder, $7.50; 2-cylinder, $13.50; 3-cylinder, $19.50; 4-cylinder, $25.50; 6-cylinder, $37.50. Open box coils: 1-cylinder, $4.50; 2-cylinder, $9; 3-cylinder, $13.50; 4-cylinder, $18. Closed box coils: 1-cylinder, $4; 2-cylinder, $8; 3-cylinder, $12; 4-cylinder, $16. Special Ford coil, $30. Half-inch Kingston plug, 75 cents; A. L. A. M., 90 cents; Metric, 90 cents.

Rhodes Unit Spark System.

New York Coil Co., New York City.

Models—Unit Spark system built in five models for single, double opposed, double vertical, three- and four-cylinder motors. The models for double vertical, three- and four-cylinder motors are provided with a rotary distributer; a distributer is not necessary on the other two models. Rhodes timers and high-tension distributers are made in four models for two-, three-, four- and six-cylinder motors. Plain box coils are made for single-, two-, three-, four- and six-cylinder motors, known, respectively, as Models 10, 11, 12, 13 and 14. Models 60, 61, 62, 63 and 64 are covered box coils for the respective motors. Models 20, 30 and 40 are covered box coils with removable units for single-, three- and six-cylinder motors, respectively. Models 25 and 35 are similar, but differ in that they are provided with an improved switch.

SPLITDORF

Features—Unit system: Single spark, economy of operation; impossible for contact to be made with the motor stopped or turning in the wrong direction. Timers: Length of contacts can be varied by turning one screw while the motor is operating; wearing surfaces do not make and break contact; rubbing contact is established which insures clean contact points. Coils:

Digitized by Google

All secondaries are sectional winding; windings anchored in the containing case; platinum-iridium contact points.

Prices—Unit Spark system: Single-cylinder, $18; double opposed, $20; double vertical, $27; three-cylinder, $30; four-cylinder, $30. Timers: Two-cylinder, $16; three-cylinder, $17; four-cylinder, $18; six-cylinder, $20. Coils: Model 10, $7.50; 11, $15; 12, $22.50; 13, $30; 14, $45; 60, $6.25; 61, $12.50; 62, $18.75; 63, $25; 64, $37.50; 20, $12; 30, $30; 40, $50; 25, $20; 35, $35.

Motsinger Auto-Sparker.

Motsinger Device Mfg. Co., Lafayette, Ind.

Models—One model, which delivers up to 5 amperes at 15 volts.

Features—Frictional contact with the wheel of the motor reduces the trouble of insulation to a minimum; governor ensures the operation of the device at a constant speed; the capacity of the Auto-Sparker having been increased, it now is utilizable for lighting several lamps as well as for the operation of the ignition system.

Price—$10.

Briggs Magnetos.

Briggs Magneto Co., Elkhart, Ind.

Models—Made in three models: N-4 is for use with four-cylinder motors; N-6 is for use with six-cylinder motors and D-4 for use with four-cylinder two-cycle motors.

Features—Guaranteed for life of the car to which they are attached; hot spark at low speeds; require no attention.

Prices—N-4, $70; N-6, $80; D-4, $90, with coils.

Herz Magnetos.

Herz & Co., New York City.

Models—For automobiles, built in a single model for use with four-cylinder motors; known as R4.

Features—Fully enclosed with aluminum housing; U-shaped magnets, ground to fit, so as to prevent ingress of dirt; compact and light.

Prices—To the trade only.

Simms Magnetos.

Simms Magneto Co., New York City.

Models—Made in two models, SU4 for four cylinder motors delivering a single spark to each cylinder and SU4-S, dual for four-cylinder motors.

Features—Very hot spark at low speeds with spark retarded; compactness; but little wiring; durability.

Prices—Not settled.

K-W Magnetos.

K-W Ignition Co., Cleveland, Ohio.

Models—Made in several models and sizes.

Features—All are of the low tension type and can be belted, geared or driven by friction wheel from any convenient revolving member.

Pittsfield Magnetos and Coils.

Pittsfield Spark Coil Co., Pittsfield, Mass.

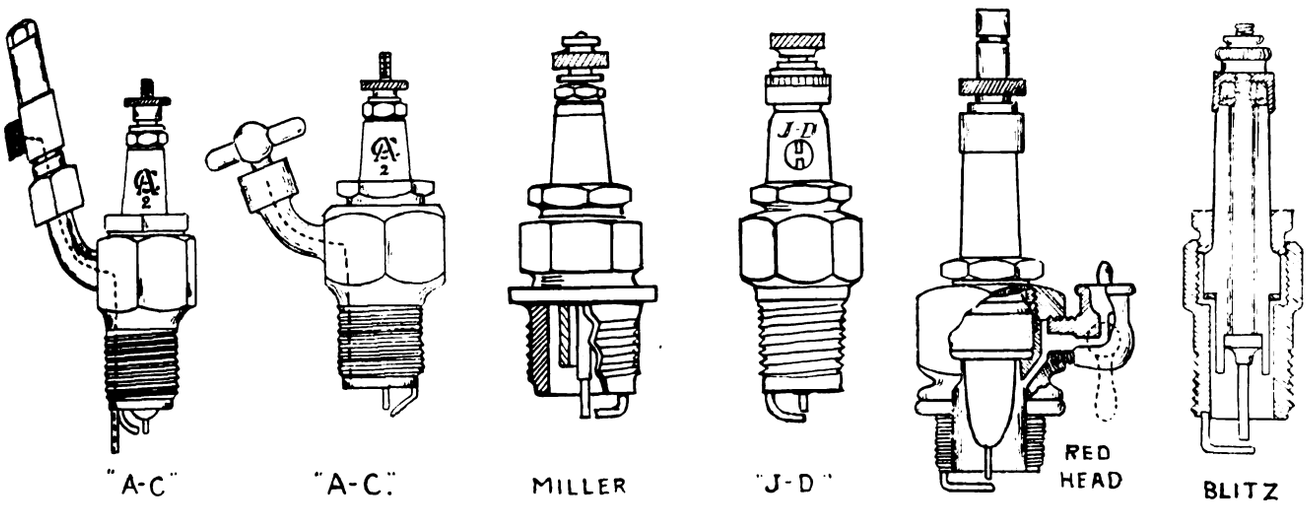
High tension magnetos of the latest type and a full line of coils for all kinds of ignition work. Also Jewel spark plugs with mica, porcelain and combination insulation.

National Coils.

National Coil Co., Lansing, Mich.

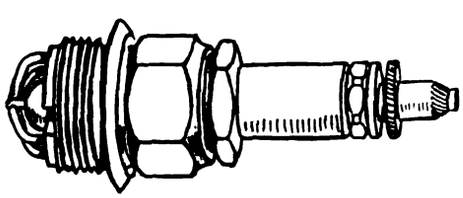
Spark coils of various designs and sizes for use with all types of ignition systems.

SPARK PLUGS.



V-Ray Spark Plugs.

Illinois V-Ray Sales Co., Chicago, Ill.



Models—Eight models, four of which are provided with porcelain insulators and four with lava and mica insulators; in each class there are a Standard half-inch plug, a metric plug, a Standard ⅞-inch plug and a Standard motorcycle plug.

Features—The lava-mica plug is distinctly new and radical in that no chamber around the insulator is provided, the lava insulation protruding in the form of a dome. Four electrodes converge toward the central electrode on all V-Ray plugs, the ends of each of the four being provided with a V-shaped slot.

Prices—All sizes of the lava-mica plug sell at $1.25; of the porcelain plug, at $1.

PRIMING PLUGS AND OTHER PLUGS OF RECENT ORIGIN

V-RAY "CHAMBERLESS"

Heinze Magnetos and Coils.

Heinze Electric Co., Lowell, Mass.

Spitfire and Breech-block Plugs.

A. R. Mosler & Co., New York City.

Models—Spitfire plugs made in six models for ½-inch or metric sizes and four models in A. L. A. M. standard. A special mica racing type also is made. Breech-block plugs are made in two models in both mica and porcelain. Umph timers are made for one-, two-, three- and four-cylinder motors.

Features—Spitfire plugs have a closed base which serves as an electrical condenser, protects the electrodes and heats the mixture in the chamber; Breech-block plugs have a core which is separated from the shell simply by turning a handle a quarter turn.

Prices—Spitfire plugs, from $1.50 to $3.50; Breech-block plugs, from $1.50 to $2.95. Umph timers, one-cylinder, $4; two-cylinder, $4.50; three-cylinder, $4.75; four-cylinder, $5.

A-C Plugs.

Champion Ignition Co., Flint, Mich.

Models—Made in eight models, No. 1 Standard, No. 1 long, No. 2 special for Ford cars, No. 3 short for motorcycles, and W. P. water proof, with a priming cup attachment, with acetylene engine starter check

Digitized by Google

valve, and with an acetylene gas priming inlet without the check valve, the W. P. being a recent addition to the line.

Features—Method of mounting the porcelain with a brass and a tapered steel washer, besides the copper asbestos washer to insure a gas-tight joint.

Prices—Standard, long, short and Ford models, $1; W. P., with priming cup, and with gas attachments, $1.25.

Mac-Kae Blitz Plugs.

Randall-Faichney Co., Boston, Mass.

Models—Made in ½-inch, ⅞-inch and metric sizes.

Features—Double insulation construction, mica tube surrounding central electrode and porcelain shell surrounding the whole. Oil soaking into the mica cannot affect the insulation and a breakage of the porcelain need not incapacitate the plug.

Prices—All sizes, $1.

Sootproof Spark Plugs.

C. A. Mezger, New York City.

Models—Made in a variety of models and sizes to fit all motors and suit all conditions.

Features—Double chamber with large area and the very thin electrodes work to prevent the formation of carbon at points where it can short-circuit.

Price—All models, $1.

Red Head Spark Plugs.

Emil Grossman Co., New York N. Y.

Models—Made in four models—Regular, with porcelain insulator, Combination, with combined porcelain and mica insulator, Priming, with a priming cup attached to the shell, and Platinum Point, with electrodes tipped with platinum.

Features—Ample firing chamber to prevent carbonization; flexible cone under bushing to distribute pressure evenly. Priming plug injects gasolene directly over the electrodes. Platinum point plug is made to withstand the very hot spark of a magneto.

Prices—Regular, $1; Combination and Priming, $1.50; Platinum point, $2.

Splitdorf Plugs.

Splitdorf Electrical Co., Newark, N. J.

Models—Made in a single model, in sizes suitable for all motors.

Features—Mica insulation surrounded with a porcelain cap for protection from moisture.

Prices—½-inch, $1; other sizes, $1.25.

J-D Spark Plugs.

Jeffery-Dewitt Co., Detroit, Mich.

Made in a variety of sizes and models; especial attention is given to the Visable, which incorporates a supplementary gap in the body of the plug.

Features—Durability.

STORAGE BATTERIES.

Exide Batteries.

Electric Storage Battery Co., Philadelphia.

Exide, Hycap-Exide, Ironclad-Exide, Thin Plate, Chloride and Tudor batteries are made. The Hycap and Ironclad and Thin Plate models are intended primarily for electric vehicle use.

Features—Light weight, durability, efficiency.

Vesta.

Vesta Accumulator Co., Chicago, Ill.

Models—One model electric lighting system.

Features—The Vesta generator is of the permanent magnet-electro-magnet type in which current control is obtained by a centrifugally operated rheostat which automatically inserts resistance in the field windings. Storage batteries and a variety of lamps also are produced.

LBA Batteries.

Willard Storage Battery Co., Cleveland, O.

Models—Made in a variety of different forms and sizes, special attention being given to batteries for use in connection with lighting and starting systems.

Features—Pure Para rubber jars; four-plate supports of hard rubber; expansion chamber to take care of volumetric changes of solution during charge and discharge; durability and efficiency.

Philadelphia Storage Batteries.

Philadelphia Storage Battery Co., Philadelphia, Pa.

Storage batteries in various sizes and types for all classes of service.

Gould Storage Batteries.

Gould Storage Battery Co., New York City.

Made in various sizes and types for motor vehicle work.

Gasolene Motors

Motors, like complete cars, have made their greatest strides in matters of detail, and the measure of the improvements so made may be said to be the number of engines installed in cars, both pleasure and commercial—and the number is something surprising. The undoubted advantages of the block-cast four-cylinder motor have taken a strong hold, and a number of fine examples of the type are produced, as well as "sixes," which are helping the car makers to meet the insistent call for those models. The practice of casting on crankcases magnetc brackets on which practically any magneto can be secured has been followed, logically, by the provision of means for attaching electric lighting and starting dynamos and motors, as well as driving means and casings.

In addition to the motors that have be come familiar, there are two that are novelties of a striking sort, to say the least. One is the Scott, which is an ingenious "shot" at the turbine idea, and the other the Magic, which has crescent-shaped sliding valves let into grooves cut into its cylinder walls, and which is credited with amazing power. Another motor that is "different," though not unfamiliar, is the Church, while the "old liners" — Continental, Rutenber, Buda, Model, Waukesha, Northway—are looking better and doing better and are offered in greater variety than ever.

Rutenber Motors.

Rutenber Motor Co., Marion, Ind.

Four-cylinder and six-cylinder motors; five models. Model 27 is a four-cylinder block-cast motor, 3¾ x 5¼ bore and stroke, L-head type; built in three styles—standard crankcase with outside flywheel, unit power plant type, and unit type with drive and housing for electric lighting dynamo. Model 28, six-cylinder, bore and stroke 3¾ x 5¼ inches; L-head type. Made in both standard and unit types. Model 29 has cylinders 4¼ x 5¼ inches bore and stroke. Model RA has 4½ x 5 bore and stroke; 32 horsepower; L-head type.

Features—All valve mechanism closed; high grade construction throughout; different crankcase styles to suit different needs; flywheels made to take either disk or cone clutches. Models 27 and 28 are new models.

Buda Motors.

Buda Co., Chicago, Ill.

Models—Seven models, all four-cylinder, block-cast, L-head motors with enclosed valve mechanisms. The dimensions of models T, TM-3 and TM-4 are identical and stand at 4¼ and 5½ inches for the bore and stroke, respectively. Model M, which is put out especially for truck use and is provided with a governor, has a bore and stroke of 3¾ and 4½ inches. Model N, which is especially adapted to take Ward Leonard electric lighting system and which is furnished with either pump or thermo-siphonic circulation, has a bore and stroke of 4⅛ and 5¼ inches. The construction of model

Digitized by Google

Q, which is dimensioned at 4⅛ and 5½ inches, also embraces the use of a governor. Model Q is a long stroke type with bore at 3¾ inches and stroke 5½ inches. Models T, TM-3 and TM-4 all have bores and strokes of 4¼ and 5½ inches, respectively; T embraces the use of a pump for effecting the circulation of the cooling water; with both the others either system can be adapted. TM-3 and TM-4 differ only in that the former is made with supports for three-point suspension, while the latter is provided with four supporting points. Models Q, O and T motors also are put out in unit power plant form, the clutch casing to which is attached the gearset being bolted to the crankcase. In combination, the plants are known as models QU, OU and TU.

Features—Clean-cut design, accessibility and adaptability.

Model Motors.

Model Gas Engine Works, Peru, Ind.

Models—Made in five models: Four are four-cylinder motors and have bore and stroke dimensions of 3½ x 4½ inches, 3⅝ x 4½ inches, 4¼ x 5 inches, and 4¼ x 5½ inches respectively; the fifth model is a six-cylinder motor, with bore and stroke at 4¼ x 5½ inches, respectively. Any of the motors can be had in unit power plant form, if so desired.

Features—Cylinders cast separately; L-head type, with the valve mechanism enclosed; five-bearing crank shaft; cam shaft formed with cams integral; domed pistons; oil return grooves on the pistons; spiral cut gears running in oil; constant level splash lubrication.

Continental Motors.

Continental Motor Mfg. Co., Detroit, Mich.

Models—New Model 6-C has cylinders measuring 4⅛ x 5¼, cast in pairs, rated at 45 horsepower. Put out in unit power plant, fitted with a dry multiple disk clutch and either three- or four-speed gearset.

Features—Valves all on right side for use in connection with left-hand steer cars; designed with supports suitable for the accommodation of all types of engine starters; three-point suspension, oiler on pivot support.

Magic Motors.

Aristos Co., New York City.

Models—Made in a single model with four block-cast cylinders measuring 85 x 120 mms. bore and stroke.

Features—Motor is of brand new and unique design throughout. The valves are crescent shaped and operate in similarly shaped spaces between the piston and the piston wall, inlet and exhaust valves being positioned on opposite sides of the cylinder. The valves are operated from the camshafts through the intermediary of box cams which permit of lag in the operation save at times when the valves are being opened or closed. Combined force feed and splash lubrication; separable cylinder heads all four cast in a block.

Scott Turbines.

Semple S. Scott, Chicago, Ill.

Models—Made in three models, 40-, 60- and 120-horsepower and designed for attachment to any make of motor car.

Features—Light weight, high efficiency, simplicity, no valves or springs, no muffler.

Prices—$400, $500 and $600 for the respective sizes.

Church Pneumatic System.

Automatic Motor & Engineering Co., Chicago, Ill.

Motors and transmission elements in several sizes and types.

Features—Pneumatic clutch and transmission.

Northway Motors.

Northway Motor & Mfg. Co., Detroit, Mich.

Gasolene motors of latest type for both pleasure and commercial vehicles.

Waukesha Motors.

Waukesha Motor Co., Waukesha, Wis.

Gasolene motors of latest type for use in commercial and pleasure cars.

Signaling Devices

Although, strangely enough, most of the manufacturers of bulb horns report that their outputs have suffered no shrinkage, the years' developments, so far as horns are concerned, have been confined wholly to electric signalling devices, and, if the underhood type is excepted, the developments are chiefly matters of size and price. A small horn at a relatively popular price has been added to practically all of the better known lines. And that the field is an attractive one is indicated by the entry into the business of several new manufacturers, the most recent and most notable of them being the Sparks-Withington Co. of Jackson, Mich., whose "Sparton" horn will be displayed for the first time. Sparton signals are of motor driven type.

Klaxon Signals.

Lovell-McConnell Mfg. Co., Newark, N. J.

Models—Klaxon made in two models, known as Type L and Type S, both embracing right angle construction—that is, with the motor set so that the cam rotates at right angles to the diaphragm. Type L is fitted with a long projector; Type S has a short bell. Combination Klaxon is similar to Type L save that a bulb horn enters into combination with it. Klaxonettes, which are a smaller and less costly edition of the Klaxon also embrace the use of a motor, which, however, is housed in the casing behind the diaphragm; similarly are made in two models with long and short projectors known as Models L and S, respectively; a combination Klaxonette also is produced. The Klaxet, which is the newest addition to the Lovell-McConnell line of warning signals, is similar to the Klaxonettes; the parts, however, are smaller and lighter. But one model is built.

Features—Motor driven; distinct, penetrating sound.

Prices—Finished in brass, black enamel, black enamel and brass or nickel, Model L Klaxon, $35; Model S, $30; Combination Klaxon, $50; Model L Klaxonette, $20; Model S, $20. Combination Klaxonette, $30. Finished in all nickel or gun metal the prices are $38, $32, $55, $22, $22 and $33 for the respective signals. The Klaxet finished in black enamel or black enamel and brass or nickel sells for $12.

Tuto and Rexo Signals.

Dean Electric Co., Elyria, Ohio.

Models—Tuto signals made in two models, with long and with short projector, the mechanism in each case being identical. Tutoette horns are slightly smaller and lighter than the Tuto models; the mechanisms are similar. Like the Tuto, Tutoette signals are built in two models, with long projector and with the short projector. The Rexo horn is made in one size only and differs from the other models in that it is smaller and produces but a single tone.

Features—Tuto and Tutoette horns are capable of emitting two tones—loud and subdued—at the will of the operator. All are operated by electro magnetic vibrators.

Prices—Tuto with either long or short projector and finished in brass, nickel, black enamel or black enamel and brass or nickel, $25. Tutoette, with either long or short projector, in brass, $17.50; in nickel, black enamel or black enamel and brass or nickel, $18.50. Rexo horn, $10, finished in black enamel with nickel trim.

Newtone Signals.

Automobile Supply Mfg. Co., Brooklyn.

Models—Newtone signals: Made in five models. Type M has a long projector with a flared end; Torpedo has a similar mechanism with a torpedo projector; Type N has a short, flared projector; Combination

Digitized by Google

has a bulb horn combined with a torpedo electric; Superior is constructed of lighter materials. Also Rubes bulb horns, made in 17 models of various sizes and shapes.

Features—Electric motor drive; loud, penetrating sound emitted by virtue of the motor-vibrated diaphragm; low current consumption; accessibility. Rubes bulb horns are fitted with non-corrodable reeds.

Prices—Type M, $20; Torpedo, $20; Type N, $18; Combination, $30; Superior, $10. Bulb horns from $1.25 to $5.

Long Horns.

G. Piel Co., Long Island City, N. Y.

Models—Made in three models; Model S for attachment to the side of the car; Model D for attachment to the dash, and the Junior, which is similar to Model S, but smaller.

of brass pipes tuned so as to give a mellow chime. The Jubilee is made in four sizes—Nos. 31, 32, 33 and 34.

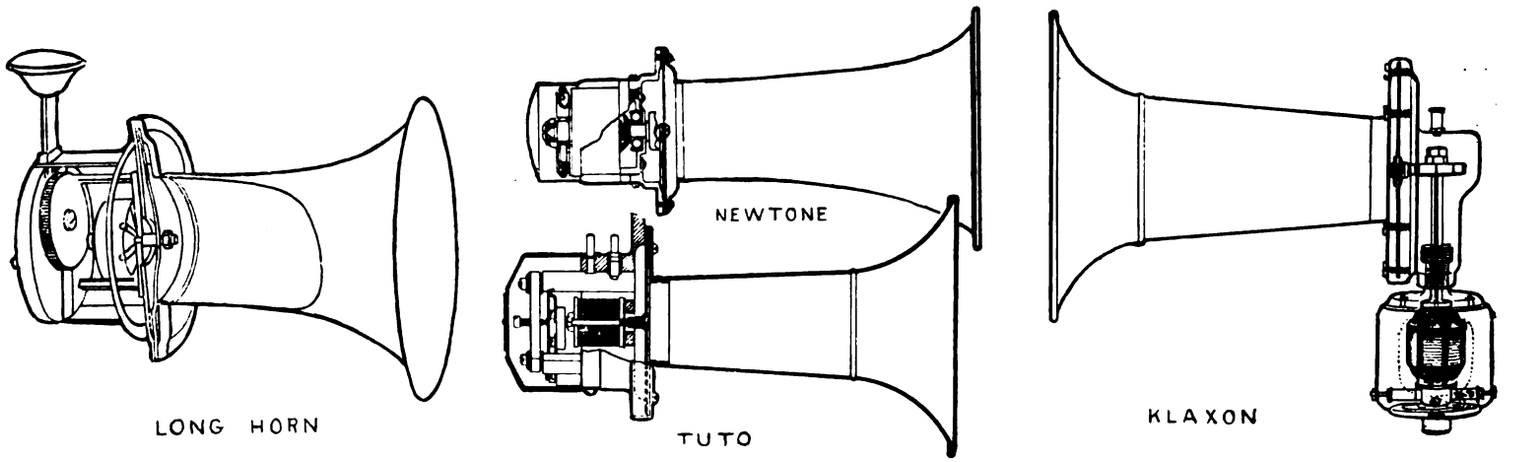
Features—Standard threaded pipe fittings which can be had with the horns, or special clamp fittings which are regularly supplied reduce the labor of attachment to a minimum. Large passages militate against choking. Pleasing mellow tone.

Prices—Rear-of-Muffler type Jericho: No. 0 and No. 1, $7; No. 2, $8; No. 3 and No. 23, $9; No. 4 and No. 24, $10. Cut-out type: No. 2, $7; No. 3, $8. Jubilee: No. 31 and No. 32, $8; No. 33, $9; No. 34, $10.

Sparton Signals.

Sparks-Withington Co., Jackson, Mich.

Models—Made in two models, both motor driven. The dash type is 12 inches long and has a flared bell 7½ inches in diameter; tical mechanisms, but with projectors of different lengths. Model A is fitted with the long projector. Model M is the short model.



Features—Electro-magnetic vibrator type with but a single moving part in the shape of an armature; heavy contacts; simple adjustment.

Prices—Model A finished either in black enamel and brass, black enamel and nickel or all black enamel, $15; Model M finished in the same manner, $12. Prices include all necessary fixings.

Riley-Klotz Horns and Whistles.

Riley-Klotz Mfg. Co., Newark, N. J.

Models—Bulb horns are made in 30 models, which differ from each other in the shape of the horns and bells as well as in size. The largest has an eight-inch bell. An under-the-hood model, 21 inches long,

EXPOSING THE INSIDES OF FOUR OF THE BEST KNOWN WARNING SIGNALS

Features — Mechanically vibrated diaphragm type; operated by the pressure of the hand on a button. Vanadium steel diaphragm is corrugated to prevent rupture. Teeth of the cam are rotatable rollers, reducing wear. New dashboard model can be attached to any convenient portion of the car.

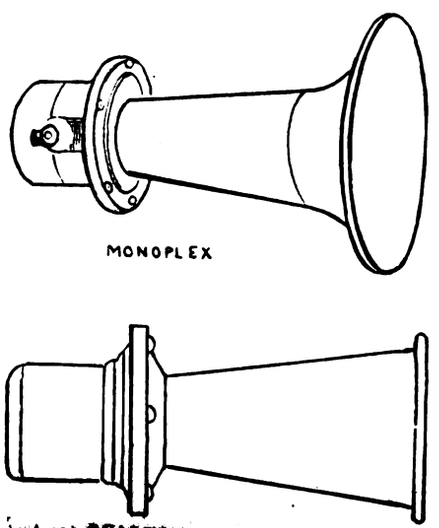
Prices—Model S, in brass or black enamel, $18; nickel, $20; Model D, in brass or black enamel, $19; nickel, $21; Junior, in black enamel, $19; nickel, $21; the Junior is furnished in brass or black enamel and sells for $11.

Jericho and Jubilee Horns.

Randall-Faichney Co., Boston, Mass.

Models—Made in two types for attachment at the rear of the muffler where permissible and for attachment to a three-way valve, which takes the place of a muffler cut-out. The rear-of-the-muffler type is made in seven sizes—Nos. 0, 1, 2, 3, 4, 23 and 24. Two sizes only of the cut-out signal are made—No. 2 for cars below 25 horsepower and No. 3 for cars above 25 horsepower.

The Jubilee horn is similar in design, [illegible] chamber present



the under-the-hood type is similar as to mechanism but is not fitted with a flared bell and is slightly shorter.

Features—Loud and piercing, but not distressing tone; specially designed commutator; laminated armature and field piece.

Monoplex Signals.

Atwater-Kent Mfg. Works, Philadelphia, Pa.

Models—Made in two models with iden-

is among the newer designs. The Nightingale exhaust whistle is made in three sizes for automobile use, for cars up to 35 horsepower, for cars from 36 to 80 horsepower and for cars over 80 horsepower.

Features — Loudness; non-corrodable reeds; durability.

Prices—From 1.50 to $6. Nightingale whistles, $7.

Gabriel Exhaust Horns.

Gabriel Horn Mfg. Co., Cleveland, O.

Models—Single tube horns made in four sizes, 25, 28, 32 and 34 inches long, respectively. Trumpet horns with four tubes made in two sizes with 28- and with 32-inch tubes. The Musical Wonder, with 10 tubes, also is made in small and large sizes.

Features—Mellow chord; simple installation.

Prices—Single tube, 25-inch horn, $15; 28-inch, $18; 32-inch, $25; 34-inch, $35. Trumpet, small, $75; alrge, $80. Musical Wonder, small, $175; large, $200.

Nonpareil Bulb Horns.

Nonpareil Horn Mgf. Co., New York City.

Models—Made in a variety of sizes and shapes for attachment either to the dash or under the hood.

Digitized by Google

Carburetters

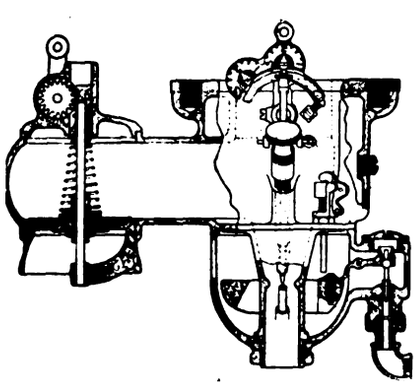
With the "rising generation," if the term be pertinent as a designation for manufacturers of carburetters of new design, a marked tendency exists toward producing multiple jet carburetters with jets numbering from two all the way up to about twenty, in an effort to obtain constancy of mixture. Those who are longer in the field, however, and whose products have become standardized, still hold to the employment of a single or, at most, two jets, and not in all cases is the fuel opening varied according to the throttle opening as a means of obtaining that ever to be desired constancy of mixture.

For the most part, improvement in carburetters has been along lines designed to render simple and convenient the adjustment of those parts which, in all save a few instances, it has been found needful or advisable to make adjustable; to this end provision for dash control of either the needle valve or the auxiliary air inlet has become almost universal. Apart from the consideration of convenience, an effort to attain greater fuel economy is the natural result of the practice for adjustments which make for better working conditions can be made under running conditions.

Verging on the radical and also on the mysterious, since the situation will not permit reference to its construction, is the creation which marks the entrance of the Motsinger Devices Co., of Lafayette, Ind., into the realm of carburetter manufacturers, and which will be exhibited for the first time at the New York show. Though details are lacking, its makers assert that it can be proven that not only are fuel and air proportions invariable under all conditions of motor speed and work delivered, but that the carburetter is so economical that it will be sold with a guarantee of more miles per gallon than is possible with any other device. That newer ideas are incorporated in the device is indicated by the fact that the single adjustment which is carried to the dash or steering column is for temperature changes.

Other departures from well beaten paths are noticeable in the Feps carburetter, product of Schoen-Jackson Co., Media, Pa., in which the use of springs, cams and balls has been disregarded and in which the high speed jet is rendered operative at the correct time by the suction of the motor as evidenced by its action on the auxiliary air clack valve which has to do with the opening of the second jet, and in the near-startling arrangement of the float chamber in the A. B. C. carburetter, so that it is tilted as the throttle is opened and thereby the lower ends of the high speed jets are immersed and rendered operative. The device is made by the International Accessories Mfg. Co. of New York City. In both cases, however, the newer ideas appertain only to the mechanical arrangements whereby certain results are obtained and not to new basic principles or theories.

Just one other point is of sufficient importance to be included in the "tendency" class—the leaning of carburetter manufacturers toward the practice of supplying outside heat through the intermediary of a jacket around the mixing chamber for connection either with the cooling system or with the exhaust. This method of supplying heat has almost wiped out the practice of obtaining heated air from a jacket around the exhaust manifold.



Schebler Carburetters.

Wheeler & Schebler, Indianapolis, Ind.

Models—Made in six models, known as D, E, F, H, L, and O. Model D has a sliding disk throttle valve, a needle valve which is used for all speeds, and a single air inlet closed with a spring controlled clack valve around which a bi-pass leads for providing air at low speeds. Model E is similar, save that a separate low speed air inlet is provided. Model F embraces the use of a low and a high speed air passage, a butterfly throttle valve and a needle valve which is provided with two adjustments, for high and for low speeds, the needle being raised or lowered by an adjustable cam on the throttle spindle. It is also provided with a water jacket around the mixing chamber. Model H is similar, but is of the horizontal type and is not jacketed. Model L is of the vertical type, is provided with an adjustable cam on the throttle shaft for operating the needle valve as the throttle is opened and with a jacket around the mixing chamber for exhaust gases; it can be provided with a needle valve adjustment which connects to the dash. Model O is provided with a second jet which comes into operation when the car has attained a speed of twenty miles an hour and with a shut-off in the low speed air passage which is linked to the throttle stem so that it is closed as the throttle is opened; a butterfly valve positioned in the intake pipe for the hot air jacket serves to regulate the temperature of the mixing chamber.

Features—Constancy of mixture, ease of adjustment, economy of fuel, freedom from back-firing, choking and flooding; flexible.

Prices—Model D, ½-inch $13, ¾-inch $15, 1-inch $16, 1¼-inch $17, 1½-inch $22, 2-inch $44; Model E, ½-inch $13, ¾-inch $15, 1-inch $17, 1¼-inch $19, 1½-inch $30, 2-inch $50; Model F, 1-inch $18, 1¼-inch $20, 1½-inch $25, 1¾-inch $30, 2-inch $60, 2½-inch $80, 3-inch $100; Model H, ¾-inch $15, 1-inch $16; Model L, 1-inch $18, 1¼-inch $20, 1½-inch $25, 1¾-inch $30, 2-inch $60, 2½-inch $80. Model O prices are the same as for Model L.

SCHEBLER MODEL L

New Miller Carburetters.

New Miller Carburetter Co., Indianapolis, Ind.

Models—Made in a single model, five sizes from 1 inch to 2 inches.

Features—Springless; single jet; fuel passage controlled throttle opening.

Prices—1-inch, $14; 1¼-inch, $22; 1½-inch, $25; 1¾-inch, $30; 2-inch, $50.

Stromberg Carburetters.

Stromberg Motor Devices Co., Chicago, Ill.

Models—Made in four models, knows as A, B, C and G. A, B and C are of the single jet type; G, which is a new model, operates on the double jet principle, and is water jacketed.

Features—Non-corrodable metal used in the jets; removable venturi tube.

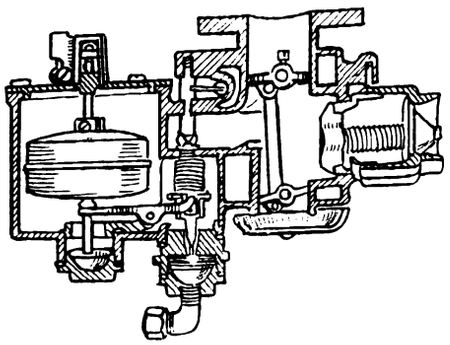
Prices—Model A, from $17.50 to $50; B, from $17 to $35; C, from $30 to $60.

Kingston Carburetters.

Byrne, Kingston & Co., Kokomo, Ind.

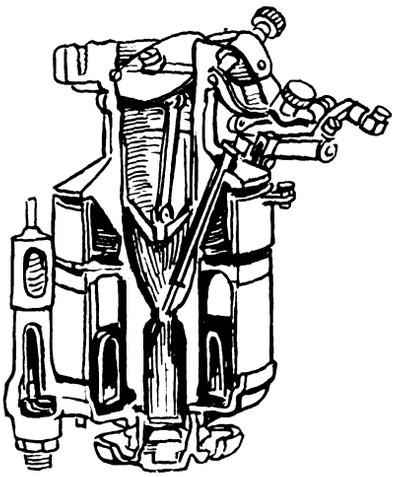
Models—Newest model, Y, is made in nine sizes from ¾ inch to 4 inches.

Features—Floating ball air inlet valve.



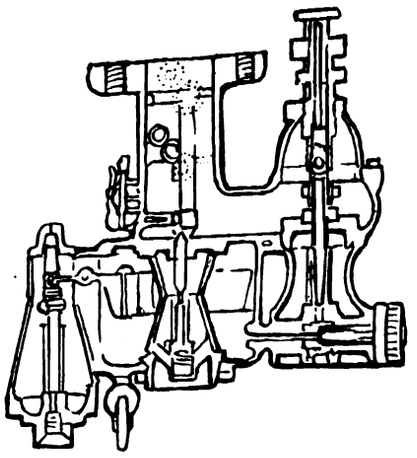
Prices—¾-inch, $8.25; 1-inch, $9; 1¼-inch, $9.75; 1½-inch, $10.50; 2-inch, $15; 2½-inch, $18.75; 3-inch, $40; 3½-inch, $48; 4-inch, $60.

Motsinger Carburetters.



Motsinger Devices Co., Lafayette, Ind.

An entirely new model, the principles of which, however, cannot be disclosed because of patent arrangements, but which introduces into every foot of air passing into the motor an absolute predetermined proportion of fuel, regardless of the motor speed, opening of the throttle, or the load. The device has but one adjustment—for temperature—and this is controlled from



Digitized by Google

RAYFIELD DOUBLE THROTTLE

SPRINGLESS NEW MILLER

DOUBLE JETTED FEPS

the dash. The device will be sold with a guarantee to afford more mileage per gallon than any other carburetter.

A. B. C. Carburetters.

International Accessories Mfg. Co., New York City.

Models—Made in a single model in all of the more common sizes.

Features—Float chamber tilts as the throttle is opened, permitting the level of the fuel to rise above the lower ends of the jets as the speed of the motor increass.

Rayfield Carburetters.

Findeisen & Kropf Mfg. Co., Chicago, Ill.

Models—Made in two models: Model D is water-jacketed and Model H is not water-jacketed; the models otherwise are similar. Model D is made in five sizes, increasing by quarters of an inch from 1¼ to 2 inches. The three larger sizes are provided with double jets. Model H is made in three sizes, 1, 1¼ and 1½ inches.

Features—Three air intakes; fixed, mechanically operated and automatic; three adjustments for low, intermediate and high speeds, which are easy to make; dash control ensures easy starting.

Prices—Model D, 1¼-inch, $30; 1½-inch, $35; 1½-inch, double jet, $37.50; 1¾-inch, double jet, $40; 2-inch, double jet, $45. Model H, 1-inch, $20; 1¼-inch, $22.50; 1½-inch, $25.

American Locomotive Carburetters.

L. V. Fletcher & Co., New York City.

Models—Made in four models, A, B, C and D. A has a single jet and is not water-jacketed and is made in six sizes from 1 inch to 2½ inches; Model B is similar, but with two jets. Model C is single jet and is water-jacketed; Model D is a double jet water-jacketed device.

Features—Simple adjustment; flexible.

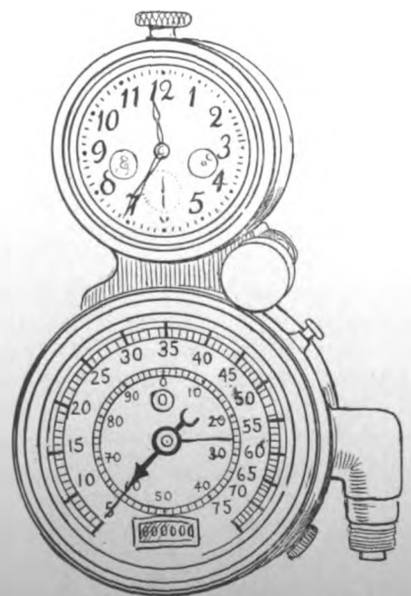
Prices—From $15 to $38.

Feps Carburetters.

Schoen-Jackson Co., Media, Pa.

Models—Made in a single model and in all of the popular sizes.

Features—Double jet venturi tube type, the high speed jet being rendered operative by the suction of the motor on the auxiliary air inlet valve; springs, balls and cams eliminated.



Homo Carburetters.

Homo Co. of America, Philadelphia, Pa.

Speedometers and Other Meters

Efforts to increase the legibility of the speedometer dial is a leading feature of the year's development. Both the Corbin Screw Corporation, which produces the Corbin-Brown speedometer at New Britain, Conn., and the Dean Electric Co., Elyria, Ohio, maker of the Elyria-Dean, are putting out instruments with dark faces and white numerals by way of avoiding reflections which interfere with the legibility of the dials; the Corbin corporation has also gone a step further and made the indicating figures which terminate in the figure 5 subordinate to those which terminate in zero and the advantage accruing therefrom is not to be minimized.

With manufacturers older in the field save in two instances, changes have been chiefly in the way of increasing the record of the season odometer readings, which in very nearly all cases now read to 99,999.9 miles, and of adding or perfecting trip odometer resets, so that the reading can be set to any tenth mile within the 100-mile scope; in a few instances improvements of a minor nature which have to do with the drive mechanism have been added, and in nearly all cases tendency to produce clock combinations both side by side and vertical is marked.

REVISED HOFFECKER DESIGN

Two complete changes of the external appearance of the lines have been effected, though in neither case have basic principles been changed for others. The Stewart & Clark Mfg. Co., which makes the Stewart magnetic speedometer at Chicago, Ill., has abandoned the use of the indicating needle in 15 of the 16 models in which the instrument is produced and substituted therefore the cylindrical scale with numerals which appear before a peep window. Other more or less innovative features have been adopted in the shape of a gradometer, which is supplied on several of the models, and a trip odometer reading up to 300 miles on one of the types. A micrometer adjustment which has to do with the accuracy of the device also has been added. The product of the Hoffecker Co., of Boston, Mass., has undergone several changes, chief among which are the adoption of a cylindrical form in place of the square casing which so long was adhered to, and the production of clock models in which Waltham timekeepers and electric dial lights are employed.

Digitized by Google

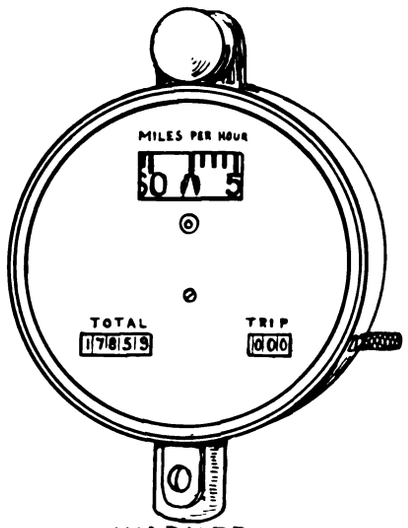
Stewart Speedometers.

Stewart & Clark Mfg. Co., Chicago, Ill.

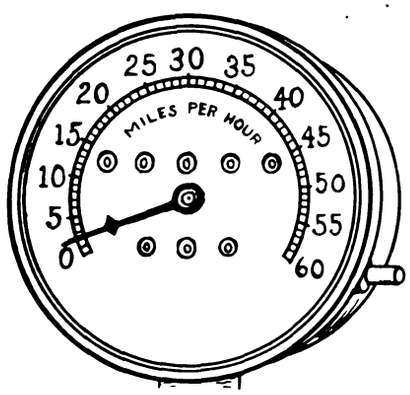
Models—Made in six types and sixteen models. Model A reads to 60 miles an hour, has season and trip odometers that read to 100,000 and 300 miles, respectively, a micrometer adjustment and electric light. A2 is similar, save that it reads to 100 miles an hour. Model B is similar save that the electric light is not provided, the trip odometer reads only to 100 miles and a gradometer is added, it reads to 60 miles. Model B2 reads to 100 miles. Model B5 is B with an electric light added; Model B6 is B2 with an electric light added. Types A and B have 4-inch dials. Type C instruments have 3-inch dials. Model C reads to 60 miles; C2 to 100 miles. In combination with clocks. Types A, B and C, all of which have rotary cylindrical dials, form Models A1, A3, B1, B3, B4, C1, and C3. Model E is 3½ inches in diameter and reads to 30 miles. Model F is an odometer only; it reads to 100,000 miles season and 100 miles trip. Model 26 has a 3-inch dial and is provided with a pointer.

Features—Magnetic type, micrometer adjustment; trip odometers on Type A read to 300 miles; gradometer incorporated in Type B; Seth Thomas clocks or Stewart clocks; odometer reset to tenths of a mile.

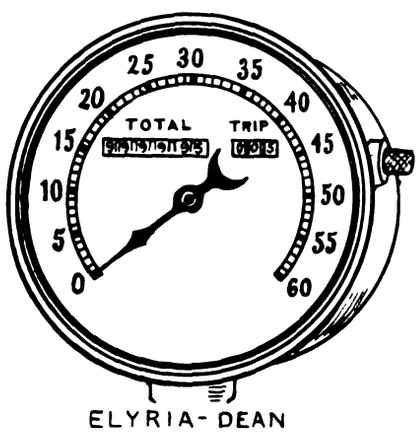
Prices—Model A, $75; A1, $125; A2, $75; A3 125; B, $55; B1, $85; B2, $55; B3, $90; B4 $65; B5, $65; B6, $60; C, $25; C1, $45; C2, $30; C3, $45; E, $25; F, $15; 26, $20.



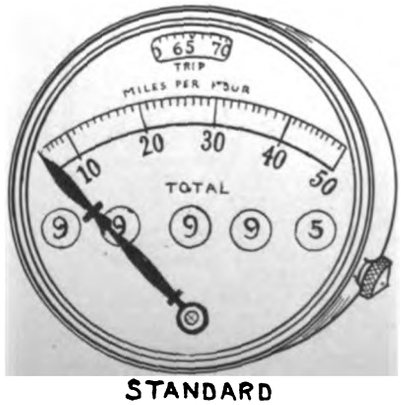
Standard Speedometers.



Standard Thermometer Co., Boston, Mass.



Models—Apart from combinations with watches and clocks, seven different models are made, four of which are provided with three-inch dials and indicate, respectively, to 40, 50, 60 and 80 miles an hour; the other three embrace the use of 4-inch dial and two of them, which differ from each other slightly in the arrangement of the dial read to 60 miles an hour, and the third to 80. On all models the season odometer reads to 9,999.9 miles and the trip odometer reads to 99.9 miles. Any of the 3-inch models enters into combination with a watch to form new models, and the 3-inch 60-mile machines with either a Boston or a Chelsea clock to form a side-by-side small model which is fitted with an electric light. A large side-by-side model also is formed by the combination of the four-inch 60-mile speedometer with a 4-inch Boston or Chelsea clock, and a vertical model.



Features—Centrifugal force type, with large figures on the trip odometer.

Prices—Three-inch models with scales reading up to 60 miles, $25; 3-inch, 80 miles, $30; 4-inch, 60 miles, $35 and $50; 4-inch, 80 miles $40; 3-inch watch combination, $30; 4-inch vertical clock combination with Boston clock, $75; with Chelsea clock, $85; small side-by-side combination with Boston clock $55; with Chelsea clock, $65; large side-by-side combination with Boston clock $70; with Chelsea clock, $80.

Corbin-Brown Speedometers.

American Hardware Corp., New Britain, Conn.

Models—Made in eight models, which combine with Chelsea clocks to form eight combination models. Model A is 3 inches in diameter, indicates to 60 miles an hour, and is provided with season and trip odometers reading to 9,999.9 and 99.9 miles, respectively; the latter is provided with a reset. Model B is similar, with a 4-inch dial. Model C is the same as B, save that a maximum hand is provided. On Model D an electric light also is provided. Model E is similar to Model B, save that it indicates to 80 miles an hour. Model F indicates to 80 miles and has the maximum hand; Model G also reads to 80 miles and has maximum hand and electric light. Model H is similar to Model G, save that it indicates up to 100 miles an hour.

Features—Centrifugal force instrument, four weights on the governor. On the dial, the multiples of 10 are made twice the size of the other figures to facilitate reading. Either black or white dials are supplied.

Prices—Model A, $25; Model B, $30; Model C, $35; Model D, $40; Model E, $50; Model F, $55; Model G, $60; Model H, $80. In combination the respective prices are $65, $70, $75, $80, $90, $95, $100, and $120, finished in polished brass. In nickel the price is $2 higher.

Hoffecker Speedometers.

Hoffecker Co., Boston, Mass.

Models—The newest product, Model L, indicates up to 75 miles an hour and is combined with an eight-day Waltham clock positioned above the speedometer dial. The season odometer reads up to 99,999.9 miles and repeat; the trip odometer, which is fitted with a circular dial and a pointer, reads up to 99.9 and repeat and is provided with a reset. A cylindrical casing has been adopted instead of the square casing and an electric light added. The compound centrifugal governor is retained.

Features—Governor requires no compensating springs; individually graduated; large figures facilitate reading; jars are absorbed within the instrument; durable.

Warner Autometer.

Warner Instrument Co., Beloit, Wis.

Models—Produced in six models, which enter into combinations with clocks and electric lights to form 10 combination models. Models R and S are cylindrical in form with the numerals on a cylindrical scale, which also obtains in other models; R reads to 60 miles an hour, S indicates to 100 miles an hour. Odometers register to 9,999 and 99.9 miles, respectively, for the season and trip. Models K-2 and L-2 embrace the use of the same speed indicating members as models R and S, but they are disposed beneath a circular disk through which the season and trip odometer scales

Digitized by Google

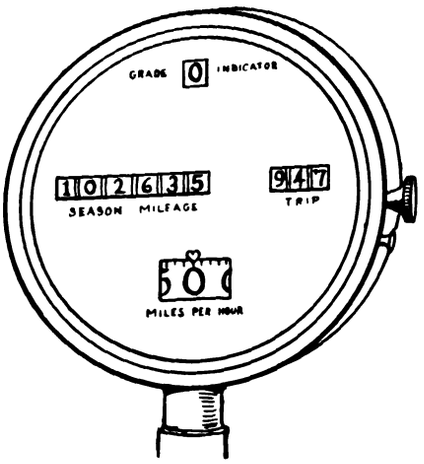
which read to 999,999 and 999.9 miles, respectively, also protrude. Hooded electric lights are fitted to both models, which are 4½ inches in diameter Model K-2 indicates speed up to 60 miles an hour; L-2, up to 100 miles an hour. Models 30, 31, 32 and 33 all are 3½ inches in diameter and are new additions to the Warner line. The latter two are similar, respectively, to Models 30 and 31, save that electric lights are fitted. Model 30 indicates up to 60 miles an hour and 31 up to 100; on all four the season and trip odometers read to 99,999 and 99.9 miles, respectively, the trip odometers being provided with a reset which also can be set so as to render the recorders inoperative. Models R and S form combination models S and T with a 3⅛-inch Chelsea clock mounted on the top of the cylinder. Models K-2 and L-2 similarly form Models M-2 and N-2, while with the clock 4½ inches in diameter mounted side by side they form Models O-2 and P-2. Models 30 and 31 combined side by side with a Chelsea clock of similar diameter form Models 34 and 35.

Features — Magnetic drag principle; large figures appearing before a sight hole being placed on the side of the aluminum cup, which is perfectly balanced by way of insuring steadiness and accuracy.

Prices—Model R, $50: S, $60; T, $90; U, $90; in either brass or nickel. Model K-2, $75: L-2, $85; M-2, $125; N-2, $125; O-2, $145; P-2, $145, in either brass, nickel or black enamel or special finishes. Models 30 and 31, $50; 32 and 33, $55; 34 and 35, $90.

Elyria-Dean.

Dean Electric Co., Elyria, Ohio.



Models—One model with a 5-inch dial, speed indication up to 60 miles an hour, distance indication on the season odometer up to 99,999.9 and on the trip odometer, which is provided with reset, to 99.9. Case and dial both are black with the hands and numerals in nickel. Centrifugal force principle employed, the governor comprising four balls which lift a cage operating needle when shaft is revolved.

Features—Large numerals and blackened dial make for easy riding. Shape of the faces of the cage in contact with the balls insures accuracy without the use of compensating means and permits of the use of a uniform scale. Springs are eliminated from the make-up of both season and trip odometers.

Veeder Tachodometers.

Veeder Mfg. Co., Hartford, Conn.

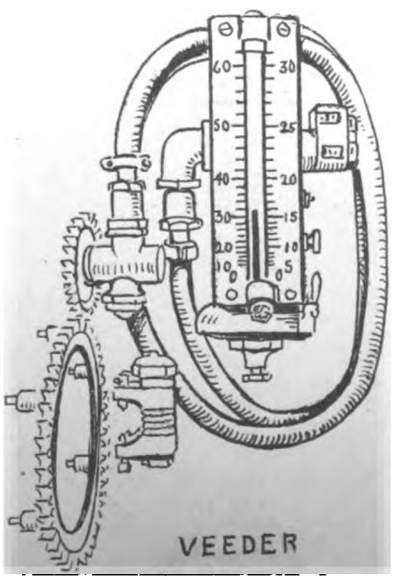
Models—Tachodometer or speedometer is made in two models, both of which read up to 60 miles an hour, but which differ in that one is fitted with an odometer which registers mileage regardless of the direction of movement of the vehicle: the converse is true of the other In both cases the odometer reads to 9,999.9 for the season and

STEWART WITH GRADOMETER

99.9 miles, respectively; the trip scale can be reset

Features—Tachodometer is of liquid centrifugal force type. Two scales are provided, one reading up to 60 miles an hour and the other, for more accurate readings, reads up to 30 miles an hour.

The hub odometer can be attached to the wheel without the necessity of making any changes whatever in the axle end. Both Model B and Model D odometers are furnished with a pressed steel pinion of novel contour, which reduces the friction and noise and is self-cleaning.



Prices—Tachodometer with irreversible odometer, $50; with reversible odometer, $55. Hub odometer, $25; Model B, $10; Model D, $20. Prices include all fittings.

Servis Records.

Coronet Hub Odometers.
Service Recorder Co., Cleveland, O.

Models—Servis Recorders made in a single model. Coronet Hub Odometers are made to fit in place of the hub cap.

Features—Recorder requires no connection with the wheel; it records the movement of the vehicle by means of the oscillations imparted to a pendulum when the vehicle is in motion. The pendulum carries a stylus which marks a revolving chart moved by a chronometer incorporated in the instrument. The device is "tamperproof." The hub odometer likewise attaches without any connection to the axle. The motion is imparted to the train of gears which moves the recording wheels by means of a pendulum which remains stationary as the odometer revolves.

Jones and Popp Taximeters.

American Taximeter Co., New York City.

Models—Jones Taximeters: Made in two models; A is arranged so that the "extra" tariff is added to the total fare reading; on B the fare and the "extras" are shown separately. Popp Taximeters: Made in two models for recording either a single tariff, where but one person is carried, or two tariffs, where more than one passenger is carried.

Features—Cannot be tampered with; accurate; easily attached without injury to car.

Prices—The instruments are rented, not sold. The rental is $6 a calendar month for each instrument up to 25; $5 in lots from 26 to 100, and $4.50 in greater quantities than 100. A deposit of $30 is required on each instrument.

BUMPERS.

Conover Safe Guards.

Lovell-McConnell Mfg. Co., Newark, N. J.

Models—Built in two sizes, with bumper bar either 2 or 2⅜ inches in width. With 2-inch bar, the device is made either in steel with an enamel finish, or in steel with a brass or nickel-plate finish, or in solid bronze with brass or nickel-plate finish; in the larger size, the device is made only in bronze.

Features—Channel section bar, semi-elliptic steel leaf springs bearing at four points to relieve the shock.

Prices—In steel, 2-inch bar, enamel finish, $15; brass or nickel-plate finish, $17.50; in bronze, brass or nickel-plate finish, $25. In bronze, 2⅜-inch bar, brass or nickel-plate finish, $25.

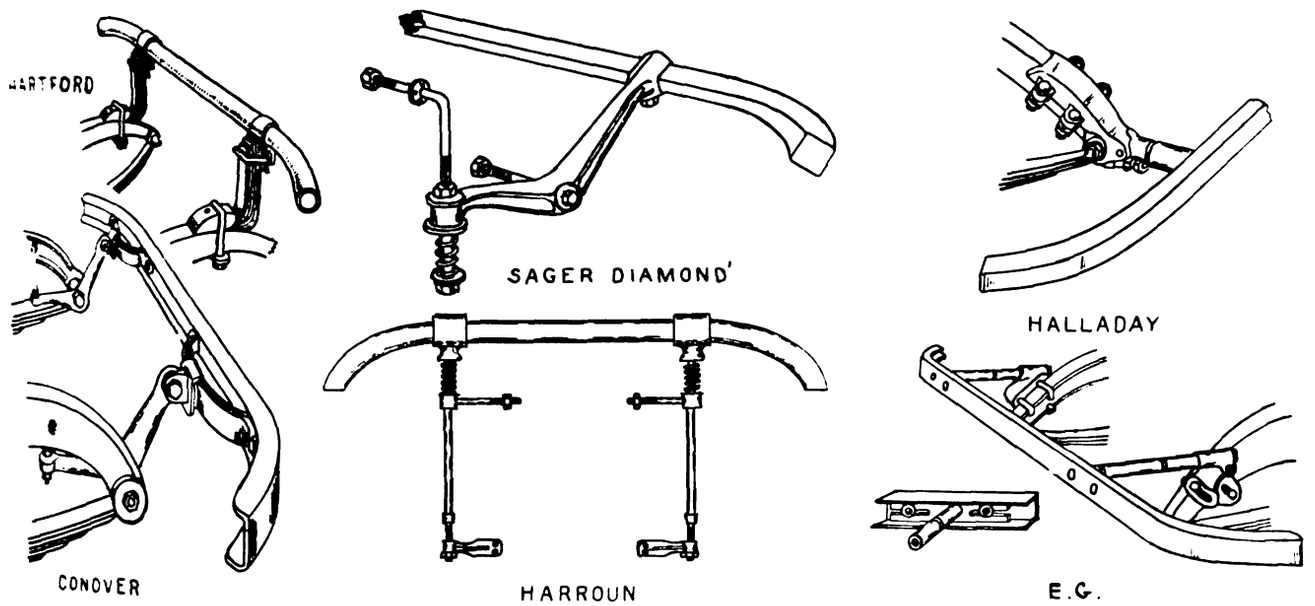
Hartford Bumpers.

Hartford Suspension Co., Jersey City, N. J.

Models—Made in three sizes, for cars of over 3,000 pounds, for cars of between 1,500 and 3,000 pounds, and for cars lighter than 1,500 pounds; a model especially adapted for use on Ford cars also is manufactured.

Features—Attach without the necessity for drilling holes in the car frame; four-leaf friction spring absorbs the jar.

Prices—For heavy cars, $20; medium cars, $16; for light cars, $12; for Ford cars, $12.



Sager Bumpers.

J. H. Sager Co., Rochester, N. Y.

Models—Made in eleven models. The

Digitized by Google

Diamond and the Protection are similar in the mode of attaching with a special spring shackle bolt, and in the disposition of the helical springs which oppose the movement of the bar; the Diamond, however, has a brass bar reinforced with steel which is rectangular in cross-section; the Protection has a round bar with wood filler. Both are made in five different finishes. The Universal, Universal Channel and Universal Diamond all can be attached without drilling holes in the frame; the helical springs are concealed in the telescopic bracket which supports the bar. The Universal has a round steel bar, Universal Channel a channel bar and the Universal Diamond a rectangular bar; each is put out in four finishes. The Fit-all bumper is also of the clamp-on type and is adapted to fit all

BUMPER DEVELOPMENT—SOME OF THE MORE PROMINENT DEVICES

[illegible] of cars save the Ford; it is made [illegible] three different finishes. Simplex, Simplex Channel and Simplex Diamond all are designed to clamp on and have concealed springs. The Simplex has a round steel bar, the others have channel and diamond bars respectively. The Packard Special [illegible] and the Ford Special bumper are designed for especial use with these cars and can be applied without resorting to [illegible] work.

Features—Durability, adaptability and ease of attachment.

Prices—Diamond, black enamel, $20; brass, $25; nickel, $27.50. Protection, black enamel, $15; brass, $20; nickel, $22.50. Universal, black enamel, $10; brass, $12; nickel, $12. Universal Channel, black enadel, $12; brass, $14; nickel, $14. Universal Diamond, black enamel, $15; brass, $17; nickel, $17. Fit-all, black enamel, $7.50; brass, $9.50; nickel, $9.50. Simplex, black enamel, $10; brass, $12; nickel, $12. Simplex Channel, black enamel, $12; brass, $14; nickel, $14. Simplex Diamond, black enamel, $15; brass, $17; nickel, $17. Packard, nickel, $20. Ford, black enamel, $10; brass, $12.

E. G. Bumpers.

Emil Grossman Co., New York City.

Models—Made in eight models—with 1¼-inch tube bar, with 2-inch tube bar, with 2-inch channel bar, Swivelaction, Commonsense, Ford Bolt-On and Ford Clamp-On, and Cadillac Clamp-On.

Features—Strength and ease of application. Can be adjusted to fit nearly all cars. All have helical springs in telescoping tubes.

Prices—1¼-inch bar: Black enamel, $6.75; brass, $7.50; nickel, $9. Two-inch bar: Black enamel, $10; brass, $12.50; nickel, $15. Channel bar: Black enamel, $10; brass, $12.50; nickel, $15. Swivelaction: Black enamel, $7.50; brass, $8.50; nickel, $9.50. Commonsense: Black enamel, $5.50; brass, $6.50; nickel, $7.50. Ford Bolt-On: Black, $5.50; brass, $6.50; nickel, $7.50. Ford Clamp-On: Black enamel, $6; brass, $7; nickel, $8. Cadillac Clamp-On: Round bar, black enamel, $6.75; channel bar, $10; brass, $7.50; channel, $12.50; nickel, $9; channel, $15.

Harroun Bumpers.

Turner Brass Works, Sycamore, Ill.

Models—Made in a single model to fit all cars.

Features—Helical spring type, bolted to car frame.

Prices—Plain, $10; black enamel, $11; brass, $12; nickel or gun metal, $13.

Halladay Bumpers.

L. P. Halladay Co., Streator, Ill.

Models—Made in there models—Imperial and Universal, which are intended to attach to any make of car, and Ford, exclusively for Ford cars.

Features—Attachment effected without drilling the frame; channel bar can be straightened when bent; helical springs enclosed in telescoping tubes.

Prices—Imperial: Black enamel, $15; brass, $20; nickel, $20. Universal: Black enamel, $12; brass, $15; nickel, $15. Ford: Black enamel, $10; brass, $12; nickel, $12.

SHOCK ABSORBERS.

Connecticut Shock Absorbers.

Connecticut Telephone & Electric Co., Meriden, Conn.

Models—Made in two models, for heavy and for light cars. The heavy type fits nearly all cars; light types are for Ford cars. Hupmobiles and cars of similar weight.

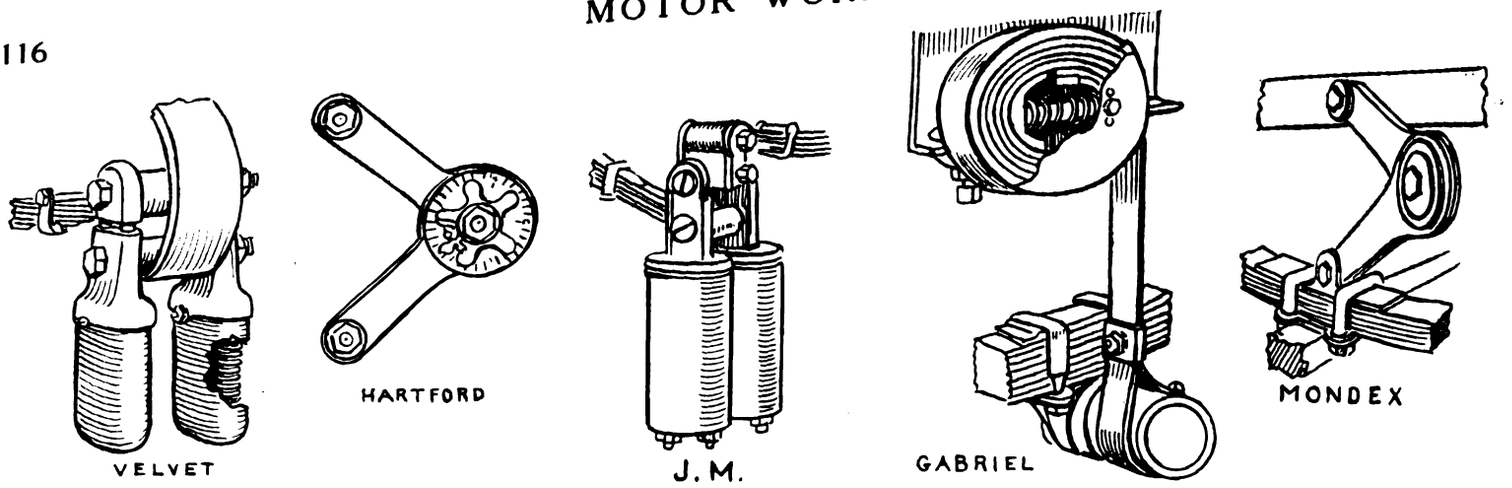
Features—Operate on the cam and flat spring principle; only have a single adjustment; require no attention.

Prices—Standard, $25 a pair; light, $15.

Flentje Recoil Preventers.

Ernest Flentje, Cambridge, Mass.

Models—Made in a single model to fit all cars.



Features—Piston working in a cylinder containing oil and ground mica checks the recoil of the springs; no springs.

J. M. Shock Absorbers.

J. M. Shock Absorber Co., Philadelphia, Pa.

Models—Made in four models for attachment to cars with different spring equipment. Model A is made up of two spring containing members and is attachable to cars with platform suspension or with full or three-quarter elliptic springs; Model B has a single spring containing member and

Digitized by Google

VARIED PRINCIPLES REPRESENTED IN SHOCK ABSORBERS

is also attachable to cars with full or three-quarter elliptic springs; Model C is adaptable to cars with single springs attached to rigid spring hangers; Model F is for use with Ford cars only. Models A and C are made in three sizes—for cars up to 2,000 pounds, for cars between 2,000 and 3,000 pounds, and for cars over 3,000 pounds. Model B is made in two sizes—for cars up to 3,000 pounds and for cars over 3,000 pounds.

Features—Helical springs enclosed in metal cylinders; increase the resiliency of car suspension; easily applied in place of the ordinary spring shackle.

Prices—Models F, A, B and C, for light cars, $35 a pair; Models A, B and C, for medium weight cars, $42 a pair; Models A, B and C, for heavy cars, $50 a pair.

Velvet Auxiliary Springs.

John W. Blackledge Mfg. Co., Chicago, Ill.

Models—Made in six models: No. 1, for cars weighing less than 2,200 pounds; No. 2, for cars weighing between 2,200 and 2,800 pounds; No. 3, for cars weighing between 2,800 and 3,600 pounds; No. 4, for cars weighing between 3,600 and 4,400 pounds; No. 5, for cars weighing over 4,400 pounds. The sixth model has enclosed springs.

Features—Attach in place of the spring shackles; comprise four resilient helical springs, which yield as rough spots are encountered; are easily attached.

Prices—No. 1, $18.50; No. 2, $18.50; Nos. 3, 4 and 5, $20; covered, $35.

Gabriel Rebound Snubbers.

Gabriel Horn Mfg. Co., Cleveland, O.

Models—Made in five sizes: Model O, for cars weighing less than 1,400 pounds; Model 1, for cars from 1,400 pounds to 2,200 pounds; Model 2, for cars from 2,200 pounds to 3,500 pounds; Model 3, for cars weighing not over two tons; Model 4, for trucks of from two to five tons.

Features—Do not limit flexibility of the springs; quickly and easily attached without machine work; require no adjustment or attention.

Prices—Model O, $25, set of four; Model 1, $30 set; Model 2, $35 a set; Model 3, $40 a set; Model 4, $50 a set.

Mondex Shock Absorbers.

Aristos Co., New York City.

Models—Made in a single model to fit all makes or cars.

Features—Resistance to change of angularity of the arms is offered by rubber disks which are compressed to a degree that varies with the amount of movement, by the action of two cams positioned face to face. Cam surfaces are made of hardened steel. Adjustment cannot vary with wear. Can be adjusted to suit conditions.

Prices—For a set of four with the attaching brackets, $50.

LAMPS.

Solar Lamps.

Badger Brass Mfg. Co., Kenosha, Wis.

Models—Thirty models, including 3 gas head lamps; 5 electric head lamps; one each gas and electric swiveling searchlight; 6 electric side lamps; 4 electric tail lamps; 5 each oil side and tail lamps; and one generator.

Features—Exclusive black finish with metallic lustre; patented system of double ray projection and eclipsing; special short focus lead glass lens mirror made by Bausch & Lomb; exclusive focusing device; new number lighting tail lamp; column searchlight; dash lamps with inside opening door; new Spherule combination oil and electric side lamps; spring clip fasteners for holding parabolas securely in door, making them easily removable; felt washer between glass and parabola in electric side lamps, making them dirt proof; octagonal doors on several models.

Prices—From $2.40 each to $30 per pair.

E & J Lamps.

Edmunds & Jones Mfg. Co., Detroit, Mich.

Models—Fourteen models, including 2 each electric head and side lamps; 1 electric tail lamp; 3 oil side lamps; 1 oil tail lamp; 3 gas head lamps; 1 combined gas and electric side lamp; 1 commercial vehicle side lamp; 1 reflector; and one generator.

Features—Simplicity; original design; annealed metal parts; three finishes, enamel, brass and nickel; substantial construction; provision for focal adjustment; Ediswan sockets; tungsten bulbs. The generator is of the orthodox type and is fitted with a device styled a "condensation cup" to keep the pipes clear of water.

Prices—Generator, $7; lamps from $2.50 to $12.50 each.

Gray & Davis.

Gray & Davis, Boston, Mass.

Models—Twelve models, including three gas and two electric head lamps; two oil and two electric side lamps; one combination oil and electric side lamp; one oil and one electric tail lamp.

Features—All lamps made from steel dies; conscientious supervision and best materials; weather and dirtproof construction; focusing adjustment; substantial locking device; tail lamp has white window to illuminate license plate; great variety of styles.

Prices—From $3.50 each to $25.00 per pair.

Jaco Lamps.

J. Alexander Mfg. Co., New York City.

Models—Two models for electricity, one a complete lamp and the other a reflector.

Features—Torpedo type lamps fitted complete with bayonet connectors, wire, switch, and 10-candlepower tungsten bulbs; especially adapted for use on Ford cards. Reflectors are true parabolas and are silver-plated on nickel for use in gas lamps; made in eight and nine-inch sizes; easily attached or detached.

Prices—Lamps, per set, $15; reflectors per set, $8.

Ham Lamps.

C. T. Ham Mfg. Co., Rochester, N. Y.

Models—Fourteen models, including eight oil side lamps; one combination oil and

Digitized by Google

electric side lamp; four oil tail lamps, and one motorcycle lamp; one electric attachment.

Features—Built on "cold blast" principle; perfect reflection and projection; substantial construction; no smoke or odor; perfect ventilation; no soot; no smoky front glasses

Prices—From $3.50 each to $16.00 per pair.

Mondex Lighting Systems.

Aristos Co., New York City.

Models—Made in a single model for use in connection with any acetylene headlight. Comprises a gas regulator, a controller and switch on the dash and spark gaps on the burners.

Features—The lamps can be lighted and the flame controlled from the dash; no spark coil is needed, the spark being taken from the magneto; readily attachable.

Price—$15.

B & L Lamps.

B & L Auto Lamp Co., New York City.

Models—Twenty-four models, including 10 gas head lamps, 4 electric head lamps, 3 electric side lamps, 4 electric head lamps, one each oil side and tail lamps.

Features—All lamps made of heavy gauge brass and are of original designs in which the popular bullet shape is predominant; bodies are mostly in one piece, with genuine parabolic reflectors.

Prices—From $3 to $22 each.

Cowles Lamps.

C. Cowles & Co., New Haven, Conn.

Models—Thirty-two models, all electric, including 1 head, 12 side, 8 tail and 11 interior.

Features—All fitted for electricity only; great diversity of designs; waterproof and dustproof construction; choice of various finishes; substantial construction; prices include bulbs.

Prices—From $3.25 each to $36.00 a pair.

Old Sol Motorcycle Lamps.

Hawthorne Mfg. Co., Bridgeport, Conn.

Models—Thirteen models, including five gas head lamps; four generator lamps; four separate generator gas head and electric tail lamps.

Prices—Lamps from $2.50 to $6.50; generators from $2.50 to $3.75.

Neverout Lamps.

Rose Mfg. Co., Philadelphia, Pa.

Models—Made in all shapes and sizes for use with both oil and with electric lights.

Prices—From $2.50 to $50.

Rushmore.

Rushmore Dynamo Works, Plainfield, N. J.

Models—Three models of electric lamps, including one each head, side and tail, and a number of models of gas lamps.

Features—Substantial construction; elegant finish; dirt- and waterproof; Rushmore lens mirror.

LUBRICANTS.

Wolverine Lubricants.

Wolverine Lubricants Co., New York.

Recommended by makers of 28 cars and motors; has burning point of 450 to 470 degrees, has low gravity and light color; no free carbon and small quantity of fixed carbon; will retain consistency at high temperature; burns cleanly. Wolf's Head Cylinder Oil, light, medium and heavy; 50-gallon barrel, 50 cents a gallon; half barrel, 54 cents a gallon; 10-gallon can, $5.75 each; 5-gallon can, $3.25 each; 1-gallon can, 75 cents. Wolf's Head Crystal Oil, extra filtered, light, medium and heavy, ranges from 75 cents to $1.60 a gallon, according to quantity and kind. Greases—Motor Grease, Non-Flowing Oil, Graphite Grease, Light and Dark Gear Compound, 25 cents a single pound to $5 for 50 pounds. Packard cylinder oil, bearing trademark of Packard Motor Car Co., 50 cents a gallon in 50-gallon quantities, to 75 cents for single gallon. Packard cup and graphite greases, 25 cents a single pound to $5 for 50 pounds.

Monogram Lubricants.

New York Lubricating Oil Co., New York.

Refined from pure, high-grade Pennsylvania crude oil, manufactured solely for lubrication of gas engine cylinders; economy, efficiency and uniformity are claimed. Company features co-operation with dealers in selling. Oils—"V" Gas Engine, Light Gas Engine, Medium Gas Engine, Heavy Gas Engine, Extra Heavy Gas Engine, Timing Gear, Gear Case and Special Steamer; in barrels, half barrels and five-, ten- and one-gallon cans. Greases—Yellow Motor Grease, Yellow Gear Grease, Graphite Motor Grease, Graphite Gear Grease, Non-liquid Oil and Gear Case Compound; in barrels, kegs and two-, five-, ten- and twenty-five-pound cans.

Albany Lubricants.

Albany Lubricating Co., New York.

Albany grease, for axle cups, compression caps and bearings. Cook's lubricant, a new product, for transmissions, differentials, and equalizing, timing and steering gears; will not run out of gear case; adheres to gears and always maintains a film between surfaces in contact. Albany auto oils, full line for various needs of a car.

McCord Lubricators.

McCord Mfg. Co., Detroit, Mich.

Models—Made in 11 models: No. 1, capacity one quart, one feed; No. 2, capacity one quart, double feed; No. 3, capacity two quarts, single feed; No. 4, capacity two quarts, double feed; No. 5, capacity two quarts, three feeds; Nos. 6 to 11, capacity one gallon, one to six feeds, respectively.

Features—All working parts of forged steel, case hardened, and are immersed in oil; delivery can be quickly regulated to meet conditions; double pump eliminates pressure in the sight-feed glasses.

Prices—No. 1, $25; No. 2, $30; No. 3, $28; No. 4, $35; No. 5, $42; No. 6, $33; No. 7, $39; No. 8, $45; No. 9, $51; No. 10, $57; No. 11, $63.

Acheson Graphites.

International Acheson Graphite Co., Niagara Falls, N. Y.

Graphcoat, a new product, applied with a brush to rims; prevents sticking of rims or tires after being in position for a considerable length of time; requires no painted surface as a ground work; will not cake, gum, attract or hold dirt, and is not influenced by extremes of temperature. Also is designed for use in spring leaves and as a lubricant for bolt threads, pipe joints and gaskets. Other graphite products.

Harris Oils and Greases.

A. W. Harris Oil Co., Providence, R. I.

Made in a variety of different grades to suit motor conditions. Harris Transmission Compound is a grease especially made for the lubrication of gearsets.

Havoline Oils.

Havoline Oil Co., New York City.

Made in several different grades, to suit all motor conditions.

Features—Will not gum or congeal; non-carbonizing.

Gargoyle Mobiloils.

Vacuum Oil Co., New York City.

Made in several different grades especially to suit varying conditions.

Features—Non-carbonizing and non-congealing.

Panhard Oils and Greases.

George A. Haws, New York City.

Made in several grades to suit all motor conditions.

Features—Will not carbonize or congeal.

Detroit Lubricators.

Detroit Lubricator Co., Detroit, Mich.

All sizes and all types of lubricators and oil and grease cups are stocked.

Texaco Motor Oil.

The Texas Co., New York.

Will not form hard carbon deposit, has proper body for sealing space between piston rings and cylinder walls, will not con-

Digitized by Google

geal in cold, is put up in sealed can under maker's guarantee, can may be conveniently carried under seat; company features its co-operation with dealers by means of various forms of advertising.

Oilzum Lubricants.
White & Bagley Co., Worcester, Mass.

SOAPS AND POLISHES.

Rex Polishes.

Armiger Chemical Co., Chicago, Ill.

Rex cream polish for brass, copper and steel, nickel plating polish, wood oil for varnished work and leather dressing for tops and upholstering material.

Features—Ease of application; will not damage the articles applied to.

Baum's Automobile Body Soap.

Baum's Castorine Co., Rome, N. Y.

A soap for washing motor car bodies which is absolutely neutral and which therefore will not injure the paint or varnish work. The soap produces a fine lather and cleans with ease.

Slikup Specialties.

N. B. Arnold, Brooklyn, N. Y.

Materials for cleaning tires, tops, upholstery, bodies, motors and all other parts of the car.

Soaps and Polishes.

J. Eavenson Sons, Inc., Camden, N. J.

Blue Ribbon Metal Polishes.

Int'l Metal Polish Co., New York City.

Soaps and Polishes.

J. T. Stanley, New York City.

Metal Polishes.

Geo. W. Hoffman, New York City.

FUEL PUMPS.

Bowser Pumps and Storage Systems.

S. F. Bowser & Co., Ft. Wayne, Ind.

Models—Pumps, tanks and storage systems are made in various sizes and styles, both portable and stationary, for handling either gasolene or kerosene; lubricating oil storage tanks and outfits also are manufactured.

Features—Pump barrels made of seamless brass tubing; valves of selected brass; pumps measure accurately and are readily adjusted to measure even fractions of gallons; gallon meter attached to the long distance systems registers to 10,000 gallons and repeat.

American Fuel Pumps and Storage Tanks.

American Pump & Tank Co., New York.

Made in a number of different sizes and forms, both stationary and portable.

Features—Pumps all are of the continuous flow type.

Fuel Handling Apparatus.

Wayne Oil Tank & Pump Co., Ft. Wayne, Ind.

SPECIALTIES IN GENERAL.

Oliver Jacks.

Oliver Mfg. Co., Chicago, Ill.

Models—Three models, Peerless in eight sizes, Oliver Tire Saver in one size and a new model, Oliver Sampson, in three sizes. All three models are of the dog-and-rack type. The Peerless model is provided with a lever which can be used as a tire tool, and when so ordered, a tire removing attachment is furnished so that the jack can be used to facilitate the removal of tires. The action of the jack is reversed by turning the handle upside down. The Tire Saver is made for cars weighing up to 3 tons and is provided with an adjustable bracket to engage with the wheel hub; the face of the bracket is leather covered to prevent marring. The new Oliver Sampson is made for road use for cars of up to 3 tons, and for garage use, with a wooden base, attached handles and double brackets, one size for cars up to 3 tons and the other for cars of 3 to 6 tons in weight.

Features—Unbreakable malleable iron frames, positive action, arched base to prevent tipping.

Prices—Peerless, for cars of 1 ton, 8½-inch, 10-inch, 12-inch, $2.50; with tire removing attachment, $3.25. For cars of 2 tons, 9¾-inch, 11¾-inch, 11-inch (low bracket), $3; with tire removing attachment, $3.75. For trucks of 5 tons, 11-inch, $6; 14-inch, $7. Tire Saver, $1.50. Oliver Sampson, for cars of 3 tons, 11½-inch, $3; 15-inch, $5; for cars of 6 tons, 17½-inch, $8.

Vanguard Windshields.

Vanguard Mfg. Co., Joliet, Ill.

Models—Made in four models; Nos. 74 and 75 are straight and are 25½ x 38 inches and 27½ x 42 inches in height and width, respectively. Nos. 77 and 78 are of the zig-zag type and measure, respectively, 25½ x 38 inches and 29½ x 42 inches in height and width.

Features—Ball-bearing type joints, steel frames. Piano hinge along bars of the zig-zag types prevents rattle; strap loops for the attachment of top straps provided on all models.

Prices—Models 74 and 75, coach glass, $12.50; plate glass, $17.50. Models 77 and 78, coach glass, $12.50; plate glass, $17.50. All finished in black enamel.

Star Tire Trunks.

Merchant & Evans Co., Philadelphia, Pa.

Models—Combined tire and tool case made to take either 34-inch or 36-inch tires, and either 6, 8 or 10 inches deep.

Features—Made of pressed steel; light, durable, moisture and dust proof, easily opened and closed; fastened with Yale lock.

Prices—Either 34- or 36-inch diameter, depth 6 inches, $21; 8-inch, $23; 10-inch, $25.

Ajax Trunk and Tire Cases.

Ajax Trunk & Sample Case Co., New York City.

Models—Trunks in four models: Nos. 30 and 32, opening at the top in the orthodox manner; Model No. 250, a combination of a suitcase carrier and luggage trunk; the fourth model is a footrest trunk designed to take the place of the usual footrest in the tonneau of the car. Models 30, 32 and 250 are made in 28-, 30- and 32-inch sizes. Ajax Refrigerette for carrying luncheons, etc., is made in a single model. Ajax double tire trunks are made in sizes suitable for all tires.

Features—Best quality trunk board supported in steel frames used in the construction, black soleleather hand stitched at the corners. The combination model is notched at the back to accommodate the overhang of the car body. The foot rest trunk is covered with an aluminum sheet, embossed. Double door on the tire trunks prevents the entrance of moisture or dirt.

Prices—Trunks: No. 30, 28-inch, $22.50; 30-inch, $24; 32-inch, $25; No. 32, 28-inch, $30; 30-inch, $32; 32-inch, $34; No. 250, 28-inch, $30; 30-inch, $33; 32-inch, $36. Foot rest trunk, $18; Refrigerette, $18; tire trunks, 26-inch, $22.50. Other diameters, $1 an inch extra.

Q. D. Rim Removers.
Tobey Glare Removers.

William L. Tobey, East Boston, Mass.

Models—Q. D. Rim Remover made in a single model for removing the locking ring from any size quick-detachable rim. The Glare Remover, which is made for attachment to the windshield rod, also is made in a single model.

Features—The Q. D. rim remover is so small that it can be carried in the pocket; its operation requires nothing more than the insertion of the hook between the retaining ring and the rim flange and screwing up the screw with a screwdriver until the locking device is uncovered; the lock ring then can be removed. The Glare Remover is a piece of amber colored glass carried in a circular frame which attaches to the windshield frame.

Prices—Q. D. Remover, 75 cents. Glare Remover, $2.50.

B'Line and Copley Grease Guns.

Randall-Faichney Co., Boston, Mass.

Grease guns in various sizes and types with different styles of handles; for handling anything from gasolene to heavy grease. Made to push in, to screw in, or both.

Features—Plungers and barrels ground to an exact fit, so that there is no leakage; no packing used; can be used to carry oil, as

Digitized by Google

oil will not leak past plungers; special guns for priming; Copley guns have leather-packed plungers and are for handling oils only.

Prices—B'Line guns, from $1.50 to $5, according to size; Copley guns from $1 to $4.

G-P Muffler Cutouts.

G. Piel Co., Long Island City, N. Y.

Models—Made in nine sizes to take 1¼-, 1½-, 1¾-, 2-, 2¼-, 2½-, 2¾, 3- and 3¼-inch pipe.

Features—When open, the valve tongue closes the path to the muffler; when closed, pressure of gases tends to seat tongue on the seat. Easily attached, simply by slipping over the ends of the pipes and clamping with set screws.

Prices—For 1¼- to 1¾-inch pipes, $4.50; for 2- to 2½-inch pipes, $5; for 2¾- to 3¼-inch pipes, $5.50.

Gilmer Tire Repair Pliers.

G. Walker Gilmer, Jr., Philadelphia, Pa.

These are spreading pliers with which to hold open a cut in a tire while repairing material is being introduced into the wound; tips of the pliers are at right angles to the levers, so that tire is not torn when they are inserted; slight pressure only necessary to open cut; ratchet in handles of pliers leaves operator with both hands free to work; can be removed without disturbing repair gum; equipment includes combination cotter pin hook and cleaner; price $1.

Perfect Gasolene Filters.

Gasolene Filter Co., New York City.

Models—Single model made for attachment to the fuel line.

Features—Chamois made in the form of a collapsible bellows forms the filtering medium, the area of the chamois being sufficient not to impare the flow of the fuel. By collapsing the bellows, which is accomplished by movement of a rod provided for the purpose, the collection of sediment can be removed from the chamois and drained through the pet cock.

Price—$5.

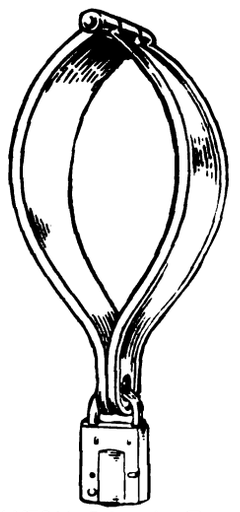
Hartford Jacks.

Hartford Suspension Co., Jersey City, N. J.

Models—Made in a single model, 10½ inches high, with a lift of 7 inches.

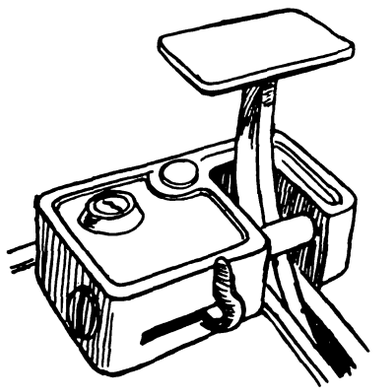
Features—Gearset operating in conjunction with a long lever, which, however, requires but a short stroke, facilitates the lifting operation. Case of malleable iron, rack cut from steel, gears machine cut and hardened. Actuating mechanism of heat-treated chrome nickel steel.

Price—$5.



Townsend Grease Guns.

S. P. Townsend & Co., Orange, N. J.



Models—Made in four different sizes to hold 6, 8, 12 or 16 ounces; all sizes are similar in construction.

Features — Inner removable cylinder which permits of quick and cleanly loading; piston, operated by a worm and handle, makes operation easy and rapid.

Prices—Six-ounce, $3; 8-ounce, $3.50; 12-ounce, $4; 16-ounce, $5.

WATCH DOG AUTO LOCK

AUTO THIEF PROOF LOCK

DOVER SAVAL

COWLES FOOT WARMER

FOUR INTERESTING SUNDRIES

Warmed Driving Gloves.

Carron & Co., Inc., New York.

Gloves are leather gauntlets with an electrical heating element in the wool lining; in thumb and forefinger of each is a thin disk connected to wires which give contact with metal plates on the steering wheel; six-volt ignition or storage battery may be used; current flows only when gloves are in contact with the plates; warmth may be regulated by wearer.

Cowles Foot Rest and Heater.

Charles Cowles & Co., New Haven, Conn.

Models—Made in a single model, 33 inches long, embracing the use of four tubes.

Features—Ingenious combination of two articles; is not in the way in the summer, for it serves as a foot rest; easily attached to exhaust pipe by means of flexible metallic tubing.

Prices—Finished in brass, $24; in nickel, $30.

Jaco Specialties.

The J. Alexander Mfg. Co., New York.

Double vibrator horn, claimed to produce twice as many vibrations as the ordinary horn. Mirrorscopes, dome lamps, dashboard lamps, wind brake, individual windshield, adjustable bumper, cut glass flower vases, brass tire holders, malleable iron tire holders, license pad holders and radiator ornaments.

Neverout Radiator Heater.

Rose Mfg. Co., Philadelphia, Pa.

Consists of heater, utilizing illuminating gas, tube which connects with top of radiator through filler cap and with bottom through petcock; designed to keep water warm while car is standing in cold garage and also is claimed to be capable of warming a garage considerably.

E-C Tire Carriers.

E-C Sales Co., Chicago, Ill.

Types—For attachment to the running board, and for attachment to the rear.

Features—Adjustable to fit different sized tires; strength and rigidity; easily attached.

Allen Friction Wrenches.

Allen Wrench & Tool Co., Providence, R. I.

Models—Friction socket wrenches made in four styles; friction drills and spark plug wrench sets.

Digitized by Google

Features—Embodies all of the features of the ratchet wrench with the elimination of teeth, springs and pawls; grips instantly without loss of motion.

Keystone and Presto Tire Covers.

Nathan Novelty Mfg. Co., New York.

Keystone tire cover; water-shedding, adjustable on new or old casings, fastens with snap buttons, perfect fit insured by highly tempered flat spring inserted in edge of flap. Packed in individual boxes. Presto cover; made of enameled goods, otherwise similar to the Keystone.

Burbank Top and Cover Cloths.

Wm. R. Laidlaw, Jr., New York City.

English Burbank cloths are made in a variety of weights and colors; Bedford Waterproof cords for replacing leather on the upholstering also are shown.

Features—Burbank cloth, although it has no rubber or other similar substance in its makeup, is waterproof.

Dover Specialties.

Dover Stamping & Mfg. Co., Cambridge, Mass.

Funnels, combined measures and funnels, measures, gasolene cans, radiator fillers, drip pans, soap economizers, tire testing tanks, oil cans, electric bulb cases, waste cans, garage pails, and various and sundry sheet metal articles.

Turner Motor Washer.

Turner Brass Works, Sycamore, Ill.

Models—Made in a single model; tank holds a quart of gasolene.

Features—Tank is drawn from a piece of brass, bottom being brazed in place; adjustable nozzle will produce either a very fine spray or a solid stream for cleansing in corners.

Watch Dog Lever Locks.

S. Breakstone, Chicago, Ill.

Made in a single size for locking the spark and throttle levers to a spoke of the steering wheel web when the car is not in use.

Features—Simple, quickly and easily applied, durable, effective.

Price—$2.

Berg Motor Car Trunks.

Berg Auto Trunk & Specialty Co., New York City.

Made in various sizes and shapes and for all purposes.

Pyrene Fire Extinguishers.

Pyrene Mfg. Co., New York City.

Models—Made in a single model, 14 inches long and 3 inches in diameter.

Features—Smothers a gasolene or oil fire without spreading it; easily handled; will not injure metal or woodwork or fabrics.

Prices—Brass, $7; nickel plate, $8.

Simplex Fire Extinguishers.

David Kahnweiler's Sons, New York City.

Models—Made in a single model, 14 inches long and 3 inches in diameter.

Features—No pump used, liquified gases are forced out by carbon dioxide under pressure; will not injure property; easily handled.

Turner Torches and Brazing Outfits.

Turner Brass Works, Sycamore, Ill.

Models—A variety of models of different sizes for burning gasolene, kerosene and alcohol.

Features—Tanks drawn from sheet brass with the bottom brazed in place. Holders for soldering bits are included.

Benford Mfg. Co., Mt. Vernon, N. Y.

Benford gas-lamp lighters, and Monarch spark plugs.

Features—Lamps can be lighted while the car is in motion with but a single motion.

Prices—Lighters, $5; plugs, $1.

Sundries.

Donnelly Motor Equipment Co., New York.

National tire pumps, National vulcanizers, Gladrag polishers, body soaps, Little Steersman steering gear attachment.

J. H. Faw, New York City.

Gaskets, both round and manifold; blowout patches, reliners, Mazda lamps, Redfield plugs, Eureka valve grinders, Ford lighting sets, etc.

Portable Garages.

James Ashley, New York City.

Light garages made of sheet metal and designed to be easily erected and taken down.

Coes Wrenches.

Coes Wrench Co., Worcester, Mass.

Drop forged, socket, end and adjustable wrenches in all sizes and styles.

Polson Windshields.

Polson Mfg. Co., Buffalo, N. Y.

Windshields in various sizes and in both the straight and zig-zag types.

Clear Vision Windshields.

Cox Brass Mfg. Co., Albany, N. Y.

Made in all sizes in both straight and in zig-zag form.

Ten Eyck Air Pumps.

Auburn Auto Pump Co., Boston, Mass.

Air pumps and pneumatic jacks.

Giant Jacks.

S. B. R. Specialty Co., East Orange, N. J.

Giant and Little Giant jacks and muffler cut-outs.

Gray Specialty Co., Newark, N. J.

Blow-out patches, tire boots, etc.

Perfecto Wind Deflectors.

Perfecto Wind Deflector Co., Boston, Mass.

Grinnell Gloves.

Morrison Ricker Mfg. Co., Grinnell, Ill.

Driving gauntlets in a variety of styles.

Tools.

Rich Tool Co., Chicago, Ill.

GENERAL SUPPLIES.

Smalley Daniels, Detroit, Mich.

New Era Replacement springs, Sly tire holders, Auto Thiefproof locks, and Mitchell steel boxes.

Features—New Era Springs are made for replacing broken springs on a number of the most popular cars; primarily they are intended to be carried in stock by the jobber; Sly tire holders are made for running board attachment for either single or for two tires; they carry tires mounted on demountable rims; Auto Thiefproof locks are made to attach to the footboard and lock the clutch pedal down so that the clutch cannot be engaged.

Prices—New Era Springs from $3.90 to $13; sly tire holders from $5 to $8.50; Auto Thiefproof locks, $5.

Charles O. Tingley & Co., Rahway, N. J.

Blowout patches, 50 cents to $1; vulcanizing fluid, and solution, sets of ¼ pint, 75 cents; ½ pint, $1; pint, $1.25; quart, $2.25; tire patches, 2½ cents to 35 cents; Gum Gum, 50 cents per tube; valve bases, 20 cents to 30 cents; Gum Gum and vulcanizing fluid sets, $1; tire solder sets, $1.50; concentrated cement, 20 cents to 60 cents; red rubber gas tubing, 10 cents per foot; lamp connectors, 15 cents each; soapstone, 15 cents per can; ironwork varnish, 25 cents per pint; rubber rougheners, 20 cents; top dressing, 50 cents per can; waste, 10 cents and 20 cents per package; tire tape, 5, 10 and 25 cents per roll; rim shellac, rim cement, tire plugs; Diamond aluminum; Special rubber cement.

General Supplies.

Charles E. Miller, New York City.

Brampton chains, United States tires, Pan-American oils and greases, El Arco radiators, Victor pumps, Wright wrenches, Wizard magnetos, Blair tops, Coe's wrenches, Clear Vision windshields, J-M

Digitized by Google

...s, Sharp spark plugs, and a variety of specialties.

Stevens & Co., New York.

Spark plugs, horns and reeds, pumps, compound and single cylinder, hand operated; power air pumps, pump connections, tire gauges, burners, tubing, nipples and cocks, grease guns, gaskets, switches, tools.

L. P. Halladay Co., Streator, Ill.

Side and rear tire holders, package carriers, Reliable oil can holders, license brackets, gasolene strainers, hood latches and handles, gear-shift levers, control pedals, lamp brackets, rods, etc.

Emil Grossman Co., New York City.

Red Head spark plug wrenches, ignition cable and terminals, Mirrorscopes, side and rear tire holders, license brackets, control pedals, Security windshield cleaners, etc.

Garage Equipment Co., Milwaukee, Wis.

Universal bumpers, torpedo tire holders, windshields, vulcanizers, jacks and lamps.

Motor Car Equipment Co., Akron, O.

Parts, Fittings and Materials for Factory Use

AXLES, SPRINGS, ETC.

Weston-Mott Axles, Hubs and Rims.

Weston-Mott Co., Flint, Mich.

Model 900-L is a new pleasure car rear axle, of which the housing, hub bodies, oil shedders and brake drums are of pressed steel; shafts and gears are of high quality steel, and ball bearings are fitted. Another new product is a line of double-reduction rear axles for commercial cars; these are designed to take the place of chain drive constructions and are for use in light commercial vehicles; features are, elimination of chain drive construction, fewness of parts, and gear ratios of from 5 to 1 to 9 to 1; are full-floating type; liberal braking surface is provided. Line also includes fixed-axle-semi-floating, single-bearing-full-floating and double-bearing-full-floating types of rear axles; tubular, square-front and I-beam front axles.

Hele-Shaw Clutches and Evans Axles.

Merchant & Evans Co., Philadelphia, Pa.

Models—Clutches made in ten sizes for transmitting power from 10 to 100 horsepower. Evans rear axles are of the full-floating type and have the gearset incorporated in the differential housing; they are made for both pleasure cars and commercial vehicles.

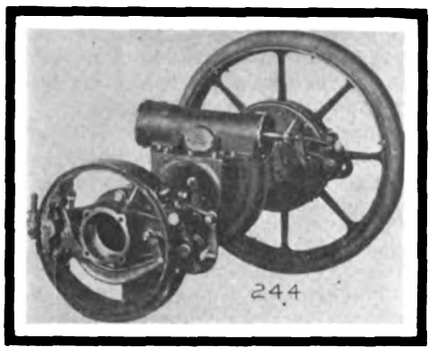
Features—Clutches are of the multiple disk type with the plates running in oil; plates are provided with "V" grooves which fit into one another and render the clutch action "sweet." Evans axles are well trussed; the gearset provides three speeds forward and reverse; on both second and third speeds the drive is direct.

Prices—Clutches, $70, $80, $90, $100, $110 $130, $150, $170, $210, $250. Axle price on application.

Timken Axles.

Timken-Detroit Axle Co., Detroit, Mich.

Front and rear axles for both pleasure cars and trucks, complete with steering knuckles for front axles; rear axles of both live and dead types; live axles complete with differential, brakes, housing, etc. Also jackshafts complete, radius rods, etc. All bearings Timken roller.



Features—High-grade material and workmanship throughout; extreme accuracy of construction; all moving parts enclosed and dustproof; special attention given to lubrication problems; large variety of equipment, so that practically any requirements can be met.

Sheldon Axles and Steel Wheels.

Sheldon Axle Co., Wilkesbarre, Pa.

Both front and rear axles are made in a variety of different weights and designs. The newest productions are the Type W-I rear axle, fitted with worm drive, and Sheldon cast steel wheels.

Features—Front axles are one-piece drop forgings, I-beam in cross-section; thrust bearings between steering knuckles and the yokes make for easy steering; Tobin bronze pivot bolt bearings fitted with rachet grease cups. Type W-I rear axle equipped with David Brown & Son worm mounted on Rhineland bearings; differential gears mounted on New Departure bearings. In the standard rear axles made, Standard and Bower roller bearings and New Departure, Rhineland, F & S, Hess-Bright, Radax and Norma ball bearings are fitted at the option of the user, and all are interchangeable. Steel wheels also optional. Steel wheels are durable and resilient; light.

SHELDON WORM DRIVE AND STEEL WHEEL

Tuthill Springs.

Tuthill Spring Co., Chicago, Ill.

Types—Semi-elliptic or half springs and three-quarter scroll springs, made in nine standard sizes from 35 to 48 inches; full elliptic and scroll elliptic springs made in six standard sizes from 36 to 40 inches. Odd sizes and shapes made to specification.

Features—Alloy steels used in the manufacture; rebound clips are provided.

Prices—Half elliptics from $5 to $18.50 a pair; three-quarter elliptics from $7.50 to $27.75 a pair; full elliptics from $7 to $19 a pair.

E-C Axles.

E-C Sales Co., Chicago, Ill.

Made in a variety of models and sizes, both front and rear.

Features—Accessibility of the gear units on the rear axles; one-piece cast steel housing, no truss rods, tubular drive shafts, liberal brake dimensions, one-piece casting around differential bearings, pinion adjustment independent of pinion bearing adjustment.

American Axles.

American Ball-Bearing Co., Cleveland, O.

I-beam front axles and full-floating rear axles, bevel gear driven, both adjustable and non-adjustable, and worm driven axles are made in various sizes.

Features—Shafts of chrome-vanadium steel heat treated; tubing of nickel steel heat treated, choice of bearings.

Perfection Springs.

Perfection Spring Co., Cleveland, O.

Thin-leaf springs for touring cars; springs for 1-, 2-, 3-, 5- and 7-ton trucks. Oil-tempered, heat treated and of American or imported Krupp silico-manganese steel.

Harrow Springs.

Harrow Spring Co., Milwaukee, Wis.

Made to specification from either carbon or alloy steels.

Marburg-Hagen Springs.

Marburg Bros., Inc., New York City.

Made to specification from pure carbon steel.

Huston Springs.

Huston Multiple Car Spring Co., Philadelphia, Pa.

Hess Springs and Axles.

Hess Spring & Axle Co., Carthage, Ohio.

Torbenson Axles.

Torbenson Gear & Axle Co., Newark, N. J.

Three sizes, for ¾, 1 and 2 tons capacity.

Digitized by Google

Features—Live axles are separate from the load bearing axle, which is a drop forging, and drive the wheels through the internal gears on the wheels and spurs on the ends of the drive shafts.

Smith Axles.

A. O. Smith Co., Milwaukee, Wis.

Both front and rear axles in various sizes.

Features—Front axles are made with an extra low drop from the spindle to the spring pad. Rear axles are made with internally trussed pressed steel housings. Ends reinforced with long swedged tubes, the outer ends of which form the bearing sleeves; driving mechanism built on the unit principle and is easy of adjustment.

STEERING GEARS.

Lavigne Steering Gears.

Lavigne Gear Co., Racine, Wis.

Models—Made for both pleasure cars and commercial vehicles. Three models, known as A, B and C, are made for pleasure car use. A is for cars weighing up to 2,000 pounds; B is for cars weighing between 2,000 pounds and 3,000 pounds; C is for cars weighing over 3,000 pounds. For commercial cars five models are made: A for trucks of less than a ton, B for 1-ton trucks, C for 2-ton trucks, D for 3-ton trucks, and E for 5-ton trucks.

Features—Irreversible; no end thrust, no loose parts, automatically take up wear, compact, dustproof.

Gemmer Steering Gears.

Gemmer Mfg. Co., Detroit, Mich.

Models—Made in eight models, four for pleasure cars and four for commercial vehicles. Models C, K, O and S are for pleasure cars; Model C has a single worm; K, O and S have double worms. The commercial steering gears are R-2, K-2 and O-2; R-2 has a single worm; K-2 and O-2 have double worms.

Features—Worm and sector type; full worm wheels with squared or tapered shafts; F & S ball bearings; spring lever, ratchet or frictional controls.

GEARS, CHAINS, ETC.

Magic Gearsets.

Aristos Co., New York City.

Made in a single model providing three speeds forward and reverse.

Features—The design of the gearset is entirely new and embraces the use of an internal gear of the step-up cone type, which provides three gears of different diameters; the gear is housed at one end of the transmission casing and is attached to the propeller shaft. A spur gear is arranged to slide on the splined end of shaft which enters the other end of the housing and which attaches to the clutch of the car; a universal joint is fitted to this shaft so that the spur can be made to mesh with either of the there internal gears and provide three gear ratios. The spur gear is shifted by means of a yoke which is operated through the intermediary of the gear shift lever. Reverse is obtained by the use of an idle pinion.

Cotta Transmissions.

Cotta Transmission Co., Rockford, Ill.

Gearsets for either shaft or chain drive; three forward speeds. Gears always in mesh and changes made by shifting dog clutches. Made in various sizes to transmit from 15 to 130 horsepower.

Features—Dog clutches for engaging different speeds, relieving the gear teeth of shocks; selective control; adaptability to right, left or center control; substantial construction of the best materials.

Prices—From $100 to $250, according to size, for shaft drive, and from $180 to $625 for chain drive, which includes differential and extension housing for differential.

Link-Belt Silent Chains.

Link-Belt Co., Philadelphia, Pa.

Made in pitch sizes from ⅜ of an inch to 2½ inches, and in widths which are ample for the power to be transmitted.

Features—Links are provided with steel bushes which are removable; washers between the links provide unbroken pin bearing the full width of the chain.

Brown-Lipe Gears.

Brown-Lipe Gear Co., Syracuse, N. Y.

Transmission and differential gears; unit power plant and rear axle gearsets, control sets, multiple disk clutches, etc.

Features—New models of four-speed gearsets; special differentials for commercial vehicles; modern methods of gear-cutting; quiet-running gears.

Motometer Indicator.

Motometer Co, New York City.

Models—Made in a single type for attachment to the radiator filler cap of any car.

Features—The device comprises a thermometer which is visible from the driver's seat and serves to warn when the motor is running hot.

Price—$10.

Coventry Chains and Gearsets.

Sarco Engineering Co., New York City.

Coventry silent chains in all pitches and widths, as well as applications of the chain drive to the camshaft, magneto and fan drive and in the gearset.

Ross Gears and Differentials.

Ross Gear & Tool Co., Lafayette, Ind.

Models—Steering gears are made in five models, all for commercial car use; B.F. is the heaviest, and B.C. the smallest; the intermediate gears are B.A., B.H., and B.B. Differentials are built in three sizes—A.E. for 5-ton trucks, A.H. for 2- and 3-ton trucks, and A.B. for 1-ton trucks. All are of similar design.

Features—Length of the bearings in the steering gears. Web-shaped housing in the differentials.

Worm Gears and Worm Drives.

Wm. Cramp & Sons Shipbuilding Co., Philadelphia, Pa.

Rough and machined castings and blanks for worm drive construction; finished worm drives of approved design.

Munice Gearsets.

Munice Gear Works, Munice, Ind.

Sliding and planetary gearsets and jackshaft assemblies in several different weights.

Lefevre Gearsets.

Lefevre Arms Co., Syracuse.

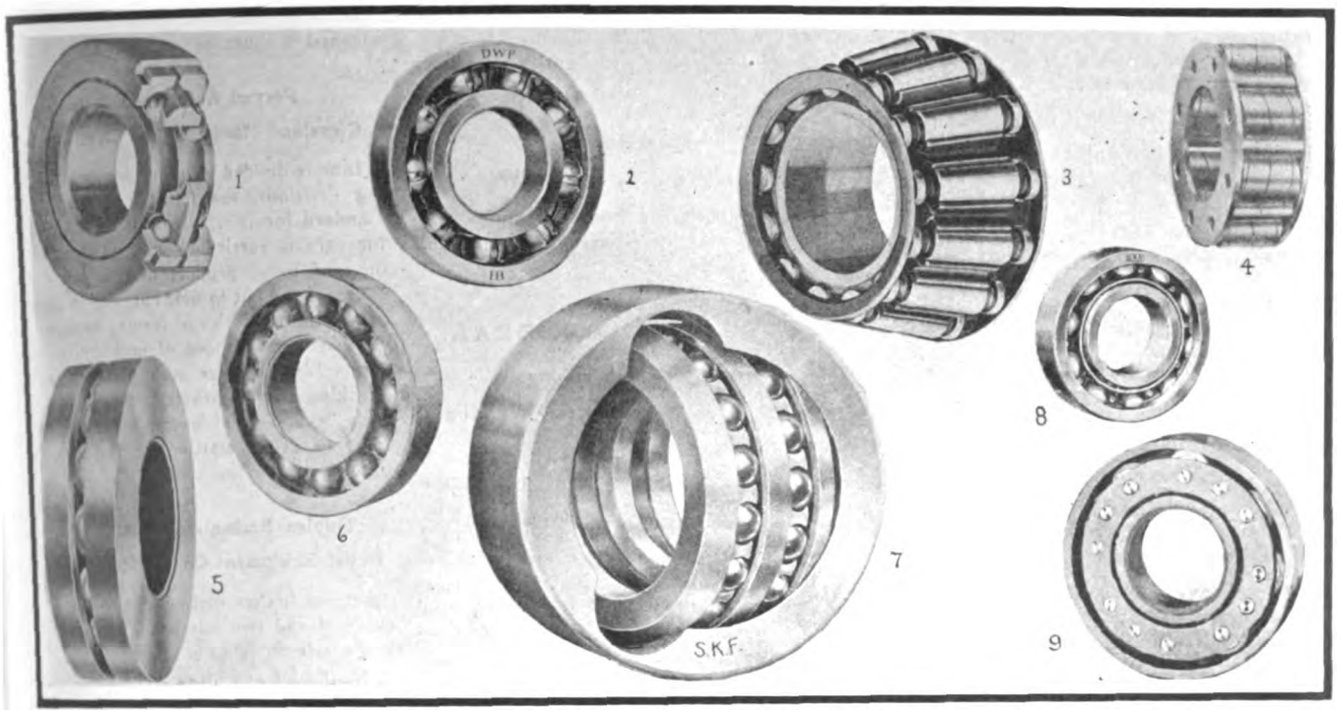
Both sliding and planetary gearsets are made in several sizes, as well as complete jackshaft assemblies and differentials and gears.

BEARINGS.

Hess-Bright Ball Bearings.

Hess-Bright Mfg. Co., Philadelphia, Pa.

Types—Radial bearings with wide races, light type made in 23 sizes from 30 mm. in diameter to 200 mm.; medium type from 35 mm. to 240 mm., and of the heavy type from 62 mm. to 265 mm. With narrow races, light type in 21 sizes from 32 mm. to 185 mm.; medium type, 15 sizes from 37 mm. to 168 mm.; heavy type, six sizes from 65 mm. to 103 mm. Six sizes of special small bearings from 16 mm. to 26 mm. are made; magneto bearings, which differ somewhat from the others in mode of assembly, are made in four sizes from 28 mm. to 44 mm. in diameter. Thrust bearings are made in a variety of sizes.



Features—Radial bearings, save the magneto types, are assembled without notching the races or risking distortion by pressing the bearings into the races. Retainers are made of pressed steel. Magneto bearings are assembled by slipping the inner raceway with the balls into place in the retainers into the outer raceway, one side of the outer raceway being tapered. The thrust bearings are provided with a rounded bottom raceway which tends to shift until the load is equally distributed on all of the balls.

Bower Roller Bearings.

Bower Roller Bearing Co., Detroit, Mich.

Made in three series known as N, Annular and T. Series N is made in diameters increasing from 52 to 240 mms.; Annular bearings are made in diameters from 52 mms. to 265 mms.; series T is made in diameters from 2.24 inches to 4.33 inches.

Digitized by Google

CONSPICUOUS TYPES OF BALL AND ROLLER BEARINGS; 1—NEW DEPARTURE; 2—HESS-BRIGHT; 3—TIMKEN (Roller); 4—HYATT (Roller); 5—BOYER; 6—R. I. V.; 7—S. K. F.; 8—S. R. O.; 9—BOWER (Roller)

Features—Combined radial and thrust bearings—body of roll carries radial load, surface carries thrust; increase of radial load does not increase thrust and vice versa; self-adjustable.

Prices—Series N, from $5.25 to $85; Annular, from $5.25 to $110; Series T, from $5.75 to $12.50.

R. I. V. Ball Bearings.

R. I. V. Co., New York City.

Radial bearings made in three types—light, medium and heavy. Light bearings are made in 23 sizes from 30 mms. in diameter to 200 mms. in diameter; medium weight bearings are made in 23 sizes from 35 mms. in diameter to 240 mms. in diameter; heavy bearings in 16 sizes from 62 mms. in diameter to 265 mms. in diameter. Type F thrust bearings with self-aligning lower raceways made in 12 sizes from 53 mms. to 140 mms.; Type G, washer bearing, in 18 sizes from 32 mms. to 150 mms.

Features—Uniformity of materials; accuracy of workmanship; design.

Prices—Radial, light, from $3 to $48; medium, from $3.75 to $90; heavy, from $7.50 to $125; Type F, from $6.40 to $33.15;

Hyatt Roller Bearings.

Hyatt Roller Bearing Co., Detroit, Mich.

Roller bearings in all sizes and for all kinds of automobile service, either pleasure or commercial vehicles.

Features—Spiral rollers which have sufficient elasticity to conform to any inequalities of surface; quiet running; oil equally distributed by the spirals, alternately, rollers being coiled in opposite directions; parallel rollers and races; suitable for heavy or light duty.

Boyer Suspension Bearings.

Suspension Roller Bearing Co., Sandusky, Ohio.

Types—Single row type combined radial and thrust bearings are made in 48 models varying in diameter from 10 mm. to 200 mm.; double row type made in 64 models varying in diameter from 10 mm. to 240 mm. Type G, from $1.10 to $11.

Features—Radial and thrust bearings combined; by virtue of the fact that the balls are placed in grooves in the lateral faces of the raceways, which are of equal diameter, the weight is distributed on all of the balls and not simply on the lower balls; dustproof.

Prices—Single row type, from $3 to $65; double row, from $3 to $90.

Whitney Roller Bearings.

A. C. Smith Co., Milwaukee, Wis.

Models—Made in all of the standard sizes for automobile work.

Features—Adjustable tapered cup and cone type; no shoulders or guiding members; cage not subject to load stresses.

SKF Ball Bearings.

SKF Ball Bearing Co., New York.

Carefully selected steel, careful selection and calibration of the balls, determination of their hardness and homodeneity, closely controlled processes in hardening and tempering the bearing races, accurate machine work, close grinding and finishing are claims by this company. Outer race has its inner surface concaved, inner race has two groves in outer surface, each groove of radius slightly larger than that of the balls; construction is designed to provide for self-alignment in case of deflection.

Timken Roller Bearings.

Timken Roller Bearing Co., Canton, O.

Tapered roller bearings for axles, shafts, knuckles, steering gears, etc.

Features—Tapered construction of rollers, cones and cups permits accurate adjustment for wear; ribs on cones and grooves in rollers keep the rollers always in their places; the utmost pains are taken in process of manufacture to ensure accuracy; special steels for each part, specially heat treated; heavy and light bearings for heavy and light duty.

United States Ball Bearings.

United States Ball Bearing Mfg. Co., Oak Park, Ill.

Bearings of all standard sizes for use under all conditions.

Norma Bearings.

Norma Co. of America, New York.

Ball and roller bearings, precision testing instruments, Hirth minimeters. Features claimed are accuracy, perfection of workmanship, superior design, efficiency, endurance and quality.

Schaefer Ball Bearings.

Barthel, Daly & Miller, New York City.

In all standard sizes for carrying radial and thrust loads.

Digitized by Google

Features—Best of materials and workmanship.

Standard Bearings.

Standard Roller Bearing Co., Philadelphia.

Bearings, both ball and roller, of all sizes and for all classes of service.

New Departure Ball Bearings.

New Departure Mfg. Co., Bristol, Conn.

All standard sizes and in single and double row types.

Rhineland Ball Bearings.

Rhineland Machine Works Co., New York.

Ball bearings in all standard sizes for all classes of service.

SRO Ball Bearings.

Marburg Bros., Inc., New York City.

Ball bearings in all standard sizes.

TOPS AND BODIES.

Golde Tops.

Golde Patent Mfg. Co., New York City.

Models—Made in five models: Model 15E is 128 inches long; 15L, 111 inches; 15K, 103 inches; 15H, 94½ inches; 17, 67 inches. Any of the models is furnished either tapering oval steel rods, known as Equipment A, or with wooden rods and steel trimmings, known as equipment B; any model in either equipment can be covered with waterproof canvas, mohair or pantasote, and in colors to suit conditions. Wizard curtains are made to go with the various models.

Features—Supported only at two points; can be very easily raised by one person; lazy tongs principle upon which the frame is constructed ensures rigidity. Wizard curtains are arranged to be folded along the under side of the top and are folded up with the top.

Prices—Prices vary according to materials used.

Budd Pressed Steel Bodies.

Edward G. Budd Mfg Co., Philadelphia, Pa.

Made in various styles for both pleasure and commercial chassis.

Features — Indestructibility, non-inflammability, lightness, all joints welded, finish can be oven-baked and thereby made durable.

Hayes Metal Bodies and Parts.

Hayes Mfg. Co., Detroit, Mich.

Metal bodies, running boards, fenders, hoods, oil pans and various other sheet metal parts.

Longdin-Brugger Tops.

Longdin-Brugger Co., Fond du Lac, Wis.

Models—One model complete with curtains. Made in mohair. Set of seat and top covers for Ford cars also shown.

Prices—Top, $35; seat and top covers, $30.

Racine Bodies.

Racine Mfg. Co., Racine, Wis.

Metal pleasure car bodies. Among the newer types are a five-passenger sedan and a Colonial coupe.

FITTINGS IN GENERAL.

Flexible Metal Tubing.

American Metal Hose Co., Waterbury, Conn.

Made for conveying warm air to the carburetter in diameters increasing by eighths of an inch from ¼ of an inch to 2 inches; for exhaust gases in diameters increasing by quarters of an inch from 1 inch to 3 inches; in short lengths provided with rubber sleeves for use as lamp connections; in short lengths provided with air pump connections and chuck for inflating tires.

Features—Durable, easily assembled, for exhaust it is asbestos packed to withstand heat.

Prices—Warm air, from 24 cents a foot for the smallest diameter to 60 cents a foot for the largest diameter. For exhaust gases, from 40 cents a foot to $1.50 a foot. Lamp connectors, 20 cents; pump connectors, 25 cents a foot, and 60 cents for the couplers.

Soss Hinges and Die Castings.

Soss Mfg. Co., Brooklyn, N. Y.

Models—Invisible hinges are made in two models, No. 117 and 119, for automobile use. No. 117 has a non-separable post plate; on 119 the post plate is separable, consisting of a socket portion which prevents the ingress of water to the post, and the hinge bearing portion.

Features—Hinges are invisible when in place; can be used on either straight or curved doors; cannot rattle; have no projections to catch the clothing, and they carry the door outside of the opening, allowing use of the full width of between the jams.

Prices—117, $1.50; 119, $2.

Numotor Top and Cover Fabrics.

L. J. Mutty Co., Boston, Mass.

Numotor fabrics are made in single texture for seat covers and in double texture with Para rubber interlining for tops, colors to suit. Numotor leather is made of a single texture covered with leather. Imported and domestic mohairs, lustres, serges and twills also are stocked.

Features—Numotor fabric is made of combed cotton yarns dyed in the fiber so as to obtain a fast color. A special dye—Indanthrene—is used. The top covers are waterproof and all of the fabrics can be cleaned without being impaired.

Forged Automobile Parts.

Cleveland Hardware Co., Cleveland, O.

Line is divided into bow socket and forging divisions, the latter into special and standard forgings; stock of standard parts for cars is carried. Company urges economy of using product of this nature because of the cut in first cost due to greater production facilities of forging company as compared with those of ordinary car factory. List includes such parts as spring shackles, lamp brackets, spring clips, yoke ends, levers, pedal levers, connecting rods, steering arms, starting crank levers and others.

Duplex Brakes and Gyrex Mixers.

Royal Equipment Co., Bridgeport, Conn.

Duplex brakes made in six models, four external and two internal. Gyrex is made in a single model to fit in the induction pipe of the motor and break up the liquid molecules.

Features—Duplex brakes are equally effective whether the car is moving forward or backward; braking force exerted over the full area of the brake drum; no drag or chatter. Gyrex mixers are easily attached and effective.

Ajax Brake Lining.

Asbestos & Rubber Works of America, New York City.

Made in thicknesses increasing by 1/16 of an inch from ⅛ inch to ¼ inch and widths increasing by ¼ of an inch from 1 inch to 4 inches.

Features—Waterproof; grease and oil proof; acid and dust proof; will not harden.

Prices—From 33 cents a foot for the smallest size to $1.97 a foot for the largest.

Multibestos Brake Lining.

Standard Woven Fabric Co., Worcester, Mass.

Sizes—Made in thicknesses increasing by 16th of an inch from ⅛ to 5/16 of an inch and in widths increasing by quarters of an inch from 1 inch to 6 inches.

Features—Long life, unburnable, grips instantly.

Prices—From 33 cents a foot for the narrowest and thinnest size to $3.60 a foot for the thickest and widest size.

Wasson Piston Rings.

Wasson Pitson Ring Co., Hoboken, N. J.

Made in all sizes and diameters to fit all makes of motors. Special rings also are made.

Features—Rings are concentric with the pistons and cylinder walls and naturally are

Digitized by Google

of equal thickness all around; resiliency is imparted to the rings after they have been finished to size by peening the inside surface in a special machine.

Connecticut Magnetos and Coils.

Connecticut Telephone & Electric Co., Meriden, Conn.

Models—Magnetos made in four models: Model A-4 is for use with four-cylinder motors; A-6, with six-cylinder motors; A-4 Dual is for dual ignition with four-cylinder motors; A-6 Dual is for dual ignition with six-cylinder motors. Dash box coils are made for use in connection with motor with one, two, three, four or six cylinders in several different styles. Tubular dash coils are made either with or without switches.

Features—Magnetos are fully enclosed; hot spark at low speeds; durable.

Prices—A-4, $90; A-6, $100; A-4 Dual, $105; A-6 Dual, $115. Coils from $12 to $60. Tubular dash coils, with switch, $13; without switch, $10.

Trufault-Hartford Shock Absorbers.

Hartford Suspension Co., Jersey City, N. J.

Models—Made in four models: Standard, for cars weighing over 2,500 pounds; Intermediate, for cars weighing between 1,800 and 2,500 pounds; Junior, for cars from 1,200 pounds to 1,800 pounds, and Juniorette, for cars weighing less than 1,200 pounds and for electrics.

Features—Frictional plates are self-lubricating and made of wear-resisting material; tension can be readily adjusted by shifting pointer on dial to give best results and compensate for wear. Pioneer shock absorbing device.

Prices—Standard, $60; Intermediate, $45; Junior, $25; Juniorette, $15, for a set of four.

Abell Tire Pump.

Standard Thermometer Co., Amesbury and Boston, Mass.

Type—Engine driven or electric driven for garage use.

Features—Ball-bearing drive; evaporated oil does not become mixed with the air pumped into the tire. The pump has three cylinders and may be attached to the engine. The garage pump may be operated by a small electric motor attached to any 110-volt socket. Pump for attachment to engine, weight, 6 pounds; price, $25. Attachments to apply to car, $5 to $10. Garage pump, weight, 40 pounds; price, direct current, $80; alternating, $85.

Pantasote Coverings.

Pantasote Co., New York City.

For covering tops, made in 23 different weights and finishes. For covering seats, made in six different weights and finishes.

Features—Uniform quality; not injured by exposure to sunlight or by grease or by changes of temperature; can be easily cleaned and is absolutely waterproof.

Prices—For tops, from $1.25 a yard to $2.05 a yard. For seats, from 90 cents a yard to $1.50 a yard.

Globe Tool Boxes and Parts.

Globe Machine & Stamping Co., Cleveland.

Thirty different models of tool and battery boxes for use on both pleasure and commercial vehicles; pressed steel fenders and body parts.

Features—Pressed one-piece covers; electrically welded seam and bottom; new style aluminum mats, and either brass, nickel or black enamel trimmings.

B-T-K Parts.

Auto Parts Mfg. Co., Muncie, Ind.

Gearsets, clutches, control levers and steering gears in several different forms. Two new types of unit power plant transmissions for 30-40 and 40-55 horsepower combinations, respectively, arranged for either left or right hand or center control and fitted with either cone or disk clutches. Dry plate clutches and cone clutches with springs under the leather are among the newer products.

Drop Forgings.

Chicago Drop Forge & Foundry Co., Chicago, Ill.

Rough drop forgings in the form of connecting rods, crankshafts, camshafts, steering knuckles, etc. The Hartsough connecting rod, which is readily adjustable simply by turning the bolt holding the lower half of the bearing, is put out in finished form and in a variety of shapes and sizes.

McCord Radiators.

McCord Mfg. Co., Detroit, Mich.

Vertical tube type, made to manufacturers' specifications.

Features—Effective whether used for pump or thermo-siphon circulation; free air and water circulation; large area of contact between tubes and fins, lightness and strength.

E-C Demountable Wheels.

E-C Sales Co., Chicago, Ill.

Types—Wood and wire.

Wire wheel, new product, removed by unscrewing ring and loosening sleeve; spokes are crossed, greater strength being claimed thereby; clincher tires only; claims are quickness of operation and simplicity. Wood wheel, on market about nine months, similar to the wire wheels.

Whitney Chains and Tools.

Whitney Mfg. Co., Hartford, Conn.

Types—Roller, block and silent chains are stocked in all sizes; hand and weight feed milling machines and tool grinders and Woodruff keys and cutters, Presto drill chucks, collets and friction tapping devices.

Features—Roller and block chains have deep side plates which add strength. Roller chains are made either in the detachable type or the riveted type; both types are interchangeable.

Raybestos Brake Lining.

Royal Equipment Co., Bridgeport, Conn.

Made in four thicknesses, increasing by sixteenths of an inch from ⅛ inch to ¼ inch, and in widths from 1 inch to 4 inches.

Features—Grips readily; not affected by grease, oil or water; durable.

Prices—From 32 cents a foot for the thinnest and narrowest to $1.88 a foot for the thickest and widest.

C. R. G. Carburetters.

C. R. G. Mfg. Co., Saugus, Mass.

Models—Made in a single model in all of the more common sizes.

Features—Multiple jet type with three jets each played in an individual venturi tube; only the low speed jet is adjustable, the others coming into action as the suction of the motor increases at higher speeds.

Westinghouse Motors.

Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa.

Electric motors for pleasure and commercial cars; all sizes.

Enclosed type; minimum size and weight, and maximum efficiency and durability; motors developed especially for vehicle work by long experience; motors built to suit any conditions.

Non-Gran Bronze.

American Bronze Co., Berwyn, Pa.

Special bearing bronze which is made not only in ingots, but in cored bars which are readily machined to make bushings.

Features—Will not metallize oil; gives excellent results in actual service; extremely convenient form for shop use; minimum waste in making cored bars into bushings.

Valentine Varnishes.

Valentine & Co., New York City.

Superfine colors, wood fillers, top-dressing, Celox primers and sealers, Vanadium varnishes, color varnishes and chassis finishing, are made.

Features—Transparency, fluidity, quick drying, dry through, brilliancy, durability, uniformity, economy.

Janney-Steinmetz Tanks.

Janney, Steinmetz & Co., Philadelphia, Pa.

Seamless, cold drawn steel tanks for use as fuel containers and air and gas containers, in varying shapes and capacities. Gasolene and oil storage systems supplied with

Digitized by Google

welded seamless tanks, as well as pressed brake drums, also are stocked.

Springfield Metal Bodies.

Springfield Metal Body Co., Springfield, Mass.

Aluminum bodies in all the ordinary types, and a full line of convertible bodies, which, used in conjunction with special convertable tops, serve to make closed bodies of the open models.

Vulcan Drop Forgings.

J. H. Williams & Co., New York.

Crankshafts, connecting rods, valve stems, igniter levers, rod ends, yoke ends, thumb nuts, spark plug wrenches, lathe dogs, clamps, caliper gauges, hammers and other parts and tools. Iron, steel, copper, bronze and aluminum are used.

Franklin Die Castings.

H. H. Franklin Mfg. Co., Syracuse, N. Y.

Various styles and sizes of die cast bearings and bushings made of Franklin babbitt alloys; also parts for magnetos, pumps, and electric lighting systems.

Features—Cheapness as compared with machined parts.

Gray Iron Castings.

Manufacturers' Foundry Co., Waterbury, Conn.

Cylinders, pistons, manifolds and other parts; gray iron of a high quality is used and ability is claimed to produce high-grade and uniform work with most intricate designs.

Linde Shims.

Linde Shim Co., New York City.

Shims for adjusting connecting rod bearings made up of an infinite number of very thin brass sheets sweated together under pressure; sheet at a time can be removed to adjust the shim to the needs of the bearing.

Cowles Trimmings and Mountings.

C. Cowles & Co., New Haven, Conn.

Door handles, robe rails, foot rests, top standards and props, curtain fasteners, curtain rollers, window lifts, body moulding, speaking phones, annunciators, locks and hinges, lamps, switches, and toilet articles.

Electrical Apparatus.

General Electric Co., Schenectady, N. Y.

Battery charging sets, mercury arc rectifiers, motor-generator sets, meters, switches, vehicle motors and controllers, tungsten lamps and cloth pinions all made in a variety of different models.

Spicer Universal Joints.

Spicer Mfg. Co., Plainfield, N. J.

Encased universal joints for transmitting all powers.

Western Drop Forgings.

Western Tool & Forge Co., Brackenridge, Pa.

Crankshafts, camshafts, connecting rods, I-beam front axles, steering arms and knuckles, lamp forks, spring hangers and other parts and tools.

McCue Axles.

McCue Co., Buffalo, N. Y.

Drop forged, I-beam section front axles are made in six models for cars weighing up to 4,000 pounds. Ten models of rear axles are made for cars of all weights up to 5,000 pounds.

Cleveland Worm Gears.

Cleveland Worm & Gear Co., Cleveland, O.

Several different types of worm gearing, as well as worm gearing assembly. The gears are made of imported steel and ground to finish.

Priming Cups and Fittings.

Edelmann & Co., Chicago, Ill.

Priming cups, relief cocks, radiator drain cocks, grease cups, screwdrivers, gas tank couplers and reducers, oil gauges, hydrometers, in a variety of different models.

Wells Screw Cutting Machinery.

Wells Brothers Co., Greenfield, Mass.

All types of screw cutting machinery, taper pin reamers, burring tools, standard and limit gauges. Especial attention to tools suitable for A. L. A. M. standards.

Imperial Fittings.

Imperial Brass Mfg. Co., Chicago, Ill.

Lubricators; gasolene, oil and water pumps; gasolene and water manifolds; priming cups and cocks; valves, accelerator pedals and other brass goods.

Baldwin Steel Castings and Steel.

Baldwin Steel Co., New York City.

Clay crucible steel castings, gears, cylinders, crankshafts, axles, sprockets, gear blanks, etc., as well as bearing steel, magnet steel, chrome, nickel and vanadium steels.

Doehler Die Castings.

Doehler Die Casting Co., Brooklyn, N. Y.

Bearings, bushings made in a variety of forms and sizes to fit all motors; a feature is the babbit lined bronze bearing. Die castings made for light manufactures.

Mondex-Helix Gas Mixers.

Aristos Co., New York City.

Models—Made in two sizes for use with 1¼-inch and 1½-inch carburetters. Both models are similar in detail.

Chrome Vanadium Steel Products.

Carnegie Steel Co., Pittsburgh, Pa.

Products illustrating the scope of application of several grades of the Carnegie Co.'s products and illustrating tests for various grades of steel.

Parsons White Brass.

Wm. Cramp & Sons Ship & Engine Building Co., Philadelphia, Pa.

Bearing metal, castings of various shapes and sizes for use in connection with all makes of motors.

Krupp Steels and Products.

Thomas Prosser & Son, New York.

Steels and completed steel parts made by Fried. Krupp, cast steel works, Essen, Germany; consists of axles, crank pins, and steel forgings.

Carpenter Steels.

Carpenter Steel Co., Reading, Pa.

Chrome Nickel steel for use in gearsets and Sampson Nickel Alloy steel for use in axles, gears, steering knuckles, spindles, etc.

Steel Tubing.

National Tube Co., Pittsburgh, Pa.

Steel tubing in a variety of sizes and cross-sections for use in windshields, cylinders and axles, etc.

Rielly Trimming Leathers.

P. Rielly & Son, Newark, N. J.

Patent and Enamel top and trimming leathers in all weights and colors for upholstery work.

Fans.

Sparks-Withington Co., Jackson, Mich.

One piece stamped steel fans of all sizes and various types and shapes.

Top Fabrics.

L. C. Chase & Co., Boston, Mass.

Mohairs, twills and special covers in all weights and colors.

Chains and Sprockets.

Baldwin Chain & Mfg. Co.,Worcester, Mass.

Lock Nuts and Bolts.

Columbia Lock Nut & Bolt Co., Bridgeport, Conn.

Paints and Colors.

Willey Co., Long Island City, N. Y.

Valves and Fittings.

Burke Valve Co., Cleveland, O.

Dynamometers.

Joseph Tracy, New York City.

Lock Nuts.

Grip Nut Co., Chicago, Ill.

Steels.

Fisher Steel & Iron Works Co., Switzerland

Metal Trimmings.

English & Mersick, New Haven, Conn.

Drop Forgings.

H. A. Elliott, Detroit, Mich.

Metal Stampings.

Metal Stamping Co., Long Island City, N.Y

REILLY'S APPRAISAL OF DEALERS' LITERATURE

Points Out Wherein Manufacturers' Printed Matter Is Invaluable to the Dealer—How It May Be Used to Advantage—Each Folder or Booklet an Educator or Salesman.

"I think we ought to do something with it, change it in some way or else discard it entirely; it doesn't seem to be much good now," remarked the Sales Manager as he sat in Reilly's office and looked thoroughfully at the latest copy of the company's dealers' bulletin which he had picked up from the little dealer's desk.

"No hope for it at all?" asked Reilly.

"I don't know; there must be some way out of the problem, but I don't believe more than three dealers out of ten ever read it and I'll bet that three out of every ten who do look at it throw it away as soon as they run through it," was the salesman's answer.

"Did they never read it?"

"I'm not sure of that, either," continued the Sales Manager. "This much I do know: We sent out a request to the dealers in this sheet a short time ago, asking them to send in certain information, and the responses were so few and unsatisfactory that it surprised me. I always supposed the dealers were alive to the value of the factory's literature but I never had much authentic information on the question until we unknowingly made this test. We never intended it as a test, either; we really wanted the information."

The Dealer's Attitude Questioned

"I don't believe it's all the fault of the bulletin," commented Reilly. "It contains valuable information and if it isn't read I can't see why the attitude of the dealers isn't what needs altering."

"Maybe you're right," responded the Sales Manager. "But supposing you are, what then? How are you going to alter the dealers' attitude?"

"That is another thing," answered Reilly. "But I wouldn't blame the innocent bulletin if it is not to blame for the shortcomings of those who are supposed to read it."

"Do you read it?" questioned the Sales Manager.

"Do I? Look here!" and Reilly pulled open a drawer in his desk and presented for the inspection of the Sales Manager a stack of bulletins dating back for months. The Sales Manager's look of gratification had not spread over a radius of more than two inches when Reilly pulled from another drawer a file of advertising matter, booklets, catalogs and pamphlets and then he called to the office girl, "Nellie, will you bring the back file of bulletins?"

The young woman entered shortly with files of still earlier dates and the whole display was presented for the inspection of the factory man. Such co-operation with the factory was not surprising in this case but it certainly was pleasing and about all the Sales Manager did was to beam his pleasure.

"I read every one of them," said Reilly. "I read every booklet and every piece of literature you get out and when I haven't much else to do I often pull out the bulletin file and read the back numbers. I wouldn't miss doing it for anything. It's worth a lot of money to me."

Inattention to Factory's Messages

"Then you think it's same good?"

"I certainly do," asserted Reilly, "it is invaluable to me. The principal trouble with your problem is that the dealers don't realize the value it can be to them. They are not only handicapping themselves as dealers in your cars but they are disrespectful to the factory. Supposing you had all the dealers gathered at a meeting where the president of the company was to tell them something he especially wished them to know; supposing three out of ten listened while the other seven read newspapers or paid no attention; supposing three out of the ten who did listen remembered what the president said while the other seven straightway proceeded to forget it. Can yon conceive such a thing?

Likening House Organ to Personal Caller

"No, you can't, and neither can I. But that is just what occurs in another way, if what you say about your bulletin is true. This publication is nothing more nor less than a message from the house to the dealer, and is sent with as much earnestness as it would be if personally delivered; if the house has nothing to say it wouldn't put it in the bulletin, and whatever is in the bulletin the dealers ought to realize is there for some purpose."

"That's an excellent way of looking at it," agreed the salesman.

"Well, that's viewing the sheet from the factory standpoint. But what is more important to me and every other dealer is the dealers' standpoint. It is safe to assume that every dealer wants to be a better dealer; he wants to be able to sell more cars and to be a better salesman and business man in general, and if you asked any one of them if this wasn't the case he would almost be offended to think that he was suspected of being without such a desire. But what do many of them do? In the case of the bulletin, it is sent out to help the dealer; it contains information that is supposed to be of assistance to him, yet many of them ignore it. If a factory expert came to him and offered to assist in any way the dealer would grab the opportunity, but when the help comes in an envelope with a stamp on the outside he passes it up.

"The delinquent dealer doesn't realize what is in this bulletin. In many of them are answers to little problems that have been worked out by the factory engineers. There are many little things that the engineers discover and that are incorporated in the publication which the dealer never would think of or find out if he did think of them and were left to figure alone. The engineers are the men who have built the cars; they know the reason for what is in every inch of them from the ground up and that is a knowledge that no salesman ever can hope thoroughly to gain, unless he takes a mighty long course in engineering.

Gaining Valuable Selling Knowledge

"A salesman or dealer knows the cars quite thoroughly, but when it gets down to the fine points of construction he begins to be lacking. Many of these constructional details are good selling points; they show a prospect that there is thoroughness back of the car, and while they may be quite technical in many cases, they are worth saving up to use in the right place."

"And we send out points in general salesmanship, too," interrupted the Sales Manager.

"That's all good, also," continued Reilly. "A great deal if it is this punchy, gingery kind of stuff that is supposed to give a man an incentive and to keep him on edge, and much of it is stuff that any good salesman already knows, and for that reason some of these car sellers stick up their noses at it and say, 'Huh, anybody knows that stuff.' Which is very true, but—there is this often unthought of habit of man of

Digitized by Google

letting good things become stored away in the attic of his idea house; if he sits down and thinks they will come out, but a little dusting off now and then does them good.

"Any kind of selling or merchandizing talk in any form is good. It isn't necessarily new, but it serves to arouse dormant ideas, and right there is a vital principle. The salesman who says, 'Huh, anybody knows that,' never stops to think that while he knew it he had temporarily forgotten it and that the little reminder, the 'stuff he knew' has made available for his use some dormant idea that was uselessly stored away in a deep wrinkle of his brain where it was no good. He knew it was good when he put it there but he had forgotten it was there."

"That's a new idea to me," exclaimed the Sales Manager, "and I'm going to put it in a personal letter to every dealer to see if they won't wake up."

Co-operating with the Manufacturer

"While you're at it," added the dealer, "you might also suggest to them that they regard these bulletins as personal letters; that's what they are. The house would like nothing better than to get its dealers together every week or two for a conference and instruction, and since it can't do this, it tries to get them together through its house organ. Also, the dealers can do much good by helping get out the bulletin. Every dealer has an idea or selling scheme of his own, something that no other dealer has thought of, and if all would get together and send these in to the factory and the factory would spread them around among other dealers, what a swapping of stuff there would be. Every dealer then would have the use of the brains of the whole selling field. Two heads, they say, are better than one, and the whole group of heads ought to be a winner."

"So many dealers have said they are so busy they neglect the house bulletin," suggested the Sales Manager.

"Yes? Well, let me draw a comparison. Every dealer on your list is busy, I presume, but he reads the newspapers, doesn't he? And how much time does he put in at it? Supposing there is a big scandal in New York or Chicago or San Francisco, he reads it, I'll bet—I do myself. He will put in fifteen or twenty minutes on a good newspaper story; but which is worth the more to him: the fact that there was a big murder five hundred or a thousand miles away or the fact that the house has discovered something original in selling or, perhaps, has made a big sale in some city, perhaps in the same town where the scandal or more was? Common sense will demand an answer in favor of the latter. Also the newspaper comes every day and the house organ once a week or once a month. It takes not more than twenty minutes to read the house paper all through, and when a house publication can't compare with a daily newspaper for value or information, there is something the matter with the house sheet or with the estimate of the dealer. I'll bank on the house literature every time."

"We spend a mint of money on printed stuff," asserted the Sales Manager.

Dealer Who Kept Literature Barrel

"And a big per centage of it's wasted," said Reilly, finishing the statement. "Dealers as a rule don't realize what the factory is trying to do for them with its advertising matter. A manufacturing company makes a study of its line and its selling problems and goes to great trouble and expense to get up a line of booklets and leaflets, every one of which is intended to be a hot shot that will have telling effect if properly used. The advertising department sends this material to the dealers and some of the dealers are wise enough to realize the value in it. Others dump it in a back room.

"I know one dealer right here in town whose company plans to keep him well supplied with a high-grade line of advertising matter, but he regards it as junk and treats it from that standpoint. I was in his basement one day and saw a barrel nearly full; I asked him what he did with it and he said he sold it to a junk dealer as soon as the supply was big enough to weigh anything at all. This man doesn't understand the principles of merchandizing, he doesn't know human nature and he is too bigoted to let any helpful information seep into his head.

Booklet Often the Better Salesman

"If he had been schooled in the right way he would know that advertising literature properly used can do many times more on certain occasions than any salesman can do, because it can go with a man to his fireside and talk with him when he is in a mood to listen; it is a little unobtrusive salesman that often will accomplish wonders and worm its way into difficult places in a surprising manner. And again, if the company, which certainly knows something about selling, sees fit to put a small fortune into advertising literature it ought to make a dealer at least suspect that there was some object in the doing; and a little investigation should show him the answer.

"If a dealer does get something of value he also should pass it on to his salesman, mark the important passages, point out the good stuff and send it along to the salesman, that he, too, may benefit by it. Hogging knowledge is foolishness; it's something that can't be cornered, and the more your employes know the better it is for you."

"Co-operating with the factory in the literature line is no more than right, any way. When the factory asks through the bulletin for certain information or that the dealer do certain things he should regard it as if the request came in a personal letter and to him alone. The company is trying to make its force more efficient, is anxious to help its dealers, and if there is co-operation there is bound to be progress; and if every dealer jumps in and they all pull together, each one is certain to be carried along toward greater success, how much greater depends upon how much co-operation he puts in; it's up to him.

"These booklets are worthy of study; they are put out for a purpose. Each of them is suited for a certain class of prospect, just what class I can determine from a study of the booklet; and when I have a prospect whom I think will be helped by a little literature, if I know what my stock contains, I know just what to send him."

"Some of our best dealers, Reilly, don't seem to think they need any help and don't seem to care to help us."

All-wise Man Travels Backward

"Well, without throwing any bouquets," answered Reilly, "I think I am safe in saying that I have as good a business as the average dealer and I hope I never see the day when I don't need assistance of some kind. The man who gets wrapped up in himself and becomes imbued with the idea that he is all there is to it and that he is beyond being benefited by anything or anyone, is in bad shape. He is on the backward road, and for two reasons; one is that he is relying upon his own ability and ideas, and these are likely to become shopworn; the other is that those who take from the experiences of others and who are willing to be helped will go by the other man so fast that he will at least appear to be going backward."

Reilly stopped talking abruptly as he saw passing the window a grocery wagon with several Christmas trees sticking out the back end. "Gee, I almost forgot," he exclaimed, as he slapped his knee. "Order me a Christmas tree, a cedar, will you?" he asked the office girl, as he stepped to the door of her little office.

"Better not get cedar," she said. "My sister bought one and it was all covered with some kind of little bugs; she sent it back and all the cedars she could find were the same way. She took some other kind."

"Order something else, by all means," agreed Reilly; "Mrs. Reilly says I'm bugs enough for one house."

"Your wife is very discerning, isn't she?" was the Sales Manager's comment.

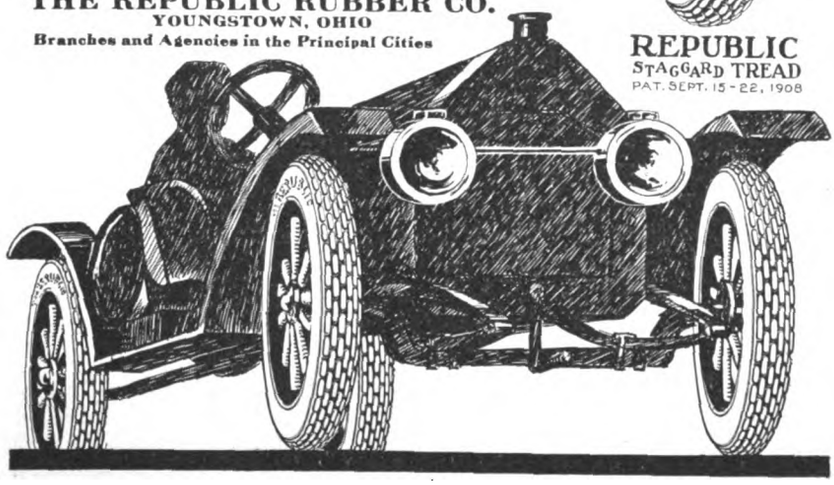
REPUBLIC STAGGARD TREAD TIRES

Ride in safety over slippery pavements

You men who are often compelled to "let her out" can indulge in bursts of speed with less fear of skidding and slewing.



The long, sturdy studs (six rows of them) in the Staggard Tread Tire give your car a good "purchase" on slippery pavements and make skidding an almost negligible factor.

There's extra mileage in the Original, Effective Non-skid Tire, too. The studs form an extra tread over the ordinary, plain tread so that you really have two wearing surfaces.

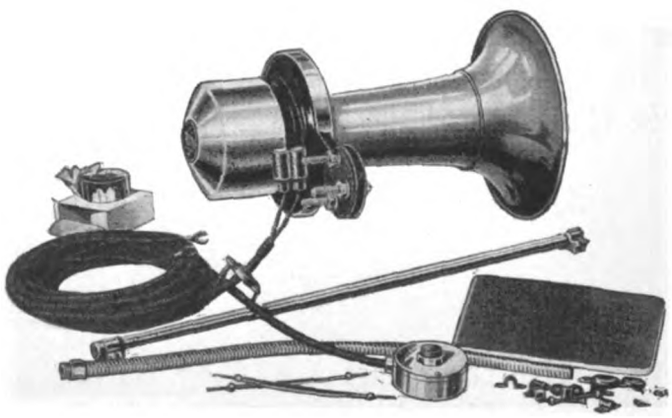
Elyria-Dean Warning Signals

The Electric Warning Signal will be standard equipment on practically every automobile marketed in 1913, and most of the earlier models will be brought up-to-date by the installation of an efficient electric horn by the car owners. We know this to be a fact for our mammoth sales of the TUTO, TUTO-ETTE and REXO Electric Horns to automobile manufacturers and jobbers is the most conclusive evidence.

45,000 REXO Electric Horns of special design are specified by one car maker, the largest electric horn order ever placed.



Thirty (30) other makers (at this writing) have standardized on the TUTO, TUTO-ETTE or REXO warning signals, requiring a daily factory output of 1,000 horns.

The ELYRIA-DEAN line of electric warning signals is complete, comprising the two-tone, one button operated, TUTO and TUTO-ETTE horns and the one-tone, trouble proof REXO Horn.

The TUTO Horn is well known throughout the world as the only double service electric warning signal, with a low note for emergency purposes—the latter obtained by merely increasing the pressure on the one button. It comes complete with everything ready for installing, including special steering column fixtures, and sells for $25.00.

The TUTO-ETTE is a smaller edition two-tone horn that sells for $17.50.

The REXO is made in the same factory and employes features which have made the TUTO horn so successful. It is a single tone horn, instantly responsive and of uniform intensity. It is free from constant care and most effective for emergencies, yet is not too loud for regular service. Our mammoth output makes a low price possible—complete with button and cord, $8.00.

Elyria-Dean Ignition Systems

High frequency, high tension electrical discharges are used in the new ELYRIA-DEAN Ignition Systems instead of the ordinary high tension discharges, which is employed in all others.

This is the new system which has created such favorable results on modern power plants. It gives a new breath of life and "extra ginger," which is so much sought for by the car purchaser

The high frequency spark differs from all other ignition sparks as it is oscillatory in character, 500,000 to 1,000,000 cycles per second.

It ignites the gas in a different manner, by ionizing, embracing a larger volume and giving more rapid and complete combustion, even of poor mixtures.

Wide spark plug gaps are permissable, 1/16 to 3/32", and the disruptive action of the spark prevents **fouling of the** plugs. Under average conditions, plugs never have to be removed, unless for mechanical breakage.

High cylinder pressures have less effect on this spark than on the other ignition sparks.

Invisible heat rays, incidental to the high frequency discharge, get in very helpful action and assist in making the combustion rapid and complete.

It allows the lowest of motor speeds without missing—running on the magneto current.

"Self starters" are made successful on magneto ignition as effective sparks are obtained at very low speeds, below 50 R. P. M.

All wiring carries low voltage currents, as the little resonator coils at the plugs step-up the pressure just where it is used. This obviates leakages and the maintaining of high insulation in the magneto, switch and connecting wiring.

It is a perfected product, the outgrowth of the many thousands of successful High Frequency Systems which have been marketed by the High Frequency Ignition Coil Co., of Los Angeles. Many of these systems have been in use for five or six years, and are still giving satisfactory service.

The exclusive manufacturing license has been granted us under the Seeley patents and pending applications, giving us the legal rights and only practical methods of applying high frequency currents to automobile ignition.

Elyria-Dean Speedometer

The ELYRIA-DEAN Speedometer is the most simple and permanently accurate speed measuring mechanism yet devised.

It operates on the unvarying principle of centrifugal force, direct, and without being hampered with compensating gears, springs, etc.

The action is the same on the coldest winter day as in the heat of summer, and without the use of temperature regulators or hand operated compensators.

The speed indications are obtained by four large steel balls, the same as used in the anti-friction bearings of an automobile, operating radially in grooves by centrifugal force, raising a cup shaped member which responds to the slightest increase in speed, whether the car is going forward or in a reverse direction.

The shape of the cup is such that a long scale of uniform division is obtained, direct. No approximating or doctoring of the scale is necessary.

The hand is steady, it shows the speed at a glance by its position and without the necessity of deciphering the figures or markings, yet the latter are larger than usual for a speedometer of the same diameter.

The dial is black with white markings, the case beautifully finished in baked black enamel with nickel trimmings.

The Odometer is the reliable Geneva type of movement with the trip re-set to any tenth mile, so as to follow guide book markings.

It always adds mileage, never subtracts, regardless of how the car runs, whether forward or backward, or whether the shaft is driven from the right or left hand wheel.

There is nothing radically new or untried in the ELYRIA-DEAN Speedometer. The centrifugal principle was perfected in the FORSE Speedometer (we are exclusive licensees under the FORSE patents).

Every detail has been so nicely perfected that the complete instrument is in strict keeping with the finest made and most luxurious automobiles.

The ELYRIA-DEAN has real speedometer value, easy reading, steady hand, permanent accuracy, great strength in mechanism and neatness of design and finish.

Elyria-Dean Electric Starting and Lighting Systems

Car manufacturers and automobile owners have had just enough experience with electric lighting and starting systems to realize their superiority over all other forms of illumination and cranking—also that the mere collection of dynamos, motors, and batteries do not constitute a well balanced equipment which will operate with the minimum amount of attention.

The dynamos, motors and even the batteries must be especially designed for automobile service and so arranged that the wiring and switching is reduced to the smallest amount.

It has taken us several years to commercially adapt this apparently simple electrical equipment to automobile service. Machines, regulators and switching devices which are perfectly adapted for stationary use have no place on the automobile. This is also true of any regulating mechanisms which require constant care and attention.

The majority of car owners fail to give the necessary attention, therefore the need of simplicity.

The ELYRIA-DEAN electric starting and lighting systems have been produced with this knowledge in view.

The ELYRIA-DEAN product includes the very compact and simple DYNALUX lighting system, the ELYRIA-DEAN separate unit dynamo and motor starting and lighting system, and the OTHO fly wheel starting and lighting system.

These equipments have been designed for distinctly different conditions, so as to give the car maker something which will exactly fit his job.

Non-Carbon Starter

The STARTER WHICH REALLY STARTS

Manufacturers—Dealers—Owners

YOU who have not investigated the NON-CARBON Starter will find it to YOUR interest to do so.

The NON-CARBON Starter is not a cheap Starter; nor a high priced Starter misrepresented.

The NON-CARBON Starter is pronounced the ULTIMATE Starter, by its users.

Listen! The NON-CARBON Starter is fundamentally different. Lay aside your prejudice. The Non-Carbon Starter is the one success.

It contains a real Non-Carbon MIXER.

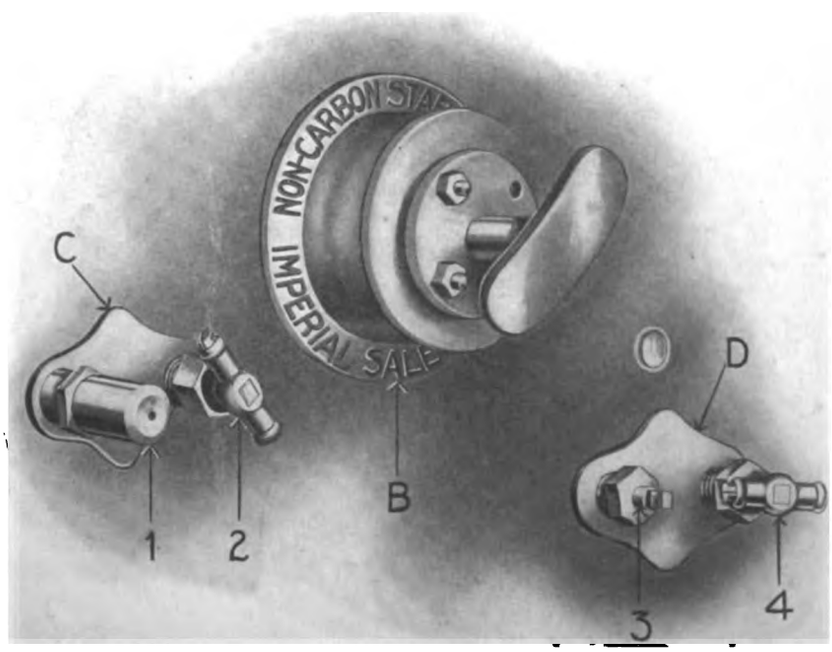
The Starter forces air into the cylinders with only a very small per cent of acetylene. We want it positively understood that the NON-CARBON Starter does NOT force pure acetylene into the cylinders, which will ignite only occasionally and form a great amount of carbon.

Each cylinder receives an equal amount of highly explosive mixture, forming a complete combustion, which has been prepared by the Non-Carbon MIXER.

As a result, the NON-CARBON Starter is the one Starter which Starts the motor **every time** a spark enters the cylinder, regardless of temperature. The NON-CARBON Starter is a real Starter which Starts and not a Starter by name only.

It produces absolutely no carbon; is positively non-injurious to the motor. **Also, when gasoline is exhausted, the Non-Carbon Starter will actually propel your car.**

GUARANTEED TO GIVE SATISFACTION



Easily Operated **Readily Installed** **Dependable**

$30 for a Four Cylinder Starter **$40 for a Six**

Live Dealers Are Given Exclusive Territory

Dealers, you can recommend a success, not an experiment. If you are in territory which you do not KNOW has been contracted for, write us.

Owners, send us your order with check for Non-Carbon Starter; name of car, model, number of cylinders; and name of dealer with whom we can make arrangements for installation, and you will receive a Starter which will give satisfaction, or money refunded.

The Springfield Convertible Body is the final result of three years development and it stands today the only practical all-the-year body for the automobile.

The illustrations tell the story. Note that the top in position gives a beautiful, glass-enclosed, weather-proof car with wide doors, and no bows or other obstruction running across doorways.

As an open car with the top folded down, there is no abnormal appearance of unsightly projection to call attention to the fact that the body can be entirely closed with glass windows.

When it is desired to enclose the body with glass, simply open the doors, unbutton the pads and raise the hinged glass into an upright position, where the spring catches hold them firmly. The four remaining glass windows are removed from the box on the back of the front seat and slipped into place, where each one is secured by tightening two winged nuts—no wrench being required. The whole operation of placing the glass in position takes only three or four minutes.

Sanford

Chassis With Driver's Seat and Dash $1,660

Stake or Express Body $1,750

THE TRUCK BUILT BY TRUCK SPECIALISTS

A motor truck to be permanently popular must be lastingly good. Sanford trucks are built lastingly good and are, therefore, popular.

Throughout Sanford construction, accessibility, standardization and durability have been carefully considered. All the bolts and nuts are standardized throughout and front and rear wheels, hubs, bearings, etc., are interchangeable. The loading space is large but the wheelbase is short, thus giving the driver considerable advantage in turning and getting in and out of narrow streets.

Sanford trucks are well balanced throughout and have the appearance of being well balanced.

The fact that the materials used are of the finest grade obtainable accounts for the extreme comparative lightness of Sanford trucks. This light weight enables exceptional tire guarantees. Chain and sprockets are extra large and heavy. In fact the 1¼ inch pitch roller chain which we are using is the same size usually put on one and a half and two ton sizes.

Be sure to look us up at the shows for we have some open territory that offers fine opportunities to live dealers. If you cannot see us at the shows, get in touch with us.

$1.50

Platinum Point
A. L. A. M.
$2.00

The time is passing when one type of spark plug will serve for all types of motors. Combination electrical l
ignition and starting systems, high duty magnetos and the popularity of enclosed cars for winter use, have cre
spark plug problems. This line of specialized spark plugs is proof of our determination to adapt RED HE
engine conditions, instead of waiting for manufacturers to build their engines to suit the spark plugs.

Regular Magneto Plug

Plug is the proven master of up to 40 H. P. Adopted as equipment by the Reo, Hup-Regal and many other factories. A porcelain that "laughs at the guaranteed not to crack from of the motor. It has a deep and a reasonable accu- not car not short-circuit it.

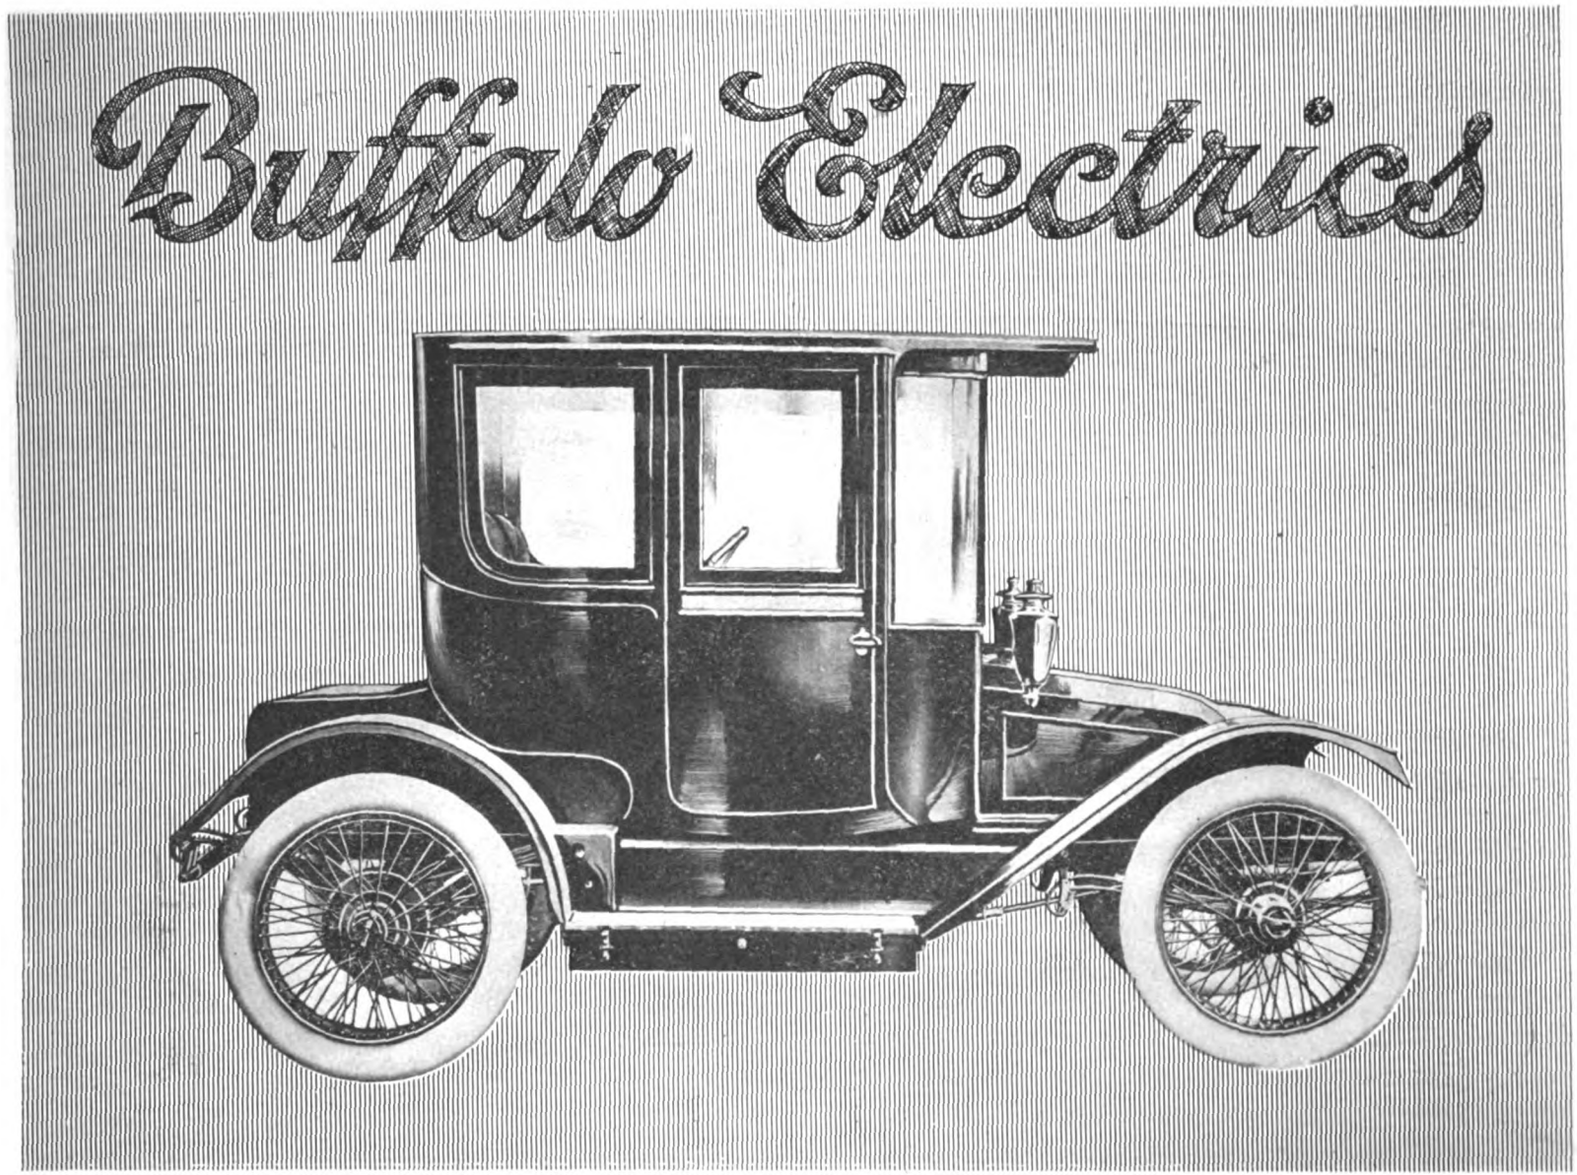
Combination Magneto Plug

Porcelain makes the best insulator, but it has drawbacks on account of its mechanical weakness — an accidental blow from a heavy wrench will fracture it. Mica cannot stand intense heat and cold without expansion and contraction —resulting in oil soaking in and short-circuiting. Therefore, the electrode is **insulated with porcelain in the explosion chamber** where mica would be disintegrated by oil and heat, and mica is used as the insulator **outside of the explosion chamber where porcelain would be exposed to damage.**

Priming Magneto Plug

This plug solves the problem of starting a cold engine instantly. Gasoline introduced through the cup of the Red Head Priming Plug, passes down the canal drilled in the shell, **flows along the porcelain and drips directly to the sparking points, where it vaporizes and** is ignited. Red Head Priming Plugs can be cleaned without removal from the cylinders: Open the petcocks while the engine is running and the compression shoots out the carbon.

Platinum Point Magneto P



We will replace, free of charge Red Head Platinum Point Plug fuses or corrodes from heat w years, but no longer. The Pl Point (1/32nd of an inch in thic will stand more than 3000 degr heat—estimated four times hotte the hottest spark delivered by any neto or combination ignition —starting system. All metal par made on machines adjusted to mi ter accuracy. This insures a tig threaded joints never before atta the manufacture of spark plugs.

Each of the above types of RED HEAD Plugs is the **DREADNOUGHT** of its class and has a record for efficie the service for which it is intended.

Buffalo Electrics

THREE models constitute the Buffalo Electric 1913 Line. One of the foremost automobile engineers designed the Buffalo Electric chassis and you will find in its make-up such elements as Single Reduction Direct Shaft Drive, Three Point Motor Suspension, Foot Control, as well as many other features which make Buffalo Electrics most efficient and economical in use. Buffalo Electrics develop remarkable speed and give extra long battery mileage. We have adopted wire wheels as optional equipment, because of their wonderful tire economy. Our own tests have proven them equally well adapted to the use of either cushion or pneumatic tires.

*Buffalo Electric Pleasure Cars and Commercial Trucks offer a complete equipment for an electric motor sales business. If you are an established dealer, with the proper facilities for handling such business, it will pay you to investigate Buffalo Electrics—**see them at the***

Digitized by Google

PLEASURE CARS

COUPES—Model 30 seats four passengers vis-a-vis. The body is roomy and luxurious with every appointment. 42 cell batteries serve a 20 H. P. motor, giving 25 miles an hour under ordinary conditions. 100-inch wheel base admits of turning in the street, with a single motion. Finish and upholstery are optional with the purchaser.

FORWARD DRIVE BROUGHAM—Model 30-B is the highest development of modern town cars. It readily accommodates five passengers, three on the rear seat and one forward in a companion seat to the driver's. The driver's seat is stationary, of the Pullman chair type, while the companion seat is set on a swivel, permitting the occupant to face forward or turn facing backward. Side lever or wheel steer is optional—on Buffalo Electrics.

RUNABOUT—Model 29 makes the Buffalo Electric line complete. There is a growing demand by business and professional men for an electric, speedy, comfortable and easy to drive. The runabout develops 35 miles an hour, and like all Buffalo Electrics has the Foot Control, Direct Shaft Drive and other features of value in the driving and maintenance of a town and suburban car.

COMMERCIAL CARS

BUFFALO ELECTRIC TRUCKS are built in three sizes from 1500 pounds to two tons. The lighter capacity truck is shaft driven direct from motor to rear axle with the reduction in the differential gears. They have ample battery capacity for a big day's work at a more rapid speed than the larger trucks.

Buffalo Electric trucks of 1½-ton and 2-ton capacity are chain driven.

THE DESIGN of Buffalo Electric Trucks is right. A close study of conditions and attention to problems already worked out by others gave our engineers a clear conception of the ideal truck to meet conditions in its specific field.

With the idea worked out, materials were selected and tested by competent experts, matters of battery equipment were balanced with load requirements and operating costs until each and every Buffalo Electric Truck offers the maximum of service value at a most economical rate per ton mile.

All trucks are sold with chassis and driver's seat complete. Special bodies are built to the order of purchasers.

Buffalo Electric Pleasure Cars and Trucks will be exhibited at prominent shows. The Buffalo Electric Vehicle Company is strong financially and is prepared to push the business aggressively. Dealers who are interested must possess the resources and business responsibility to conduct such an agency in a broad-gauge, up-to-date manner.

The New DETROIT MOTOR WAGON

4 Cylinder, 4 Cycle Long Stroke Motor, 16-20 h.p.

CHAIN DRIVE—SOLID TIRES—EVERY PART STANDARD

The new Motor-Wagon represents a practical development. It embodies features of construction that are the result of daily service in over thirty-one different lines of business. It is neither freakish nor faddish. Standard truck practice is followed throughout.

Note these Details: Long Stroke Motor, Bosch Magneto with fixed spark, Muncie Transmission and Jackshaft, Whitney Chains, Dead Rear Axle (1 1-2 inch squared), 3-inch Channel Frame, Solid Tires front and rear. This car is designed from start to finish for use with solid tires and gives a reliable economical service that cannot be duplicated.

The Motor-Wagon meets the demand for a strong, serviceable, economical half-ton truck designed from a thorough knowledge of the services required.

Get in immediate touch with us. We have a proposition that makes a hit with every merchant. It has the capacity and the economy of operation buyers want. Write at once for full details.

The
STANDARD WELDING
COMPANY Cleveland Sixth City

PIONEERS *and*
WORLD'S LARGEST PRODUCERS
of AUTOMOBILE RIMS

OFFICES IN
NEW YORK CHICAGO DETROIT

In their ability to perform various functions essential to a good and satisfactory rim, they surpass anything yet produced.

In workmanship and high quality of material they cannot be excelled

Digitized by Google

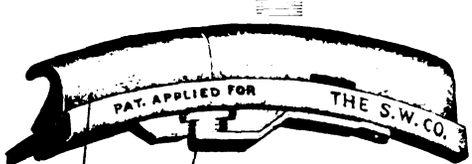
Safe, certain, easy and quick to operate is the detaching mechanism on the No. 40 and No. 50 series of STANWELD rims.

A little lever with a cam — pry it loose with a screw driver, swing it outward and remove the side ring. Then slip off your tire. No lateral compression of tire is necessary to do this.

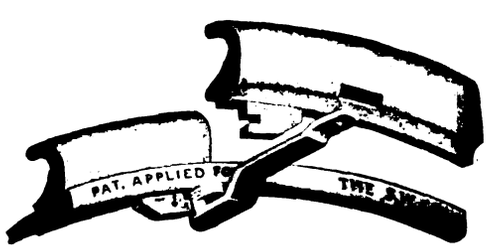
The side ring nor the lock can not of themselves come loose.

The side ring can be reversed to accept either straight side or clincher tires.

There are no loose parts to the detaching mechanism other than the removable ring.



No special tools are necessary to operate STANWELD rims.



Endorsed by the leading automobile engineers, tire makers and car owners and adopted as standard equipment on many of America's most complete and luxurious cars, STANWELD rims are destined soon to become the universal wheel equipment.

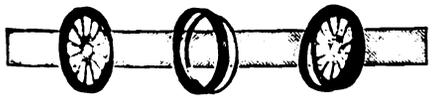
The Standard Welding Co.

Cleveland, Ohio

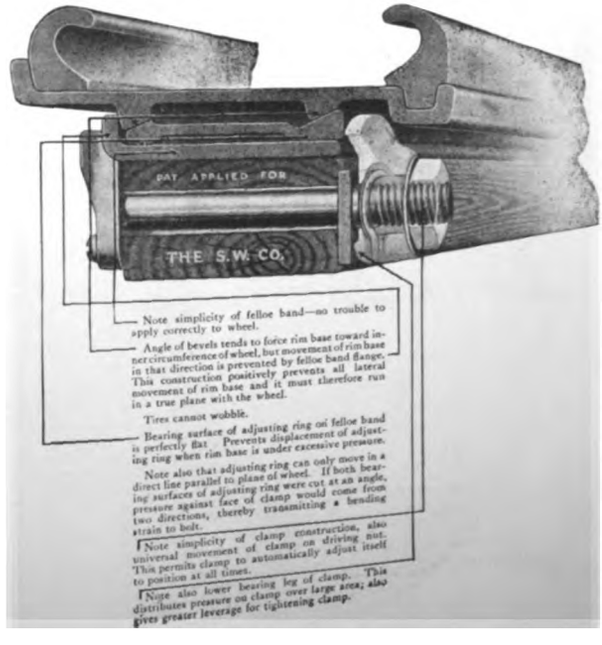
Digitized by Google

STANWELD demountable rims, series No. 40, stand alone in their pre-eminent efficiency.

Universal in their acceptance of tires, automatic in their mechanical operation, combining both a quick detaching and demounting feature which operate independently, and positively preventing wobbling of tires, they surmount all the defects of former types of demountable rims.



STANWELD rims, No. 40 series have an entirely new feature for the securing of the rim base to the wheel —The adjusting ring. This device is an intermediary band that lies under the entire rim base and supports it at all points of the front and rear circumference.



The rim base has the felloe band flange as a guage for its lateral position and must always lie in the same perfect position on the wheel no matter how the clamping devices are tightened. This is the preventive of tire wobbling, one of the prime reasons for excessive tire expense.

Number 40 STANWELD rims are the wheel equipment on all leading makes of cars.

The Standard Welding Co.

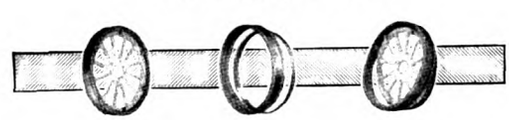
Cleveland, Ohio

Digitized by Google

STANWELD Rim No. 30 is designed for those who require a demountable rim of minimum weight and extreme simplicity.

It has both the quick detachable and demountable features and is made in two styles, one for straight side tires and one for clincher.

This rim is split circumferentially, the two sections having corresponding lugs that are locked together by two semi-circular rings. One end of each ring is securely rivited to the wider portion of the rim base. The free ends of these rings are secured by a swinging latch which is in turn locked by a cam latch.



No special tools are required to operate this rim and no circumferential movement of either section is necessary to disengage the two parts of the rim base.

The rim base of STANWELD Rim No. 30 will fit the felloe band of either the Continental Gilbert type rim or the Standard Universal No. 3 rim, without requiring any special wheel work or additional equipment.

The Standard Welding Co.

Cleveland, Ohio

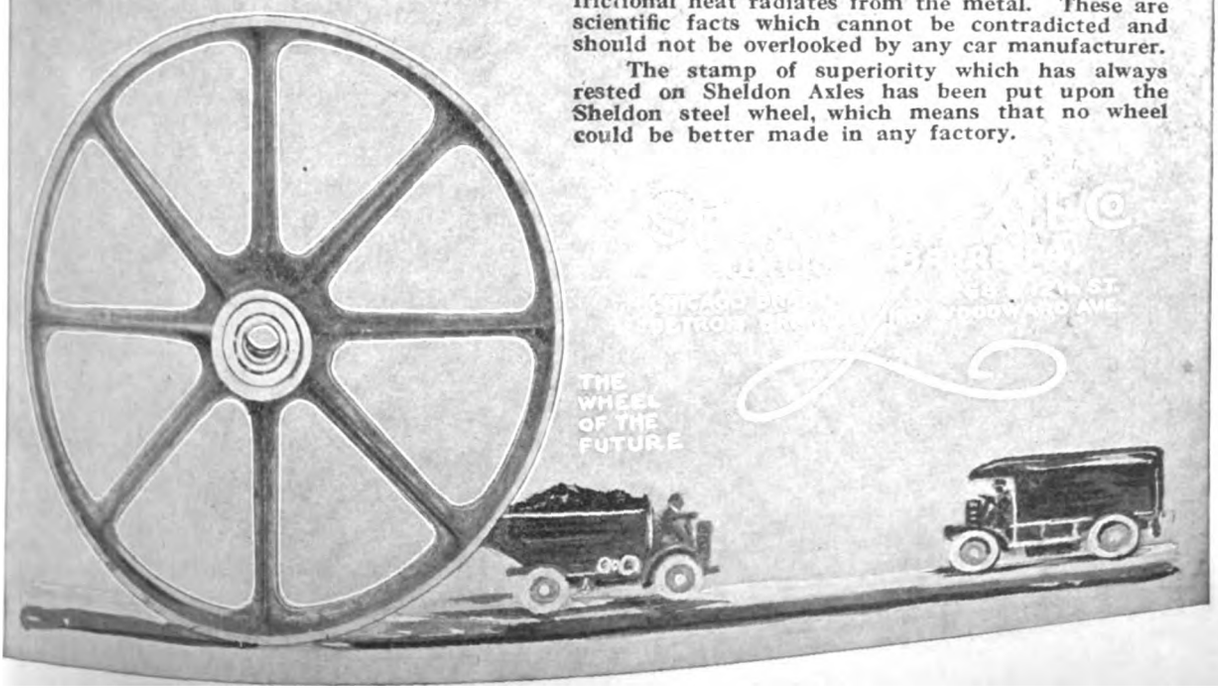
Yes they can be broken

BUT NO BLOW IN ACTUAL SERVICE CAN DO IT

SHELDON STEEL WHEELS



Here is a wheel that weighs less than the wooden wheel, that is positively unbreakable and that will outlast the best twenty cars that ever were manufactured.

The Sheldon steel wheel is the result of years of study of the wheel problem, the concentration of expert effort on improved design, and the most economic methods of construction known to the industry. It is unbreakable under conditions that would smash a wooden wheel to fragments and make a wire wheel unfit for anything but junk. The superior resiliency of the Sheldon steel wheel adds another advantage which the car owner or car manufacturer cannot overlook—tire economy.

This tire economy results from the light weight at the wheel's periphery and the rapidity with which frictional heat radiates from the metal. These are scientific facts which cannot be contradicted and should not be overlooked by any car manufacturer.

The stamp of superiority which has always rested on Sheldon Axles has been put upon the Sheldon steel wheel, which means that no wheel could be better made in any factory.

AUTOMOBILE DEALERS

Can Handle Woodworth Treads More Profitably and With Less Risk Than Any Other Auto Accessory

Easy Sales ***Repeat Orders***
Guaranteed Service ***Small Expense***

"Double Grip" Woodworth Tread, for use on snow and ice. The high rivets are cupped and hardened, and can be renewed.

The Market

Every live dealer has many customers who will gladly pay a good price for freedom from punctures and skidding. To doctors and business men especially, such immunity is invaluable. At present most of them accept the puncture risk, and reluctantly use chains to avoid skidding. When they realize that in Woodworth Treads they can have not only protection against skidding but puncture insurance added without extra cost, they will gladly buy the Treads and use them constantly.

Guarantees

Woodworth Treads do their work so well that we are prepared to guarantee them to the fullest extent. We make good any Treads which do not give the full guaranteed mileage; we support the dealer in selling the Treads on trial, because almost invariably a trial means a sale and a permanent customer; we guarantee the Treads not to damage the tires; and we allow the dealer to return for full credit any goods ordered but not sold.

Dealer Helps

To assist dealers in displaying the goods, we furnish free of charge on request a lithographed metal reproduction, showing the Tread **full size.** Attached to this is a pad of circulars with description and prices. We will also send a small section showing the materials and construction. Thus the dealer can show the goods and take orders with no investment save for the express charges on this outfit. We have also made arrangements by which dealers in all parts of the country can get the goods promptly and with small expense for express charges.

Write us stating you will pay the express charges on our order-taking outfit and we will send it to you free, will enter you as our agent for your territory, and will explain how you can get the goods promptly and without high express charges.

See Us at the New York Show

In spring and summer use the regular style WOODWORTH TREADS. They prevent skidding, abolish punctures and pay more than their cost in the tire life they add.

CUBIT

ELECTRIC HORN

$3.00

A Good Horn at a Low Price.
In Black Enamel, very High Gloss.
Weighs Two Pounds and a Half.
Consumes very little current (1½ to 2½ amps.).
Emits high toned Musical Blast.
Has no working parts to get out of order.
Has no VIBRATOR, the diaphragm is the Armature.
Requires no Oil. Runs on SIX VOLTS.
Gets better with age as the "Bulging" of the diaphragm which is detrimental to other horns makes the "CUBIT" more efficient.

Typhoon

UNDER THE HOO

The Typhoon Electric Horns

ranging in price from $6.00 to $20.00 are models of tone value, durability, and beauty of lines and finish.

Guaranteed One Year

Several of the most popular sellers are shown on this page as part of the most complete assortment to choose from — both vibrating and motor driven types; notably concealed type E, with megaphone projector as noted in the top illustration. This horn gives a mellow but commanding warning and does not break the lines of up-to-date construction of the automobile.

Typhoon Electric Horns will satisfy the most critical judges of signals. They are already used by fourteen of the best automobile manufacturers in the country as standard equipment.

Write for our illustrated literature and commercial proposition to the trade. Both are worth having.

THE LARGEST AUTO SUPPLY HOUSE IN AMERICA

Our Name Is Your Guarantee

WHATEVER you buy from the house of CHAS. E. MILLER you may expect the fullest degree of satisfaction in every detail. Quality, quantity, material, workmanship, durability will be just right or we will make it right. Our name is your guarantee.

To buy from a house the size and standing of this one is the safest way to insure complete satisfaction in all your dealings. We handle goods of **standard quality only** and of course stand back of everything we sell.

No matter what you want in the line of automobile accessories or supplies, remember our slogan, "We Either CARRY IT IN STOCK, WILL GET IT—OR IT ISN'T MADE." One of the prize winners in MOTOR'S recent advertising contest selected this as the slogan out of the many shown. His reason was as follows: "This saying is the clearest possible statement of the Miller business policy which I have found to be a fact through several years of satisfactory relations with them."

Our Annual Catalog is the largest, most complete, up-to-date and authoritative dictionary of the auto supply market of any book published. It has come to be recognized as one of the standard reference works of the industry.

The total distribution of one hundred thousand copies of this catalog practically covers the world, at least wherever automobiles are used. Nearly all foreign as well as domestic automobile manufacturers and dealers, the offices of American Consuls, Public Libraries, Universities, Y. M. C. A. Schools, Publishers, Automobile Clubs, Engineers' Offices, Purchasing Departments—in all these places you will find a copy of the Miller catalog on file.

Fifteen branches spread over the United States, located in the principal motoring centers, bring Miller service within the reach of practically every motorist in the United States. Prompt delivery, perfect quality, honest prices—these are the things that distinguish Miller service and explain the marvelous growth of this pioneer establishment since its inception in 1896.

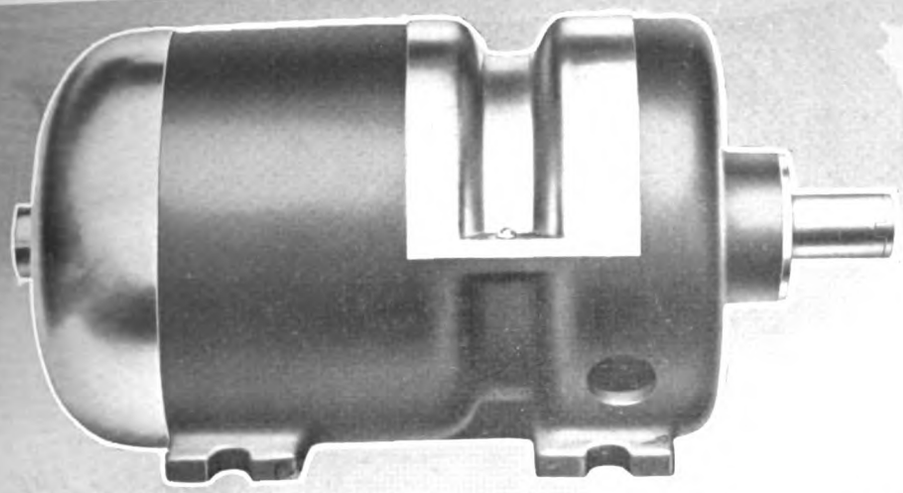
GRAY & DAVIS

Electric Starter

The Most Powerful of All Starters

The GRAY & DAVIS 6-volt Electric Starter stands pre-eminent among starting devices. No other starter can compare with it for efficiency, power and positive operation. The great big feature is the small 6-volt battery that is part of the system—exactly the same style of battery as you've **always** used for ignition.



The GRAY & DAVIS Electric Starter is a marvel of simplicity. There are no complicated controls—only a simple switch. It starts a car under any conditions even in **zero** weather.

It is a specially designed motor which rotates the fly-wheel—will spin a 6-cylinder car for one and one-half hours—propel it 2 miles. Two minutes after car is started, under gasoline power, the current used for starting is replaced in the battery.

A big factor of safety. If the car is stalled on car tracks or in traffic, you press pedal and the car is propelled by the starter. You don't have to change gears or touch throttles. It is not sold direct to the owner—demand it on the car you purchase.

America's leading manufacturers have adopted the GRAY & DAVIS 6-volt Electric Starter as 1913 equipment—this endorsement by those who know most about starters, substantiates our claim that it is the most efficient starter obtainable.

Merry Christmas

Charles Dickens
Robert Louis Stevenson

Clement C Moore
James Whitcomb Riley
F Hopkinson Smith

Henry Van Dyke
Eugene Field

"My friends, my very dear friends, I should say, for I omit none of you—befo' I kindle with the torch of my love these little beacons which are to light each one of us on our way until another Christmas season overtakes us; befo', I say, these sparks burst into life, I want you to fill yo' glasses—"—*Col. Carter's Christmas Tree.—F. Hopkinson Smith.*

"'I don't know what to do!' cried Scrooge, laughing and crying in the same breath and making a perfect Laocoön of himself with his stockings. 'I am as light as a feather. I am as happy as an angel. I am as merry as a schoolboy. I am as giddy as a drunken man. A merry Christmas to everybody! A happy New Year to all the world. Hallo, here! Whoop! Hallo!'

"He had frisked into the sitting room and was now standing there, perfectly winded.

"'I don't know what day of the month it is!' said Scrooge. 'I don't know how long I've been among the spirits. I don't know anything. I'm quite a baby. Never mind. I don't care. I'd rather be a baby. Hallo! Whoop! Hallo here!'

"He was checked in his transports by the churches ringing out the lustiest peals he had ever heard. Clash, clang, hammer, ding, dong, bell. Oh, glorious, glorious! Running to the window he opened it and put out his head. No fog, no mist; clear, bright, jovial, stirring, cold; cold, piping for the blood to dance to; golden sunlight; heavenly sky; sweet, fresh air; merry bells. Oh, glorious. Glorious!

"'What's to-day?' cried Scrooge, calling downward to a boy in Sunday clothes.

"'To-day!' replied the boy. 'Why, Christmas Day.'

"'It's Christmas Day!' said Scrooge to himself. 'I haven't missed it. The spirits have done it all in one night. They can do anything they like. Of course they can.'"—*Dickens.*

"To be honest, to be kind; to earn a little and spend a little less, to make upon the whole a family happier for his presence to renounce when that shall be necessary and not be embittered, to keep a few friends, but these without capitulation; above all, on the same grim condition, to keep friends with himself—here is a task for all that a man has of fortitude and delicacy. He has an ambitious soul who would ask more; he has a hopeful spirit who should look in such an enterprise to be successful."—*Robert Louis Stevenson. A Christmas Sermon.*

Probably more grown men and women can recite to-day: "'Twas the Night Before Christmas" than can remember any other poem of equal length in the language. They may have forgotten the name of the author, Clement C. Moore, but they can reel off the beginning glibly enough:

'Twas the night before Christmas and all through the house
Not a creature was stirring, not even a mouse;
The stockings were hung by the chimney with care
In hopes that St. Nicholas soon would be there;
The children were nestled all snug in their beds,
While visions of sugar plums danced in their heads.

And how these elocutionary lights, as well as the rest of us who are not vocally inclined, have revelled in Eugene Field's delicious "Jes' 'Fore Christmas."

"Father calls me William, sister calls me Will,
Mother calls me Willi—the fellers call me Bill!
* * * * * * *
Most all the time the hull year round there ain't no flies on me,
But jes' 'fore Christmas I'm as good as I kin be!

And the pious smugness with which this interesting imp concludes is unctuous joy to the soul of the reader:

But Christmas, with its lots and lots uv candies, cakes and toys,
Wux made, they say, fur proper kids and not fur naughty boys!
So wush yer face an' bresh yer hair an' mind your p's and q's,
An' don't bust out yer pantaloons an' don't wear out yer shoes.
Say "yessum" to the ladies an' "yessir" to the men,
An' when they's company don't pass yer plate fur pie again;
But, thinkin' uv the things you'd like to see upon that tree,
Jes' 'fore Christmas be as good as you kin be!"

"They's a kind o' feel in the air to me
When the Chris'mas time sets in
That's about as much of a mystery
As ever I've run ag'in.

Is it the bleat o' the whistle and beat
O' the little toy drums and blare
A' the horn? No! No! It is jest the sweet—
The sad-sweet feel in the air!"

James Whitcomb Riley.

"Hang up the baby's stocking;
Be sure you don't forget;
The dear little dimpled darling,
She ne'er saw Christmas yet."

Henry Van Dyke preaches another pretty good sermon in "The Spirit of Christmas," which was published seven years ago. He says there is something better than keeping Christmas Day, "and that is keeping Christmas. Are you willing to forget what you have done for other people and to remember what other people have done for you; to ignore what the world owes you, and to think what you owe the world, to put your rights in the background, your duties in the middle distance and your chance to do a little more than your duty in the foreground; to see that your fellowmen are just as real as you are, and try to look behind their faces to their hearts, hungry for joy; to own that probably the only good reason for your existence is not what you are going to get out of life, but what you are going to give to life to close your book of complaints against the management of the universe, and look around you for a place where you can sow a few seeds of happiness—are you willing to do these things even for a day? Then you can keep Christmas.

"Are you willing to stoop down and consider the needs and desires of little children; to remember the weakness and loneliness of people who are growing old; to stop asking who much your friends love you, and ask yourself whether you love them enough; to bear in mind the things that other people have to bear in their hearts; to try to understand what those who live in the same house with you really want, without waiting for them to tell you; to trim your lamp so that it will give more light and less smoke, and to carry it in front so that your shadow will fall behind you; to make a grave for your ugly thoughts and a garden for your kindly feelings, with the gate open—are you willing to do these things even for a day? Then you can keep Christmas.

"Are you willing to believe that love is the strongest thing in the world—stronger than hate, stronger than evil, stronger than death—and that the blessed life which began in Bethlehem nineteen hundred years ago is the image and brightness of the Eternal love? Then you can keep Christmas. And if you can keep it for a day, why not always?"

"And so, as Tiny Tim observed, God Bless Us, Every One!"

Says Longfellow:

"I heard the bells on Christmas Day
Their old familiar carols play.
And wild and sweet
The words repeat
Of peace on earth, good will to men!"

Prest-O-Starter

Starts your engine (old or new) quickly and easily in coldest weather

For Four Cylinders $20

For Six Cylinders $25

$1.50 extra for two-way valve necessary when the same Prest-O-Lite is used for both starting and lighting.

Here's a starter that adds practically no weight to your car, is perfectly simple and is as durable as the engine itself. Easily applied to any engine, old or new, very economical in the use of gas, and requires no expert repairing.

How Prest-O-Starter Works

The principle of starting a motor with Prest-O-Starter is the same as "starting on compression." A measure of acetylene, at low pressure, is pumped from your Prest-O-Lite into the cylinders

Touch your spark—your engine starts

Unlike "gasoline priming," it is not affected by heat or cold. It is certain.

In cool weather, by opening a valve on the dash, you can feed gas at low pressure into the intake manifold. This allows your engine to run on acetylene until it is warm enough to run on gasoline.

If the Prest-O-Starter did no more than prime your engine in this way during cold weather, this convenience would be well worth the price.

But Prest-O-Starter is more than a primer. When installed properly, it will start your engine, summer or winter, almost invariably without recourse to the crank.

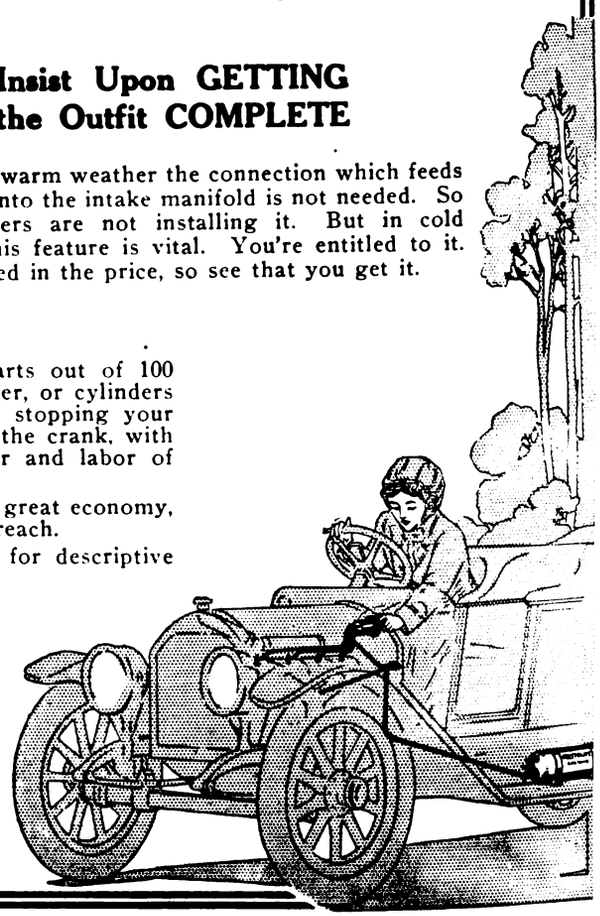
Make Sure Your Starter Is Installed CORRECTLY—Look It Over

The Prest-O-Starter is easy to install correctly. In fact, it's so very easy to install that some good factories and garages install it with utter carelessness, overlooking the one or two simple features vital to success in operation. Fortunately this is an easy matter for the car owner to correct, even if he isn't a mechanic.

Our literature tells you exactly how the Prest-O-Starter is installed, and how to adjust it. Anyone can give it the slight attention it may need or quickly tell a dealer where the trouble lies.

Every Prest-O-Starter is sold with the assurance of satisfactory service. The entire Prest-O-Lite Organization is back of every one. If you have any trouble, report it to us or to our nearest branch. We'll wipe it out quickly.

Insist Upon GETTING the Outfit COMPLETE



During warm weather the connection which feeds acetylene into the intake manifold is not needed. So some dealers are not installing it. But in cold weather this feature is vital. You're entitled to it. It's included in the price, so see that you get it.

Now—More Than Ever—You Need One

Your Prest-O-Starter, properly installed will average better than 95 starts out of 100 attempts. The few failures are caused by your motor stopping on dead center, or cylinders filled with burnt gas. Both of these conditions can be easily avoided when stopping your motor. But should either or both happen, an eighth or a quarter turn of the crank, with the switch at neutral, will remedy the trouble at once, with all the danger and labor of cranking eliminated.

Rest assured that no other starter can give you as high efficiency with as great economy, durability and freedom from mechanical trouble. The price is within easy reach.

Get in touch with any of our branches—or your dealer—or write us for descriptive literature.

Exchange Agencies Everywhere

Digitized by Google

This book will show you why the Franklin dealership is a profitable one. Send in your application at once.

The dealer who handles the Franklin has a car with six exclusive features, each one of which is a sales clinching fact.

ENTZ ELECTRIC STARTING AND LIGHTING

A real selt starter with really original features. Unfailing in action. You throw on the switch and the motor starts —no buttons, levers or pedals. In crowded traffic, if you slow the engine down to where it would ordinarily stall, the starter picks it up and starts it running again without any action on the part of the driver. A permanently connected starter without change gears.

THESE ARGUMENTS SELL FRANKLIN CARS

These are the arguments you can bring to bear upon the prospect when you show him the Franklin: (1) Uses less gasoline; (2) Uses less oil; (3) Wears out fewer tires; (4) Travels faster in the long run; (5) Rides easier; (6) Lasts longer.

Franklin dealers are making money and Franklin sales are increasing steadily every year. The Franklin now stands third in sales among all high-grade cars, and rapidly gaining on second place. The "Franklin Dealer Proposition" shows why this is so.

A PERMANENT BUSINESS CONSTANTLY INCREASING

One of our dealers says: "I could not very well drop the Franklin if I wanted to. Everywhere I have sold them I have created a permanent business. Franklin owners came back year after year."

The Franklin dealer does an all-year-around business. This means a profitable garage business. Franklin cars keep going summer and winter. They keep going because Franklin direct air cooling is not affected by weather conditions. They keep going because the owners can afford to drive them. They do not cost heavily to operate. If you sell Franklin cars in your territory you have a steady year-around demand for gasoline, oil, tires and accessories.

CONTINUOUS PRODUCTION INCREASES BUSINESS

Our continuous production policy makes the Franklin dealership a good proposition for the dealer. You can always offer the very latest model with the newest equipment. There are no "off months" waiting for the so-called yearly announcements. Franklin dealers do a good business every month in the year.

SEND FOR FRANKLIN DEALER PROPOSITION

Chicago has increased sales over last year, 195%; Philadelphia has increased sales 357%; San Francisco has increased sales over last year 200%; New York has increased sales 72%; Boston has increased sales 104%; Cincinnati has increased sales 500%. There is a big increase all along the line.

The Franklin Dealer Proposition will explain how you can get your share of this big increase.

Now Europe, Too

The Michigan "40" Wins World-Wide Acceptance as Leader of Its Class

Hundreds of dealers have come to this factory to see the new model of the Michigan "40."

In the first 30 days they left with us orders for 6,125 cars.

These men believe that this car is bound to lead the Forties this year.

Then Europe Came

Then came experts from Europe—artists in cars. Men who must compete with the finest cars in the world.

They came from England, Scotland, France, Russia, Germany and China. And these men agreed that no medium-priced "40," either in Europe or here, had so many attractions.

Some of the world's leading dealers, including the German Packard Motor Car Co., took our agencies abroad.

These Men Know

These experts and dealers, some of whose orders approach $1,000,000, don't make mistakes on cars.

Their tests were searching and extreme. Some of these men spent weeks in our factory.

They know the whole market. When they unite in this way on the Michigan "40" their judgment can well be regarded as final.

What Won Them

These men were brought here by the fact that W. H. Cameron is this car's designer. There are 100,000 successful cars which tell what he can do.

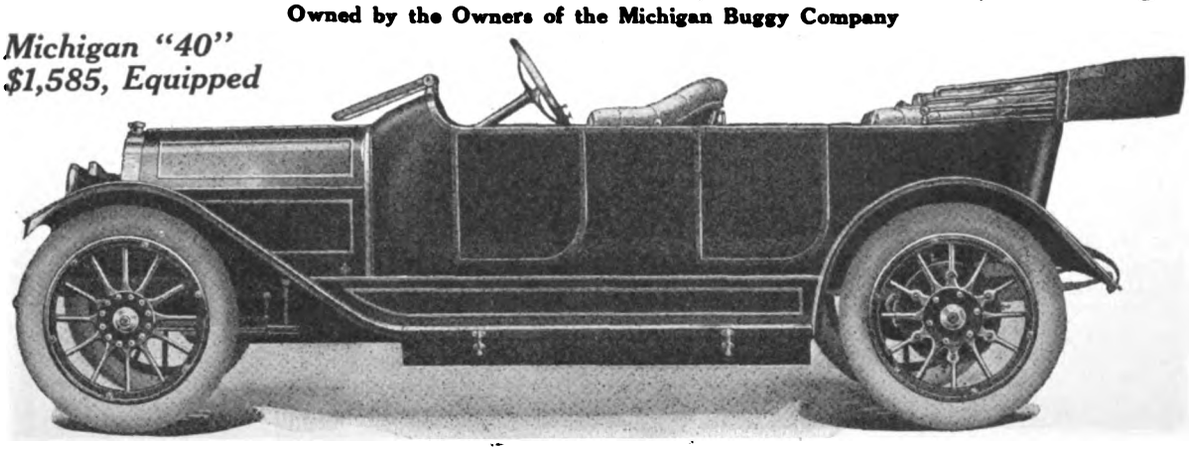
This new model results from four years of development. And 5,000 cars have been built in those four years to prove out 300 improvements.

The body is a John A. Campbell creation. It has 14-inch Turkish cushions and 22 coats.

The car has four-forward-speed transmission. It is vastly over-tired. It has center control, left-side drive, electric lights with dynamo.

It represents the last word in comfort, luxury and strength.

There is not another car with so many attractions sold at anywhere near this price.



The Michigan "40" is one of the most-talked-of cars in America. You never saw more effective advertising. And our advertising expenditure for the 1913 season is $350,000.

We can take care of a few more dealers in territories not yet closed. Write for our proposition.

MICHIGAN MOTOR CAR CO., Kalamazoo, Michigan

Owned by the Owners of the Michigan Buggy Company

Adjustable pedals
Firestone Q. D. demountable rims—extra rim

14-inch Turkish cushions
Rear cushion 50 inches long
Hand-buffed leather upholstering
Best curled-hair filling
Wheel base 118 inches
Nickel mountings
Large over-capacity, giving big factors of safety
Pressed steel, full floating rear axle
Axles sufficient for an 80-horse-power car.

Genuine cellular-type radiator
Best mohair top, side curtains and envelope
Windshield built in as part of body
Electric horn
$50 speedometer, 4-inch dial
Special foot rail
Swing robe rail
Rear tire irons
Complete tool equipment
Tool chests under running boards

There is such a difference of opinion about the various types of self-starters that we have not adopted any one type as regular equipment. We prefer to leave this selection to the buyer. We equip with either the gas or a positively efficient electric starter at moderate extra price.

The truck with the worm gear drive at the Garden Show

The Pierce-Arrow Motor Truck is the only American built heavy service truck using the worm gear drive. This drive is the most direct and efficient means of transmitting the power of the motor to the rear wheels. Its economic value shows in operating cost figures.

The worm gear drive of the Pierce-Arrow Truck saves both power and wear. Its efficiency has been proved by three years of constant service in Pierce-Arrow Trucks —and it is backed by this guarantee:

The worm wheel and worm shaft, generally known as worm gear construction, employed in the Pierce-Arrow Truck, are warranted to fulfill their functions for one year from date of shipment, under normal service.

The

Pilot

"The Car Ahead"

Fourth Successful Year—Three Great Models

Pilot 40, four cylinders, famous Teetor motor, 4½" bore, 5" stroke, 53 H. P., 120" wheel base, large New Departure bearings in wheels, double internal expanding brakes, 14" diameter, 36 x 4 tires. Our great four cylinder car with three years of constant, unfailing service to its owners. Roadster or Touring car. PRICE ONLY $2000.

Pilot 50, four cylinders, Teetor motor, 4½" bore, 6" stroke, 59 H. P., 126" wheel base, five or seven passenger Touring car, 11" cushion in tonneau, large New Departure bearings in front hubs, with Hoffman balls, Hess-Bright bearings with D. W. & F. balls in rear hubs, double internal expanding brakes, 16" diameter, 37 x 4½ tires. PRICE ONLY $2250.

Pilot 60, six cylinders, the wonderful new Teetor motor, 4" bore, 6" stroke, 67 H. P., 132" wheel base, five or seven passenger Touring car, 11" cushion in tonneau, large New Departure bearings in front hubs, with Hoffman balls, Hess-Bright bearings, with D. W. & F. balls in rear hubs, double internal expanding brakes, 16" diameter, gasoline pressure feed, 37 x 4½ tires. PRICE ONLY $2500.

Electric Lighting—Electric Starter

The famous GRAY & DAVIS system of lighting and starting. A more expensive system for lighting and starting to buy than others, but more reliable and efficient than any other. POWER TIRE PUMP operating from fly wheel to inflate tires.

Press a Lever to Start Your Motor, to Light Your Lamps and Fill Your Tires With Air

Beautiful upholstered jewel bodies, cushions 11 inches deep and a handsome ventilating windshield of special design are exclusive features.

Every Convenience and Comfort—Every Part of Machinery Accessible Without Soiling a Coat Sleeve

The most beautiful and powerful cars constructed this year. TEETOR "T" HEAD MOTORS in all models, the simplest and most powerful motors built in this country. Not a grease cup on them. MOST PERFECT OILING SYSTEM ever devised—it cannot go wrong. COOLING SYSTEM so efficient that a Pilot has been operated 4,000 miles in the New England hills the past summer WITHOUT a fan.

NICKEL BABBITT BEARINGS in motors (not bronze), the best material for bearings ever found. Motor has 150 LESS PARTS, WEIGHS 150 LBS. LESS and delivers to rear axle (straight line drive) far more horsepower than any other motors of similar piston displacement.

SPEED AND ECONOMY RECORDS EVERYWHERE. MOTOR NOTED FOR ITS HILL CLIMBING ABILITY.

Won the Algonquin Hill Climb in Chicago three successive years and cut 25 seconds from the previous record for its class at Dead Horse Hill at Worcester, Mass., in 1910.

The Strongest Built Car in America

With a record for unfailing service in the mountains and deserts which have been the graveyard of so many automobiles and where many manufacturers do not care to send their cars. LET US SEND THE PROOF. If you could visit our factory and see the way we construct Pilots, see the materials we use, you would realize why we have a "no trouble" car and why we are selling so many of them in sections where other cars cannot stand the service.

Guaranteed for One Year

Some manufacturers guarantee their cars for several thousand miles. It is DIFFERENT with the Pilot. You can ride 25,000 MILES if you want in one year, either on the Massachusetts boulevards or the deserts of Arizona and Nevada—it does not matter—the Pilot Guarantee is with you all the time. A LONG LIST OF SATISFIED OWNERS. LET US SEND YOU THEIR OPINION OF THE CAR. There is so little trouble with a Pilot that some of our agents are advertising to take care of the car for their customers the first year FREE OF ALL EXPENSE. HOW MANY AGENTS OF OTHER CARS DARE DO THIS? THIS IS THE PROOF OF RELIABILITY.

Pilots are not thrown together over night. Every car receives individual attention. We could make many more cars than we do if we made them with "hurry-up" and "get-them-out" methods, but THEN they would not be Pilots. The buyer who gets one of these good cars has an absolute assurance of the highest quality of service and the minimum of trouble and expense.

THE CAR WITHOUT A MECHANICAL DEFECT

Built To Wear—Not Just To Sell

Read the Specifications

Full-floating rear axles (absolutely guaranteed), chrome nickel steel shaft, 1⅛ inches in diameter; strongest axle bridge housing on any car; Brown-Lipe differential, famous National oil tempered springs, wheels of great strength with twelve spokes; double internal expanding brakes, Warner transmission (heavy enough for the strongest motor), cone clutch with auxiliary springs under leather facing, making very easy engagement; large size Mayo type radiator, 3⅝ core (German silver); control in center of car for convenience of driver; absolutely reliable irreversible steering gear. Sub-frame construction with shaft and bevel gear drive, and double universal joints between transmission and differential and V-shaped torsion rod to rear axle. Straight line drive and the strongest automobile construction on any car and found only on the very best and highest priced cars. New Departure bearings (Hoffman balls), Hess-Bright and F. & S. bearings used where best adapted for service. Springs, front half elliptic 38 x 2, rear very long half elliptic, 53 x 2 inches, insures easy riding. Genuine white lead and oil paint, 11 inch cushion and heavy Turkish upholstering on handsome jewel bodies, with entrance from either side—an exclusive feature—add beauty and refinement to these wonderful constructed cars.

Regular Equipment for All Models

Mohair top and hood, ventilating windshield, Warner autometer, Stromberg carburetor, Eisemann magneto, tire power pump, electric lights and electric starter (Gray & Davis system), electric and bulb horns, tool kit, tire repair outfit, jack, robe and toe rails, five electric lamps including lights in dash and large electric headlights, quick detachable, demountable rims, Auto Hind Reflector and Never-Out License Brackets, nickel finish throughout. THE MOST COMPLETELY EQUIPPED CAR EVER SOLD. Compare the above specifications and equipment with cars selling from $500 to $1,000 more in price and see if you can find a better car than the Pilot.

Special Equipment

Westinghouse Air Springs May Be Had as Special Equipment on All Models

Dealers and Agents!

If you have sold cars that have given poor service, the Pilot will redeem your reputation. If you are selling good cars, your competitor with the Pilot will keep you awake nights with his competition, the Pilot having so many good points YOUR car does not possess. You will be on the defensive ALL THE TIME, no matter what car you sell—even the very highest priced car. You will find your car will have to "step lively" to make even a showing with the PILOT in HILL CLIMBING, FLEXIBILITY, GENERAL ROAD WORK or any of the various and special tests which the shrewd car buyer requires to be performed satisfactorily before parting with his money.

Varnish No Longer Sells a Car

The wise car buyer looks under the body. He wants to know how strong are the FRAME and AXLES and what kind of BEARINGS are used. He wants a dependable CLUTCH that takes hold gradually and WILL NOT SLIP and the TRANSMISSION absolutely reliable and the gears of the best alloy steel. He wants TWELVE spokes in the wheels and the spokes must be 1¾-inch or more or no sale. He must have a DRIVE SHAFT at least 1½-inch in DIAMETER and material CHROME NICKEL STEEL. He wants his machinery ACCESSIBLE so that adjustments can be easily effected when necessary and without great expense. You can satisfy him on every essential with a Pilot. She is built right. NO COMPLICATED MACHINERY IN A PILOT. Adjustments are so easily made that any owner with but little mechanical knowledge can easily care for his car. And the equipment the FINEST AND MOST COMPLETE ever offered. Everything needed on a car is there, including the famous Gray & Davis system for Lighting and Starting, the finest electric lighting and electric starting system yet devised, and the price—quality considered—the lowest in the land.

AGENTS WANTED

(In Territory Not Taken)

WRITE US AT ONCE for the greatest agency proposition made by any manufacturer or distributor. WE CO-OPERATE with you in your territory and do not require you to tie up a lot of money in deposits. If you have another car agency or desire an agency or are thinking of purchasing a car you cannot afford to neglect this opportunity of knowing more about the Pilot—THE CAR WITHOUT A MECHANICAL DEFECT—but WRITE AT ONCE for beautiful art book showing the Pilot models in colors and a complete and detailed description of the cars. Also get our agency offer for your territory. IT WILL INTEREST YOU.

The CORBIN-BROWN SPEEDOMETER

"The Speedometer of Permanent Accuracy"

Its mechanism is extremely simple.

Its centrifugal governor has four balance weights so sensitive that they respond to the slightest increase of speed.

This centrifugal principle of the Corbin-Brown is the same as that applied to the regulation of engines.

It insures absolute regularity of revolution regardless of temperature.

It is as accurate during the zero of Christmas as during the torridity of July.

Its few parts operate with practically no friction and therefore do not wear.

It records speed accurately from low mileage to high.

Its hand is steady; its odometer absolutely dependable.

The more advanced construction of its flexible shafting is an additional safeguard of accuracy.

This consists of a succession of eye-links and solid links as shown in illustration.

The solid link gives a smooth bearing which minimizes friction and insures smooth running.

The strength of these links makes breaking almost impossible.

However, if perchance one should break, the replacing with a new link is so simple that anyone can do it.

Every Corbin-Brown is calibrated by hand and tested to absolute accuracy before being sent out.

Each is built of specially hardened steel and brass, and with the precision of a high grade watch.

We have an unusually attractive proposition to offer dealers and car manufacturers. Write us today

What Shows Don't Show

By R. E. Olds, Designer

You'll see the new model of Reo the Fifth at your local Automobile Show.

It will strike you as beautiful, luxurious, roomy—having every final touch.

But here are things you can't see. And they mean, in the end, more than all that shows.

Tire Mileage

Tires on a car form the chief item in upkeep. Tire-saving means more than all other savings together. Every old motorist knows this.

So this year I add 30 per cent to my tire cost, to add 65 per cent to the average tire mileage. I give you tires 34 x 4. Compare them with rival cars.

The usual tires on this type of car would more than double your tire cost, so tire makers say.

No Possible Flaws

The steel in this car is twice analyzed, to make sure it accords with my costly requirements.

The gears are tested in a crushing machine, to prove that each tooth will stand 75,000 pounds. This test is usually made with light hammers.

The springs are tested in another machine, to stand 100,000 vibrations.

I use in this car 190 drop forgings. The average cost is twice that of steel castings.

But they give me lightness and strength. And hidden flaws can't occur in drop forgings.

The various parts of this car get a thousand inspections. Thus all the uncertainties are completely eradicated in building this Reo the Fifth.

No Broken Bearings

I use in this car 15 roller bearings, 11 of them Timken, 4 Hyatt High Duty.

They cost five times as much as the usual ball bearings. But good roller bearings don't break under strain.

No Overtax

It's the sudden shock which shows up a car's weakness, not the ordinary tests. And sudden shocks will come.

To withstand them, I give to axles and driving parts 50 per cent. over-capacity. I have made them all ample for a 45-horsepower car.

To prove them out, I ran one of these cars for 10,000 miles, at top speed on rough roads. I met at its worst every possible road shock, and not one important part gave out.

I use 14-inch brake drums. I use 2-inch, 7-leaf springs. I use costly steels — chrome nickel, vanadium, manganese—all to ward off an overtax. I place cost below safety in this Reo the Fifth.

No Troubles

That isn't quite true. All machines have their little troubles. But I've gone to the limit to save trouble with this car.

Each engine is tested 20 hours on the blocks, and 28 hours in the chassis. There are five long-continued tests.

My carburetor is doubly heated—with hot air and hot water—to save the troubles with low-grade gasoline.

I use a $75 magneto to save ignition troubles. I use a centrifugal pump, instead of a syphon, to insure the water circulation. That costs about $10 extra.

Cars are built slowly and carefully, parts ground over and over. I limit my output to 50 cars daily, so nothing shall be slighted.

No Skimping

To make the car show my infinite pains, I give equal care to the finish.

The body has 17 coats. The luxurious upholstering is of genuine leather, filled with the best curled hair.

There are three electric lights, and the dashboard lights are flush. And the whole car, even under the hood, is fully nickel-trimmed.

Center Control

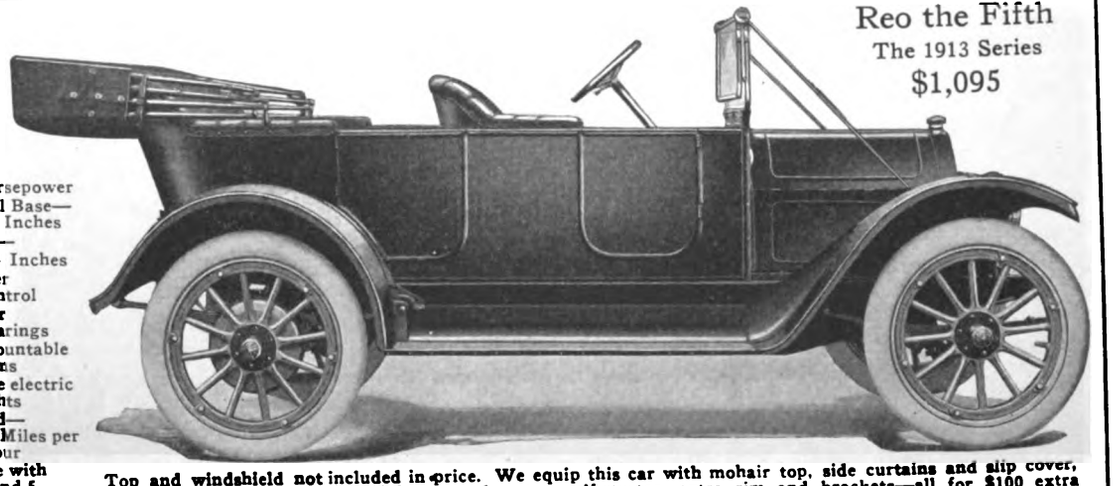
Our center control is exclusive to this car. All the gear shifting is done by one small handle, completely out of the way. It is done by moving this handle only three inches in each of four directions.

Both brakes are operated by foot pedals. So no levers at all clog the way of the driver. And this permits of the left side drive.

No other center control will please a man who once discovers this.

Add $200 to My Cost

These extremes, I figure, add $200 to the necessary cost of this car.



They cut down our profits. They force us to factory efficiency. They compel us to build every part ourselves. And, to minimize cost, we build only one chassis.

But these things save users from three to ten times what it costs me to give them to you.

They insure to you safety, economy, comfort. They insure to me that reputation I have spent 26 years in acquiring.

I find that car users, more and more, are coming to look for this class of car. Our output is always much oversold. And this year, with 60,000 excellent cars to my credit, the demand will be greater than ever.

A thousand dealers are now ready to show this new model of Reo the Fifth. Our 1913 catalog is also ready. Write us for it now.

Reo the Fifth
The 1913 Series
$1,095

30-35 Horsepower
Wheel Base—112 Inches
Tires—34 x 4 Inches
Center Control
Roller Bearings

Canadian Factory, St. Catharines, Ont.

(126)

Digitized by Google

To Reo Dealers—and Others

We know all the advantage of folderols in a car. And we are giving that advantage to Reo the Fifth.

This year, a wider, longer body—three electric lights—flush dash lights. And a self-starter included in the hundred-dollar equipment.

A 17-coated body, the best of upholstering, every finishing touch, and nickel trimmings even down to the engine.

The coming left-side drive, without any side levers. An exclusive center control, which appeals to users more than any other.

A stunning appearance, remarkable finish, luxuriousness, comfort, convenience and room. Not a car in this class can compete now with the Reo in all of these selling attractions.

But Real Worth Counts

But you know, as we know, that in the long run it is service and economy that count.

All the other attractions diminish in time. What men keep before them is the endurance, the lack of trouble, the low cost of upkeep.

That's where our main effort centers. Any man who knows Mr. R. E. Olds knows him to be an extremist.

He knows what is needed. And 26 years spent in building cars have shown up all the shortcomings, taught him endless precautions.

Reo the Fifth will secure its chief fame, its enduring prestige, through the infinite pains which he takes with this car.

If you are building, as we are, for the years to come, those features will count with you.

Big Tires This Year

How Mr. Olds is working to cut cost of upkeep is shown in this year's tires.

Tires 34x4 will give twice the average mileage of tires 32x3½.

Their adoption this year increases our tire cost about 30 per cent over last year. But this is only one outward example of the countless perfections in every part of this car, all working toward upkeep economy.

Other cars at a glance may look equal to this car. But there isn't a car within range of this price which competes on the points we bring out in our ads.

The Car of the Future

Men are coming, we think, to seek more and more for a car built like Reo the Fifth.

Last year's demand, every month of the year, was far in excess of our output. It ran five times our production at times.

And all those last year's cars will argue for better-built cars than the common.

This demand will grow. Every man knows that it should grow. Every Reo the Fifth, in every community, is proving the value of a car like this.

And you know that sound business, either for makers or dealers, can't be built on a lesser basis.

Our Wonderful Advertising

This year, as last year, we shall constantly go to every car buyer—in country and city—with our telling salesmanship-in-print

It will be, as it has been, the most efficient advertising ever done in the motor car line.

We are doing more than is necessary, perhaps by twice over, to create a lasting impression, to build a firm reputation.

We stand for better cars, and our purpose is to make this stand effective.

Every motor car buyer, wherever he lives, is being all the time told about Reo the Fifth. And the matter and manner make a wondrous impression, you know as well as we.

And the past year has taught you what an overwhelming demand this advertising brings to the dealer.

Now a Larger Output

The factors which last year held back our production are not in existence now. We do not rush cars, whatever the pressure. And we have no desire to compete with others on quantity.

Mr. Olds sets his limit at 50 cars daily. But we run at full headway every month of the year. And our advertising is arranged so that, even in dull months, the demand exceeds our production.

This continuous, unvarying, year-round trade makes Reo the Fifth a very good car to handle. We aim to keep dealers and factory men busy winter and summer, and our advertising so far has done that.

COVERT

Transmission Building Is a Specialty

We believe that Covert Transmissions are the best produced today. They are made of the best materials by men who are transmission specialists. From the drafting room to the final inspection every process of manufacture is most efficient. These are just a few reasons why Covert Transmissions are better.

Now as to why they are more economical. We have a large plant and produce transmissions in great quantities. Every man in our plant thinks of nothing but transmissions, how to make them better—how to make them faster. This assures the highest possible quality at the minimum cost.

Manufacturers with the finest equipped plants are rapidly coming to see that the making of transmissions must be considered on the same plane as speedometers, carburetors, etc.

Let us quote you prices on transmissions for your new models. We can make them better—more economically—which facts have been sufficient to close contracts for a surprisingly large number of 1913 and 1914 pleasure and commercial cars.

Champion Priming Plugs
End All Winter Starting Trouble

Every car owner is up against the priming question today.

The trouble is greater this winter than ever before because the gasoline is of lower test.

Champion Priming Plugs are indispensable to the many thousands of cars that have not priming cups.

They are even badly needed on cars that have them, because the cups cannot place the gasoline right at the firing points.

Champion Priming Plugs deliver the few drops required just where they are needed.

The gasoline goes direct to the plug's base through an enclosed channel — firing cannot soot-up the porcelain nor burn the firing points.

Priming is done quickly, simply and safely. If you should happen to start without tightening the needle valve top, the hot exhaust could not endanger the porcelain.

Champion Priming Plugs have been given every test, and are strongly recommended to dealers by manufacturers of those cars that are not regularly fitted with priming devices.

These recommendations were not made until the manufacturers were convinced of the thorough reliability of **Champion Priming Plugs** under the most severe conditions.

Champion Priming Plugs are made in the largest factory in the United States devoted exclusively to spark plugs.

They are backed up by the fact that our regular priming plugs are specified by the manufacturers of over 60 per cent. of the cars now running in America.

You run no risk in buying **Champion Priming Plugs**, because, like the rest of our product, they are exchangeable for any other type of spark plug on our list.

Dealers should order **Champion Priming Plugs** in 100 lots in order to get the lowest possible discount.

FOR SALE EVERYWHERE AT $1.25 PER PLUG

Trial Set of Four Champion Priming Plugs, Fully Guaranteed, Prepaid, to Any Car Owner for $5. Give Name of Car and Year of Make—Also Name of Your Dealer.

All jobbers and most dealers are already supplied. Write today. Liberal trade discount to dealers. Be ready to supply your trade while our big campaign is calling the attention of car owners everywhere to these priming plugs.

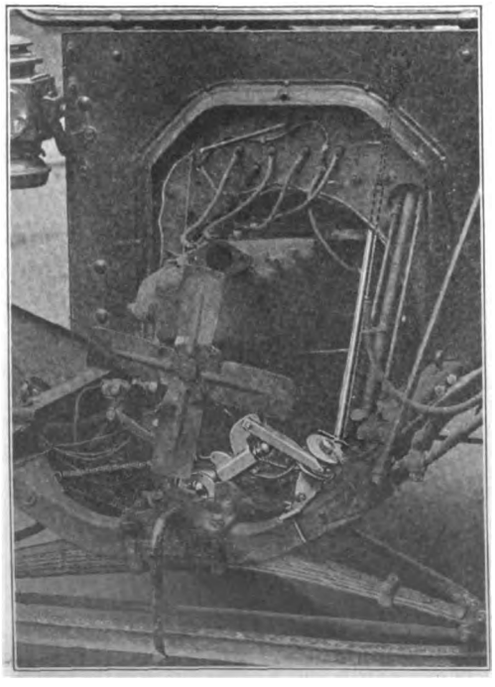
The Triplex Ford Engine Starter

How Are Your Ford Cars Started?

DO YOUR OWNERS STILL STRADDLE THE BUMPER AND CHURN THE CRANK?



You Will Give Them This Message if You Appreciate the Unequaled Advantages of Starting the Ford Car With the TRIPLEX ENGINE STARTER.

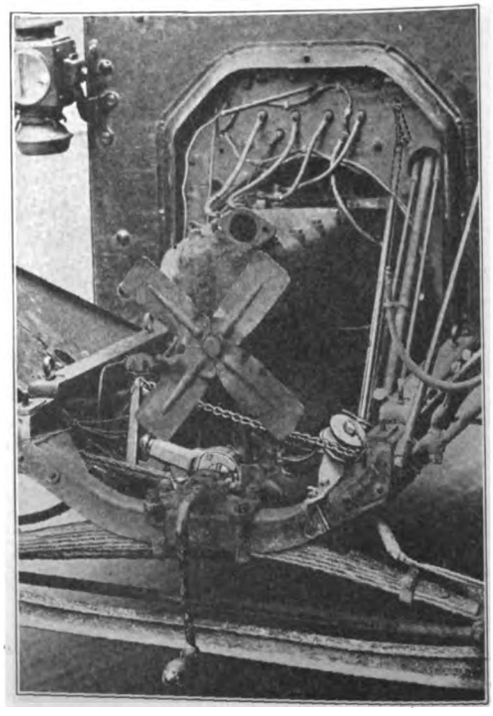
The TRIPLEX FORD ENGINE STARTER is a mechanical starter, which, of all types—compressed air, acetylene gas, electric and spring—is the only one on the market which at all times proves absolutely RELIABLE. In no respect is it a "Hit-or-Miss" proposition—working one minute and short circuiting or blowing out a cylinder head the next. It gives 100 per cent. uninterrupted service from the time it is attached. It comprises so few parts and is so simple and direct in application that it cannot get out of order, and it is as safe and durable as it is simple and effective.

You do not have to leave your seat to start the Ford Motor, WHEN EQUIPPED WITH THE TRIPLEX STARTER.

All that is necessary is to pull the lever. Will absolutely start the Ford 1,000 times out of 1,000.

Can be easily attached in one hour's time. Absolutely no holes to drill or mechanical work necessary to install same. Absolutely guaranteed to outlast the motor.

DEALERS: It doesn't require SALESMANSHIP to sell an ARTICLE for which every FORD OWNER is clamoring. Bring the TRIPLEX FORD ENGINE STARTER AND THE FORD OWNER together and a sale results.



Price $11.50

The Triplex GUARANTEE

The Triplex finishes the work the carburetor leaves half done.
The Triplex makes imperfect carburetion a mechanical impossibility.

Sixty Day Trial Proposition.

The Triplex is guaranteed to decrease fuel consumption 25%, increase power, prevent carbonization, prevent Back Firing, effect easy starting.

The Triplex will increase mileage, promote flexibility.

The Triplex will equalize the most uneven mixture that leaves the carburetor—make it uniform throughout.

The Triplex utilizes every drop of gasoline to its full capacity, making a saving of over 25% per gallon. It gives you five gallons of fuel at a cost of four. It makes high-grade gasoline out of low.

INSURE YOUR CAR Against Fire By Using a Triplex.

A back fire is impossible with a TRIPLEX, due to the fact that any flame is cut off before it reaches the raw fuel in the carburetor. Fire cannot pass through a TRIPLEX. The principle is the same as the non-explosive feature of the miner's gauze lamp.

The Triplex makes starting easier regardless of temperature or atmospheric conditions, and stops suction of live gasoline when the motor is cold.

The Triplex increases power proportionately. The full cylinder charge is ignited every time—the maximum power delivered at the point of highest efficiency. Because there is no fuel waste, there is no power waste. A TRIPLEX is a double economy—it INCREASES power at the same time it DECREASES fuel consumption.

The Triplex can be readily attached by anyone in one-half hour's time.

The Triplex is sold with the understanding that if it does not do as we claim we will gladly refund your money at the end of sixty days.

90 %
OF THE AUTOMOBILES DESTROYED BY FIRE ARE CAUSED BY A BACK FIRE IGNITING THE RAW GASOLINE IN THE CARBURETOR

KISSELKAR

the car of liberal design

Exhibit at New York and Chicago Shows—Pleasure Cars

New York—No. 22 Grand Central Palace
Chicago—No. M1 Coliseum Annex

LIBERAL design means greater comfort, greater durability, more impressive appearance, lower up-keep and slower depreciation. It is one of the factors that separates the KisselKar from average automobiles, and makes it a conspicuous value—a distinctive achievement in motor car engineering and manufacturing.

SIT in a KisselKar—immediately you sense the unusual roominess of the tonneau—one factor of the liberal KisselKar design.

Lounge back in the seats—here is another surprise, a result of liberal design. Never before have automobile seats been made so exceptionally deep, encouraging the completest relaxation. This, and the eleven inches of softest upholstery, give you the most luxurious ease.

Ride in the KisselKar—there's a steadiness and softness of motion immeasurably superior to every previous idea of car comfort—it is **super-comfort**, due to liberal design.

The generous KisselKar wheelbase is the basis of this rare riding comfort. If a car is to be roomy, and at the same time have the "balance" which causes a car to ride with steadiness and handle responsively, it must have a liberal wheelbase in proportion to the roomy body. No car can equal KisselKar roominess, comfort and ease of driving without equaling the wheelbase—and few cars do.

Ride on rough roads—here is where the liberal KisselKar design discloses its comfort value. The generous wheelbase modifies the irregularities of the road—springs built according to the weight of each model—shock absorbers and eleven inches of resilient seat upholstery absorb the road vibration. The unusually deep seats permit you to relax in a way so that side sway or lurches do not disturb you—no tendency to brace yourself.

The one who drives will appreciate the unusual roominess of the front compartment—the "balance" that makes the KisselKar easy steering and lightfooted in picking the road.

Every part of the car shows the liberal KisselKar design—transmission, differential, steering knuckles, brake drums, etc., securing a greater safety margin, minimizing up-keep and depreciation.

Go to a KisselKar dealer. He will afford you every opportunity to convince yourself of KisselKar superiority—the super-comfort, the distinction and the roadability by which the KisselKar gives the owner a pride and satisfaction he can secure in no other way.

No-Rim-Cut Tires—10% Oversize

12 Years in 1—and Over

Our fiscal year ended November 1.

We sold in that year 918,687 automobile tires—a gain of 125 per cent over 1911.

Our greatest previous gain was 100 per cent.

Last year's sales by far exceeded all our previous twelve years put together.

They were enough to equip completely 230,000 cars. Yet the demand last year exceeded our output by 400,000 tires.

These are facts to ponder, if you own a car:

Why has this tire so outsold all the others?

Why are sales doubling faster than we can build factories, after seventeen hundred thousand have been tested out?

You know, as we know, that nothing has done it save lessened cost of upkeep.

In this day of odometers, men are making comparisons.. These figures reveal the result.

Next Year—500,000 Cars

The percentage of increase which we are maintaining will next year mean an output of 2,000,000 tires.

That will mean to equip, in a single year, 500,000 cars with Goodyears.

Contracts with car makers seem to insure that nearly half of next year's new cars will go out with Goodyear tires.

Think what that means—about as many Goodyear tires as all other makes together.

The demand from car users is increasing at an even greater rate.

Major Savings

The flood of demand began with the advent of No-Rim-Cut tires.

This patent tire ended rim-cutting forever. And that, as shown by careful statistics, saved 23 per cent of tire runs.

Men are quitting clincher tires by the tens of thousands to get rid of those rim-cutting troubles.

Then we made these tires—our patent type—10 per cent over the rated size. And that, with the average car, adds 25 per cent to the tire mileage.

These two features of ours cut the average tire bills 48 per cent. They are saving tire users now, we figure, a million dollars monthly.

Mileage Tests

Then we built a machine on which four tires at a time are worn out in our factory under all road conditions.

Year after year we have used that machine to compare fabrics and formulas, methods, materials and ideas. We have also compared rival tires with our own.

The mileage is metered, and the meter told us when we reached the limit—when we had the best tire in existence.

Then the odometer on thousands of cars told the same story to users. That's the reason for this wondrous Goodyear growth.

1,700,000 Used

Up to November 1st men had put into use 1,700,000 of these tires. They are running now, we figure, on 250,000 cars.

The present sale—918,687 last year—is a simple result of those tests.

You can't for a moment think these men mistaken, after all these years, after all these tests. They are seeking just what you seek—lesser cost per mile.

They are using odometers—keeping records of cost. And a quarter-million such men have come to Goodyear tires.

Doesn't it seem to you reasonably certain that the same tests would win you?

Our Latest Invention

The Winter Tread

The latest service our experts have rendered lies in this Non-Skid tread.

Not a regular tread with short-lived corrugations. But an extra tread made of very tough rubber, giving a double thickness.

This thick extra tread gives us deep-cut blocks. They last for thousands of miles. They present to the road surface countless edges and angles, which grasp with a bulldog grip.

The blocks meet at the base, so the strain is distributed over the fabric, just as with smooth-tread tires. This invention alone, our experts say, will double the life of non-skids.

Please make your comparisons. The advantages here will be obvious to you. You'll see that we have solved the problems.

Write for the Goodyear Tire Book—14th-year edition. It tells all the ways to save on tires.

GOODYEAR

AKRON, OHIO

No-Rim-Cut Tires

With or Without Non-Skid Treads

Note the double-thick tread, to give multiplied endurance.

Note the deep-cut blocks.

Note the sharp edges and angles, facing every direction.

Note how the blocks widen out at the base, so the strain is distributed. It never comes on a small part of the fabric.

Our experts spent three years on this difficult problem. And we think they've solved the skidding question as it never was solved before.

200,000 have been tested out.

"Whitney" Chains

The Most Practical for Motor Vehicles

WE call your attention here to "Whitney" Cotter Detachable Chains as the most practical chains ever offered for motor vehicles. They have made a record for themselves which no other Detachable Type has approached.

This Cotter Pin feature is so practical and necessary that it calls for little detailed explanation. The illustrations tell their own story, proving that this form of construction is logical and necessary for chain equipped motor vehicles. This Cotter Detachable Chain can be taken apart at any link and lengthened, shortened or repaired without the use of any special tool, as the Cotter Pin can be removed with pliers, screw driver or any sharp pointed instrument. The use of Whitney Cotter Detachable Chains assures the builder, owner and driver of commercial vehicles uninterrupted service on account of the ease of repair.

"Whitney" Chains are made from steel best adapted for the purpose, carefully hardened and calculated to resist the most wear, while in the matters of machining and assembling the utmost care is exercised and thorough inspections and tests characterize each process of manufacture. Their future service, however, depends entirely upon the care, alignment and adjustment, for the best chain in existence cannot withstand the evil influence of improper adjustment and lack of lubrication.

It will pay you, Mr. Manufacturer and Dealer, to get better acquainted with the "Whitney" Chains which are today standard on the majority of commercial vehicles. Write for our illustrated catalog which shows top and side views of each size of all Roller chains manufactured by us.

Lippard-Stewart

The Delivery Car

CHASSIS
List $1650

BODIES
Standard Panel....$150
Standard Express..$125

The Lippard-Stewart Model "P" Delivery Car—30 Horsepower

What Will This Car Do for Me? This is the vital question, regardless of whether you consider the Lippard-Stewart Delivery Car from the view point of a probable owner or prospective dealer. Considered from the owner's standpoint, it is a car that assures you a prompt, thorough, efficient and economical delivery system at all times. If you are a dealer, it is a car that will help you build a profitable and constantly increasing business upon the sound platform of satisfied customers.

Here Is an Ideal Delivery Car—built by men who have made this distinctive line of motor car construction a specialty. Men who know the requirements demanded by delivery service, and last but not least—understand how to meet these demands. Transportation experts—men who when they built the Lippard-Stewart Delivery Car designed and built it a delivery car from the ground up. A practical commercial vehicle, not a commercial body on a pleasure car chassis. Strong, dependable and serviceable—a car that will deliver more goods over a wider territory at less cost per package than is possible with horse and wagon. Low in first cost. Economical in upkeep.

Examine Its Perfect Chassis—strong yet simple in construction—with its frame built heavier and wider at the point of greatest stress and reinforced with corner gusset plates. Note the 30 Horsepower Continental Motor. Consider the rugged cone clutch and the transmission strong enough for a 50 H.P. Car. Observe the shaft drive, the differential, the simplicity of construction practiced throughout the entire building of the car and the easy get-at-ability of every important mechanical part even when the car is loaded. Look at the perfect spring suspension that assures easy riding and minimizes wear and tear. Then—

Consider the Price of the Car—its sound dollar for dollar value. Compare it with any delivery car apparently competing with it. Note how the Lippard-Stewart Car actually baffles competition. Then as a dealer form your own conclusions as to the car's value as a business investment—its ready salability and the quick turnover of capital it assures.

Note the Comprehensive Lippard-Stewart Line—the volume of sales it makes possible—a line that offers you a car to meet the specific demands of practically every firm and individual who need a delivery car regardless of their business. A line that knows no dull seasons and a car that practically sells itself and stays sold winter or summer.

Read These Special Features of Lippard-Stewart Construction: Continental 30 H. P. Motor, Eisemann Magneto, Brown-Lipe Selective Transmission, Cone Clutch, Full Floating Timken Rear Axle, Timken Roller Bearing throughout, Left Hand Drive, Pneumatic Tires, 35 x 4½ Front and Rear—full equipment of Lamps and Tools.

We Want Good Dealers Everywhere. We have a splendid opportunity to offer first-class, up-to-date, energetic men—men who can measure up to our standard of integrity and business ability. If we have no dealer in your town and if you are the logical man to represent us—a man who can grasp the big possibilities of our proposition and can handle it in the way it should be handled, write us instantly.

"The Easiest Riding Car In The World"

The MARMON "32"

The graceful and beautiful lines of the new bodies distinguish the latest series Marmon "32" at a glance. The many refinements in equipment and appointments add to the comfort, luxury and ease of operation. But underlying all the new features is the same high standard of design, materials and construction that has made these cars world-famous in contests and service. No one can question the judgment of the Marmon owner in his choice of this car. The records of its performance are the highest indications of value.

Outline Specifications

Motor—4½" x 5", "T" head, 32-40 h. p. **Oiling**—Marmon system automatic force feed lubrication. **Ignition**—Two spark dual system. **Transmission**—Selective sliding gear, unit with rear axle. **Clutch**—Cone. **Rear Axle**—Floating type, unit with transmission. Pressed steel housing. **Brakes**—Internal expanding, 403 sq. in. surface. **Wheelbase**—120 in. **Rims**—Quick detachable, demountable. **Tires**—35 x 4½ front and rear. **Control**—Left-hand steering, right-hand control in center. **Carburetor**—Improved automatic float feed. **Springs**—Rear, full elliptic; front, semi-elliptic. **Body**—Marmon perfected cast aluminum construction with sheet metal seat backs. Deep cushions. Nickel trimmed. **Equipment**—Electric starting and lighting system with storage battery, Pantasote top, built-in windshield, speedometer and clock, electric light to illuminate entire dash, horn, shock absorbers front and rear, single tire carrier, extra demountable rim, coat rail, foot rest, assortment of tools, oiler, jack, tire repair kit and pump. **Prices**—Five-Passenger Touring Car or Four-Passenger Suburban, $3000.00; Two-Passenger Roadster, $2900.000; Limousine (seats seven) $4000.00; Landaulet (seats seven) $4100.00; prices f. o. b. factory, Indianapolis, Ind.

"The Easiest-Riding Car In The World"

The MARMON SIX

When it became known there was to be a Marmon Six it was generally believed it would prove a car of surpassing value. During the time the Marmon Six has been under development and test we believe we have overlooked nothing that would add to the quality or capability of the car or that would enhance the safety, the comfort or the convenience of its user. So far as any test can be applied it is a proven car—brought to a place where we can say, "Here is a car that will live up to the Marmon name"

Outline Specifications

Motor—4½" x 6", "T" head, 48-80 h. p. **Oiling**—Marmon system automatic force feed lubrication, delivering oil through hollow crank shaft directly into main bearings, connecting rod bearings and piston pin bearings, also through hollow cam shafts to cam shaft bearings. **Ignition**—Two spark dual system. **Clutch**—Improved dry plate multiple disc. **Rear Axle**—Floating type unit with transmission. Pressed steel housing. **Front Axle**—A new type, an exclusive feature of the Marmon Six. The vertical spindle is placed in the direct center line of the wheel. This construction makes the safest, surest and easiest steering mechanism ever devised. **Brakes**—Internal expanding, 403 sq. in. surface. **Wheelbase**—145 in. **Rims**—Quick detachable, demountable. **Tires**—Front 36 x 4½, rear 37 x 5; front and rear rims and tires interchangeable. **Steering Gear**—Left hand with center control. **Carburetor**—Improved automatic. **Springs**—Front, semi-elliptic; rear, ¾ elliptic. **Body**—Convex curve type Marmon perfected cast aluminum construction with sheet metal seat backs. Deep cushions. Nickel trimmed. **Equipment**—Electric starting and lighting system with storage battery, cape top, windshield designed as part of dash with provision for ventilation, speedometer and clock, electric light to illuminate entire dash, electric step light under tonneau doors, electric emergency lamp with long extension cord, electric horn, power tire pump, shock absorbers front and rear, tire carrier, extra demountable rim, coat rail, foot rest, assortment of tools, oiler, jack, and tire repair kit. **Prices**—Seven, Five, Four or Two-Passenger Body Types, $5000.00; Limousine (seats seven) $6250.00; Berlin Limousine (seats seven) $6450.00; Landaulet (seats seven) $6350.00.

STAVER

The only stock Touring Car to finish with a perfect score in "Round-Lake-Michigan" Endurance Run

1069 Miles

Staver "55"

$2250

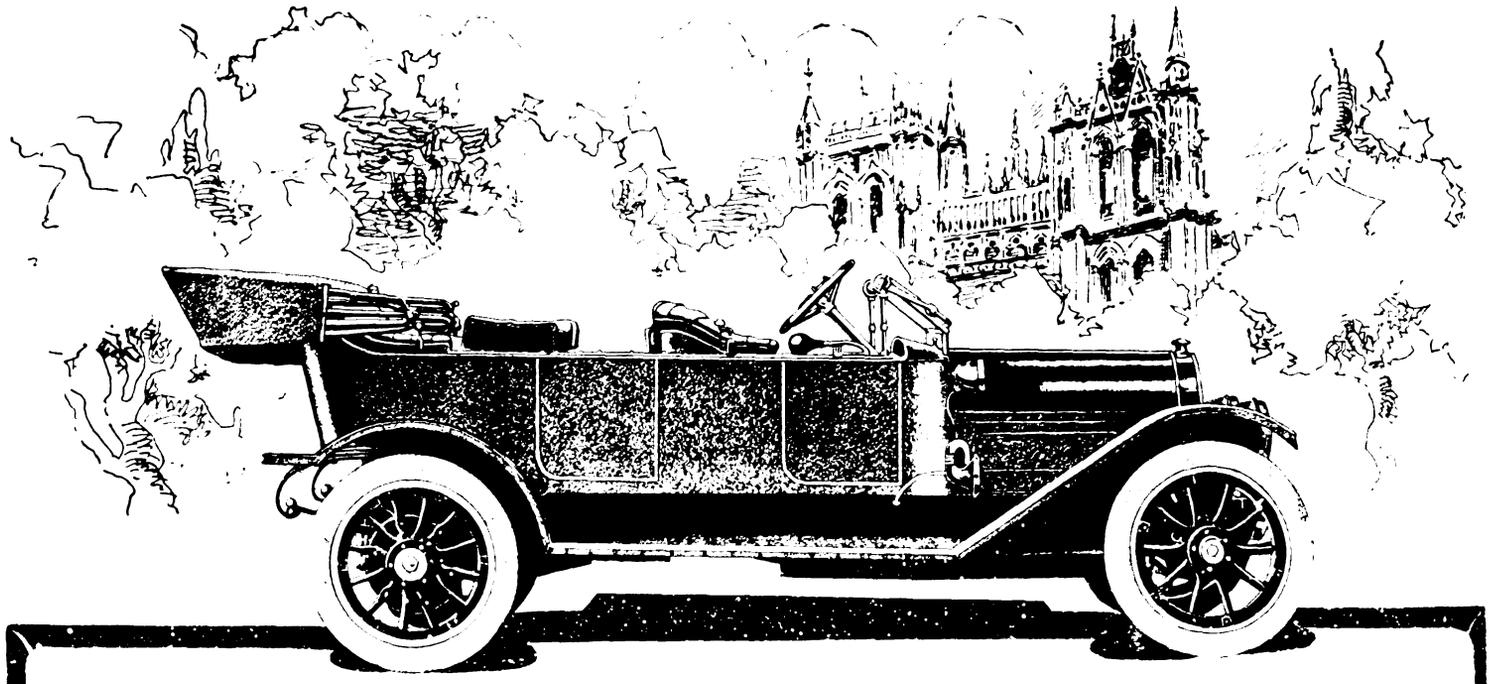
The remarkable merits of the Staver car are now being nationally recognized.

The Staver gave another wonderful demonstration recently, of what constitutes a superlatively good automobile. Two years in succession winning one of the most gruelling road tests on record, emphasizes the consistent qualities of Staver cars.

We have been deluged with telegrams from every part of the country, demanding to know our plans for 1913.

2000 CARS

That's the output for this year. Three chasses — cars that have no superior at any price — anywhere. Every improved equipment. Positive starter — electric lights (generator). Bodies made in our own shops — luxury — power — fitness to defeat competition. Backed by a great factory and a name that is a household word.



We do business in a liberal manner. Wire or write us.

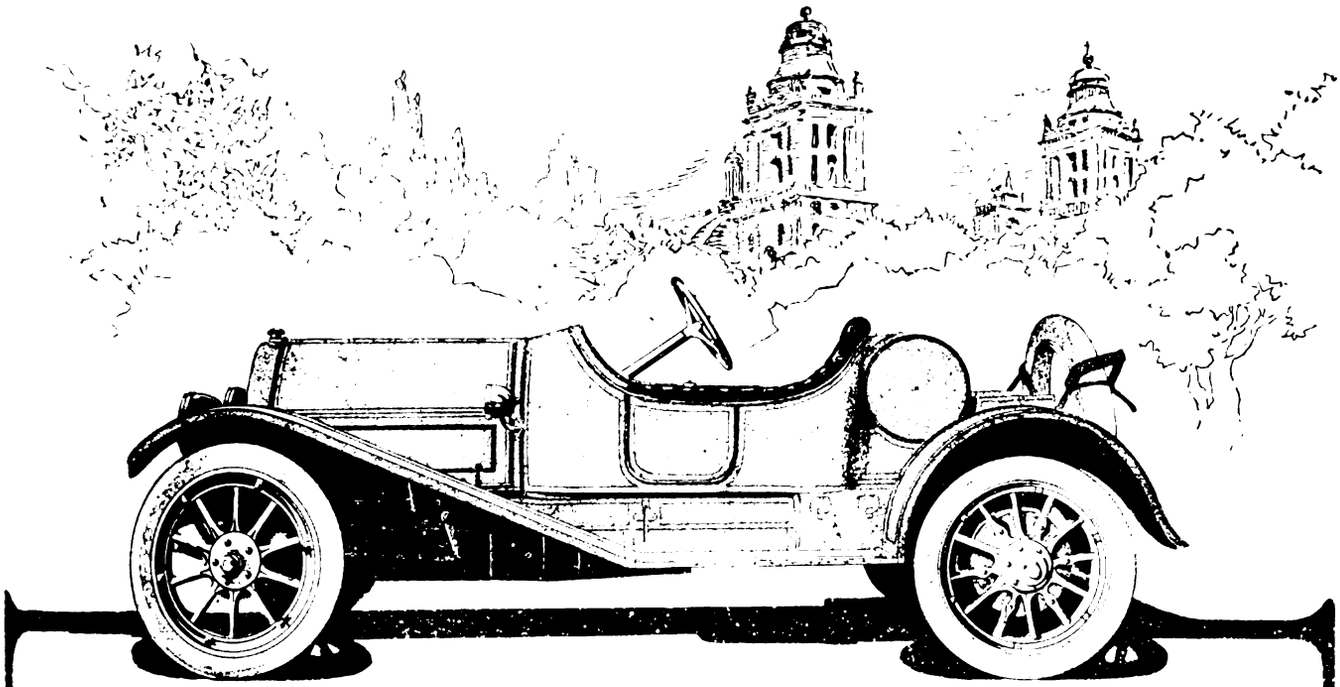
STAVER CARRIAGE COMPANY, CHICAGO, ILL.

Digitized by Google

Digitized by Google

COMPLETE and modern in every respect the Pullman line for 1913 offers a dealer opportunity unexcelled by any manufacturer.

Not alone in the value the car itself presents to the prospect does the Pullman proposition offer a splendid opportunity but in the co-operation and selling assistance given to the dealer as well, is the Pullman agency a valuable asset.



For 1913 three models stand out prominently, the Pullman 4-36; Pullman 4-44, and the Pullman 6-66. These models follow closely the lines and design of the previous year and but very little change has been made. This largely has been in the way of refinement and equipment.

All Pullman models, for example, are electric lighted and equipped with a dependable and well tried electric starter.

All radiators have been enlarged and the oil reservoir has been increased in size on the larger models. The fly wheel and clutch have also been enlarged as has the steering wheel on all models. The springs have been improved and strengthened on all models and where necessary have been lengthened.

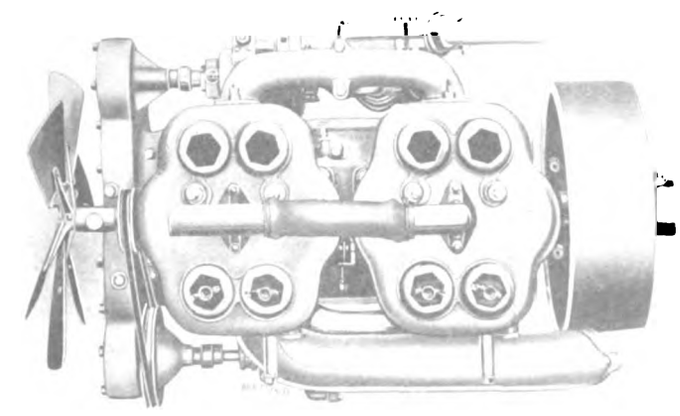
From tire to top all models are thoroughly and completely equipped with every device and accessory that adds to the comfort and convenience of the car.

Digitized by Google

BACK of every Pullman car stands ten years of experience that makes for the benefit and protection of the car purchaser. For ten years the Pullman Motor Car Company has sought to produce each year the greatest car value on the American market. Our long list of constant satisfied users and money making dealers is fair evidence of the realization of our plans.

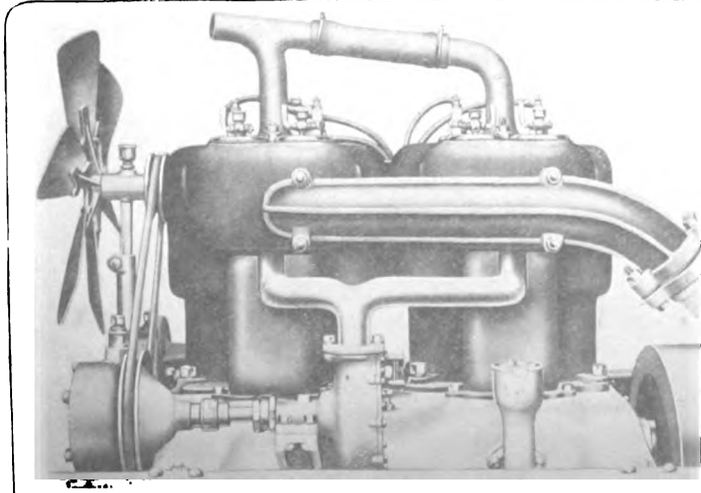
Consequently in our 1913 offering there is nothing of an experimental nature. Basic design and basic construction of all Pullman models has been proved right for several seasons and these correct basic principles have been closely adhered to.

The 4-36, $1675, is a popular five-passenger car of medium horsepower. The motor is 4 1-16 x 5 inches with cylinders cast in pairs and large valves. This same chassis, however, may be equipped with any one of six bodies.



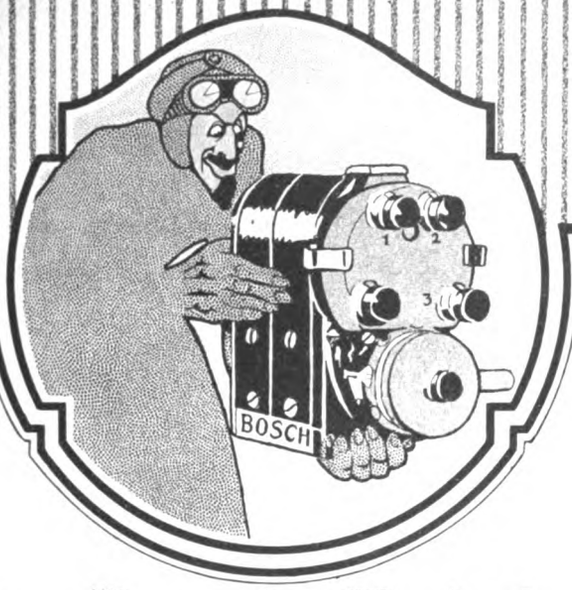
The 4-44, $2150, carries a 4½ x 5½ motor also with large valves. The transmission in this model is four-speed of very compact design. This same chassis may be had equipped with any one of six bodies.

The 6-66, $2750, is a big, powerful car with a 4½ x 5½ motor that develops its rated horsepower at only 1300 r. p. m. This model also carries the four-speed transmission and a wide range of body styles.



Digitized by Google

THIS shows a dissembled Pullman four-speed transmission. The case is cast in one piece assuring rigidity, uniformity and extreme accuracy. The gears are large, which minimizes teeth pressure and insures perfect lubrication. These transmissions are run on a testing bench 20 hours, then taken down, inspected, cleaned and remounted before being finally assembled in the car.



TOP view of a Pullman 4-44 motor. The cylinders of a Pullman motor give excellent example of the careful tests and inspections in the Pullman factory. After being carefully examined and put under water pressure test each cylinder is carefully annealed for ten hours to overcome internal strains. Then it is tested under pressure again and rough bored. They are then allowed to stand for ten days to take final shape before being finish bored.

EXHAUST side of the 4-44 motor. By placing the pump on this side and the magneto on the opposite side the stress on the shafts is more evenly divided. All valves are enclosed and operated by adjustable valve lifters. All bearings are extra large and all parts are very accessible.

Continental

A Motor That Confers Distinction on Every Car It Drives

A man speaks with pride of the Continental Motor in his car.

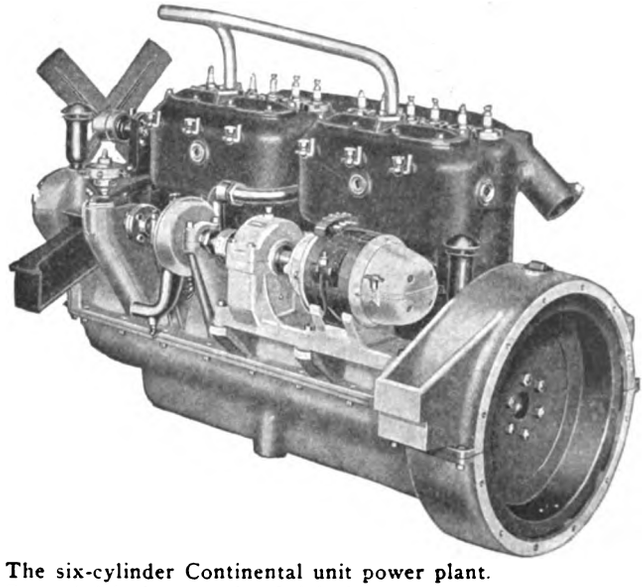
A manufacturer installs it, and advertises the fact.

Both are moved by the same impulse, and behind that impulse is the universal recognition of the Continental as a mark of high quality and distinction.

The Continental is so accepted because it long since has proved its right to the fullest confidence of the car owner and the car manufacturer.

Think of a car powered with a Continental Motor.

Recall what you have heard said about it, not only by men who own that particular make, but also by men who own others.



Recollection will tell you that the car's reputation is high—it is regarded as a good car.

This idea, as we have said, is widespread.

A Continental Motor is looked upon as standing sponsor for the quality of the car.

We want you to get acquainted with the Continental—whether you are owner, engineer or manufacturer.

It will not be troublesome to do this, for at both the New York and Chicago shows many of the leading pleasure cars and trucks will be equipped with the Continental.

The six-cylinder Continental unit power plant.
Bore, 4⅛ inches; stroke, 5¼ inches.
Built to accommodate any type of self-starter now made.
Simple method of mounting shown in illustration.
Suitable for right or left hand drive.
Four cylinder types—20 to 70 H. P.

Note, also, the large percentage and class of these cars; this will be impressive testimony.

Specifications, literature, etc., mailed on request.

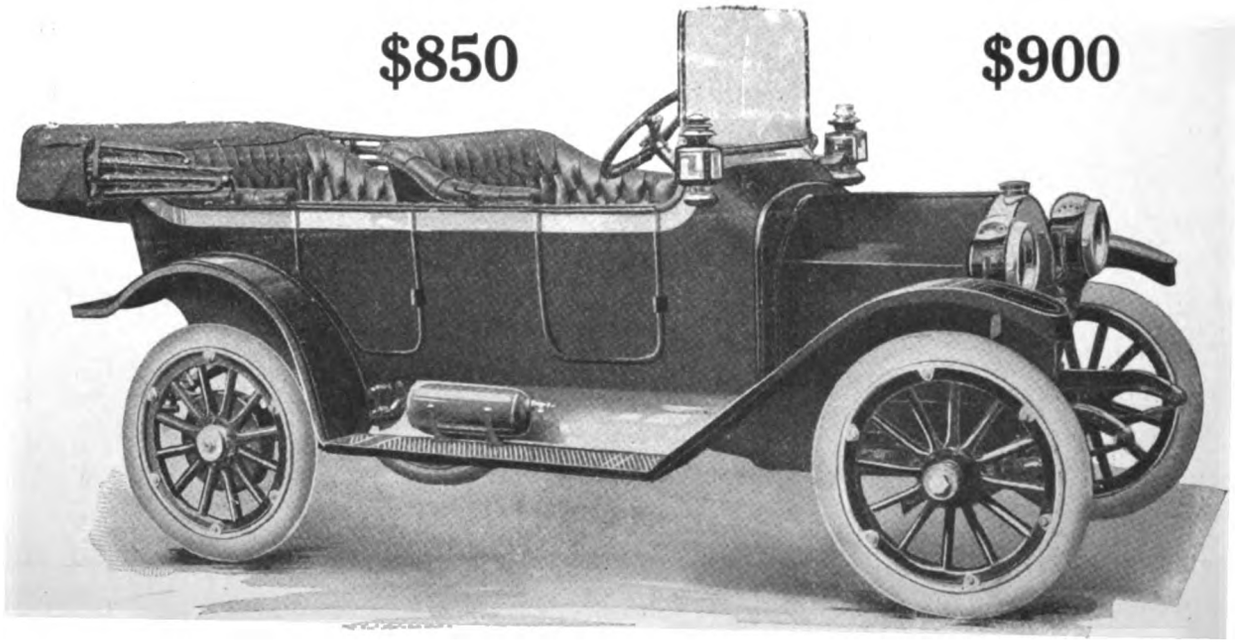
$850 — $900

5 models:

Five models—at $850 and $900—afford equipment to suit every preference. Top with side curtains and dust cover; windshield; kits; lamps; generator; horn and jack—with $850 model. In addition—Speedometer; Prest-O-Lite or electric outfit; quick demountable detachable rims; tire irons, etc., with all $900 models.

Nine of the Big Features



1. Ball bearing throughout.
2. Long stroke, high power motor, unit power plant fully enclosed.
3. Full floating rear axle.
4. Left hand drive, center control.
5. Extraordinary braking surface.
6. Multiple disc clutch, running in oil.
7. Extra capacity tubular radiator.
8. Enclosed valves, all on one side.
9. Platform rear spring.

Detroiter

As Notable in Economy as in Cost

Right as the first cost of the Detroiter is—the low after-cost is even a bigger point in its favor. The same nine exclusive features of construction that make this car distinctive in the low-priced field, make it also a marvel of low upkeep. From 20 to 25 miles on a gallon of fuel, and 75 miles on a quart of lubricant is its every day record. Note the superior points of construction in the panel at the left.

The combination of these three—the nine remarkable features of construction, the remarkable first cost and the remarkable after-cost—is the reason why the Detroiter is probably the easiest selling car in America today.

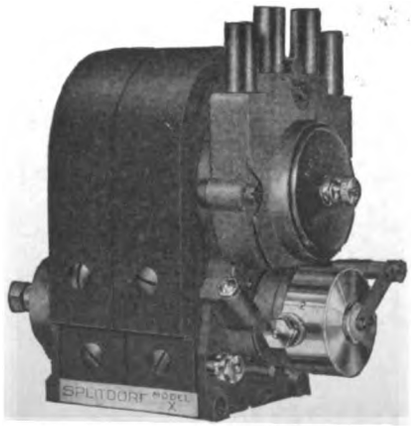
SPLITDORF

"Always There"



SPLITDORF ignition devices are making rapid headway in the choice of owners and drivers of the automobile, the motor truck, the motor boat, the motorcycle, the aeroplane and the motor driven farm implement. Sheer merit has brought them to the front in the face of the closest competition.

SPLITDORF PLUGS are not experimental—they are STANDARD. Known since their first appearance as the "common sense plug," they are exactly that—no more and no less. SPLITDORF PLUGS will outlast your motor. There is nothing fanciful about them—they are made to endure any and every strain of ignition put upon them.

Four magnetos of the well-known SPLITDORF low tension type are making their appearance for the first time, minor structural changes on the older styles giving the latest models a smoother and more compact appearance. Models "W" and "Z" are of the 3-pair magnet type, designed for heavy, low speed 4 and 6 cylinder motors respectively, while the "X" and "Y" are of the 2-pair magnet type for 4 and 6-cylinder motors respectively, in which efficiency has been raised to the highest standard.

If interested in any form of ignition for gasoline motors, just write in for our free literature. Our new catalog, our "Racing Record" or our "New Lights for Old" is yours for the asking. Do it TODAY.

TELEPHONE CONNECTIONS
DR. O. G. FREYERMUTH
PHYSICIAN AND SURGEON
1129 GUERRERO STREET

SAN FRANCISCO, October 21, 1912.

The START -LITE Company,
1502 Michigan Ave.,
Chicago, Ill.

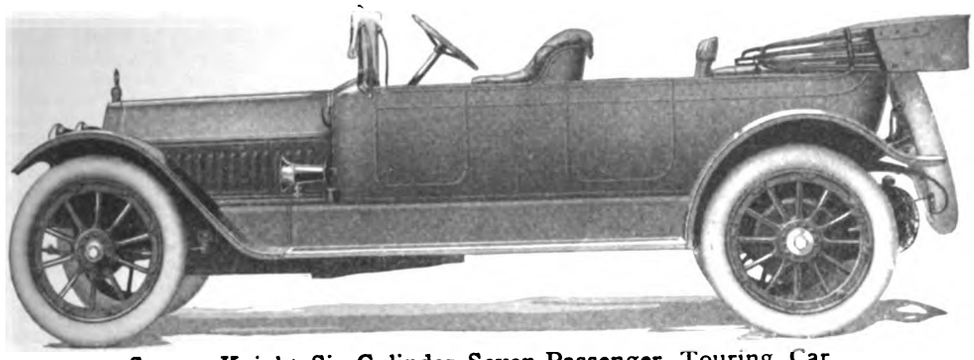
Gentlemen:

Replying to yours of July 3rd, I will answer the questions as follows:

The appealing feature of your system was its reasonable cost and the economy of operation, for the acetylene bill is reduced over one half, as when the lights are not needed they are instantly put out.

I have had my equipment now five months and can say that it is a pleasure to have the lighting control at my finger tips. I am more than pleased with it.

I preferred this system to the electric system because it was cheaper to install, cheaper to operate, more reliable and the light more effective.



I am

Yours very truly,

O G Freyermuth

Announcing the New Six-Cylinder STEARNS-KNIGHT

Stearns-Knight Six-Cylinder Seven-Passenger Touring Car

THE new six-cylinder Stearns-Knight is pre-eminently a class car—built for those who demand the utmost in motor car luxury. This of necessity means limited production, and emphasizes the importance of placing orders early if delivery is to be assured.

Chassis in Lead . . .	$4400 and $4500
Seven-Passenger Touring Car . .	5000
Five-Passenger Touring Car . . .	4850
Four-Passenger Light Touring Car .	4850
Three-Passenger Roadster . . .	4850
Limousine	6100
Landaulet	6200

All six-cylinder Stearns-Knight models are completely equipped with Gray & Davis electric starting and lighting system, Warner Autometer, Mea magneto, windshield, Klaxon and bulb horns, silk mohair top with side curtains and slip cover, Q. D. demountable rims (two extra rims), muffler cut-out, robe-rail, foot-rest, tire-carrier, complete tool and tire repair equipment, etc.

Choose Your Car *Now*

NOW is the time to decide what car you are going to buy. The automobile shows bring all of the cars before you. You have a chance to study them—to compare them point by point.

We do not expect you to buy a Chalmers car simply on our word that it is the best value at the money. You will want to see all the cars and to compare them as to quality and price.

Let Us Prove Chalmers

We believe, however, that Chalmers cars possess qualities that make them the best cars for you to buy. And all we ask is an opportunity to prove to you that the things we say about Chalmers cars are true.

They of course have all the "features" that modern motorists demand—self-starter, electric lights, long stroke motor, demountable rims, four-forward speed transmission, speedometer, power tire inflater, etc.

How to Judge Motor Cars

But in addition they have certain other ***qualities*** which you should look for in all the cars you consider.

As you study the cars at the National shows or in the dealer's salesrooms compare them not only as to comfort, beauty, convenience and mechanical excellence, but also as to the following points:

1. **Stability of the company marketing the car.**
2. **How long have they been in business?**
3. **Do they manufacture their parts or merely assemble?**
4. **What do the owners say about the car?**
5. **Has the car itself merely features or is real quality built into it?**
6. **Will it command a good price in case you care to sell it two or three seasons hence?**

Consider the prices of cars ***only in relation to their quality.*** You can pay too little to make a wise investment. You can also pay too much.

Here are some specific facts showing why it is to your interest to pay the Chalmers price rather than lower prices. These same facts show why it is not necessary to pay more than the Chalmers price to get the maximum in motor car service and comfort:

Chalmers transmission gears are ground to an accuracy of ½ of 1/1000 of an inch, at a cost of $8 more than unground gears. But grinding means quietness, smoothness, long wear.

The Chalmers crank shaft cost $6 more than a crank shaft which "would do." But one fact that we are proud of is that we have never had a case of broken crank shaft.

We spend an extra $15 on each Chalmers body in order to use the best material and the full flush-sided bell-backed design.

None Better than Chalmers

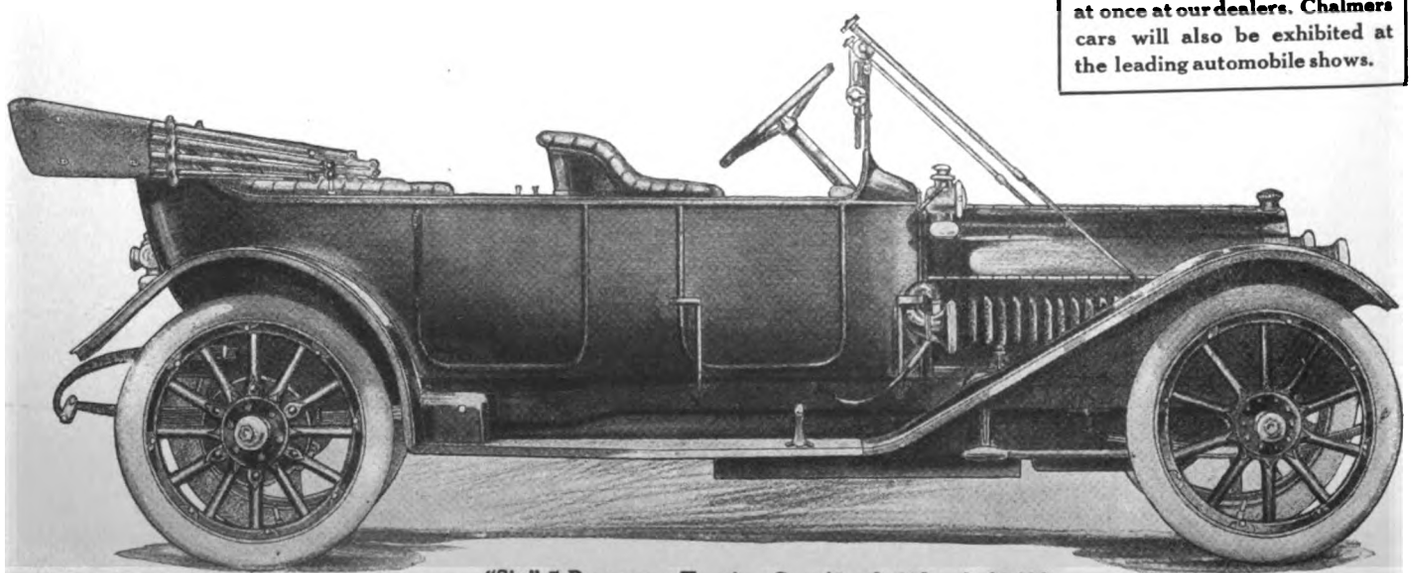
To make Chalmers radiators the best in use we spend $5 more per radiator than the ordinary type costs.

We could "save" $10 per car in top material alone but the costlier quality tells in longer wear and better looks. Would require a chemical analysis to tell the difference.

We could buy leather for upholstering $12 per car cheaper than we actually pay We spend this difference to secure a high grade, genuine, long-lasting leather.

Compare Chalmers with Others

The Turkish springs in the luxurious Chalmers cushions cost $3.50 per car more than the ordinary spiral springs used in most medium priced cars.



We mention these few items just to show you that we are making no exorbitant claims when we say that Chalmers cars are genuine quality cars at medium prices. We ask you to remember these things in making comparisons.

See the other cars, but do not buy until you have seen the Chalmers. Compare other cars in the Chalmers price class on the points we have named. We are willing to accept your decision after you have made such a comparison.

Our book "Story of the Chalmers Car" sent free on request, will help you in making your choice.

Chalmers Motor Company, Detroit

We urge you to see these cars at once at our dealers. Chalmers cars will also be exhibited at the leading automobile shows.

"Six" 5-Passenger Touring Car, (6 cyl. 54 h. p.) $2400

"Thirty-Six" (4 cyl. 36 h. p.) 4 or 5 Passenger $1950 "Six" (6 cyl. 54 h. p.) 7 Passenger $2600 "30" (4 cyl. 30 h. p.) 4 or 5 Passenger $1600

(Prices include full equipment and are f. o. b. Detroit.)

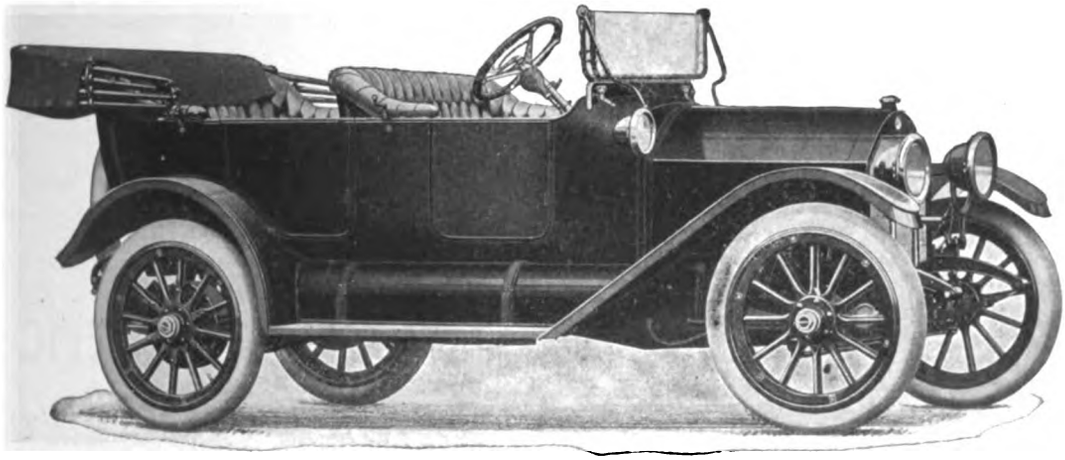
Marion



You Can Buy a Duplicate Of Any Marion Show Car

1913 Marion show cars are typical of the entire Marion product. You can purchase any Marion car on exhibition or get a duplicate of any model from any Marion dealer.

Every show in the 1913 circuit will have stock Marion cars, but in beauty of line and finish and in completeness of equipment, they equal any cars which are especially prepared for the show season.

This accords with the Marion policy of giving to purchasers and dealers the very best workmanship, attention and finish attainable. These cars are made in the largest automobile factory in Indianapolis, they have been built successfully for 10 years, and they are better now than ever.

Do not miss seeing Marion cars at the show—or see ones just like them in our dealers' show rooms. At New York they appear in the Grand Central Palace. In Chicago at 2450 Michigan Avenue.

Marion 37-A, Completely Equipped, $1475

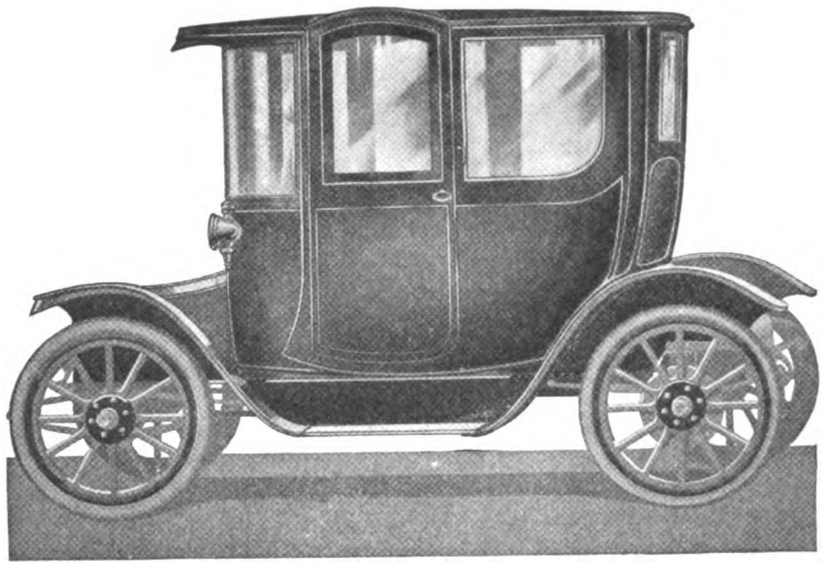
1913 Marion cars are pre-eminent because of their graceful appearance, beautiful finish, class and luxury. They are powerful, sturdy and strong. The completeness of their equipment alone would make them notable.

There are four body models: 37-A, 30-40 h.p. five-passenger touring car, $1,475; 48-A, 48 h.p five-passenger touring car, the Marion "de luxe," with electric self starter, $1,850; the famous Marion "Bobcat" speedster, 30-40 h.p., $1,425, and the latest Marion 38-A, 30-40 h.p. fore door roadster, $1,475.

These cars are built expressly for those who require reliability, comfort, style and full value for the money. Their position in the 1913 line-up is unique. For ten years they have been manufactured with unusual quality. In equipment they have no superiors. As to their standardization and success, there has never been a question. To produce and market the 1913 series, we have increased our capitalization one million dollars and have recruited experts from the oldest and biggest factories in the industry.

We cannot begin to enumerate all the points you will note and immediately like about the 1913 Marion. See them at the shows, or let us send you illustrated literature. We offer the fairest sales agreement ever written. If you are a dealer do not allow this opportunity to pass.

Big Features, Marion 37-A



Disco Self Starter.
Prest-O-Lite Tank.
Warner Speedometer
Nickled Trimmings
Tools, Tire Iron.
Center Control.
Dynamo Electric Lighting System.
Q. D. Demountable Rims, One Extra.
Mohair Top, Boot, Storm Curtains.
Brewster Green or Deep Wine Color.
Plate Glass Windshield.
Concealed Tool Boxes.
Ample Power.
Long Easy Springs.
Comfort, Dependability.
Quietness, Simplicity.
Deep Upholstering.
Plenty of Room.

A Revolutionary Low Price

For the Most Efficient, Classic Electric!

$1885

The Standard Electrique

HERE IS AN electric pleasure car equipped with the ***same*** batteries, motor, control, frame, wheels, tires and make of body found in cars selling at $2,800 to $3,000.

THE STANDARD ELECTRIQUE is the only high-grade Electric built and sold for less than $2,000. The market for a car of this supreme quality and low cost is limitless. Thousands have waited for an opportunity to purchase an electric vehicle at a price which was not exorbitant.

LOOK INTO THE MERITS of this artistic and efficient car. The Standard chassis has at least thirteen points of constructional superiority over the high-price cars. The body design, by its grace and beauty, will instantly appeal to you.

AN INVESTIGATION will prove to you why we had an average of one new dealer every third day during 1912. Our production and sales for 1913 will set an Electric record.

Cole "50" four cylinder, five passenger convertible to seven passenger, touring car, Delco electric self-cranking, ***price, completely equipped, $1985***

WOULDN'T you feel that as a dealer you were a success if you had this car on your floor?

Wouldn't it mean more than mere dollars and cents to you to represent a car which is writing gasoline history?

Just think what it would mean to you to have the entire magnificent Cole organization at your back to a man!

There is a way — the page opposite tells you how.

Digitized by Google

You know—

that from this minute on automobiles will be *sold*, not *bought*. This means that in your fight for business you must be fortified with the best possible connection.

There are all kinds of motor cars—most of them are good. We admit it. On the other hand, you will admit that it's mighty hard to find any one line which offers you all the advantages, that you, as a dealer, have a right to demand.

Time and again you have said: "When I make my next change I propose to 'get in' right. Give me an organization which will take me into the family—I'm done talking through any factory's keyhole.

"First of all, give me *standard* construction, so that my time and the time of my salesmen won't be wasted trying to convince people that things which are wrong are right.

"I will not even consider any line that does not give me a a real proven self-starter—*it must be electric* and combined with electric lighting and ignition—such as the Delco. No more gravity feeds for me, either—give me a pressure feed with service tank in the rear. Give me three-point suspension, unit power plant, enclosed valves, a silent motor that *is* silent, automatic lubrication, long wheel base and elliptic springs in the rear. Put everything the driver needs to touch right on the dash, within her or his easy reach—where it belongs.

"And. I'm through with stingy upholstering—give me real, hand-buffed leather and upholstering at least eleven inches deep. This means that when Mrs. Smith sits down in my car—she's sold. And, by the way, Mrs. Smith, and every other prospect, is through being cramped for room. Give me a tonneau with plenty of sprawl room, and a safe, clean running board not cluttered up with traps. No cheap materials, either. Don't think I'm trying to tell you how to build your car, but if you'll give me this line-up, I'll put it over."

All right, Mr. Dealer, we've listened to you—now won't you listen to us? It's to your advantage. We actually have combined everything you specify in the Series Eight

COLE

THREE CHASSIS—THREE PRICES

No difference in quality—merely diamonds of varying karat

Cole "40", 116-inch wheel base, Delco Electric Starter, completely equipped... $1685

Cole "50", 122-inch wheel base, Delco Electric Starter, completely equipped... $1985

The new Cole six-cylinder "60", 132-inch wheel base, Delco Electric Starter, completely equipped..... $2485

With this line-up you need never let a live prospect get away.

Hook up with COLE

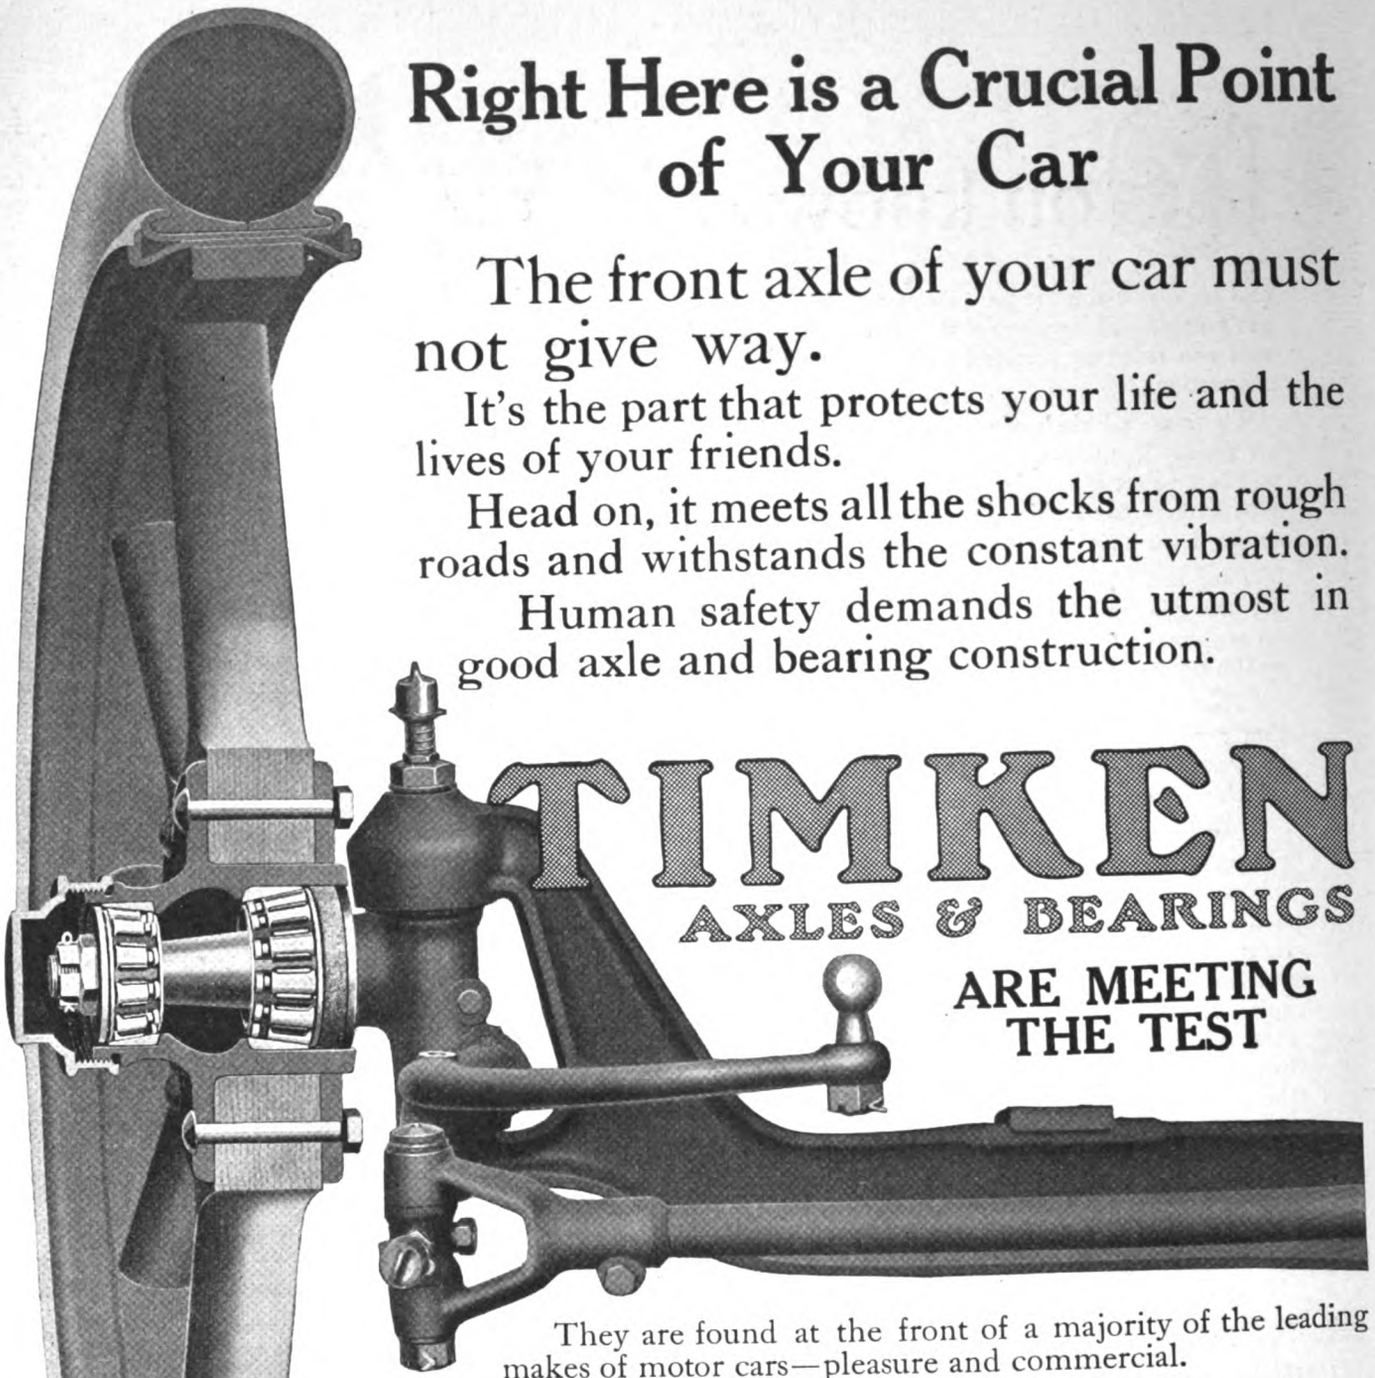
Opportunity knocks but once—and she wears thick mittens. Maybe this is your chance. There's still some good territory open. Possibly you're located right in it.

Fill out the coupon opposite. It will cost you no effort—It may make you money. After you get the Cole Blue Book and the Series Eight Technical Bulletin—conceded to be the most comprehensive description of a motor car ever written—you'll be in postion to judge for yourself.

The live dealer is the dealer who does the right thing at the ripe time. We're expecting your coupon by return mail.

THIS IS YOUR COUPON—FILL IT OUT *NOW*

COLE MOTOR CAR CO., INDIANAPOLIS, INDIANA



I am one of those dealers who never believes in overlooking a prospect. Maybe we won't get together, but let's get down to cases. I would like to know more of your proposition and if my territory is open. Understand, this request carries with it no obligation on my part. Come on with your COLE BLUE BOOK and your SERIES EIGHT TECHNICAL BULLETIN—I am ready to look them over.

Right Here is a Crucial Point of Your Car

The front axle of your car must not give way.

It's the part that protects your life and the lives of your friends.

Head on, it meets all the shocks from rough roads and withstands the constant vibration.

Human safety demands the utmost in good axle and bearing construction.

TIMKEN AXLES & BEARINGS ARE MEETING THE TEST

They are found at the front of a majority of the leading makes of motor cars—pleasure and commercial.

Doing valiant service. Protecting thousands of lives.

Giving comfort and satisfaction in driving.

Why Timken Axles and Bearings are Meeting the Test

Timken-Detroit Axles are made by an organization of men absolutely, and wholly devoted to *one idea*—good axle building.

Men who work together—in unison—who have worked together for years—whose experience goes way back into the era of horse-drawn vehicles.

Men who built successful axles for the earliest motor cars—both pleasure and commercial.

Men who have added to their own the experience of all the thousands of users of Timken-Detroit Axles.

Men who make a special study of axle design in the light of all domestic and foreign practice.

Men who care so much for the reputation of Timken-Detroit Axles that they do not neglect the least element of design nor risk imperfection in the smallest part.

The integrity and ideals of such an organization are the best guarantee to the builder and owner of a motor car.

Materials, methods—the finished product are but the expression of that integrity and those ideals.

Timken Tapered Roller Bearings owe their superiority to the principles of their design.

They are correct in theory—proven in practice.

The ideal motor-car bearing must do four things:

1. *It must reduce friction loss to the minimum.* Timken Bearings do reduce it to a negligible quantity.

2. *It must carry the heaviest possible load in proportion to its size.* Timken Bearings do this because they carry the load on the *whole length* of rollers, instead of the points of balls.

3. *It must meet side pressure or end thrust.* The rollers in a Timken Bearing carry end thrust, too, along their whole length—because they are tapered and revolve at an angle to the shaft.

4. *It must be adjustable for wear.* The Timken Bearing is the one bearing that can be adjusted to take up the minute wear *without sacrificing any of its characteristics.*

You can get the whole story of axle and bearing importance and construction by writing to either address below for the Timken Primers, T-3 "On the Care and Character of Bearings," and T-4 "On the Anatomy of Automobile Axles."

HOFFECKER SPEEDOMETER

WALTHAM TIME PIECES

Hoffecker is to a Speedometer what Waltham is to a Timepiece.

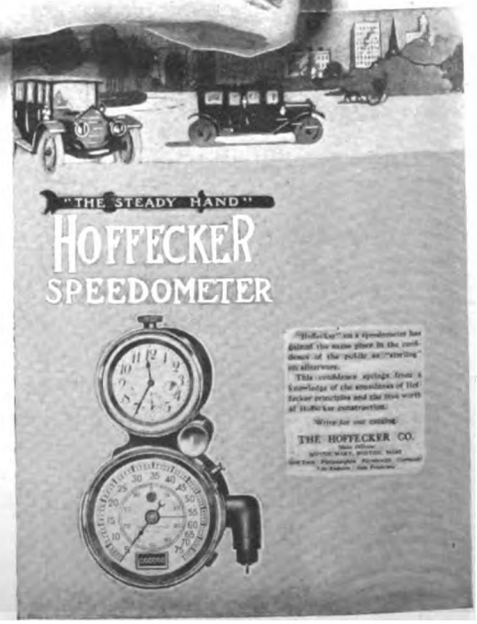
DEALERS

This combination standing on the pedestal of Quality and Fair Prices will Help you Sell Cars so Equipped You know it.

Quality

Fair Prices

Digitized by Google



HOFFECKER SPEEDOMETERS

A car of quality is only possible when its parts and accessories (made on the outside) are also embodiments of quality—you, as a dealer, know this—your customers know it—and the 1913 prospective buyer is car-wise.

The Hoffecker-Waltham combination ought to be standard equipment on the cars you sell, simply because they are mechanically perfect, sold within reason and advertised to owners and prospective buyers in a convincing, effective way.

Now, when you recommend the Hoffecker-Waltham combination to buyers—when you ask the car manufacturer to so equip—then you are taking *a real interest* in your patron—one he will appreciate because he knows the nation-wide reputation of these instruments from their self advertised prestige and through our intelligently placed advertising.

Hoffecker speedometers and Waltham time pieces are made in factories where materials are selected and mechanical intelligence is paid for without regard to cost. These instruments in their durability and accuracy represent highest cost of production. *This means quality.*

Digitized by Google

WALTHAM
TIME PIECES

Your manufacturer, Mr. Dealer, can buy them at a most moderate cost—but he cannot buy more quality at *any* price. The reason is obvious.

Hoffecker speedometers and Waltham time pieces are not extravagently and wastefully advertised. Our advertising gets the attention of the biggest group of men who read, reason, advise and buy on substantial advertised claims—and the cost to us is small. Your customer does not help pay our publicity bills through *quality subtracted* to meet tremendous advertising bills.

One of the double-page spreads, advertising these products, is shown here. These appear regularly in The Automobile, Motor Age and Motor, these three publications covering the motoring field with their enormous circulations. This is our best advertising—and yours.

Here is the whole story of manufacturing and advertising methods that will put the best instruments in the world on the cars you sell—if you investigate and then act. Your manufacturer will co-operate. It's to his interest also.

Hyatt Quiet Bearings

HYATT High Duty Type Bearings are best for transmissions because: They have never failed in transmission service. Once adopted for use in transmissions, they have never been replaced by any other make; they have, in many instances, replaced other bearings. They reduce noise. They possess superior lubricating qualities found in no other bearings. Their cushioning effect relieves gears and shafts of undue strains, reducing excessive and unnecessary wear.

High efficiency, first cost, dependability—each and all of which make bearing value—are not claimed as exclusive Hyatt features—but in practical value—the proper proportioning of all these factors and in ability to enable the Motor Car Builder to meet present conditions—the Hyatt Roller Bearing is claimed superior.

No adjustments—no moving parts—make

ZENITH

Carburetion standard carburetiou

That the Zenith Carburetor and its principle of simplicity are successful is proved by its record in Europe, its birthplace.

There it has been in use for six years; and on some of the leading cars of the Continent.

At the recent Olympia Show in London, Zenith was the equipment of more than 29 per cent. of the cars displayed. Its closest competitor had a percentage of 13.

Zenith Sets Brooklands Record

At Brooklands recently a Zenith-equipped Vauxhall, four cylinders, 3½ x 4⅝, broke the track records set by a Sunbeam six-cylinder car, as follows:—

97.15 miles per hour in 50 laps; and one mile at a speed of 99.61 miles per hour.

Previous record: 93.75 miles per hour for 50 laps; 99.45 miles per hour for the mile.

We attribute the success of the Zenith entirely to its simplicity.

It has no moving parts but the float—not a spring, a ball or anything else.

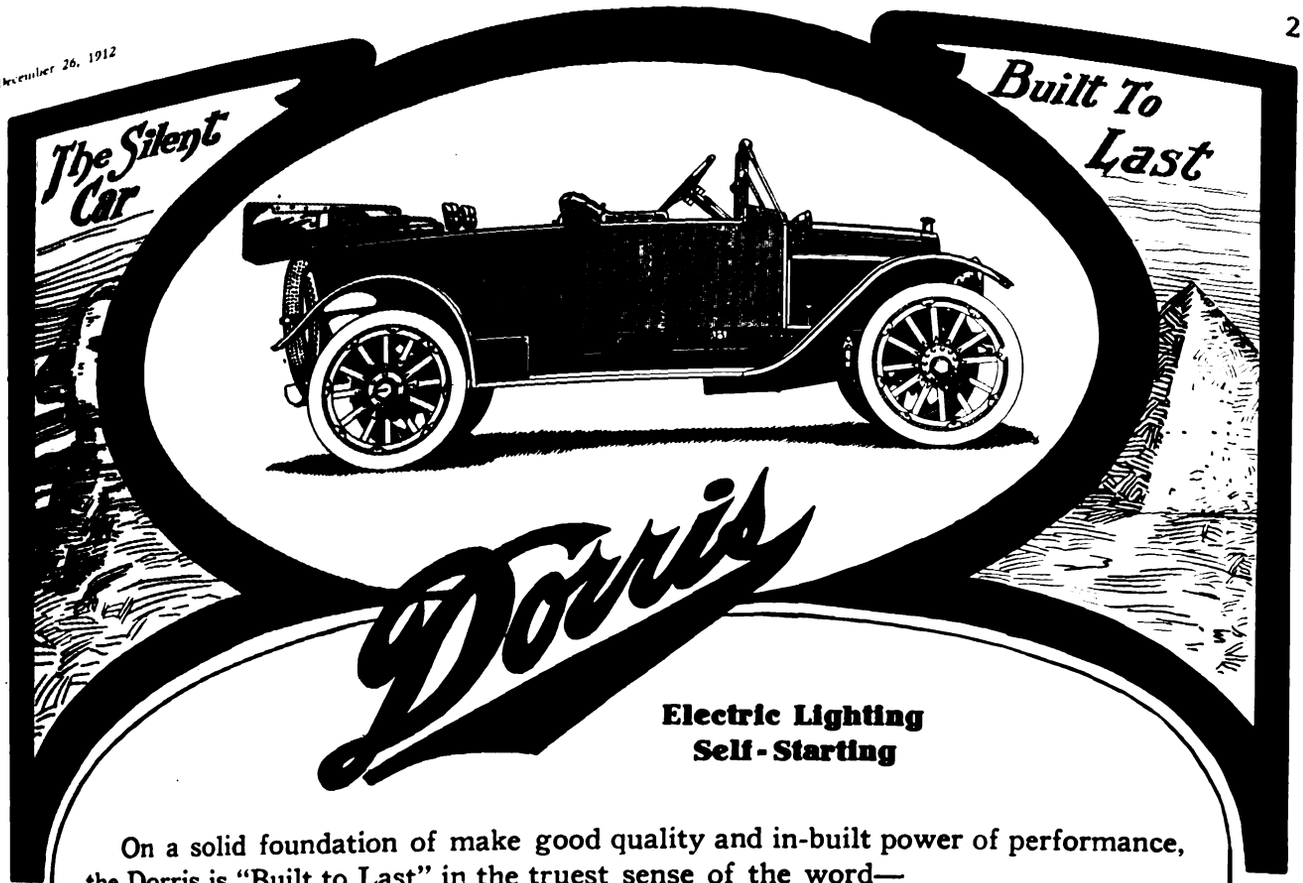
It has not a single adjustment.

As it is made for a motor, so it remains forever—always supplying the correct mixture at high speed and low speed, under load and light, by means of its multiple jets.

To the manufacturer it is a standardized part. It is fitted in place; and there is no adjusting to do, no tuning up.

It requires no more attention in assembly or test than the finished cylinder block.

To the user, it is a boon. [illegible] its work perfectly under any condition and all conditions.



It is flexible to the last degree; economical, efficient; and for the first time it gives the word "automatic" its true meaning as applied to carburetors.

AMERICAN UNDERSLUNG

Electrically Lighted

A Convertible Limousine—Coupe

The "American Tourist Limousine" is rapidly being adopted as a family closed car. A chauffeur may be dispensed with merely by dropping the glass partition at the back of the driver's seat. This unusual convenience means much to the prospective buyer of a closed car who does not wish to incur the expense of chauffeur hire.

In the "American Tourist Limousine" our designers have incorporated as never before the sweeping, ease suggesting lines of the famous old Colonial coaches. "American Underslung" construction alone permitted this.

The usual high overhung limousine must appear awkward and clumsy in comparison with this latest limousine type.

The convertible limousine-coupe seats five with comfort—a fifth auxiliary seat fits into the upholstering. The interior is handsomely finished in the most expensive gray whipcord. The car is priced at $3500—complete.

We will be glad to forward an artistically prepared booklet on closed cars.

The illustration represents the popular Budd All Steel Dump Body—a most practical design for rear end unloading. The hoist is operated by hand and the rear end is equipped with a substantial lock. Built on a channel frame which is bolted on chassis. Furnished in any capacity.

Put an All Steel Body on *Your* Truck

Progress is marked by improvement. Evolution is the order of the day. Just as the motor truck is demonstrating its supremacy over the horse drawn vehicle so are Budd's All Steel vehicle bodies superceding the ordinary body of wood. The answer lies in two words—Proven Superiority.

The Budd All Steel Vehicle Body is a revelation in truck body building. Made of special open hearth steel and worked by the exclusive Budd process, innumerable designs in any style body are possible and the maximum of serviceability, stability and strength is assured.

BUDD All Steel Motor Vehicle BODIES

are practically indestructible. They are proof against the elements—immune from the ravages of time, wear and tear. They will not warp or crack. They cannot rot or split. Light in weight they are easy on tires.

By use of special machinery each body is worked into shape. All joints are carefully welded. Thus each body becomes a single unit—a perfect surface is assured which in turn guarantees the highest quality of "oven baked" enamel finish. A finish that practically becomes an integral portion of the steel and eliminates frequent repaintings.

From a sanitary standpoint alone, Budd All Steel Bodies demand your attention. All corners are made round. There is no chance for the accumulation of dirt. The steel will not absorb moisture, therefore perfect sanitation is possible.

When you stop to consider the fact that Budd's All Steel Bodies represent the height of efficiency in service and durability—that they give you every advantage of the wooden body yet none of its faults, and practically **cost no more than a first-class body of wood,** it is but justice to yourself that you give them a thorough investigation.

Whether you are a manufacturer of commercial vehicles or a prospective buyer of a motor truck, it will pay you to look into this matter now. We have some facts upon All Steel Bodies that will prove of vital interest to you. Write for them today.

We Will Exhibit at the New York Automobile Show

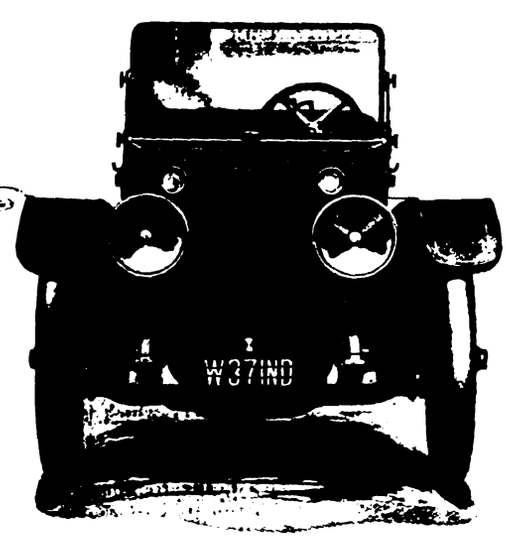
HAYNES



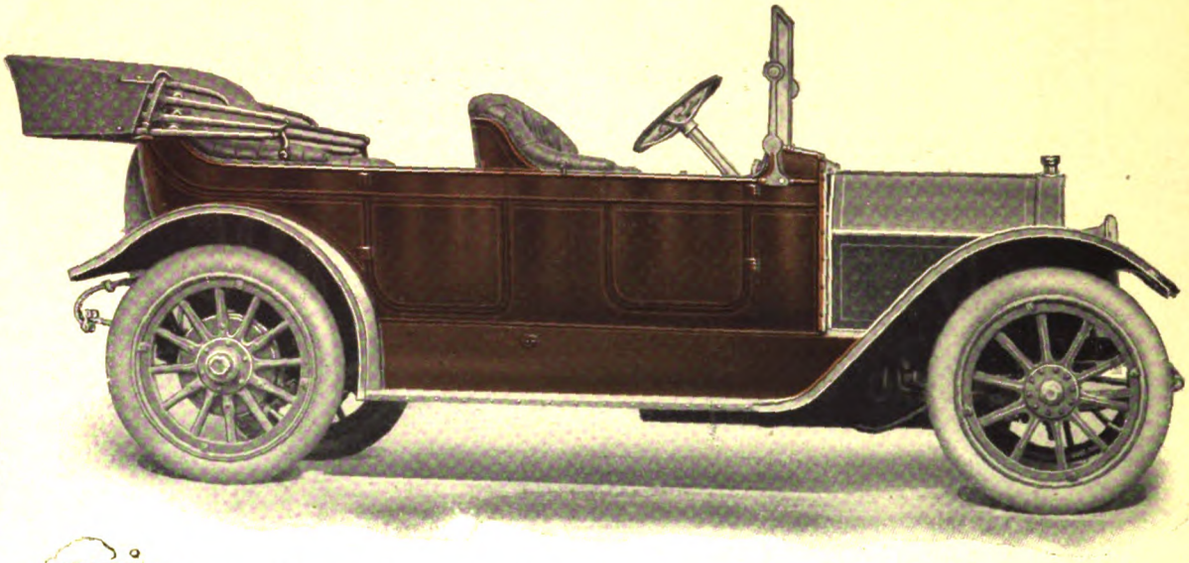
announces

Model 24, $1785

Electric Starting—Electric Lighting

AN EVENT which will interest every live dealer. With this new car—Haynes Standard throughout—added to our Model 22, the dealer has a complete proposition to meet every demand of his customers and need fear no competition.

This announcement is a fitting event with which to celebrate the twentieth anniversary of America's first successful automobile. It heralds a car that for design, quality and SERVICE will continue to keep the standard of Haynes Merit in the front rank where twenty years of effort have held it. An announcement that means many more Haynes owners, a broader field and increased sales for Haynes dealers.



HAYNES MODEL 24

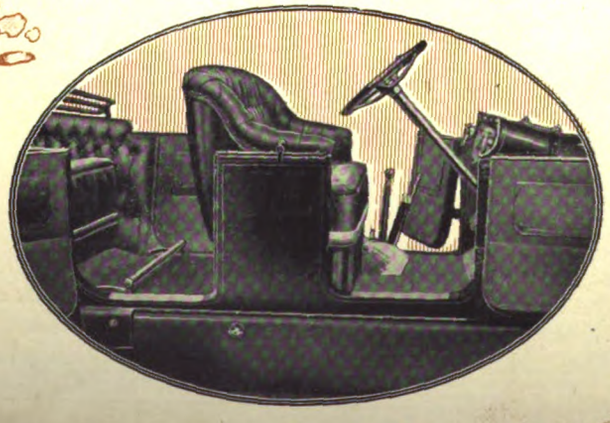
NOW is the time of ALL TIMES to be a HAYNES dealer

Digitized by Google

Here's the New Haynes—look at it—see what a car it is—figure out for yourself what this new price means in SALES

THIS new Haynes is marketed at a sensational price. Some big men in the industry have said it is a daring step for us to take, to "put a famous Haynes in the $1800 class."

Perhaps it is a daring step, but our factory efficiency and our increased production in the new plant *justify* this step. And if we are putting the Haynes in "the $1800 class" then this car marks the establishment of *new standards of value* among $1800 cars.



For Model 24 is *Haynes* standard. And Haynes standards are new to the $1800 class.

There's twenty years of motor car experience and standardization built into the Haynes, and you *cannot* supply your trade with such *certainty* of *service* in any other car.

Ever since that day two decades ago when Elwood Haynes gave his little horseless carriage—America's first automobile—its successful road test, the Haynes car has set the pace most of the time and *kept* the pace *all* the time.

Mr. Haynes never scored a greater achievement—aside from the production of his *first* car—than this new Haynes Model 24. The fact that we can offer this car at the sensational price of $1785—sensational for a Haynes—makes the achievement all the greater.

There are no better sales opportunities—from the dealer's viewpoint—than this new 1913 Haynes.

Center Control
Luxurious Upholstery

The accompanying illustration gives just a hint of the luxurious upholstery which is but one of the many splendid features of Model 24. It also shows, in a degree at least, the roominess of both compartments and the especially convenient arrangement of Haynes center control.

Digitized by Google

This Big Haynes, Model 22, is continued as a Haynes Leader—a powerful, complete car and a popular seller with our dealers

WE ANNOUNCED the Complete Car—with *perfected* electric starting system—last July. This was Haynes Model 22. We said at that time that we had adopted the *type* of starter which was bound to become the standard starting construction on high-grade cars—the separate unit electrical system, embracing a dynamo for starting the motor, with gearing direct to fly-wheel, a generator and storage battery for lighting and standard magneto for ignition.

In the face of all the self-starter failures of the 1912 season this was a bold statement. But were we right?

Since that announcement, practically all high-grade cars have adopted the separate unit system, the highest priced cars are using it, and automobile engineers everywhere declare it is now the *standard*.

The Haynes starting system is so simple in its wiring, so free from complications of every sort as to insure its constant operation.

Just another example of Haynes being *out in front*.

This big Model 22, full 40-horse power, marks the very highest development of the Haynes car. In New York, Chicago, San Francisco and other markets where competition is most keen and the car-buying public most discriminating, Model 22 has found great favor.

Model 22, Detail Specifications

Motor, 4½ in. x 5½ in., 40 h. p.; wheel base 120 in.; fine hair upholstery, 12 in. deep; tires 36x4½ in.; absolutely 100% efficient electric starting equipment of utmost simplicity; Eisemann dual magneto, Stromberg carburetor, Warner autometer, demountable rims, top, windshield, electric signal horn, electric cowl lamp, standard bumper, etc., etc. Touring car models $2250; Roadster $2250; Coupe $2750; Limousine $3400; Berlin $3500; f. o. b. factory.

Digitized by Google

You Want the Haynes Now Even More Than You Ever Wanted It Before. And You Need It Now

Many dealers have built up splendid, permanently established businesses with America's pioneer car. And think how much greater the Haynes Line is today than ever before, with this new model at less than $1800 added to our present Model 22.

You must recognize how much Haynes *character*, Haynes history and Haynes high standard of construction mean as a *guarantee* of motor car service. The Haynes car is an *institution*,—always a known quantity in its *efficiency*. The twenty years' experience that is built into every Haynes means more to the discriminating purchaser than all loud-sounding claims could possibly mean.

Wouldn't you, as a dealer, build a profit on this foundation already laid? Wouldn't you find great satisfaction—and big business—as a distributor of America's *first* car and still its *foremost?*

And doesn't the addition of this new Haynes Model 24 to the splendid Haynes Line make it almost *imperative* —from your own viewpoint—that you should know *all* about the Haynes, and all about Model 24 especially, *at once?*

If your territory is still open, this is the car you want

Write or wire us today. Don't put the matter off to "think it over." Someone else will get into action while you are thinking. If you want this car, *act.* There is no better proposition for 1913. Write or wire today.

Haynes Automobile Company

All-Year-Around Service

TO GET full value from your motor car, you should select one which is **suitable for all-the-year round service.**

Abbott-Detroit automobiles are.

In the first place, they are **driven by powerful Continental motors** which have **sufficient reserve power** to meet all emergencies.

Each unit conveying the power from the fly wheel to the wheels is an equally efficient mechanical device. Practically no power is lost.

THE CLUTCH

The **clutch** which is of dry, multiple disc type is composed of 17 steel discs, each alternate one faced with a combination of copper wire mesh and asbestos which will not burn.

Interior of Flywheel Case Showing Multiple Disc Clutch

When this clutch is operated, there is a **total absence of all gripping, jarring and jumping,** the motor taking hold gradually but firmly.

Owing to the **large amount of friction surface,** this clutch is most efficient and **may be slipped without harm or excessive wear.**

Those who have driven cars through heavy mud and winter snows, know how valuable is this ability.

Another thing, in the cone clutch, the revolving parts attached to the transmission is so large and heavy that the inertia of such a mass of metal tends to keep the clutch in motion and renders it almost impossible to shift the gears readily, without producing that clashing and rasping noise so disagreeable to the occupant of the car and others nearby.

Transmission and Clutch Unit with Inspection Covers off.

In the multiple disc clutch, however, this inertia is reduced to a minimum and the gears may be shifted while the speed of the car is being reduced or accelerated, without the attendant disagreeable and deteriorating effects.

It wears very little and seldom requires adjustment.

Abbott-Detroit advertising for 1913 is being printed in serial form. This is the sixth of the series. The seventh will appear in Saturday Evening Post January 18, 1913, Collier's Weekly January 11, Life January 9, Literary Digest January 4. Copies of previous advertisements sent on request.

THE TRANSMISSION

The transmission, which is of the three-speed forward and reverse sliding gear type, is situated just behind the clutch and its case is bolted direct to the engine crank case, so that the whole power plant forms one unit.

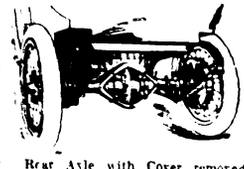
The main shaft and counter shaft gears, the faces of which are 1 inch in width, ¼ of an inch wider than those usually used in other cars of this class, are made of 3½ per cent nickel steel, very accurately machined, ground and mounted upon Timken roller bearings.

The transmission and clutch case is oil and dust-proof and the gears and shafts run in a specially prepared lubricating compound.

If desired, the interior of the transmission case may be easily inspected, by the removal of the top cover plate.

The Abbott-Detroit transmission is one of the most compact and efficient change speed gears that has ever been placed in a motor car.

It has been **built for severe service** and for that reason will be found to be particularly adapted for hard winter use, when, on account of the changing character of the road it is necessary to shift gears often.



Abbott-Detroit

Built for Permanence and Guaranteed for Life

OTHER MODELS

Some other things should be mentioned as important for your consideration when buying a car which you expect to drive the year round.

There should be ample road clearance, an absence of projecting parts below the frame, a protected steering gear, wide flaring fenders, snugly fitted to the body so that no water or slush can get through, provision for entirely enclosing all moving parts including brakes, well-finished and upholstered bodies, close fitting wind shields and tops equipped with Jiffy Curtains, well fitted door of clean cut design, free from places in which mud and slush can collect.

Rear Axle with Cover removed from Bevel Gear Case. Note also Underslung ¾ Elliptic Scroll Springs.

Abbott-Detroit cars are admirably suited to give all-the-year-round service.

Remember—Electric Self-Starter
Electric Lighting
Standard Equipment
on all Models

"The demand of the day is that an organization shall be judged by its product and not by what is claimed for itself."

This is our slogan. Apply it when inspecting the 1913 Abbott-Detroit Cars.

MODELS AND PRICES

34-40	Fore-Door Roadster, 116-inch wheel base	$1700

Mr. Dealer: The Borland is the Electric to satisfy the owner and profit the agent. Secure your territory now for 1913.

The secret of Borland superiority is *construction*. Mechanical perfection only can constitute an electric which does what the Borland does. For instance: *the run from Chicago to Milwaukee* (104 miles), under adverse conditions, on *one battery charge*, is conclusive evidence of the fact that the Borland owner gets plus-service on his battery equipment.

The Borland 1913 Roadster—It will be a great Business and Professional Men's car $2850

Specifications: General Electric motor, especially built for us to withstand a 500% overload. General Electric non-arcing controller with 6 speeds forward and 3 reverse. Interlocking device attached to brakes to cut off current when brakes are applied. Current is still cut off until Control Lever is returned to neutral position. Control lever horizontal type. Wheel base, 96 inches. **Batteries:** 42 cells, 11 plate Exide. **Speed:** 35 miles per hour. **Equipment:** Skid chains, hydrometer, odometer, pneumatic tires, 34 x 4.

The Borland 1913 Regular Coupe—A beautiful and elegant production $2900

Specifications: General Electric motor, especially built for us to withstand a 500% overload. General Electric non-arcing controller with 6 speeds forward and 3 reverse. Interlocking device attached to brakes to cut off current when brakes are applied. Current is still cut off until Control Lever is returned to neutral position. Control lever horizontal type. Wheel base, 96 inches. Extra large aluminum 5-passenger body, revolving front seats, either front or rear drive. **Batteries:** 40 cells, 9 plate Exide. **Speed:** 22 miles per hour. **Equipment:** Skid chains, hydrometer, odometer, toilet case and flower vase. Solid or pneumatic tires, optional, 34 x 4.

For appearance, satisfaction, comfort, safety, convenience and mileage the Borland is the most convincing electric known.

Our 1913 electrics recognize and cater to the advanced ideals and demands of the public.

These beautiful Borlands, 1913 models, will delight every woman who sees them and will sell themselves to the men.

The agent who sells a Borland to a man or woman is creating a continuing business for himself. The absolutely perfect construction of the Borland eliminates the necessity for repairs due to defective material or workmanship, and insures the dealer the greatest final profit on each sale.

With our increased factory facilities we have trebled our output, and are now in position to make very attractive propositions to dealers throughout the country.

Besides the models illustrated we are making: Brougham, $2500; Coupe, $2700, either front or rear drive; Limousine, $5500; 1500 pound delivery truck, open body, $2100; 1500 pound truck, with closed body, $2250. These models make a complete line for dealers to handle.

Write us today if you want territory. Better wire, for already the far-seeing dealers are negotiating for choice reservations. Catalogue and other literature sent immediately on request. Protect yourself and be the Borland man in your locality.

During the New York Show Mr. U. B. Grannis, Vice-President, will be at the Waldorf Hotel. Mr. Grannis will be pleased to talk with dealers who desire information regarding the Borland.

Our complete line of models will be demonstrated at the Chicago Show—Space A-1, First Regiment Armory.

The One Certain Way To Obtain Tire Quality

USE

AJAX TIRES

Guaranteed for 5000 Miles

It's the easiest thing to claim Tire Quality
But We Guarantee It.

Ajax Tires mean—

—30 per cent more mileage than other standard tires at no greater cost

—5000 miles (written guarantee) vs. 3500 miles (verbal guarantee) a saving of from $4 to $20 on each tire

—Value and satisfaction that come with decreased tire cost and increased tire service.

Thousands of Motorists are Practising True Tire Economy. Are you?

Dealers Everywhere

have found the Ajax Proposition an unfailing trade winner. Our literature is an education in tire making and selling. Send for it today.

Introducing a Device of Remarkable Merit

(FRONT VIEW)

THE BOYCE MOTOMETER

PAT'S PEND'G

Every sensible owner will buy—

Every live dealer will handle—

Buyers of new cars will request—

And the more progressive manufacturers, for 1913, will regularly equip with—THE MOTOMETER.

A watchlike instrument, fitted to any radiator cap, protecting the motor from damage caused by improper lubrication, overheating, defective cooling, etc.

The MOTOMETER is the only instrument ever invented to indicate, while driving, the **exac heat** of your motor, and in so doing warns you by means of a red fluid indicator,

(VIEW FROM SEAT ½ Actual Size)

When the Radiator Needs Water
When the Oil Supply Is Insufficient

In short it tells whatever excessive heat tells—a broken water pump, a clogged pipe, a broken fan belt, etc., and tells **before the damage is done.**

Attached the same as an ornament, readily visible from the seat day or night, the MOTOMETER registers the inside temperature of the radiator. It gives a feeling of security to know when the car is operating correctly—carburetor right, water right, lubrication right, everything right. Nothing can go wrong without the Motometer forewarning.

The constant rise and fall of the indicating fluid under varying road conditions, is more interesting and instructive to watch than a speed indicator. It will prevent frozen radiators in winter and cracked cylinders in summer.

And the Price Is

$10.

Finished in black enamel with gold plated or nickel rims. If your dealer cannot supply you, send check or money order and we will express an instrument prepaid. Sooner or later you will drive a Motometer equipped car. Why not enjoy it now.

DEALERS—The MOTOMETER is the handsomest and most meritorious accessory offered for 1913, selling at a price that means no dead stock. Act at once! Be the first to handle the MOTOMETER in your town.

THE MOTOMETER COMPANY, Inc., 904 U. S. Rubber Bldg. Broadway at 58th St. New York City

HAVERS SIX

The HAVERS "Six"
AT THE
New York Show.

HAVERS SIX

Of course you will read our announcement "that was withheld for three years" in Saturday Evening Post of January 4th. It will tell you what we have been doing in the past three years—what we are going to do in the future. It will also tell you that we will be at the New York Show. It is the first of a series of advertisements to appear in the Post and other periodicals and newspapers. For we want to drive home to the public the fact that ***this is the year of the Six and the Havers the Six of the year.***

We are going to exhibit our entire line of Havers Sixes at the New York Show, January 11-18. We will be on the mezzanine floor, Space 127,

GRAND CENTRAL PALACE

and cordially invite you to inspect these cars.

Whether you represent a six or not, we want you to make a careful, thorough investigation of both the finished car and the open chassis for the Havers Six will stand comparison with the most expensive automobile manufactured.

Beautiful in line, perfect in action, exquisite in appointment, it compels your very first consideration. For a thousand dollars less than you expect, it gives you everything that can be asked in six-cylinder luxury and service. Come and make us prove it.

To the worth while dealer who does not represent a Six, we extend a special invitation which may prove mutually profitable.

We have greatly increased our production by the purchase of the large E-M-F plant at Port Huron and in certain territory where we are not represented we have an attractive proposition. If you are not going to New York, write us today for particulars.

One Look Tells Everything

The JEFFERY-DEWITT CO. DETROIT, MICH. Visible Spark Plug lays bare all ignition troubles

The "visible gap" is an open "window" giving you a full view of the internal workings of your spark plug.

If the spark is seen jumping the gap, look for your trouble between the gap and sparking point.

If there is no spark in the gap, your trouble is behind the plug—in Magneto, or batteries, or coil, or wiring.

But for the "visible gap" it would take you many precious minutes—often hours—to locate the seat of trouble.

$1.00 Buys this great new Spark Plug

Indicates in which direction trouble lies.
Facilitates timing of engine.
Intensifies spark in cylinders.
Consumes only minimum current.
Gap adjustable—can be closed entirely.
By widening gap plug cleans itself.
Permits regulating spark for any cylinder.
Costs same as any good plug—$1.00.

Dealers will find J. D. Visible in greatest demand

Visible Idea Worked Out Perfectly for the First Time

The "visible gap" feature, so far as being incorporated in a plug, has always seemed as far away as perpetual motion. The visible feature has been marketed in a separate device for years, but this is the only plug in which this important visible feature is actually embodied.

It is simple. Merely a hole in the porcelain and a spiral action to regulate width of the gap in the central electrode which carries the current.

The hole in no way lessens the strength of the plug, and the current in jumping the "visible gap" loses none of its efficiency. On the other hand it intensifies the spark at the gap in the cylinder.

Additional prestige is lent the J. D. Visible Spark Plug by the fact that it is being introduced by the largest manufacturers of spark plugs in the world. We are exclusively manufacturers of spark plugs; we make millions of them each year.

The J. D. Spark Plug was a famous plug before it was improved by the visible feature. It combines finest workmanship, best materials and simplest designs.

Every part of this plug is made in our factory—even the porcelain being produced in our own potteries from clays and other ingredients imported from Europe.

This unequivocal guarantee goes with all our spark plugs:

"Your money back or a new plug if you are not satisfied."

If your dealer hasn't the J D. Visible yet, send your money direct to us for a set, specifying size wanted and make of car, and we will ship them postpaid. Remember, the J. D. Visible Plug is $1.00. Our literature on ignition free for the asking.

JEFFERY-DEWITT COMPANY, 565 Butler Ave., Detroit, Mich.

Double Your Box Business in 1913

In 1912 Globe Steel Boxes outsold every other automobile box on the market. Sales exceeded 100,000 boxes.

In 1913 Globe Boxes will lead again. Several new sizes for which there is big demand make the Globe line the most complete and most profitable line for the dealer and jobber.

GLOBE STEEL Tool and Battery Boxes

Their selling points are obvious – heavy steel, water-tight construction, electrically welded back, one piece covers, wood linings, beautiful design and finish, brass, nickel plated or oxidized trimmings and many other features.

Forty-seven of the leading makers of automobiles are featuring Globe Boxes as standard equip nent on their cars. And these cars range in price from the Luxurious Lozier to the Vanadium built Ford.

Globe Boxes are now made in thirty different styles and sizes. Each style is made to meet a particular requirement of the car owner or manufacturer. And every box is stamped with the Globe trade mark which means that the dealer or jobber selling this box is offering the buyer the most box value that money can buy.

If you are not already carrying the Globe line, contract now and cash in on the 1913 business.

DEALERS!

Answer these Questions

Why can a man buy a house

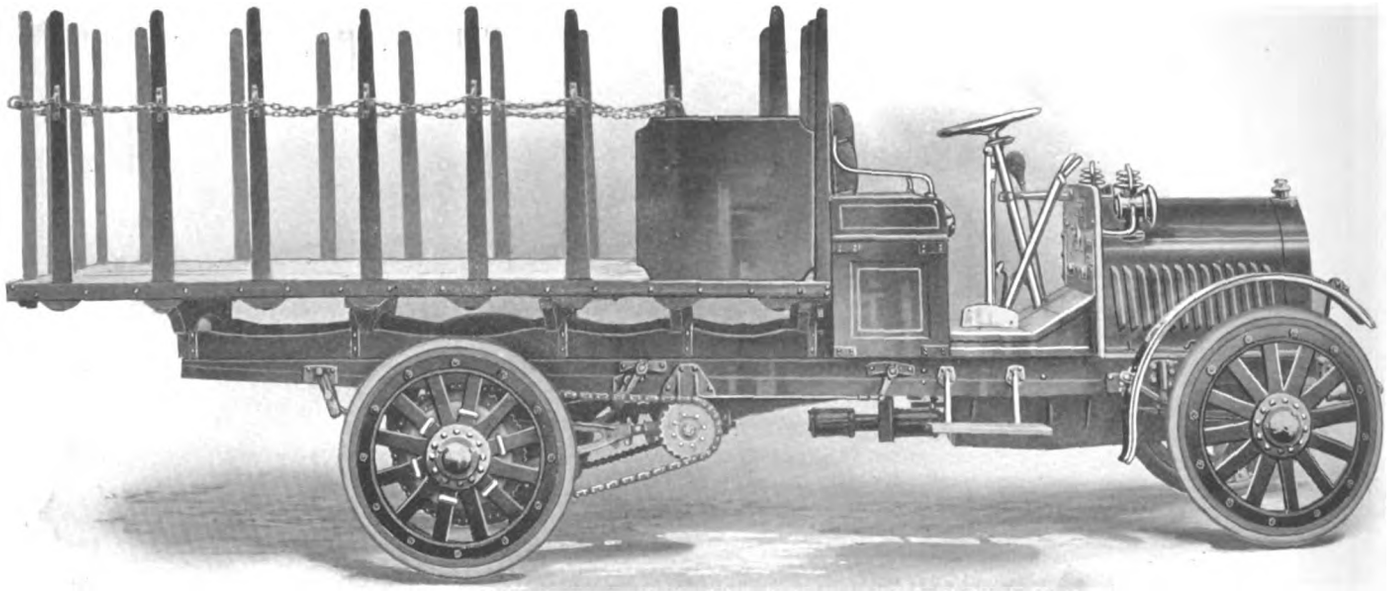
Or equip his plant with machinery

Or buy a Cash Register

Or almost any other commodity—all on the Installment plan

and

Why shouldn't a truck manufacturer furnish you with Commercial Cars on this plan to sell on the same basis



THE LATTER QUESTION IS ANSWERED ON NEXT THREE PAGES

Digitized by Google

It Can Be Easily Done

You, Mr DEALER, Can Sell THE SELDEN TRUCK Shown Here

On a Time Payment Basis That Will Enable You To Handle Legitimate Business Which Cannot Be Handled In Any Other Way

And It's Strange that the Plan

Digitized by Google

and We Are Doing It

Why We Do It — How We Do It

There isn't a dealer anywhere who does not realize that the greatest obstacle in the way of increasing automobile sales lies in the LACK OF READY CAPITAL—and this is emphasized in the commercial field, where trucks are greatly needed by merchants and light manufacturers who cannot afford to take enough money out of their business to purchase the machine outright.

And there are dealers a-plenty who lack capital sufficient to carry the accounts of firms that WOULD buy from the dealer on a credit basis, even if the dealer could stand the strain. This condition furnishes the motive back of the Selden plan presented on the opposite page. This plan is just as simple as the advertisement covering it and just as practical and commercial as any installment selling agreement in the whole wide field of partial payment business.

We Are the Pioneers in the Plan of Selling Motor Trucks on the Partial Payment Basis

We make it easy for you to sell, and for your prospective customers to buy the very best one ton truck on the market on easy terms and at a rational price.

This is the most progressive step ever taken in the history of the automobile industry. We are the pioneers in the movement and we guarantee that the Selden method of selling trucks will prove a big stimulus to your business, in the placing of Selden trucks with those who need them and ought to have them.

You may ask "How can your company lay out so much money without demanding an unusual rate of interest?" The answer is simple.

The Selden Factory is one with ample facilities for purchasing and manufacturing on a scale that materially reduces the cost of production. These savings go back into quality of production and they reduce our interest charges to a nominal and perfectly legal rate, and on the other hand our company is backed by unlimited resources which enable us to handle this business on practically a cash basis so far as our net income is concerned.

DEALERS CONSIDER THIS CAREFULLY

Think it over—look at it from every viewpoint, remembering always that the Selden business is built on square dealing and honesty in policy and manufacturing methods—then granting that you CAN sell the best one ton truck at a cash deal price and on the installment basis, isn't the opportunity too big to let slip?

This proposition is of vital interest to you. It is worth your investigation. We are prepared to present facts and figures strong enough to prove that you, as our representative, have the biggest selling opportunity ever offered an automobile dealer.

Now read the next page of this insert, giving in brief the features of the SELDEN ONE TON TRUCK—Then write for full information and get your territory first.

Was Never Thought of Before

Digitized by Google

Quality Simplicity **SELDEN** One Ton **TRUCKS** Service Economy

GENERAL SPECIFICATIONS
OF THE
SELDEN 1-TON TRUCK

AXLES. Front, I-beam forging 1⅜" x 3" x ⅜" web. Rear, solid forging 2" x 2¾". Both heat treated.

BRAKES. Foot pedal operates internal brakes on jackshaft. Emergency lever operates 16" internal brakes on rear wheels.

CAPACITY. 2000 lbs.

CLUTCH. Multiple disc, dry plate. Integral with transmission.

COOLING. Vertical tube radiator; circulation by positive driven centrifugal pump and fan mounted on Motor.

DRIVE. The drive from Unit Power Plant is through universal joint to jackshaft; then by side chains to rear axle.

EQUIPMENT. Three oil lamps, horn, jack and set of tools; driver's seat.

FRAME. Pressed steel channel section 5⅝" deep. Bumper in rear. Front cross member detachable so as to facilitate removal of Unit Power Plant.

GASOLINE TANK. Drawn seamless steel tank, tinned inside and out. Capacity 20 gallons.

HEIGHT OF FRAME. Frame 29½" from ground when loaded.

HORSE POWER. 23 H. P. (S. A. E.)

IGNITION. Dual. Magneto driven at crankshaft speed.

JACKSHAFT. The jackshaft is fastened to frame by spherical bearings, so that distortion of frame under extreme road conditions does not affect jackshaft. The drive shafts are 1⅜" diameter of alloy steel, and heat treated. Bevel gear type and differential. Five Pitch Driving Gears, Hyatt Roller Bearings throughout.

LOADING SPACE. The available space back of driver's seat is 8 ft. 6" on the short wheelbase and 10 ft. 2" on the long wheelbase. The frame width is 32". The extreme outside width of body, without using bolsters, is 46½". Using a 3" bolster or sub sill a body 52½" outside will clear sprocket chains. A bolster 10½" high will raise the body over the rear wheels, give necessary clearance for jounce and allow any width of body to be built. Where light bulky merchandise is carried, it is permissible to let the body extend eight to ten inches beyond the frame.

MOTOR. Four cylinder vertical, cast "en bloc," Unit Power Plant type. Bore 3¾" x stroke 5¼". Maximum motor speed 1150 controlled by sealed governor.

SPEED. Sixteen miles per hour maximum allowed by governor.

SPRINGS. Front 42" long, 2¼" wide. Rear 48" long, 2½" wide. Semi-elliptic both front and rear.

SPEED CHANGE. The control levers are placed in the center and steering gear on the left. This arrangement gives easy access in and out of the driver's seat from the right-hand curb.

STEERING GEAR. Worm and nut type. 18" wheel.

TRANSMISSION. Transmission is bolted to, and is supported by the motor, according to the best practice in Unit Power Plant construction. This construction keeps the transmission and motor in alignment regardless of strains produced by faulty loading of the truck. It is of the selective sliding gear type, having three speeds forward and one reverse. The gears and shafts are of ample proportions, and are made from heat treated nickel steel. Timken bearings are used throughout the transmission.

TREAD. 56" front, 60" rear.

TIRES. Solid rubber front 36 x 3½, solid rubber rear 36 x 4. S. A. E. demountable.

WHEELS. Wheels are artillery type, hickory, twelve 2" spokes. S. A. E. rims are furnished as standard, allowing detachable tire rims to be used.

WHEELBASE. Optional. 125" or 145".

WEIGHT OF CHASSIS. Less tires and rims, 3100 pounds.

PRI CE. Chassis, $2000. F. O. B. Rochester, N. Y. We can furnish several types of bodies and will quote prices upon application.

SELDEN TRUCK SALES CO.
210 East Avenue, Rochester, N.Y.

Six Passenger "32"

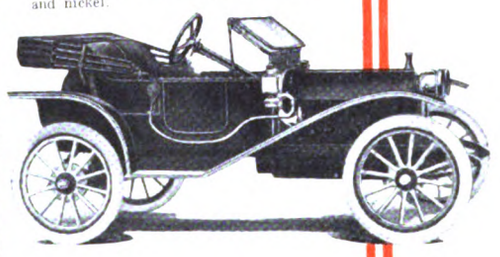
$1175 F. O. B. Detroit, has equipment of two folding and revolving occasional seats in tonneau, foot rest, windshield, mohair top with envelope, Jiffy curtains, quick detachable rims, rear shock absorber, gas headlights, Prest-O-Lite tank, oil lamps, tools and horn. Four cylinders 3¾-inch bore and 5½-inch stroke; 126-inch wheelbase; 33 x 4-inch tires. Standard color, black. Trimmings, black and nickel.

Hupmobile

The "32" Coupe

A distinguished addition to a distinguished line

First View, New York Motor Show, Jan. 11-18



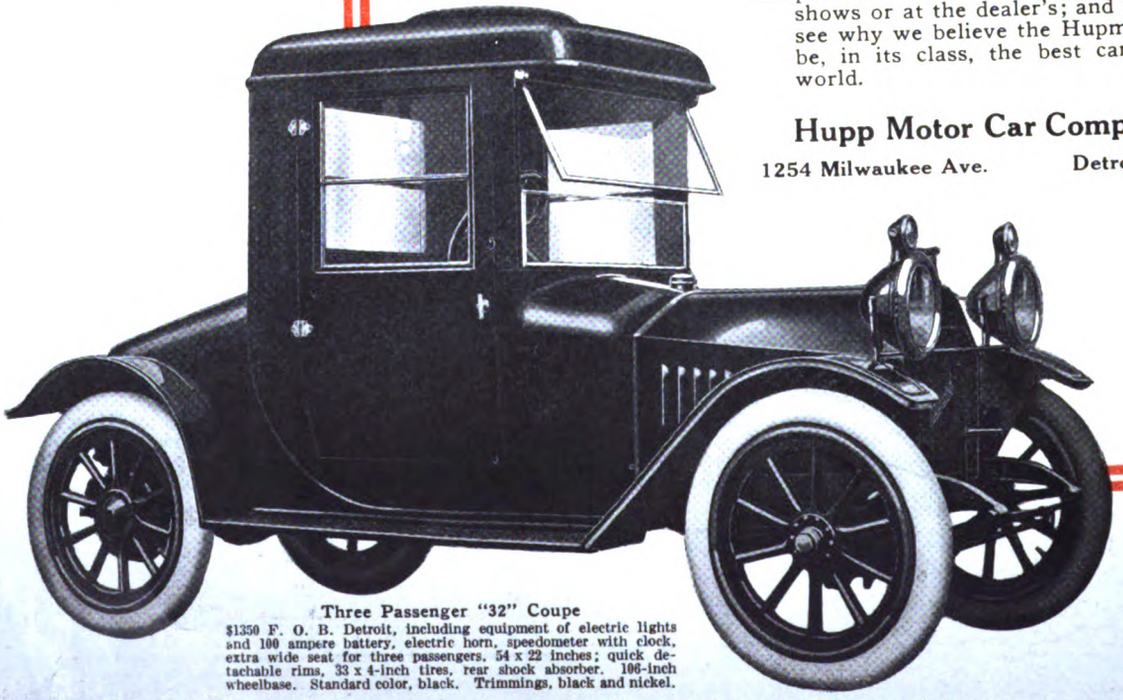
In exterior appearance the Hupmobile Coupe is as unobtrusively unique and as well-balanced as the other models of the "32" type.

In interior finish and appointment, it is rich and luxurious—imported Bedford Cord upholstery, with side walls to match and ceiling done in heavy satin; with right-hand control and room for three adults in comfort.

The coupe rounds out the line of Hupmobile pleasure cars, which now includes two touring models and a roadster, all built on the same sturdy "32" chassis, and the well-known "20" Runabout.

The entire line will be displayed at the New York and Chicago shows.

Inspect the cars there, at any other shows or at the dealer's; and you will see why we believe the Hupmobile to be, in its class, the best car in the world.



"20" Runabout, Fully Equipped

$750 F. O. B. Detroit. Four cylinders, 26 H. P., sliding gears, Bosch magneto, top, windshield, gas lamps and generator, oil lamps, tools and horn.

"32" Touring Car or Roadster, shown at right of six-passenger "32," fully equipped, $975 F. O. B. Detroit.

Hupp Motor Car Company

1254 Milwaukee Ave. Detroit, Mich.

Three Passenger "32" Coupe

$1350 F. O. B. Detroit, including equipment of electric lights and 100 ampere battery, electric horn, speedometer with clock, extra wide seat for three passengers, 54 x 22 inches; quick detachable rims, 33 x 4-inch tires, rear shock absorber. 106-inch wheelbase. Standard color, black. Trimmings, black and nickel.

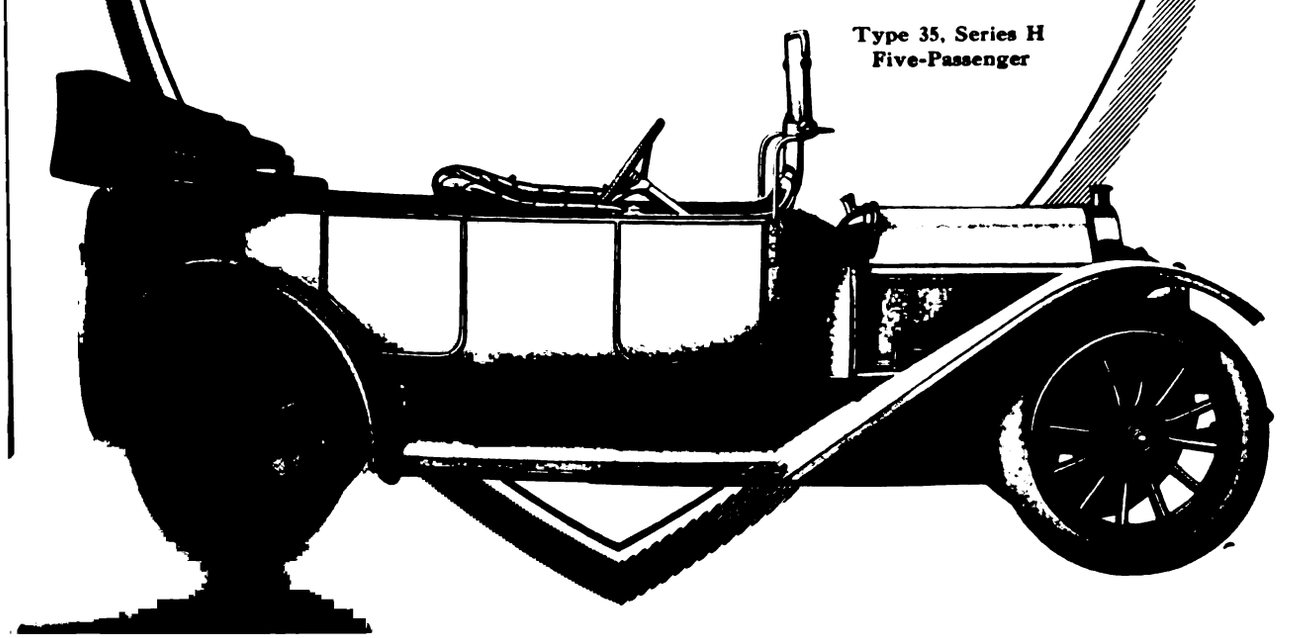
MERCER

ANNOUNCING

Type 35, Series G, Four-Passenger
Type 35, Series J, Raceabout
Type 35, Series H, Five-Passenger
Type 35, Series K, Runabout

A NEW series of Mercer cars that appeal directly to the Motorist who realizes that bulk and weight are no longer essential in a motor car of the highest type. The Mercer is the "happy medium" car—neither too heavy nor too light.

Power, strength, durability, consistency of performance, comfortable riding qualities, graceful appearance, up-to-the-minute appointments, and real legitimate dollars-and-cents value, are what influence wise buyers in their choice of a car. Measured by this standard the Mercer is recognized as leader of the medium-weight class.



Pronounced features are high efficiency motor, perfect lubricating system, reliable steering gear, large and perfectly balanced crank shaft, four-speed transmission, foot brake operating on transmission, springs that give real riding comfort, two-spark Bosch magneto of enclosed type, Rushmore electric lighting and starting systems, both separate units and operating independently of ignition, distinctive and exclusive body designs.

Prices: $2600 to $2900

THE LONG HORN

As Effective As The Lion's Roar

Announcing the "Junior Long" Horn

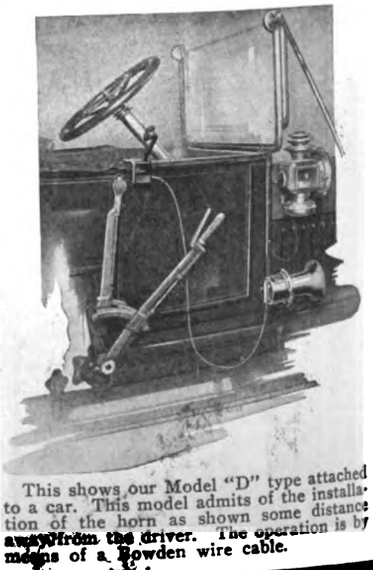
The greatest automobile horn value ever offered—

$11.00

It differs from the original Long Horn in size only, its construction is just as perfect.

Here is the Model "J. S." Junior

OUR JUNIOR LONG HORNS



Here is the Model "J. M." Motorcycle

And remember, please, that $11.00 represents the total and final expenditure your customer makes when he purchases a Long Horn. After that the Long Horn costs him nothing—for the Long Horn is an absolutely dependable, never-failing, mechanically operated horn—louder than most electric horns—requires only a push of the button to issue a warning. There are no batteries to wear out—no motor to break down—no bulb to rot or crack—nothing to get out of order at all.

The addition of this $11.00 Junior, Model "J. S."; of the Model "D," which has a cable and dash board attachment, and the motorcycle Model "J. M." make the Long Horn line the most complete warning signal line manufactured.

No dealer can afford not to carry them for there is a marked demand for the Long Horn which is increasing rapidly.

This shows our Model "D" type attached to a car. This model admits of the installation of the horn as shown some distance away from the driver. The operation is by means of a Bowden wire cable.

INTERLOCKS

Double Your Mileage

INTERLOCK INNER-TIRE

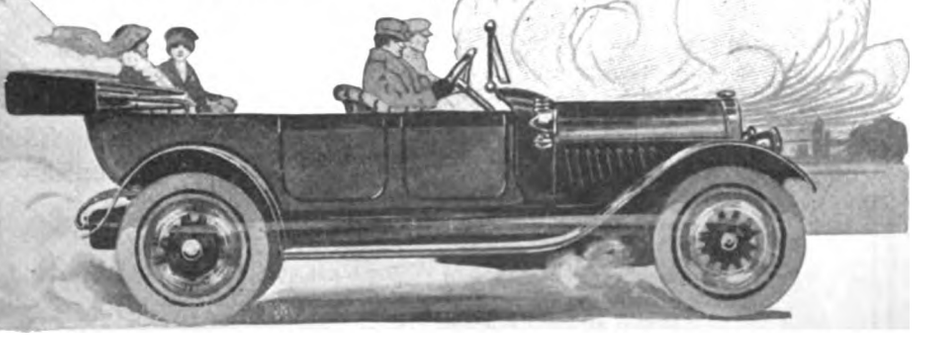
Prevent Blow-Outs and Punctures

Save Half Your Tire Expense

If you really believed this you would order a set of Interlocks for your car at once. We can prove our statements if you will give us the opportunity. Thousands of car owners are discarding inner shoes, reliners, fillers, extra treads and other makeshifts for Interlock Inner Tires with the most satisfactory results. A set of new tires equipped with Interlocks will carry your car an entire season without tire trouble. That's a big statement, but we can prove it.

What Interlocks Are Interlock Inner Tires are complete endless inner tires (not inner shoes) quickly and easily placed between the outer casing and the inner tube. They strengthen the outer case and protect the inner tube from punctures. The patented Interlock Flaps lock the Interlock securely making it an integral part of the whole tire that flexes perfectly and cannot chafe, creep or heat. Interlock Inner Tires will hold even if the outer casing is broken, and can be used in old or new tires. They double the mileage of new tires and add 1,000 to 5,000 extra miles to old ones. Interlocks have a fine gray rubber finish, are smooth outside and inside and have no troublesome ends, joints or edges to cement. Interlocks do not affect the resilience of your tires—are easy to insert and can easily be removed from one tire and replaced in another.

Proved Best by Road Tests Interlock Inner Tires are the only tire reinforcement that has stood the exacting test of hard road work. Eight tires equipped with Interlocks have made over 7,000 miles each, a total of 56,000 miles, without a blow-out or any tire trouble. Interlocks used in tires that have gone 10,000 miles with the outer casings worn clear through have kept up with fast cars equipped with new tires and carrying extra tires. Interlocks have made a 4,500 mile cross country run—the last 1,000 miles over 20 mountain ranges without a blow-out or even carrying an extra tire. In the Four States Run Interlocks stood the test of hard fast road work under the critical observation of tire experts, without tire trouble. These and other hard public tests have proved the efficiency of Interlock Inner Tires beyond question.



90% Of All Tires Are Scrapped Before The Rubber Tread is Half Worn Out

because the fabric is not strong enough to resist hard road work, resulting in blow-outs, punctures, rim cuts, etc. The liberal excess fabric strength of tires equipped with Interlocks prevents blow-outs, punctures, etc., gives extreme long mileage, safety, and that freedom from tire trouble which every car owner desires.

Are You Open to Conviction?

Send us your address on a post card and let us mail you our booklets, data and testimonials of users which are very convincing. Interlocks are sold by the best dealers everywhere. Ask your dealer about them. See our exhibits at New York, Chicago and Boston Shows.

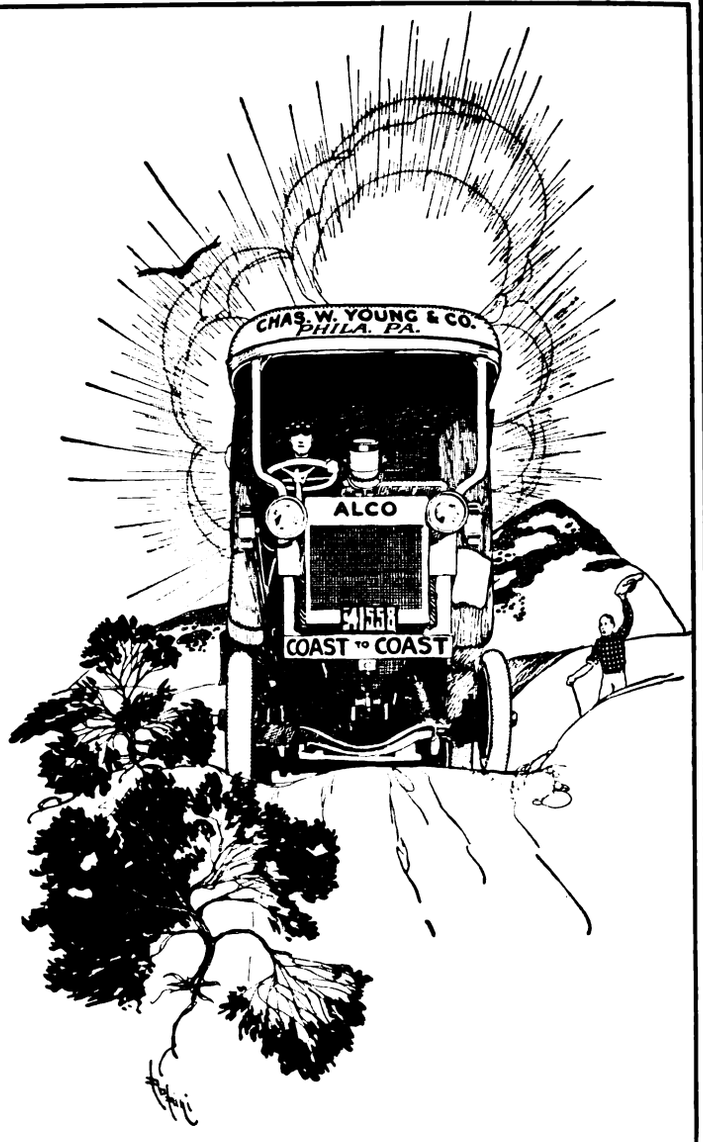
And it Delivered the Goods



4145 Miles

Over boulevarded highways in the East it sped; through sand two feet deep in Ohio; across trackless prairies in Illinois, with the heat of a sizzling sun beating down. It crashed through weak bridges in Iowa and conquered roads of gumbo. The alkali mud of Colorado was no barrier; its progress was not checked by cloudbursts in Wyoming, by steep-sided gullies, by deep ruts, by roads submerged.

It cut a new roadway over the broad expanse in Utah; it crossed the Great Salt Lake Desert, often 150 miles from habitation; battled with hailstorms, rainstorms and snowstorms in Nevada; climbed the tall peaks of the Sierras that seemed to mount to the skies.

At last into California!

It pressed onward to San Francisco; then 35 miles to the north. And the first load of goods ever delivered across the continent by motor truck had reached its destination.

It completed the journey of 4,145 miles in 412 hours of actual running time.

Across 15 states it hauled a 3-ton load of Parrot Brand Olive Silk Soap, the product of its owners, Charles W. Young & Company, from Philadelphia to a customer in Petaluma, Cal. It faced the most terrific conditions ever forced upon a motor truck; received the most gruelling tests yet supplied in business service. But it delivered the goods!

ALCO
Motor Trucks
6½ ton 5 ton 3½ ton 2 ton

The achievement of this Alco truck simply punctuates the strongest claim we have ever made.

Simply demonstrates why other Alco trucks are serving and saving for leaders in more than a hundred lines of business in America, in the tropics, in Alaska, in Canada, in the Philipine Islands and so on.

Vitalized Rubber calls a halt on "Short Mileage!"

At last science gives you more rubber shod mileage

Diamond (No Clinch) Tires

now made of VITALIZED RUBBER—a scientific combination of pure rubber and a toughening compound.

You can get Vitalized Rubber in Diamond Tires—NOW

A tire containing too much rubber fails to give the necessary mileage because it is not tough enough to withstand road usage. And the tire containing too little pure rubber has not the necessary staying qualities.

Our chemists have discovered the secret of how to mix pure rubber and a toughening compound in just the right proportions. The result is additional mileage for you. The pure rubber we use comes direct from the trees of the tropics—it is fresh and contains all the vitality of youth—it is elastic and easy riding. Then we mix this pure rubber with the secret toughening compound, which gives it the necessary vitalizing, wearing, *more mileage* quality.

This scientific combination has been vainly sought after for years by tire makers. After 15 years of successful tire making we have solved the problem—and you enjoy the benefit of our really wonderful discovery—in "Diamond" Vitalized Rubber Tires.

Add to this the Diamond proven principles of proper construction—nothing inferior in rubber, fabric or workmanship—and you have as perfect a tire as money can buy.

Here is a combination of easy riding and more mileage advantages you can't get in any other tire today—*Vitalized Rubber*, *Perfect 3-Point Rim Contact*, *No-Pinch Safety Flap*, and, if you wish, the now famous Safety (Squeegee) Tread—made to fit all types of rims.

So this time specify "Diamonds"—you can get them at any of the

25,000 Diamond Dealers always at your Service

A perfect 3-Point Rim Contact tire at last

Fifty per cent of all tires are ruined through lack of perfect rim contact.

Perfect 3-Point-Rim-Contact is just as big an advantage in tire construction as 3-point suspension in the automobile.

Diamond 3-Point Contact Tires hold with a vise-like grip absolutely preventing the tire from breaking above the rim, insuring no rim skid—no rim cutting—no rim trouble at all.

Our engineers have mastered the principles of Rim Contact construction, and you can get the Diamond (No-Clinch) Tire, with a perfect 3-Point Rim Contact—an important advantage that has been overlooked by all other tire makers.

"More Mileage" Book—Free

If you are not entirely satisfied with the mileage you are getting now—if you wish to reduce your tire upkeep—send today for our new book, "How to Get More Mileage Out of Your Tires." It is free to every tire user. No matter what tire you ride on, you simply cannot afford to be without this valuable book, so send the coupon today.

Mail This Coupon TODAY

THE DIAMOND RUBBER COMPANY, 104

The Atwater Kent Ignition System

DEALERS and REPAIRMEN

HERE are a few good Atwater Kent "talking points." You can make them make you money.

Its simplicity of mechanism—no vibrators, relays, or commutator—just one contact point regardless of the number of cylinders and only three moving parts, none of which are subject to excessive wear.

Its single adjustment easily and quickly made and seldom requiring attention.

Its adaptability and easy installation on any standard make of motor, new or old.

It is ideal for use in connection with lighting and starting equipment as it produces a hot dynamic spark, perfectly timed regardless of the engine speed.

While the Atwater Kent System is high in value and reputation, it is not high in price. In fact, it will cost less than half as much as a good magneto and will give superior results at a much less cost of upkeep.

There are now two types of Atwater Kent Ignition equipment—standard **Type F** and the new **Type K,** the latter having the automatic spark control and insulated primary circuit features.

PRICES OF THE TYPE F SYSTEM

	Standard Coil.	Kick Switch Coil.
1-cylinder	$17.00	
2-cylinder opposed	18.00	
2-cylinder distributor type	22.00	$24.00
3-cylinder distributor type	25.00	27.00
4-cylinder distributor type	25.00	27.00
6-cylinder distributor type	27.00	29.00

PRICES OF THE TYPE K SYSTEM

	Standard Coil.	Kick Switch Coil.
2-cylinder	$32.00	$35.00
3-cylinder	35.00	38.00
4-cylinder	35.00	38.00
6-cylinder	37.00	40.00

In substituting the Atwater Kent System for the magneto or for driving it from any horizontal shaft or gear, we furnish a special magneto gear mounting, the additional price of which is $5.00.

You will have many inquiries for ignition equipment during the coming year and should be in a position to recommend the Atwater Kent whenever the most efficient ignition is desired.

Seize the opportunity and post yourself by a visit to our exhibit No. 140 Madison Square Garden Show, New York City, or write for our booklet "D."

ATWATER KENT MFG. WORKS

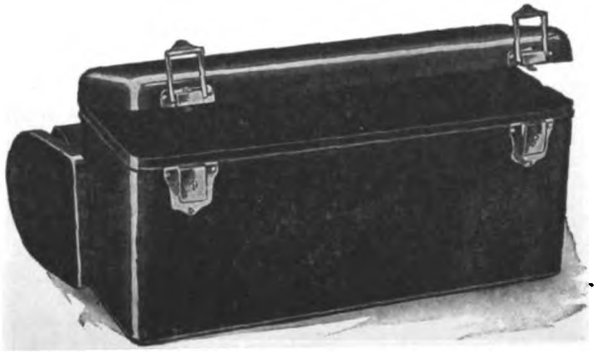
This trade-mark of quality is HAYES MFG. CO. HAYES DETROIT, MICH. *on more than 250,000 boxes*

The Line of Beauty

Leads to HAYES Bodies

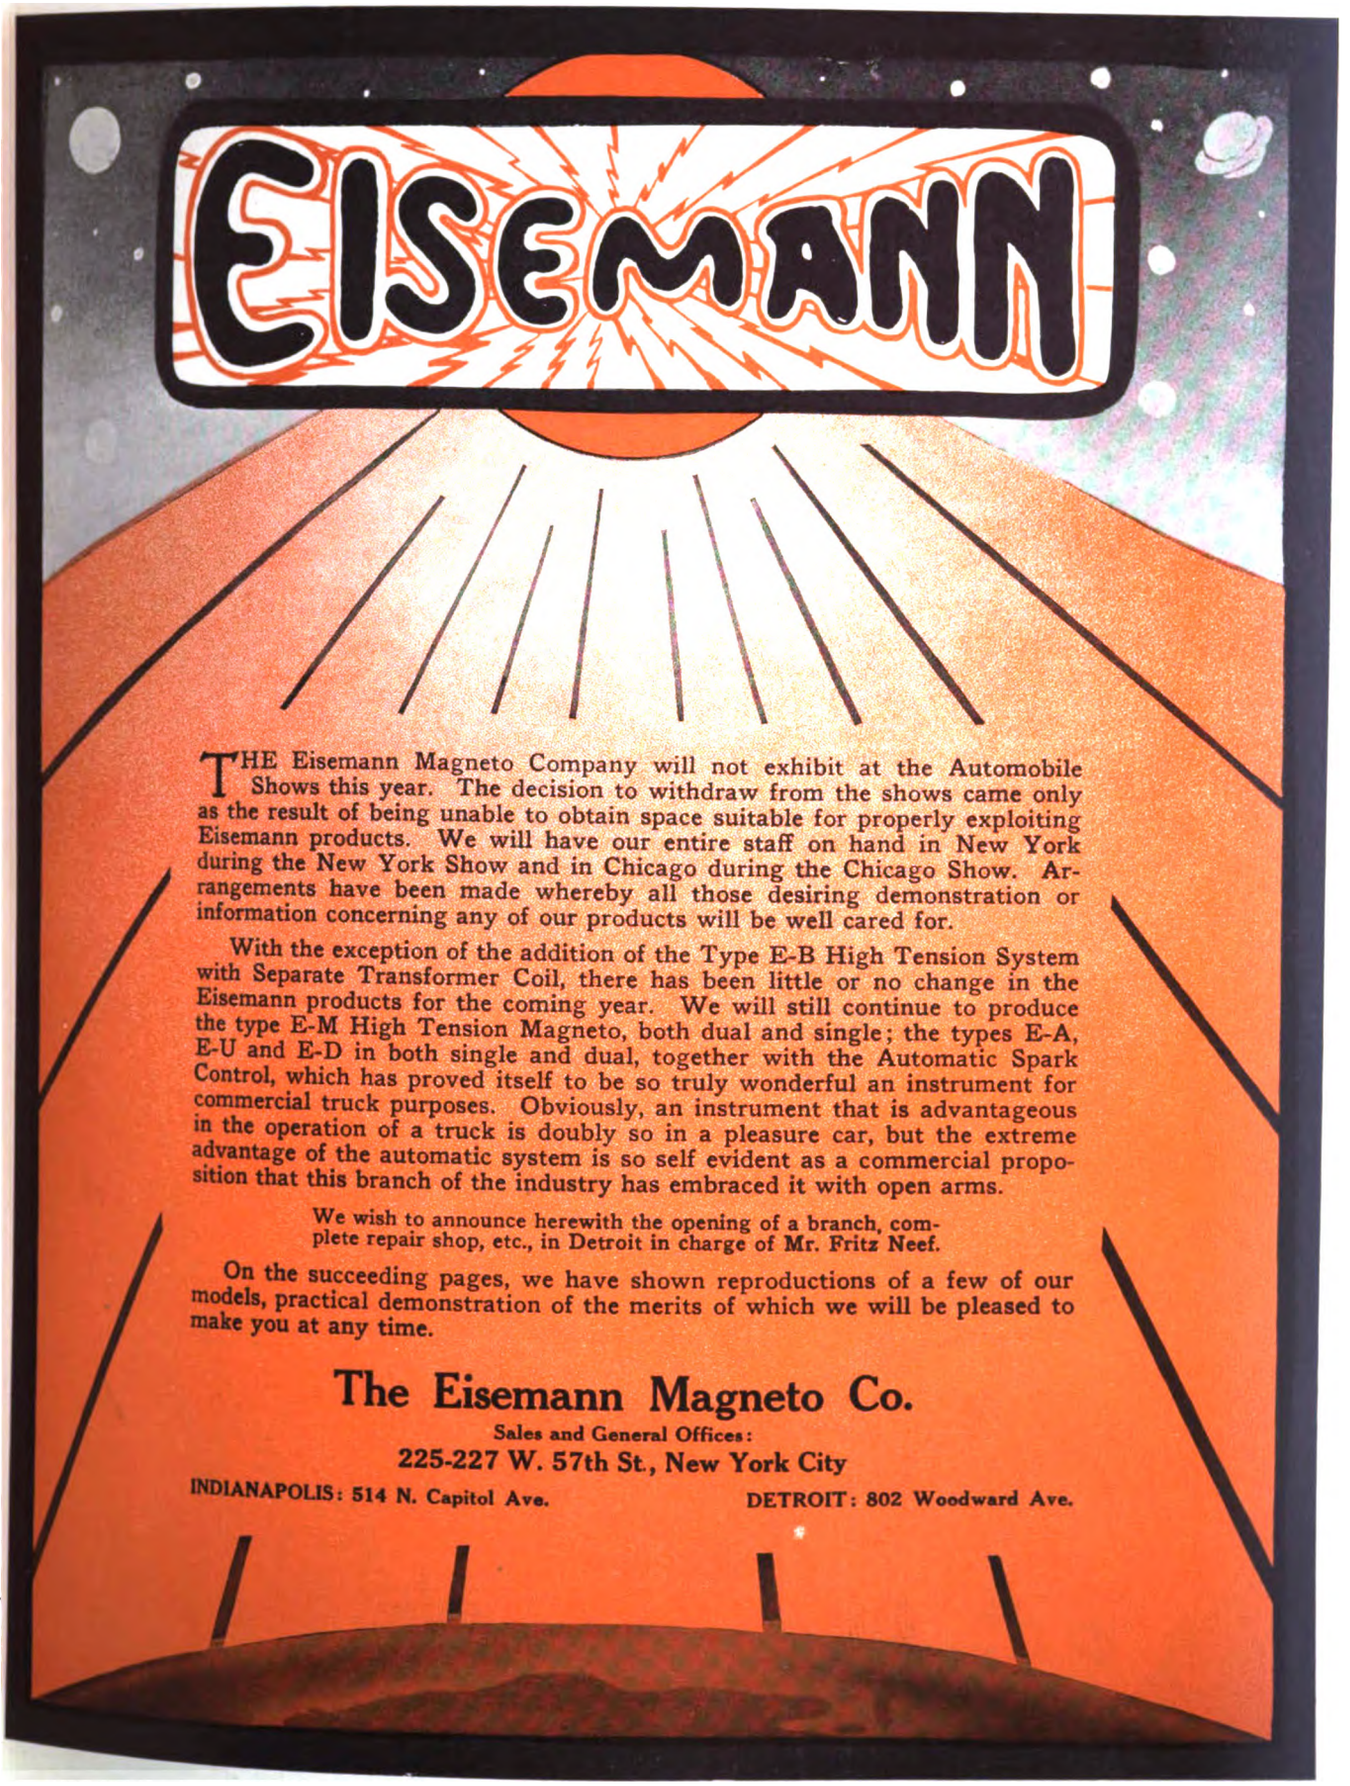
THE looks of a car have a lot to do with the sales. Looks are in the body—in the clear, clean-cut horizontal, the swelling curve of the rear seat back, the correct proportioning of shroud and hood, the graceful sweep of the fenders. The eye of the buyer notes these points before it goes deeper to motor and transmission.



Why Not Make the Most of It?

The Hayes organization has spent its entire career in the building of handsome automobile bodies and sheet metal parts. To your needs it can bring an unexcelled experience. Its engineers know bodies as your engineers know motors. They are at your service and the results of their experience is yours when you want it.

Let our engineers go over your blue prints. They will show you the short cuts and offer suggestions worth money to you. They will make you fenders, hoods, shrouds—anything in sheet metal that you want—that will prove a revelation.



You will save time, trouble and money. The Hayes organization will "speed up" your production; will stop your worry; will do the work quicker and cheaper than you can do it yourself.

Certainly this is worth investigating.

HAYES MANUFACTURING COMPANY
DETROIT **MICHIGAN**

Digitized by Google

THE Eisemann Magneto Company will not exhibit at the Automobile Shows this year. The decision to withdraw from the shows came only as the result of being unable to obtain space suitable for properly exploiting Eisemann products. We will have our entire staff on hand in New York during the New York Show and in Chicago during the Chicago Show. Arrangements have been made whereby all those desiring demonstration or information concerning any of our products will be well cared for.

With the exception of the addition of the Type E-B High Tension System with Separate Transformer Coil, there has been little or no change in the Eisemann products for the coming year. We will still continue to produce the type E-M High Tension Magneto, both dual and single; the types E-A, E-U and E-D in both single and dual, together with the Automatic Spark Control, which has proved itself to be so truly wonderful an instrument for commercial truck purposes. Obviously, an instrument that is advantageous in the operation of a truck is doubly so in a pleasure car, but the extreme advantage of the automatic system is so self evident as a commercial proposition that this branch of the industry has embraced it with open arms.

We wish to announce herewith the opening of a branch, complete repair shop, etc., in Detroit in charge of Mr. Fritz Neef.

On the succeeding pages, we have shown reproductions of a few of our models, practical demonstration of the merits of which we will be pleased to make you at any time.

The Westcott Six, $2,475

Electrically Started and Lighted
127-inch Wheel Base---5 Passenger

The Westcott Line for 1913 is a glowing tribute to the whole science of automobile building—

The Westcott Motor Car Company occupy their supreme position in automobile manufacturing because of their excellent selection of the vital parts that make up the splendid Westcott Six—

The component parts of the New Westcott Six are built in plants whose whole endeavor has been to secure perfection in their individual fields; and

From the first, the Westcott Motor Car Company have turned their entire efforts to the joining of these separate units in one harmonious whole—

Westcott popularity is not due to the stimulation of public opinion through advertising—

The Westcott Line stands pre-eminent in a field of costlier cars because of actual performance and faithful service—

It is one of the few Six Cylinder Cars that possesses the tremendous "reserve power" so essential and so necessary to the success of the medium priced Six—

Because of the high favor in which the Westcott car is held by both the automobile trade and the buying public, it has been decided that the Westcott Line will be advertised extensively in 1913.

In advertising the Westcott Line we believe that we are rendering just as much service to the ultimate car buyer as we are to the dealers and ourselves—

The motor car buyer will no longer be compelled to buy the Westcott car on the favorable expressions of other Westcott car owners, however favorable they may be, but you have as their guarantee, and assurance of sincere service the positive statements and claims made for Westcott superiority by the people who build it.

Westcott Motor Car Company, RICHMOND, INDIANA

New-Miller Carburetors

"Adjusted *from* The Seat"

Your Automobile Is No Better Than It's CARBURETOR!

No matter how finely equipped—no matter what the other mechanical details—the entire efficiency of your motor depends upon the carburetion. Don't blame your engine—or other working parts—until you are sure the trouble isn't in the carburetor. There is but one carburetor made to give maximum power and proper mixture at low speed as well as high. That is the best carburetor you can use in your car. It is the:

New-Miller Carburetor

Try it out. If it isn't just as far above other carburetors—doesn't give you just as much better service—just as much saving of fuel as we claim—we are the losers.

Here are a few of its individual features that make it the best of all carburetors for your use.

New-Miller Carburetors are mechanically operated, the slightest movement of the throttle giving a positive movement to the auxiliary air and needle.

Once adjusted on your motor for low, intermediate and high, they never need another adjustment, taking care of weather conditions and variable grades of gasolene by a convenient control.

Besides being mechanically operated they are proportioned mechanically, all parts being manufactured to a standard on specially designed machinery, making every unit interchangeable.

By their control, admitting air as desired, they may be throttled low and save you enough fuel to pay for the carburetor itself in a season's use.

We have prepared a new Carburetor Book, giving the inside facts of carburetors—telling just how the New-Miller is made—giving complete details throughout.

It will pay you to send in the coupon below and get this information today.

Owners and Dealers are requested to see our Factory Representatives at Elevated Platform, Space 150, Madison Square Garden, New York Automobile Show, or Space 130-131, Coliseum Annex, Chicago Automobile Show.

Jackson

No hill too steep
No sand too deep

Jackson dealers are enthusiastic; that's the story of the new Jacksons

When the first of the new Jacksons was announced, a wave of enthusiasm swept the country. Inquiries literally poured in.

That's how the buying public received the Jackson; and the same result followed the announcement of the other models.

What did the dealers do?

To a man they saw the great possibilities presented by the Jackson line.

Every one of them came in with requests—no, they were demands—for increased allotments.

"Sell?" they said, "you are giving us the best selling line of Jacksons you ever built!"

That's what they said when they were told about the cars.

Their enthusiasm was increased a hundred-fold when we outlined the most extensive advertising campaign the Jackson Company has ever attempted.

This advertising includes not only double pages and single pages in publications like the Saturday Evening Post, Collier's, Literary Digest, Life, etc., etc., but local newspaper advertising—continuous and consistent through the big selling seasons.

Is it any wonder that Jackson dealers are on tiptoe?

They have a line of cars they can sell in competition with anything on the market—on any basis whatever.

They are sure of themselves; sure of their cars; sure of factory co-operation through a big advertising campaign.

Their feet are on solid ground; they are in position to put ginger into their work and they are doing it.

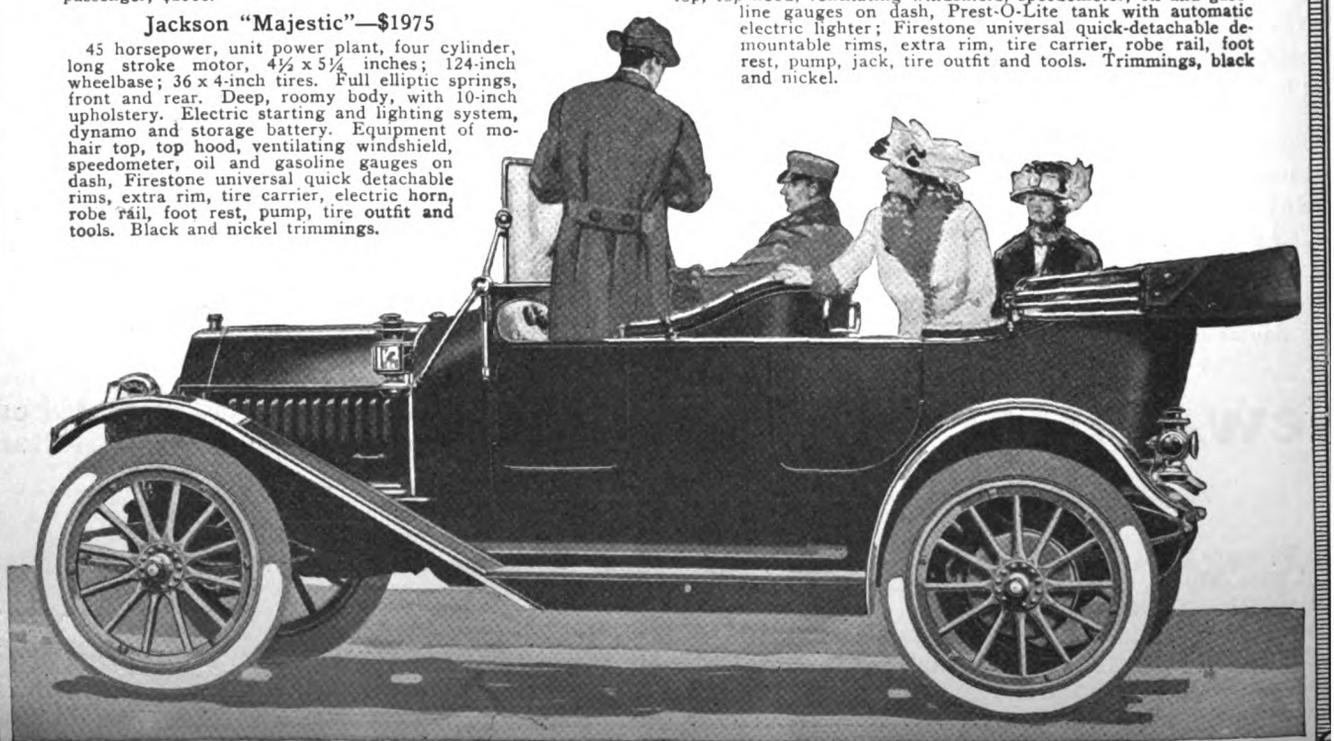
If your instinct for business tells you that you want to be with the Jackson, say so to us and without delay.

The sooner you act, the better your chance if your territory is now without Jackson representation.

JACKSON AUTOMOBILE CO.

1204 East Main Street
JACKSON, MICHIGAN

Jackson "Sultanic"—$2650

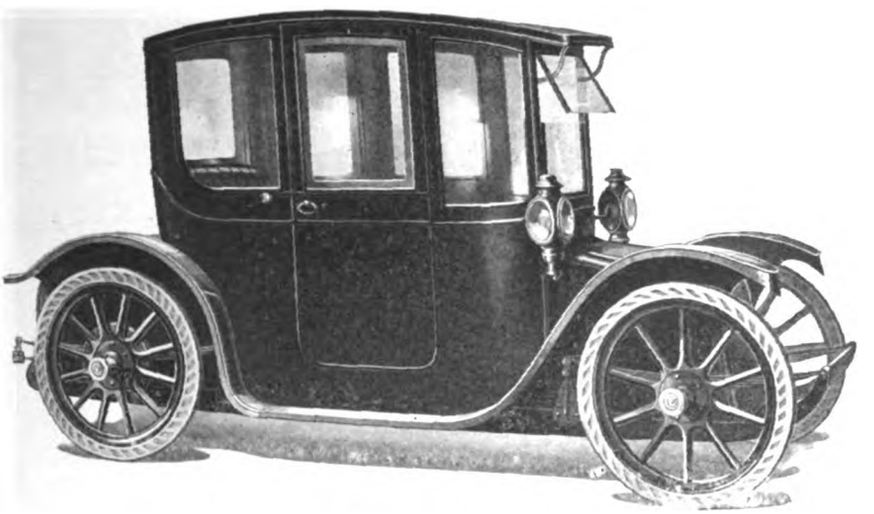


Seven passenger, six cylinder, 55 horsepower; unit power plant; long stroke motor—4⅛ x 4¾ inches; 138-inch wheelbase; 36 x 4½-inch tires. Full elliptic springs, front and rear. Deep roomy body, with 10-inch upholstery. Gasoline tank under dash supplied from storage tank at rear with pressure pump. Total capacity, twenty gallons. Electric starter, electric dynamo and lighting system, mohair top, top hood, ventilating windshield, speedometer, oil and gasoline gauges on dash, demountable wheels, extra wheel, wheel carrier, robe rail, foot rest, pump, jack, tire outfit and tools. Trimmings, black and nickel. Five passenger, $2500.

Jackson "Majestic"—$1975

45 horsepower, unit power plant, four cylinder, long stroke motor, 4½ x 5¼ inches; 124-inch wheelbase; 36 x 4-inch tires. Full elliptic springs, front and rear. Deep, roomy body, with 10-inch upholstery. Electric starting and lighting system, dynamo and storage battery. Equipment of mohair top, top hood, ventilating windshield, speedometer, oil and gasoline gauges on dash, Firestone universal quick detachable rims, extra rim, tire carrier, electric horn, robe rail, foot rest, pump, tire outfit and tools. Black and nickel trimmings.

Jackson "Olympic"—$1500



35 horsepower, unit power plant, four cylinder, long stroke motor—4⅛ x 4¾ inches. 115-inch wheelbase; 34 x 4 inch tires. Full elliptic springs, front and rear. Deep roomy body, with 10-inch upholstery. Gasoline tank under dash, supplied from storage tank at the rear, with pressure pump. Total capacity, twenty gallons. Equipment includes Disco self-starter, mohair top, top hood, ventilating windshield, speedometer, oil and gasoline gauges on dash, Prest-O-Lite tank with automatic electric lighter; Firestone universal quick-detachable demountable rims, extra rim, tire carrier, robe rail, foot rest, pump, jack, tire outfit and tools. Trimmings, black and nickel.

"The Perfection of Electrics"

$2550
F.O.B. Detroit

MODEL B—FIVE PASSENGER BROUGHAM

The Century Electric Brougham
For 1913 Now Ready

The demand of the user is for a low-hung body—with a low center of gravity. The under-frame construction of the Century gives both—and with it high road clearance and correct distribution of weight. The illustration speaks for itself of Century beauty and style. No car at any price offers more real value. Immediate deliveries.

NOTE THESE SPECIFICATIONS:

BODY—Hammered Aluminum panels; selected hardwood frame; tilting glass front; upper half swings out, lower half slides down, door and rear windows slide down; long running boards and extra wide doors.

BODY DIMENSIONS—Rear seat width 47", depth 21", cushion 8" thick; front seat width 44", depth 20", cushion 6" thick; knee room between seats 24"

UPHOLSTERING—Superfine imported broadcloth or hand buffed leather. Furnished in blue, green, brown or maroon. Bedford cords or fancy cloths.

PAINTING—Rich black frame work and mouldings with blue, green, brown or maroon panels to match upholstering.

WHEELBASE—98"; the most practical for easy riding and convenience in handling.

TREAD—Standard 56", road clearance 12"; providing absolute safety.

AXLES—Rear, full-floating, of the very latest type. Front, straight tubular. Axles mounted on imported ball bearings.

FRAME—Special straight design for under-frame construction.

BRAKES—Two 12 x 1¼ inches. Internal expanding on rear wheels.

SPRINGS—Semi-elliptic front; triple platform rear. Assuring easy riding qualities.

FENDERS—Full skirted metallic; giving absolute protection to body.

STEERING—Side lever; ball bearing; easy and safe.

CONTROLLER—Horizontal lever positively safe, arranged to allow full use of rear seat.

MOTOR—High efficiency type, extra large size, built especially for vehicle service by Westinghouse.

DRIVE—The motor is rigidly suspended to chassis sub-frame slightly forward of car center. Direct shaft drive to rear axle without reduction chains or gears. The best and most economical method of power transmission.

BATTERY—Exide 30 cells M. V. 13 plates as Standard Equipment.

MILEAGE—65 to 100 miles on a single charge.

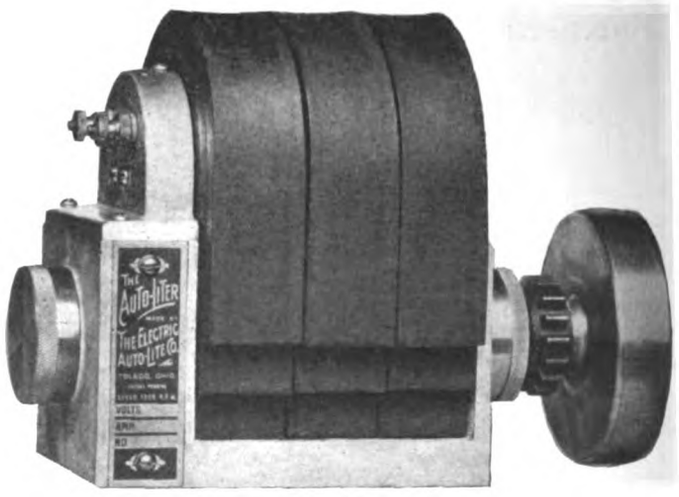
SPEED—2 to 23 miles per hour.

TIRES—Optional 36 x 4 high efficiency Motz cushion, or 34 x 4 special electric pneumatic, nobby tread rear.

EQUIPMENT—Speedometer, volt-ammeter, side and tail lamps, electric bell, toilet case, watch, cut glass flower vase, complete outfit of tools, charging plug, etc.

Dealers—Is Your Territory Open?

We are now established in our new factory—and are going right ahead with manufacturing operations, with the result that from now on we will be able to guarantee immediate deliveries. Write at once for our proposition.



CENTURY ELECTRIC CAR COMPANY, Detroit, Michigan

ELECTRIC STARTER

The Auto-Lite 6 Volt Electric Lighting and Starting System

EFFICIENT and SAFE

Has more torque and will crank your engine with more speed than any other system on the market of equal weight.

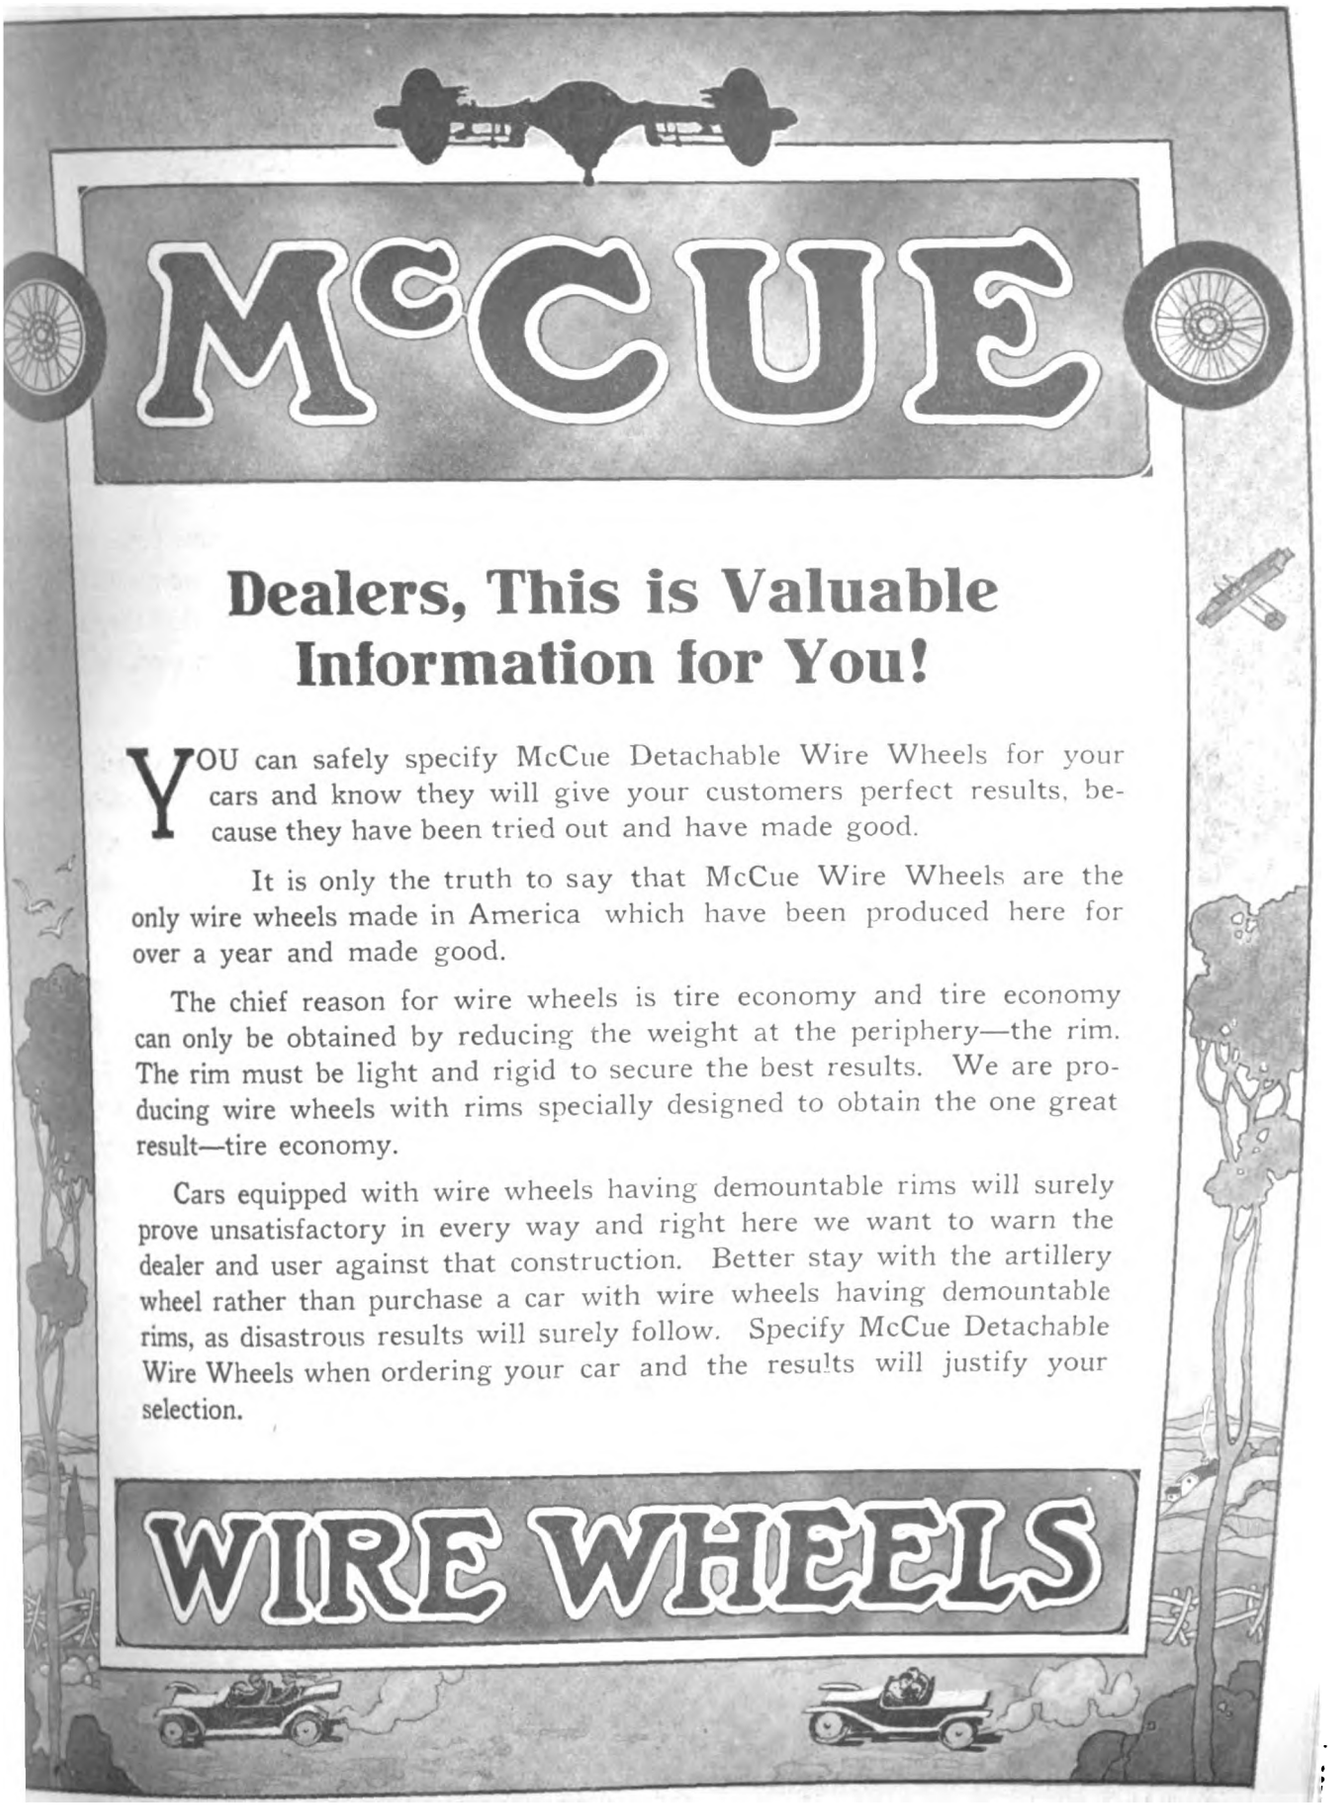
100 per cent. efficiency. Not a make shift for any car. But a distinctive application for each manufacturer, insuring positive results.

First—The system consists of a powerful 6 volt series wound motor.

Second—Of a simple lighting generator with large capacity. Of few parts and built rugged for automobile usage.

Third—A rugged simple starting switch operated by a foot pedal.

Fourth—An ammeter which shows both production and consumption of current.



This system is not an experiment as there are thousands in use. We guarantee deliveries, efficiency and service. Insist upon an Auto-Lite system on your car.

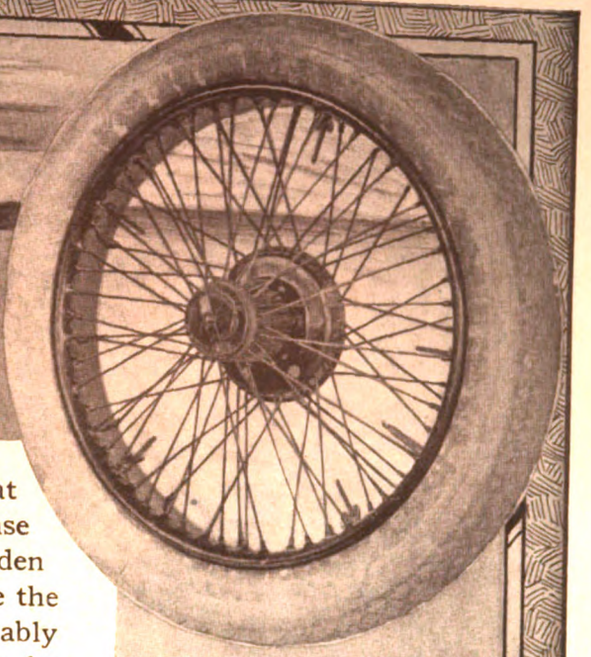
WIRE WHEEL

SAVE TIRES. Wire wheels have come into prominence solely because of their intrinsic merit. Principal among their advantages is the fact that they save tires. Actual test has shown wire wheels to increase the life of tires 68.75 per cent.



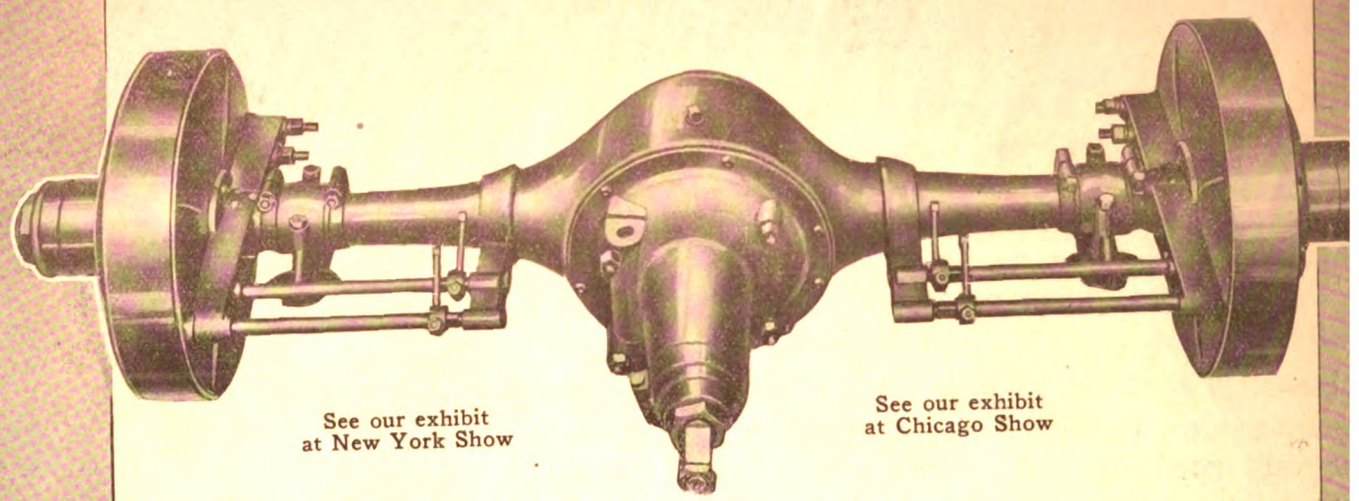
INCREASE COMFORT. Being suspension wheels and much lighter and more springy than any other wheels, wire wheels make the car much easier riding and much easier to drive. Anybody can tell by riding in a wire wheel equipped car that the car rides easier than it did with wooden wheels.

SAVE CAR ITSELF. By their light weight construction and springiness wire wheels absorb a large amount of shock that in other wheels is transmitted to the mechanism of the car to its detriment. In this way wire wheels actually increase the life of the car itself as well as the life of the tires. This, of course, means money in the owner's pocket, not alone in making the car last longer but in making the car easier to maintain.

McCUE

Digitized by Google

HAVE COME



REDUCE UPKEEP. It is very obvious that a wheel that will save tires and make an easier riding car must also increase fuel mileage. Wire wheels are so much lighter than wooden wheels—wire wheels absorb shock to such a degree and make the car so much easier for the motor to drive that they considerably increase the miles per gallon of gasoline and oil that can be obtained from the car.

SUPERIORITY DEMONSTRATED. All of these facts have been widely demonstrated during the past few years. Abroad all of the really good cars carry wire wheels and other types of wheels are really the exception. This applies not only to pleasure cars but to racing cars as well. In this respect it needs only to be cited that in the French Grand Prix over 85 per cent of the entries carried wire wheels. This race was won on wire wheels as have been nearly all the big races abroad in the past two or three years. In this country wire wheels for racing cars have proved out in great shape. Above it shown a photograph of a wheel and tire that went through both the Vanderbilt and Grand Prix at Milwaukee this fall on its original air and finished inside the money.

WIRE WHEELS AXLES

Digitized by Google

McCUE AXLES

See our exhibit at New York Show

See our exhibit at Chicago Show

The McCue Detachable Wire Wheel is the most flexible wire wheel made. It is the only wire wheel made in this country which has stood the hard racing tests and severe usage for a year past.

The wheel construction which we will furnish our trade on and after Feb. 1st, for 1913 cars, has been under the severest test for several months. And it has been perfected in those details which are so important in a new construction where sample work is necessarily made by hand to permit the hurried filling of sample orders. We have been making McCue Detachable Wire Wheels for automobiles for fifteen months and have a complete tool equipment for the production of a high class product.

We believe we are just one year ahead of any other American manufacturer and that they must go through the same experience we have. Even if they follow us they must still prove their construction. When copying our construction they will necessarily copy our mistakes the same as we did with the foreign construction.

The McCue Detachable Wire Wheels have arrived—the rim, the spoke and nipple, the detachable hub with the security lock have each had the most careful attention and each of these products has been perfected under tests much more severe than they will receive in ordinary usage, and all brought up to the McCue axle standard.

Send for "Mileage Plus."

A Personal Invitation to *YOU!*

TO see Miller Tires and meet Miller Men at the New York Show, week of January 11-18.

Mr. Tire Dealer and Mr. Tire User—we want to know you ***both.*** Your interests are mutual. For that which is best for the Tire User is best for the Tire Dealer.

You will find us at Booth No. 549

We believe you will want to learn more about *MILLER ONE CURE, WRAPPED TREAD* method of building

Miller Tires

The greatest advance made in the construction of automobile tires in a decade—we believe. A method that is saving motorists thousands of dollars every day, by the elimination of tire troubles, caused by old processes of manufacture—we KNOW.

Miller Non-Skid Tires

Are built with a new tread design that not only prevents skidding but also retains the non-skid feature twice as long as ordinary treads.

Mr. Dealer

There are a few good cities in which we are not satisfactorily represented. If you're looking ahead, write us for our agency proposition. It's interesting and profitable. We'll be glad to talk it over at the show, too.

Regal You Should See

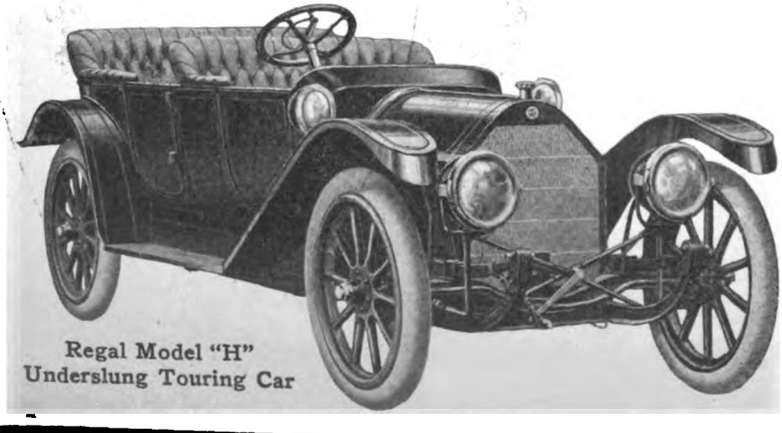
At the New York Automobile Show,

Model "T"
Underslung
Touring Car

$950—Full Underslung Frame—Nickel Plated Trimmings—Electric Lights

Wheel base, 108 inches, Motor, four cylinders, cast en bloc; bore, 3¾ inches; stroke, 4½ inches; dual ignition; thermo-syphon cooling. Selective sliding gear transmission, three speeds forward and reverse. Tires, Morgan & Wright, 32 x 3½ inches. Equipment includes nickel-plated trimmings; demountable rims (one extra rim with each car); electric lights and storage battery, with option of gas headlights, oil side and tail lamps and Prest-O-Lite tank; electric horn; foot accelerator; tools and tire repair kit. Top, windshield and speedometer, $75 extra. **Price, $950.**

You should see these Regal cars and the Regal exhibit at the New York Automobile Show, January 11-25, 1913.



There will be other good exhibits and there will be other good cars, but the Regal display and the Regal cars will prove something new and something different.

One feature of this exhibit will be a chassis especially prepared to illustrate the essential differences of Underslung construction. We have arranged to offer each visitor at the show an opportunity to learn, first hand, the characteristics of this feature of Regal design. Whether you represent another line of cars, whether or not you are even selling cars, we want you to see this exhibit. You'll learn something new about an automobile that you did not know before.

The Regal Exhibit

The 1913 exhibit will be something new and different. No lover of a good motor car should miss it. See the Underslung Chassis.

In charge of the Regal booth will be a corps of attendants who know the details of Regal construction. They have seen the cars manufactured at our factory. The business of these men will be to explain where Regal cars are different and to answer such questions as you may desire to ask. No man will urge you to buy a Regal car. None of these men will urge you to sell Regal cars unless you

Regal Model "H"

The Car With The Gearless Transmission!

This is the car that will give you the best service under all conditions, because it is efficient and strong, just where the ordinary car is weak—in the transmission. Your Cartercar is reliable, simple to drive—and always ready to go on any road.

Greater Efficiency

A Cartercar has an unlimited number of speeds—one lever control—and will easily climb a 50% grade. The transmission is composed of only two unit parts—which must mean great reliability. Just think seriously over what these features will mean to you.

Greater Tire Mileage

The tires on your Cartercar will wear about twice as long as on the gear car. This is because the transmission eliminates all jerks and jars in starting and changing speeds.

Electric Starting

Whether the weather is warm or cold, all you have to do is merely to press down a small knob and the motor is cranked. Then turn this same knob and you light all or as many lamps as you wish.

Four Excellent Models

The new Cartercar line includes four extremely good models—Touring Car, Roadster, Coupe and Sedan. They are finished elegantly, deep upholstering and attractive lines. The prices are from $1600 to $2000.

At All the Big Shows

The new Cartercars will be shown at the big shows this winter. We will be glad to see you and will carefully explain the many advantages of this car. Or, if you cannot be at any of the shows write us for new catalog.

13,055 Magnetos Shipped in October *13,165 Magnetos Shipped in November*

1913 sees more Remy Magnetos in use than all others combined

MORE than three hundred of the most representative organizations in the entire automobile industry chose the Remy Magneto exclusively for 1913.

More than three hundred of the greatest engineers in the industry gave this action their stamp of approval.

More than ten thousand dealers were previously consulted by the manufacturers.

More than three hundred thousand satisfied users of Remy Magnetos during 15 years gave volume to this tidal wave of demand for the Remy Magneto for 1913.

And the many years of Remy success is emphasized in the 1913 season, when the greatest attention is being paid to choice of equipment.

Are these facts significant to you

The Remy Electric Company is the pioneer manufacturer of magnetos in this country—one of the first in the world.

It is the world's largest manufacturer of magnetos.

It created "Ignition Service."

We have more than fifty branches and service stations in North American motoring centers for intelligent service to Remy users.

More than 1,000 men are employed to build Remys.

This great force facilitates construction and deliveries with scientific, automatic, time-saving, accurate machines—protected by a fire-proof factory.

These men are electrical and mechanical experts drawn from every civilized country of the globe.

The Remy Electric Company has as a result of its tremendous volume greater buying facilities than any other ignition concern.

These facts, combined with the simplicity of the Remy construction, make it logical for the Remy Electric Company to offer the best motor car electrical equipment for the lowest legitimate cost.

A Message to Assemblers

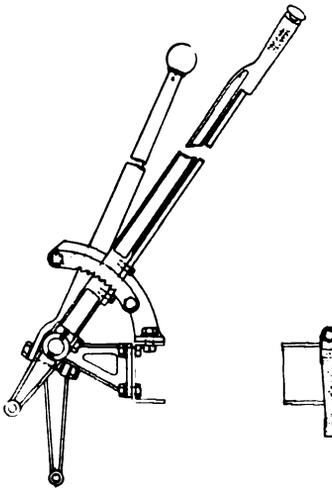
in Small or Large Lots

Let Us Furnish Your Cone Clutches, Joints, Rocker Shafts, Control Sets

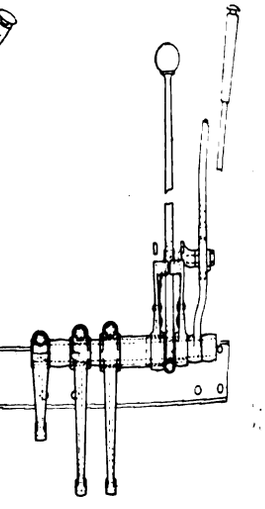
In offering these assemblies to the trade, we do so with the full knowledge that the designs are standard, containing not a single untried feature and following along the lines used by the most successful car builders.

Special attention has been given to the selection of material best suited to withstand the wear occurring to the individual parts; and letters received from customers, covering service during the season just ending, indicate that our efforts have not been wasted.

P-40 Cone Clutch



Cone is aluminum and has face machined after leather is riveted on, giving absolute fit in fly wheel. This feature and the special springs under leather insure easy engagement and long life.

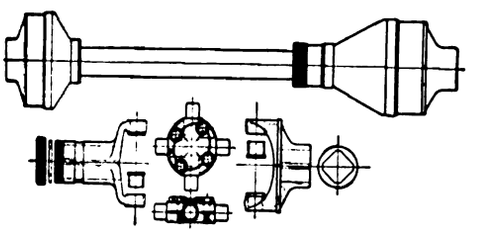


Will furnish either bronze or ball bearing throw-out yoke.

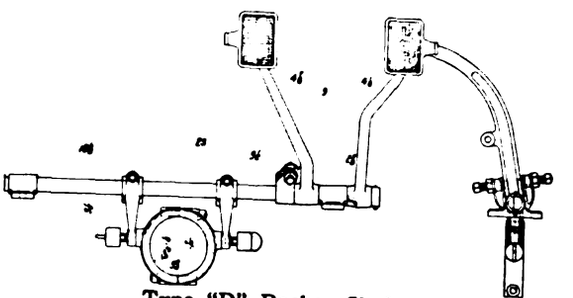
This type also supplied for 30 H. P. cars.

Type "C" Control

Designed for center control. General dimensions can be changed to suit special requirements. This type also made with gear shifting lever only, when both pedals are used to operate the brakes.



The Otto Konigslow Mfg Co.
Cleveland.



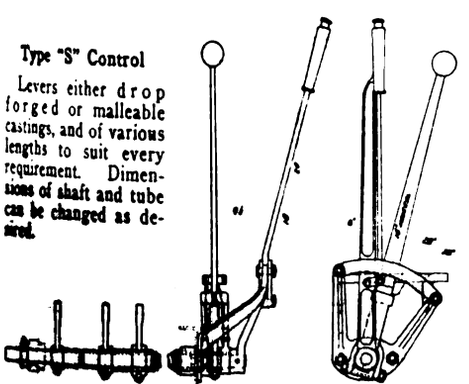
Digitized by Google

Truck and Pleasure Cars

P-30 Drive

Furnished as shown or joints only. Forgings are special analysis steel heat-treated and accurately machined. Note simplicity of design

Type "D" Rocker Shaft

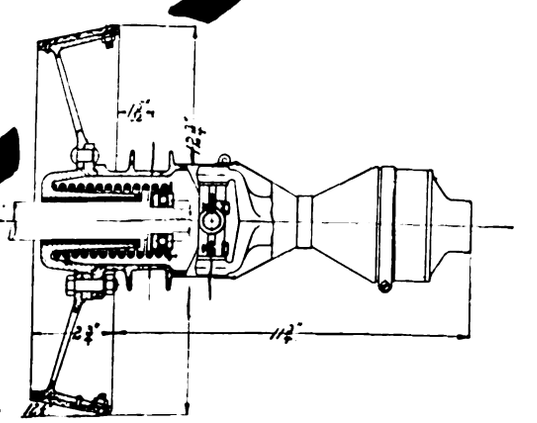


Furnished complete with pedals for brake and clutch. Throw-out yoke either bronze or ball bearing. Have a variety of styles of pedals both malleable castings and drop forged with separate pads, to suit special requirements.

We wish to especially emphasize the point that you are not restricted to dimensions as here shown. Send us your blue prints, or rough sketches will do, giving the essential dimensions; also advise whether interested in quantities or samples only.

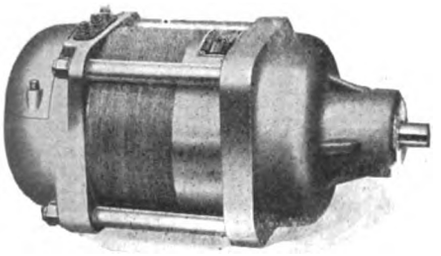
Considering design and workmanship, our prices will be found surprisingly low.

Type "S" Control



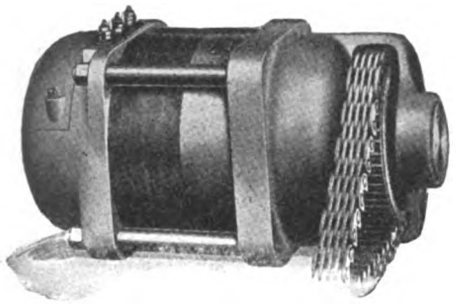
Levers either drop forged or malleable castings, and of various lengths to suit every requirement. Dimensions of shaft and tube can be changed as desired.

U-30 Cone Clutch



In this type standard double joints are used in place of sliding blocks. Can also furnish with single universal and extended shaft if desired.

Fitted with either bronze or ball bearing throw-out yoke.



The Otto Konigslow Mfg Co.
Cleveland.

APLCO Model A-7 Electric Engine Starter

APLCO Model A-7½ Electric Engine Starter

APLCO Flywheel Starter

APLCO Electric Engine Starters

The Simple and Foolproof Systems

Designed by V. G. Apple, the man who made the first dynamo for an automobile, the first electric lighting system for an automobile and the first electric engine starter (1900).

Not An Experiment But a Fully Developed Success

The Models A-7 and A-7½ having withstood a year of severest test in actual service can be depended upon to perform their functions with certainty and absolute reliability.

The Aplco System Is Not a Makeshift

Not so delicate in construction that the possibility of its not working has to be provided for with elaborate care. It is not necessary to have an army of engineers following these equipments about. The Aplco Electric Engine Starters are as dependable as the engine in your car and are ready to give service any hour in the twenty-four and in any kind of weather.

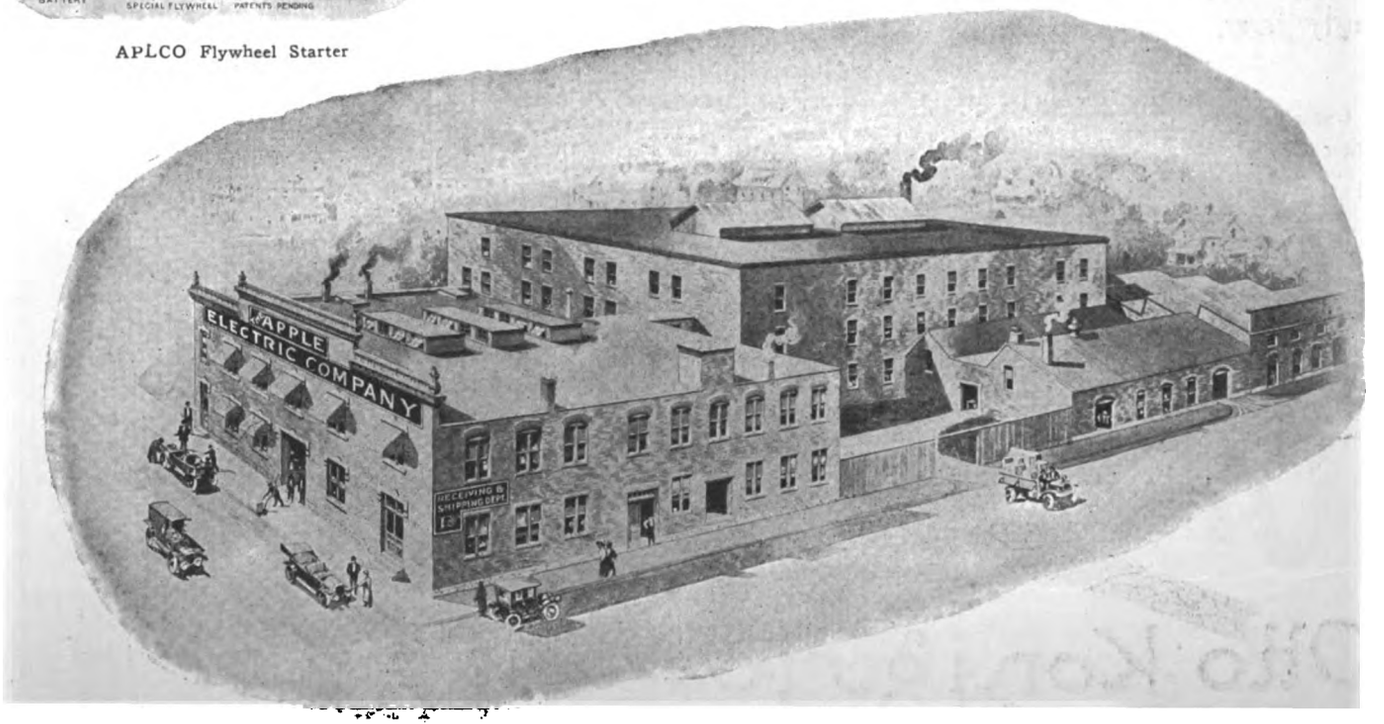
Note the Clean Cut Lines of the Aplco Models

They are three unit systems—Dynamo-Motor, Controller and Storage Battery. No additional apparatus necessary and they combine in one system every electrical function required on an automobile. Controlled by a system of regulation so simple a child can operate it.

See these three systems at our NEW YORK STORE, 20 VESEY ST., during the New York Show---1508 MICHIGAN AVE., during the Chicago Show.

The Aplco Flywheel Starter Will Be There

in operation on an automobile engine. This is the greatest engineering triumph of automobile history. It absolutely eliminates all gearing, clutches and extra bearings. Has just two parts, one attached to your engine crank case, the other bolted to your flywheel. No elaborate changes necessary to install. No complications. Not necessary to make a gear out of your flywheel. All three models can be seen at our New York and Chicago stores as well as the Aplco Electric Lighting Systems.



The Apple Electric Company

An Ohio Corporation. Capital $300,000 fully paid.

20 Vesey Street, New York *1508 Michigan Avenue, Chicago*

Factory and Home Office, Dayton, Ohio, U. S. A.

Knox Model 46-"Little Six" Colonial Berline.

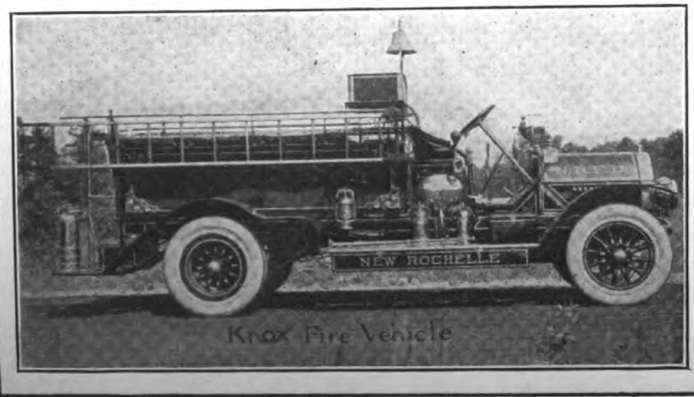
THE Knox COMMERCIAL

THE well-established reputation of Knox Pleasure and Commercial vehicles requires little or no argument here to those discriminating motorists who appreciate the value of cars of sterling worth and acknowledged reputation.

It is our intention in these pages to give a few condensed facts covering several of the more important Knox pleasure and commercial models.

Knox "Little Six" Model 46

A medium type six-cylinder car designed to meet the requirements of automobile enthusiasts who desire a trim, handsome six of reasonable capacity —a car with sufficient power and flexibility to serve in both town and country.



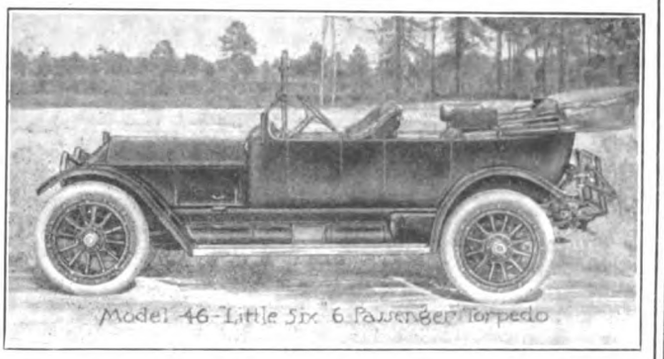
This model embodies the best features of approved European and American design, while retaining the vital characteristics of Knox construction, founded upon years of careful test and ripe experience. It is pre-eminently a model of rare distinction and exceptional merit.

Knox Closed Cars

These cars will stand the supreme test for silence which the closed type of body imposes, due to its tendency to increase the intensity of vibration, noise and rattle. The Knox chassis are ideal for closed car service on account of their reliability and the power, flexibility and silence of the Knox type of motor.

Knox Commercial Vehicles

We show here the Knox Martin Tractor, considered by experts to be the most practical and efficient means of transporting freight by motive power on the highway. It is particularly adapted for the transportation of coal, lumber and kindred lines, on account of the convenience with which trailer bodies can be interchanged on it, thus enabling the Tractor to be kept constantly at work with a high earning capacity.



Knox Fire Vehicle

KNOX AUTOMOBILE C
New York C
BRANCHES 1960 Broa

Digitized by Google

LINE OF PLEASURE VEHICLES

The unique arrangement of this Tractor permits the larger part of the load to be carried on steel tires, with a consequent material saving in upkeep cost, as well as affording complete accessibility to all vital parts and a more perfect road flexibility than is possible with the conventional motor truck.

Knox Fire and Civic Vehicles

Knox motor driven fire apparatus and civic vehicles have made an international reputation for reliability and service and are now found as standard equipment in some of the best and most up-to-date municipal departments of the United States as well as in several foreign countries.

The reliability, economy and speed of response made possible through the use of Fire and Civic apparatus of the Knox type is promoting a rapid and nation wide change to motor driven equipment.

STANDARD PLEASURE CAR EQUIPMENT

FOLDING TONNEAU SEATS—Extra folding seats with spring cushions are provided in seven-passenger types.

TOP—Knox artificial leather or mohair, unlined, with storm curtains and dust-cover included.

WINDSHIELD—Single folding type with double adjustment of upper glass.

LIGHTING—Four-cylinder models have combination oil and electric side and tail lamps with current from storage battery; gas headlights with electric sparker and Prest-O-Lite tank. Six-cylinder models have Berdon dynamo lighting system with electric head, side and tail lamps and storage battery auxiliary.

STARTER—Electric, of special Knox design.

RIMS—Fisk removable rims for bolted-on tires or universal Q. D. demountable, including one extra rim.

TIRE PUMP — Compressed air pump driven by the motor.

SPECIAL HORN—Combination Klaxonette and Reed Horn.

SPEEDOMETER AND CLOCK — Mounted on dash shield for convenient observation from both front and rear seats.

TIRE CARRIER AND BAGGAGE RACK—Option on horizontal metal tire trunk for one tire with permanent rack or vertical carrier for two tires with folding rack; both located at the rear.

COMPLETE TOOL EQUIPMENT — Including also jack, hand tire pump and tire repair kit.

ROBE RAIL AND FOOT REST.

Church-Field Brougham

Church-Field Electric

The Church-Field Electric combines the convenience, the simplicity of operation, the economy and the elegance of the electric vehicle with the perfect control, the power, the reliability and the general efficiency of the gasoline motor car.

It is pre-eminently the car of the discriminating man or woman who demands that the family conveyances be expressive of personality and place in the community.

The Church-Field is the only electric car that has a two speed planetary transmission.

This means an enormous saving in the cost of maintenance, because it minimizes the wear and tear on the batteries and the consumption of current.

Furthermore it places the Church-Field on the same footing with the gasoline car in climbing hills—the crucial test of power.

In a few words, the Church-Field is the electric of most power, the most perfect control—the most elegant—and distinctive.

To convince you of this, we only ask that we be allowed to demonstrate the Church-Field to you.

CHURCH-FIELD MOTOR CO., Sibley, Mich.

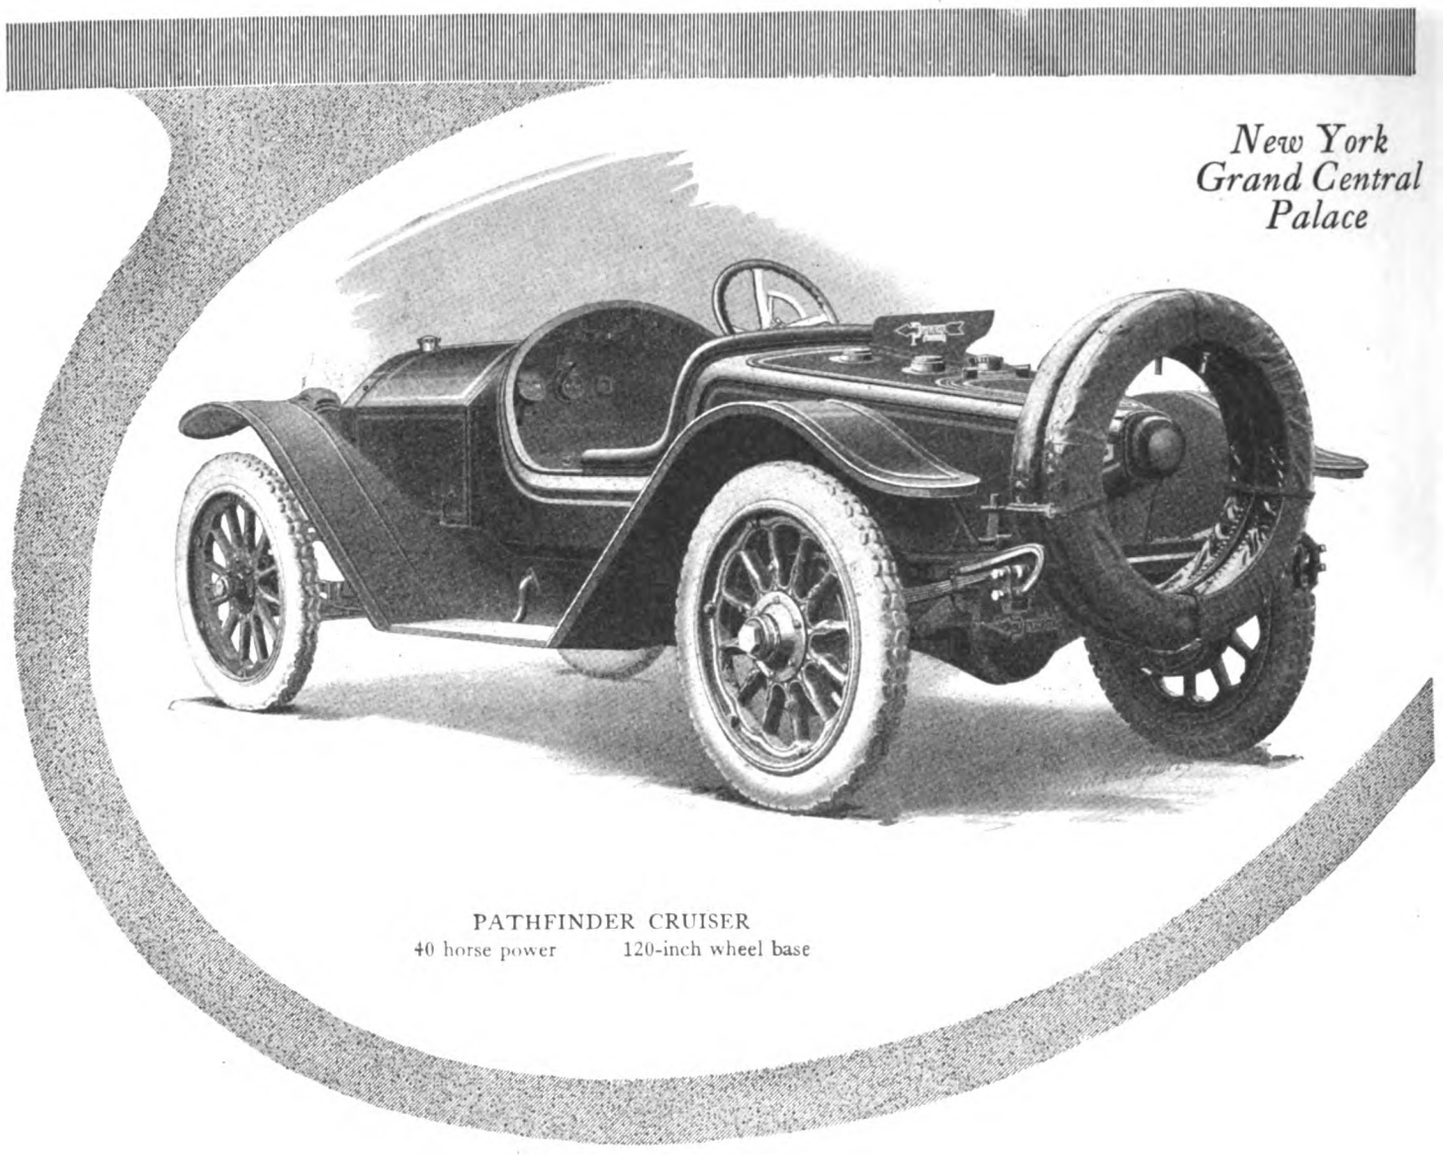
A Few Church-Field Electric Features

Ten point-speed control.

Two-speed Planetary Transmission.

Specially designed and patented springs.

Specially manufactured motor with 75 to 100 per cent more power than those used in most electrics of similar type.



Body is low, underslung, preventing skidding and permitting easy entrance and exit.

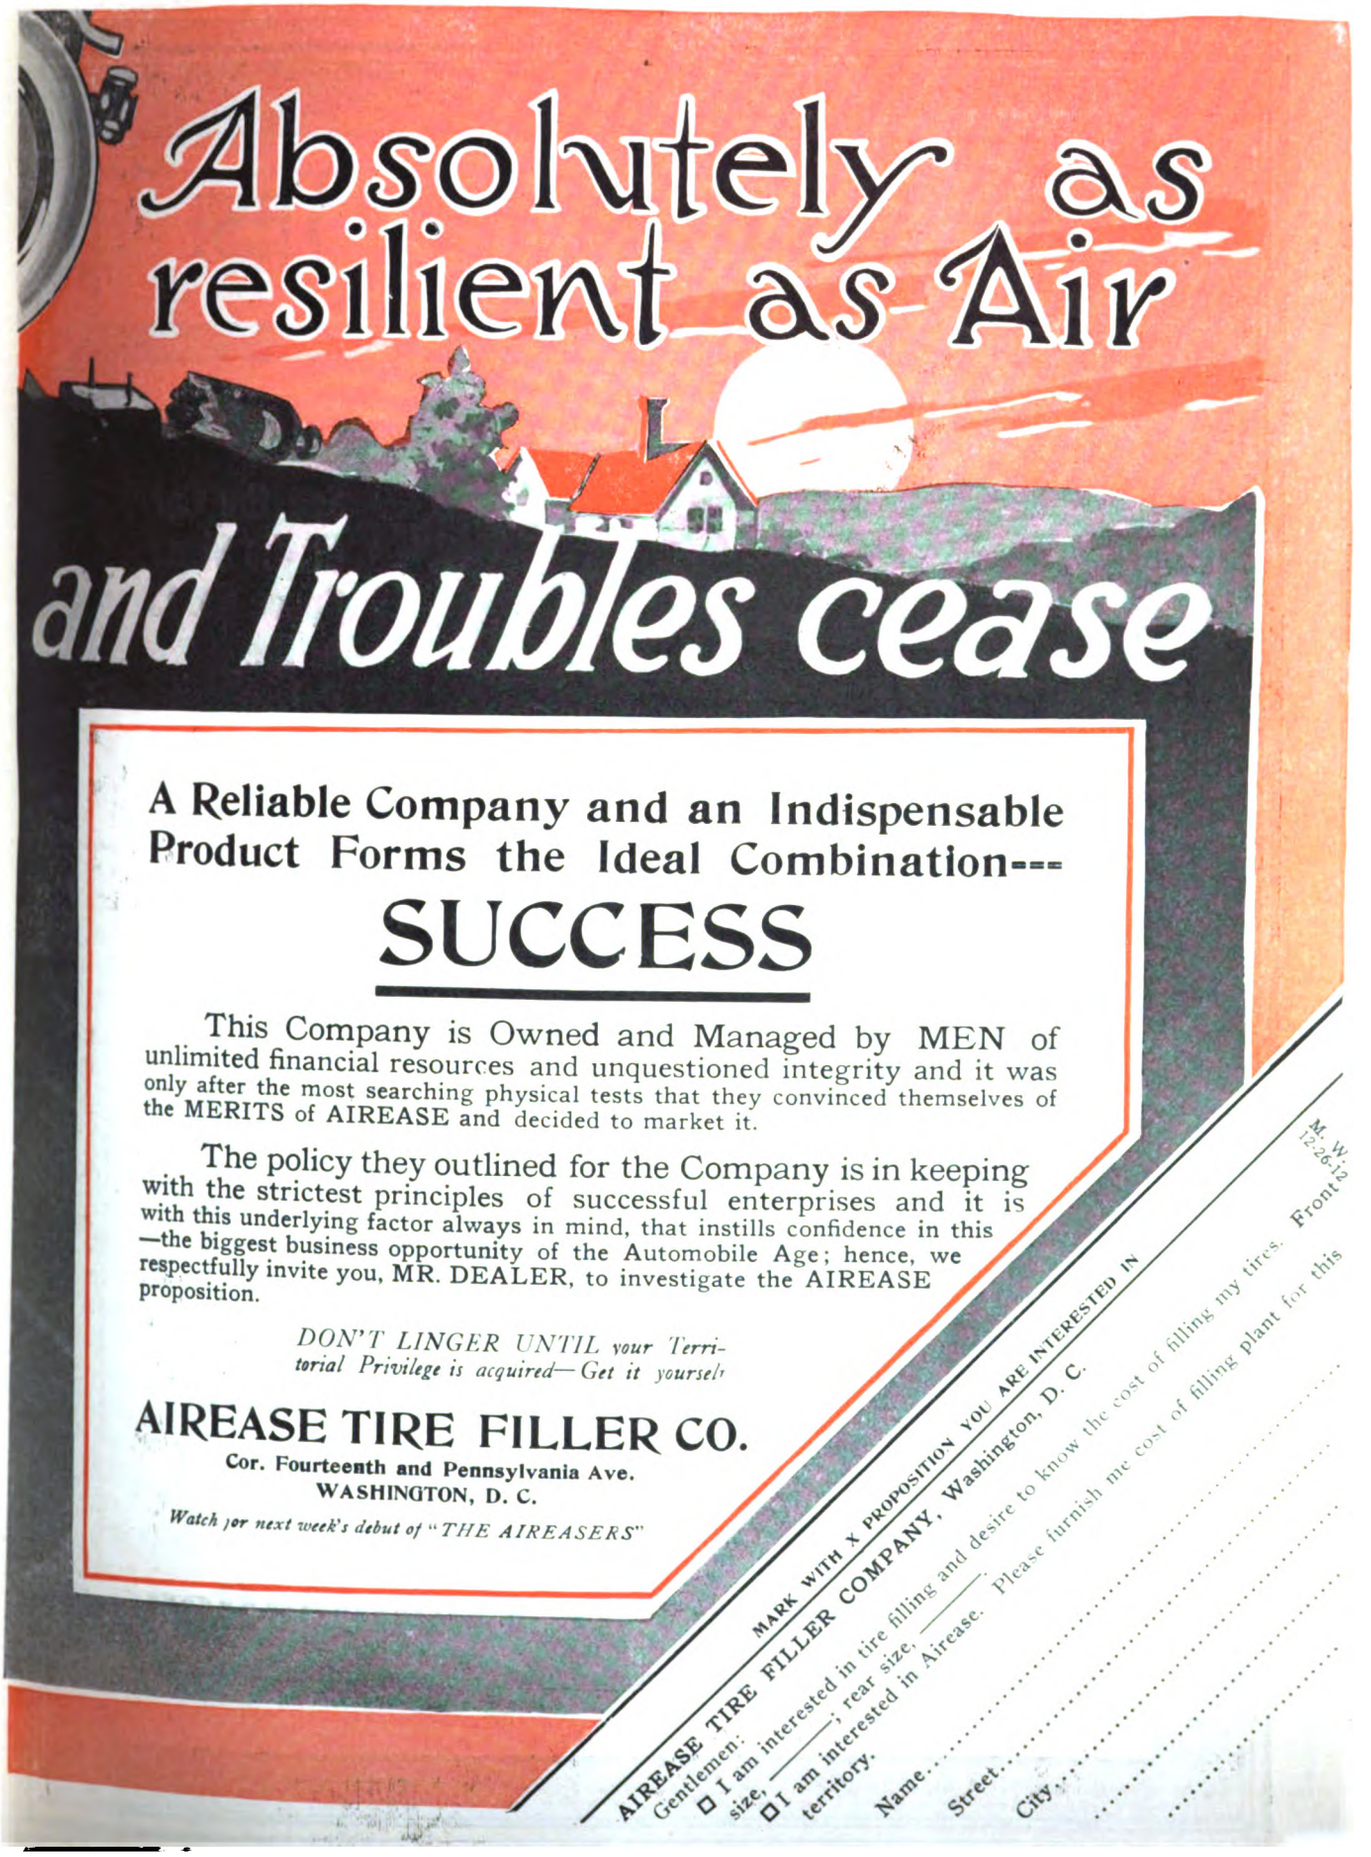
No more Punctures Use AIREASE

AT LAST the Solution of the Tire Expense Problem Has Been Solved---

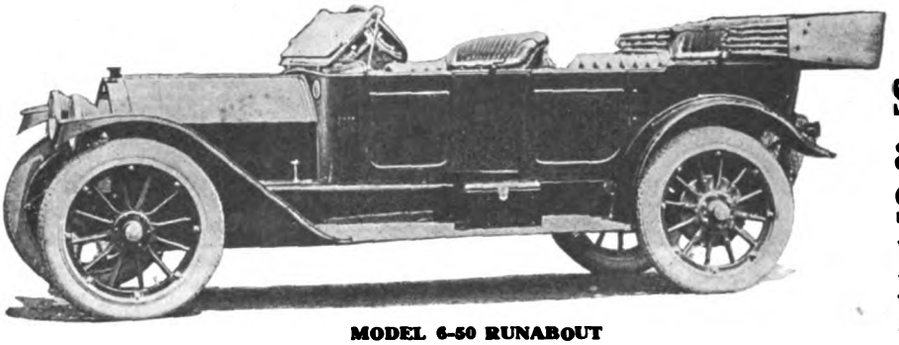
AIREASE



WE KNOW that AIREASE is a wonderful discovery and we want the Motoring Fraternity to know it and participate in this most remarkable invention; hence, we are inaugurating a stupendous National Advertising Campaign in keeping with it.

UNLIKE other attempts in this direction, we do not claim AIREASE a "cure-all" for eliminating tire troubles and expense; but we do make the unqualified claim that AIREASE is the ONLY SUBSTITUTE for air in tires that will not injure the tire and absolutely rides as easy as air and will stand-up under all conditions without disintegrating, solidifying or shrinking; and, also, that AIREASE contains no acids, glue or other substances so injurious to rubber.

AIREASE is a SURE SELLER and every sale will increase the demand; hence, to meet this demand, we must have representative men throughout the Country with Territorial Rights to sell AIREASE—the most wonderful invention since the automobile arrived.



ARE YOU THE MAN? If so, there is no time like the present to knock at the AIREASE door of opportunity

KLINE KAR GET THE BEST

MODEL 6-50 RUNABOUT

See the Car at the Show Space No. 13 In the Palace

Mr. Dealer, here is a car, the Kline Kar, which you cannot ignore when you visit the show. We have arranged to exhibit all of our models in the Grand Central Palace, New York City, and at that time will be able to make you a proposition that will enable you to go into the open market and sell our product with profit to yourself and to us.

Series A Kline Kars embody features that make them the ideal medium priced automobile. Wheel bases have been lengthened, valve springs enclosed, auxiliaries added to the rear springs, tire sizes increased, upholstery made deep and luxurious, body room increased and the general body lines made even more beautiful than heretofore.

No matter what your requirements, we have the car you want.

Prices, $1,850 to $3,500 (FULLY EQUIPPED)

Edelmann Economy Gauge Enjoined

Twitchell Patent Again Sustained

Injunction Issued in Favor of

A. SCHRADER'S SON, Inc.

Notice Is Hereby Given to the Trade That:

In a suit brought in Chicago by A. Schrader's Son, Inc., against E. Edelmann & Co., makers of the Edelmann Economy Tire Pressure Gauge, for infringement of Twitchell patent No. 927,298, Judge Humphreys of the U. S. District Court for the Northern District of Illinois, on December 18, 1912, issued a preliminary injunction restraining E. Edelmann & Co. from the manufacture, sale and use of the Edelmann Economy Gauge.

This injunction, which was granted despite vigorous opposition by E. Edelmann & Co., is the last of an unbroken series of victories for the Twitchell patent and sustains the contention of A. Schrader's Son, Inc., sole owner of the Twitchell patent and all rights thereunder, that this patent covers all pencil type gauges now on the market.

The following gauges have been held by the courts to be infringements of the Twitchell patent:

The Northam Gauge—held to be an infringement by the U. S. District Court for the Southern District of California in the suit of Chas. R. Twitchell vs. Northam Auto Pressure Gauge Co.

The Prest-O-Lite Gauge—held to be an infringement in the suit of Chas. R. Twitchell vs. Prest-O-Lite Company in the Southern District of New York.

The Safety Tire Gauge—held to be an infringement by the Supreme Court of the District of Columbia in the suit of Chas. R. Twitchell vs. Rudolph & West Company.

Furthermore, in the suit against the New York Sporting Goods Co. the **sale** of the Edelmann Economy Gauge was enjoined.

All other infringers will be promptly prosecuted.

The only gauges licensed for use or sale under the Twitchell patent are the Schrader Universal Tire Pressure Gauge, the Twitchell Tire Pressure Gauge and the Allen Tyrometer.

The trade is warned that the sale or use of the Edelmann Economy gauge or other infringing gauges is as much an infringement of the Twitchell patent as the manufacture of the gauges themselves.

Consequently jobbers and dealers handling infringing gauges are liable to injunction and damages.

Schrader gauges may be obtained for $1.00 from all tire manufacturers, jobbers, supply dealers, garages, or from

A Great Car At the Big Shows

Plan to spend a good share of your time at the New York Show or the Chicago Show witnessing the special demonstration of the Dreadnought Moline M-40 five passenger touring car and two passenger roadster. When you are thoroughly informed as to these superb cars —see everything else and make comparisons. Make our booth your headquarters. Look for the

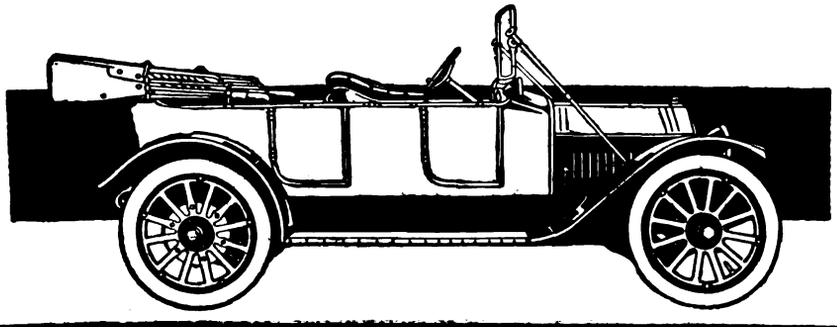
Dreadnought Moline M-40

Electric Self-Starter---Electric Lights

Completely Equipped, $1,950

At the New York Automobile Show, Madison Square Garden, January 11 to 18, 1913
At the Chicago Automobile Show, Coliseum, February 1 to 8, 1913

This famous car holds unapproached world's reliability records. Won in the classic Chicago Reliability Run 1910, 1911 and 1912. A superb car. A car with a pedigree. A car you will be proud to ride in, and happy to drive. Its owners place every confidence in the ample power of the famous Dreadnought Moline Long Stroke Motor—its passengers enjoy the highest degree of luxury and convenience. Sturdy and reliable over the roughest country going, its flexibility makes it ideal for crowded city traffic. It has power and endurance for touring —beauty and style for the boulevards. In every sense of the word—a superb car.



On its 124 inches of wheel base rests as great car value as you will find in America. To prove to yourself this statement we ask you to read the following list of

Over a Score of Added Features

10 inches added wheel base (now 124 inches)
Ward Leonard Electric Self-Starter and Electric Lighting System
5 more horsepower
Improved Steering Gear
Gasoline tank under cowl—
Indicator and filler on dash
Inside control
Ten inch upholstery
Turkish spring cushions
Flush side bodies
Nickel trimmings
Long stroke motor, 40 H. P.
Enlarged brakes
Improved springs
Large wheels and tires
Exceptionally roomy body
Demountable rims (set of 5)
Double independent ignition system
Carburetor dash air control
Rain vision wind shield
Moline silk mohair top
Speedometer
Completely equipped

We invite the closest scrutiny—the most careful comparison of values. Winning every Reliability event entered in 1911 and 1912, the Dreadnought Moline with its Long Stroke Motor, is rightly considered "One of the Most Reliable Cars in America." See the car itself at the New York Show—Jan. 11 to 25, 1913; or the Chicago Show, Feb. 1 to 15, 1913.

We have some live and interested territory for high-class progressive dealers only. If you can qualify write us on your business stationery. We will reply personally and confidentially. Handsomely printed informative literature on request.

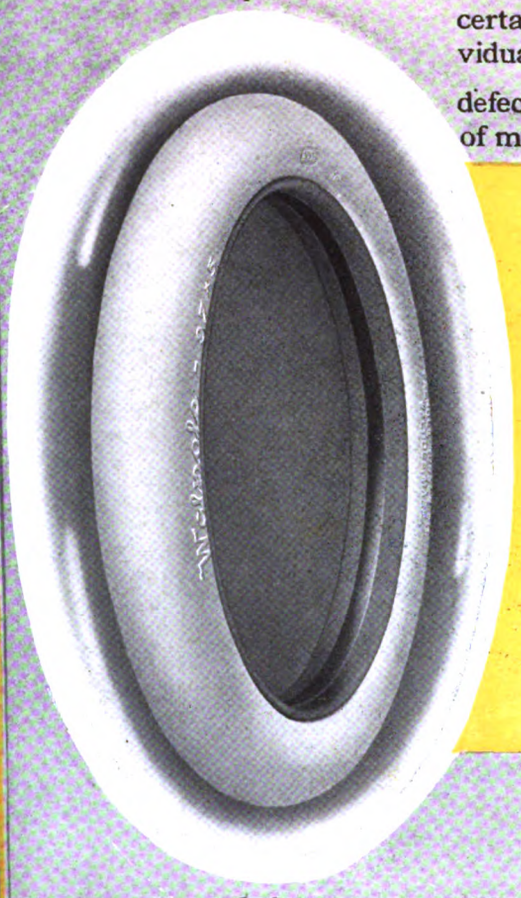
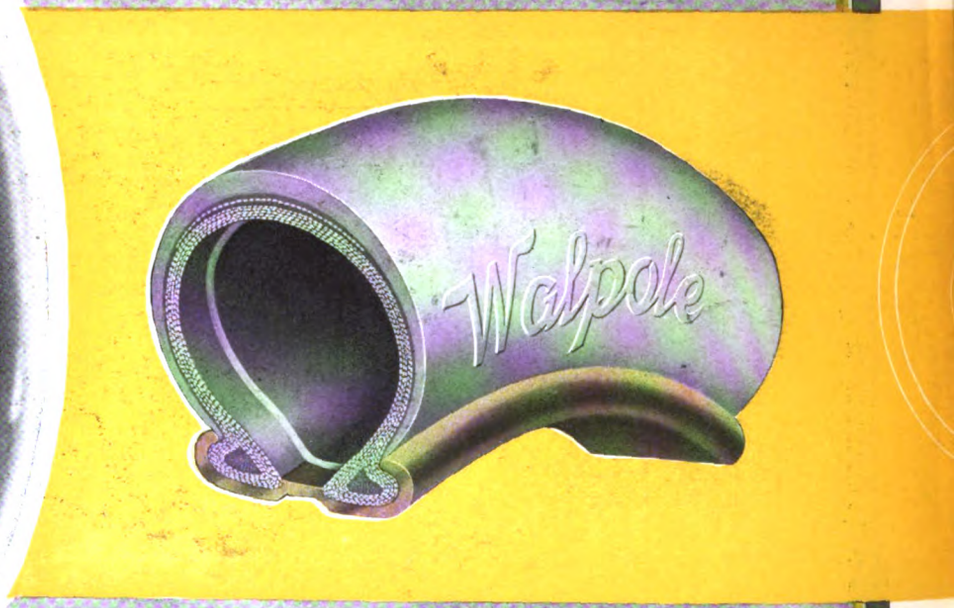
Walpole "NO STONE BRUISE" Tires





WE BACK OUR DEALERS WITH A 4000 MILE GUARANTEE

Digitized by Google

Walpole SERVICE MEANS JUST THIS—

Tires built expressly for those who use the best—tires which you, Mr. Dealer, ***can recommend and sell,*** backed by definite mileage guarantee that must make good. The standard set by this company is high. Its basis is the conservation of the car owner's satisfaction. Service and quantity of production at the expense of quality has never had a place in this organization. Such combination is impossible. Walpole tires are built and cured as a unit. Each tire represents a certain and definite amount of personal, individual work, which must, of necessity, preclude defects of any character. Couple these methods of manufacture with the ***highest grade rubber***

and fabric the markets afford—add to this combination, ***rigid, thorough, individual inspection through every process of construction*** and you can, Mr. Dealer, guarantee to your trade that when a Walpole tire leaves this factory it is as near perfect as workmanship, facilities and quality of materials can make it.

When you recommend Walpole tires you do it with confidence inspired by the policy of this company and to back this up we will protect you in the guarantee that each Walpole tire is guaranteed against stone bruise for four thousand miles' service.

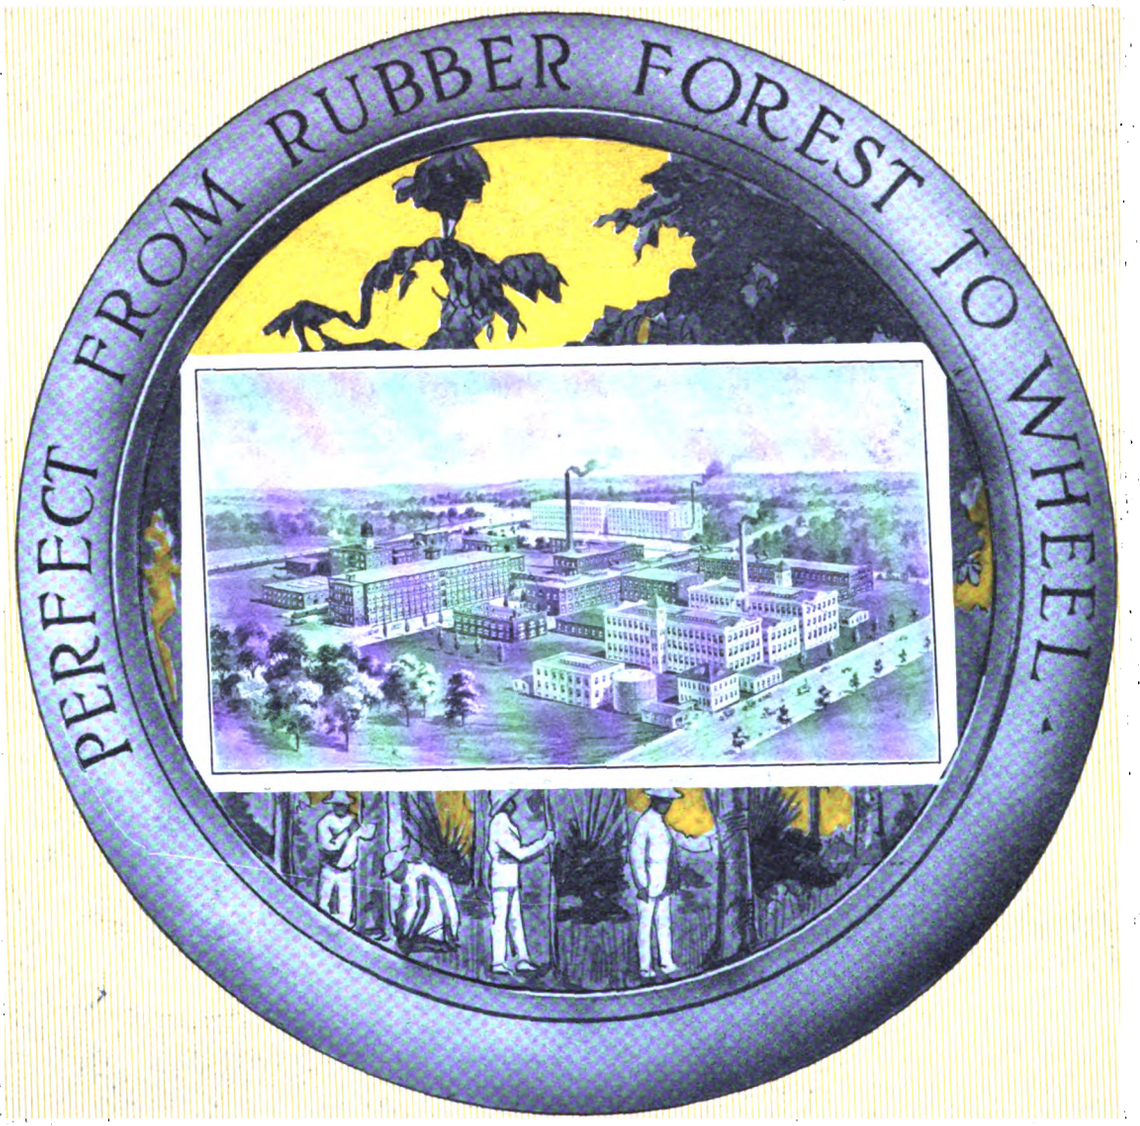
We will exhibit at the Madison Square Garden Show, New York, in SPACE 232, BALCONY

Digitized by Google

DEALERS — BAD TIRES NEVER MADE GOOD BUSINESS

Your own best business instinct most certainly dictates the handling of good tires. Dealers who care more for an upbuilding of business for the future ***will not and do not*** recommend or sell tires of doubtful worth. Such policy is a big factor in the commission of slow business suicide.

It is potent to those in the trade and to car owners with tire experience back of them, that tire upkeep is one bugbear militating against more and better automobile sales. It is the unreliability of the average run of well named "cheap" tires that has done much to discourage the purchase of cars by those who could well afford to pay for them but who fear the uncalled for item of expense —tire upkeep.



We know that Walpole tires are inspiring confidence and creating sales wherever they are introduced. We know that Walpole dealers are keeping friends and making more friends through their sales.

In the production of well made tires, the interests of the car manufacturer, the tire manufacturer and the dealer are identical. And so we come to you with confidence, inspired by the quality of our products, and ask you to investigate them. To understand in full the "whys and wherefores" back of their production. With the facts in your possession you will become a friend and customer and you will recommend these tires to your manufacturer as part of a standard equipment.

We will exhibit at the Coliseum Show, Chicago in SPACES 196 and 197, IN THE BALCONY

We Grind and Machine Crankshafts Exclusively

We can grind anything from a motorcycle crank up to a six-throw automobile crank.

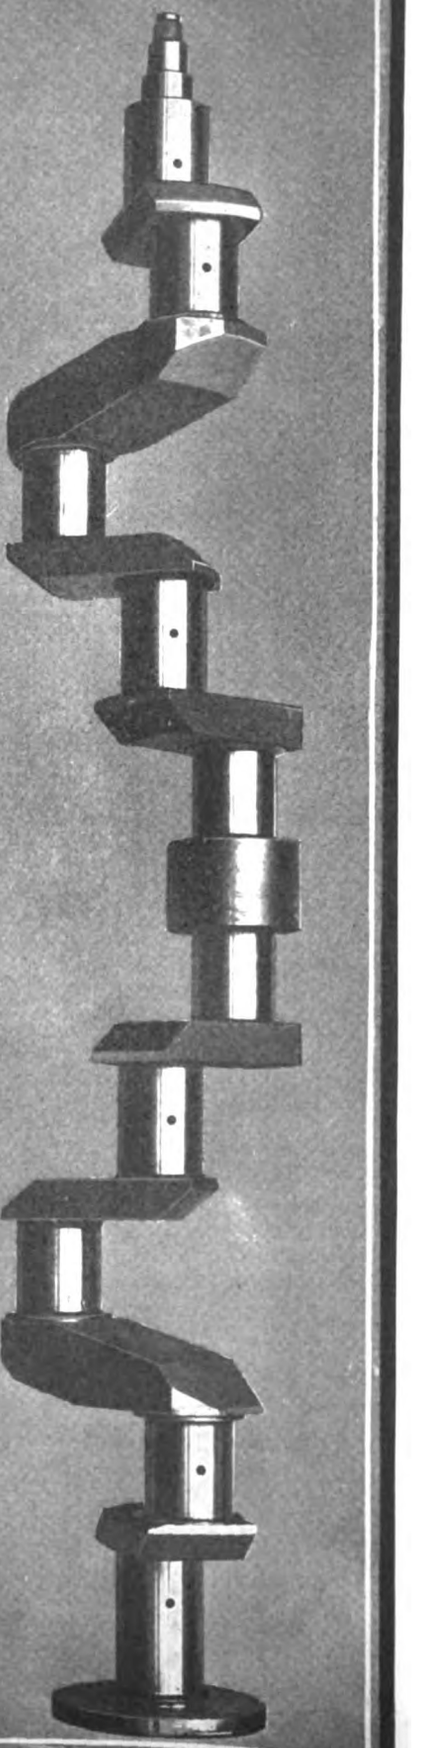
Been grinding and machining crankshafts for over seven years. Doing work for some of the best and biggest concerns in the Automobile industry.

Incidentally we have developed one of the most complete and thoroughly organized plants of its kind in the world.

In Our Lathe Department we have a very complete equipment of special crank-turning lathes and heavy-duty engine lathes, all fitted with the best tools for this class of work.

Our Grinding Department is as complete as we know how to make it. We use modern methods and the latest improved crank pin and plain grinders which are constantly tested for accuracy by experienced men.

Our Finishing Department is equipped with machinery especially designed for accuracy and speed on turning gear fits, cutting tapers, threading, drilling flanges and oil holes, cutting key-ways, etc. All our work is carefully inspected after each operation and finished work is inspected twice before shipping.



Our Tool Room equipment has been carefully selected with a view to close work on jigs, gauges, and all necessary tools for our shop.

We Have Made a Specialty of machining and grinding crank shafts for over seven years, and our constantly increasing business is a good indication that we know how to make good cranks.

Our little brochure—"A Modern Crankshaft Factory," sent on request, gives interesting details of our equipment and facilities. Get in touch with us.

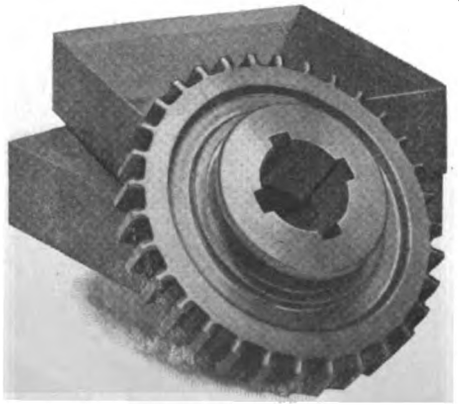
This factory has manufactured over 1,000,000 Automobile Gears during the past three years

This big demand for "Grant-Lees" Gears is a plain case of "survival of the fittest." Through years of ordinary and unusual service in the mechanism of hundreds of thousands of automobiles, they have proved the most durable and longest lived. And to no little extent is this durability due to the fact that

Our Factory Is Equipped Most Efficiently

Upon the heat treatment, for instance, depends the toughness, the wearing qualities, the life of the gear.

Our heat treating department is equipped with the most accurate machines for measuring heat that science has produced.



Automatic Control of Heat

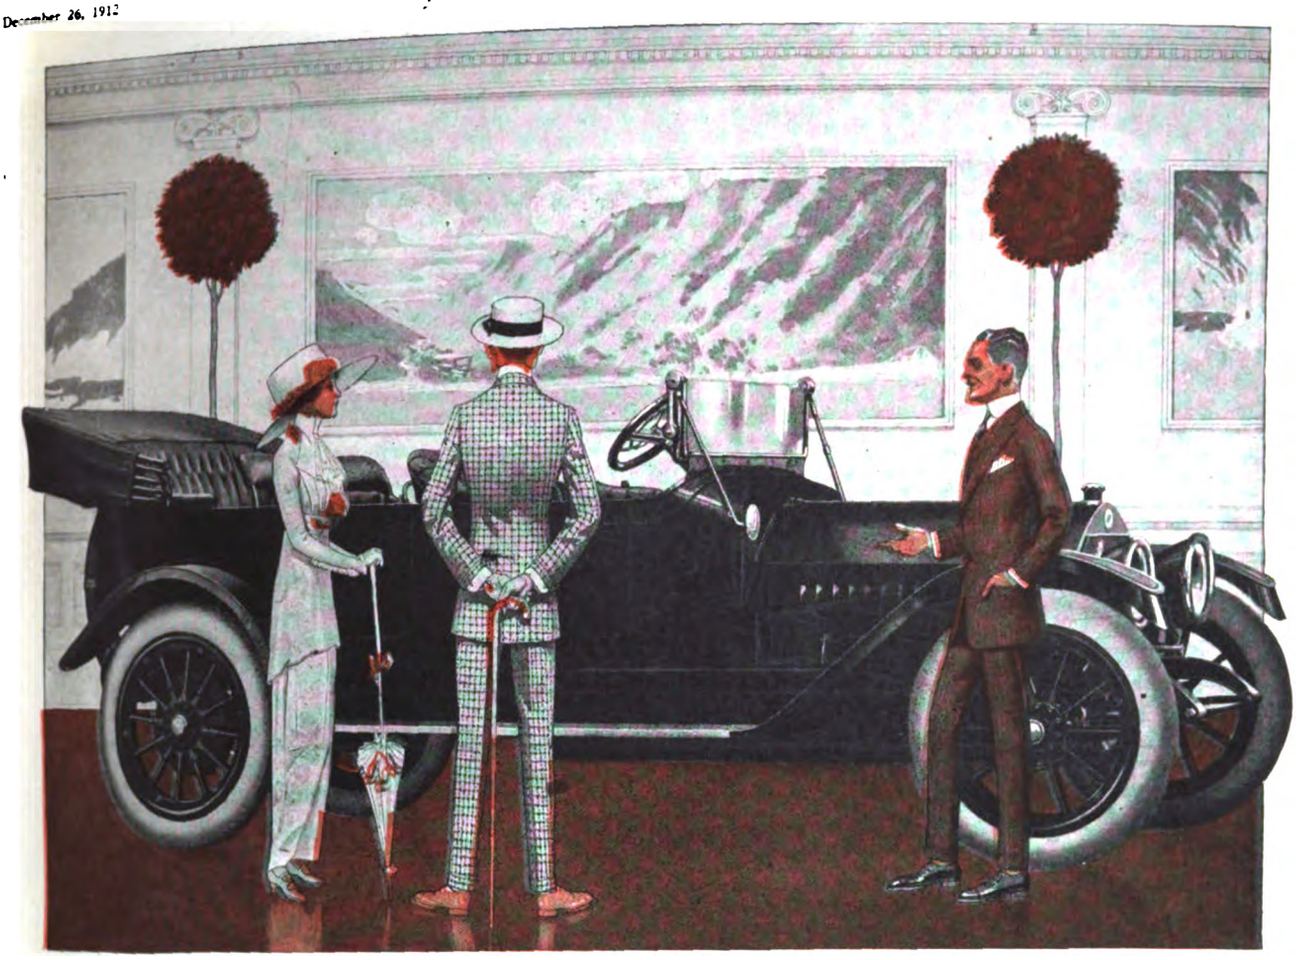
The heat of our furnaces are maintained to a uniform degree by automatic pyrometers.

To be doubly certain, the exact heat is constantly shown, day and night, on a recording pyrometer in the office of our factory manager.

Toughening and Testing of Steel

The steel in every Grant-Lees Gear is analyzed—made tough, elastic and durable. After every gear is finished the proper depth of case and hardness is proven by our special method.

We Pack Our Gears Like Ball Bearings



Each Grant-Lees Gear is accurately machined and perfect to the smallest detail. To guard them against even scratching in shipment we pack them individually as shown in the picture.

Manufacturers who demand the very best are fast adopting Grant-Lees Gears.

THE Detroit Electric
Society's Town Car

The Detroit Electric—
The Big Opportunity for Dealers

Clear Vision Brougham

Model 42
$3000 F. O. B. DETROIT

Mr. Dealer, do you realize the wonderful possibilities in the electric car field, not only for big future business, but for immediate sales and handsome year-around profits, now? You should appreciate the fact that this electric is destined to be the car for all city and suburban uses. It is just the right size to be practical. It is simple and safe to operate; it is easy and cheap to maintain.

The Detroit Electric is the ideal car for winter use as well as for summer driving. Electrically started, electrically lighted and electrically controlled, it offers the utmost in luxurious comfort and cleanly travel. It is a car suited for the business man or the society woman for every day in the year—a car combining simplicity with the advantages of electricity obtainable in no other type of car.

Electric current is now the cheapest form of energy and electric construction is by far the least expensive to maintain. Power is easily obtainable at any service station at low cost and is made still more convenient and inexpensive through private charging outfits.

The simplicity of electric construction requires the minimum of attention. The Detroit Electric has no complicated mechanism to require adjustment and care. Very little oil is used, which means not only small expense, but freedom from dirt and grease.

Roomy and comfortable, the Detroit Electric Clear Vision Brougham gives the luxury of the most expensive limousine at proportionately low cost. Deep, soft upholstery, rich artistic trimmings and fine finish of all parts give the Clear Vision Brougham a comfort and beauty of the highest type.

The agency for Detroit Electrics is the most valuable asset you can have in your business. We recently had occasion to change one of our agency connections and three different men traveled 700 miles each to Detroit to secure this agency.

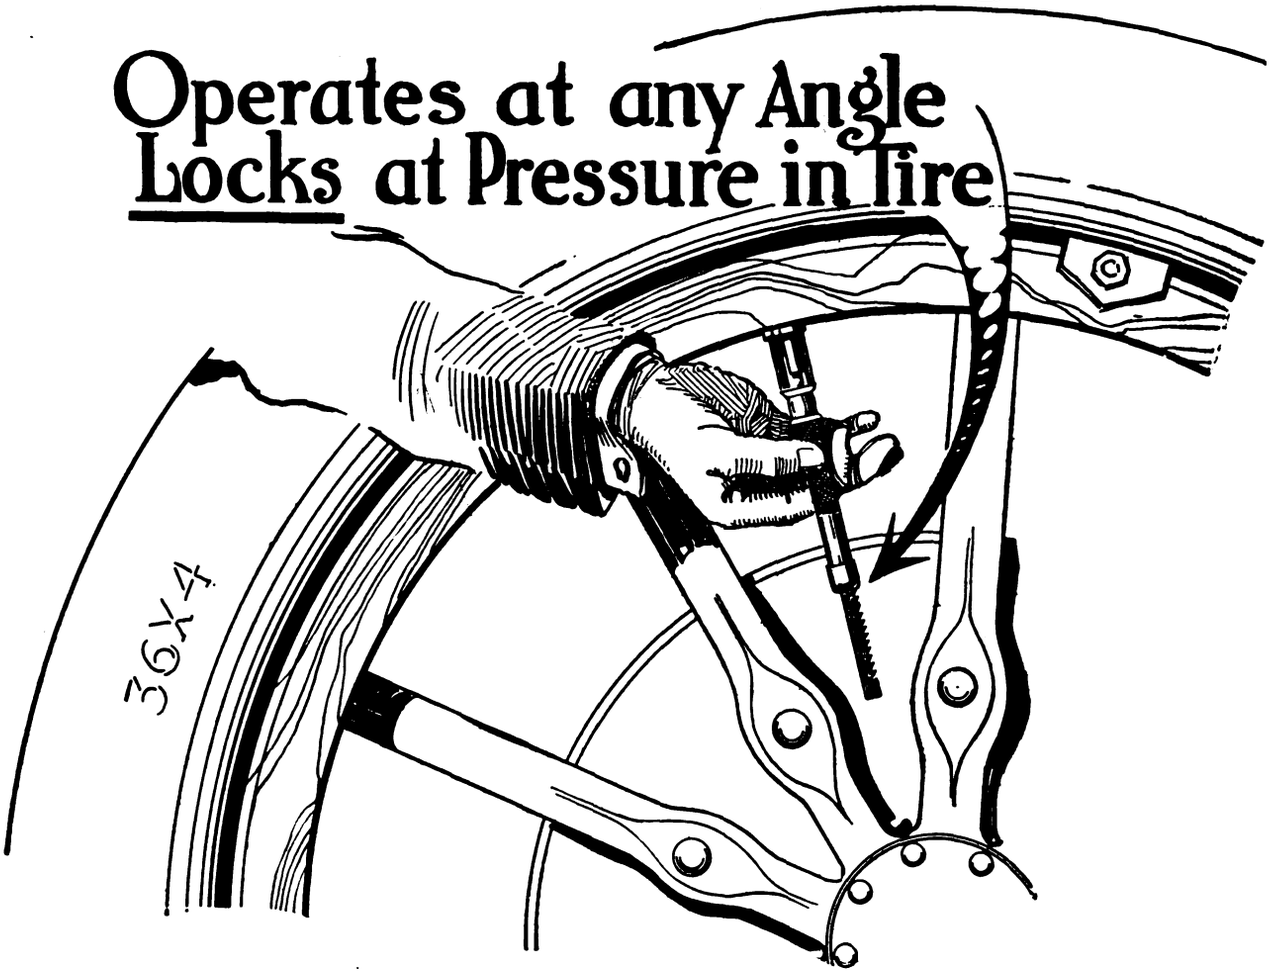
Detroit Electric Bodies of Finest Material and Highest-Grade Workmanship

The panels, mouldings, window sash and roofs of Detroit Electric bodies are made of **pure aluminum,** the advantages of which type of construction are readily seen.

Aluminum permits of shaping into more artistic lines than any other material. There are no sharp angles, or square corners in the bodies of the Clear Vision Brougham. Beautiful, rounding, curved effects are much in vogue and are **only possible** with aluminum, which can be shaped as easily as gold and silver, and after hardening has the tensile strength of iron.

Aluminum is lighter than wood, which is a big item in saving weight. It takes a beautiful finish and retains it without warping, cracking or checking. Detroit Electric bodies remain beautiful. The greatest care is taken to eliminate all noise. Bodies are cushioned from the chassis frames. A thick layer of felt matting is put between the aluminum roof and the top ribs of the frame for this purpose. Fenders are also of aluminum, each pair being fully **enclosed** between step and body.

Clear Vision Features— New Seating Arrangement



The Clear Vision feature of the 1913 Detroit Electric with all seats facing **in the direction of travel,** gives an unobstructed view ahead to all occupants. No one is compelled to sit facing backward. The driver sits in one of the front seats, an arrangement which insures safety and comfort, obtainable in no other way. The seats are all so **centrally** located that the driver is in no way noticeable whether alone or with others.

The New Positive Lock Stop Twitchell Air Guage

Operates at any Angle Locks at Pressure in Tire

Tire Insurance for $1.00

THE new Twitchell is the most accurate, simplest, most durable and most easily applied and read tire gauge made. It can be used with the tire valve at any angle and positively locks at pressure in tire—two essentials for a first class tire gauge which are exclusive Twitchell features. With a Twitchell gauge you don't have to pull the wheel around until the valve is at the bottom of the wheel. The ratchet makes it possible to get an accurate reading with the valve at any angle. The indicator bar is held not merely by friction but positively locks at the pressure in the tire and remains there until released by pressure on the end of the bar. That means that you can be sure of an accurate reading even when you are obliged to carry the gauge to the headlight at night.

With the aid of a Twitchell you can always keep your tires inflated to proper riding pressure and not only **lengthen the life of your tires** but **avoid 75 per cent of your tire troubles.** Yes, 75 per cent, for that is the proportion of tire troubles that are directly due to improper inflation.

The Twitchell is Tire Insurance

See the Twitchell Gauge at any of the big Automobile Shows and be convinced of its merits. A Tire gauge that can carry the advertising we are giving the Twitchell **must** be a **good** tire gauge—it must be the **best gauge to use**—consequently **the best gauge to sell** if you are a dealer.

The SPARTON

Dimensions:
Length, 12 inches
Flare, 7½ inches
6 Volts
Runson Dry Cells or Storage
Black enamel and brass or nickel bell

The First Electric Horn of Quality and Efficiency—At a Quantity Price

That headline means exactly what it says. It is the essence of our message. We cannot think of a single reason why it should be qualified. In size, mechanical and electrical construction, beauty of appearance, and volume of tone the "Sparton" compares only with the most expensive motor-driven horns. In durability and economy of current, it outstrips all. Its price is about one-third.

What the Fan Business Taught Us

We have been building fans for automobile engines for years. Today there are more Sparks-Withington Fans in use than all other makes combined. The secret of our growth is told in three words—Quality, Efficiency, Price. We designed the best fan, built it in quantities—got the price right. We are applying the same methods to the electric horn business.

How the "Sparton" Was Developed

It took over two years to develop the "Sparton." During that time it has been subjected to every conceivable test. We wanted to be absolutely sure we were right before we started to build it in quantities. New machines, that would give the horn a severer test than years of service in use, were invented. We knew how to get tone quality—we wanted durability—a horn that would stand up longer than any other—and we have it.

Special Machines Designed for Quantity Production

After the conclusion of all tests we designed special machines for making the various parts. These machines and the fact that we make every part of the "Sparton" horn permit us to quote prices unheard of for a high quality motor-driven horn. Remember, quality and efficiency have been added—not sacrificed.

Facilities That Enable Us to Produce the "Sparton" Horn at "Sparton" Prices.

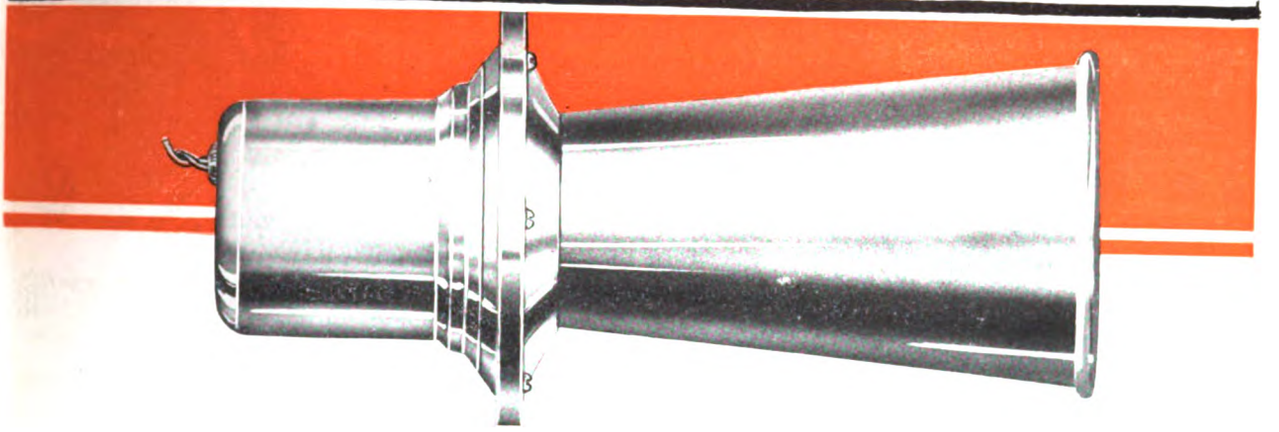
1—Complete and modern machine shop for building tools.

2—Complete sheet metal plant.

3—Battery of High Speed Automatic machines.

4—Complete Electrical Department.

5—Enameling Department.



6—Plating Department.

7—Heat Treating Department.

Digitized by Google

Electric Horn

At Every Turn We Save You Profits That Every Other Manufacturer Must Pay.

We build our motors complete, manufacturing shafts and high speed bearings on high speed automatic machines; we stamp the laminations; wind both armatures and field coils; build a specially designed commutator; do all our own electrical work.

We stamp the bell, diaphragm holders, front and rear, diaphragms, diaphragm actuators, motor covers, push button springs and castings.

For all these operations other horn makers pay a profit to someone else.

Big in Size—Big in Tone—Big in Value
Neither Shrieky, Squawky Nor Scary

It is impossible to describe "Sparton" tone. It is big. It is forceful. It is instant. It warns and guards but neither haggles with nor insults. It has distance-penetrating ability that adds safety to driving. It demands right of way and gets it without offense. It has the power of bigness and dignity.

This tone is produced with minimum current consumption. The "Sparton" on test showed lower current consumption than any motor-driven horn of similar size. In tone quality experts pronounce the "Sparton" superior.

Two Styles Ready

The "Sparton" can be furnished in two standard types:

Dash Type—In Black Enamel and Nickel or in Black Enamel and Brass.

Under-the-Hood Type—In Black Enamel.

The dash type is twelve inches long with a flaring bell seven and a half inches wide. It looks big and is big.

The under-the-hood type has same motor and construction but is a trifle shorter.

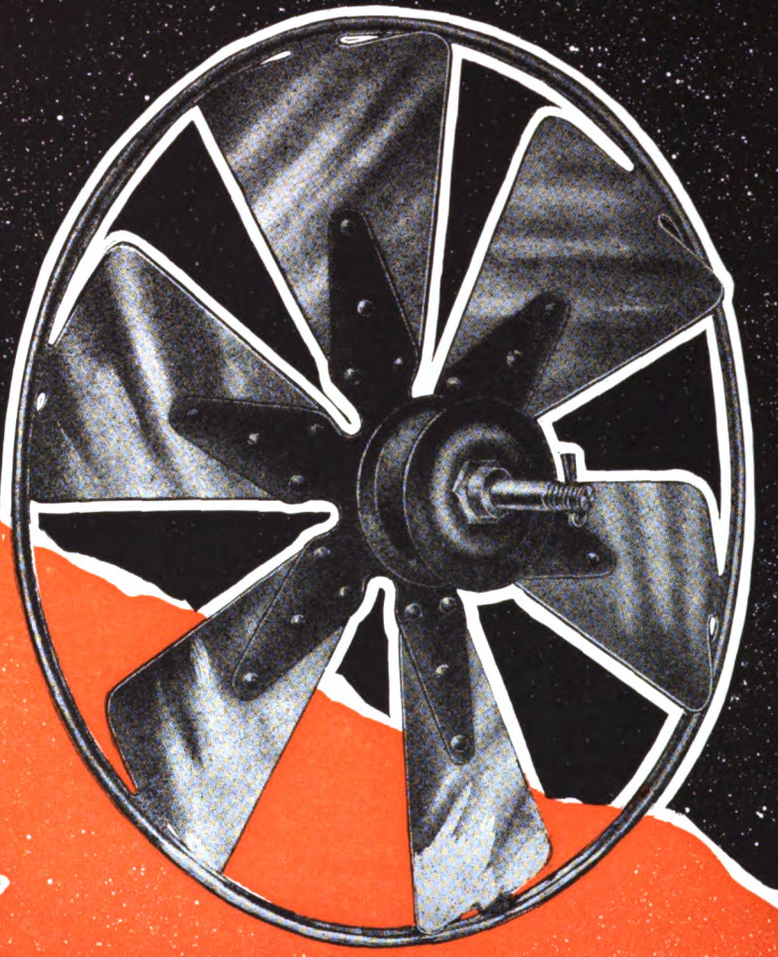
Car Manufacturers—Act Quickly

We are now ready to talk 1913-1914 business. When our values are disclosed there will be a rush to get under cover. Don't wait too long or you may be too late. Better get a sample of the "Sparton" right away and give it a thorough test. Then ask us for prices. Our figures will give you a pleasant jolt—when you know the kind and quality of horn offered in the "Sparton."

Our Daily Capacity 700 to 1000 Horns

Before a word was printed or this first public announcement made, we built 7,000 "Sparton" horns. Our daily capacity is 700 to 1,000 horns. You see what we mean by "Quantity"—in the past the entire yearly output of all electric horn makers has not been sufficient to tax our capacity.

These facts are significant. They show our confidence in our horn. They explain why and how we can afford to make unusual prices. They indicate also, what every car manufacturer knows—that **the time for the electric horn as standard equipment has arrived.**



Price has been the bar. Now quantity production establishes a new scale of prices—with values better.

Automobile
and
Accessory Parts
Milled from the Bar

MOST important in making automobile or accessory parts are results for safety in your assembled product.

NAMCO duplicate products are made uniformly accurate to your specifications. The fit is exact and the threads are clean.

You do not have to allow for spoiled pieces because all NAMCO parts must stand a rigid examination and test before shipping.

Loose and wear caused by the vibration at joints and ill fitting joints handicaps the value of your machines. NAMCO parts will make your machines run smoother, quieter, and make them last longer.

For these reasons you will find NAMCO parts less expensive, and being accurate, they will cost less to assemble. Use them on your cars for 1913 because you are particular.

We also carry in stock all sizes of A. L. A. M. standard Cap Screws, Plain and Castellated Nuts, and Hexagon Brass Nuts.

We have an interesting booklet which gives over 200 reasons why you need NAMCO products. Be sure to ask for the "Trades' Service" booklet.

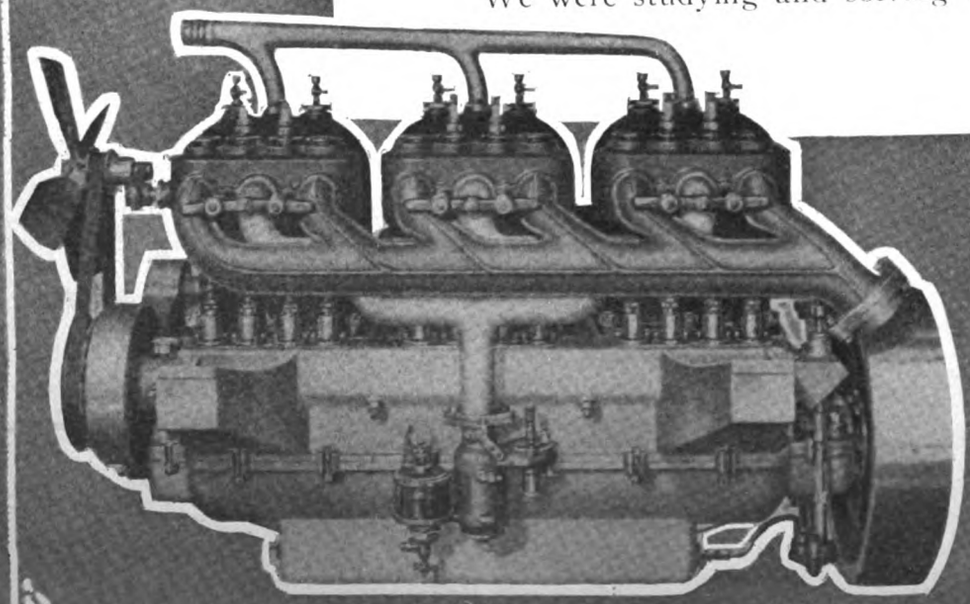
BEAVER



To Dealers

The prospective owner looks to you for expert advice before he buys. The manufacturer recognizes your position and is open to your suggestions on specifications.

Nothing in the car is of such importance as the engine. Have you investigated the latest phases of six-cylinder construction? Do you know why the Beaver Six Motor will make the best car still better?

We have a message for you. In it we will show you in detail a Six-Cylinder Motor that is a marvel of simplicity, silence and service—one that stands alone in these days of the perfected sixes. When you recommend a car tell your customer about the Beaver. We will give you the facts.

We were studying and solving the six cylinder problem

BEAVE

2402 First Avenu

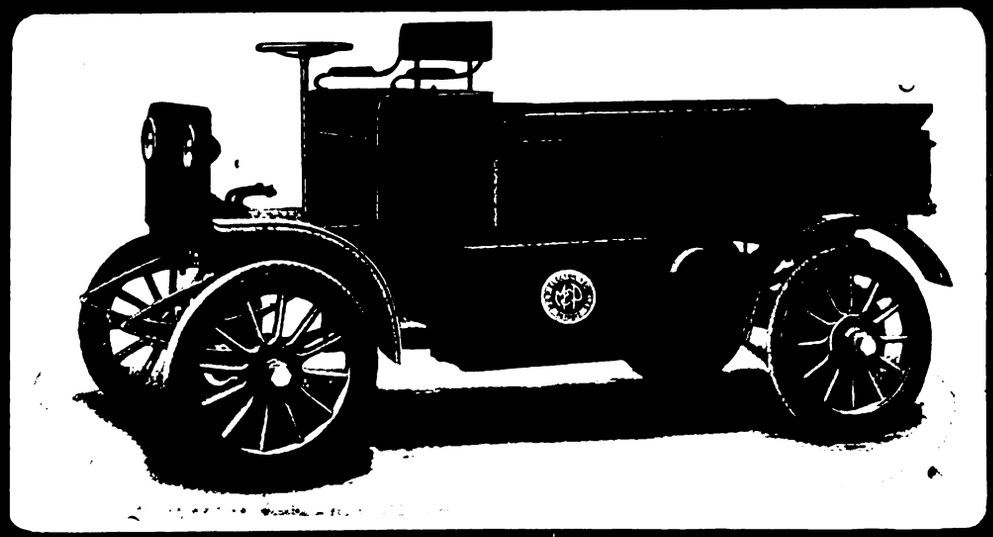
SIX CYLINDER POWER PLANT

five years ago, and today the Beaver Sixes are in advance of ordinary development.

It is no longer the question "A Six or a Four"—but which is the **best** six and you, manufacturers and dealers, ought to have the basic facts back of Beaver superiority. They are open to every man who claims to know the difference between a good engine and one that is built for profit only.



The Beaver 40-45 Six Unit has made good. It is constantly making more friends among dealers and owners. Manufacturers who are building silence, speed and endurance into their cars **know** this engine and install it.

Another popular Beaver model is the 28-30 H. P. Four Cylinder Unit Power Plant. Especially adapted for light trucks of 1500 to 2500 lbs. capacity. In all there are 17 different types of Beaver Motors, two, four and six cylinder, from 15 to 60 H. P., a motor for every type of car made.

The M & P One Thousand Pound Electric Truck Comes to Your Customer, Mr. Dealer, With an Iron-Clad Guarantee Back of It

This guarantee covers every possible angle, protecting you and the buyer in the matters of reliability and economy of operation.

The M & P One Thousand Pound Electric Truck is the first electric truck of its quality to be sold at M & P Prices. And because of long experience, and low overhead we are producing a vehicle which will positively give more or better service at lower cost of operation than can any other electric truck selling for as high as $2,200.

Comparison with the gasoline truck is unnecessary. We are selling electric trucks whose advantages are obvious.

A Truck That Makes Good at a Price That Sells It

The M & P Truck is the acme of simplicity—strong, sturdy, reliable and economical. In a word, it is properly designed and properly built. It is "Made to make good and it does." Tests prove that the cost of operation is twenty-five to thirty-three per cent less than that of a similar powered gasoline car.

A point that will also appeal to your trade is the price. It puts the high grade electric delivery wagon within the reach of the average retail merchant, who is, at present, utilizing horse-drawn vehicles for transportation purposes. We have the facts and data to prove to you and to such a merchant that the "M & P" can save him a surprisingly large amount of money.

You, Mr. Dealer, have studied the electric commercial proposition—you know that the trade is hungry for it. You don't have to go to the big manufacturer to sell this truck. You have but to present it to the dry goods merchant, the hardware man, or any other merchant with a delivery problem, to prove there is a waiting market.

Get the facts and figures covering this proposition, including complete description of the M & P and our liberal commission to you. Find out how and why it will pay you to get busy now.

M & P ELECTRIC VEHICLE COMPANY

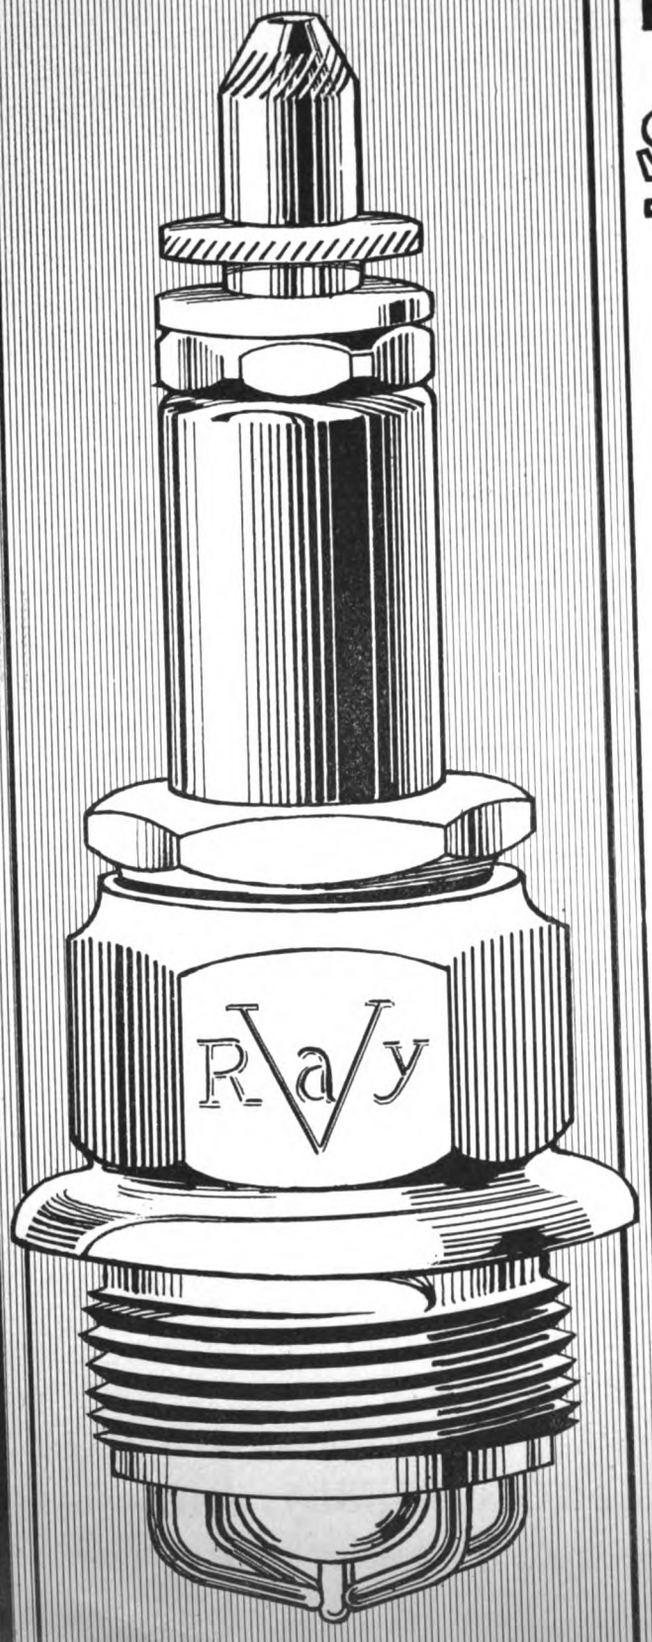
This is an announcement of a tire filler company that is in business only for the purpose of selling tire filler—not for selling stock or territory.

FIRST, we want to impress upon everybody the fact that the American Kushion Kore Tire Co., Inc., is not a stock jobbing proposition. There is no stock for sale and the members of the corporation are all men of standing and reputation who are in business to make money out of the sale of Kushion Kore tire filler. Every statement we make here is backed and guaranteed by us to be true and we respectfully refer you to any bank or reputable business man in Buffalo as to the standing of our company.

Kushion Kore is a perfect substitute for air and in many respects it is superior to air in tires. Neither extreme heat nor extreme cold will in any way affect Kushion Kore. It will always maintain the same size and shape regardless of weather, road or temperature conditions. Just how long Kushion Kore will last is hard to tell but we know that it will outwear several casings. Kushion Kore is not melted or run into the tire tubes hot. As a matter of fact it is not attached nor does it come in contact with the casing, and the tubes are discarded entirely. Kushion Kore is placed in the tires in its original form after it has been thoroughly tested and examined, and then enclosed in knitted cover. Kushion Kore will not flatten or lose its shape in any way and, of course, it absolutely does away with blow-outs or punctures.



Kushion Kore is from 10 to 20 per cent lighter than any other tire filler on the market and is guaranteed not to contain glue, gelatin, glycerine or any other substitute that will dissolve in water. Neither does it contain rubber.

We are looking for bona-fide up-to-date dealers to represent us throughout the country just as they represent a tire company, a carburetor company or any other accessory. We are not trying to sell any state rights or stock or hold up the dealer in any way. We have a legitimate business proposition upon which any live dealer can make a goodly bunch of money, but he must make that money by selling Kushion Kore, just the same as he would by selling automobiles or anything else. We realize that we have made some pretty radical statements here and we hope only that you will give us a chance to prove the truth of them.

American Kushion-Kore Tire Company, Inc.

1913 V-RAY MICA LAVA SPARK PLUG

Dealers

This plug, which retails for $1.25, has more and better features than any plug on the American or foreign markets. Its electrical and insulating improvements are radical and right.

The MICA-LAVA spark plug has absolutely no chamber or recess in the shell exposed to the cylinder. It cannot harbor soot.

The solid block of flint-like lava, comes from the solid lower part of the steel shell—no chamber whatever. The lava is indestructible and is not affected by heat or oil.

The only mica used protrudes above top of spark plug and is not exposed to heat or oil. It has six cylindrical layers of sheet-mica wrapped about center stem before washers are put on.

The terminal-cap fits all cable terminals and has a unique self-cleaning feature attached thereto. The electrodes are of uniform length and will fit all valve clearances in any motor.

The electrodes, commencing with 1913, are of the very best Meteor wire and will withstand any heat to which they can be subjected.

The plug comes in four sizes, the ½" Standard, Metric, ⅞" A. L. A. M. and Standard Motorcycle Types.

The Famous V-RAY Porcelain Spark Plug

We will continue to handle our famous V-RAY PORCELAIN PLUG which has been radically improved and is better than ever. The PORCELAIN PLUG for 1913 is reduced from $1.25 to $1.00 each, and is made in the same sizes as the above mentioned MICA-LAVA PLUG at $1.25.

? WHICH

FOR EVERY CAR OWNER the question gets right down to this alternative: *damage* or a *Conover Safe-Guard.*

EITHER is inevitable.

COLLISION you *cannot* avoid. If you don't run into something, some other car or wagon backs into you. It is merely a matter of time for *every* car. Fenders, lamps, radiator, wheels, axle—any or all will be smashed to some extent. If badly, you can collect insurance; but you lose the use of your car while repairs are being made. If slightly damaged, you cannot collect a dollar.

PROTECTION you *can* have. And this for the original price of *one* Conover. Made on a new principle; backed by a new guarantee. Its broad, flat surface, sturdy semi-elliptic steel springs, with four contact points, were made to take blows. If dented, you can hammer back the protection surface. If broken, you can have a new Conover *free*, any time within two years.

WHICH alternative? Which is the economical, satisfactory sensible one?

Best quality of steel heavily enameled in black, royal blue, French gray or maroon; bar 2 inches wide. **$15.00**

(Any other color of enamel $5.00 extra)

Best quality of steel, brass or nickel plated; bar 2 in. wide - - - **$17.50**

Solid bronze, finished in either brass or nickel; bar 2 in. or 2⅜ in. wide **$25.00**

Shipped, express paid, anywhere in the United States, on thirty day's trial, upon receipt of the regular price. When ordering, give name and model of car. Specify size and finish desired.

An attractive booklet will be sent free upon request.

NEWTONE HORNS

The Largest Automobile Horn Factory in the World.

Produces More Automobile Horns than All Other Manufacturers Combined.

We are the pioneer horn makers in the United States. 75 per cent of the horn consumption of the country is supplied by this company. The following statement will give an idea of the magnitude of our business. Note that during the past six months—what we consider the dull season—we have made and shipped over 22,000 horns monthly.

READ THIS AFFIDAVIT:

Helen L. Hicks, of Borough of Brooklyn, City and State of New York, being duly sworn, deposes and says that she has been employed by the Automobile Supply Mfg. Co., a domestic corporation, for about two years, last part in capacity of billing clerk and general office work and that she is familiar with the shipping slips, shipping books and bill books.

Deponent further states that she has examined said books and same show that the Automobile Supply Mfg. Co., shipped

In June, 1912—17,028 Bulb and Electric Horns of different sizes and types.
In July, 1912—22,006 Bulb and Electric Horns of different sizes and types.
In Aug., 1912—19,866 Bulb and Electric Horns of different sizes and types.
In Sept., 1912—22,156 Bulb and Electric Horns of different sizes and types.
In Oct., 1912—26,103 Bulb and Electric Horns of different sizes and types.
In Nov., 1912—22,392 Bulb and Electric Horns of different sizes and types.

Sworn to before me this 12th day of December, 1912.

(Signed) ISAAC BROWN,
Notary Public, Kings Co.

(Signed) HELEN L. HICKS.

ERGON MOTORS

Introducing a New Motor

AS the name implies, Ergon Motors are "work" motors—motors literally filled with work and energy. Ergon Motors are the result of a definite intention to keep pace with the growth and demand of the motor car industry—both in its pleasure and commercial branches.

This new motor, which is larger than any of our previous products, is of the four-cylinder, four-cycle "L" head type, with cylinders cast in pairs. It is a long stroke motor, the length of stroke being 6 inches, with a bore of 4 3/8 inches. Next to power, accessibility and simplicity have been the prime considerations in the construction of Ergon Motors.

It is the intention herewith to announce generally the production of these new motors rather than to specifically go into the construction details. However, we wish to emphasize the fact that wherever we have had recourse to parts or materials produced out of our own factory we have acquired only the acknowledged best. For instance, all of our bearings are either F. & S. or Timken. The crank shafts and connecting rods are made by the Driggs-Seabury Ordnance Corporation, of Sharon, Pa. The silent chain drives are made by Hans Renold, of Manchester, England. The design of Ergon Motors is such as to accommodate several standard makes of either electric or pneumatic starters.

The NATIONAL COMPOUND MIXER & PRIMER

SAVES 10% to 40% FUEL

Increases Power Speed and Flexibility

We Guarantee This

KILLS CARBON TROUBLES

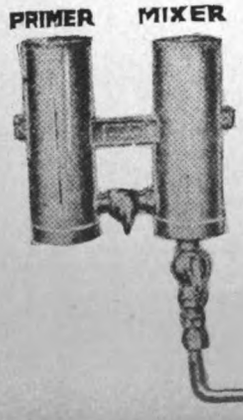
Makes the Engine Run Better and Last One Third Longer

We Guarantee This

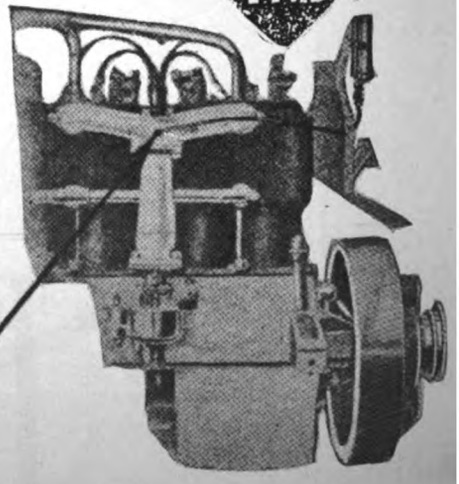
A device that will reduce expense and increase efficiency. Every customer of yours who is looking for the most and best out of his automobile, will take a buying interest in this device if you will simply demonstrate it, for we can prove that it will

Save from 10 to 40 Per Cent on Gasoline Bills
Increase Power from 10 to 40 Per Cent
Save 50 Per Cent of Engine Trouble
Prime the Engine Clean the Engine

We show it here—a small, compact, simple apparatus, attached to the dashboard—installed in 20 minutes—never out of order—can be operated in an instant.



The National Compound Mixer breaks up and mixes in exact proportion every drop of gasolene with the proper amount of air. In other words, it finishes the work the carburetor leaves undone and we do not have to tell you that ordinarily only about one-half of the gasolene is converted into gas.



The Priming Feature

alone is particularly valuable in that every cylinder can be instantly primed by simply operating the priming valve, which sends a proper amount of rich mixture into all cylinders, making starting easy under all circumstances. Great for "sixes"—makes starting easy any weather.

It Cleans the Engine

A couple of ounces of alcohol or kerosene dropped into the primer will, through a simple operation, clean the engine in a remarkably short time, thoroughly burning out every trace of foreign matter.

Your Customers Need It

and you can supply it if territory is open in your vicinity. It is distinctly up to you to write for our proposition. There is money in it for you.

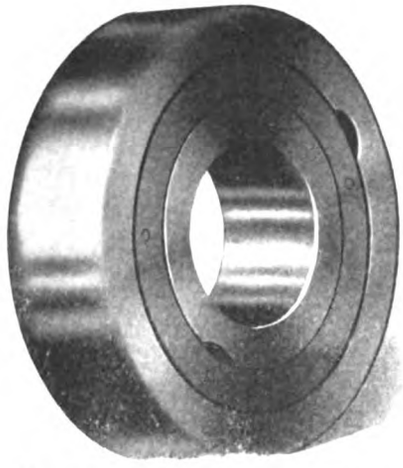
New Departure Double Row, Exterior

The American-Made New Departure Ball Bearings are positively superior because of



QUALITY OF STEEL USED—The peculiar work of ball bearings requires steel of special quality. To perfect processes by which this quality could be developed, we built and equipped an extensive engineering laboratory and physical testing plant. Here each lot of material coming into the factory is scientifically analyzed and treatment prescribed necessary to bring it up to the New Departure standard. The result of this great care is a steel of great strength, resiliency and toughness.

QUALITY OF WORKMANSHIP —There are not more than a dozen large manufacturing plants in the United States where the average daily wage rate is as high as ours. This brings the best mechanics to us. Much of the mechanical equipment is the invention of our president and is used exclusively by ourselves. Our system of inspecting is a continuous check against poor workmanship, each bearing being inspected not less than thirty-one times during process of manufacture.

Digitized by Google

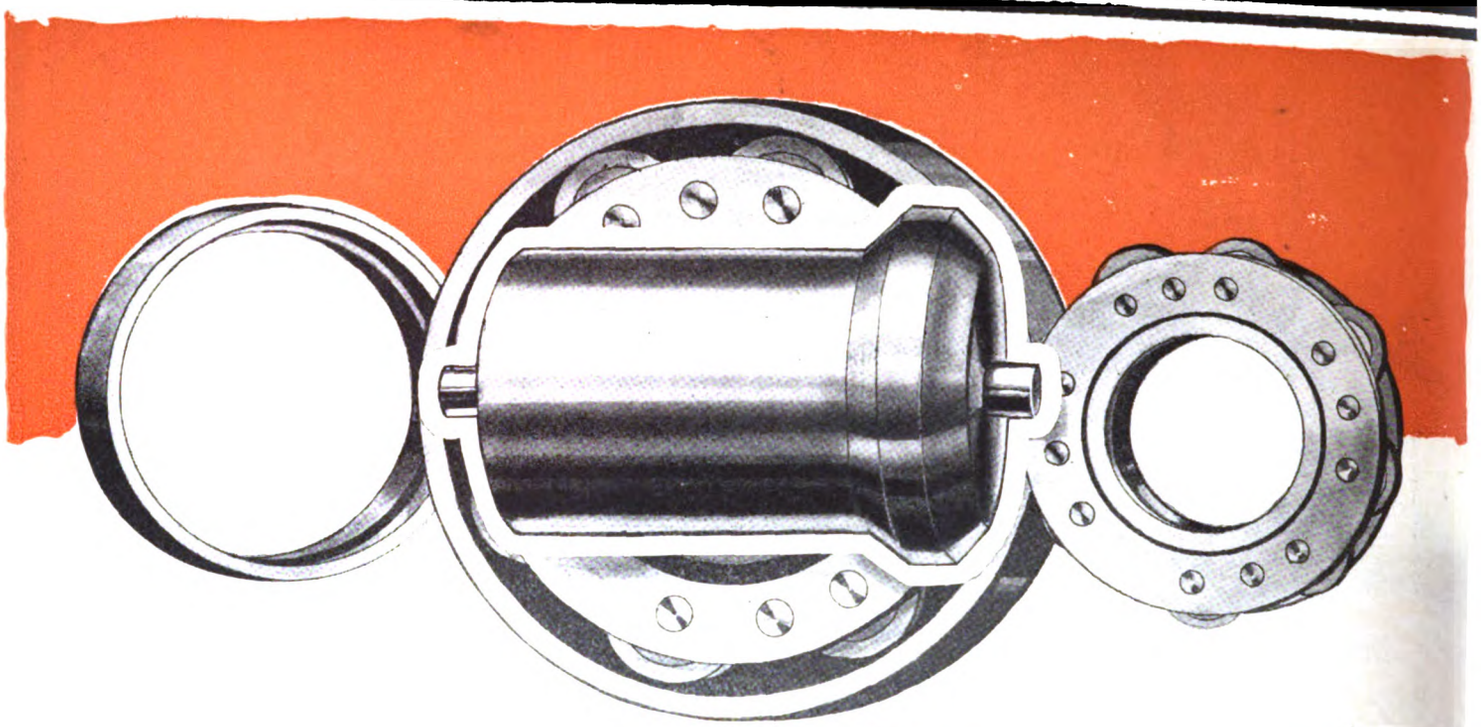
NEW DEPARTURE BALL BEARINGS

Standard on 80% of 1913 Cars

New Departure Single Row, Exterior

QUALITY OF FINISH—New Departure ball bearings are more insistently gauged and tested for uniformity of dimension and accuracy of finish than any other. Our inspectors work within exceedingly close limits and bearings that do not measure up to established standards in all respects are rejected.

New Departure Ball Bearings are made in three types:



DOUBLE ROW—Combined radial and thrust,
SINGLE ROW—Strictly radial,
RADAX—Radial and one direction thrust.

See the interesting exhibit of this American made ball bearing at Madison Square Garden Automobile Show, Space 204, Balcony---Both Weeks.

Bower Roller Bearings

Right in Design Right in Quality Right in Service

A BEARING is only a small thing and yet it has a vital and important relation to the whole car. It affects service, affects fuel consumption, affects tire economy, affects power, affects ease of repair and adjustment.

As automobiles become more refined, as engineers pay closer and more scrutinizing attention to details the sale and use of Bower Roller Bearings increases.

For engineers, and all who deal with the public, realize that the less you leave for the public to do in the caring for a mechanical device of any kind the greater is the certainty of giving complete satisfaction.

And the use of Bower Roller Bearings entirely eliminates the necessity of one kind of adjustment that must be made when other types of roller bearings are used.

Bower Roller Bearings are non-adjustable radially. End play can easily and quickly be regulated without changing the RADIAL alignment; the RADIAL alignment never requires adjustment.

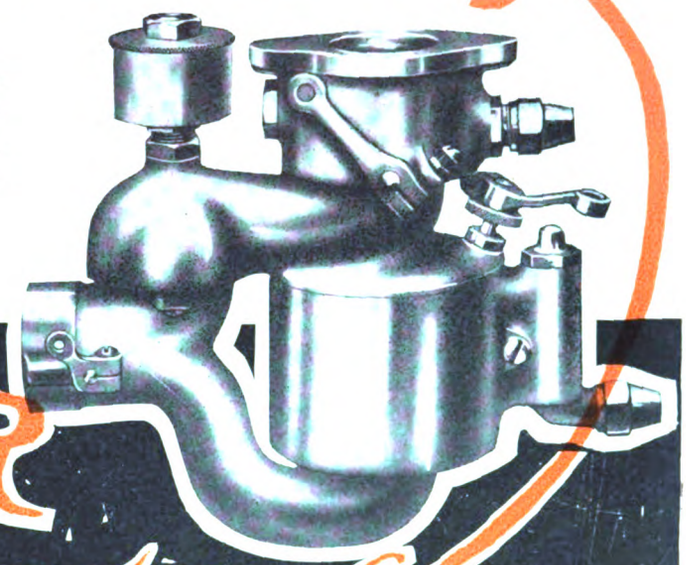
The body of the roller carries the RADIAL load; one end of the roller carries the end thrust, independent of the RADIAL load. Thus increasing the RADIAL load does not increase the end thrust; nor does increasing the end thrust increase the radial load.

To accomplish this in a single bearing unit without combining the radial and end thrust in a single element, is to achieve the highest type of roller bearing efficiency—and that is exactly what we claim for the Bower.

Every Bower claim is susceptible to proof—and the increasing use of Bower Roller Bearings—now in their fourth successful year—points unmistakably to the fact that we are "delivering the bacon."

Made in all regular standard sizes. Interchangeable with all the prominent makes of ball or roller bearings.

Get in touch with our engineering department, or write for full details.



We will exhibit at Concert Hall, Madison Square Garden, New York, and at Coliseum Annex, Chicago—glad to see you

The LUXURIOUS BROC

Elegance and Roominess Mark the New Broc Models

THE BROC actually offers more of comfort, luxury and beauty than intending purchasers expect in an electric.

This page shows the interior of Model 29. Front seats revolve on safe, substantial pedestals; cushions are much deeper than those of any other make of electric; backs are shaped. There is ample head-room, body-room, foot-room. From cushion-top to ceiling is 44½ inches.

The new Model 31 (also with pedestal front seats) is a forward-drive brougham for five passengers. It is built—as all Brocs are—with the most faithful attention to every detail of safety, comfort, convenience, beauty.

IMPORTERS' SALON

An Exposition of European Cars of Quality

Dealers visiting New York will find ample enjoyment and profit in a visit to this exhibition, which will be held

In the Grand Ball Room of the Hotel Astor, Broadway and Forty Fourth St., from January 2d to 11th

Here will be found comprehensive exhibits of the following cars, all representative of Europe's choicest car making genius and skill

Austrian	*Lancia*	*Minerva*
De Dion Bouton	*Metallurgique*	*Panhard*
Isotta Franchini	*Mercedes*	*Renault*

Healey & Co. *Locke & Co.*
The Holbrook Co. *Quimby & Co.*

The Importers' Automobile Alliance have made ample preparation to entertain the trade. Here this splendid group of ultra exclusive cars may be inspected in comfort, amid delightful surroundings and far from the rush and crowding which are characteristic of the domestic shows. All dealers are invited to come and see and hear. The Importers' Salon will prove intensely interesting.

IMPORTERS' AUTOMOBILE ALLIANCE

In order to discourage idle sight-seers a nominal fee of fifty cents will obtain, but interested dealers will be furnished tickets free upon request

DEALERS

The European Car Idea is Growing in America — is your Ear to the Ground

Dealers who read this announcement will do well to consider the advisability of forming an agency connection with us for handling the Metallurgique—a car for the classes—a distinct and exclusive product, sensational in body design, equipment and appointment. These cars are limited in quantity—unlimited in quality.

Luxury of appointments are regal—beauty of design and finish supreme on both sides of the water. Service unlimited. The Metallurgique is the only logical car for men of wealth and position who desire an equipment that will make all others appear commonplace.

Let us help you find and please and sell to those in this class. As a preliminary, write and get the literature and terms. We can throw more light on the Metallurgique, Europe's choicest product.

See these cars at Importers' Salon, from Jan. 2d to 11th, Hotel Astor, New York, Southwest Corner of Ball Room

Lancia

AMERICA'S FAVORITE FOREIGN CAR SOLD AT AMERICAN PRICES

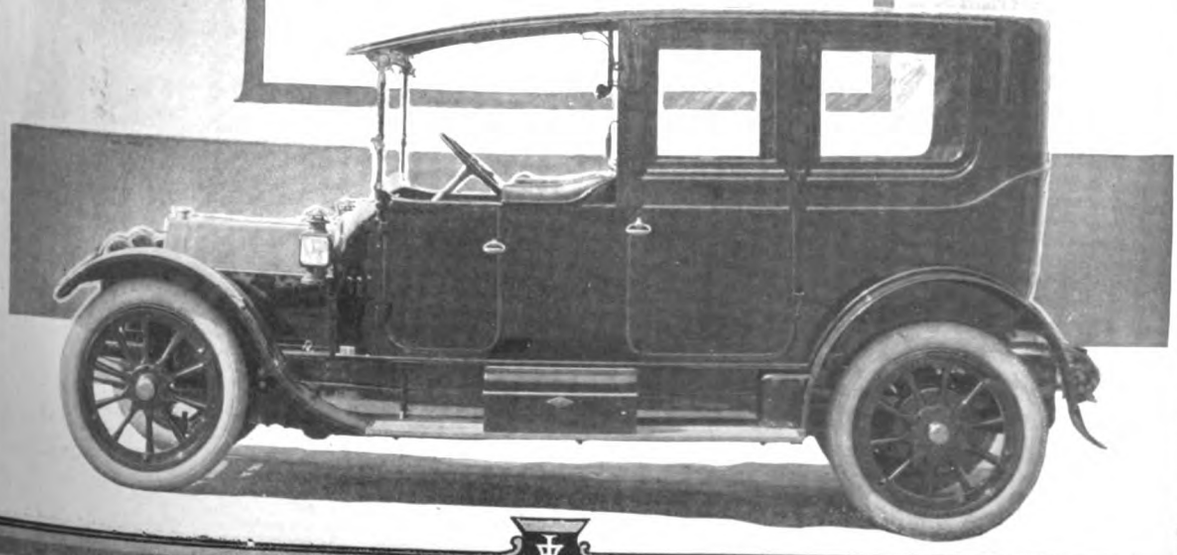
Lancia cars, made in Europe, offer the American buyer every European point of superiority in material, engineering features, workmanship, design and finish—and it is conceded that car building methods which obtain on "the other side" are years in advance of American methods.

And American Dealers can sell Lancia cars at American prices.

You, Mr. Dealer, know that limited quantity production insures the **personal attention** of every man engaged in the building. Lancia production is typically European because it **is** limited. Here are no American cut and dried operations that produce quantity at the heavy expense of quality.

Lancia dealers use these arguments as the basis for selling arguments.

Car wise buyers who want European automobiles are quick to grasp and act upon them.



There is some choice territory awaiting dealers who are looking for that **different and better car.** Are you such a dealer?

DEALERS WANTED

ADAMS-LANCIA COMPANY

238 West 58th Street **New York City**

A complete line of Lancia cars will be on exhibition at the Importers' Salon, Hotel Astor, New York, east center of Ball Room, from Jan. 2d to 11th.

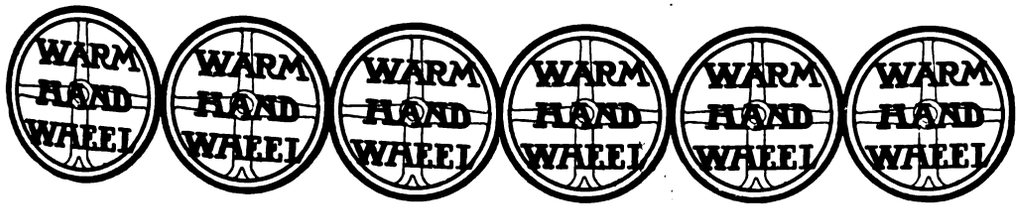
The Warm Hand Wheel is just what its name indicates—a steering wheel that will keep the hands good and warm even in the biggest blizzard that ever blew down from the north.

It is operated at very slight current consumption from the lighting outfit or storage batteries. On Ford cars the current is furnished from the magneto which is built in the fly wheel.

Installation is easy and the work can be done in a short time by any one with ability to follow the very simple directions which come with the wheel. Remember, no working parts of the car are interfered with in the operation.

DEALERS YOUR OPPORTUNITY

lies in getting quick action in the matter of installing these wheels in your territory. They are needed and wanted for six months in the year, and they will never be more appreciated than right now in the heart of winter.



You don't have to be told that the Warm Hand Wheel will encourage winter driving which now has cold hands as one of its big drawbacks. More driving means more business for you—another reason, aside from your direct profits, that you will have to admit.

The Warm Hand Wheel retails for $15; your share in the transaction is liberal—your customers pleased and your business increased in profit and more trade.

Send for the proposition.

The Warm Hand Steering Wheel Company

527 Fifth Avenue **NEW YORK**

Made in Germany

SCHAFER

BALL BEARINGS

That leading manufacturers use Schafer Ball Bearings is proof positive of their value from a QUALITY standpoint, for it would be a grave error in judgment for them to risk the reputation of their product by gambling on bearings of problematical value for the sake of economy.

The Reasons for Schafer quality are simple, but final.

They are made in Germany where steel making is far in advance of American practice, and not even content with this material, we incorporate the finest extraordinary steel of special analysis.

Schafer Ball Bearings are engineered by the highest type of skill procurable—men mentally equipped to devise resistance to load, shock, side thrust and other influences, that must be met and guarded against.

Schafer Ball Bearings are inspected at every stage of construction. Each separate ball, cage, and raceway must get its "diploma" by stages in which hardness, tensile strength, accuracy in turning, grinding and finishing are determined clear up to final shipping.

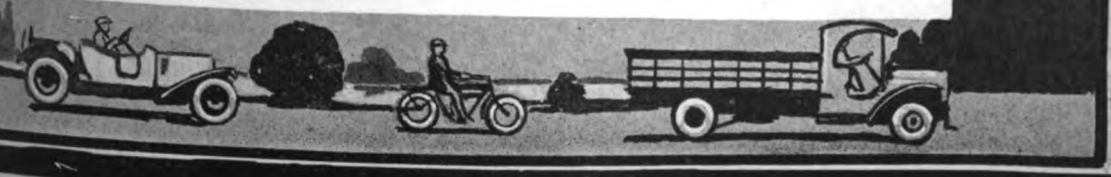
Digitized by Google

Used in America

SCHAFER

BALL BEARINGS

Specialization—and by that we mean meeting the requirements of our trade—has been a factor largely responsible for the up-building of our business.



To the car designer, this specialized knowledge is of more than ordinary value, because the proper designing of bearings for a particular car is quite as important as the selection of spring, axle and other major parts in which alignment, weight, support and other important problems must be figured out and acted upon.

The automobile engineer who demands this co-operative service as co-equal with right material and expert workmanship, will find the combination in these quality bearings at right prices.

Schafer Ball Bearings are worthy of your recommendation and the cars you sell will have added a major point of quality if so equipped.

A Sure Car Seller *when a man sees the*

USL TRADE MARK
THE UNITED STATES LIGHT AND HEATING CO.

U-S-L ELECTRIC Starter and Lighter

For Gasoline Automobiles

He Wants a Car That Has This Equipment

You know how red hot the starter question is. Here's the proposition that has set the whole automobile world talking—the U-S-L ELECTRIC STARTER and LIGHTER. With it you avoid a complexity of gears or other reduction devices employed to enable a puny starting motor to coax the engine over. The U-S-L is *direct connected*. Substituting armature weight for fly-wheel permits the installation of a powerful, rugged, noiseless motor-generator.

Simplicity—The U-S-L is the simplest of all starting and lighting systems in both principle and construction. By it the old-fashioned cast-iron

Fly-Wheel is eliminated (because no longer needed) and its place taken by the U-S-L Armature.

The Armature is the sole moving part. It is bolted for keeps on the engine shaft—is a unit with the engine, and does fly-wheel duty.

Power—The U-S-L does its work positively and easily, without noise, jerk or jar. It whirls the engine from 150 to 400 R. P. M. as long as necessary, and, as a Generator, supplies all the current car can use for any purpose. It is also a stand-by power plant; when the engine stalls, a simple push of the foot button will carry the car out of danger.

Compactness—The U-S-L Motor-Generator is self-contained within fly-wheel space inside the aluminum casing shown in this illustration.

No Added Weight ***Nothing to Oil***

No Complications or Trouble

Cars thus far equipped with the U-S-L Electric Starter and Lighter are:

RAMBLER	**GARFORD "NEW SIX"**
OVERLAND	**EDWARDS-KNIGHT**
BERGDOLL	**MOYER**

And Endorsed by the Entire Automobile Engineering Profession.

See the U-S-L Electric Starter and Lighter at the Shows; New York, Madison Square Garden, Space 157, and Grand Central Palace, Space 205; Chicago, Coliseum, Space 326; Boston, Mechanics' Building, Space 431.

THE HARTFORD AUTO PARTS CO.

MANUFACTURERS OF

UNIVERSAL JOINTS AND CONE CLUTCHES.

THE J.S.BRETZ CO.
NEW YORK DETROIT
SOLE SELLING AGENTS

W. H. CADWELL, PRESIDENT.
C. MUELLER, VICE-PRESIDENT
J. J. ANDZULATIS, TREASURER
A. J. BROUGHEL, SECRETARY
D. F. KALISH, GENERAL MANAGER
H. W. BIGELOW, ASSISTANT TREASURER

HARTFORD, CONN., December 23, 1912.

To The Trade:

The quality of Hartford cone clutches and universal drives is known to every manufacturer of complete cars. Here we have established a reputation for making these parts all correctly designed, from faultless steel and machined up to the point where the finest micrometer test cannot detect a false measurement.

Our equipment is modern in every aspect. We have built twenty special machines for our own use right here in the factory--machines that perform functions separate and distinct from those performed by the ordinary equipment of the ordinary plant.

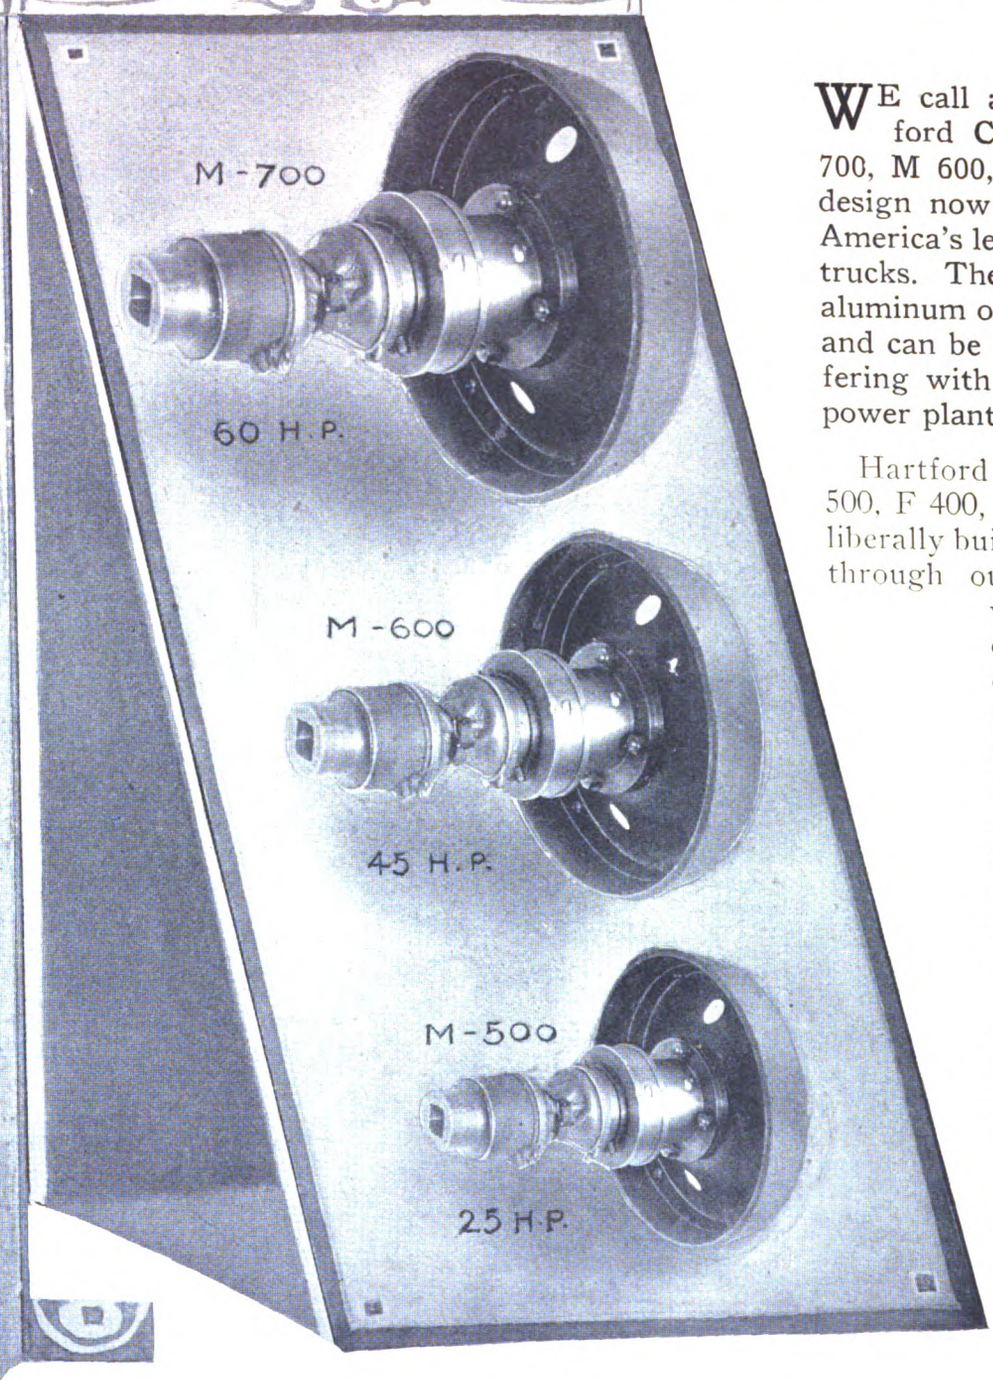
Every mechanic in our employ is skilled in this particular branch. No operation, however small, is entrusted to unskilled help or to beginners.

Every clutch and every universal drive coming from our shops carries with it a guarantee of perfection in material and workmanship. This guarantee protects the manufacturer and car owner. We stand ready to make good on any part that develops flaws or defects.

We call especial attention to the fact that all wearing surfaces of Hartford products are hardened and ground; the latter by a specially devised machinery insuring against depressions or elevations common with parts that have been simply reamed.

We are anxious to get in touch with your engineering problems as they apply themselves to our products. If you will send us blue prints, we will at once give you our specifications and we will put them into blue print form and submit prices.

Remember our Engineering Department is always at the disposal of those interested.



Very truly,

THE HARTFORD AUTO PARTS CO.

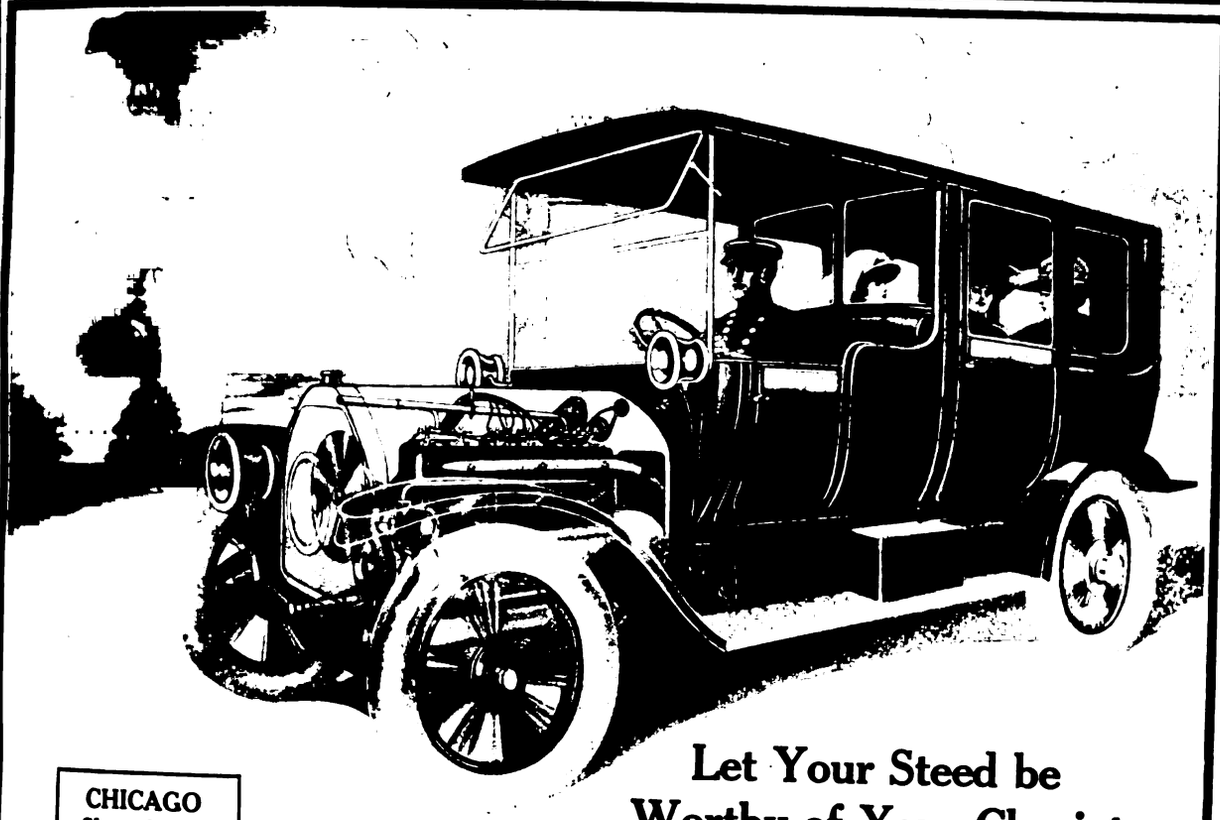
THE HOME OF THE HARTFORD AUTO PARTS CO.

Specialization is the key note of quality production—specialization that means concentrating brain, energy and money in the work of making one or two things and making them well.



The plant of the Hartford Auto Parts Company, shown here, is a practical demonstration of the soundness of the "specialization" idea, standing today as the largest factory in the world devoted exclusively to the manufacture of cone clutches and universal drives.

It costs good money to produce parts that are stressed to the "Hartford" standard—but this works out for us as a reputation buildler **and for you, Mr. Car Manufacturer, as an assurance of quality that will do its part in establishing and holding YOUR reputation.**

"Deliveries as promised" is part of our system, and this means that we increase facilities just as rapidly as demand calls for such increase. This plant is never overcrowded to the point where we have to send apologies instead of shipments.

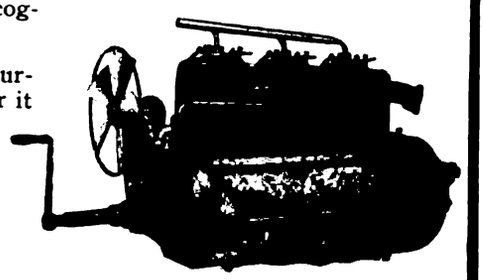
Let Your Steed be Worthy of Your Chariot

MOST automobile buyers select their first car because of its appearance. In making their second purchase they inspect the chassis even more critically than the body. If you are building automobiles for repeat sales you must install a motor that is consistent with the quality of your car, one that will appeal to and satisfy the most experienced motorist.



THE RUTENBER MOTOR

is such a motor. No matter whether it be for the handsomest limousine or for the most powerful truck, for the racing car or for the light delivery wagon, for the roadster or the touring car, the Rutenber Motor offers the assurance of consistent service, dependability and economy of maintenance. It is honest, substantial, powerful and silent. It has plenty of speed, endurance and reserve energy. It has established its own reputation and has won recognition for many a car.

When competition is keenest the Rutenber Motor furnishes the argument that clinches the sale. Thereafter it gives the service that insures reorders and extends the reputation of your car.

Write for the Rutenber Book.

Dealers Who Want to Sell More Cars for Spot Cash Will Find the Basis of a Sound Plan on this Page

We Can Help You to Help Your Prospective Customers to Buy Cars Through You.

IT is noteworthy that there are many concerns and individuals in your locality who want pleasure cars and commercial trucks but who cannot afford to buy them on the cash plan now in vogue.

We refer particularly to business houses with capital tied up—concerns that could turn one or more trucks into a working asset if they could afford to buy them—

And there are doctors or professional men or salesmen who could get dollar for dollar value out of a pleasure car if they had the capital to invest.

It is this lack of ready money that hampers your business, Mr. Dealer.

Realizing this condition, we have formed an organization to extend financial assistance to motor car buyers—especially those who need them more for business than they do for pleasure.

This plan, based on sound financial principles, gives you the benefit of a quick sale and your customer quick delivery and the purpose of this advertisement is simply to ask you to introduce us to prospective buyers who are short on capital.

HARMAN-YOUNT CO.
KENTON HARMAN Pres.
1790 Broadway New York

Digitized by Google

This company is organized to do business on a square basis and our contracts bear only legal rates of interest. The proposition will meet the approval of any man of business judgment because it is simply a case of his borrowing money at ordinary rates of interest on security which he, in accordance with our plan, will be able to furnish.

If you have prospective customers who hesitate on account of lack of capital, then you will be doing yourself, as well as us a service if you will refer them to us and tell them to write for our proposition.

It will pay you to acquaint yourself with the details, for then you, too, can put the matter personally before those interested.

Remember, this plan is mutually co-operative.

It sells more cars for the manufacturers, puts more commission in your pocket, and gives your customer the benefit of ready money.

The help-the-dealer plan we have worked out is logical, square and attractive from every angle. It enables him to show the man who is short on ready money a quick, short cut to the ownership of a car—the manufacturer gets his cash and the buyer squares up with us on the easy payment plan, and at regular rates of interest.

Give ancial istance to spective Owners egal Rates Interest

We Lessen Sales Resistance and Create New Selling Outlets for Car Manufacturers

We are forming many mutually valuable business connections. In every instance all round satisfaction results. We can do equally well by you and your prospective trade if you will co-operate. Write today.

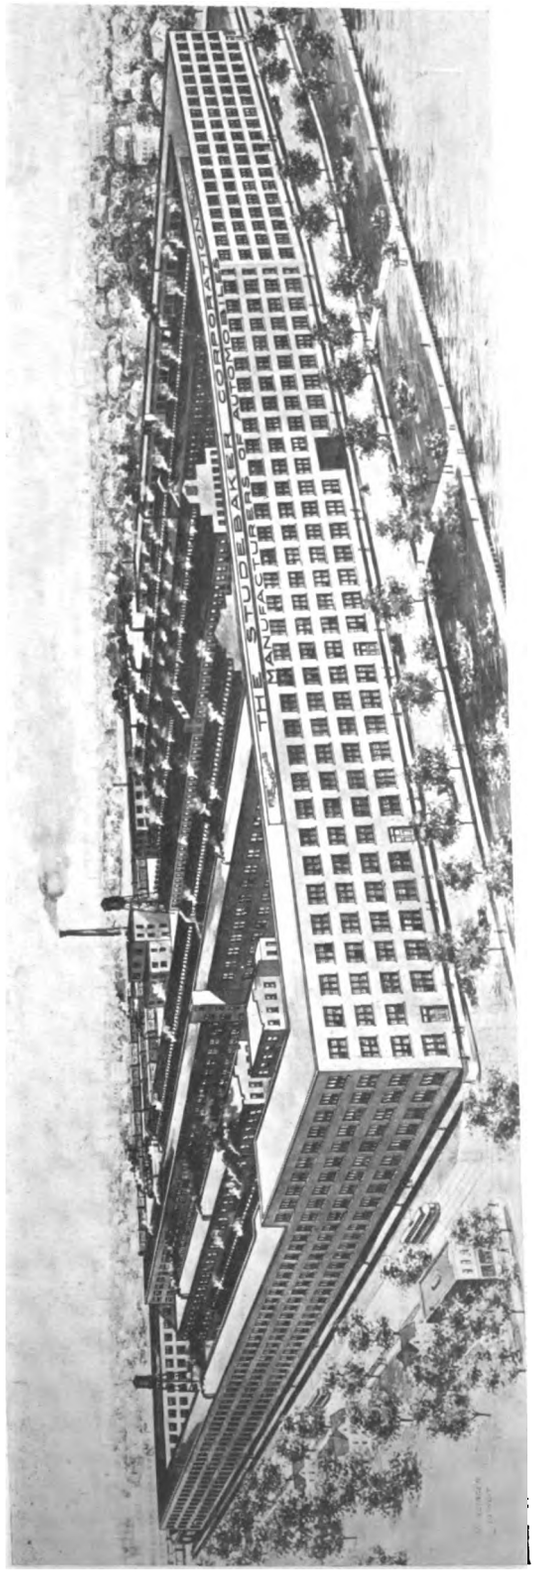
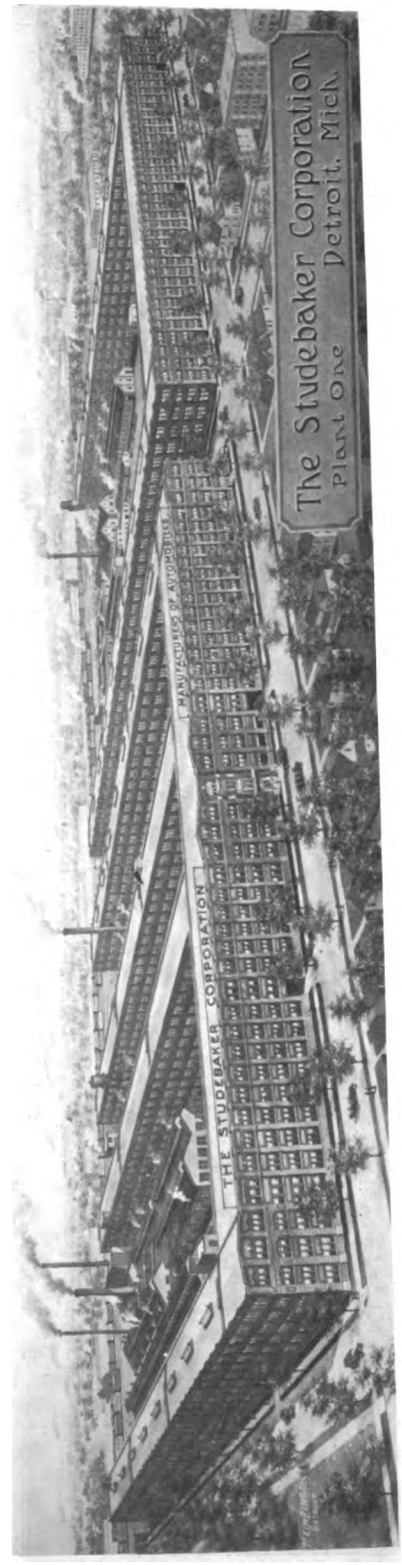
Studebaker

1913

To make unmistakably clear the superiority of Studebaker automobiles is the purpose of this advertisement. You will, we believe, be interested in the many important matters described in the following pages. It is the story of one of the great achievements of modern industry, and, because it is true, it will be found convincing.





Studebaker "35"

Why This Advertisement Has Been Written

MANY automobile purchasers, largely on account of the fact that they are unable to secure first hand information, do not make efficient purchases. Efficient buying depends almost entirely upon knowledge; the knowledge of, first, where to buy; second, what to buy, and why.

Few manufacturers have had the foresight to take the public into their confidence, and honestly endeavor to explain to them the fine points of their product.

It is, therefore, our purpose, in the following pages, to describe the Studebaker product in such a detailed way as to leave no doubt in anybody's mind as to the character of motor cars that we are making and selling.

We shall do so by taking up the various parts individually, explaining how we get the raw material, why we know it is good, how we test it, how it is made up into parts, why our design and construction is proper, how we satisfy ourselves as to our machines' efficiency and endurance, and why the Studebaker product is worthy of its name.

The Studebaker Line

The new Studebaker cars are built on three chassis, the model "25" carrying a five-passenger touring car, and Roadster bodies; the model "35" with a six-passenger touring car, Sedan type and Coupe bodies; the "Six" equipped with six-passenger touring car and two-passenger roadster and limousine.

In making these cars at their remarkably low prices, we firmly believe that we are giving you more for your money in material, workmanship and finish, not to mention the liberal equipment, than any other motor-car maker in the world.

We are not making this claim unsubstantiated.

We shall now proceed to show you why.

Digitized by Google

Studebaker

Manufacturing Conditions

ALL Studebaker models are built under the same manufacturing conditions, all are similar in design and identical in the quality of material. They undergo the same careful treatment in the inspection and testing of raw materials, have the same high grade workmanship, careful assembling, accurate and painstaking inspection and thorough testing.

The manufacturing of the model "25" is not slighted in any way, because it is low-priced.

This is characteristic of the Studebaker policy.

We believe that anything that is worth while doing at all, is worth doing well.

Studebaker quality is insisted upon in all Studebaker products regardless of price.

The motors are built in the same way.

In fact, the entire mechanism is practically the same in all cars with the exception of one or two distinguishing features.

The steels, bronzes and babbitts used are the same.

The method of assembling is the same.

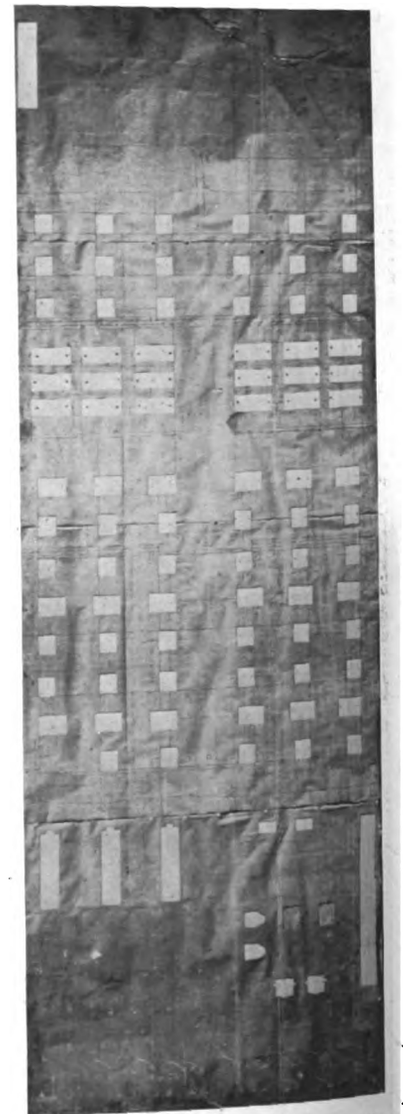
The same high-grade automatic machinery make the parts of all.

They are assembled by the same expert workmen.

The purchaser of a model "25" receives the same treatment and generous "looking-after" that the owner of a 6-cylinder gets.

HOW CARS ARE BUILT IN THE STUDEBAKER PLANT

To build a business successfully the manufacturer must make a legitimate profit.



He must allow the dealers a reasonable commission. At the price at which Studebaker cars are sold it would be difficult to do this were it not for the fact that we are able to buy raw materials in enormous quantities, make them up in large lots and assemble them in an efficient manner.

In spite of the fact that we pay high wages to our men we are able by means of business short cuts and manufacturing savings to produce a vastly superior product at a low rate per car.

The secret of our success along these lines is due almost entirely to the manner in which we have laid out our plants and grouped our manufacturing tools. We have avoided wherever possible "double handling;" putting into practice what efficiency experts have discovered will decrease the number of motions required to perform certain operations.

By means of carefully indexed stock rooms, special trucks, overhead trolleys, special assembling and testing frames, we have cut down the work of handling the parts to a minimum.

The Studebaker factories are the largest and best equipped motor car manufacturing plants in the world. We have our own immense forge shop, foundries, and batteries of automatic machines where we build the entire car from raw iron and steel to the finished product. Over 250 drop-forgings enter every Studebaker car.

Showing how efficiency engineer lays out shop arrangements to avoid unnecessary handling.

Operations that used to require 10 or 12 motions have been reduced to four.

Transportation operations that needed four men and consumed over an hour in time are now handled by one man in less than 2 minutes.

Digitized by Google

Studebaker

Our large drop-forging plants and improved foundries make short work of parts which a few years ago had to be made by hand or tediously machined. The introduction of steel stampings in our rear axle and other parts of the car, such as the running board, and brackets, have not only enabled us to increase the efficiency of the cars by decreasing their weight, but simplified very materially the process of making these parts.

We could go on with an enumeration of a hundred other such innovations which our experts have introduced. Suffice it to say, however, such has been the number and value of these improvements, that it is now possible for us to make and sell a line of cars, completely equipped in every detail, at such low prices as to make the Studebaker product the sensation of the motor car trade.

The Studebaker Chemical and Physical Testing Laboratories

NO AUTOMOBILE manufacturer has as complete an experimental department, chemical and physical laboratory as we have.

We make this statement without fear of contradiction. Not only does the department alone occupy an entire building larger than some motor car factories, but the character of its equipment is much superior to that of any other testing laboratory of this kind, and it surpasses also the equipment found at most of the best universities.

Apparatus for the complete testing of chemical composition, physical strength, and molecular construction has been installed.

Owing to the fact that many makers have made the same broad claims regarding their laboratories this statement may not seem impressive.

Interior of our balance room, where accurate weighing is done. The floor upon which these scales rest is independent of the rest of the factory and is not affected by vibration. This precaution is necessary owing to the delicateness of the apparatus. These scales are so accurate that they will easily weigh the amount of graphite in a pencil mark made on a piece of paper.

The photographs, however, will convey a somewhat better idea of the vastness and scope of these laboratories and the number of experts required to maintain their operation.

A look into the thousands of records that our engineers have made would still further impress you with the remarkable work which such a department accomplishes. Unlike many such efficiency departments, this one has paid for itself many times over.

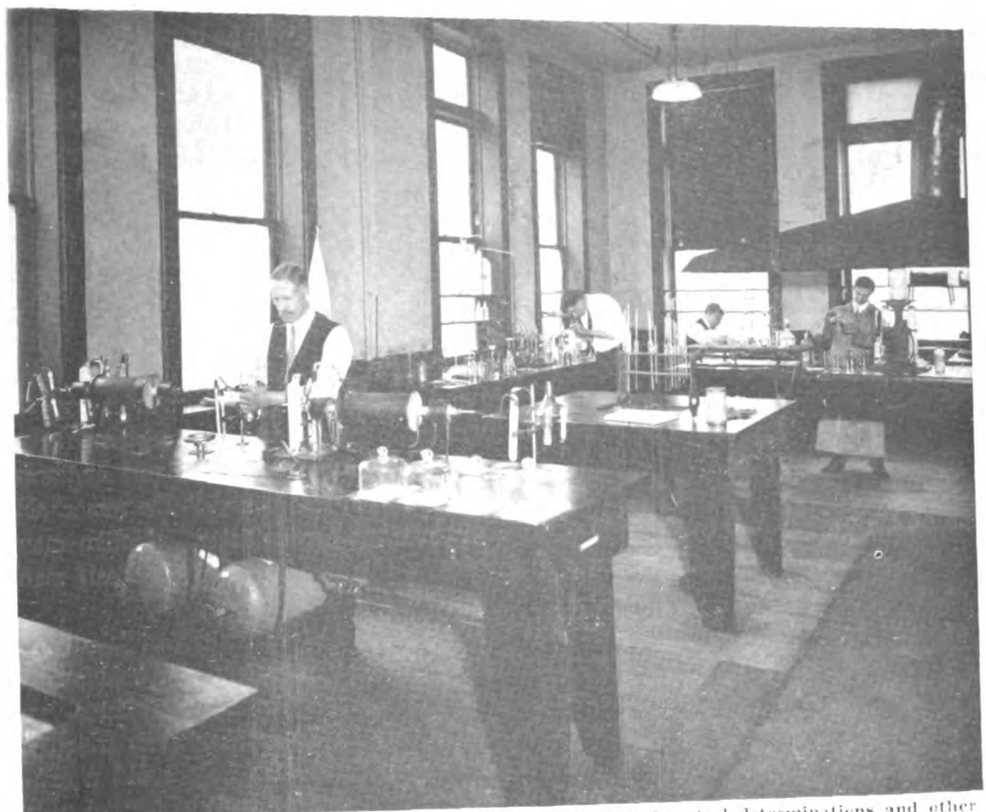
It has caused the rejection of inferior material, changed heat-treating formulas, suggested new metals, new babbitts and bronzes, new wheels and new tires, and made possible innumerable improvements found only in Studebaker cars, which no amount of careful planning without such help could possibly have accomplished. It has suggested methods of testing which have proved to be vastly superior to those generally accepted as proper and sufficiently thorough.

The problem of heat-treating, which, as you know, has a great deal to do with the resistance and wearing qualities of metals, has for many years been a stumbling block to the engineering profession.

While many theories have been evolved which experimental tests have seemingly verified, yet no one knew exactly what could be expected.

Our laboratories furnish us with exact knowledge on these matters.

To accomplish this, we added, in addition to our chemical and physical laboratories, another equipment suitable for what is known as "Proximate Analysis." This system of studying the structure of metals depends upon a minute microscopic examination of their molecular structure.



So pleasing and satisfactory have been the results obtained by this method that we have adopted it for all of our regular work.

Crude material is now a known quantity to us.

We know what we need for every pur-

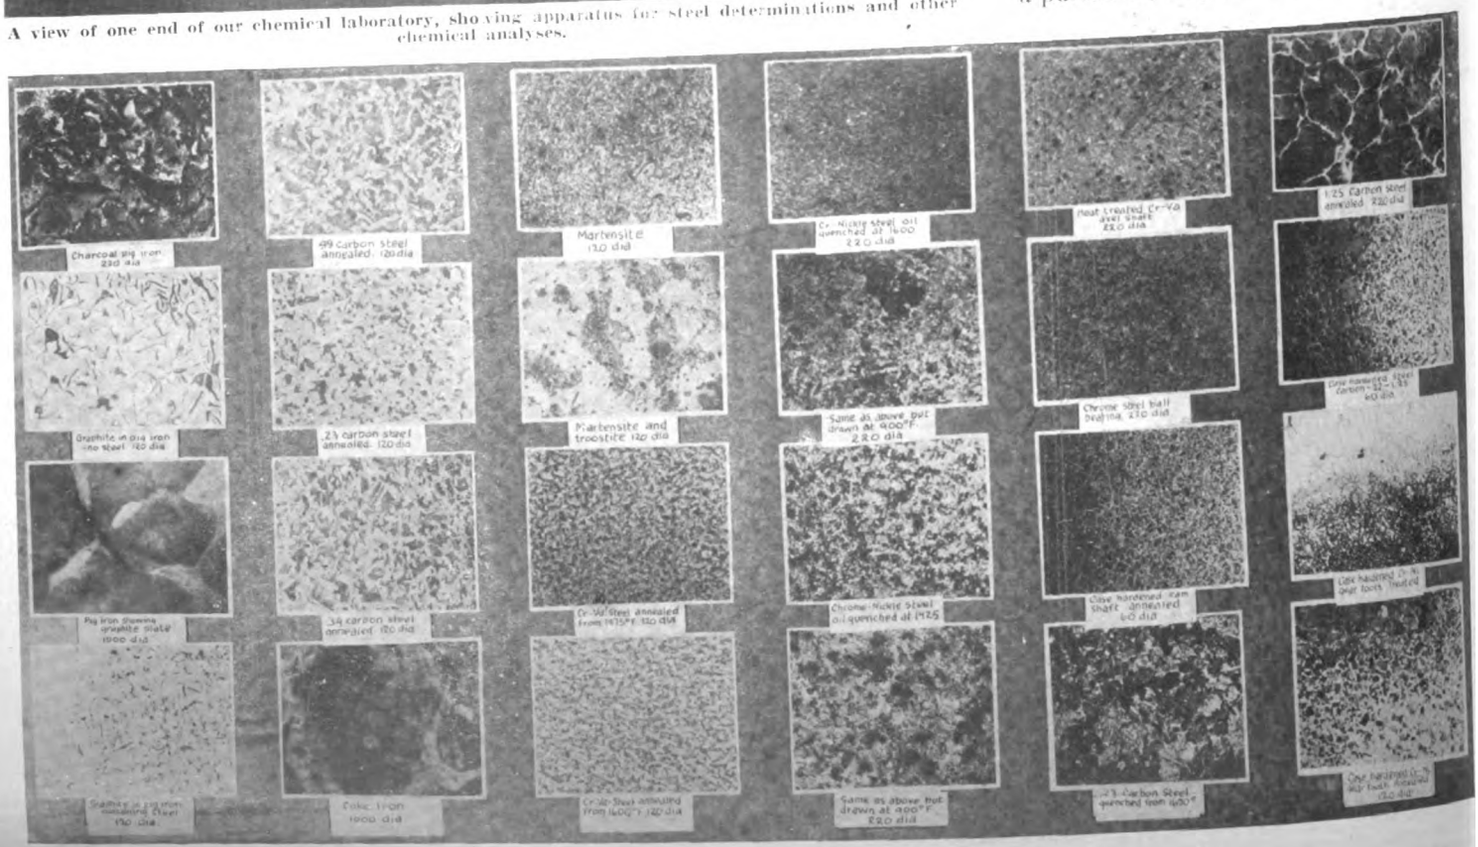
Studebaker

A view of one end of our chemical laboratory, showing apparatus for steel determinations and other chemical analyses.

pose; what metal is best suited for every part in our car; why it is best, and how to handle it to get the maximum strength out.

When a shipment of crude material comes into our plant we do not depend upon the manufacturers' specifications. We pay extra to have metals made the way we want them. We buy them in big runs, and analyze samples of every shipment that comes in.

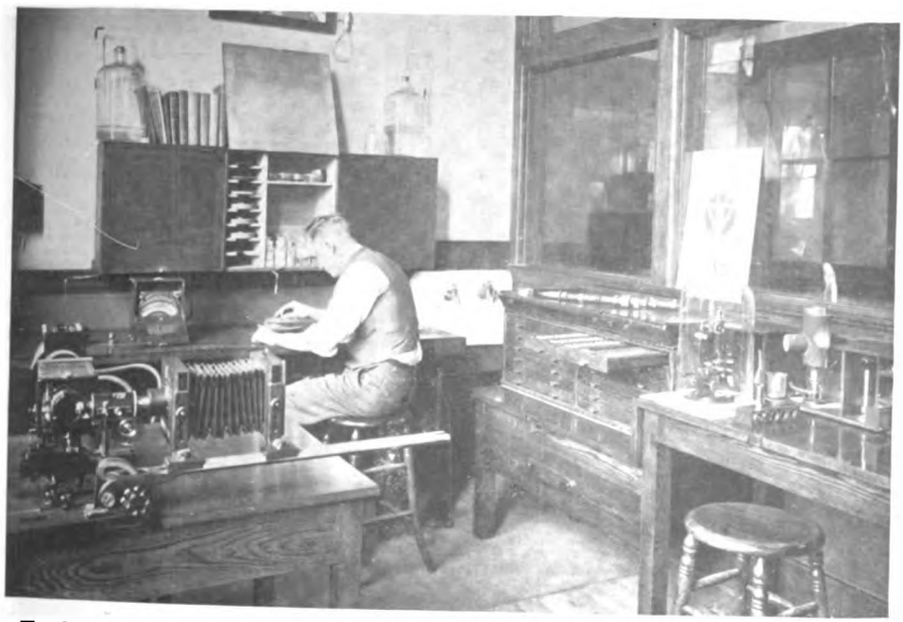


Not content with a mere chemical analysis we make physical tests and microscopical examinations to check up our chemical laboratory findings.

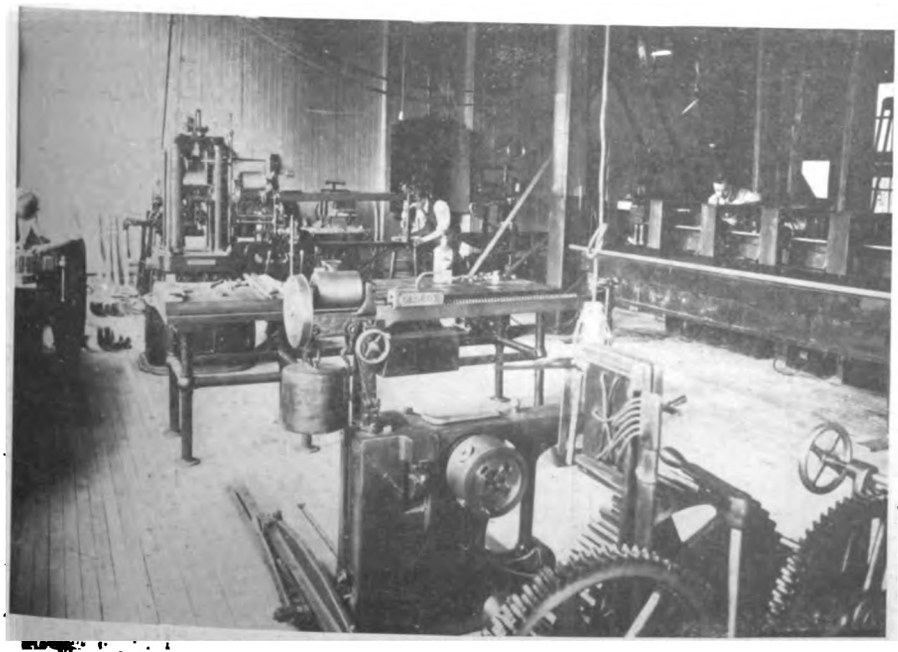
We test for comparison, tension, torsion, or twisting effect, hardness, wearing qualities, lubricating qualities.

We break parts by slow and fast vibration, bending and unbending, find out everything that we need to know by methods that are as accurate as the mathematics of astronomy.

Even wheels and tires are subjected to the same rigid chemical and physical tests.



We know exactly how strong a material is; what its general properties are, and what its true worth is. Consequently, we buy scientifically and efficiently. You, as a purchaser, reap the benefits.



Magnified cross sections of steel and other materials used.

Body Construction and Finish

THE statement is frequently made by automobile manufacturers that bodies are especially well finished, but few of them give details as to exactly how this is done.

If you will look at some of the illustrations you will see that Studebaker bodies are particularly well made, well shaped and well braced. The top irons run from top to bottom, and are firmly held in place by a number of screws. Double trimming strips, well braced backs, and many other special features will be noticed. Twenty-four operations are required to complete the upholstering and painting.

View of body after wiring and switches have been put in. This work is all done before the upholstering is put on.

24 ACTUAL OPERATIONS

The rough bodies are first primed with a preservative; they are then glazed to cover hollow color varnish is laid on, twenty-four hours after which a second coat is added.

After allowing twenty-four hours for this to dry, the bodies are again taken to the rubbing deck, and rubbed smooth.

A coat of rubbing varnish is then applied, followed by a second coating of the same material, which, after twenty-four hours, is again rubbed.

During the twentieth operation the striping is put on and body wiring finished.

The job is then ready for the upholstering. After this is completed the entire surface is cleaned with water, and rubbed smooth, after which the final finishing coat of varnish is applied. This is allowed to dry for forty-eight hours or more, after which the aluminum scuff plates are put on, and the body completely equipped.

The result is that the bodies on all Studebaker cars have as good a finish as it is possible for skilled workmen to give them, and if there is one thing that Studebaker workmen can do it is to finish a body correctly.

No workmen in the world have had greater experience in this line.

DETAILS OF CONSTRUCTION

The auxiliary seats are also worthy of your careful inspection, as they are of excellent material, very rigidly made and mounted in bayonet sockets. The trimming strips, running along the top of the body, also show refinement in detail.

Instead of being merely fastened on with screws, you will notice that each fastening is provided with a countersunk nickel washer, which not only makes a better looking

UPHOLSTERY

What is true of painting is true of upholstery as well, as Studebaker upholsterers are masters of this art.

The leather used is the finest hand-buffed leather that can be purchased.

The burlap and hair are of an equally superior quality.

The springs that form the frame work are the best that can be purchased, and their construction is such that they are braced in every direction.

You will see how this is done by referring to the illustration.

Now, just a word about hand-buffed leather. Leather used for upholstering is of four different grades, known as "split," "deep-buffed," "machine-buffed," and "hand-buffed," the last being the finest grade, and costing from 5 to 6 cents more than the machine-buffed.

Upholstering the seat cushions. Pressing down the hair preparatory to tying it in. Note high-grade, hand-buffed leather and genuine curled grey hair used.

Rear seat, showing thickness of cushion and form of auxiliary seats. Note the small amount of room that it takes when folded up.

These various grades of leather are obtained from the different parts of the skin of the animal, the split being that next to the flesh, the deep-buffed being that portion between the split and the machine-buffed, while the hand-buffed is the outside coat.

While many makers are satisfied to use inferior qualities, some even using the split, which costs from 8 to 12 cents less, we prefer to utilize the best we can buy.

The gray hair used in stuffing the cushions is of an A1 quality, costing from 8 to 10 cents a pound more than that used by many manufacturers.

WINDSHIELDS AND FENDERS

The windshields have been simplified and much improved in design and appearance.

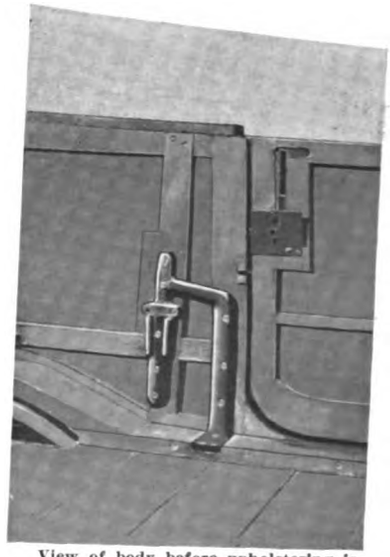
For the "35" and SIX the windshield is made in two-glass sections, both adjustable, and is known as the "rain vision and ventilating type," giving rain vision, clear vision and ventilation.

The "25" windshield is of the ventilating type.

The frame is finished in black enamel, with nickel-plated trimmings.

The fenders and mud guards of crown cross-section, for the SIX and "35," fit the body snugly, and add greatly to the beauty and distinctive appearance of the car.

LAMPS



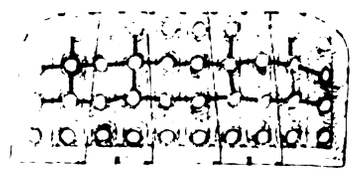
The latest style bullet lamps, with parabolic reflector, furnish a lighting equipment unexcelled for the "35" and SIX. Besides the usual five lamps an electric light has been placed on the dash.

They are all electrically lighted, the current being furnished direct from the storage battery, which, of course, is kept charged by the dynamo, and controlled by a triple push button, located under the cowl of the dash in a convenient position.

The "25" windshield is lighted by a Prest-O-Lite tank leading to large brilliant headlights.

TOPS

The tops are made of carefully selected silk mohair, stretched over combination hickory and steel bows. The straps and fasteners contain many features which make for convenience, and the use of the Studebaker Jiffy curtains adds another feature which all motorists will appreciate.



View of body before upholstering is put on, showing the well braced construction and the manner in which the body is ironed for auxiliary seats.

Upholstering and cushions

Shows spring construction of cushions. Special attention is called to extra bracing by means of cross rails and strips of metal improving the seat construction, and preventing it from sagging.

A Discussion of Studebaker Construction

THE frames are made of basic open-hearth, hot-rolled steel, stamped into channel section with cross members and reinforcement plates of the same material. A drop in the side members for the two larger cars allows the springs to be fastened at a point higher than usual, so that the distance through which the springs can work is materially increased, and at the same time the body is raised enough to allow easy access to the rear axle.

THE SPRINGS

A double scroll ¾ elliptic type of spring on the "35" and SIX, and full elliptic on the "25," shackled at both ends, and lubricated by special spring bolt grease cups, makes the action of the rear suspension particularly free, the rear wheels thus being allowed to accommodate themselves to the irregularities of the road, with alacrity, and without communicating the shock to the body and passengers. A system of semi-elliptic spring in front, fastened to the frame in front, and shackled at the rear, completes the suspension equipment.

This shows top, windshield, dash, steering wheel and dash construction. Note double strip of oak-tanned leather fastened at dash; also clear vision, rain vision and ventilating windshield, . braces and adjustment features.

As you will note in the illustration, the rear system is firmly fastened to the end cross-member instead of inserted in or attached to the end of the side-members. This construction is unquestionably superior to other existing types on account of its rigidity and strength.

Another point that is worth mentioning is in the ¾ elliptic type, the insertion of a block of wood between the top leaf of the spring and the frame; this block of wood serves as an absorber of vibration and shock, and when desired, can be removed to permit the ready release of the spring.

As in the highest priced cars, the leaves of the spring have small lips formed on either side, which are turned up at right angles to the face of the spring, keep the leaves together, and prevent them from flying out of line on the recoil.

All the spring shackles have grease lubricated shackle bolts operating in bronze bushings; a point which bears emphasis because many makers do not use bushings, but allow the shackle bolts to work in a more or less imperfect hole formed by the spring itself.

All the spring plates are made of the finest oil-tempered steel, accurately fitted and ground. Drop-forged steel pads are used throughout, those on the rear being provided with means for grease lubrication.

Radius rods, the ends of which also operate in bronze bushings, well lubricated, extend from the rear axle housing to the frame cross-member, removing all driving stresses and strains from the springs.

View of end of frame showing manner of supporting the upper half of rear spring. Note that it is fastened to the cross-member instead of to the side member, and that a wood block is placed between the upper leaf of the spring and the frame, making removal of spring easy. This illustration also shows the manner in which the spring leaves are lipped.

THE FRONT AXLES

The front axles are of basic open-hearth steel, drop-forged, and specially heat-treated, according to our formula; tests show that it is capable of carrying many times the load to which the severest service can subject it.

How we know this, and how it is tested, will be described later under the heading of "Our Chemical and Physical Testing Laboratories." The steering knuckles are of basic open-hearth steel, drop-forged, accurately machined and suitably heat-treated; these are carried at each end of the axle, on vertical bolts of large diameter, operating in phosphor bronze bushings, exceptionally well lubricated, to insure easy steering and minimum wear.

Method of fastening carpet on floor of car by means of glove buttons; eye is sewed on to the bottom of carpet, and not set into the fabric, as is commonly done; no floor connections show on top of the carpet; also, the [illegible] that back of front seat is [illegible] tected with heavy [illegible] floor to top of [illegible]

Digitized by Google

THE REAR AXLES

The rear axle of "35" and SIX is of the full floating type; it is enclosed in a housing of open-hearth steel, especially designed and stamped in a unique form that fits it snugly and does away with truss rods, leaky joints and other parts with which many rear axles are encumbered. The upper and lower lips of the housing are made of three thicknesses of steel, giving triple strength just where it is needed.

The differential gearing is carried on two Hyatt roller bearings, supported in turn by two extensions running into the rear axle housing from the transmission case. This construction insures a perfect alignment between the driving bevel pinion and the driving gear at all times. As excessive friction and disalignment at this point means great loss of power at the rear wheels, you will readily see the great advantage of this design.

"25" REAR AXLE

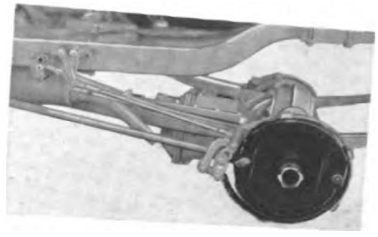
The rear axle of the "25" is of a semi-floating type, having this marked and new advantage that the upper half of the transmission case may be readily removed, exposing the entire transmission and rear axle gear assemblies. Thrust washers are provided to take end thrust on each side of differential so that driving pinion and rear ring gear cannot be thrown out of alignment or bearing surfaces injured.

Load is carried on two extra long high-duty Hyatt roller bearings.

Every part of the rear axle assembly is accessible; both axle shafts, with driving flanges, can be easily removed; the differential may be inspected or removed entirely by the mere unscrewing of a few nuts.

The axle shafts, driving pinion, drive gear, differential bevel gears, are all made of chrome nickel alloy steel, drop-forged, accurately machined, hardened and ground. Particular care has been exercised in the design of all gears and shafts, giving more bearing surfaces and sufficient material for adequate keys and key-ways. How we have determined what these sizes shall be, how many, and what sized keys should be used, under the heading, "How We Check Up Design."

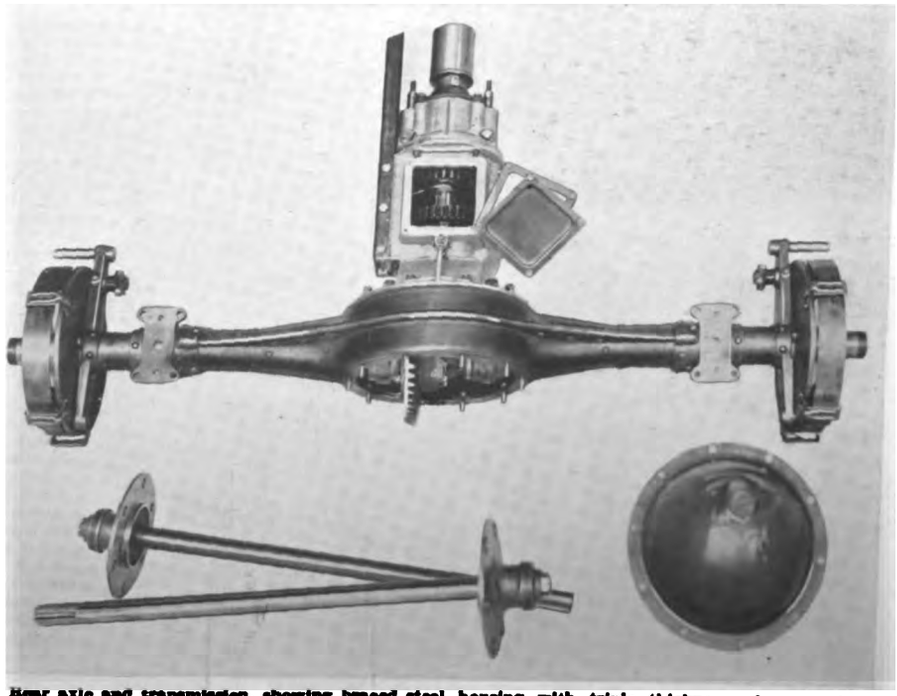
Why we use an axle shaft with six projections around its circumference instead of one with a squared end, will also be explained.



THE MOTORS

The motor design, common to all the new Studebaker cars, is particularly worth your careful inspection, as it contains many new points you will not find on other motors in other cars.

The cylinders are cast en bloc, of special close grained gray iron; the intake, exhaust and water pipes form a part of the cylinder casting, doing away with a great number of small parts, troublesome joints, and gaskets. The carburetor intake passage from the right-hand side of the motor to the inlet valve is fully water-jacketed.

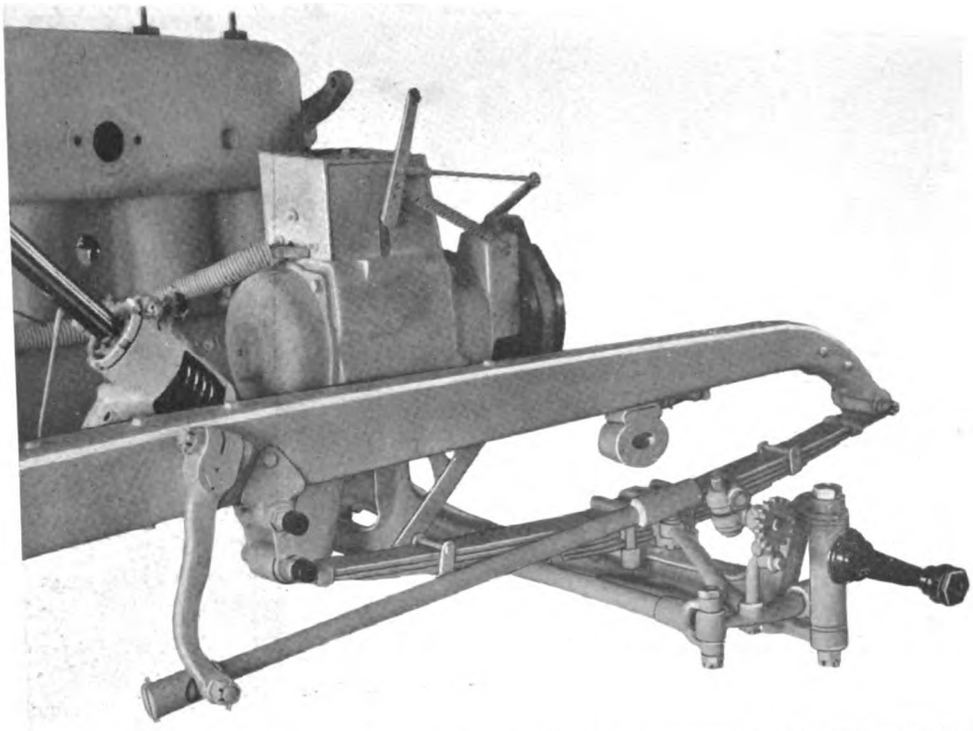


The air and gasoline mixture in consequence is thoroughly vaporized, producing a mixture which ignites readily, and liberates its maximum energy.

The cooling water is taken from the radiator into the cylinder jacket directly around the valve seats, thus preventing trouble from warped and leaky valves, and the consequent loss of power which always accompanies such defects.

View of end of rear axle, showing internal and external brakes, brake mechanism, and upset end of frame. Note the large amount of room between the rear axle and body, allowing for a large deflection of the rear springs. This view also shows the braced steel rear axle, transmission case, and one end of the radius rod.

Studebaker motors on account of their improved construction and enclosed valves run very quietly; you cannot hear the working of the valves at all.



Rear axle and transmission, showing braced steel housing with triple thickness where needed, full floating type rear axle, bevel gear drive, strong, compact transmission and also end of the torque rod.

MOTOR WORLD

Studebaker

December 26, 1912

Front axle construction, showing self-starter, steering gear, magneto, steering gear connections, steering knuckle, special speedometer bracket, rubber spring bumper, spring shackle equipped with lubricating bolts, lipped springs, and form of channel section; also, note steel conduit through which electrical connections with dynamo pass.

Special spring testing machine designed by our engineers for testing endurance and flexibility of the various forms of spring suspension. Hundreds of sets of springs have been tested by this machine up to the point of fracture, thus giving us accurate information regarding the quality of steel used in Studebaker cars.

THE PISTONS

The pistons also are made of a special close-grained gray iron; the heads are crowned to give maximum strength and minimum weight, and highly polished to prevent the adherence of carbon. This feature is also worthy of special notice as the carbonizing of pistons, although the source of much trouble, has been given but little attention by manufacturers generally.

The mirror polish given to Studebaker pistons, although increasing their cost to a considerable extent, has proved to be an efficient improvement in motor construction and operation. Each piston carries four piston rings, three near the upper end to insure perfect compression and no leakage, the fourth at the lower end to act as an oil wiper, preventing excessive lubrication and its consequent smoking.

Unlike other construction, the piston pins, of high carbon basic, open-hearth steel, hardened and ground, are held rigidly in the upper end of the connecting rod, and operate in bearings of large surface in the piston walls. This excess of bearing surface reduces the wear materially, and makes it seldom necessary for any inspection of this part of the motor to be made.

THE CONNECTING RODS

The connecting rods are made of high carbon, basic, drop-forged and carefully heat-treated steel, according to a special formula.

The lower, or crank shaft bearing, surfaces are made of a special babbitt, which our laboratory engineers specify for this place. These bearings are so set into the retainers that they cannot work loose. The bearing caps are held in place by two special bolts of angle diameter.

Each set of pistons, piston pins, and connecting rods is carefully weighed and balanced to within a quarter of an ounce before being placed in the motor; this balancing operation is very important because, if such balancing is not done, the motor will not run evenly, and especially at high speeds may develop vib...

Digitized by Google

knocks which are not only disagreeable and troublesome, but detrimental to the mechanism as well.

THE FLYWHEELS

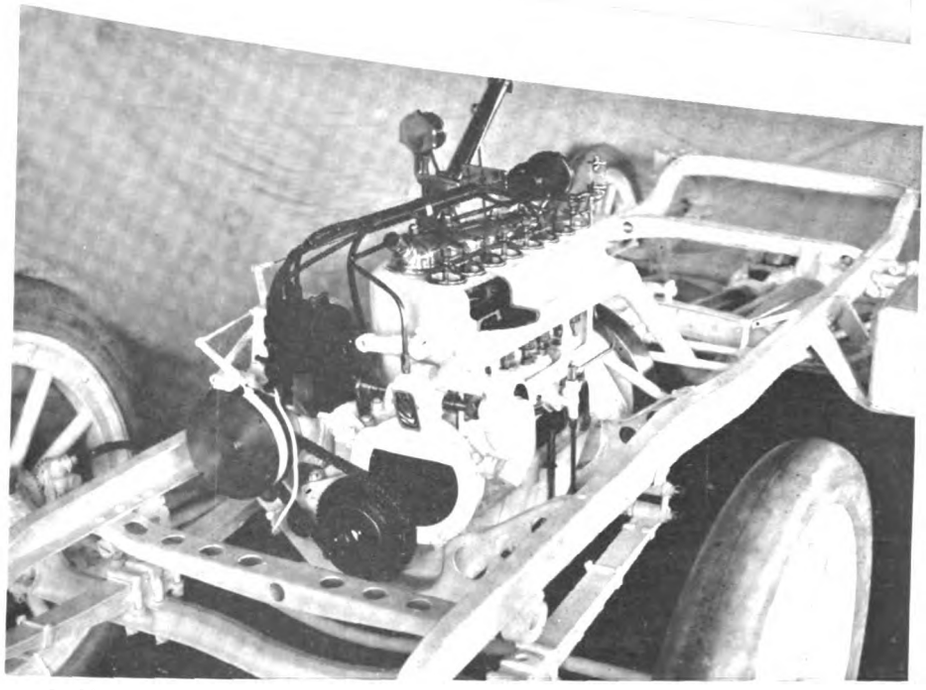
Much care has been taken in the design of the flywheel in the placing of just the right amount of weight at just the right distance from the center to secure a smoothly running motor.

By careful drilling and weighing, it, too, is accurately balanced, both statically and dynamically; that is, at rest and in motion. Some of these points which we have just mentioned constitute features of refinement which are not visible, but whose effect is, nevertheless, plainly to be felt when the machine is being operated. They constitute a strong reason for preferring Studebaker cars.

THE CRANK SHAFTS

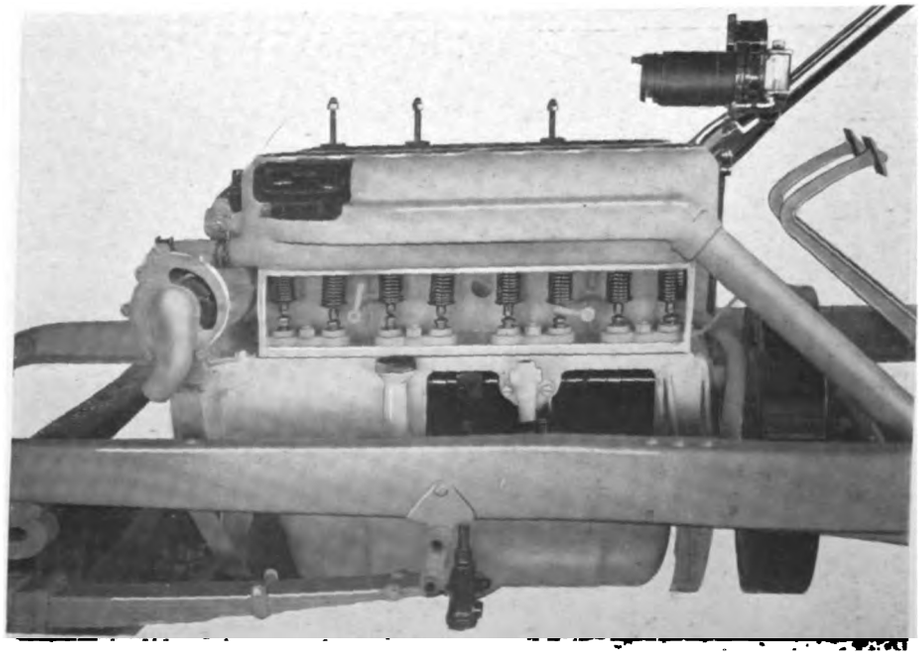
The crank shaft is a single drop-forging of high carbon, basic, open-hearth steel, machined, heat-treated, ground and balanced with the greatest accuracy.

It runs in three split bearings of high-grade babbitt, each bearing being provided with ample means for adjustment and liberal lubrication. The SIX crank shaft runs in four bearings.



THE CRANK CASES

The crank case is made in two sections, the upper half cast from a special grade close-grained gray iron for the "25" and "35," and of aluminum for the SIX. The lower half is a one-piece steel stamping of heavy gauge metal designed to carry oil distributing tubes, oil dip pans, and act as an oil reservoir for the lubricating system.



THE VALVES

The valves of larger size are all mounted on one side of the cylinder casting, and the mechanism is entirely enclosed in a dust-proof compartment, which, however, can be easily inspected by the removal of a plate held in place by two bolts fitted with lever nuts.

Everything possible has been done to

Looking at the front of Model 35 motor, showing cross shaft with helical driving gear, water pump, water pump connections, magneto, self-starter, silent chain for driving same through motor support, and general form of construction. Note universal joints in pump, and magneto drive shafts, and adjustable fan support.

Motor sections showing valves, valve seats and inlet and exhaust passages; also, interior of pump and crank case. Note the manner in which valves are enclosed, and in the center of the hole through which hot air from the carburetor is sucked directly from the valve compartment, thus doing away with any possibility of getting dirt into the carburetor, and insuring warm air at all times. At the upper right-hand corner the coil and sight feed that go on the dash are also shown. Note the manner in which a portion of the exhaust pipe is eliminated by making it a part of the cylinder casting. A good view of the fly-wheel and clutch and brake pedals are also shown. The small standpipe showing the level of oil in the crank case will also be noticed in the foreground.

Digitized by Google

insure the elimination of wear, noise and trouble. The valve heads are drop-forged from basic, open-hearth steel, and electrically welded to high carbon steel stems. This combination has been found to be desirable as the open-hearth steel successfully resists heat and is not liable to pit, while the high carbon steel stems have been found to be best suited for wear and to give great rigidity. That our decision is right has been proven by the very satisfactory results that these valves have given in high-speed racing and long endurance contests.

The push-rods that operate the valves are of high carbon, basic, open-hearth steel, machined, hardened and accurately ground; they are carried in cast-iron bushings, pressed into the cylinders, and are actuated by one cam shaft; a screw and lock-nut of the most approved design allows them to be delicately adjusted.

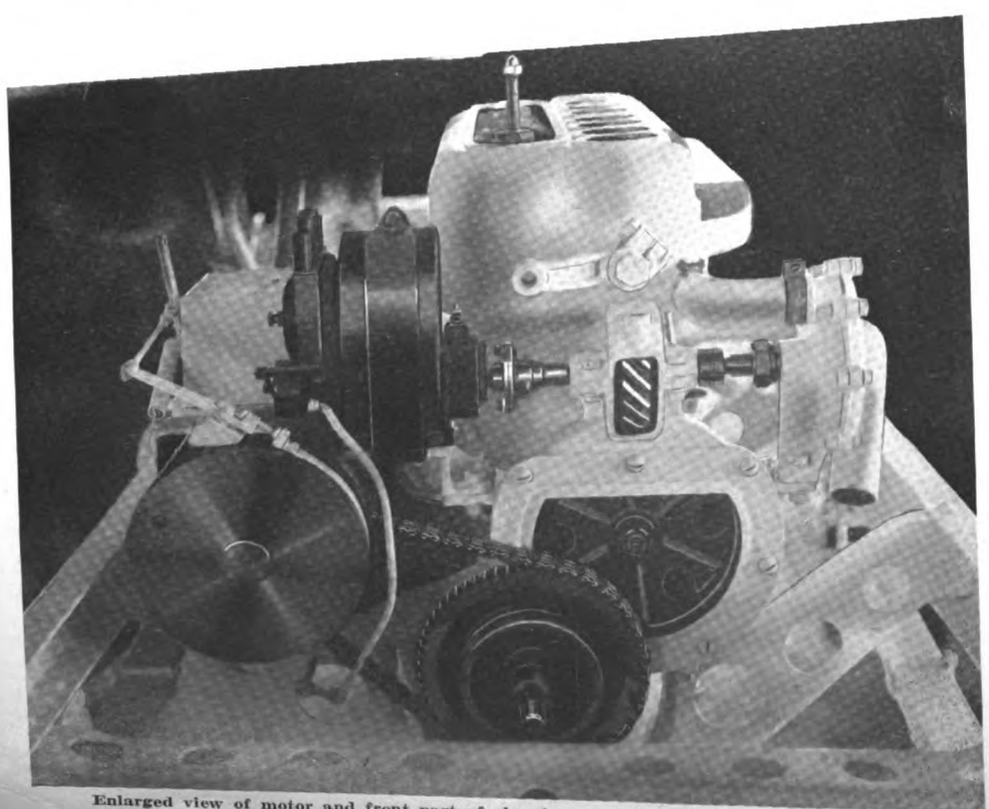
Marks on the flywheel accurately spaced at the proper distances make valve timing an easy operation.

IGNITION

The Splitdorf dual system of ignition, consisting of a low-tension magneto and auxiliary battery of four dry cells, is used. A coil fitted with the latest style of dash switch is mounted under the hood, and the wiring is carried through insulated flexible steel and hard rubber conduits, to Splitdorf mica insulated spark plugs.

As will be seen from the illustration, the magneto is mounted in front of the motor, and is driven by transverse shaft, operated by helical gears.

All wiring, the magneto and coil are fully protected from dirt and moisture by an easily removable waterproof cover.



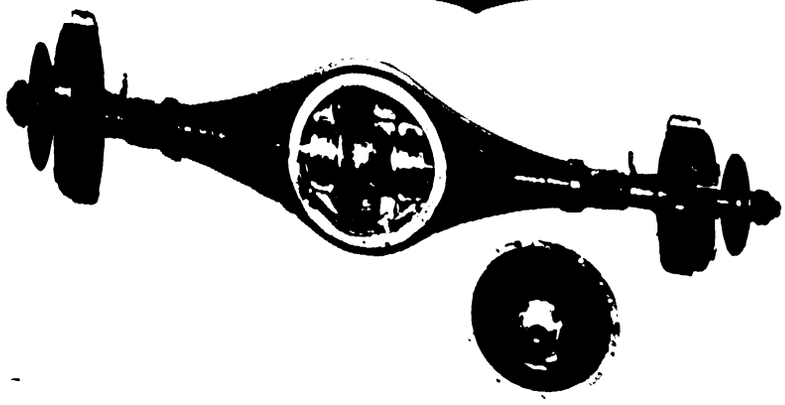
The entire wiring equipment, which runs inside the body, is installed and inspected before the upholstering is put on.

Fly-wheel, clutch and front universal housing.

No pains have been spared to make the entire electrical equipment thoroughly trustworthy.

We do not take the manufacturers' word for it, but test every piece of material, every terminal, every magneto, every coil, every wire and every switch that goes into the ignition construction.

Enlarged view of motor and front part of chassis. Section to show interior mechanism.



LUBRICATION

Studebaker cars are equipped with the combined splash and pump circulating system.

Oil is taken from the reservoir in the bottom of the crank case by a pump driven from the cam shaft, and constantly delivered through tubes to the timing gears and pockets in the dip pan underneath the crank shaft. When the motor is running the oil is pumped from an oil reservoir in the bottom of the crank case through a sight-feed on the dash, and, after distributing itself over the timing gears, finally drains back into the crank case again. A strainer prevents any dirt from entering the oiling tubes.

The amount of oil in the crank case reservoir may be ascertained at any time by glancing at the gauge located near the filler pipe.

Digitized by Google

Showing interior construction

As only the surplus oil goes through the sight-feed there is always sufficient warning given before the reservoir is empty, so that no damage can be done from lack of lubricating oil. The quantity of lubricant and the method of its distribution have been so accurately calculated that there is no possibility of the motor smoking. Another advantage of the system is that fresh oil is constantly furnished to the timing gear case, completely flooding this mechanism, and almost entirely eliminating any wear and noise at this point.

COOLING SYSTEM

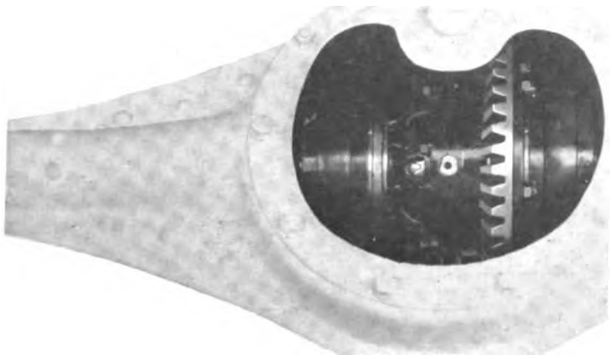
A McCord tubular radiator in the "25" and "35" and a Livingston Honey Comb in the SIX, through which the water is forced by a centrifugal pump, maintain the cooling water at the proper temperature under all conditions. The cars literally cannot overheat.

The system has a large water capacity, and on account of the ample water jacket space and piping used, is very efficient.

Shows ease with which the differential and large bevel can be removed.

The air circulating fan is mounted on a bracket on the front of the motor in such a way that the belt by which it is driven may be easily and quickly adjusted.

THE CLUTCH



The clutch is of the leather-faced type.

The cone is a one-piece steel stamping, well ribbed for stiffness.

The clutch-hub is a steel casting with phosphor bronze bearing on the crank shaft.

The contact between the clutch-cone and flywheel is maintained by a highly tempered coil spring which exerts a pressure of about 80 pounds.

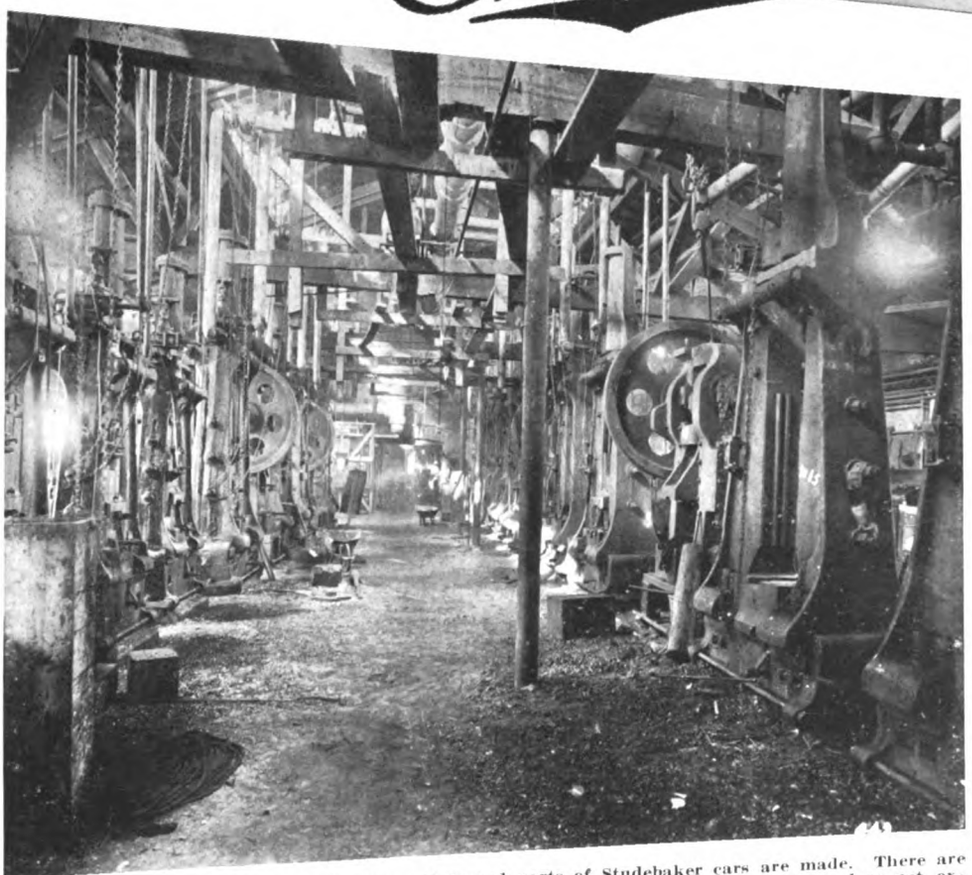
The system of foot levers is so designed that very little pressure need be exerted on the foot pedal to release the clutch.

Differential with oil-tight cover removed.

Beneath the clutch leather is a series of flat springs that hold up the leather at several points, making the clutch engage easily and smoothly.

TIMING GEARS

The timing gears are of the helical type, cut with a 20-degree pressure angle, and long addendum type tooth, designed especially to give very quiet action and great durability.



The pump and magneto shaft gear is of the same type, set at right angles and meshes with the cam shaft gear.

This entire gear assembly is enclosed in an oil-tight case, and runs in oil.

PROPELLER SHAFT

The drive from the clutch to the trans-

Digitized by Google

View in large drop forge plant where all forged parts of Studebaker cars are made. There are over 250 drop forgings in each car whereas the usual number used by most makers does not exceed 140.

mission is through the propeller shaft of chrome nickel steel, especially heat-treated.

Front and rear universal joints, with all parts of basic, open-hearth, drop-forged steel, and phosphor bronze bushings, are provided. Both are entirely enclosed by a newly designed dirt-proof and oil-tight covering, insuring clear, well lubricated universal joints.

A torque arm, bolted solidly to transmission case at the rear end, and secured to a cross-member of the frame at the front end by a system of springs, fully protects the gears and driving shafts from road shocks and undue strains.

TRANSMISSION

The Transmission is of the selective sliding gear type, three speeds forward, and one reverse. All gears are 6/8 pitch, cut with a 14½ degree pressure angle, hardened and accurately ground. The countershaft is of large diameter, and carried on two plain die cast bearings with large flanges to take the thrust.

The forward drive shaft is of chrome-nickel alloy steel, hardened and ground, and is carried by two annular ball bearings.

The rear drive shaft is of chrome-nickel alloy steel, hardened and ground, and is carried at the front end in a phosphor bronze type of bearing, drilled and grooved for lubrication, and at the rear end is carried in a Timken improved roller thrust bearing.

A specially designed ball bearing is also located at this point to take care of any additional thrust that may develop.

The drive pinion is secured to the rear drive shaft in a taper fit with a Woodruff key and a castellated nut.

The sliding gears are maintained in position by a ball and spring lock arrangement and corresponding grooves in the rear shift rods.

This arrangement, together with the improved control system, keeps the gears in mesh regardless of road conditions.

The transmission parts are all contained in a two-piece cast aluminum case, bolted to the rear axle housing.

SPECIALLY DESIGNED GEARS USED

The driving teeth gear used in Studebaker cars are very different in shape to those used by other makers. They have a special form of tooth, which was invented

One of the Studebaker Foundries.

Digitized by Google

by one of our men, and later developed in our laboratories. They are absolutely silent in their operation and wonderfully efficient.

DUST PANS

The dust pans are steel stampings, and are made in three sections, the front and rear fastened permanently to the frame; the middle section is held up by specially designed lock to facilitate its quick removal and replacement at any time.

Every precaution has been taken to give a sufficient amount of ventilation.

THE STEERING GEARS

The steering gear is on the right-hand side, and is of a positive worm and worm gear type, absolutely irreversible; in other words, a movement of the front wheels, such as that caused by striking obstacles in the road does not cause the steering wheels to rotate.

By using a wheel instead of a mere sector it is possible to reset the gear in four different positions, so that in the case of wear a new surface can be quickly presented.

To gain great steadiness, the steering is fore and aft; that is, the reach rod from the steering gear operates directly on the right-hand steering knuckle lever, and moves parallel to the frame.

The steering wheel is an aluminum spider with a bent wood rim of large diameter.

The spark and control levers are carried on the sector at the top of the steering column, and an accelerator pedal is also provided for handling the throttle in crowded traffic where it is desirable to keep both hands free.

CONTROL

The control levers, located on the right-hand side, are made of drop-forged, heat-treated steel, and will not break as combination steel and brass levers sometimes do.

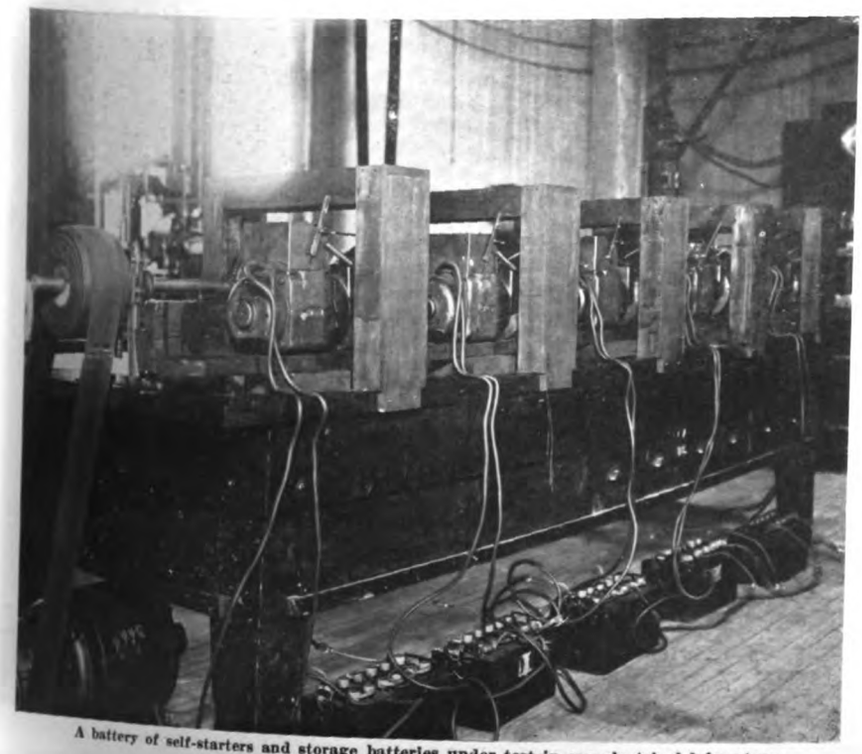
The emergency brake lever works in conjunction with an improved inverted type of sector.

Electric switches for operating the electric lights and ignition system are conveniently located on the dash within easy reach of the driver.

THE BRAKES

The brake construction on Studebaker cars is unique and very expensive to make.

Designed with a large factor of safety they are constructed so that they will hold equally well forward or backward.



They consist of two sets, both of which operate on brake drums on the rear hubs, the emergency brake being controlled by a hand lever, the operation of which expands an internal shoe.

The service brake, operated by a foot pedal, is of the external band type, the inner surface of which is covered with an asbestos composition lining. The emergency brake has a metal to metal contact, with very large braking surface.

A special spring release prevents the brakes from dragging, a defect which is noticeable in some other cars.

THE WHEELS

Artillery wheels, equipped with demountable rims, and Goodrich Q. D. tires are used.

A battery of self-starters and storage batteries under test in our electrical laboratory.

ELECTRIC SELF STARTER

An electric starter of the motor generator type, especially designed for the Studebaker Corporation, and manufactured by the Wagner Electric Manufacturing Company, of St. Louis, is included as regular equipment on the "35" and SIX. Acting on the crank shaft through a silent chain, it is capable of turning the motor at 80 r.p.m. for a period of 30 minutes. A Willard 50-ampere hour, 12-volt battery, used in connection with the starter, supplies the lighting system, and is automatically and continuously charged by the starter, which runs as a generator after the motor starts.

A flexible cord runs from the starter controller to a handle on the steering post within easy reach of the driver. To start the motor, you merely pull this handle.

As soon as the motor begins to fire, the starter automatically changes its function to that of a generator.

We show in one of the illustrations a battery of these self-starters under test in our electrical laboratory.

No maker has a more complete method for testing than we have.

Distinguishing Characteristics

THE STUDEBAKER "25"

The Model "25" is one of the most remarkable values ever produced.

We know of no other low-priced car which is manufactured under such favorable conditions and in factories exclusively devoted to high-class manufacture.

As we have said before, in nearly all its details, it is exactly like the higher priced types; being especially noteworthy on account of its simplification of chassis design.

It has, however, full-elliptic springs, and a semi-floating rear axle, which is equipped with thrust bearings to take up the end thrust and in which the construction is such that the gears cannot get out of alignment.

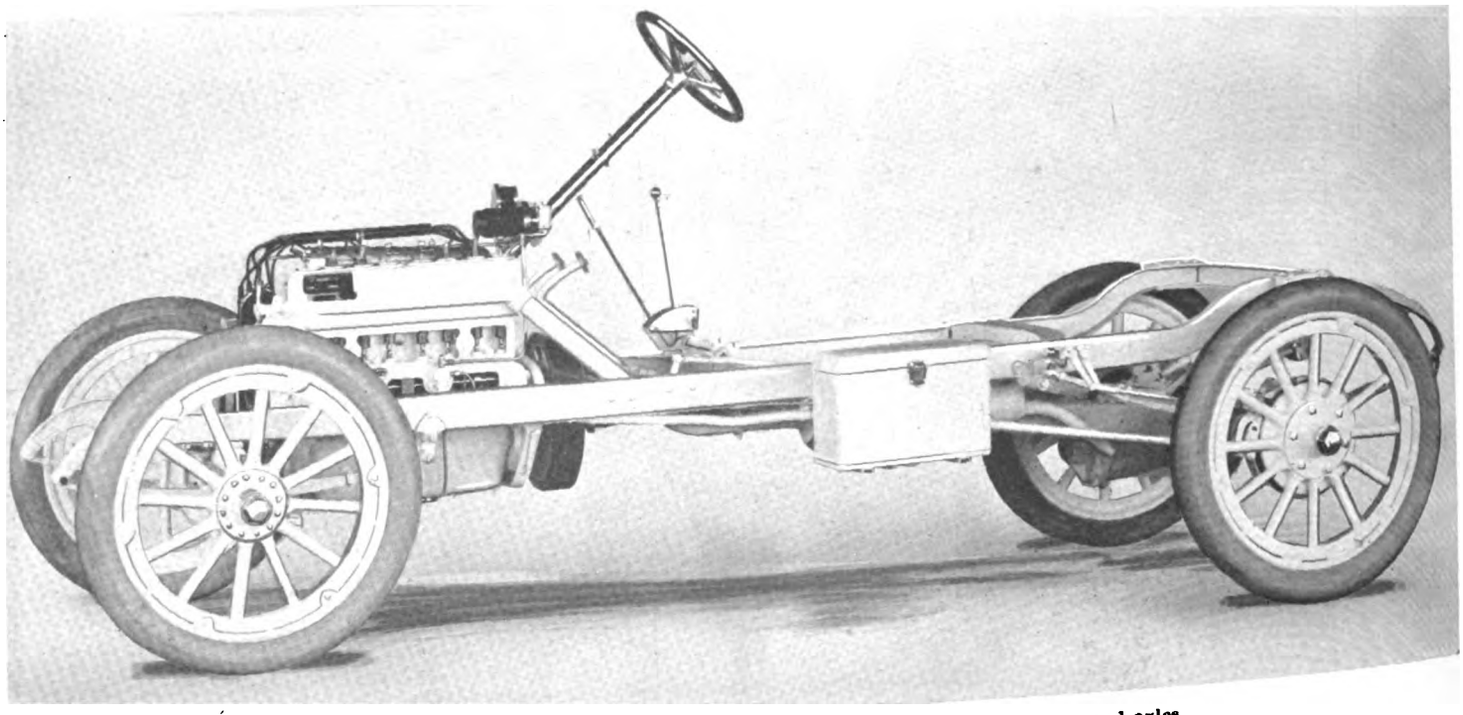
The transmission differs slightly from the two other cars, but is equally strong and accessible.

The driving torque is taken up by a torsion tube surrounding the propeller shaft.

The motor develops 26 horsepower on brake test. The touring car fully equipped with all tanks filled, weighs 1,950 pounds. The car has extraordinary power and has already made a great record as a hill-climber, and under the most severe road conditions. Its equipment is liberal, as will be seen by referring to the table of specifications.

The "25" has a 3½" bore by 5" stroke, 4-cylinder motor, 102" wheelbase, and 30 x 3½" tires. It sells for $885.00.

For equipment, models and prices, see detail specifications.



THE SIX

The "Six" has a 3½" bore by 5" stroke, 6-cylinder motor which develops 40 horsepower on brake test. The upper half of the crank case is composed of aluminum, in order to save weight. The radiator is of the honeycomb type. In all other respects the "Six" is typical of the general Studebaker design. The weight of the "Six," with all tanks filled, is 3,000 pounds.

It is built on 121" wheelbase with six passenger body, and is equipped with 34 x 4" Goodrich tires.

The announcement of a six-cylinder car of undisputed high-grade at $1,550 is an achievement which marks a memorable point in the advancement of the automobile industry.

For equipment, models and prices, see detailed specifications.

View of special Model 35 chassis section to show interior mechanism of motor and axles.

STUDEBAKER "35"

The Model "35" is equipped with a 4⅛" bore by 5" stroke, 4-cylinder motor, and has 116" wheelbase.

The actual horsepower delivered on brake test is 35, and the car weighs 2,850 pounds fully equipped with tanks filled.

The "35", we believe, is absolutely unapproached by any car selling within $500 of its price of $1,290. It fills the eye, a big car, of distinguished lines, comfortable, roomy and equipped with an excellence and attention to detail which has never before been shown in a moderate priced car. If you would like a $2,000 car, buy the $1,290 Studebaker "35." At every joint it is as good or better than many cars of good reputation for which you are asked to pay a much larger price.

A Word About Studebaker Service

Few automobile manufacturers have what may be called a truly efficient service department.

Many claim to have, but investigation has shown that in most instances it falls very far short of being ideal. A large number of service stations are necessary to keep an efficient service department in successful operation, to give customers proper attention, to insure the rapid filling of orders, and a speedy adjustment of claims.

The Studebaker Corporation, like few other organizations, is happily in a position to handle such matters promptly. 2,500 Studebaker branches and dealers dot the country.

Hardly a city of any size can be found in which there is not a Studebaker representation.

It is for this reason that we have been able to lay out, and put into successful operation a plan for taking care of Studebaker owners in a generous way that is second to none in ultimate usefulness. It has always been our policy to do this.

Our enormous business and our reputation for honesty and fair dealing has come as a logical result of such policy.

Naturally we are jealous of such a reputation, and intend, therefore, to maintain it at any cost. A careful, consistent conservatism, combined with a progressive policy towards our purchasers, will, we believe, enable us to do it.

The Closing

IN the preceding pages we have discussed at length some of the important features and some of the little known characteristics which make Studebaker automobiles the extraordinary values we believe them to be.

We make this claim for every Studebaker Car—that in quality of material, in method of manufacture and in skillful workmanship, Studebaker automobiles are not excelled by any cars built, no matter what the price.

This claim is justified because it is true. With every car we sell goes a pledge of business honor which rests upon sixty years of Studebaker success and fair dealing.

We have told you a little about these cars because we hope above all things, that every prospective buyer will make a most searching examination of the car he proposes to buy. Studebaker cars are honest down to the last detail of construction and they will reward a buyer with years of satisfying service. Think over these things and take an opportunity to see for yourself the marvelous values which you will find in Studebaker automobiles. You will see them at all the shows and at the salesrooms of our dealers.

Protect Your Car with a Bulldog

BULL DOG AUTO LOCK

Progressive Dealers

Will be alive to the sales possibilities of this device, which is by long odds the best insurance against theft, joy riding and meddlers generally.

The Bull Dog Auto Lock is one of the necessities that is "a little worker with a big mission to perform," and to see it is to want it. Dealers have proved this by the number of sales they have made and are making.

This safety device is simple in construction, easy to attach and detach, neat in appearance, and has the tenacity of a bull dog. It will fit all modern cars that have a sliding gear transmission.

Write and get our proposition to you. The retail price is $2.50, small enough to make sales come easy and large enough to give you a liberal commission.

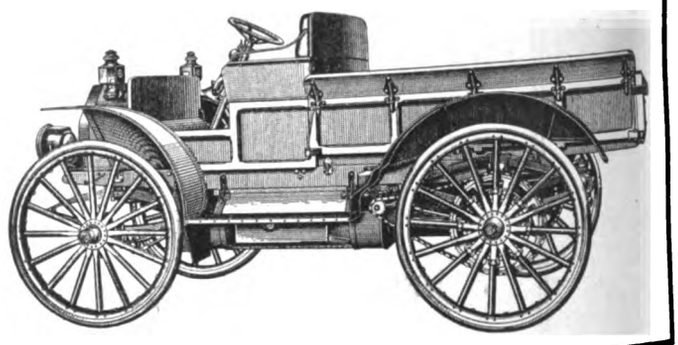
Every Business Man Can Use an International Commercial Car



To the man who sells automobiles, the International Commercial Car presents an interesting and attractive proposition. It occupies a field of its own. The fact that a man already owns an automobile makes him a better prospect for an International Commercial Car, especially if he is a farmer or a business man who does light hauling or makes deliveries.

Better Than Horses

The International Commercial Car is more reliable than horses. It works long hours without rest. It travels over roads where mud, sand, snow, or ice would make it cruel to drive horses. It is a better investment than horses.

Less Expensive

The International Commercial Car costs less than horses and wagons to do the same amount of work, and the up-keep cost is less. It costs nothing when not working. It does not require so much care as horses. It is a money-saving proposition for a business man from every point of view.

Strictly a Commercial Car

It does not compete with pleasure cars. It is strictly a commercial car, whose size, power, shape, transmission, tires, road clearance, construction, price—all are the result of years of experience in building a car to prove satisfactory for light hauling and quick deliveries in the hands of average drivers.

This is the Car We Ask You to Sell

Can you do it? If you think you can, our proposition will interest you. Better write for it anyway and see just what we have to offer. Address

International Harvester Company of America

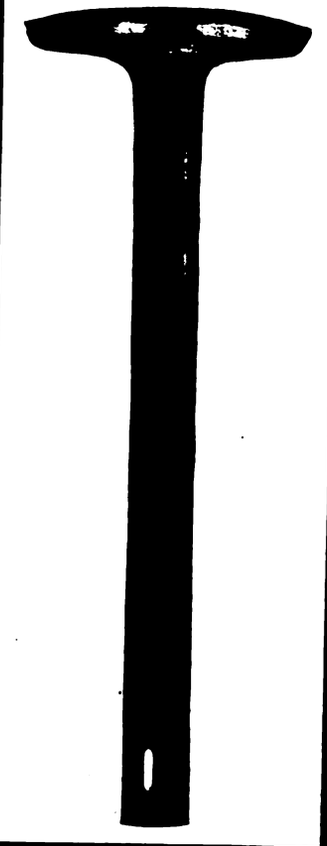
THINK THIS OVER very carefully and read it twice, if necessary.

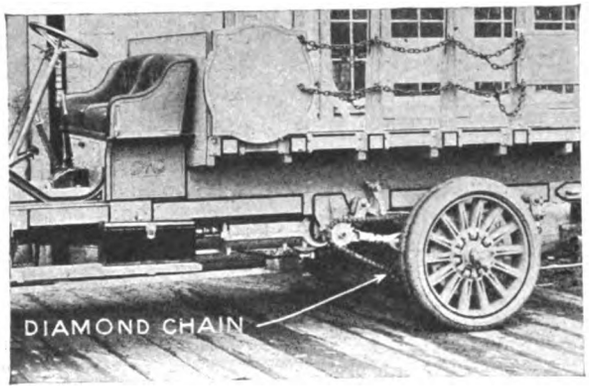
Is there any part of an automobile engine, or any other gas engine, that is more important to its efficiency than a Valve?

Your engine leaves the factory running smoothly and sweetly—tuned up to its highest power. Perhaps the valves pit—warp—go out of shape—fail to hold compression. Then the power diminishes, and what can be more aggravating to the driver, who has known the fullness of the pulling power of his motor, than to have it grow less and less?



You cannot slight this part by putting in an inferior product—valves that will give trouble, or even break from inexperience in their manufacture—valves of unsuitable material, not suitably heat treated.

Too much is at stake, and a slight extra cost at the outset, which is the exception, may save you many times over a probable later expense.



This Company, with the experience of many years as a guarantee, will furnish you with properly made valves, of the materials best adapted to your requirements.

Not only QUALITY, but efficient SERVICE is a factor—surely there is a satisfaction in getting the kind of work you want—when you want it.

Prominent make of truck equipped with DIAMOND CHAINS

This picture shows one of the General Motors Truck Company's 2½, 3½ and 5 ton trucks equipped with Diamond Chain.

When prominent manufacturers specify Diamond Chain as standard equipment they must have a reason and it is in their service records that this reason is disclosed.

Diamond Chains have proved in every test the essential qualities of strength and durability, which can only be possible with the strictest attention to material and construction. All rivets in our heavy duty chains are nickel steel. All holes in side bars are reamed accurately to size and pitch—giving an even and perfect bearing not possible with simply a punched hole.

In our treatise "Power Chains and Sprockets," there is valuable engineering information on the subject of Chain Drives for Trucks. We have a limited number of these books for free distribution. Write now and secure a copy.

Add $10 to $25 Profit to Each Automobile Sale

Here's an easy way to pick up an extra Ten or Twenty Dollar Bill whenever you sell an automobile.

Just send us the name of the purchaser and we will endeavor to sell him an Edwards Private Portable Steel Garage.

That's all we want you to do—merely furnish us the name.

You Invest No Money or Time

It means $9.25 to $20 profit FOR YOU on each sale. And you've no money or time invested. Send us a list of all automobile owners in your locality, and on this plan you'll make a nice, clean profit—perhaps several hundred dollars.

The Edwards is far and away the most popular and widely advertised Private Garage. Our prices are much lower than others. And we've an excellent system of following up all names received. We won't miss any opportunities to close sales.

Write Us Now Send us your list of local auto owners at once. or we will be glad to answer any questions.

Edwards Fire-Proof Garage

An artistic, fire-proof steel structure for private use. Gives absolute protection from sneak thieves, joy riders, fire, lightning, accidents, carelessness, etc. Saves time, work, worry and trouble. Comes ready to set up. All parts cut and fitted. Simple, complete directions furnished. Absolutely rust-proof. Joints and seams permanently tight. Practically indestructible. Locks securely. Ample room for largest car and all equipment. Made by one of the largest makers of portable fire-proof buildings. Prompt, safe delivery and satisfaction guaranteed.

The Edwards Mfg. Co., 709-759 Eggleston Ave., Cincinnati, O.

Easy-Riding Tire That Never Cause Trou

Motz Tires are as easy-riding and shock-absorbing as properly-inflated pneumatics, yet never puncture or blow out. They also end dangerous skidding and waste of power. Guaranteed for 10,000 miles—two years. Easily applied to any standard clincher, universal quick-detachable or demountable rim. Adopted as standard equipment by all leading makers of pleasure electrics.

Note their patented shock-absorbing construction—the double, notched treads, (A); the undercut sides, (B); the slantwise bridges, (C); the absorbing qualities when passing over an obstruction, (D).

ONE USER'S EXPERIENCE

The most convincing proof of this tire's worth is the experience of users. Here is what Rev. M. P. Boynton, Pastor of Lexington Avenue Baptist Church, Chicago, under date of October 16, 1912, wrote us:

The Motz Tire & Rubber Co.,
2023 Michigan Ave., Chicago.

Gentlemen:—Between three and four years ago I put Motz Cushion Tires upon my Electric Runabout. It at once increased the mileage by increasing the speed from twelve to fifteen miles an hour and reducing the amperage from thirty-five to twenty-eight in normal conditions. I discovered that though the motor is carried on the back axle with no spring support, the Cushion Tires did it no harm.

The heavy back tires particularly were a joy forever. I disposed of the machine some months ago, having used those tires for over three years and they seemed to be in as good condition as the day they were put on, barring the slight wear on the duplex face of the tire. Very respectfully,

(Signed) M. P. BOYNTON.

Send for copy of handsome Tire Book, No. 58. Please give make and model of your car and size of rims.

MEZ Soot PARK

All spark plugs are the "best" if you want to put your seal of approval on every advertised, but unproved, claim that goes into print, but—

It's quite another matter if you are inquisitive concerning the "reasons why" back of such advertising.

This advertisement is directed to inquisitive dealers and manufacturers.

One of the Oldest Spark

WHY THEY ARE SOOT PROOF

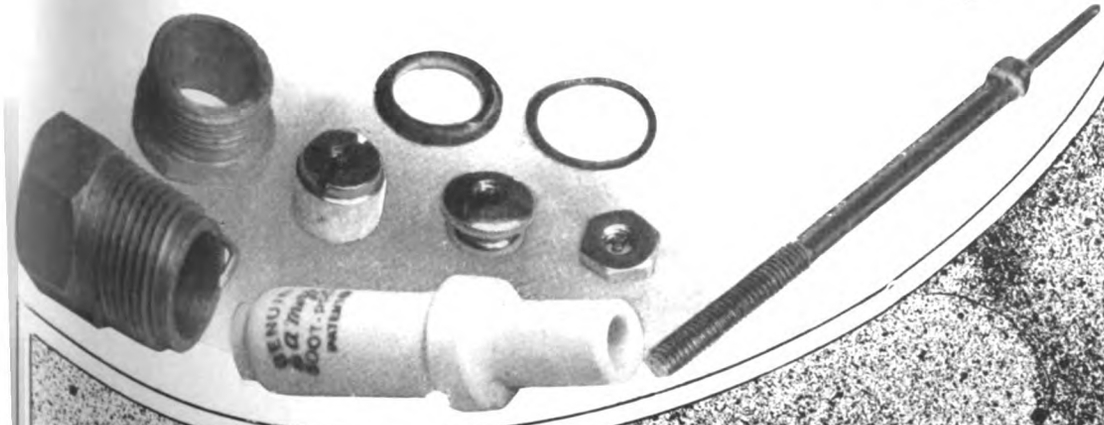
We began making these plugs in 1900 and we **started right** by breaking away from the solid porcelain design which was warranted to develop "carbon distemper" every seven or eight miles.

We originated the double chamber idea which gives a large area of carbon surface inside and outside the porcelain, making a path of resistance several times greater than that in any other plug—**the current must take the path of least resistance**—the air gap.

Perfect Electrical &

Digitized by Google

GER Proof LUGS



The small diameter of the porcelain chamber radiates heat so rapidly that carbon is actually burned up as fast as formed.

Mezger Soot Proof Spark Plugs cannot short circuit, leak, collect soot, clog—under any conditions of speed, temperature, excessive oiling or pressure.

Plug Makers in America

We own the basic patents on this device. It has been half way but never successfully imitated, because our double chamber principle is radically right. Other plugs are better than the old solid porcelain type, but they fall far short of Mezger Soot Proof Service—in time and satisfaction.

Insulating Features

Digitized by Google

Dealers

Good Spark Plugs Hold and Make Trade

DEALERS

In these days of mediocre demand and wholly unreliable automobile parts and accessories it s a wise dealer who holds and builds trade through the selling of satisfactory goods—and the car owning public is quick to accept the opinions and recommendations of such dealers.

How much dead stock have you, Mr. Dealer—just in spark plugs alone, for instance? Have you loaded your shelves with advertised but unproved goods, and tied up a lot of money? Why not handle spark plugs that ***have made good*** through service?

Mezger Soot Proof Spark Plugs can be handled exclusively by you —they are in demand—you can create more demand.

One of the Oldest Spark Plug Makers in America

In justice to yourself—in justice to your trade—for the commissions we offer—you ought to sell MEZGER SOOT PROOF SPARK PLUGS.

Net prices to the trade and full detailed information will be mailed on request. Write for them.

The Motor Lamps with Distinctive Features

There are no other motor lamps on the market with the advantages of Solar Lamps. Solars are always exclusive in style and in quality. They are the strongest lamps as well as the most effective.

In no other lamps can you obtain the Solar Special Short Focus Lead Glass Lens Mirror Reflector—the patented system of double ray light projection which gives two distinct fields of light for town and country use—or the new and exclusive black finish with a metallic lustre which is unaffected by heat or moisture. All of these features are exclusively "Solar."

Do not equip your car or specify equipment to the maker until you have seen all of the Solar advantages. See Solars at any live dealer's or write for the catalog.

Solars are made in all styles for oil, electricity, gas and in combinations.

HODGE & GRAVES CO.,
Amesbury, Mass.

Repairing Casing

TIRE CUTS ruin casings. They admit moisture to the carcass, cause the fabric to rot and weaken, grow larger—end in blowouts.

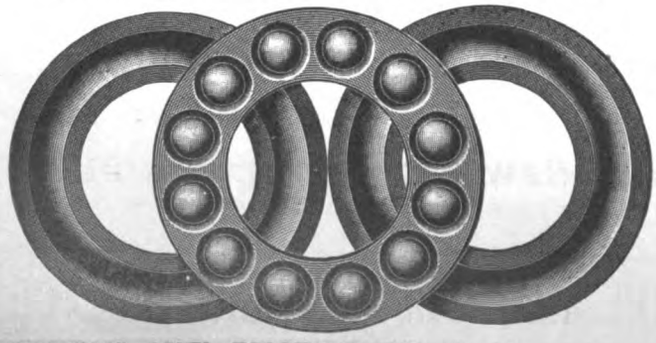
You can repair **CASINGS** and **INNER TUBES** anywhere in 15 minutes, better than a Repair Shop can do—and for *one cent*.

Universal Auto-Vulcanizer
Patented

A practical vulcanizing outfit complete, with enough repair gum to make 40 patches. It weighs 3 pounds and can be carried in the tool box. **Simplest and most satisfactory device for eliminating tire troubles that has ever been devised.**

Absolutely automatic. Place the patch—attach the Vulcanizer—put in the gasoline—light it. No further attention required. In 15 minutes the job is done.

It *can't burn, scorch* or *injure* tube or casing. It *can't* get out of order. It *can't* fail to do its work. So simple, anyone can operate it. The Universal Auto-Vulcanizer saves its cost a *hundred times* over in trouble and expense.



Price Complete. **$4.00** Ready for Instant Use
Guaranteed Satisfactory or Money Refunded

Auto Supply Houses:

On this page, the one just before the classified ads, there will be an important announcement each week.

Look for a startler in the next issue.

C. A. SHALER CO.
449 Fourth St., Waupun, Wis.

SHALER Vulcanizers

predominate in auto supply catalogs

In reply to a circular letter sent a few weeks ago to all concerns cataloging automobile supplies, we received two hundred and fifty-four catalogs.

Here's the way the Shaler line led the field of trailers:

	No. of Catalogs Received.	No. of Pages Given.
1. **Shaler**	**254**	**447½**
2. Trailer	254	60
3. Trailer	254	52½
4. Trailer	254	47 5-6
5. Trailer	254	39 1-3
6. Trailer	254	25½
Next ten trailers combined	254	97 1-3

Briefly, distributors themselves acknowledge that the Shaler line is **standard.**

The Shaler line, the only complete line of vulcanizers manufactured in the world, covers the requirements of every motorist and garage.

Get our 1913 proposition at once.

Shaler Vulcanizers—the accepted standard

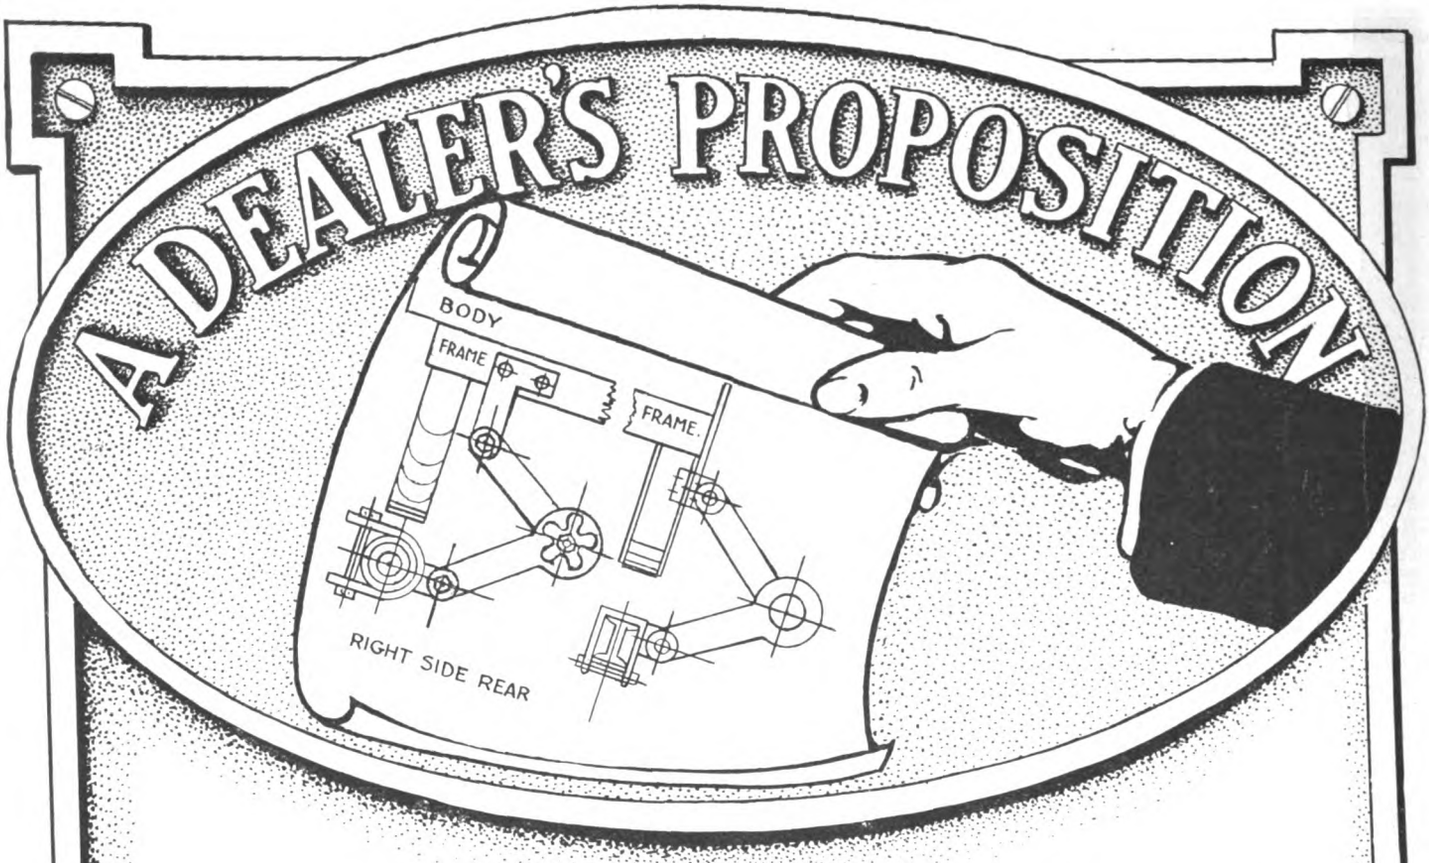
No. 2

New York, January 2, 1913



Ten cents a copy
Two dollars a year

There are certain lines which should go with the building of an automobile body, just as there are certain lines that go with the building of a yacht. In the PIERCE-ARROW CARS *for 1913 the automobile body has come into its own. These bodies have been built as automobile bodies—not as adapted carriage bodies. You will see the great difference at once.*

Truffault-Hartford
SHOCK ABSORBER

is distinctively a dealer's proposition. We've spent a fortune in compiling blue prints of every make, year, model of automobile manufactured since the motor car industry began. These prints show how to Truffault-Hartford-equip with a minimum of trouble and expense. The printed instructions, also provided, further simplify attachment.

Any dealer, anywhere, can sell Truffault-Hartford Shock Absorbers and put them on a car, if the purchaser does not want to do it himself.

Every car owner is a live, prospective buyer, for there is a model for every car from modest roadster to pretentious limousine and they list from

$15 to $60 a Set of Four

Another New Model Now Out

No accessory better or more widely advertised. Favorably known wherever autos "chug." Giving absolute satisfaction on more than 200,000 cars. Indispensable for comfortable motoring. A reducer of upkeep cost.

A dealer's proposition, pure and simple.

Write for full particulars with details of our co-operative dealers' advertising.

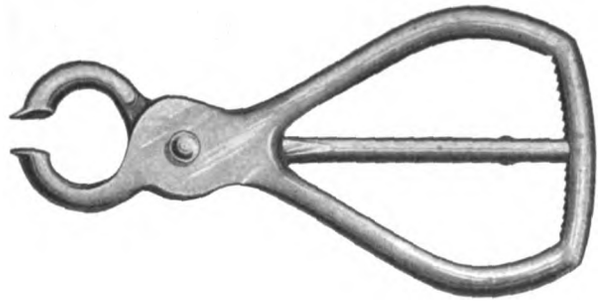
Bearings of Recognized Worth are Ear Marks of Car Quality

DEALERS

Are the Cars You Represent R.I.V. Equipped?

R. I. V. Ball Bearings have correctly grooved raceways, eliminating excessive side-play, machine-cut ball retainers and consequent uniform accuracy of spacing.



Designed after a most careful investigation into the requirements of motor truck service, leading manufacturers, after making exhaustive tests of all anti-friction bearings, are placing them on their latest output.

R. I. V. success rests in the confidence of the public in its product, its methods and its business integrity.

Mr. Car Manufacturer

You can guarantee your car mechanically but you do not protect the purchaser on tires.

A few cents judiciously expended for Gilmer Tire Repair Pliers as regular equipment will save the buyer of your car hundreds of dollars.

All manufacturers of motor cars realize that the real item of up-keep is tires, for it is an acknowledged fact that the best set of pneumatic tires may be cut or bruised in the first hundred miles of service, and injured rubber leads straight to the inevitable blow out. Hundreds of good tires are discarded daily before they have given 50 per cent. service.

The above is an indisputable fact, Mr. Car Manufacturer, and any little effort on your part to eliminate the excessive tire up-keep will be appreciated by the purchaser of your car.

Gilmer Tire Repair Pliers as regular equipment will be a constant reminder of your foresight in supplying him with the proper tools and equipment to prevent premature blow outs. It takes but a few minutes each week to thoroughly heal any little wound, and wherever introduced Gilmer Tire Repair Pliers bring hundreds of endorsements.

Let's get together on your 1913 equipment. A complete Gilmer set with every car you manufacture represents but a few cents extra expenditure per car; may I quote you in quantity?

Fedders Radiators

The square tube radiator is acknowledged to be superior to any other form of construction and Fedders design and methods of manufacture give Fedders radiators a standing second to none in the field.

Fedders Square Tube Radiators offer a maximum of radiating surface—all four sides are surrounded by water—cannot clog and can be repaired in short order by any tinsmith.

While we specialize on square tube types, we are also equipped to build on any specifications that may be furnished. Send us blue prints and our engineering department is at your disposal for co-operative work.

$985

Completely Equipped

Overland

$985

Completely Equipped

High-Priced Feature No. 9

Every Overland motor is thoroughly "worn-in" on the block under a belt for 48 hours; it is then tested on the block under its own power for 48 hours.

Not content with these tests, we require that each chassis be tried out on country roads—carrying a test body weighed with 800 pounds of sand bags.

Finally, each completed car is subjected to a trying 5-mile drive by an expert driver.

When you buy an Overland you are buying guaranteed performance.

In the Model 69T this high priced inspection and supervision costs but $985.

Write today for details. Please address Dept. 50.

Vol. XXXIV New York, U. S. A., Thursday, January 2, 1913 No. 2

"GAS" GOES TO 17 CENTS AFTER LULL SINCE JULY

Standard Oil Advances Wholesale Price One Cent—Increase of 88.8 Per Cent. Since Raises Began —Other Changes.

No New Year's greetings accompanied the announcement, but nevertheless the Standard Oil Co. on the day following the birth of 1913 let it be known to the trade that gasolene, that lately restless commodity, had made another ascension, after having been quiet since July, when it reached 16 cents at a cent-a-month rise from a wholesale figure of 9. The price to the garagemen of New York now is 17 cents per gallon, and other prices changed accordingly.

The 17-cent price is that at which the tradesmen will be supplied with fuel and has been attained in the space of about twelve months, it being near this time a year ago that the price began quietly to rise, and had gone several steps above 9 cents before much attention was attracted; the present price represents an increase of 88.8 per cent. over the 9-cent figure.

In addition to the garage price, there are other figures at which the oil company's "auto naphtha" is sold; delivery in wood barrels, which is prohibited in Greater New York and which was 19¾ cents, now is 21, an increase of 1¼ cents. Steel barrel delivery, which in New York takes the place of the prohibited tank wagon delivery, is the form in which garagemen get their "gas." The price to the individual car owner who has facilities for storing gasolene was 18 cents, two cents above the tradesman's quotation, and this now preserves the same margin with an increase to 19 cents.

The increase was not unexpected for fluctuations in gasolene—upward, of course—have been felt in various States as the old year drew to a close, but most prices are close to, if not in accord with, those maintained by the metropolitan division of the company. The same old explanation of the law of supply and demand is made to account for this latest increase, as it has served as the basis for the others.

Pope Secures Massachusetts Charter.

The Pope Mfg. Co., of Hartford, Conn., is now formally a Massachusetts corporation, the necessary charter having been issued late last week. It places the company's authorized capital at $6,500,000, which will be made up of 25,000 preferred and 40,000 common shares. The new corporation will acquire as a going concern all the assets and business of the Connecticut corporation of the same name, the capital stock of which also was $6,500,000. As Motor World stated last week, the transfer is due to the fact that the chief ownership of the Pope company for some time has been vested in residents of Massachusetts.

Otis Elevator Quits Worm Production.

The Otis Elevator Co. of Philadelphia, which, among other things, has been producing a worm gearing of the Hindley type, has transferred that branch of its business to the Hindley Gear Co., also of Philadelphia. It is stated that the demand for the Hindley worm gear axles attained such proportions that it best can be taken care of by a separate company.

Peerless Declares 40 per Cent. Dividend.

Incidental to its recent increase of capital from $3,000,000 to $10,000,000, the Peerless Motor Car Co., of Cleveland, declared a dividend of 40 per cent., amounting to $200,000. This dividend, it is stated, will wind up the business under the $3,000,000 capitalization.

Castle Retires from Lamp Company.

Fred E. Castle has resigned the presidency of the Castle Lamp Co., which recently removed from Amesbury, Mass., to Battle Creek, Mich., and is no longer connected with it in any capacity. He has no definite plans for the immediate future.

STANDARD MOTOR FORMED AS SUCCESSOR TO U. S. MOTOR

Capitalized Under Delaware Laws at $31,000,000 and Officials Already Picked—Many Legal Knots To Be Untied.

When the United States Motor Co. is sold, on Wednesday next, 8th inst., and passes into the hands of the reorganization committee, the name will pass out. In its place will arise the Standard Motor Co., which, in anticipation of the sale, was incorporated on Monday last, under the laws of Delaware, with an authorized capital of $31,000,000. The capital stock of the United States company is $42,500,000. Of the capitalization $11,000,000 is 7 per cent. cumulative first preferred, $9,000,000 is 6 per cent. non-cumulative second preferred and $11,000,000 is common stock.

It is planned that three voting trustees shall have control of the new stock for the next five years—Charles H. Sabin, Harry Bronner and James C. Brady. Hallgarten & Co. head a syndicate which has agreed to purchase for $7,720,996 the voting trust certificates representing the stock allotted to shareholders who have assented to the reorganization plan.

The new officers of the company will be Walter E. Flanders, president and general manager; W. F. McGuire, vice-president; Carl Tucker, treasurer, and M. L. Anthony, comptroller. The board of directors will be made up chiefly of members of the reorganization committee.

For the second time, the annual meeting of the United States Motor Co. was adjourned last week, owing to lack of a quorum. About 80,000 shares are necessary to constitute a quorum, and it is stated that there were present, in person or by proxy, only about 69,000. Another attempt will be made to hold the meeting on January 15th—a week after the sale of the property is scheduled to occur.

Digitized by Google

At last week's abortive gathering, the corporation counsel of Kingston, N. Y., appeared on behalf of stockholders residing in Ulster county and for the second time made an attempt to secure a full report of the company's operations for the fiscal year which ended July 31st last; his efforts again proved unavailing.

Pending the sale and transfer of the property, the lawyers involved are being kept busy untying the legal knots which have developed in several directions.

So far as concerns the bankruptcy petition, filed against the United States Motor Co. November 18 in the Federal court in Trenton, N. J., an effort was made Monday, 30th ult., to secure its dismissal, and while this move was primarily unsuccessful the petition seems unlikely to prove a stumbling block in the path of the reorganizers in the light of the present standing of matters. The petitioners are small creditors, but their action is said to have been taken at the instance of a U. S. Motor man who is opposed to the reorganization plan.

In demurring to the petition—in which demurrer the United States Tire Co. also joined—on Monday the attorneys, who represented the creditors and reorganizers, denied the allegations of fraudulent transfers of assets, preferential payments, and that the appointment of a receiver in the United States District Court in New York constituted an act of bankruptcy; the judge sustained the demurrer on the first two points but declared that the appointment of a receiver should be construed as an act of bankruptcy. He closed the matter for the day by giving the opponents of bankruptcy two weeks within which to answer.

This two weeks will not be up until January 13—five days after the assets of the company will have been sold in New York City; and once this sale is completed the bankruptcy petition becomes practically nil, since, with 96 per cent. of the proceeds of the sale paid over to creditors who have agreed to the reorganization and the remaining 4 per cent. paid in to the court for those creditors who oppose, this latter figure will be all that will be left for adjudication in bankruptcy, and shortly after the sale the old company will be dissolved and a new one formed. Also the appeal in New York City from denial of an order of intervention asked by some the Columbia stockholders will probably not be reached

STEWART-WARNER MERGER COMPLETES ORGANIZATION

LaChance of Chicago Flexible Shaft Made Vice-President—Branches Unite, Generally Under Former Stewart Manager.

With the election of a vice-president and two directors, the list of officers of the new Stewart-Warner Speedometer Corporation was this week made complete; John K. Stewart was chosen president and C. B. Smith secretary and treasurer more than a week ago when the $11,000,000 corporation was formed by the merger of the Warner and Stewart & Clark companies, and the newly chosen men are: Vice-president, L. H. LaChance, an officer of the Chicago Flexible Shaft Co., out of which the Stewart & Clark company grew; directors, H. M. Whitney, a member of the Chicago law firm of Whitney, Payne, Shaw and Strawn and Stewart's personal attorney, and a representative of White, Weld & Co., New York and Chicago bankers, who financed the deal. Nels Gross, former eastern sales manager for Stewart & Clark, and who was stationed in New York, probably will be sales manager of the corporation; W. J. Zucker, former Stewart manager in Chicago, becomes western sales manager; while A. J. Inderrieden, former Warner eastern sales manager, retains the same office in the Stewart-Warner company.

The organization has been further perfected by the appointments of managers of branches; in most cases the Stewart manager is made head of the branch, with the former Warner manager as his assistant, and both businesses are to be combined under one roof but handled separately.

Branch managers will be as follows: New York, F. O. Fleischer, formerly Gross's assistant; Boston, E. G. Biddle; Philadelphia, C. P. Brewster; Buffalo, James G. Barclay; Cleveland, H. A. Ungar; Detroit, E. W. McGookin; Chicago, H. A. Kraus; Minneapolis, including St. Paul territory, Thomas Snelling; Kansas City, Harry Weber. All except Barclay were Stewart men, as was W. R. Johnston, who is now Pacific coast manager and who will appoint sub-managers in cities in the United States west of the Rockies. The Canadian trade

In some of the American cities the management has not yet been decided upon, but business will be placed under one roof in every case; this cutting of rents will mean a saving of about $100,000 a year, and the cessation of litigation over patents is no mean figure.

The new stock of the corporation is quoted at 95 for preferred and 50 for the common, with 100 as par in both cases. Very little, however, will reach the public; the $1,000,000 of preferred taken by the bankers may be all distributed, but the greater portion of the $10,000,000 common —about $7,500,000, it is said—will remain in Stewart hands.

Ohio Town Heralds Mammoth Project.

What, it is declared, will be "one of the largest automobile, motor boat and aeroplane factories in the world" is to be erected in Bridgeport, Ohio, by the Bridgeport Auto Co., which recently was organized in that little town with a nominal capital of $5,000. It has acquired what was formerly the Crystal Glass factory, and also considerable adjacent real estate, and will raze the old building and erect a much larger and more modern plant better equipped to meet its needs. The incorporators of the Bridgeport company are J. Bernard Handlan, William Gail Hamilton and W. G. Knothe, all of whom are lawyers and of whom Handlan is said to hold the rights to several important patents. In addition to the Ohio attorneys, it is stated that several capitalists who are interested in the enterprise now are manufacturing motor trucks "which are being sold all over the world and the rights to which will be transferred to the new Bridgeport company."

Iowans Acquire a Minnesota Truck.

The Nevada Mfg. Co. of Nevada, Ia., which heretofore has been producing vehicle woodwork, has taken over the plant, machinery and patents of the Fourtraction Auto Co. of Mankato, Minn., which manufactures a four-wheel drive truck under patents of E. Rosenburg, who is the principal stockholder in the Mankato concern. It is stated that the business of manufacturing trucks will be considerably enlarged and that much will be made of a traction-plow with which experiments have been made for some time and which is said to have reached a high state of development.

WEED CHAIN PLANS REACH WORLD-WIDE PROPORTIONS

President Lasher Purchases Weed's Interests—Factory in Canada and Arrangement With Parsons to Extend European Trade.

Harry D. Weed, of Syracuse, N. Y., who founded the tire chain industry in this country and around whose patent rights the now powerful Weed Chain Tire Grip Co., of New York, was built when W. B. Lasher interested himself in the subject, last week relinquished all connection with the company which bears his name. His patent rights and other interests have been acquired by Lasher, who, to all intents and purposes, always has constituted the Weed company. Weed, who held an interest in several patents of his own and also in the American rights to the Parsons patent, which he early recognized as necessary to his complete success, has not been truly active in the company's affairs. He held no office and his duties largely have been of a consulting nature.

The transaction, which is said to have netted Weed a handsome sum, leaves Lasher in full control, and already he is carrying out plans which may be said to be of a world-wide nature. Among other other things, he has acquired the Canadian rights to the chain business of the Oneida Community, which operates a factory in Niagara Falls, Ont., and in which the Weed chains for the Canadian trade have been produced. Lasher, however, now is organizing what probably will be known as the Canadian Chain Co. and will erect a plant of his own also in Niagara Falls, Ont. Pending its completion, Weed chains will continue to be made in the Oneida Community factory.

Lasher also is reaching across the sea and has consummated an arrangement with the Parsons Non-Skid Co., of London, which owns the parent Parsons patent, whereby American-made Weed chains will cut a conspicuous figure in the trade not only of Great Britain but of the Continent. It appears that the Weed people have designed machinery which enables them to produce and retail their chains at about half the cost of the Parsons company itself, which fact naturally has been a potent factor in bringing about the arrangement between the two companies.

Grabowsky Bids Prove Insufficient.

None of the bids offered at the adjourned receiver's sale, on Tuesday last, of the assets of the bankrupt Grabowsky Power Wagon Co. of Detroit were accepted by the referee, who again will offer the property on January 23rd. It is stated that an offer of $55,000 by Wintermitz & Co., of Chicago, for the material and machinery probably will be accepted, and it is expected that at the public sale on the 23rd inst. sufficient will be realized from the sale of the building and its equipment to swell the net receipts to $200,000, which will net the creditors about 50 cents on the dollar.

Flanders's $600,000 Mortgage Recorded.

The second mortgage on the property of the Flanders Motor Co., which was arranged some time since, formally was recorded in Detroit last week. It is in favor of the Central Trust Co. of New York as trustee, and covers an issue of second mortgage 6 per cent. third year gold bonds of a value not exceeding $600,000. It covers all of the Flanders Motor Co.'s property of every sort, including the use of the name Flanders Motor Co. at home and abroad. It also provides that no demand shall be made for payment of interest against any incorporator, past, present or future, or any stockholder, officer, etc. The instrument is attested by Paul Smith, as vice-president of the company. The first mortgage on the property, to the amount of $300,000, is held by the Union Trust Co. of Detroit.

De Tamble Creditors Refuse 10 Per Cent.

James S. Sansberry of Anderson, Ind., who controls $101,000 of the De Tamble Motor Car Co.'s $200,000 bond issue, has offered the creditors a settlement on a 10 per cent. basis, which at a recent meeting before the referee in bankruptcy was refused pending an examination of the bankrupt company. An appraisement shows that the De Tamble assets amount to $145,000 and the liabilities to $233,000, which includes $133,000 in bonded indebtedness. This leaves about $100,000 due to open accounts.

Six More Added to M. A. M. Roll.

Six new members were added to the roll of the Motor and Accessory Manufacturers, Inc., at the meeting of the directors on Thursday last, 26th ult. They are as follows: Dayton Malleable Iron Co., Dayton, O.; Herschell-Spillman Co., North Tonawanda, N. Y.; North East Electric Co., Rochester, N. Y.; Penberthy Injector Co., Detroit, Mich. Portage Rubber Co., Barberton, O.; Tyer Rubber Co., Andover, Mass.

Baker Shares $200,000 with Employes.

The Baker Motor Vehicle Co. of Cleveland, O., manufacturer of Baker electrics, has declared a stock dividend of $200,000. The dividend is unusual in that it will be equally divided among the stockholders and certain of the employes.

TIMKEN FORMS ALLIANCE TO MANUFACTURE WORM GEARS

Detroit Axle Makers and the British Browns Joined in New Company—Result of Painstaking Investigation.

Reports that the Timken-Detroit Axle Co. was making ready to engage in the manufacture of worm-geared axles were confirmed early this week. The company, it transpires, has formed an alliance with David Brown & Sons, of Huddersfield, England, whose worm gears long since acquired a reputation.

The worms, however, will not be handled directly by the Timken-Detroit Axle Co. but by a new corporation styled the Timken-David Brown Co., whose plant will adjoin that of the Axle company in Detroit. The necessary building already is in course of erection and, pending its completion and the manufacture of certain special machinery in England, the gears will be imported. They will be offered in types for both pleasure and commercial vehicles. The first of the gears will be displayed at the New York and Chicago shows in connection with the Timken-Detroit Axle Co.'s exhibit.

The fact that the Timken people have embraced the worm gear is not altogether surprising. It has been not wholly a state secret that for more than two years they have been inclining in that direction and conducting most exhaustive investigation. Indeed, they have had worms of their own making in practical use in this country for all of a twelvemonth, and, as a matter of fact, had become possessed of complete detailed drawings of worm drive axles long before any of those axles had made their appearance in this country.

Most of the Timken investigation has been conducted by or under the direction of H. W. Alden, the company's chief engineer, who himself made several visits to Europe to make necessary observations and acquire necessary knowledge. Also, on two separate occasions, a competent engineer spent six months in Europe investigating and practically testing every type of worm gear obtainable.

The Timken-David Brown worm is of the straight type, in contradistinction to the hour-glass type. In explaining the Timken choice, Chief Engineer Alden says:

"In the straight type the worm itself is cylindrical throughout its entire length and the worm wheel into which it meshes is concave. In the hour-glass type both the worm and the worm wheel are concave.

"A moment's reflection will show that

Digitized by Google

with the hour-glass type there is just one position in which the worm and wheel can be located with respect to each other in order to gain any advantage from even a supposed greater area of contact of the hour-glass type over the straight type.

"The same amount of reflection will show that with the straight type it is only necessary to locate the worm correctly with the worm wheel in one direction. In the other direction it can stand anywhere, because the worm is cylindrical and uniform in diameter throughout its entire length.

"It is, therefore, evident that the straight type is much less liable to damage through misalignment. With the hour-glass type, the slightest misplacement in any direction is fatal. With the straight worm, unlimited latitude is possible in one direction.

"It is common practice abroad to make the worm itself of steel and to harden it. This means, of course, that in the process of hardening, the tooth form is bound to become distorted to some extent. The straight worm can be ground on its working surface after hardening and this is done by the best foreign makers. I use the term 'grinding' here in the sense of removing the inaccuracies incidental to even the most careful manufacture, and not in the sense of smoothing an inaccurate surface by polishing.

"The hour-glass type of worm can be polished, but it is absolutely impossible to grind it in the proper sense of that term. Consequently, with the straight type of worm, it is possible to produce a geometrically perfect article. The exact opposite is true with the hour-glass type."

Alden admits that certain English car builders have discarded the worm after trying it, but declares that their action is due entirely to the fact that they thought the making of worms a very simple matter and rushed into it without proper precaution.

David Brown & Sons have built worms for all purposes for 15 years, and in doing so have invented and constructed a number of machines which are radically different from the machinery used by other makers, which was among the several things that appealed to the Timken people.

On the 2,500 London omnibuses, which are being converted to and made silent by worm drive, Brown gears are being utilized, and in this country they are by no means unknown, as it is the gear which has been employed in the Pierce-Arrow heavy truck

FLANDERS AND CHIEF AIDS REACH PARTING OF WAYS

Pelletier and Paul Smith Will Not Follow Him Into Big Corporation—Christmas Tiff That Preceded Resignations.

E. LeRoy Pelletier will not be advertising manager of the $31,000,000 Standard Motor Co., as the United States Motor Co. will be known after its reorganization is effected; nor will Paul Smith be its sales manager—that is, unless what happened during the past week is mere "stage play," or something else occurs to change the face of the situation. As Walter E. Flanders is to become president and general manager of the Standard company, when the reorganization comes to pass, and as the Flanders Motor Co. is to become a part of it, it has been taken for granted that Pelletier and Smith, who heretofore have worked on a mutual admiration basis, would follow him into the bigger organization.

As a matter of fact, however, they last week resigned from the Flanders Motor Co. and for a brief period it looked as though all was off between Flanders and Pelletier and that they no longer would speak as they passed by, despite their many "greatest ever" declarations and their claims that each "made" the other and "made" Paul Smith between times. According to the stories, Flanders and Pelletier engaged in a little tilt while at Christmas dinner, served in the Flanders homestead. Flanders is credited with having dropped a remark which offended Pelletier and led him to believe that he was not to be taken care of in the same old way, and as a result there is said to have been some heated talk in which the word "ingrate" figured on two sides; but several days later, when Flanders expressed regret, the differences were smoothed over, just as they were smoothed over a year or so ago when Flanders, in playful mood, paid a midnight visit to Pelletier's home and, instead of knocking at the front door, drove his big car up the front stoop and so terrified the women folk that one of them went into hysterics from which she did not recover for a week. Pelletier then vowed he never would forgive his "big chief," but he soon forgot his vow and the two renewed their admiration of

changed his mind before getting there and returned to Detroit.

Paul Smith remained in Detroit. He admits his resignation, but declares it was brought about when he discovered that the policies outlined by Flanders were not what he had expected they would be, and that they were such as would place him in a position where he could not remain and maintain his self-respect. Smith since has received offers from other manufacturers, but Pelletier apparently is foot-free and has declared his purpose to visit Panama before returning to work of any sort.

Reports are current also that many of the high-priced men whom Flanders took from the Studebaker establishment when he himself went over to the Flanders Motor Co. are not likely to find "good things" in the reorganized United States Motor Co., as they had expected would be the case and which they hailed as a reward for their disappointments. In fact, several of them already have found it advisable to seek other berths.

The same reports credit W. F. Macguire, who is to be assistant general manager of the reorganized United States Motor Co. and who is serving in that capacity for the receivers, with being an assistant in fact as well as in name, and also with demonstrating that he is possessed of a will of his own. He is not much given to press-agentry, or other fireworks, and in outlining his work has made plain that his department is not to be a refuge for pensioners, personal press agents or "good fellows." It is fairly certain that no Pelletier ever will dominate Macguire or boast of having "made" him.

It is understood that Berry Rockwell, who only three weeks since retired as advertising manager of the United States Motor Co., has been recommended by the receivers for the same post in the reorganized corporation, and A. B. Barkman, Pacific Coast supervisor and a trade veteran, for promotion to the higher office of general sales manager.

Speedwell Rotary Valve Car Ready.

The Speedwell Motor Car Co. of Dayton, O., in which, as Motor World stated last week, several men identified with the Mead Engine Co., of that city, have acquired an interest, has submitted a proposal to its stockholders to increase its capital stock to $600,000. Meanwhile, it has floated a bond issue of $150,000. As Motor

Changes of Capitalization.

Dayton, Ohio—Automatic Lamp Control Co. from $15,000 to $30,000.

South Bend, Ind.—Milton G. Smith Garage and Auto Co. to $25,000.

WISHART TELLS CREDITORS WHAT HE DID WITH $9,000

Trips and Hotel Bill Made Big Holes in Finances—Proceedings in Bankruptcy Cause Many Court Motions and Orders.

When the creditors of the Wishart-Dayton Auto Truck Co., the New York representative of the Dayton Auto Truck Co., filed a petition in bankruptcy in the Federal court in New York City several months ago they asserted that George Wishart, whose name the company bears, had mismanaged the concern and had taken from the treasury more money than he was entitled to, but not until recently did they secure Wishart's statement of affairs. Now that they have it, they have learned where some of a dealer's profits may go. But more recently, on Monday of this week, they asked to have Wishart adjudged in contempt of court for refusing to pay back $9,551.80 and turn over a truck, but because of a technical error in the moving papers, regardless of whether the move had merit, the application was denied.

They claim Wishart drew funds to the total amount of $18,843.17, and to ascertain what he had done with it brought about an examination wherein Wishart explained certain things. For one thing, he showed that taking a party to the 500-mile race at Indianapolis last May made a hole of $200 in his finances and that living at the Hotel Belmont, which is not a dollar-a-day house, ate up $700 more in a short time. He went to Dayton on business once and came back $100 poorer and when Spencer, his son and a well-known racing driver, made three trips to Dayton, away went $300. A truck, known in the proceedings as the Grey truck, caused him to spend $335 for "detectives and informers," and other items clipped the bankroll at anything from $100 and up per clip.

Despite the fact that Wishart states that he was the whole company, financed it, conducted it and therefore was entitled to do with it about as he pleased, since he often was called upon to meet deficits if any occurred, the creditors are after that $9,000. The court ordered him to pay it back, but in the papers which asked that he be punnew corporation has an authorized capital of $1,000,000. The change of name is due to the expansion and change in the nature of the business. For a considerable period the company produced only rawhide gears, but of late years it has made gears of both metal and rawhide, the output of the former being many times greater than that of the rawhide. It will be further increased when the addition to the plant is completed.

The reorganization carries with it no change in ownership, which is vested chiefly in Thomas W. Meachem and his sons, T. G. and J. F. S. Meachem. The officers of the old corporation, who will fill similar positions in the new one, are as follows: President, T. W. Meachem; vice-president, T. G. Meachem; treasurer, A. C. Vosburgh; secretary, J. F S. Meachem. These officials and W. H. Diefendorf, chief engineer, constitute the board of directors.

Walter Secures Rights to Latil Drive.

Sole manufacturing rights for the United States in the Latil front drive system have been secured by the Walter Motor Truck Co., of New York, and a 2½-ton truck built under the Latil patents will be one of the Walter exhibits at the approaching national show in New York. The Latil front drive is of French origin and has been in use abroad for several years.

The most prominent feature of the system is that the whole of the mechanism, which includes a four-cylinder motor, four-speed gearset and the usual steering and control mechanism, is mounted on the front axle, together with the driver's seat. Rearwardly projecting frames are provided for the attachment of the body, which may be of any type and may have steel tired wheels —in fact, steel tires are considered preferable because of the reduction in tire expense consequent upon their use. Drive is direct to the front wheels through spur gears.

Lion Assets Finally Bring $13,000.

The assets of the bankrupt Lion Motor Car Co. of Adrian, Mich., finally were disposed of on Tuesday last, 31st ult., to Wintermitz & Co., of Chicago, for $13,000. The previous week the Chicago firm had offered $12,250 for the property, but the referee in bankruptcy refused to accept it and ordered a new sale at which sufficient competition developed to induce the Chicago concern to add $750 to its original bid.

Under the style Miller Tire Agency, C. P. Foley and J. F. Riley have opened up at 273 Jefferson avenue, Detroit, Mich., where they will handle Miller tires. Foley, for several years was Michigan representative of the Firestone company and later was manager of the Detroit branch of the Republic company, while Riley was proprietor of the Standard Auto Tire Repair Co.

S. F. Slansky, formerly West Side agent in Cleveland, O., for the Jackson Motor Car Co., and a prominent electrical contractor, has taken over the company's branch and with it the entire Northeastern Ohio territory; sales and showrooms and a completely equipped service station have been opened at 2027 Euclid avenue. E. A. Roemer, formerly traveling representative for the branch before it was taken over, will retain his association with the Jeffery company as special representative in the central Western States.

The Beloit (Wis.) Auto & Machinery Co. has been incorporated to succeed the Fourth Street Garage, located at 842 4th street; the business will be enlarged and will embrace garage work, accessories and supplies and new and used car selling. The officers are: President, J. A. Austin; vice-president and general manager, O. F. Brewer; treasurer, Jerome C. Davis; secretary, R. J. Davis, formerly manager of the Fourth Street Garage; directors, T. M. B. Gunn, and the four officers.

Changes Among Prominent Tradesmen.

G. C. Farnsworth, one-time advertising manager of the Metzger Motor Car Co. of Detroit, has taken up similar duties for the Century Electric Car Co., also of Detroit.

W. L. Caten has been elected vice-president and general manager of the Speedwell Motor Car Co., of Dayton, O. It is stated that his assumption of the duties involves no change of officers.

James Joyce has resigned the office of sales manager of the Selden Motor Vehicle Co. of Rochester, N. Y. Joyce, who is one of the genuine veterans of the industry, has made no plans for the future.

A. S. Watson has been appointed southern district manager of the Olds Motor Works and will make his headquarters in Atlanta, Ga. Previously he was identified with the Olds agency in Cleveland, O.

H. M. Bacon has been appointed manager of the Goodrich-Diamond branch in Cleveland, O. He succeeds C. B. Meyers, who recently became general manager of the Swinehart Tire & Rubber Co. in Akron.

H. H. Doering has been appointed sales manager for the Gramm Motor Truck Co. of Lima, O., which is one of John N. Willys's properties. For several years previous, Doering was sales manager for the Ohio Electric Car Co. of Toledo.

H. M. Denyes has been appointed chief engineer of the Jackson, Church, Wilcox Co. of Saginaw, Mich., maker of the Jacox steering gear and one of the General Motors group. Previously Denyes was identified with the technical department of the Buick Motor Co. in Flint, Mich.

General Motors truck factories, has been appointed chief engineer of the General Motors Truck Co. itself. He succeeds Cornelius T. Myers, who resigned to go into business for himself as consulting engineer.

Minor Business Troubles.

Schedules in bankruptcy have been filed by Elmer E. Rhodes, trading as the Joliet Motor Car Co., in Joliet, Ill. The assets are placed at $5,516.89 and the liabilities at $15,079.20.

Oscar A. Wandschneider, who has traded as Drumm & Snyder, with a garage at 55 East 47th street, Chicago, has filed schedules in bankruptcy; they disclose liabilities of $5,082.60 and assets of $2,413.

A petition in bankruptcy has been filed by the Class Journal Co. and others against William A. Suttle, of Chicago, who has conducted the Automobile Supply Co. at 3900 Sheridan road; the claims amount to $1,862.50.

An involuntary petition in bankruptcy has been filed against the Bates-Odenbrett Automobile Co., of 503-7 Broadway, Milwaukee, Wis., dealer in Krit cars; the petitioning creditors and their claims are: O'Neil Oil & Paint Co., $1,030.42; Geo. W. Browne Co., $138.63; Julius Andrae & Sons, $46.10.

Armin G. Albrecht who, with August J. Diamon, has conducted the White Bear Automobile Co., in Minneapolis, Minn., has brought proceedings for the dissolution of the company; he asks a receiver and accounting. He claims that he bought an interest in the company August 1st last, and that due largely to his efforts the value of the business has increased from $8,000 to $21,300, but that Diamon has neglected the business.

The Equitable Distributing Co., of which Arthur Sidwell is treasurer and which has dealt in automobile supplies at 246 Columbus avenue, Boston, Mass., has filed a voluntary petition in bankruptcy; it states that it has assets of $6,000 and owes $6,677.21, of which $6,543.21 represents an unsecured indebtedness among 100 creditors. The remainder is for wages due and taxes. Of the $6,000 assets $1,000 consists of stock in trade and $2,000 of bills receivable.

Recent Losses by Fire.

NEW YORK, JANUARY 2, 1913

THE LOGICAL WAY TO RATE ENGINES.

It is becoming increasingly evident that the A. L. A. M. engine rating formula, which has outlived the Association of Licensed Automobile Manufacturers itself, no longer serves its purpose. Not a few manufacturers already have expressed themselves to that effect and, indeed, the lengthened and lengthening strokes of engines makes the fact so clear that there is small room for dispute.

Lending point to the situation, it is the declared intention of the New Jersey Commissioner of Motor Vehicles to apply to the legislature for authority to establish each year "special formulæ, as the conditions would demand, for the purpose of arriving at a true horsepower rating," in order to permit of what he considers a proper adjustment of the annual license fees.

If such authority were granted in New Jersey, and adopted by other States, as appears not unlikely, it would lead to chaos. It requires but small consideration, however, to reveal the insufficiency of the A. L. A. M. formula—cylinder bore times the number of cylinders divided by the constant 2.489. An arbitrary piston speed of 1,000 feet per minute is assumed, which obviously is wrong, for it automatically robs the long-stroke motor of the benefit of its cylinder capacity. The advantage of a long-stroke motor consists in the additional power due to running it at a higher piston speed than the short stroke motor. But the A. L. A. M. rule, misfitting the motor to the formula, reduces the crankshaft speed by assuming the same piston speed as in the short stroke motor, eliminating the increase of power that would obtain, due to the increased cylinder capacity, if both motors were run at the same R. P. M. rate.

The insufficiency and elasticity of the A. L. A. M., and all other formulæ for reckoning horsepower, long ago was remarked by Motor World, nor does it seem probable that more than one solution of the problem is possible. It is fairly simple and has been suggested and advocated many times by Motor World. It is simply the adoption of piston displacement as a basis for engine rating.

Several manufacturers of prominence supported Motor World's suggestion, but as many engineers maintained that so many features should be considered that piston displacement of itself would not meet the needs. Motor World, however, has remained unconvinced. It still believes that piston displacement is the true method for rating engines.

As the term "horsepower" has become so thoroughly a part of trade language, its use probably never can be avoided; but it is quite within the bounds of reason to establish an empirical horsepower formula with piston displacement as the basis. In other words, all that is necessary is an agreement that a given number of cubic inches shall constitute the unit of horsepower, and the rest is easy. It may be a radical step and may offend present engineering practice, which, however, is not a valid or logical objection.

The suggestion can be made to serve so many purposes that it well deserves the serious consideration of the Society of Automobile Engineers and other trade organizations. If they elect to permit it to pass unconsidered, the idea is respectfully referred to New Jersey's Commissioner of Motor Vehicles. It will relieve his dilemma for all time.

SALESMANSHIP AT THE SHOWS.

It is an old subject—one that recurs at about this time each year but which has not lost point because of the fact—the subject of intelligent and otherwise competent attendance at the national shows.

Ever since shows first were instituted, the lack of such competence has existed to an extent that has provoked remark. Too many of the men in attendance at too many of the exhibits are painfully lacking in intimate knowledge of the goods they are present to exploit to best advantage.

In corresponding ratio, the need for real and far-reaching intelligence has become greater. Most of those who attend shows are now car-wise. Glittering generalities, however courteously expressed, no longer serve to satisfy them.

"Know thy car," or "thy tire," or "thy accessory," whatever it may be, should be the gospel of every attendant at every exhibit. The manufacturer who is satisfied with less stands in his own light. The old familiar wheeze, "Our engineer will be here at four o'clock and will be glad to tell you all about it"; or the other equally familiar excuse, "Can't you come around a little later when our manager is here?" are confessions of weakness in the sales organization.

Men who sell goods should know all about them, else they are not thoroughly competent to sell them. If there ever was a time when the manufacturer should do his best to demonstrate the efficiency of his sales organization it is at the national shows. There yet remains a week for exhibitors to improve on previous efforts in this respect.

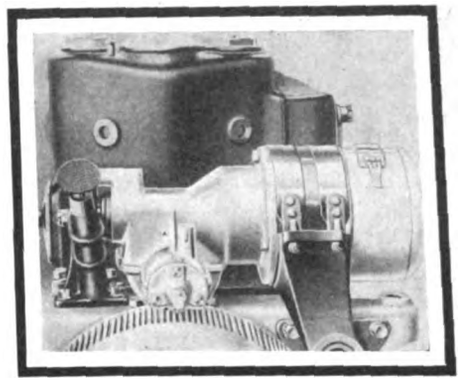
MORE SPACE REQUIRED FOR CHICAGO SHOW EXPANSION

Wilson Building, Next Door to Coliseum Annex, Leased and Already Partly Filled—Trucks and Cars Added to List.

More elbow room for the Chicago automobile show has been found, and as a result it will fill three buildings, instead of two as heretofore—the Coliseum and Annex, the First Regiment Armory, and the Wilson building, which adjoins the Annex on the south and the lease of which just has been consummated. Like the Annex, it has a main entrance on Wabash avenue, though simply by opening passageways in the south wall of the Annex it can be made to all intents and purposes an integral part of that building.



The Wilson building is approximately the same size as the Annex and, as it is free from posts or other obstructions, it readily permits of the display of the largest passenger and commercial vehicles. Already, the Mercer Automobile Co. and the Midland Motor Car Co., previously allotted space in the Annex, have taken space in the Wilson building, as have the Paige-Detroit Motor Car Co., previously allotted space in the Armory, while the W. H. McIntyre Co., the Republic Motor Car Co., and the Century Electric Car Co. have accepted basement spaces thus vacated. The commercial vehicle manufacturers who have accepted space are the Grand Rapids Motor Truck Co., of Grand Rapids, Mich. the Driggs-Seabury Ordnance Corp., of Sharon, Pa.; the Randolph Motor Car Co., of Chicago; the Edwards Motor Car Co., of New York, and the O. Armleder Co., of Cincinnati, O.

Altogether, the acquisition of the additional space will permit the staging of 102 pleasure car exhibits, all of which have been allotted, 77 commercial vehicle exhibits, all but a few of which have been allotted, and 244 accessory exhibits. The work of decorating the Wilson building is being actively pushed, and the few remaining spaces will be offered to the first 30 applicants on the waiting list in the order in which their applications were received.

their last meeting voted to contribute the sum of $150,000 to the temporary committee which has the project in hand, the amount representing one per cent. of the $15,000,000 which it is expected will be the ultimate cost of the highway.

Little Known Features of Well Known Cars

In so far as the operation of the apparatus is concerned, the location of the component parts of the electric lighting and starting system is a matter of small moment, for, since the apparatus requires only occasional attention, and then merely a little cleaning and a drop or two of oil, it is obvious that accessibility is not a prime requirement. In the usual location, however, at the side of the motor, the dynamo or motor, or both combined in a unit, as the case may be, renders inaccessible parts which are more vulnerable and at the same time more vital to the correct functioning of the motor than is the electric system.

MITCHELL STARTER LOCATION

In realization of this fact, the Mitchell-Lewis Motor Co., which produces the Mitchell car, has sought locations for both dynamo and motor which are slightly out of the ordinary. The dynamo is located at one side of the gearset and is driven from the lay shaft. Even more novel is the location of the starting motor, which, as shown in the accompanying illustration, is located under the footboard with the armature shaft at right angles to the crankshaft of the motor. Power to start the motor is transmitted through the intermediary of a worm and worm wheel and a spur gear

January 2-10, New York, N. Y.—Importers' salon in Hotel Astor.

January 4-11, Montreal, Can.—Annual automobile show in the Drill Hall and Armory, under the auspices of the Automobile Club of Canada.

January 6-11, Cleveland, Ohio—Cleveland Automobile Show Co.'s exhibit in the Central Armory.

January 11-18, New York, N. Y.—Automobile Board of Trade's 13th annual show in Madison Square Garden and Grand Central Palace. Pleasure cars only.

January 20-25, Philadelphia, Pa.—Philadelphia Automobile Trade Association's exhibit in the First and Third Regiment Armories.

January 20-25, New York, N. Y.—Automobile Board of Trade's 13th annual show in Madison Square Garden and Grand Central Palace. Commercial vehicles only.

January 21-26, Toledo, Ohio—Annual show in the Exposition building under the auspices of the Toledo Automobile Shows Co.

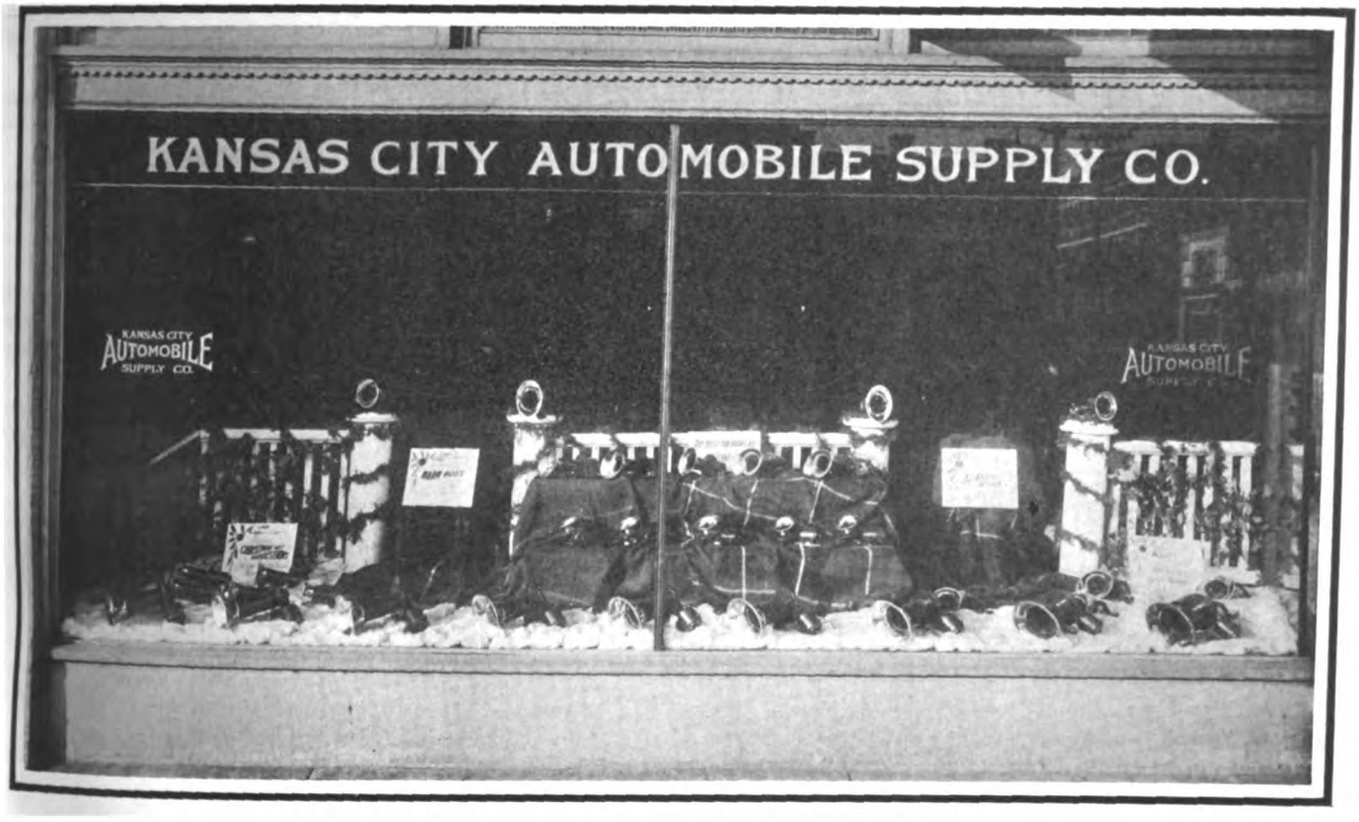
January 25-February 1, Providence, R. I.—Annual show of the Rhode Island Automobile Dealers' Association in the Providence State Armory.

January 27-February 1, Ottawa, Can.—Annual show of the Ottawa Valley Motor Car Association in Howick Hall.

January 27-February 1, Scranton, Pa.—Third annual show of the Scranton Automobile Dealers' Association in the 13 Regiment Armory.

January 27-February 1, Detroit, Mich.—Detroit Automobile Dealers' Association Show in the State Armory.

February 1-8, Chicago, Ill.—National Association of Automobile Manufacturers' 12th annual show in the Coliseum and 1 Regiment Armory. Pleasure cars only.



February 3-8, Washington, D. C.—Washington Automobile Show Co.'s exhibit in Convention Hall.

February 8-15, Hartford, Conn.—[illegible] annual show of the Hartford Automobile Dealers' Association in the State Armo

WINDOW DRESSING OF THE CORRECT SORT

Kansas City Accessory House Illustrates Effectiveness of One-article Display, Using Klaxon Horns as the Basis—Attractive Background and "Christmas Touch" Make it Both Eye-pleasing and Seasonable.

"ONE LINE" DISPLAY IDEA EXEMPLIFIED IN A CHRISTMAS WINDOW SETTING

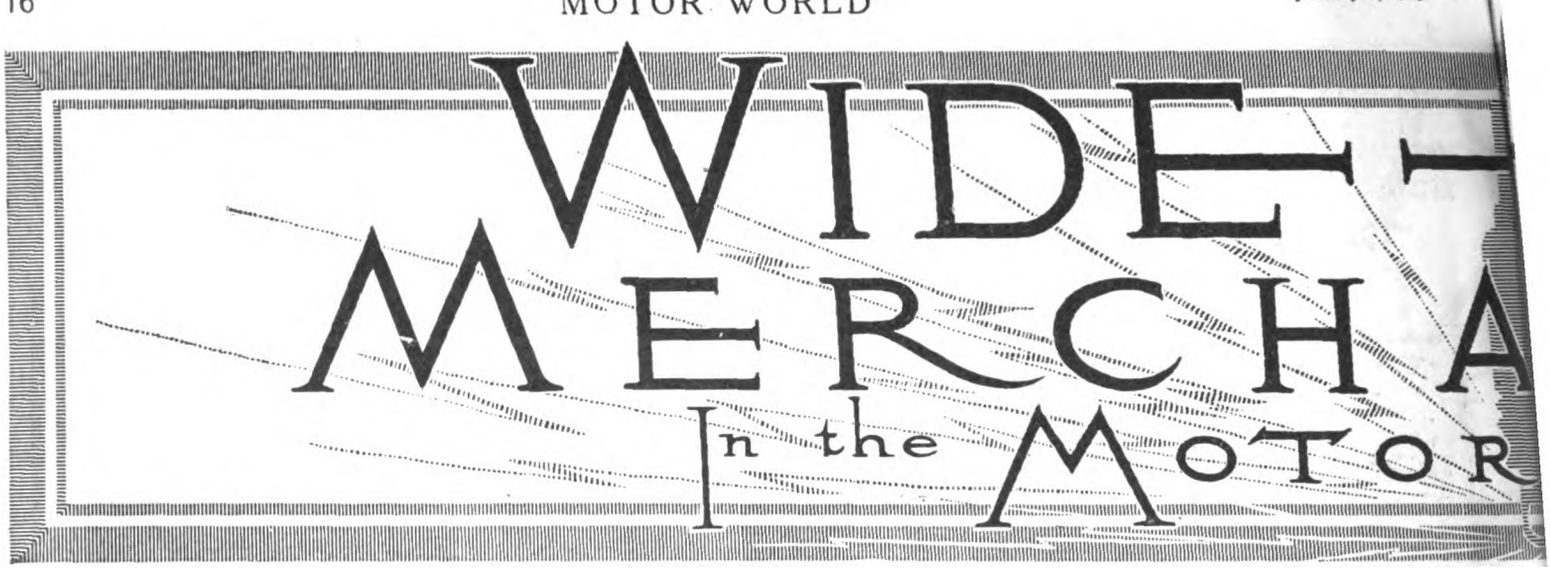
Combining the various commodities of the automobile supply trade in an attractive window display requires no small amount of ingenuity, but that a dealer should despair of having an eye-pleasing window because of lack of superior window-dressing talent is unwise in view of the artistic results achievable when one article of trade is made the basis of design; on the other hand no dealer should falsely imagine that this type of display requires no ability.

What can be done in this line is shown by a window dressed up for the holiday season by the Kansas City Automobile Supply Co. of Kansas City, Mo. In this case Klaxon horns were made the piece de resistance and their effective grouping is depicted in the accompanying photograph. As a base the decorators covered the floor of the window with cotton wool, over which ground mica was strewn to give a snowy touch; at the back of the window a balustrade-like fence separated the window from the rest of the store and at the center of the space, against this fence, boxes were covered with rugs and robes.

The horns were placed at points of advantage but were not crowded; a row extended across the front of the window floor, placed at an angle which eliminated any possible effect of stiffness in the arrangement. Upon the robe-covered boxes were other Klaxons, while four cards in selected locations announced the Christmas season. One mental nudge was given the passerby by the following motto, "A Klaxon Horn the One Best Gift."

While this properly may be termed a one-article window, those who stopped to read had called to their attention the fact that the store sold warm rugs, and the sight of these coverings in the snowy window supplemented the cold outside as a reminder that open-air touring in December is not always as warm as in midsummer.

Truck Club Re-elects its Officers.



In its permanent quarters at 1845 Broadway, where a clerical staff is now employed to handle its work, the Motor Truck Club, of New York, held its annual meeting last week, at which time all of the incumbents were re-elected, as follows: D. C. Fenner, president; Emerson Brooks, vice-president; C. E. Stone, treasurer, and E. L. Howland, secretary. A new board of managers also was chosen, consisting of E. W. Curtis, Jr., George H. Duck, Karl L. Frederick, J. W. Perry, A. W. Robinson, W. Oscar Shadbolt, and Arthur J. Slade. The selections were unanimous, no opposition ticket being presented.

It will be the last time that any president or vice-president will succeed himself, as the organization voted that hereafter the terms of those offices be limited to one year. Plans for a novel breakfast, to be held January 21st, during the week of the New York truck show, were reported well in hand.

Motz Locates Branch in St. Louis.

The Motz Tire & Rubber Co. of Akron, O., has established a branch in St. Louis, Mo., at 4436 Olive street. It is in charge of E. G. Seibel, who previously was connected with the B. F. Goodrich Co.'s Pittsburgh branch.

FAILURES THAT ASSIST SALES

Learning Not to Make Same Error Twice a Pathway to Success—Scrutiny of Lost Sales May Reveal Helpful Reason.

"Say! Do you know that I had almost made up my mind to buy your car last time you were here?" said the prospect, as he lolled back in his office chair. "It's a fact; you came as near getting my order as anyone ever did; but I've been thinking it over since then and have concluded that it is better for me to wait a couple of months. Drop in and see me in about sixty days. . . . No, there's positively nothing doing now; I can't even take more time to talk about it to-day. Good-bye; will see you in a couple of months."

The salesman gave himself a mental kick as he stepped into his demonstrator and drove away. He recalled that on his last visit he had succeeded in warming up the prospect by the heat of his own enthusiasm; he had felt things coming his way; he knew he had reached further home than ever before. He remembered how interested the prospect had been as he detailed certain features of construction that had been improved; he went over the visit step by step and saw how his work, while good as far as it went, lacked just the final touch that meant an order. A little more courage, a little more resolution, a little more perseverance on the spot and—one more car sold.

The salesman learned a lesson that he capitalized right away. Next day a man one block away bought one of his cars because the salesman had studied his failure of the day before and knew why he had failed. Within a week he had made three sales to men he had been trying to close for a long time.

It is a good thing to get a jolt once in a while; it wakes you up and, if you are the right sort of a salesman you won't grumble but will pick out the weak spot and eliminate it. The salesman, or any other man, always should remember this one thing, that one of the surest pathways to the correction of faults or weaknesses is that of learning not to repeat mistakes; the best of men err, but they are the best men because they learn not to make the same error twice.

FOUR REQUIREMENTS OF RETAIL ADVERTISING.

Much retail advertising is like a charge of buckshot fired into a dark bush because something moved there. The thing that moved was the bush—and the wind made it move; no harm was done, but the buckshot and the powder were wasted.

The shrewd advertiser will sight his game. That is, he will find out what papers they take and what is the best method of reaching them, and will be governed by the facts and not by theories or guesses. This is the plan followed by the most careful and successful national advertisers, and if it is important for them, with their large appropriations, it is even more important for the dealer with a small appropriation.

After deciding on the right medium, the method most successful is to use space sufficiently large to command attention and, with this, couple frequency of insertions. In other words, keep at it often enough to avoid being forgotten.

The general principles surrounding the preparation of an advertisement are: First, to make it attract attention by means of white space, size, design or other method; second, to have it interest by means of a display line that sums up the story told in the advertisement; third, to have it convince by reason of the logical and truthful presentation of selling facts. The only thing left after the ad. has attracted, interested and convinced is to tell where the article can be secured, and the signature and address should be sufficiently prominent and plain so there will be no doubt on that score. The advertisement measuring up to these requirements, placed in the right medium and backed by continuous effort is almost certain to be productive.

CONCERNING "STICKTOITIVENESS" AND "LEMONS."

Those who are in the thick of the selling fight are continually being impressed with the value of sticking to it. And sticking to it does not mean to be so persistent that you earn the ill will of a customer while forcing him to do something that he is going to repent so soon as you are gone.

The right sort of sticktoitiveness means being on the job in season and out of season—being there with a smile and a feeling of optimism, sure that you have the right car for the prospect, serenely confident that sooner or later he will realize it.

Some salesmen are too quick in sizing up a situation; they fancy they are picking a "lemon" when, as a matter of fact, it often is an entirely different kind of fruit. And they often overlook the fact that lemon juice is mighty good in its place. It probably took nerve to squeeze the first lemon and swallow the juice. It takes nerve today to pick out a prospect that everyone else has labeled "lemon" and passed up; but someone is going to squeeze that lemon sometime, and why shouldn't it be you?

It takes strength of will, determination, and courage, but when you have the signed order from someone everyone else neglected because he was so hard to convince, there is a pleasure and a satisfaction that cannot be measured in money. A difficult task accomplished is capable of affording more real pleasure than is obtainable by the mere enumeration of earnings—that is, with the man whose heart is in his work.

Don't be afraid of "lemons"; cultivate the strength that will give you power to give them the right squeeze, and the juice will run into your cash drawer.

SERVICE THAT REPELS PATRONS

Sale of Lubricant as an Example of How Not to Do Things—Small Lapses Make Large Fault.

"I want some heavy transmission oil—about half a gallon," said the motorist who drove into the garage.

"Drive your car right up here," said the garageman. "Hey, Bill! Come here and get this gentleman some transmission oil."

"Oil right," remarks Bill, and steps briskly to the row of oil pumps, gallon can in hand.

Doubtful Concerning the Oil.

It was 8:30. Mr. Motorist had an engagement to keep in a few minutes; he got busy and pulled out the floor board of his car, so as to have everything in readiness for the oil man. Presently over he came with his oil, unscrewed the transmission cover and dumped in the oil.

"Guess it will take a little more, sir," he ventured.

"Fill it up," ordered the motorist—and then he gasped in horror. "Why, man alive, is that transmission oil? It looks and acts like cylinder oil. Are you sure it's transmission oil?"

"Well, it's lubricating oil; that's all I know about it," admitted the man in charge of the oil.

Manager Verifies the Doubts.

He started to look for the foreman; after a hurried consultation he came back and affirmed that it was transmission oil. Being of a doubting nature, the motorist went to the front office and consulted the manager.

"Why, he's given you cylinder oil," said the boss. "The best thing you can do now is to stir a little light dope in there and mix it well."

That was done. It took five minutes to replace the cover plate on the transmission; it took three minutes for the man to find enough different pieces of paper on which to wipe off his dirty hands; it took four minutes to look for the foreman to find out the price of the grease and oil; about a minute and a half to find out that he did not know the prices; and then three minutes to run to the front office and consult those in charge; another minute to come back and tell that it was 65 cents; about three minutes more to get a dollar changed, to say nothing about the ten minutes spent in putting in the oil and grease. It was 9 o'clock when the customer finally left that garage.

How Trouble Can Be Avoided.

A large portion of the half hour wasted might have been saved if the grease and oil cans had been labeled and the prices marked in plain figures. Anyone could then have sold it in the absence of the "regular" man, and the autograph register and daily inventory check in use in this garage would have kept a perfect check on the sales.

Incidentally, it would not have been a bad idea for this garage to provide a rag tower or a waste box near oil tanks for wiping off greasy hands and oily splashes on the body of the car.

TIMELINESS IN ACCESSORIES.

Dealers in accessories will find it profitable to follow up the motorist with seasonable articles, one thing at a time. A "live wire" accessory house will, for example, mail a postal card to every car owner in the city on the first snowy day calling attention to its cimplete stock of anti-skid chains.

The first freezing day will bring its circular on hood covers and other little comforts for the motorist and his car. Robes, gloves, etc., will be suggested separately and forcibly.

"There is safety in numbers," wrote someone a long time ago; and accessory dealers have believed it as part of the unwritten law. The result is they spend a lot of money for mail matter that brings no return.

They should try concentrating on a few things at a time. Then, instead of being tossed into the waste basket or laid aside for the distant future, their printed matter is far more likely to bring results.

The thought, in brief, is that the minute a dealer begins to try and sell a man everything at one time he succeeds in selling him nothing. This does not decry the value or diminish the importance of catalogs. It is simply to urge accessory dealers to try specializing on certain things at certain seasons. The thing that is timely demands immediate action—and you make immediate sales.

GARAGE ATTENTIONS THAT ARE WORTH WHILE.

People who drive automobiles are likely to get less and less into the habit of helping themselves and more and more into the habit of being waited on. Wait on them. It's a business proposition—and it pays.

One man who drives a car every day and is consequently a regular consumer of supplies goes to a certain garage for all his gasolene and pays three cents a gallon more for it simply because the people at that garage wait on him. He gladly pays the difference in price for the service that unscrews his gasolene tank, lifts his hood, takes a look into his radiator, examines his tires and fills them when needed. He is a good, steady customer for the garage and the garagemen are out nothing for the extra time they spent in waiting on him, because it has not increased labor or overhead cost one penny. On the other hand, the garage is building a permanently satisfied customer who never misses an opportunity to boost for it.

Solutions of The Used Car Problem

In Competition for Motor World's Cash Premiums of $50, $25, $15 and $10 for the Best Four Articles Dealing With the Subject.

By JOHN W. GREY, Detroit, Mich.

There is and can be only one solution of the used car problem which will work out logically, and that is when that commodity has a fixed or set valuation in the open market. The trouble with conditions to-day is not with the market, but rests entirely with the dealer and the manufacturers. It really reverts to the old story of insufficient knowledge of the subject—the same story that has caused so many of the failures which have occurred in the industry. The motor car business has had a phenomenal growth, a mushroom growth, and on that account and because the sledding has been so easy no real attention has been paid to this particular end. We have, however, arrived at a time when the standardization of prices has become an absolute necessity, and as essential as the consummation of the original sale.

There should be no more speculation about buying a used car than there is about buying a used locomotive, but because the manufacturers and dealers have failed to agree on a set standard of values this market naturally is in a chaotic state. The average dealer is so avaricious and octopus-like in his desire to consummate a sale that, in nine cases out of ten, he will allow a ridiculous figure for a used car rather than lose the sale. He then hopes to break even by selling this same car at an advance of its regular market value to someone who is not acquainted with the tricks of the trade. If the dealers would only realize they are "killing the goose that lays the golden egg" by making ridiculous trades and educating the public up to false values, and to expect more than their car is worth, there would be a more healthful condition existing to-day.

What is really necessary is for the dealers to get together in each community and form a co-operative association, agreeing, among other things, to have a fixed trading price on every make of car. Of course, there are several in existence to-day, but these seem to be more or less of a joke. The main object has been entirely overlooked in the rush of present day business. This does not necessarily mean an absolute price, but a sliding scale, perhaps allowing a margin of from $50 to $150 difference, depending on the condition of the car, this ratio applying to the more expensive cars; in the lower priced field it naturally would be proportionate.

The National Association of Automobile Manufacturers could really handle this subject, and as a working basis could utilize the figures of value as set forth by the insurance companies. Until co-operation and protective working rules are founded, the present atmosphere will not clarify, as the industry as a whole is coming down to a firm foundation based on clean business principles and not upon the flighty methods of personality and good-fellowship as heretofore.

By DENNIS H. STOVALL, Philomath, Ore.

The problem of what to do with the used car is easily solved by equipping it with a delivery body for trucking and general carrying purposes. There is a wide field for the used car here, and the fact is becoming more and more apparent, both to manufacturers and operators.

During the past four seasons there have been only minor changes in the main, or mechanical, features of the leading cars; yet the fact that they are old models, and that there is a difference between the body lines of the present year's car and that of last year, or of two years ago, results in the sale or exchange of many of these high grade machines. And it is a fact well known to all who have given motor cars any consideration, that a high grade machine is always high grade. The material and workmanship that went into it can never be taken away, as long as the car remains intact. It is simply a matter of condition.

A good car, put in condition, is still a good car, no matter how many miles it has run or how roughly it has been handled. For such cars, new parts are always available, and an experienced workman can, at comparatively low cost, make them almost as good as when they came from the factory, so far as all practical purposes are concerned.

Such cars, converted into trucks or other delivery vehicles are available to grocers, bakers, laundrymen, confectioners and florists for one-half and even one-third the cost of the original. In many instances these cars can be bought for little more than the price of a delivery horse and rig; and the car will accomplish five times as much as the horse at a cost of upkeep even less than that of a pair of horses. These used cars are especially good for city delivery work, as they are light and speedy as compared with the regulation truck. And in this work they are business-getters. They enable retail merchants to make deliveries promptly and keep all promises in this regard.

Nor is the used car out of place on the farm, when given the task of hauling produce to town. I can speak with experience in this particular, having used a rebuilt car for farm trucking during the past three years. In this work it dispenses with a span of horses; also, it makes possible the delivery of produce, eggs, butter and milk at an early morning hour, when such things are wanted. The distance to town of seven miles is covered by this "used car truck" in 30 to 35 minutes. The fastest team on the place could not make it, under load, in less than one hour and thirty minutes. Instead of four or five hours being needed for the trip to town; it is made in a little over an hour. Thus the used car, in this work, is a time-saver. With the farmer, as with the merchant or professional man, time is money. This for the simple reason that the time formerly wasted in driving to town with a team can now be used in development work.

The same features that appeal to the city retail merchant appeal likewise to the farmer, when it comes to buying a used car for trucking and delivery purposes. These are cheapness in price as compared with the original cost of the car and its rebuilt condition, excellence of service, and economy of upkeep. There is a risk, of course, in buying a used car, provided such a car is bought in a run-down condition, either from an irresponsible individual or a firm dealing in second-hand cars. But such risk is removed when the car is bought of the manufacturers, either direct from the factory or through a branch house. In this case the maker has a reputation at stake, and is keenly anxious to give satisfaction. The used cars sold in this way are rebuilt cars and, being rebuilt by the makers, have all worn parts replaced, gears renewed, bodies repainted and finished, and the motor put in excellent tune. There is practically no risk in buying such a car, and if purchased for delivery purposes, such a machine will pay for itself within a comparatively short time.

GARFORD LAUNCHES A MODERATE-PRICED "SIX"

Designed to Sell for $2,750 with Complete Equipment, It Mounts a Long-stroke Block Motor with Detachable Cylinder Heads—Other Unusual Features also Incorporated—10,000 Cars to be Produced.

In bringing out for the current year a brand new "six" that differs radically from anything else that has gone before it, the Garford Co., of Elyria, O., has not sprung quite such a surprise as it has by placing the car near to the popular-priced class, thus marking a significant change in Garford policy as a result of the acquirement of the Garford property by the John N. Willys interests.

That there has been no visible drop in quality, however, despite the very decided drop in prices—the new car sells for $2,750 as either seven-passenger touring car or roadster, and both are more completely equipped than is usual—is revealed by the list of specifications. Instead, there actually has been effected an increase in quality, as is made plain by the details of construction, the reason for the lowered price being succinctly explained by the production plans which provide for the construction of 10,000 cars during the next twelvemonth.

NEW GARFORD SIX IN TOWN CAR FORM, WHICH SELLS AT $3,750 FULLY EQUIPPED

In describing the new Garford "six," reference to its predecessors will serve no useful purpose for the reason that it is a new car all the way through—"from stem to stern," to express it nautically—and differs from all previous Garfords in every respect, with the exception, perhaps, of the hub caps which still display the familiar monogram. Even superficial examination serves to make plain the undeniable difference; it is apparent in the lines of the body and its lowness, in the design and construction of the axles, in the fenders, and particularly in the single large head lamp which blinks from the top of the radiator like an immense eye.

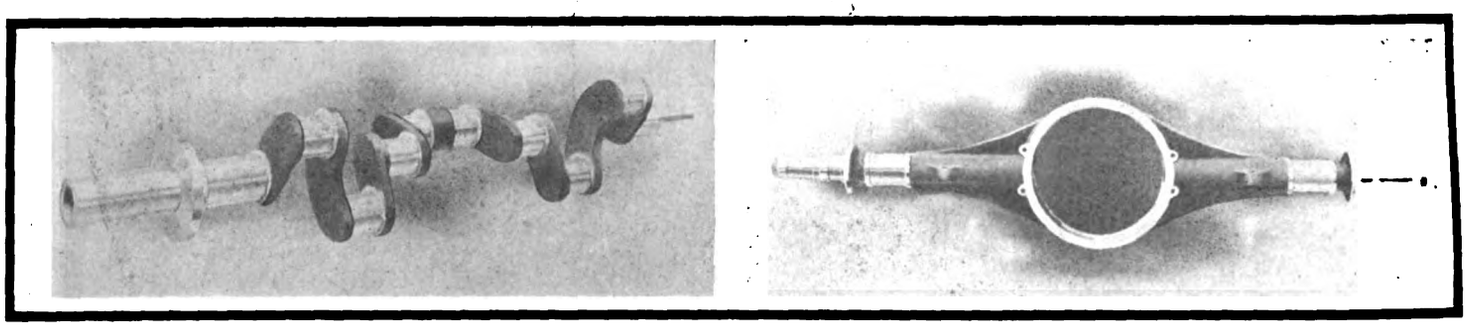
There is much logic, too, in the Cyclopean idea expressed by the use of only one head lamp; it is significant of the policy to eliminate all unnecessary weight. Incidentally, the use of one lamp materially reduces the chance of rattles and, it is pointed out by the manufacturers, if one lamp is good enough for locomotives there is little reason for placing two lamps on a road locomotive, or, in other words, an automobile. The lamp is supported in a spherical socket in the top of the radiator in such a way that it may be adjusted to cast its light rays at the will of the driver, and its position is such that it is particularly safe from damage in the event of collision. The side lamps, which form part of the complete electric lighting and engine starting system with which the car is equipped, are let into the dash and are fitted with parabolic reflectors. The tail lamp and the lamp on the dash are wired in series, thus making of the latter a tell-tale in case the tail lamp becomes extinguished. The electric lighting and engine starting system employed is the U. S. L., which takes the place of the flywheel and is self-contained.

The motor is no less distinctive than the rest of the car and exhibits for the first time the combination of six cylinders in a single block with detachable cylinder heads. The casting is unusually "clean" and clear cut in appearance, and is very nearly rectangular in shape; external parts have been eliminated wherever possible, which fact is true throughout the construction of the whole car. By making the cylinder heads detachable, it is explained, machining operations are simplified and it is possible to obtain a better finish on the bores, to say nothing of the fact that the loose heads tend to make for more even expansion under heat and consequently reduce to the minimum the possibility of dangerous distortion. The motor casting, to which are bolted clutch and the gearset, thus making of the whole a rigid unit, is mounted directly on the main frame at four points, though by reason of the use of what is termed an "equalizer" the effect of three-point suspension in obviating the transmision weaving strains to the motor is obtained.

The bore and stroke of the motor are 3¼ inches and 6 inches, respectively, which, combined with the fact that the reciprocating parts have been made as light as is

Digitized by Google

consistent with a liberal factor of safety, accounts for the comparatively high turning effort obtained; as high as 60 horsepower at normal engine speed has been obtained quite easily on block test. Connecting rods are of high grade steel, heat treated, the camshaft is extra heavy with the gear securely bolted to a flange at the end and the crankshaft, which is of the four-bearing type, is distinctive by reason of the unusual method of counterweighting that has been adopted. The counter weights are in the form of arcs, the end attained being that vibration at high speed, or any speed, for that matter, is reduced to the point where it is practically nil. Lending emphasis to the feature of accessibility which everywhere is apparent, the whole unit power plant may be dismounted by removing four bolts and two clevis pins and disconnecting the universal joint to the gearset.



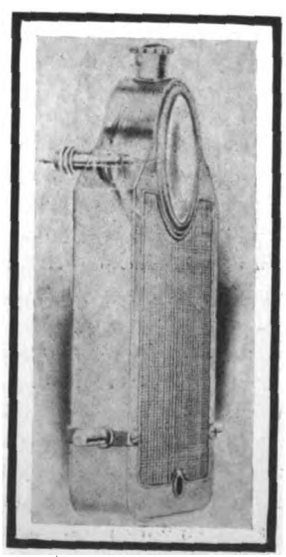
In choosing the material for the valves each branch feeding three cylinders. The exhaust manifold is of the "ejector" type.

From the engine, power is transmitted by means of a large diameter cone clutch which is fitted with cork inserts. The gearset is of the four-speed variety in which high speed is fourth, and direct drive third. By making use of an "overstep" for fourth speed it is possible to maintain the gear ratio at the rear axle very low while at the same time providing for quick acceleration with a minimum number of engine revolutions per minute on high gear under normal touring conditions. In conformity with the general trend, the steering gear, which is of the worm and wheel type, is located in the center of the floorboard. The frame is of a new type construction, very thin steel being pressed into a deep channel, the ensemble permitting a degree of rigidity and staunchness that is obtainable in few other ways. By reason of the under-slinging of the rear springs, and the general design, the drive is transmitted in virtually a straight line when the car is loaded.

The rear axle of the car is of the full-floating type and is encased in a housing drop-forged in a single piece; inspection plates are provided, of course. The propeller shaft is contained within a tube bolted securely to the rear axle and serving as a combination torque member and strut rod. The universal joint is completely enclosed in a metal housing and is calculated to run for indefinite periods without attention. The brake drums, mounting internal expanding and external contracting bands, also are one-piece drop-forgings, and the front axle, which has its spring seats forged integral, is set to permit a slight "toeing in" at the bottoms of the wheels. The rear springs are of the three-quarter elliptic variety with the semi-elliptic portion hung beneath the axle, and the front springs are semi-elliptic of the orthodox pattern.

Bodies in each case are formed completely of steel, the various parts which enter into their make-up being welded instead of merely riveted together, which construction, it is pointed out, successfully eliminates the possibility of squeaks or other metallic noises. Bodies are entirely free from wood and joints. The upholstery, of the best hair and hand-buffed leather, is 10 inches in thickness and is mounted over Budde patent De Luxe cushions, which are so constructed that, regardless of the road, there is no likelihood of passengers "striking bottom." Seat cushions are raked backward at an angle calculated to afford the acme of comfort. Cowls are deep and, in addition to carrying the usual equipment, serve also to house a gravity fuel tank (fuel being fed by pressure from a rear tank) and the batteries that go with the U. S. L. system. The speedometer is let into the floorboards so that only its dial is visible and the drive is taken from the transmission, thus eliminating wheel spiders and flexible shafts.

In addition to the touring car and roadster, both of which list at $2,750, a third model, styled a town car and listing at $3,750, also is made, the prices in each case including the following equipment: U. S. L. electric lighting and engine starting system, electric horn and electric heater, the latter being built into place; top with special side curtains which roll up when not in use and may be put in place merely by unfastening their catches, thus permitting them to unroll; rain-vision windshield, built in place; speedometer, tire brackets, inspection and tonneau lamps, ammeter, robe and foot rails, power tire pump, tire repair kit, and the usual tools, jack, and spare parts.



GARFORD ARC BALANCED CRANKSHAFT AND DROP FORGED REAR AXLE HOUSING

cognizance has been taken of the necessity for lightness and strength, and to this end they have been made of Tungsten high speed steel and so designed as to reduce the possibility of warpage to the minimum. This possibility is still further reduced for the reason that the valve seats are thoroughly water-jacketed, the cooling water being circulated by means of a larger centrifugal pump; radiation is assisted by a 16-inch aluminum fan located behind the radiator. The advantage of detachable heads again becomes apparent when valves require re-grinding, the operation being simplified by the removal of the top casting when all the valves may be treated at once.

The lubrication system is self-contained and is positive, a gear-driven pump placed near the rear end of the crankcase forcing oil directly to the main bearings, whence it drains into pockets beneath the connecting rods. Scoops on the connecting rods force the oil to the bearings and splash it over the auxiliary bearings and the cylinder walls; one lead from the pump goes directly to the timing gears in the front of the case. A Bosch magneto is used for ignition.

From the carburetter, which is of a new type calculated to render adjustment an infrequent necessity, the gas is fed to the cylinders through a two-way intake pipe,

REILLY'S NO-YEARLY-MODELS IN RESOLUTIONS

At the Sales Manager's New Year's Dinner the Dealer is Deficient in Resolving—Says Reforms, Like Improvements in Automobiles, Should Be Made Without Regard to Season.

Originally it was a pet scheme of the Sales Manager's, but those to whom he broached the subject were quick to express approval, and so it came about that on New Year's Eve, when the majority of the town's population was developing lung power in one way and vinaceous capacity by other methods, the Sales Manager and other factory executives, with some of those dealers who were nearest to the factory, sat down at dinner in the city's best hotel as the company's guests. The idea had grown from its inception, and every man of the group was enthused by the spirit of the gathering which initially had found the germ of its spirit in that of the season.

"I DON'T MAKE RESOLUTIONS ON NEW YEAR'S DAY ANY MORE THAN ON ANY OTHER DAY," EXPLAINED REILLY

Sales Manager Dinner Director.

Being the father of the scheme, the Sales Manager had been voted to the head of the table and had thrilled with pleasure at the cheer and merriment which surrounded the board as the pussy-footed waiters noiselessly cleared away the wreck of one course and caused another to follow in easy succession. As the little army of tray-toters brought coffee and cigars, the Sales Manager arose and, prefacing his talk with the customary seasonal remarks and the usual confession of inability to fill the position, explained the scheme with which everyone, of course, was familiar, having helped develop it; many of the ideas were contributions by the dealers.

Explains the Resolution Scheme.

It was, briefly, that each man at the table, in accordance with the dinner invitations, had sent to the Sales Manager in a sealed envelope New Year's resolutions which he believed the best to be put into effect in connection with himself or his business; it was to be a free-and-above-board meeting, in a way, and as the toastmaster opened the envelopes in succession and read the various resolutions, each man, from the company's president down, was to tell why he had made these resolutions, what had led up to them and what benefit was to be derived.

There was no preference in the opening of envelopes. The first was a dealer; he told of certain things he intended doing in the coming year and spoke briefly. Then followed the company's secretary, another dealer, the advertising manager, more dealers, and the president of the organization had his say. He had resolved to be stricter in his consignment policy and showed whereby this would benefit both dealer and factory; he would make more expeditious the adjudication of defective parts claims, that the public might be as fully satisfied as possible on this score; other things he enumerated and nearly all proved popular. Those with which the dealers did not appear pleased at first could not be objected to when the motive was explained.

The Sales Manager cut another envelope and smiled amusedly as he read to himself the brief resolution upon the sheet; then he read aloud: "I resolve to continue my no-yearly-model policy of resolutions," and added, "and our friend, Reilly, I believe, will tell about his resolution, which is all that appears on this paper."

Reilly's No-Yearly-Model Resolve.

"I am only too glad to add my bit to what has been said," explained the dealer, as he arose. "The explanation, however, is very brief and is just what the resolution says; I don't make resolutions on New Year's Day any more than on any other day. Just

Digitized by Google

like series models, I bring 'em out when they're ready."

Reilly sat down, but after a few seconds of mystified silence on the part of the others, who persisted in asking him questions, he forsook his chair once more and began: "I know that when I was invited to this dinner I was expected to contribute to the general program by telling what I was resolved to do during the coming year, but, as I have told you, I have made no resolutions, will not make any in honor of the New Year, so could not truthfully tell you I had done so.

Failure of New Year's Reforms.

"Once upon a time I used to think all during the fall about what I would resolve on New Year's Day, and when the day came I immediately declared in effect the whole list I had thought up; the result was that one by one the good resolves all went to pieces, and generally I was ready to begin all over by St. Patrick's Day. I went through the same program year after year, until I felt foolish about it and decided to give up resolving altogether.

"About that time I heard the first suggestion as to no-yearly-models in the automobile business, and when the next New Year's came around I happened to think that series resolutions were just as sensible as series cars; I then made up my mind that whenever I thought of a resolution worth carrying out I would get it going at once, just as series model manufacturers put improvements into their cars, regardless of any day or season. If the resolution whether personal or business, is worth anything at all it is a loss to yourself or your business to let several months drag by before the resolution becomes an actuality.

Fallacy of Postponed Improvements.

"Supposing, for instance, that you have found your place of business becoming a trifle untidy and that you as well as your employes are at fault in the matter; you must realize that such an appearance is not conducive to increased trade, and there certainly is not a man here who does not want to do a better business. That being the case, what is the use of sitting back and letting that trade-killing condition exist for two months just because you have been brought up to consider January 1 as the day for turning over a new leaf and starting a clean book; it is better not to let the old book get dirty.

"To go to an extreme in our imagination of possible conditions, supposing you had a list of prospects and decided to wait until the first of the year before you went after any of them. You all smile cynically and I know you think such a condition absurd; but to make a comparison, any resolution is supposed to help you, and the going after prospects helps you, so why put off either one until a certain day, unless you have some very excellent reason for so doing?

Sewing Up the Hole in the Pocket.

"I remember well one fall day several years ago I discovered I had been getting lax in meeting bills on time, not because I couldn't, but just because I was careless and didn't keep close enough track of some things. I lost discounts, and every time I got a reminder on a bill and found I had lost a discount it made me sore with myself. I told myself that I would turn over a new leaf on New Year's Day, and just then the nonsensicality of the thing came to me. I said, 'Reilly, you fool! there's a hole in your pocket, the money's dropping out, and you aren't going to have it sewed up until New Year's.' I sewed it up right then, and it was worth the effort, too.

"New Year's resolutions are a whole lot like repairing your house. You find that a window has been broken and you say you'll fix it up New Year's. The house needs it now and you know it ought to be done, but such things should be fixed only on a certain day. Sounds sensible, doesn't it? I don't mean to cast reflections upon anyone or the methods of anyone here, but I submitted the only thing I could in the way of a resolution, and you have asked me to explain it.

"So far as resolving goes, the model system applies quite fully in that introducing improvements once a year and making resolutions once a year are much the same; they are better than no improvements or resolutions at all. New Year's resolving is not such a bad thing in a way, for it really does cause a man to stop and think over himself or his business and very often he will find something which he will effectively correct; but, what is better yet, in my way of thinking, is to have a New Year's examining and resolving every other day and not let yourself or your business backslide.

Will Weakened by Delaying Change.

"Letting yourself do certain wrong things for two months or so under the expectation that you are going to reform on a certain day is will-weakening. You give yourself up to habit, and with every day habit becomes stronger and your will, not being compelled to combat habit, becomes weaker. When the time does come for will to combat habit the battle is many times harder than it would have been had the start been made earlier, and every one of you knows that to be true. Every one of you can remember when, as a kid, you tried to dam a brook and how the water would persist in trickling through. It kept you working every second to keep that dam in shape, I don't need to tell you what would have happened had you sat down upon the bank and decided that you would not begin to stop the trickles until five minutes had passed. It's just the same with resolutions.

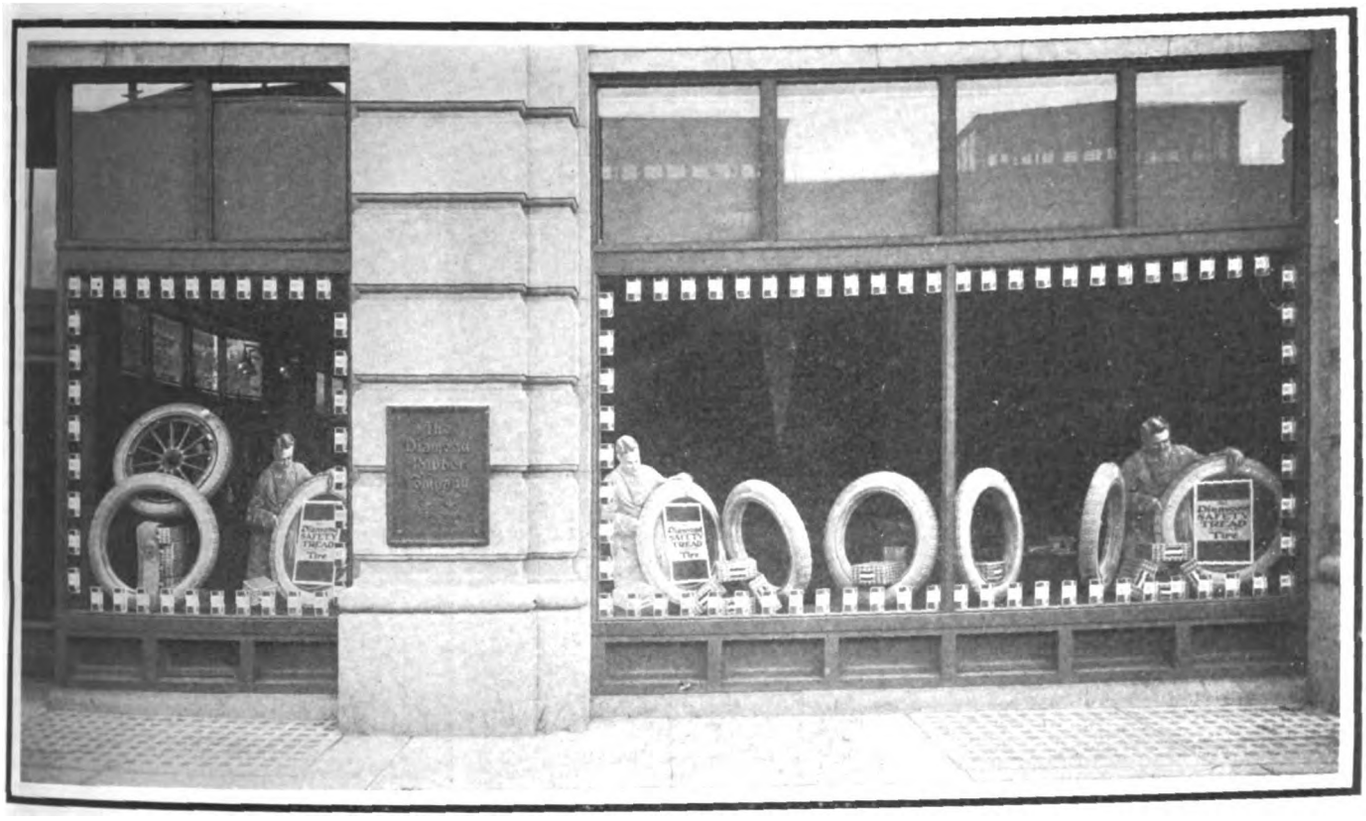
"A great many dealers are lax in their dealings with their customers; they allow big margins in trades, give too much or not enough as service or do something which the customer demands but which he would get along just as well without. Instead of making a change on New Year's Day, why not do it at any other time? You may be doing the wrong thing in demonstrating, the factory may be wrong in its consignment policy, but why is January 1 especially fitted for a change?"

Year's Coming Stops Reilly's Talk.

All this time one of the waiters had been hovering nervously about the table, for he had been ordered to bring on a New Year's concoction with which the infant twelvemonth was to be greeted as he was ushered in; but the waiter didn't like to interrupt a speaker, and midnight was getting perilously close. As a last desperate course the waiter stepped to the Sales Manager and whispered in his ear. The Sales Manager glanced at his watch as the waiter departed kitchenward.

Reilly was well wound up by this time and since his harangue had been invited and not thrust upon his audience, he saw no reason for stopping until he automatically ran down; on the other hand, he never realized had long he had talked; he was interested in his theme just as was interested in any other thing he set out to do. As the waiters entered with laden trays the Sales Manager interrupted Reilly. "We must drink a toast to the new year, Reilly, and I'll have to stop you or postpone the new year's coming for a while."

"Easier to stop the new year," laughed a dealer, as Reilly looked at his watch in surprise and sat down, only to rise again as his fellows did likewise. Just then an unusual height of noise from the street heralded the victory of the new year over Reilly, who, despite the fact that he had been made to give way before the youngster, forgivingly raised his glass.



Doane Chosen to Head Lynn Dealers.

Harry M. Doane was elected president of the Lynn (Mass.) Automobile Dealers' Association at its annual meeting last week. The other officers chosen are: First vice-president, Warren H. Beede; second vice-president, Sidney H. Barrett; secretary-treasurer, Percy I. Reynolds. The association has made arrangements to hold an automobile show in the State Armory from January 20th to 25th.

TIRE SELLING CAMPAIGN THAT HELPED DEALERS

Co-operation by Manufacturer and Retailer That Followed Some Unusual and Effective Channels and That Stimulated Sales of Diamond Product—Non-Skid Tread as Basis and the Methods Employed.

WINDOW DISPLAY THAT FORMED A PART OF THE DIAMOND TIRE SETTING

Co-operation is a word of tremendous significance for both manufacturer and dealer. If the manufacturer fails to assist, "back up" and otherwise help his dealers, or if the dealers fail to assist, help and otherwise "back up" the manufacturer, the result is practically the same—and in figures it is expressed by zero.

Maker and Dealer Pull Together.

It is a great deal easier to pull than to push, and when manufacturer and dealer get into harness by means of a well and carefully thought out plan based upon a true analysis of conditions, and pull together, something of a most satisfactory nature to both parties is quite certain to happen.

At least this is what Clyde S. Thompson, advertising manager of the Diamond Rubber Co., thought, and as a result of thinking it he planned a dealer-manufacturer campaign for Diamond Safety Tread tires that was thoroughly effective from every standpoint and that points a moral to whoever cares to grasp it.

The Diamond idea was to link up forceful newspaper advertising with good window display and helpful follow-up work. In its broad essentials there is nothing new about the plan. It is the general plan of every well directed campaign. The new things were the details and, as in every campaign, the details are the things that count.

The first efforts were centered on New York City, for, it was argued, in this one city there were as many dealers as there are in some States; and, even in New York, conditions vary so greatly that what was accomplished there might very well be taken as a correct basis for future work elsewhere.

Fires First Advertising Gun.

The opening gun of the campaign was fired in the morning newspapers. The story of the Diamond Safety Tread tire and a good illustration of it, in full page space, appeared one Sunday morning. In the meantime a list of the big dealers in New York had been prepared and their home addresses secured. To these dealers an A. D. T. messenger brought a complete copy of the chief paper containing the advertisement, together with a personal letter from the local Diamond manager. The paper showed the dealer exactly what was being done to push the sale of Diamond Safety Tread tires locally—and this plan guaranteed that he saw the advertisement, no matter what paper he might happen to read regularly. The letter explained the entire plan of co-operation and told him where and how to get the Safety Tread tires with which to supply his trade.

Copies of Papers Sent to Dealers.

Dealers in New York territory outside the city were sent copies of the paper and the letter, so that by nightfall on Sunday every one of the dealers interested was fully posted concerning all the details of the undertaking.

For the next step attractive and unusual window displays had been planned; and, by Monday night these were well in hand, because Manager Thompson had not only

Digitized by Google

plenty of ideas but ample material to work with.

Large "cut-outs"—a stiff four-foot lithograph of a man pointing at a Diamond tire—attractive cartons, artistic signs that told a story, all to the point, were supplied to every dealer and definite practical lay-outs of effective, eye-catching window displays furnished.

Attractive Layout of Literature.

A standard design in orange and red, officially adopted as the Diamond colors and used on all literature and printed matter, was used on the Diamond cartons and a clever acrostic scheme by which, on a checkerboard background of orange diamonds, the word "Diamond" was distinctly spelled out, no matter which way the carton sat, formed a tangible and attractive part of the display.

NEWSPAPER ELECTROTYPE

Effective Follow-up by Letters.

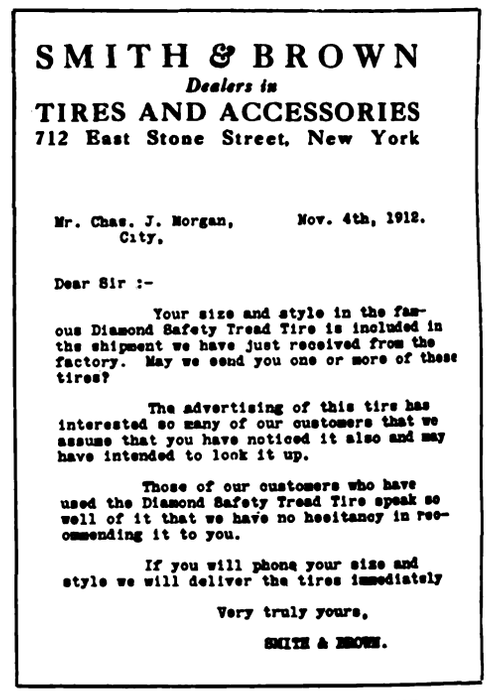
All that was done so far was simply a formation for the effective follow-up system, which included further window displays and newspaper advertising over the manufacturer's signature, plus individual follow-up on the part of the dealer. To this dealers' individual follow-up considerable attention had been paid by the Diamond company, for the Diamond people realized that it was the kernel of the whole campaign; and if they could get real co-operation from the dealer at this point it would swing things their way.

The first piece of this follow-up was a typewritten letter printed under the dealer's own letterhead on paper furnished by the Diamond company. The important fact in connection with this special letterhead was that it gave all the prominence to the dealer's name and business—no Diamond advertising or mention of Diamond appeared in any way, except that in a faint, gray tint there was a large reproduction of the Diamond Safety Tread and a street scene that had been used as a standard design in the newspaper advertising. This served to connect this particular piece of literature with what had gone before and what was to come after.

Personal Appeal to the Customer.

The letter opened by stating that "Your size and style in the famous Diamond Safety Tread tire is included in the shipment we have just received from the factory," and asked if one might be sent to the recipient of the letter; spoke of the newspaper advertising that was attracting attention of customers and bringing them into the store; recommended the tire because customers had spoken so highly of it; and wound up by stating that if the size and style were 'phoned the tires would be delivered immediately.

DIAMOND WINDOW "CUT-OUT"



Real Co-operation With the Dealer.

These letters were supplied all addressed and enclosed, ready for stamping and mailing, so that all the dealer had to do was to furnish the Diamond company with a complete list of prospects and customers and then stamp the mail after it reached him. Thus was eliminated any possible chance of the dealer failing to send out the matter after it had been prepared for him.

This letter was followed a week later by a mailing card, the dominating feature of which was a view of a street skidding scene with the heading, "Any Curb Stone Will Stop a Skid," a large Diamond Safety Tread tire appearing on the left in exactly the same style and position as in the previous newspaper advertisements. Ample space was left for the dealer's name and address, and personal advertising. Incidentally, this little detail of leaving large space for the dealer's name and address instead of the usual inch-high space made a big hit with dealers.

Accentuating Newspaper Advertising.

On top of this came a mailing card with a two-color reproduction of the window cut-out. Again the fact that "Any Curb Stone Will Stop a Skid," but "The Diamond Safety Tread will prevent a car from starting to skid," was the keynote. This was followed by an invitation to "come in and let us show you," and the slogan "It won't slip, won't slide, won't skid—it grips" that had been played up in newspaper advertising was featured. The text was short and to the point.

SMITH & BROWN
Dealers in
TIRES AND ACCESSORIES
712 East Stone Street, New York

Mr. Chas. J. Morgan, City. Nov. 4th, 1912.

Dear Sir :-

Your size and style in the famous Diamond Safety Tread Tire is included in the shipment we have just received from the factory. May we send you one or more of these tires?

The advertising of this tire has interested so many of our customers that we assume that you have noticed it also and may have intended to look it up.

Those of our customers who have used the Diamond Safety Tread Tire speak so well of it that we have no hesitancy in recommending it to you.

If you will phone your size and style we will deliver the tires immediately

Very truly yours,

SMITH & BROWN.

DEALER'S CIRCULAR LETTER

These three pieces, in connection with what had gone before and was being continued in the newspapers, made an effective campaign that actually linked up the manufacturer advertising with the dealer's store.

Nor was the co-operation allowed to rest there. The "Diamond Dealer," a monthly house organ for dealers in tires and accessories, gave many other suggestions and helps; and each issue carried with it a "Make it Pay" idea on which dealers could "cash in."

House-Organ "Make It Pay" Ideas.

One month it was an offer to furnish moving picture slides with the dealer's name and address; again it was a sheet showing

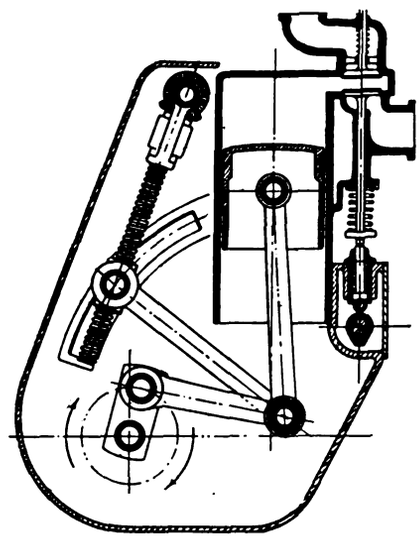
Digitized by Google

a series of prepared newspaper electrotypes which would be furnished for the asking; and another time it was "5 Business Boosters free for the asking," which included an offer to furnish window cut-outs like the one shown, window display cards, circular letters, electrotypes and moving picture slides all at one time. The dealer who did not avail himself of some or all of these helps was asleep at the switch and missing opportunities.

Further issues of the "Diamond Dealer" contained photographs of effective window displays made in various parts of the country and always and everywhere was pushed the idea that the dealer in Diamond tires could have all the help and co-operation he needed if he would only co-operate with the manufacturer.

This sort of manufacturer co-operation is the kind that every dealer can afford to eagerly reach for, because it not only helps him push the sale of the specialty advertised but helps him build up an acquaintance with hundreds of people who otherwise would know nothing about him and actually brings purchasers into his particular place of business.

Of course, this story tells about the plan only so far as it has already been and is being worked out. It has proved so successful that it is but the starting point. Dealers as a whole were quick to avail themselves of the assistance offered, and the entire plan met with a response that was nothing short of marvelous. All of which shows that it is a comparatively easy matter to get dealer co-operation when one does some thinking for the dealer and works out a plan thoroughly with his needs and opportunities in mind. Also it helps the manufacturer to cash in on national advertising by linking up the dominating ideas of the national campaign with the dealer's personal follow-up work.



When Motor 'Buses Will Turn Over.

That the motor omnibus is possessed of considerably greater stability than might be supposed by reason of its top-heavy appearance was revealed by a number of tests which recently were made on a new Daimler 'bus designed for use in the streets of Paris. In order to make the tests, the 'bus was placed on a specially constructed platform side end of which was raised with a block and fall until the vehicle virtually balanced on two wheels. With the 'bus empty, it could be tipped to an angle of 41 degrees, measured at the rear axle, before there was imminent danger of its toppling over; loaded on top only, it could be tilted up to 28 degrees, and loaded both inside and outside the angle of inclination could be increased to 35 degrees without causing tipping.

FRENCH SHOW REVEALS BIG DRIFT TO BLOCK CASTINGS

Longer Strokes also in Vogue, but no Startling Changes in Design Apparent—Several New Engines Appear.

As was the case at the previous French automobile show, or Salon de l'Automobile, which annually is held in the Grand Palais in Paris, the exhibition which closed its doors December 22 was more truly international in character than was the London show, despite the fact that the latter was slightly the larger of the two. There were upward of 700 exhibits staged and, needless to add, American cars and accessories were prominent—a great deal more prominent,

ITALA VARIABLE STROKE MOTOR

be it added, than they were at the last French show. England also was well represented, quite as a matter of course, and the Continental exhibits included products from German, French, Belgian, Italian and Swiss factories.

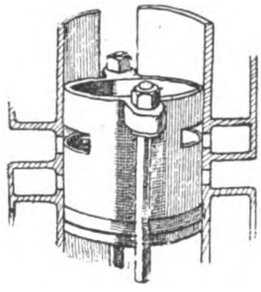
Large Number of American Cars.

The Ford exhibit was the largest single American exhibit and occupied a small section all to itself with a huge electric sign placed over it in such a way that it was instantly visible to visitors passing the portals of the hall. Among the other American cars that held prominent places were the Abbott-Detroit, Anderson electric, Buick, Cadillac, Case, Century electric, Flanders, Hupmobile, Mitchell, Overland, Oakland, R. C. H. and Studebaker American accessory exhibits included Goodrich tires, Klaxon horns, Bowser gasolene tanks, Vacuum lubricants and Oildag and Gredag, the latter two being deflocculated graphite lubricants, products of the International Acheson Graphite Co.

Block Casting Shows a Gain.

Although there were exhibited no developments in the realm of the poppet valve motor that rightfully deserve the adjective "startling," there was a very well-defined tendency toward block casting and a general increase in the ratio of stroke to bore. With very few exceptions, manufacturers of smaller motors—which size, by the way, would seem to have the call—have embraced block casting whole heartedly, the result being that comparatively few pair-cast cylinders and practically no separately cast cylinders appeared. If there is anything which might deserve the prefix "startling," it is the manner in which the stroke to bore ratio has increased in the past twelvemonth. Several motors which last year exhibited greater conseratism now have strokes that are just double their bores and in at least 50 per cent. of all the motors exhibited the stroke to bore ratio was 1½ to 1. The "square" motor apparently has disappeared, for not one was in evidence. "Sixes," which have proved one of the real developments of the American industry, are not as favorably viewed abroad, according to a census of the show, and have not appreciably increased. The four-cylinder motor still is in the lead, with the "six" second, the "one-lunger" third, strange as it may seem, the twin fourth, and two representatives of the "eight" fifth.

Little Increase in Sleeve Motors.

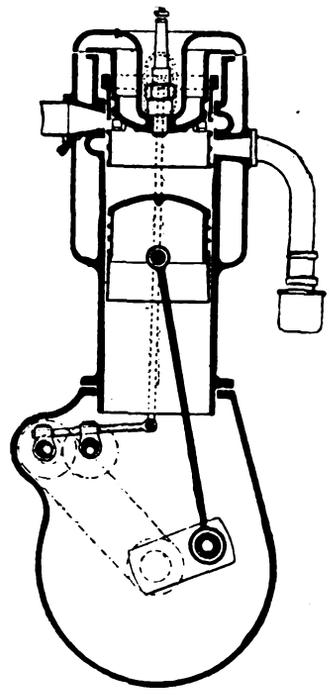


The main tendency, however, is toward block casting, with a decided leaning toward unit construction. The four-speed gearset, which in both England and America has made considerable advance during the past year, has not made such marked progress in French products, though a greater number of cars are equipped with it than was the case at the last show. Knight type motors remain practically stationary, except that in one or two cases—namely, Gregoire and Clement-Bayard—larger models have been added to existing lines. Similarly, there has been little or no increase in the popularity of the other forms of "valveless" motors, the Argyll, the Itala and the Henroid, which first sprang into prominence about this time last year.

As was to be expected, however, several new, or almost new, engines "sans soupapes," as the French quite erroneously say, have been developed during the interim, prominent among which are the Schneider and the M. A. B., the former having a single sliding sleeve valve and the latter having conical rotary valves. In the Schneider engine, the single sliding sleeve

Digitized by Google

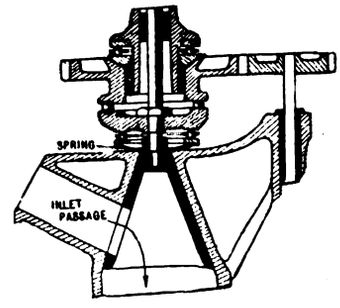
valve serves alternately as intake and exhaust port, the necessary reciprocating and oscillatory motion being imparted by means of a series of wonderfully constructed eccentrics which permit due periods of "dwell" during the compression and firing strokes. Contrary to the usual practice, the rods which actuate the sleeve—it does not touch the piston, being very short—are attached at the top, after the manner shown by the accompanying illustration.



The M. A. B. conical rotary valve engine, a sectional view of the cylinder of which is reproduced herewith, bears slight resemblance to the Russel rotary valve motor,

SCHNEIDER SINGLE SLEEVE VALVE

which made its initial appearance in America about a year ago as the first product of the Silent Valve Co. of America located at Connersville, Ind., though it differs from it in a number of respects. In the M. A. B. engine, the conical rotary valve is driven by a central shaft. One of the peculiarities of construction which is not quite clearly shown by the picture is that in the event of the valve sticking, it is automatically lifted off its seat and out of engagement with the driving gears, thus obviating the possibility of damage. The action, of course, necessitates that the valve be reamed.



Although it is not a "valveless" engine, the new Itala variable stroke motor is none the less interesting, for the reason that it represents what is claimedd to be the practical application of a theory long since promulgated and quite as assiduously attempted. The sectional sketch is purely diagrammatic and is intended to convey merely the principle upon which the engine works, which, briefly stated, is the same as the

SCHNEIDER SLEEVE-VALVE MOTOR

link reversing mechanism of a steam locomotive. The bore of the engine is 130 mm. and the stroke may be varied from 90 mm. to 300 mm. merely by shifting the screw block through the proper distance up and down the quadrant.

As the piston does not perform its short strokes in the center of the cylinder, but alters its relationship with the cylinder head, the compression factor remains constant regardless of the cylinder volume in use. Hence, it is possible to obtain a wide range of powers with approximately the same crankshaft speeds, which fact makes possible the elimination of the usual gearset. When starting, the piston is permitted to perform its full stroke, but as the car speed increases and less power is required, the engine virtually is "linked up," that is to say, its stroke is decreased with the aid of an auxiliary "throttle" lever. The idea is not new, of course, and is as old as the steam engine itself, though in the steam engine the "link motion" is employed to control the admission of steam to the cylinders. The

M. A. B. ROTARY VALVE

Itala engine has been in course of perfection for the past five years and appears for the first time in a practical form.

As was to be expected, the body work at the French show is outre—that is, some of it is—to say the least. Apparently the French leaning toward fantastic lines and "distinctive" designs has not been materially lessened in the past year, though it should be added that the saving grace of an otherwise more or less ludicrous situation is that such fantasy as has been developed can be excused in a great many cases by well-meant endeavors to increase either car efficiency (apparent in the so-called "streamline" bodies) or the comfort of the occupants.

Effect of Heat on Dynamos.

If it were not for the fact that the insulation on coil windings in electric motors, dynamos and other apparatus is rather easily destroyed by heat, it would be possible to make such machines considerably smaller and lighter than they now are built without decreasing the output, allowing them to run at higher working temperatures. This matter of heating is one of the most important factors in electrical machinery designing. The reason a motor or dynamo is given a very high overload capacity for a short time—the figures sometimes reaching as high as 300 per cent.—is that in the time specified the motor cannot become hot enough to do any harm. If the heat did no damage the overload rating might be the normal rating, for the motor or dynamo is quite able to work up to the output.

Where and Why Wear Increases.

The reason why noise and, what is more important, wear, increase so rapidly as the clearance between the valve lifter and the end of the valve stem becomes greater, is that the lifter, when raised by the cam, increases its velocity rapidly as it goes up. The further it has to move before striking the valve stem the faster it will be moving and the noisier and more wearing will be the impact.

Noise Caused by Worn Pistons.

A cause of engine noise that sometimes is not suspected is the slapping of worn pistons, which, of course, is likely to occur only when the engine has been run for a long time and the cylinders and pistons are considerably worn. The lateral thrust of the connecting rods rocks the pistons.

Method of Welding Aluminum Wire.

It is said that aluminum wire can be very successfully welded by the following method: The ends of the wires to be joined should be cut off straight and square and held in the flame of a blow-pipe or other source of heat until the aluminum melts; it will be held in place, however, by the film of oxide which forms on the aluminum, which is very difficult to fuse. When the metal has melted in this way, the two ends should be very quickly jammed into each other, when the two molten ends will run together and solidify, forming a strong joint. The secret of doing a good job in this way consists in making the melted metal run together without admitting air between the surfaces and so forming the oxide which is so difficult to avoid in soldering the light metal.

A REASON AND A REMEDY FOR STARTER TROUBLES

Necessity for Properly Charging Batteries and a Simple Adjustment That May Be Made to Compensate for Car Service That Varies—U. S. L. Combined System as an Example of Simplicity and Adjustability.

(This is the fourteenth of a series of articles designed to make clear the electric lighting and engine-starting systems in use and to render easier their care and repair by the dealer and owner alike.)

Taking care of an electric lighting and starting system is a great deal like swimming—it is largely a matter of acquiring confidence. Any normal person can swim if he will but believe he can swim. But first he must try, and after he has gotten over the shock of sinking once or twice—he ought to sink under the guidance of a competent instructor, be it added—and the surprise of discovering that every time he sinks he bobs right up again, he will acquire confidence in his own ability to keep his nose and mouth out of the briny despite an erstwhile leaden heart. Ever afterward he will swim automatically; he will never forget how to do so.

U. S. L. LIGHTING AND STARTING SYSTEM IN DETAIL

Necessity for Keeping Batteries Charged.

It is much the same with the electric lighting and engine starting system. Any normal person can take care of one of them if he will but believe he can do so and is confident enough in his own ability to make a real attempt at it. And just as the embryo swimmer has certain motions to learn in order to make progress and other things to learn not to do so that he may keep afloat, so has the owner of an electric lighting and starting system a number of things he must learn to do and not to do.

One of the first things the swimmer must learn to do, for instance, is to keep his lungs full of air, for it is the air that keeps him afloat and keeps the water out. Similarly, one of the first things the owner of an electric lighting and engine starting system must learn to do is to keep his battery full of "juice." In other words, he must keep his battery fully charged; he must see to it that the generator is working propery and putting back into the battery just as much current as is drawn out.

Of course, the majority of electric lighting and engine starting systems on the market are quite automatic in action, as already has been made plain in the thirteen preceding articles that have appeared in Motor World, and may be relied upon to maintain the battery in a fully charged condition practically without attention. A certain amount of care is necessary, as a matter of course, though it is not of the kind that requires a college education.

When Adjustments May Be Incorrect.

As the average system comes from the manufacturer, fitted to a car, it is set to operate at what has been predetermined to be a fair average normal car speed. That is to say, it is set to close connection between the generator and the battery at approximately 12 to 15 miles an hour, for instance. Hence, it ought to commence to charge the battery immediately the car speed exceeds the current for which the cut-out is set. And it will always do so, provided, of course, that there is no derangement in the mechanism.

If, however, the cut-out is set to operate at, say, 16 or 18 miles an hour, or 20 miles an hour, and the avearge speed at which the car is driven is less than the low limit for which the cut-out is set, it scarcely requires elaboration to make plain that trouble is bound to ensue; it will be only a matter of time before the battery is exhausted to the state where it is incapable of starting the motor, at least, and probably incapable of lighting the lamps.

Often, even where the cut-out is set to operate at a fairly low rate of car speed, trouble of the kind may manifest itself through no fault of the mechanism. Suppose, for instance, that the electric lighting and engine starting system is fitted to a large touring car, which, legitimately, may be expected by the manufacturer to be used for touring service. In such case, the cut-out probably would be set to operate at approximately 14 miles an hour, for it is logical to expect that the average touring speed would be at least that high.

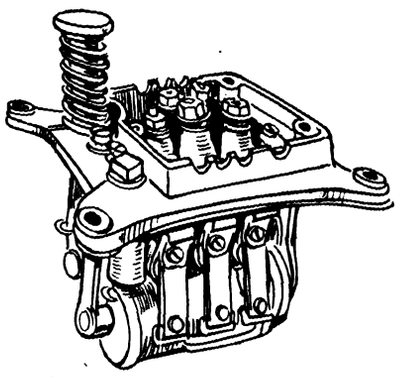
The Importance of Proper Setting.

If the car is driven continuously in city traffic, however, where, by reason of congestion and low speed limits, the car speed but seldom can be made to equal or exceed the low limit for which the cut-out is set, it follows that the energy in the battery will be depleted, particularly where a great number of stops requiring the use of the engine starter are made. Another thing: Even when the car is stopped and the engine permitted to run idly, no current will be passed to the battery in the majority of cases, for the engine then will be running too slowly It is possible, of course, to let the engine "turn up" faster during brief stops, though the practice is not to be recommended under any circumstances, for it is one that will do more harm to the engine in causing unnecessary wear—to say nothing of wasting fuel and oil—than it will do good to the battery.

Digitized by Google

Generally speaking, most generators of the kind that are used in electric lighting and engine starting systems can be expected to generate sufficient current to charge the battery (even if at a very low rate) at lower speed than that for which the cut-out is set. Naturally, there are well-defined limits which it is not well to exceed. Consequently, where it is found that the battery appears unduly exhausted after continuous town service, or other service that requires a slow rate of speed for protracted periods, it is possible in a great many cases to apply the necessary specific to effect a cure merely by adjusting the cut-out device. Where the mechanism is of the electro-magnetic type, which is the type most generally used, the operation is quite simple in the majority of cases, and requires only that the tension on the spring which returns the cut-out arm to its normal position be decreased.

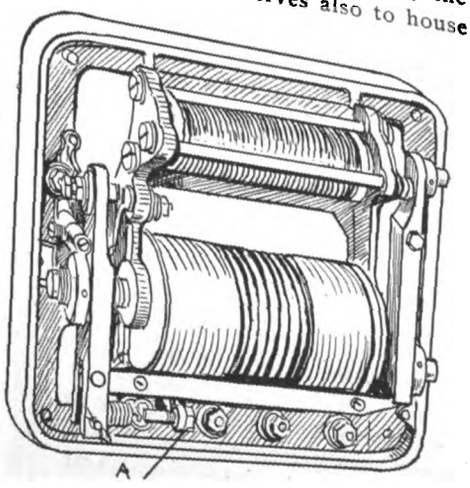
Determining When Cut-Outs Should Close.



Needless to add, great care must be taken in making the adjustment, for there is danger of doing more harm than good. The best way to go about it is to make frequent observations with the aid of the speedometer during three or four days when the car is driven in average service, and then to compute the actual average speed of the car for the period. Then with that speed as a guide, and with the aid of the speedometer, the cut-out should be set so that its contacts come together when the speed is reached. For instance, suppose that the cut-out closes the circuit normally at, say, 13 miles an hour and that the normal average speed obtained by observation and computation (guesswork will not do) is only 11½ miles an hour. Then, with the car operating at 11½ miles an hour, according to the speedometer, the tension on the cut-out armature return spring should be reduced until the contacts come together. The generator, then, will commence to charge at that rate of speed. The original determination of the speed at which the cut-out operates can be made, of course, by examining the device carefully while the car speed is increased, making note of the speed shown by the speedometer immediately the contacts come together.

Adjustments That Are Easily Made.

Adjustment of the kind may be made with very nearly all of the electric lighting and engine starting systems on the market by any person possessing average intelligence without fear of untoward results, provided care is taken. Decreasing the tension on the spring too much will cause the contacts to come together too soon, of course, and may result in the battery discharging itself through the generator. In only one or two cases is it impossible to make such an adjustment, and in these cases the apparatus should be referred to either the manufacturer or to the dealer from whom the car was purchased, care being taken to state specifically the actual average rate of speed at which the car is driven and the service for which it is used.



Carbon Pile That Regulates Current.

Generally, cut-out mechanisms are located on the dash in an accessible position where

U. S. L. STARTING SWITCH

they may easily be gotten at, which practice obtains in the U. S. L. system, which is manufactured by the United States Light & Heating Co. of Niagara Falls, N. Y. The cut-out used in the U. S. L. system is illustrated herewith, and, as may be seen by the picture, the same case serves also to house

U. S. L. GOVERNING UNIT

the regulating mechanism, which consists essentially of a pile of carbon disks placed in series with the shunt field of the generator. The pressure on the pile of carbon disks is varied automatically by the current passing through the field; the greater the current passing through the field the less will be the pressure upon the carbon pile and consequently its resistance will increase and cause the current to drop, thus maintaining it practically constant. When there is little current passing through the field, the pressure on the disks is greatest, thus permitting the field to "build up" and the current to increase.

The U. S. L. cut-out, as may be seen in the picture, is nothing more or less than a small electro-magnet which actuates an arm carrying a contact. When the current generated by the dynamo exceeds the voltage of the battery, which is floated on the line, the magnetism of the coil is sufficient to draw the arm toward it, thus bringing the contacts together and establishing the connection between the battery and the dynamo. That is to say, the magnetism will draw the arm toward the core of the magnet and thus bring the contacts together, provided it is strong enough to overcome the "pull" of the spring which returns the arm to its normal position with the contacts separated. It is here that the adjustment must be made if any is necessary.

How Spring Tension May Be Altered.

As is shown in the illustration, the tension of the spring may be varied by screwing up or unscrewing the tiny nut (A) at the end of the treaded screw to which the spring is attached. Unscrewing the nut will decrease the tension and cause the contacts to come together at slower car speed; increasing the tension will have the reverse effect. In making the adjustment, the nut should not be moved more than about a quarter of a turn at a time; in fact, one-eighth turn may suffice to make the necessary correction.

Except for the fact that the U. S. L. electric lighting and engine starting system employs an electro-magnetic cut-out and the method of regulating current with a pile of carbon disks, it is different in a great many ways from everything else of its kind on the market. Primarily, it is of the type in which the motor and the generator are combined in a single unit, which serves alternately to charge the battery and to start the engine It differs from all other such systems except two, however, in that it is designed to take the place of the flywheel. Consequently it performs three functions, though, despite this fact, it adds no weight to the car to which it is fitted.

Motor and Dynamo In the Flywheel.

The whole apparatus consists essentially of three elements, not including the switch, the cut-out and regulator, and the battery, and these three are shown by the accompanying illustration disassembled the better to make plain their construction. From left to right, these three elements are: The aluminum case mounting the field coils, the armature and brushes, and the brushes and brush rig, the fourth element, of which only part is shown, being merely an outside dust ring. The switch and the cut-out and regulator also are shown in the picture.

Digitized by Google

The aluminum casing mounting the field coils is assembled at the factory as a unit and afterward is bolted directly to the crankcase of the engine concentrically with the crankshaft. The field consists of eight poles bolted to a pole ring. The armature, which is of the outside ring type, together with the commutator, also is assembled as a unit, and the whole is bolted to the flange plate on the end of the crankshaft, the armature, therefore, rotating about the field. The third unit, consisting of the brushes and the brush rig, as it is styled, is bolted to the casing and remains stationary. The switch, which also is shown in detail, is merely a drum switch in which the rotation of the drum under the actuation of a pedal serves to make the proper connections for starting and for charging. For starting, the voltage employed is 24, there being 12 cells of battery, and for lighting and charging a six-volt current is employed, the connections automatically being made in the switch.

Weight Reduced and Simplicity Gained.

By reason of the fact that the motor-generator unit takes the place of the engine flywheel it thus eliminates its weight, which, briefly, accounts for the fact that the addition of the system to a car does not increase its weight. The battery is carried in a cradle beneath the chassis frame, generally at the rear, and need never require attention other than that the cells must be filled with filtered water about once a month. As the acid does not evaporate to an appreciable extent, it never will be necessary to add it to the solution.

Incidentally, as the unit is direct connected to the gasolene motor, all forms of gearing are eliminated, and with them the necessity for lubrication or attention or care of any kind. Also, even the slight noises which may emanate from "silent" chains or spiral or herringbone gears also are eliminated.

Few Parts That Require Attention.

In caring for the U. S. L. system, there is practically nothing that will require attention other than the brushes and the commutator, information which applies to very nearly every other system on the market. As the commutator rotates at engine speed, which is fairly low as compared with the speed at which the commutators of not a few other generators operate, the brushes should wear almost indefinitely without the necessity for replacement. They should be examined from time to time, however, and cleaned of accumulations of carbon dust or other dust, which if permitted to collect will have more or less of an abrasive effect, which may be detrimental to the commutator.

In order to get at the brush ring and the commutator, the outside dust ring may be removed by taking out the bolts that serve to hold it in place; the ring is made in sections and should come away quite readily. Before removing the brushes, such dust as may have collected at the edges of the ring should be brushed away with a fairly stiff brush, after which grease or oil can be removed from the parts with a cloth dampened with gasolene. As the brushes are fitted with "pig tails," to assist in the collection of current, no attempt should be made to remove them entirely; it will suffice to take them out of their holders and wipe them with the dampened cloth used in cleaning the dust ring.

Proper Care of the Commutator.

Before replacing the brushes—they may be taken out merely by lifting the spring-returned arms that press them against the commutator—the commutator should be examined to make sure that it has not been cut or scratched. If it exhibits a brownish, glazed appearance, it may be assumed that it is in very nearly perfect condition, in which case it should not be touched. If, however, there appears to be difficulty in getting enough current properly to charge the battery and the commutator is caked with a hard, dry substance, or appears scratched or cut, it should be carefully cleaned by holding very fine sandpaper (preferably No. 00) against it while the motor is running. In any case, very great pressure should not be exerted; the better way is to grasp the two ends of a strip of sandpaper and, holding it taut, permit it to touch against the surface with just sufficient force to bring the ends about half an inch lower than the center.

The length of time required to bring the surface of the commutator to the proper condition naturally will depend upon its condition when the application is made. Perseverance, however, and light pressure are infinitely better than heavy pressure and a hurried job. Emery cloth never should be employed for the purpose, for tiny pieces of emery are likely to become imbedded in the comparatively soft copper and work future havoc with the commutator brushes.

Importance of Tight Connections.

Before replacing the brushes and the outside dust ring, make very sure that all the brush connections are perfectly tight, for there are few things calculated to create greater havoc with proper operation than loose connections. All nuts and binding screws should be tightened with a pair of pliers or with a small wrench, if provision for the use of one is made. Needless to add, care must be taken not to strip threads, or the nuts will work themselves off and may get in the mechanism and cause extensive damage.

The cut-out part of the system should require but infrequent attention, for it is in operation theoretically only when the motor is stopped and restarted, and the contacts, therefore, are subjected to very little wear. Occasionally they should be inspected and, if necessary, cleaned with a small, very fine file, or with a couple of pieces of emery cloth glued to opposite sides of a piece of thin Bristol board. As there is nothing in the regulator mechanism that moves, comparatively speaking, it will never require to be touched from one season's end to the next.

Johns-Manville Adds Radiator Shield.

Not content with the recent enlargement of its line of automobile specialties, which now includes brake lining, spark plugs, demountable rims, terminals, etc., the H. W. Johns-Manville Co., of New York, just has added a radiator shield for preventing the freezing of the water when the car is left standing with the motor stopped and also for cutting down the area of the radiator exposed to the air while running.

The shield consists of a thick layer of thoroughly cleansed cattle hair quilted between two layers of waterproof imitation leather. Near the top is an opening for admitting air to the radiator, and this is covered, when the car is standing, with a flap held in place by two snap hooks. The cover is made with outlines conforming to the shapes of the various standard radiators.

Motor Wagon Builds Half-Ton Car.

Apart from the 800-pound wagon employing a two-cycle, two-cylinder engine, the Motor Wagon Co. of Detroit now has ready for the market a half-ton car built of standard parts, and utilizing a four-cylinder, four-cycle motor; it also has three-speed selectively controlled gearset and double side chain drive to the rear wheels, which, of course, run on a solid axle; the wheels are shod with solid rubber tires. The standard body provides 22 square feet of loading space, the closed body types having a cubic capacity of 100 feet.

Effects of Adding Carbon to Iron.

The addition of a small percentage of carbon to pure iron, which is not a little like copper in softness and ductility, converts it into steel having hardening and other properties which vary with the percentage of carbon. Heating and suddenly cooling iron to which .25 per cent. of carbon has been added results in a slight hardening effect; 1 per cent. of carbon gives sufficient hardness for tools for cutting metal, while 2.2 per cent. of carbon produces a metal that is hard, brittle and not at all malleable.

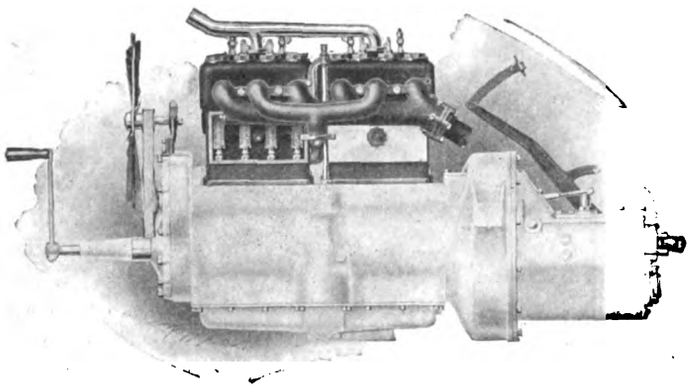
HAZARD'S LATEST MODEL IS CHRISTENED "ERGON"

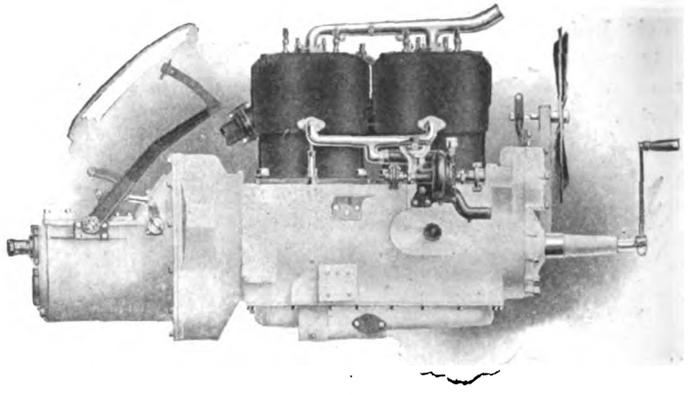
Unit Type With Long Stroke and Timing Drive by Chains—Starting and Lighting System Provided For.

Not content with merely designing a brand new motor, larger and more powerful than any of its previous models, the Hazard Motor Mfg. Co., of Rochester, N. Y., has also found a new name, for the engine has been christened "Ergon," from the Greek, meaning work or energy.



As the accompanying illustrations show, the motor is built on the unit power plant idea, the outfit including a dry plate clutch and three-speed selectively controlled gearset. By omitting the flywheel housing, however, the unit feature may be dispensed with if desired. The unit is designed for three-point support, there being two substantial arms cast on the flywheel housing for the support of the rear end, while the single suspension point in front is located under the end of the crankcase and directly in front of the oil reservoir. There is also a trunnion, cast integral with the front cover plate, through which the starting shaft passes; if desired, the motor may be supported by this instead of the boss. The lower support, however, is considered advantageous because it permits easy access to the camshaft drive.

The cylinders are cast in pairs, and are of the L-head type the stroke is long, being 6 inches as against a bore of 4⅜ inches. One of the up-to-date features of the engine is the abolition of gears for driving the camshaft, magneto and pump and the use of Renold silent chains for the purpose. Two chains are employed, one for the camshaft and the other for the shafts which impart motion to the pump and the magneto; a double idler, over which both chains run, serves to take up lost motion due to wear.



Clean design is a feature of the Ergon motor that stands out clearly. Not a little of the attractive outward appearance of the machine is due to the fact that the intake and exhaust manifolds are cast in a single piece and held in place on the cylinders by four studs. The carburetter is attached directly to the flange of the intake section of the manifold. On the opposite side of the motor there is only the water manifold and pump. All the valve stems of each pair of cylinders are enclosed in a single compartment with an easily removed cover plate.

A feature of the motor that is indicative of the tendencies of the times is the provision that has been made for the installation of an electric or pneumatic starting system, or electric lighting dynamo, a bracket being cast to take the pump, dynamo or motor and provision made for driving through silent chain. The arrangement is such that any one of a number of different systems may be installed with little difficulty.

The demand for motors, especially since the new model was brought out, has been so great that the Hazard company has discontinued the manufacture of control sets, which formerly constituted a portion of the manufacturing business.

VALVE SIDE OF ERGON MOTOR

OPPOSITE SIDE, SHOWING WATER PUMP

When too Much Kerosene Does Harm.

The use of kerosene for cleaning out carbon from the cylinders of a motor is a good thing; but if carried to excess more or less trouble is apt to follow. Too much kerosene will cut out all the lubrication and very considerably impair compression, and the oil left in the cylinders will mix with the gasolene and may tend to make ignition difficult and starting very hard. Further, the burning kerosene is likely to produce deposits of carbon, leaving the engine almost as bad, perhaps, as it was before the treatment was applied. A tablespoonful or two to each cylinder, according to the size of the motor, should be plenty, and it should of course be put in when the motor is hot, just after a run.

DIE-CASTING IN BRASS PERFECTED BY DOEHLER

Small Parts, Golden Yellow in Color and Exceptionally Accurate, Now Made in Molds—Details of Uunusual Process.

Materially widening the scope of die-casting operations, which heretofore have been more or less limited by reason of the necessity for employing comparatively soft material, the Doehler Die-Casting Co., of Court and Ninth streets, Brooklyn, N. Y., at length has perfected a method of die-casting brass parts, thus marking what is said to be the first practical demonstration of the art in America. In appearance and finish and the accuracy within which dimensions can be held—from .002 to .005 inches, depending on the general construction of the part—the brass die-castings appear much the same as the ordinary kind except that they are a golden yellow in color.

The process by which they are made, however, differs materially from the ordinary die-casting process, the brass being heated until it is only semi-fluid, or plastic, when it is forced into the molds under tremendous pressure. The pressure quite naturally results in greater homogeneity and obviates the possibility of common casting defects. The material which is used is high in copper and consequently is easily machined, though in the majority of cases machining is unnecessary by reason of the accuracy which is possible in casting. The brass shows a tensile strength of approximately 55,000 pounds to the square inch, an elastic limit of 40 per cent. of the ultimate tensile strength, and an elongation in six inches of about 20 per cent. For the present, operations will be confined to the formation of small parts weighing less than one pound and not exceeding three inches in over-all dimensions. Among other parts made by this process are gears, the teeth of which require no machining.

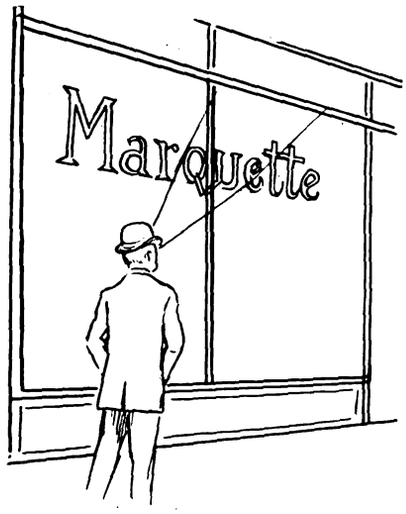
APPLYING PSYCHOLOGY IN THE MAKING OF SIGNS

How Big Signs May Fail Unless Properly Placed and the Lesson Taught by the Tendency Toward Smaller Ones, Placed Low—Harm That May Be Worked by Much Lettering—Necessity for Brevity.

That the psychology of the salesroom applies also to the store front is a fact that, unfortunately, is appreciated too little by many of those engaged in the automobile business. The salesroom is the place where the salesman meets the prospective customer, talks with him, points out the good qualities of the merchandise he has for sale and eventually makes the sale. In the equipment of the salesroom, the disposition of wares adroitly displayed in a suitable setting, commercial psychology plays an important part, the importance of which amply is evidenced in the well-defined efforts which everywhere are apparent to obtain a proper atmasphere—there is no other word for it—in the salesroom. But just as certain as it is that prospects are recruited from outside the salesroom—and probably written by the outside of the salesroom—so is it certain that some form or variation of the psychology which assists in making sales within doors is applicable to the outside as well. The lack of such appreciation is readily to be found in signs and the methods employed in silently heralding or calling attention to what is contained within.



Tendency Is To Look Downward.

To those who are inclined to introspection there must have been remarked at one time or another in the course of their busy lives the wholly natural tendency to look down—at the sidewalk. It may be that the continual upheaval in which the streets of very nearly every large city generally may be found has instilled a natural timidity in the heart of the pedestrian that has served to make him even more cautious of where he places his feet, though it is more likely that the tendency is perfectly natural and is inherited from the days when antedeluvian ancestors perched on tree branches and judged the distance they might fall.

Be that as it may, the tendency is there, and that it is known to exist and to persist is appreciated by a certain class of more or less clever advertising artists who have gambled on their perception to the extent of improvising various types of sidewalk signs, of which the miniature projectoscope, reflecting the time of night or an "ad" on the pavement, is the Omega and a liberal application of whitewash in a semblance of crude letters is the Alpha. The signs "take"; they catch the eye of the wary pedestrian who watches where he treads and the eye of him who watches the pavement in the hope of picking up something for nothing.

Top of Window Limit of View.

It is seldom that the average pedestrian casts his eyes heavenward unless his attention is attracted by an unusually glittering or rapidly moving object. The top of the

SIMPLICITY THAT FAILS OF EFFECT

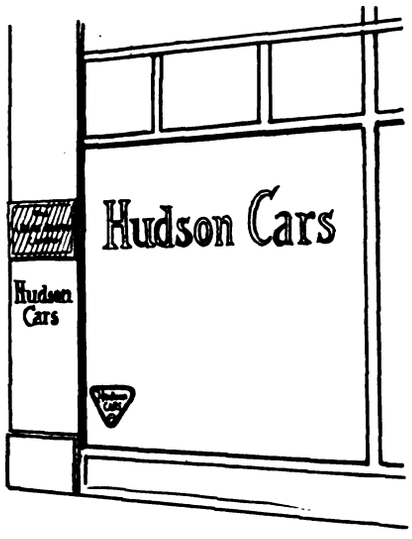
store windows is about the limit of perfectly natural sight from the center of the sidewalk. It is possible, of course, to look higher, and it is altogether likely that "fixed glances" upward, along the row of uprising store fronts that have been squeezed out of ground floor positions will reveal almost a wonder-world of shops on upper floors, unknown and probably unsuspected before. It is a simple experiment that is recommended to those who are skeptical.

Big Signs and Their Usefulness.

It is here that the really big sign scores or fails. If it is one of those tremendous creations with letters five or six feet in height, and spaced nearly as far apart, its usefulness is limited unles it is placed well on high with a practically unlimited sweep in front of it and nothing to obscure it. The prime reason for any sign, of course, is to provide a means whereby "he who runs may read," though it may not be irrelevant to interpolate that the mere reading will do no good unless the tale told by the sign is specific and carries a message to the one who reads it.

That is to say, a tremendous sign blazoning to the world the single word "milk" or "tobacco" or any other plentiful commodity is insufficient in itself. It advertises milk, or tobacco, or whatever it may, and nothing else. The industry connected with the manufacture or production of that particular commodity is benefited, naturally, but the individual who is responsible for the erection and expense of the sign is not receiving proper dividends on the investment for the simple reason that the reader, who is or who may become a consumer, is as likely to purchase from any one of a hundred or a thousand dealers in that particular product as he is to deal with the owner of the sign.

Making the Sign Tell a Story.



Similarly, the mere advertisement of a single name with the aid of a sign is an oversight on the part of the person responsible for it. The name may signify a whole lot to those who are "in the know" or who are users or potential users of the products the name stands for, but there are so very few names unmistakably connected with products of universal use that, except in very few cases, the investment represented by the sign must result in a debit rather than a credit. To put it in perfectly plain language, it is altogether probable that in the majority of cases—it is almost a fact—that there are thousands who read the sign and know not what it stands for as against tens who read it intelligently and therefore may be expected to benefit its owner.

The value of every sign, be it big or little, obviously lies in its capacity for advertising something—a commodity or a process or a name. To perform its mission in life well it should hit the reader between the eyes in such a manner, and so quickly, as to leave an indelible impression. If the really large sign is far enough away, is not obscured and the lettering is clear, it may be expected to achieve its end. But where it is close at hand, or is partly obscured by

Digitized by Google

buildings or other signs, its value as an advertising medium is small at best.

"Quick look" signs which may be seen

MANY SIGNS, CLEANLY ARRANGED

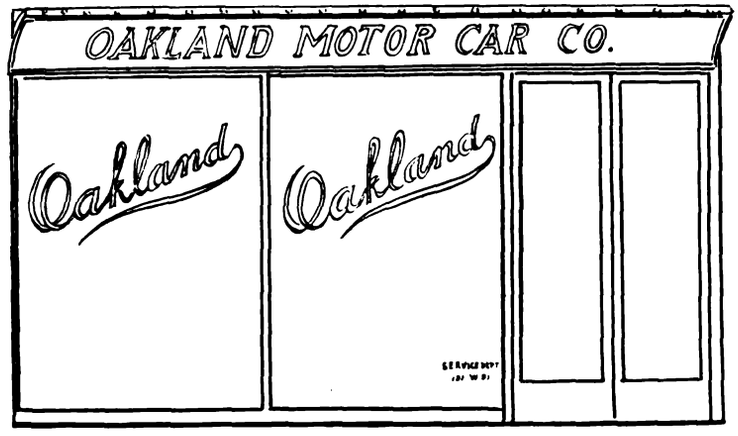
and read at a glance are of the type that are sought now more than ever, for it would seem that their value, particularly in the automobile business, only within comparatively recent times has come to be generally recognized. The tendency toward big signs and big displays gradually is receding, and the reason for the change, at least where store windows form practically the only location for lettering, is not hard to grasp.

Injecting "Quick Look" Quality.

When the big sign is well placed it becomes virtually a "quick look" sign, as a single glance serves to convey the whole of it to the brain of the reader. But it is a mistake to place a big sign where it becomes necessary, by reason of narrow scope of vision, to take two looks at it or to screw one's head nearly off in endeavoring to obtain a continuous vision that shall convey the whole meaning of the sign.

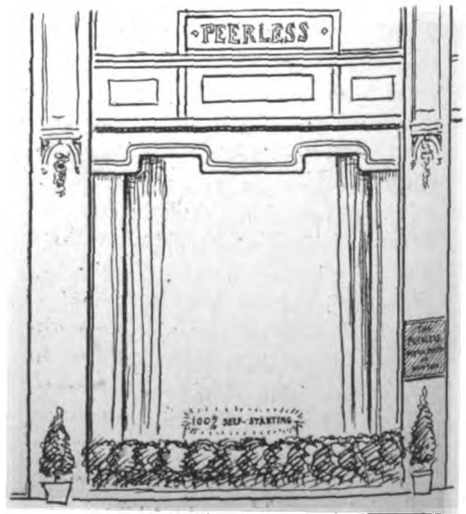
For instance, one of the accompanying illustrations shows a typical Broadway (New York City) automobile show window with a single word—Marquette—on it in letters about 2½ feet in height. The sign serves its purpose in advertising the name of the car to those who pass in the trolleys or automobiles. But experience would seem to prove that those who ride in trolley cars are not very much interested in automobiles, from a purchaser's point of view, anyway—particularly in view of the fact that the car advertised is not a low priced one—and those who ride in automobiles generally are too much engrossed with the traffic problems at that particular intersection to pay much attention to signs.

The particular appeal of the sign, therefore, logically should be to the pedestrian, although even here the sign is not all that might be expected. In the diagrammatic sketch, the pedestrian's scope of vision is shown graphically. If he looks first at the center of the sign, which is more than likely by reason of the break in the window which serves to attract attention, he sees only the letters "quet" clearly. The others he sees less clearly, the initial "M" and the final letter "e" being almost entirely outside his scope of vision. If he really wants to see the sign, it is necessary for him to look again, possibly twice more, before the whole name is perfectly clear to him. Repeated looking, of course, may serve to impress the name upon his mind, but it is more likely that he will not take the trouble to turn his head, and in the majority of cases the value of the sign will be lost.



Getting Results With Small Signs.

In such cases, two smaller signs are infinitely superior to a single large one. The smaller signs are just as easily read from passing vehicles, they cost little, if any, more to place, and are very much more easily read by the pedestrian public. And as it is the pedestrian public which is most likely to be invited inside by signs, the value of catering to those who walk as much as to those who ride should be apparent without further dissertation. An excellent example of the case in point may be found in the windows of the Oakland branch in New York. Here there are two moderately large signs that are not too large to be read easily from the sidewalk, supplemented by a third sign, extending for the length of the two windows, and illuminated at night to make it plain to those who ride. Incidentally, both the smaller signs also can be read by those who pass in vehicles.

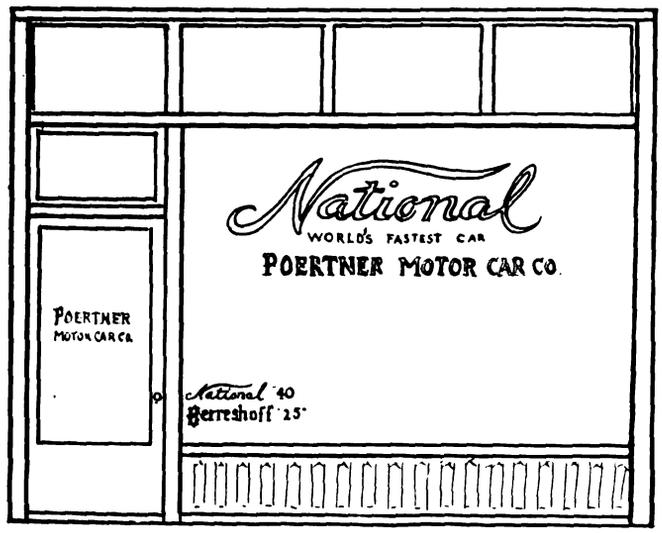


The other extreme is to place no signs whatsoever on the windows, after the practice of a few well-known jewellers on Fifth avenue—Tiffany, and Black, Starr & Frost, and others—and drygoods merchants on less conspicuous streets. Whether or not the practice is a good one is open to question. The lack of signs presupposes, in a measure, that the location of the place of business is sufficiently well known to a select clientele of purchasers whose expenditures are enough in a given time to support the business without the necessity for increasing the number by attracting the attention of passers-by with the aid of signs. Support of the fact would almost seem to be evidenced by the almost invariable rule that the larger the establishment the smaller will be the signs.

Where No Signs At All Are Used.

At several of the New York agencies for cars which enjoy the distinction of being classed with the "upper ten," for instance, signs of any description on the windows are conspicuous by their absence. At the Packard agency there are no window signs, nor are there any at the Peerless agency. In both instances, finality in conservatism is marked by small bronze tablets at either side of the massive doors. At the Peerless branch, however, a large illuminated sign high up over the center of one of the extensive show windows twinkles for the name "Peerless" after nightfall, though it is doubtful if anyone ever sees it during daylight hours. It is altogether too high

SIGN ARRANGEMENT THAT IS EFFECTIVE



CONSERVATISM IN SIGN DISPLAY

Digitized by Google

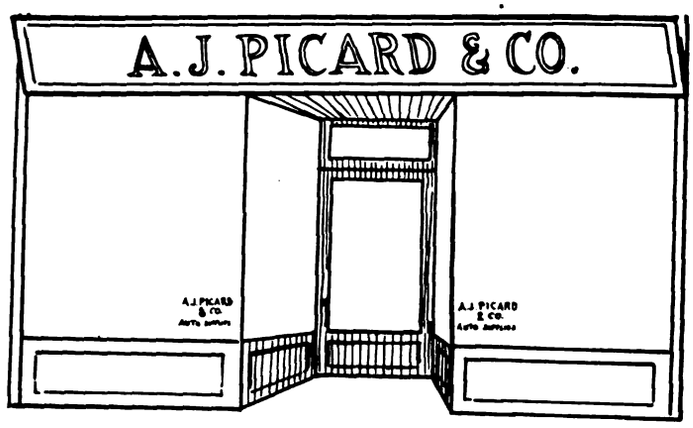
up to be seen from the sidewalk on the agency side of the street, and its "protective coloring" is such as to render it almost indistinguishable from the other side.

Tendency Toward Small, Low Sign.

As already has been made plain, signs that are located in high places are not worth their keep unless they are so placed that they come directly within easy vision, for the average person is indisposed to raise his or her eyes to a very much higher level than that marked by his or her own nose. That this fact is coming to be appreciated is evidenced by the growing tendency toward the use of smaller signs placed lower down. In not a few cases the lettering of such signs is scarcely more than two or three inches in height, and the whole sign is so placed that it comes directly in the line of vision of the passing pedestrian. Consequently, it cannot fail to attract attention, and as it is small and easily read—and easily remembered—its real value scarcely is to be disputed. In not a few cases such signs even are placed slightly lower than the level of the eyes, asumption having been correctly made that the natural tendency is to lower rather than to raise the eyes.

DISTINCTIVENESS IN LETTERING AS A GOOD EXAMPLE

Trademarks Used as Eye Catchers.



Such signs, of course, are practically worthless in spreading a particular doctrine to those who ride in trolleys or automobiles, for to them they are practically invisible. That is to say, they are invisible in the sense that they cannot be read and understood in the short time required to pass them in a fairly rapidly moving vehicle. In several instances, however, a ready means of making them not only visible but attractive as well has been evolved, with the aid of a little ingenuity. It is a pretty well known fact that the clearest way to make an impression is with the aid of pictures. Which, briefly, is the method employed by those who would have their signs understood even upon the briefest inspections. The pictures, however, are not really pictures, but are reproductions of a trade mark or a particular style of lettering made familiar to the general public through extensive advertising in newspapers and magazines. Thus, for instance, the well-known Hudson triangle appears on the Broadway window of the Hudson agency, and even though the lettering upon it cannot be read, the most superficial glance serves to make plain the triangle. Long association of the form of the device with the name of the cars has served to make the one very nearly synonymous with the other

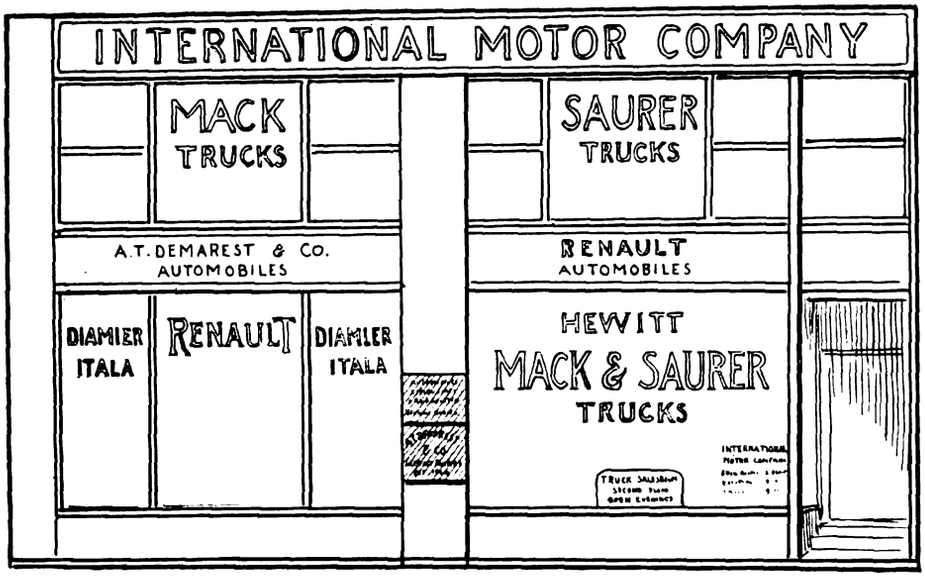
Much the same method is employed at the National agency, where the names of both National and Herreshoff cars appear in the lower left corner, done in the particular style of lettering adopted as distinctive by the manufacturer and extensively advertised as a sort of trademark. But even where such small signs do serve to convey their meaning by their shape alone, it is the better part of wisdom to supplement them by a larger sign, which may be read by both the pedestrian and the person who rides past either in a trolley car or in an automobile.

This has been done at both the Hudson and the National agencies, the example of the National agency serving to illustrate another angle of the very much mixed sign problem. Here not only is the name of the National car advertised in a manner that leaves little to be desired, but the name of the company which acts as the agency is advertised in a like manner. In this way the two names—that of the car and the agency—become connected in such a manner that the mention of one almost invariably serves to convey a picture of the other.

Absence of Letters Clears Window.

Obviously, there are two specific reasons for the choice of small window signs in preference to large ones. The first of these is to place them before the eyes of the walking public, from among which are recruited a goodly proportion of the prospects who enter a store, and the second is to leave the windows clear and unobscured for the display of cars or other merchandise, as the case may be. A. J. Picard & Co., of Broadway, New York City, for instance, leaves its windows practically devoid of lettering, except for small signs in the corners of both front panes, placed there especially for the edification of the pedestrian. A very much larger sign, extending over the width of the store apprises those who ride past in automobiles of the name of the firm—though there is nothing to indicate the nature of its business.

SMALL SIGNS EASILY READ BY PEDESTRIANS



Primarily, the purpose of the show window is to permit the display of articles of merchandise—as its designation serves to make plain. Whether or not a secondary purpose may be added in extolling its merits as a repository for sundry letters and symbols making known the name and business of a firm is open to conjecture. Certain it is that a broad expanse of plate

Digitized by Google

glass affords an excellent opportunity for the disposition of such advertising matter as may be included under the head "signs," though there is little room for doubt but that the placing of signs can be overdone, and overdone in a manner out of all proportion to the amount of good advertising that may be expected to accrue.

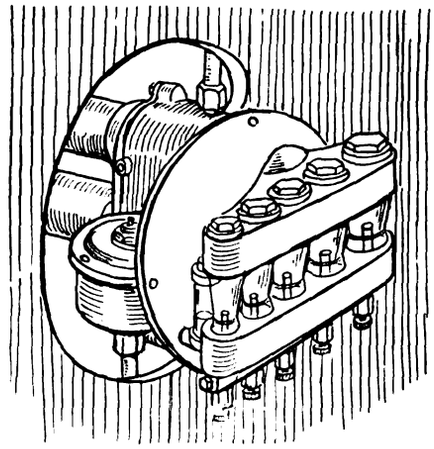
How Elaborateness Defeats Purpose.

If it is the purpose of a sign to make plain certain matters in such a manner that "he who runs may read," there is little sense in making that sign so elaborate and so complicated that neither he who runs nor yet he who walks can make head or tail of it in the time required for him to pass it. In the first place, elaborate signs, containing a multifarious assortment of names and addresses and trade-marks and names of products, to say nothing of several horizontal lines dividing the lettering into regiments and battalions and companies, defeats its own end for the reason that it cannot be read easily and quickly. And for this reason it seldom, if ever, is read at all. In the second place, it defeats the end of the show window, because it so obscures it that a view of the merchandise on display may be gained only under difficulty. Where the lettering is done in gold, there is the added disadvantage in the dazzling effect of the sun reflected ad nauseum in the faces of every passerby.

PROFUSE LETTERING WHICH OBSTRUCTS INTERIOR VIEW

In the case of the International Motor Co., for instance, there is so much lettering on the windows that it is difficult to see into the showroom and impossible in a quick survey to read all of the signs. Several careful glances are needed to assimilate all the information conveyed by the signs, and even then it is doubtful if the person of average intelligence could carry all the names in his or her head for any length of time. Of course, there are many products to advertise on the windows—three of them, to say nothing of Demarest's assortment—though it is quite conceivable that, with the aid of a little ingenuity, a much more suitable arrangement could have been found.

Effectiveness Through Electricity.



As a means of conveying specific information in a way that can be easily read and understood, electricity is becoming more to the front every day, vide the immense electric signs that turn Broadway nights into days. In this respect, that particular variety of small electric sign, mounted on small pedestals, which may be placed within a show window, has not yet reached the limit of its usefulness. Already several prominent automobile agencies, among which are Chalmers, Peerless, Hudson, Cole and Oakland and a few others, have adopted them as a means of attracting the attention of belated pedestrians, and it is altogether probable that if their batting average, as an advertising medium, could be ascertained, it would be found to be fairly high. The signs themselves are clever and, what is more to the point, they are odd.

Carburetter That Operates Visibly.

Although efficient carburation is considerably less of a problem than it was, there are those who believe that as a problem it looms considerably larger than generally is supposed, and their convictions are reflected in the various types of carburetters that almost continually are being placed on the market. Among them, the Gardner Visible, which is produced by the Gardner Carburetter & Brass Works, is unusual, to say the least, though its structure is no more unusual than is the location of its birthplace, which is Shreveport, La.; a Chicago office is maintained at 1546 Marquette Building.

The Gardner carburetter does not differ from a number of other carburetters in that it has a multiplicity of needle valves, but it does differ from all others in that the needle valves all are ranged side by side on the dashboard of the car. In fact, the whole carburetter is mounted on the dash, the float chamber and fuel and gas connections being on the driver's side. Each of the five needle valves is enclosed in its own individual glass tube, the whole device being so constructed that the mixing takes place virtually before the driver's eyes. In addition to the five needle valves, which are graduated in size, there is a sixth glass tube which serves to indicate the level of the fuel in the float chamber.

The reason for the unusual construction

GARDINER "VISIBLE" CARBURETTER

is to permit the driver to adjust the carburetter without leaving his seat, gas being delivered from the five needles successively as the engine speed is increased. Each needle is separately adjustable and it is expected that merely by glancing at the nature of the vapor passing through the tube or tubes, as the case may be, the operator will be able to judge whether faulty engine running is due to improper carburation. It is claimed that, inasmuch as the five needle valves come into "play" successively, gradually increasing the supply of fuel as the demand increases, the carburetter is automatic in a fuller sense of the word than is general and also that, after it has once been set it need not be touched again.

How Tungsten Material is Obtained.

Tungsten, which is used for lamp filaments, is obtained from a previously prepared oxide by heating the oxide with carbon in an electric furnace. Much difficulty is experienced in removing the carbon and also various chemical impurities which tend to destroy the strength and uniformity of the metal.

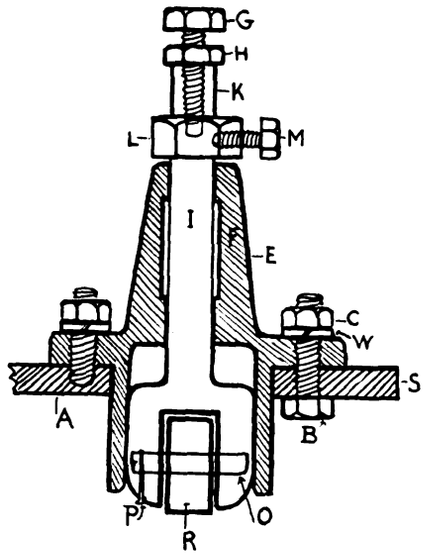
TAKING UP LOST MOTION IN WORN VALVE LIFTERS

How Friction Upsets Factory Adjustments—Where to Look for Trouble and How to Make Repairs to Lifters.

Despite the obvious importance of the timing of the valves in causing a gasolene motor to function to the best advantage, it is not usually the work of the repairman to go very deeply into the matter, for it is safe to assume that the valves were timed properly at the factory, which means that the cams were properly profiled and properly located in the first place, and that any errors in the relative times of opening and closing crept in through wear of the contacting surfaces of the valve lifters and stem ends, or else through wear of the roller pins, rollers, or of the cams themselves.

Where Trouble First Crops Up.

The common use of very hard cams with broad surfaces, of hardened anti-friction rollers on the lower ends of the lifters, and the usual profusion of lubrication, combine to keep down the wear of the cams and rollers to a minimum, and the effects of wear are first apparent in the lifters and valve stem ends. For worn cams there is only one remedy—new ones. The stem and lifter ends, however, usually are fitted with means for adjustment, and the maintenance of the proper clearance between the two surfaces is of no small importance to the running of the motor, not only so far as concerns the amount of power developed, but also in the amount of noise made.



Magnification by Repetition.

The valve lifter and guide shown in the accompanying illustration are not of any specific make, but merely serve to indicate the method of making adjustments. While the existence of a gap between the lifter and the valve stem of, say, 1/32 of an inch, does not seem like a very big thing, it is made to look bigger by the application of a few figures. For instance, a motor running at 1,000 revolutions per minute will lift each of its valves 500 times a minute; which is as much as to say that in a four-cylinder motor there will be 2,000 intake valve and as many exhaust valve openings and closings. And if the lifters all are a little out of adjustment, it is easy to see how much any little effect is magnified by the constant repetition of the choking of the charge, or the holding back of the exhaust, or whatever it may be.

Manufacturers and dealers do not always devote quite as much attention as they should to the matter of giving explicit instructions regarding valve lifter clearance, and while a man with experience can make a very good approximation in adjusting lifters, the best and quickest work can be done only if he possesses exact knowledge on the subject. The simplest form of adjuster is that illustrated, consisting of a bolt (G) screwed into the tappet head (K) and provided with a locking nut (H) to bind it in position.

Indications of a Loose Tappet.

While such a lock-nut, well tightened down on a fairly fine thread, is not very likely to loosen and allow the adjustment to be lost, it will sometimes do so, and this tendency should be looked for, especially

CONVENTIONAL VALVE LIFTER

in a new engine. Should a nut loosen and allow the screw to work up, popping in the carburetter is apt to occur if the intake valve is affected, and in the case of the exhaust valve there will be popping in the carburetter and also a very perceptible falling off in power—usually more than if the intake valve is affected to a similar degree, though of course there will be loss of power and a considerable increase in the clicking noise of the tappet striking the end of the valve stem.

Gauging the Gap Under the Stem.

In the absence of anything more definite in the way of a gauge for tappet setting, the old-time plan of using an ordinary visiting card as a gauge answers very well. In making the adjustment the space should be just sufficient to allow the card to slip out when the valve is closed, with just a trifle of friction, showing that the card just touches both surfaces lightly.

It is an excellent idea for a repairman to accustom himself to thinking in thousandths of an inch, instead of the more common thirty-seconds or sixty-fourths, for the ordinary divisions of an inch are not sufficiently fine for anything but the roughest motor work. For instance, a sixty-fourth, which is a pretty small division of the ordinary sort, is equal, approximately, to fifteen-thousandths or, as it is written, .015. A piece of ordinary newspaper measures about three thousandths, or .003, and in some cases —rather rare ones, however—this is the amount of clearance that is allowed between the tappet valve stem. Usually, in such a case, one or two thousandths more clearance will do no harm and make no perceptible difference in the running of the motor. A rather common clearance is about eight thousandths (.008), and when this is specified the adjustment should be made sufficiently close so that a gauge two thousandths thicker will not enter the space. The sense of feeling is the most reliable guide to the proper tightness of the gauge.

Frictional Points That Need Watching.

Besides the wear that comes on the tappet head and the valve stem end, there will be, in course of time, a certain amount of wear in the roller pin (O) where it passes through the roller, and in the hole in the roller through which the pin passes. The amount of wear will depend largely upon the relative hardness of the parts and the areas of the bearings. If there is motion of the pin (O) in the fork (P) of the lifter there will be a certain amount of wear at this point also.

All this wear has the same tendency—to increase the clearance between the lifter and the stem, and, as long as the looseness is not serious, it can be compensated for by raising the adjuster. When the wear of the pin becomes more serious, however, it should be replaced with one which will take up all the lost motion.

New Pins for Anti-Friction Rollers.

Perhaps the most convenient material of which to make new roller pins is Stubbs's steel rod or finished drill rod, which comes in all diameters and is perfectly round, straight and polished. The quality of the steel is excellent in any of the better class of steel drill-rods or the like. The replacing of a pin means merely the reaming out of the holes in the tappet fork (P), enlarging the hole in the roller until it is true and cutting off a piece of steel rod of the proper diameter. The enlarging of the hole in the roller is not to be accomplished by reaming, however, for the roller is hard ened. It could be reamed by softening the steel and rehardening it after enlarging the hole; but usually it is both better and cheaper to grind it out. This can be done

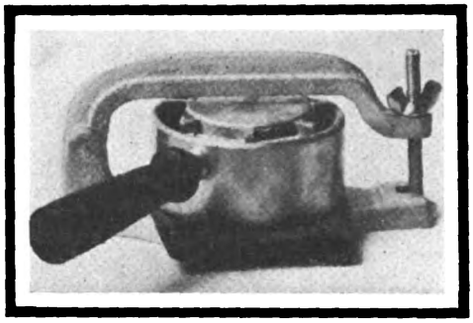
Digitized by Google

by chucking a piece of rod somewhat smaller than the roller pin in a lathe or electric drill spindle, first splitting the end of the rod with a hacksaw and inserting a piece of fine emery cloth which is wrapped about a turn and a half around the rod.

If the pin is to be hardened, the hole for the split-pin or locking wire should, of course, be drilled before the hardening is done. Incidentally, Stubbs's steel and drill-rods, being of tool steel, must be hardened all the way through.

The large nut (L) with set-screw (M) is intended for use when removing valve lifters to prevent the lifter from falling into the crankcase. If the adjusting screw and its lock-nut are removed and the guide (E) lifted from the crankcase the whole lifter is apt to slip through the guide if it is not held in some way; somehow this is a very easy thing to forget. The nut is smoothed out by running a drill or reamer through it to remove the threads and a hole drilled and tapped for the set-screw.

Should the lifter guide (E) be worn where it is in frictional contact with the lifter stem (I) there will be side motion or rocking of the lifter, which should not be allowed to go very far. Whether the repairman's work should consist in bushing the old guides, or in fitting new ones, depends very largely on the cost of the new parts, and it is not possible to make suggestions owing to the wide difference in the construction and cost of various lifter guides. It sometimes happens that it is not practicable to insert a bushing because of the thinness of the stock in the walls of the guide. When, however, a bushing is to be made, it is not a difficult matter to machine it up from a cored bar of bronze, or even to bore and turn a solid rod if no cored bars are at hand.

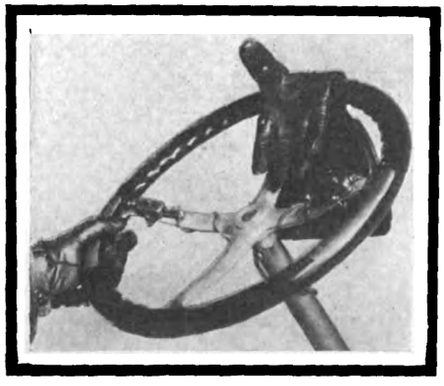


It should be noted, before putting in a bushing, whether there is a relieved section in the guide, as shown in the accompanying illustration. These spaces often are of great importance, being intended as oil traps, and should not be ignored. Also, before finishing the bore of the bushing, the lifter stem should be trued up, should this be necessary, as sometimes is the case.

The final touches should be put on the bore of the guide bushing by passing a reamer through it, a parallel reamer if one is available. Otherwise an expansion reamer will answer. Of course, the reaming may be dispensed with if the boring is done with care and skill; but it tends to increase the life of the guide.

The cutting of oil pockets should be the last operation in making the guide. Care should be taken not to make them so deep as to part the metal of the bushing or to make it too thin and weak. Of course, any little rough edges left after cutting the oil pockets should be taken off. In replacing the guide on the crankcase a thin paper gasket and a little shellac will prevent the leakage of oil, if there is any tendency in that direction.

Shaler Develops a Low Priced Vulcanizer.



Applying the principle that a vulcanizer should do its work by holding a certain degree of heat for a specified time, rather than by heating up and gradually cooling down, the C. A. Shaler Co., of Waupun, Wis., has brought out a small portable vulcanizer which is styled Vul-Kit.

The accompanying illustration shows the general appearance of the new vulcanizer and the construction of the universal clamp. The detachable handle permits the removal of the device from a tire without waiting for it to cool. The heating element consists of a gasolene lamp which does not burn raw gasolene but converts it into gas, and distributes the flame evenly over the bottom of the heating plate. The design is such that the correct degree of heat is attained, and this is maintained steadily until the work is finished. An asbestos pad is let into the shelf on which the tube to be vulcanized is placed, retaining heat and preventing the pinching of the tube.

Glove that is Warmed by Electricity.

Common though the expression "warm gloves" has been ever since there were gloves, it has remained for the automobile to bring out, by creating a demand, a type of glove that actually is warm in itself, and not merely a retainer of the heat of the human hand. Such is the Carron electrically heated glove, manufactured by Carron & Co., of New York City, which recently was incorporated with an authorized capital of $20,000.

Interwoven with the gloves are heating coils of resistance wire, so calculated as to give a gentle warmth when the current from a 6-volt ignition battery passes through the wire. On opposite sides of the steering wheel are two pairs of plates connected with the battery, and there are metal contact pieces on the gloves so arranged that each glove has its complete individual circuit through which current passes when the wheel is grasped and the plates brought into contact with the heater contacts. There are also two diminutive rheostats, one for each hand, so that the heat can be regulated separately for each. The accompanying illustration shows the appearance of the gloves and the contact plates on the wheel. An insulated cable carries the current from the battery to the plates.

Purpose of Threads in Aluminum.

Studs used for attaching valve lifter guides, etc., to crankcases are apt to work loose if merely screwed into the soft aluminum, and therefore they are safer if screwed through and a split-pinned nut put on underneath. The thread in the aluminum is useful not for taking the strain, which is done by the nut, but for preventing the stud from falling into the crankcase when the guide is removed.

Tire Injury That Increases Damage.

A deep cut in a tire, which partly severs a piece of rubber and allows it to flap, should receive immediate attention for the particular reason that the loose piece is apt to tear off more rubber and so make the damage worse than at first. This is particularly true of solid tires. Of course, a bad cut should be taken care of immediately in any case; the foregoing is merely an extra reason for avoiding delay.

Current Lost by Poor Adjustment.

One of the causes of excessive current consumption in ignition systems employing vibrator coils is excessive tension on the vibrator springs. The spring adjustment should be slackened until the motor commences to miss explosions and then tightened down gradually until the firing again becomes perfectly regular. Further tightening results only in useless consumption of current.

Grease That Interferes With Filing.

Passing a greasy hand over the surface of cast iron that is being filed is sufficient to make the file slip and fail to "bite" without the application of considerable pressure, especially if the file is a little worn and dulled by use.

BOSTON CHAUFFEUR WINS BIGGEST WINTON BONUS

Dondero Spent Nothing for Repairs in Driving 27,000 Miles — Twenty Others with Remarkable Records Share $3,500.

John L. Dondero is one Bostonian who enjoyed a merry Christmas and a happy New Year. Dondero, who is chauffeur for F. M. Hauthaway, received $1,000 for a year's work outside of his salary, and the money was earned in a way which is not generally attributed to chauffeurs. He was winner of the first prize in the fifth annual "upkeep contest" of the Winton Motor Carriage Co., and earned the $1,000 by driving 26,987 miles with no repair expense other than for tires.

Second prize, $500, went to William J. Green, chauffeur for E. L. Smith, of Chicago, who covered 22,928.8 miles with no expense; third prize, $250, to Thomas Murren, driving for J. M. Anderson, of Medford, Mass., who covered 16,477 at an expense of 95 cents; fourth prize, $150, to Albert Bedard, chauffeur for Charles B. Maguire, of Providence, R. I., who traveled 18,245.3 miles at an expense of $18.01.

The other sixteen prizes of $100 each were distributed as follows: E. P. Brubaker, 15,729 miles, no repair expense; J. Walter Tracy, 14,022 miles, no repair expense; J. F. Folger, 14,474 miles, 75 cents; Frank Schneider, 14,431 miles, $3.60; Herbert Decker, 12,541.8 miles, no repair expense; L. V. Wright, 12,716 miles, 15 cents; A. N. Peters, 13,845.4 miles, 95 cents; E. A. Hodge, 13,441 miles, $21.22; Harry Batch, 15,333 miles, $53.65; S. J. Meneely, 11,743.3 miles, $5.25; John L. Scott, 12,271 miles, $25.35; Joseph H. Gallo, 11,307 miles, no repair expense; Wm. Ahrens, 11,150 miles, no repair expense; E. E. Stokes, 11,126.3 miles, no repair expense; Clarence Finley, 11,119.5 miles, $1.25; Wm. J. Armstrong, 10,870 miles, 85 cents.

Four chauffeurs who were hot contestants for big money reported total mileage of 98,000 miles, but their records were not accepted because they had permitted their odometers to remain out of order at one time or another.

Races Train to Avoid Collision.

Presence of mind has saved many a skin, and even though it did not save the skins of Dr. Leo H. Joyce and three others who were riding with him in his car, it saved their lives at least. Dr. Joyce coasted down a fairly steep incline toward the Susquehanna railroad tracks that enter the town of Butler, N. J., and at the critical moment an express train loomed large around a curve. As there was not time to check the momentum of the car sufficiently to prevent the collision that was imminent, Dr. Joyce did the only other thing he could do to avoid the smash. He turned his car quickly onto the railroad tracks ahead of the train, at the same time shouting to his guests to jump down the embankment, which they did. Instantly afterward the car was struck by the locomotive and hurled 30 feet, a tangled mass of junk. Dr. Joyce was catapulted from his seat and landed some 12 feet further away from the scene of the accident than did his car. Both his knee caps were broken, as was one wrist; the others in the party escaped with their lives, though they were found to be severely injured. The engineer of the train stated that Dr. Joyce had taken the only possible chance to save his own life and the lives of his guests.

"Boycott" to Check Speeding Taxicabs.

Just how to curb the racing proclivities of the drivers of the taxicabs which pass through the Presidio Reservation in California, is a problem which long has troubled Col. Cornelius Gardener, commander of the post. He has at last hit upon a scheme which, he believes, will prove effective, in that if put in operation the taxicabs will have but scant reason to pass through the reservation. Col. Gardener's method, as put forth in an edict which he has sent to the companies operating the cabs, is to have the army officers and their friends "boycott" the cabs of those companies which do not force their drivers to observe the traffic rules which adhere within the limits of the reservation, and since such a procedure would mean the elimination of at least half of the revenue derived from the operation of the services, it would seem that the colonel's method will prove highly effective.

Berlin to Use Electric Cyclecars.

The city of Berlin, which always has been progressive in the matter of using automobiles in public service, has been experimenting with electric cyclecars, and the results have been sufficiently satisfactory to warrant the purchase of several machines having a carrying capacity of 500 pounds and a maximum speed of 18 miles an hour. They are for postal service.

Huyette Again Heads Quaker Club.

Paul B. Huyette was unanimously re-elected president of the Quaker City Motor Club, of Philadelphia, at the annual meeting and election of officers. The other officers chosen are: First vice-president, G. Douglass Bartlett; second vice-president, I. T. Shoemaker; treasurer, Ralph L. Murray; secretary, A. Earl Adams

TWO-MILE MOTOR SPEEDWAY PROMISED FOR LONG ISLAND

New Jersey Project Abandoned in Favor of New York Location— Work to be Commenced Soon and First Race July 4th.

Because stock in the Metropolitan Motor Speedway Co., which was to have built a two-mile speedway on the New Jersey meadows, opposite New York City, did not sell as rapidly as was supposed would be the case, and despite reports to the effect that engineers had been hired and that work had been started on the project, the venture definitely has been abandoned. In its place there has been launched the New York Motor Speedway Association, identified with which are a number of men who were connected with the New Jersey venture and which just incorporated under the laws of New York State with $1,000,000 capital stock. Just who are the men concerned has not been divulged, nor will it be known until to-morrow, when the election of officers takes place.

The new association will take up the work of the old virtually where it was left off, with the exception that a new location for the speedway has been chosen. With the aid of such real estate "wizards" as Lewis B. Fish, of Fish & Marmon, and Gage E. Tarbell, a plot of ground some 650 acres in extent on the Hempstead plains between Garden City and Mineola on Long Island has been leased, the exact location being the fenced tract bounded by the Old Orchard road on the north, Whale Neck avenue on the east, Clinton road on the west and the Motor Parkway on the south, that has been used for the past year as an aviation field. The lease is to run for 10 years, with the option to purchase the land at a flat price of $3,000 an acre any time within two years from April 1st.

According to present plans, it is proposed to permit the 40-odd hangars now on the ground to stand until such time as the erection of grandstands, which, by the way, are to seat between 75,000 and 100,000 persons, makes necessary their removal. March 1st has been set as the date for the commencement of operations on the speedway, which is to be an oval, two miles in circumference, and it is hoped that the first real racemeet can be staged on Independence Day. If plans are carried out in full, there will be weekly matinee racemeets held on Saturday afternoons and several more important races during the season, to say nothing of aviation exhibitions, motorcycle contests and possible variations in the way of athletic meets.

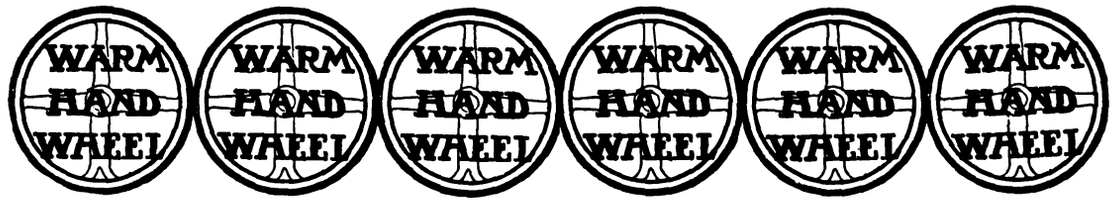
The selling price of the Warm Hand Wheel, $15, puts it within reach of every man who owns a car. You, as a dealer, can figure out just how many sales you could make through a simple demonstration.

This is the season for quick sales. Now is the time when cold hands on the steering wheel cry out for relief, and you are overlooking a sure seller if you have not investigated the Warm Hand Wheel.

This steering wheel is a positive necessity for winter driving. It keeps the hands comfortable (even without gloves) no matter how cold it may be. There is nothing complicated or delicate in its construction. It is simple, effective and lasting.



In the operation of the Warm Hand Wheel but little comment is needed. It works to satisfaction on batteries or lighting plant. On Ford cars the built-in flywheel magneto will heat it to perfection.

Installing the Warm Hand Wheel takes but little time and you don't have to interfere with a single working part of the car.

This is our message to you, Mr. Dealer—and back of it is a selling proposition that you are losing out on every day you put off writing. Let us get together right now, when midwinter makes the Warm Hand Wheel look mighty good to every driver who gets his hands on it.

American Axles

This High Class and Costly Construction Is To Be Found Only in American Axles

In *American Axles* of the bevel type, the pinion shaft has bearings on either side of the pinion.

The shaft has, therefore, the strength and security typified by the two strong hands in the small, upper illustration.

Cheaper construction omits the inboard bearing and endeavors to support the shaft in a one-handed fashion which proclaims its own weakness.

To add the inboard bearing, with its support an integral part of the housing, is much too costly practice for cars sold at the lower prices.

But for cars that must have the best of construction, the cost is more than justified in the continued maintenance of its originally perfect adjustment and the entire absence of noisy vibration.

American Axles equipment instantly establishes in your mind a sense of highest class: it supplies a basis by which you can unerringly judge a car.

The American Axles line includes, besides our bevel gear, the Lanchester-Daimler Worm Drive, to which we have the exclusive use as axle manufacturers in America.

THE TRUTH

of the matter simply is—that you cannot insure your car completely and satisfactorily without a Conover Safe-Guard

COLLISIONS you *can't* avoid—especially the minor ones.

The best way to insure these costly front parts is to *keep* them from damage.

How can you tell when a frightened horse, or another car, will back into your mudguards, lamps, wheels, radiator? Or when your brakes won't work in time? These accidents are countless, daily occurrences.

You may collect insurance, but if the damage sustained is under $25.00, you can't collect at all. In any event, there's the trouble and the wait for your car to come back from the repair shop.

The Conover Safe-Guard puts a massive, sightly barrier all around them. It takes the bumps—against its broad, flat surface and its sturdy, semi-elliptic, four-point-contact springs. If dented, you hammer it back; if broken—any time within two years—you can get another Conover Safe-Guard *free*.

It is built for *protection*—sold to you for *protection*—and its cost is less than the damage your car is bound, sooner or later, to sustain without it.

Best quality of steel heavily enameled in black, royal blue, French gray or maroon; bar 2 inches wide. **$15.00**
(*Any other color of enamel $5.00 extra*)

Best quality of steel, brass or nickel plated; bar 2 in. wide - - - **$17.50**

Solid bronze, finished in either brass or nickel; bar 2 in. or 2½ in. wide **$25.00**

Shipped, express paid, anywhere in the United States, on thirty day's trial, upon receipt of the regular price. When ordering, give name and model of car. Specify size and finish desired.

An attractive booklet will be sent free upon request.

BOYCE MOTOMETER PAT'S PEND'G

1913's TRADE SENSATION

Know the Exact Heat of Your Motor While Driving

The Motometer is a watchlike instrument fitted to the radiator cap, protecting the motor from damage caused by improper lubrication, overheating, defective cooling, etc. By means of a red fluid indicator it warns you.

When the Radiator Needs Water

When Oil Supply Is Insufficient

In short, it tells whatever excessive heat tells—a broken water pump, a clogged pipe, a broken fan belt, etc., and tells before the damage is done.

Attached the same as an ornament, readily visible from the seat day or night. It will prevent frozen radiators in winter and cracked cylinders in summer.

Finished in black enamel with gold plated or nickel rims.

Price $10

Sign of the bright red tag

¶ On the bench of each inspector is a rack full of crimson tags.

¶ Danger signals to be tied on every piece not made *exactly* to specifications; warning tags to insure that no imperfect parts shall enter the finished bearing.

Timken Tapered  Roller Bearing

¶ Here's a red-tagged 'cup' marked 'small O. D.'—date—name (Griffin) of the man who ground it. An inspector (Will Keyser) has found it to be half the thousandth part of an inch too small in outside diameter.

¶ So he tagged it red and sent it along, with other tagged parts, to the 'morgue.'

¶ 'Morgue' is the name Timken shop men give to the place where rejected parts go. It's the morgue man's task to break up those parts so they never can come, by possible chance, into use in the Timken Bearing.

¶ Twelve operations make the part called the 'cone.' Twelve inspections are given to *know* each dimension, each angle, is right. Let the slightest error occur at any step of the way—an inspector will spot it and—tie on the red tag quick!

¶ Long before such care was used, the Timken principle of tapered rollers revolving between a tapered cup and a tapered, two-ribbed cone gave a unique type of bearing that won marked success over all other kinds.

¶ In the years that have followed, Timken care *in every detail* of the making has added a hidden value that's only revealed in a life-time of good service.

The Timken Roller Bearing Company

Canton, Ohio, U. S. A.

The only axle manufacturer licensed to make automobile axles equipped with Timken Roller bearings is the Timken-Detroit Axle Company

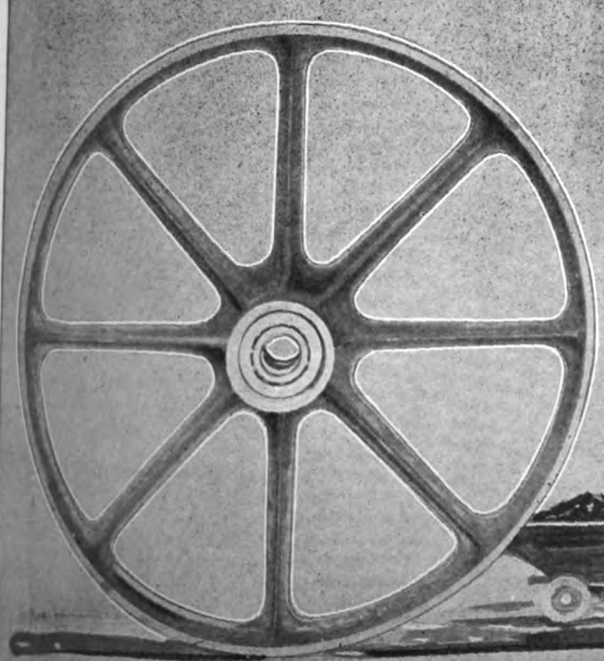
Yes they can be broken

BUT NO BLOW IN ACTUAL SERVICE CAN DO IT

SHELDON STEEL WHEELS



Here is a wheel that weighs less than the wooden wheel, that is positively unbreakable and that will outlast the best twenty cars that ever were manufactured.

The Sheldon steel wheel is the result of years of study of the wheel problem, the concentration of expert effort on improved design, and the most economic methods of construction known to the industry. It is unbreakable under conditions that would smash a wooden wheel to fragments and make a wire wheel unfit for anything but junk. The superior resiliency of the Sheldon steel wheel adds another advantage which the car owner or car manufacturer cannot overlook—tire economy.

This tire economy results from the light weight at the wheel's periphery and the rapidity with which frictional heat radiates from the metal. These are scientific facts which cannot be contradicted and should not be overlooked by any car manufacturer.

The stamp of superiority which has always rested on Sheldon Axles has been put upon the Sheldon steel wheel, which means that no wheel could be better made in any factory.

THE WHEEL OF THE FUTURE

Digitized by Google

Men Will Want
These Things This Year in a "40"

Mark all the features listed below this cut.

Note the four forward speeds, the over-wide tires, the center control, the left side drive.

Note the electric lights, the 14-inch cushions, the roomy, 22-coated body, the 50-inch rear seat.

Note the big springs, the big brakes, the immense over-capacity.

And note the price at which these things are given. Does any Forty you know make a comparable offer?

All Men Will Know

Our dominant advertising, all the time, keeps all these facts before motor car buyers.

They are bound to know—just as you know—that no other car in this class makes an equal offer at the Michigan price.

It's a Cameron Car

This is not the product of an obscure engineer. It is built by W. H. Cameron, a man whose work is known the world over—who has built 100,000 successful cars.

The body is designed by John A. Campbell, whose body designs have been chosen by kings.

The concern back of the Michigan is one of the largest and strongest of its kind. And we waited four years to perfect this car before we came out in the limelight.

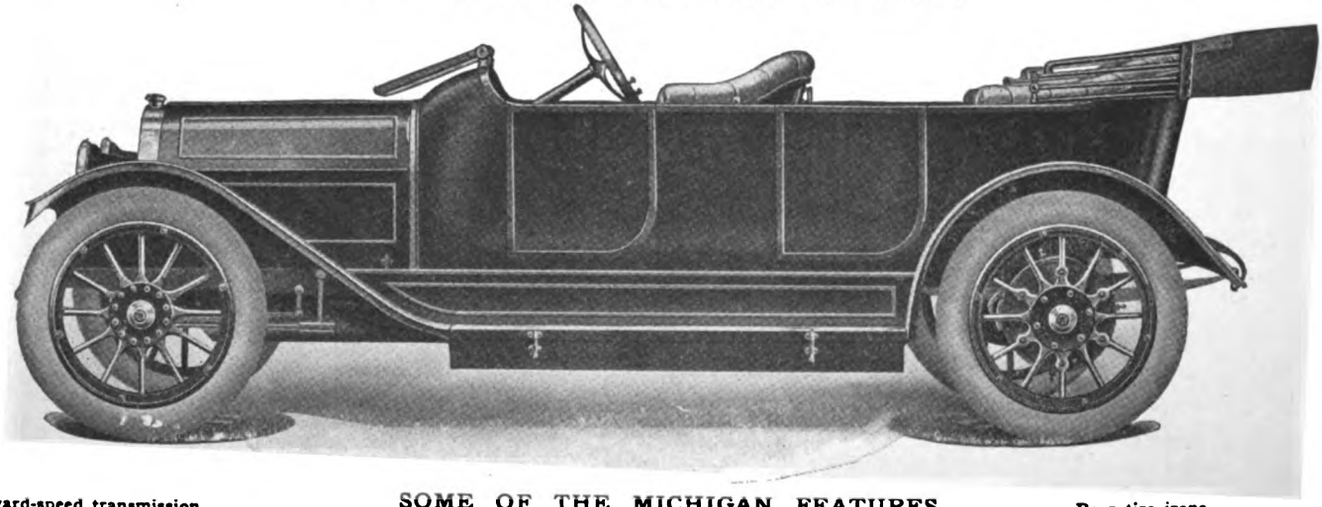
Scores of the ablest men have given their best to it. And 5,000 Michigans have been put on the road to test their 300 improvements.

The final result—the latest Michigan model—is one of the greatest cars of the day.

World-Wide Fame

The car has jumped, in the past four months, into almost world-wide fame.

Experts have come here from 11 foreign countries. They have selected the Michigan to compete in Europe with the finest foreign cars.



Hundreds of American dealers, who know the whole market, have chosen the Michigan as the greatest car in its class.

Such a verdict can't be avoided by any man who knows the facts.

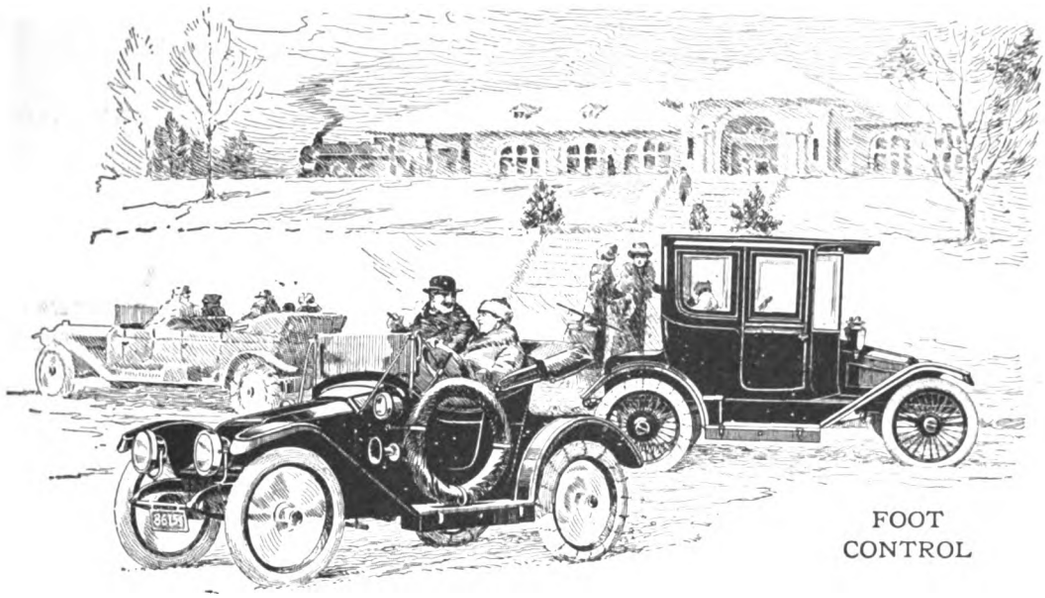
We invite dealers and users to send for our catalog and the facts which they wish to know.
(139)

MICHIGAN MOTOR CAR COMPANY, Kalamazoo, Michigan

Owned by the Owners of the Michigan Buggy Company

Four-forward-speed transmission
Oversize tires—35 x 4½
Electric lights and dynamo
Center control—left-side drive
Motor, 4¼ x 5¼
Extra effective brakes—16 x 2½ ins.
Big, comfortable springs
Adjustable steering post
Adjustable pedals
Firestone Q. D. demountable rims—extra rim

SOME OF THE MICHIGAN FEATURES



14-inch Turkish cushions
Rear cushions 50 inches long
Hand-buffed leather upholstering
Best curled-hair filling
Wheel base, 118 inches
Nickel mountings
Large over-capacity, giving big factors of safety
Pressed steel, full-floating rear axle
Axles sufficient for an 80-horsepower car
Genuine cellular-type radiator
Best mohair top, side curtains and envelope
Windshield built in as part of body
Electric horn
$50 speedometer, 4-inch dial
Special foot rail
Swing robe rail

Rear tire irons
Complete tool equipment
Tool chests under running boards

There is such a difference of opinion about the various types of self-starters that we have not adopted any one type as regular equipment. We prefer to leave this selection to the buyer. We equip with either the gas or a positively efficient electric starter at moderate extra price.

Buffalo Electrics

FOOT CONTROL

THE action of walking is so natural you never give a thought to how it is done, although, to start, you raise one foot—to stop, you place both feet on the ground. Just as simply and unconsciously the owner of a Buffalo Electric controls the starting, stopping and speed of his car—all by the foot control—an exclusive Buffalo Electric feature. You do not walk with your hands—why start, go slowly, fast or stop a car in an unnatural manner. Foot control on Buffalo Electrics is the natural control.

Raising the foot pedal releases the brakes and applies the power—depressing the pedal shuts off the power and applies the brakes.

In driving thru congested traffic, even in case of danger of collision, your first impulse is to brace down with your foot and, to your joy, if you drive a Buffalo Electric, you find this involuntary action compels the car to respond almost as to a wish. Your hands meanwhile are free to guide the car; either or both employed for the purpose, as you desire.

Besides the factor of safety, Buffalo Electric foot control means greater battery economy.

MODEL 29—2 Passenger Roadster—35 miles an hour under ordinary conditions. Wheel steer, wood or wire wheels, Klaxonette warning signal, full floating rear axle—Timken Bearings.

MODEL 30—4 Passenger Vis-a-Vis Coupe—30 miles an hour. Full day's service on single charge. Highest type equipment for ideal town car.

MODEL 30B—4 or 5 Passenger forward drive Coupe. Wood or wire wheels, French body design. All Buffalo Electrics have foot control, caster steering, shaft drive, aluminum bodies and extra capacity batteries.

Maximum Carrying Capacity
Minimum First Cost
Minimum Maintenance
Minimum Turning Radius

What It Is

Not a Theory But a Proven Success in a Year's Gruelling Work. Many in Successful Operation. 5 to 10 Ton Capacity. Full Details Explained in Tractor Catalog. Send Today.

A motor unit that may be attached to any heavy vehicle designed to be drawn by horses; the combination making a five-wheeled motor-drawn vehicle.

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO EXCESSIVE COST OF RUBBER TIRES. Wagons have been doing good work for many years on steel tires and there is no reason why they will not continue to do so when drawn by the tractor; the heaviest part of the load is always carried on steel tires.

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO EXCESSIVE VIBRATION ON STIFF SPRINGS. All working parts of the tractor are carried on springs as resilient as those of a pleasure car.

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO SUDDEN STARTING OR STOPPING OF HEAVY LOADS. The cushioning of the shock between the engine and the load is one of the most important advantages gained, (fully explained in catalog).

IT SAVES HEAVY MAINTENANCE CHARGES DUE TO NEGLECT ON ACCOUNT OF INACCESSIBILITY OF PARTS—all parts of the tractor being more accessible than on a touring car.

IT SAVES HEAVY MAINTENANCE CHARGES due to frame twist. The tractor accommodates itself to all road unevenness.

The single front wheel can be turned at 80 degrees angle, enabling the driver to back to any position or turn completely around in a narrow street.

McCUE

Three prominent wire wheel equipped cars at the French Salon shown on this page—Leon Bollee, Barre, and Rolls-Royce.

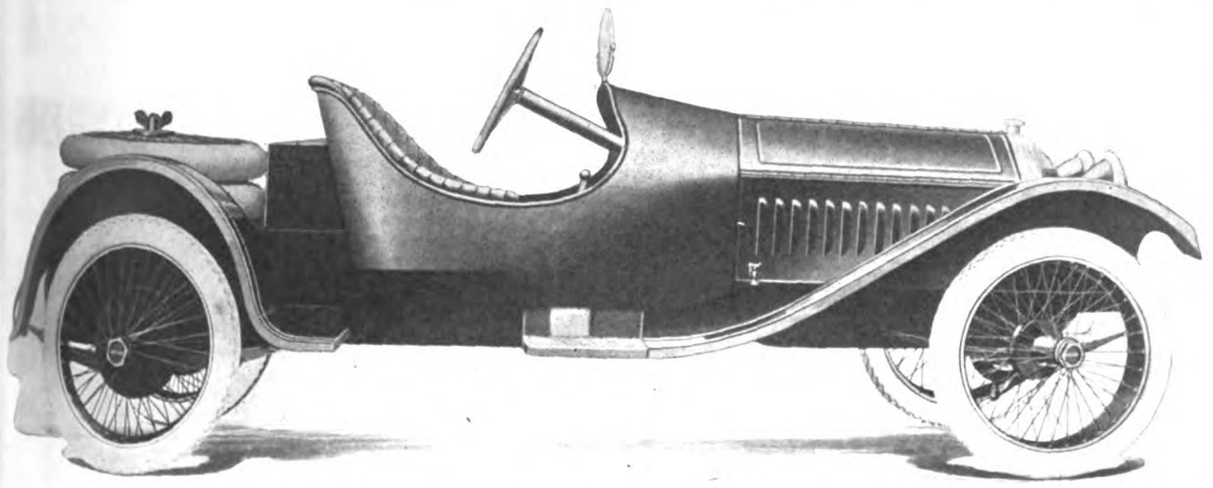
DEALERS—MANUFACTURERS

We want to emphasize the real reason for wire wheels—we want you to consider it, and act upon it.

Wire wheels save tires, not theoretically, through some abstruse, far-fetched theorem, but **actually up to a percentage that goes above fifty of added tire usefulness.**

Rapid radiation of frictional heat is one reason—but not the most vital, save in cases where abnormal speed conditions obtain. Then, metallic radiation of frictional heat is an important consideration.

Under ordinary every-day conditions, it is the extreme lightness of the McCue Wire Wheel at its periphery, that reduces to a minimum the pounding effect at point of contact. This tells its own story of tire economy.



Here is the illustration:

You can strike a terrific blow with a ten pound hammer if you grasp it by the handle—but you can't do execution if you grasp it by the head and use the end of the handle as the striking point. The "hammer head" of the McCue Wire Wheel is the hub—the light end of the "handle" is the rim.

The economic disposition of metal in this wheel is arbitrary—it can't be changed without sending tire life down toward the accepted wooden wheel standard. For this reason demountable rims would never serve — they would add weight at the periphery, and every added pound counts wrong—

Digitized by Google

WIRE WHEELS & AXLES

Oakland Roadster, Wire Wheel Equipped

Explaining why McCue Wire Wheels are detachable—a pre-determined engineering feature with the tire saving quality in mind.

The McCue Wire Wheel is the final evolution of the burden carrying wheel. It can not be improved.

When you specify these wheels you are taking advantage of a selling point that will soon dominate—you are going on record as one who is helping the car owner save money—and so you conserve his patronage.

Looking into the immediate future, your best business interests will be conserved if you beat competition to this radical improvement—because it will surely dominate the field—and soon.

Isn't it worth while?

McCue axles represent the best in axle making, clear from design, through material and into the finished product.

If your customers want wire wheels, you write the manufacturer for inner hubs and wire wheels to go on the particular model to be so equipped. We are situated so that we can meet this demand for the manufacturer.

THE McCUE COMPANY, Buffalo, N. Y.

It is important to note that all spokes used in the manufacture of McCue Wire Wheels are the famous "Circle S" brand of swaged spokes manufactured by The Standard Company of Torrington, Conn.

The Atwater Kent Ignition System

DEALERS and REPAIRMEN

HERE are a few good Atwater Kent "talking points." You can make them make you money.

Its simplicity of mechanism—no vibrators, relays, or commutator—just one contact point regardless of the number of cylinders and only three moving parts, none of which are subjected to excessive wear.

Its single adjustment easily and quickly made and seldom requiring attention.

Its adaptability and easy installation on any standard make of motor, new or old.

It is ideal for use in connection with lighting and starting equipment as it produces a hot dynamic spark, perfectly timed regardless of the engine speed.

While the Atwater Kent System is high in value and reputation, it is not high in price. In fact, it will cost less than half as much as a good magneto and will give superior results at a much less cost of upkeep.

There are now two types of Atwater Kent Ignition equipment—standard **Type F** and the new **Type K,** the latter having the automatic spark control and insulated primary circuit features.

PRICES OF THE TYPE F SYSTEM

	Standard Coil.	Kick Switch Coil.
1-cylinder	$17,00	
2-cylinder opposed	18.00	
2-cylinder distributor type	22.00	$24.00
3-cylinder distributor type	25.00	27.00
4-cylinder distributor type	25.00	27.00
6-cylinder distributor type	27.00	29.00

PRICES OF THE TYPE K SYSTEM

	Standard Coil.	Kick Switch Coil.
2-cylinder	$32.00	$35.00
3-cylinder	35.00	38.00
4-cylinder	35.00	38.00
6-cylinder	37.00	40.00

In substituting the Atwater Kent System for the magneto or for driving it from any horizontal shaft or gear, we furnish a special magneto gear mounting, the additional price of which is $5.00.

You will have many inquiries for ignition equipment during the coming year and should be in a position to recommend the Atwater Kent whenever the most efficient ignition is desired.

Seize the opportunity and post yourself by a visit to our exhibit No. 140 Madison Square Garden Show, New York City, or write for our booklet "D."

Lancia Cars

"They copied all they could follow,
But they could'nt copy my mind,
And I left 'em sweating and stealing
A year and a half behind."
—Kipling

DEALERS You Can Sell This Car

"The Best of Europe At American Prices"

The Lancia propaganda has taken root and is growing in America—and the reason is mighty obvious.

There is a class, Mr. Dealer, and a restricted one at that, who understands, appreciates and buys this peer of light European cars—(we will send you the names on request).

And there are those in *your* territory to whom its combination of strength, efficiency, simplicity and design will appeal.

The Lancia is the best of Europe at American prices—meaning that the purchaser of a Lancia car does not have an extravagantly priced European novelty of freak design—

But a ***real service*** car from Europe—a masterpiece of European design, steel and finish—made and tested in the Alps under the personal supervision of Vincenzo Lancia himself—with a guaranteed value, pound for pound, dollar for dollar greater than that offered by any American or European manufacturer.

Do you want to sell a car of class, service and beautiful design to the fastidious and critical? If you do, then come to New York if possible—see and know the Lancia—or write and let us give you details of the "20" and "30" mounted with coach work in keeping with the chassis.

"Service and Silence"

Kline Kar Model 6-60, Touring, $3500

DEALERS

YOUR experience with other cars should tell you that it does not pay to handle a line that constantly worries the life out of you with complaints from the user, who has trouble with the machine. This user knows now that he is better off when he buys a car of quality in the first place, even though he must pay a little more for it, and he will soon begin to demand such a car of his dealer.

It is up to you to have the car in your line when he calls. The Kline Kar will answer all the requirements this prospect may impose and more.

Prices $1850 to $3500

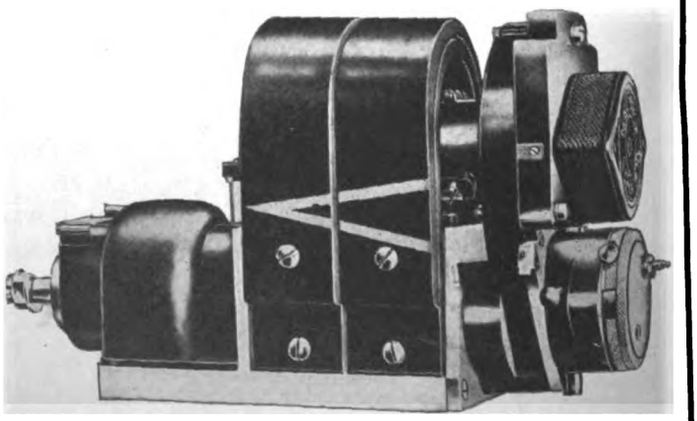
EISEMANN

Automatic Spark Control
INCREASES TRUCK EFFICIENCY

No type of magneto is so peculiarly adapted to the demands of commercial vehicles as the Eisemann models equipped with **Automatic Spark Control.**

By making the advancing and retarding of the magneto an automatic function based, as it should be, on relative engine speeds, the Eisemann Company has provided an ignition system especially adapted to trucks that insures the greatest continuous engine efficiency obtainable.



Eisemann Magnetos with **Automatic Spark Control,** by removing the guesswork necessarily present when magneto timing is a human element, simply force the engine to develop maximum efficiency insofar as ignition is concerned, irrespective of engine speed. For with the spark controlled automatically in relation to engine speed the engine is bound to get its spark at exactly that moment which will give maximum results.

The story of the magneto with **Automatic Spark Control** is a mighty interesting one—let us tell it to you.

Acme Parts Stand Expert Inspection

Accessory parts in many cases are for display as well as practical purposes. They require a smooth finish and must be accurate.

The reputation for quality that NAMCO products have gained is the result of careful study of trade requirements. To maintain that standard for 1913, NAMCO parts must stand rigid inspection—first in our factory and then in yours.

Our operators know the measure of quality set by us in making milled parts. They turn out the kind of product that measures up to the inspectors' gauges. That's the kind you want, and the kind we sell you.

Tell us your specifications, or send in your samples for estimate. If you have not seen our "Special Milled Products" book, ask us for it when sending in your samples. For lists of tandard goods, ask us to send booklet "Milled Screws."

When the alarming message comes across the wire telling you of the peril of your loved ones at home, every moment is an age. It is then that you appreciate the importance of the motor that throbs beneath the hood of your car. Speed and the certainty that there will be no break down, no delay,—these are the paramount considerations at times of emergency.

THE RUTENBER MOTOR

furnishes these elements to any car. It is the speedy and dependable motor that serves you well in the moments when speed and dependability are all-important. It takes hills and bad roads without complaint. It does not hesitate. It does not get overheated even though you drive it cruelly. It enters into your mood and responds in sympathy to your slightest touch at the throttle.

The car that carries a Rutenber Motor inspires confidence and justifies the faith of those who place their trust in it.

There is a Rutenber Motor adapted to the needs of every car.

Write for the Rutenber Booklet.

"In Exchange for your empty tank, accept only a genuine Prest-O-Lite"

This is the message that is going to Prest-O-Lite users everywhere.

In it there is a hint for the wise dealer, as well.

You know that no imitator of the Prest-O-Lite has ever successfully imitated Prest-O-Lite service.

You also know that no imitator ever made good the large claim "more gas and better gas than Prest-O-Lite."

So does your customer.

Imitations are getting harder and harder to sell. There are now mighty few dealers trying it.

Most of those who yielded to the old but ever tempting claim "More Profits" have come back home.

To the dealer who is still trying to force imitations on people who won't have them, perhaps because he has money tied up in them, we can only say:

"The sooner you resume earning your good old Prest-O-Lite profit, the sooner you will make your income what it used to be."

DIAMOND CHAINS

Standard Equipment on ALCO TRUCKS

The truck illustrated is a 5-ton Alco equipped with Diamond Chains.

To stand the hard day-after-day service conditions to which these chains are subjected they must necessarily be exceptionally strong and durable, which is only possible with the close attention we give to material and construction.

In Diamond Truck Chains all steel is made to our special analysis, holes are reamed accurately to size and pitch, Nickel Steel Rivets, and the most advanced methods of heat treatment are used.

It is such construction that has made Diamond Chains the standard equipment of so many leading manufacturers.

Our treatise "Power Chains and Sprockets" contains valuable engineering information on chain drive for Trucks.

DIAMOND CHAIN & MANUFACTURING CO.

Chain Manufacturers for 22 Years

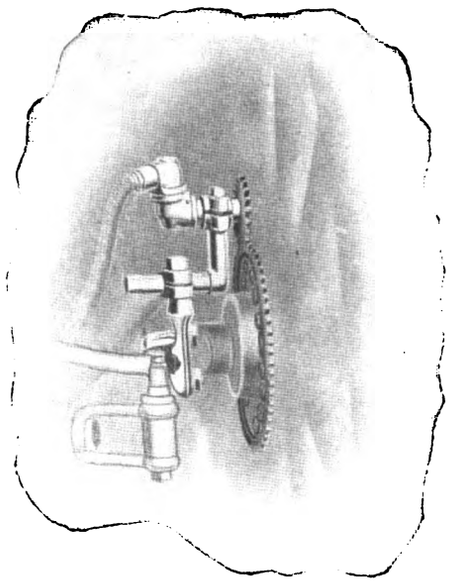
141 W. Georgia Street Indianapolis, Ind.

CAPACITY 8,000,000 FEET PER YEAR

(138)

Our departments of engineering and design co-operate with the men who build the car—combining their weight of experience in radiators making with the particular requirements of the designer of the automobile.

We will not, however, endanger the reputation we have made by making radical changes from established design. In standing by this resolve, we have, on rare occasions been obliged to lose business—something to be regretted, but none the less necessary.



Mayo Radiators are built to hold the engine at an even temperature—not too hot to endanger its usefulness, nor too cool to lose its efficiency. "Tolerance" in change of design is therefore liberal—but it has its limits.

If you, as the man who has sold the car, find yourself in "hot water" so to speak, with a leaky, inefficient radiator and a "superheated" customer, then be sure this car was not equipped with a Mayo Radiator. Dealers who sell cars Mayo equipped know that the radiators will stand up under any unfavorable condition short of a blow with a hammer or a bad collision.

Triplex

A FUEL SAVER AND A MONEY MAKER

Increases Power
Decreases Cost

The Triplex is a device placed between the manifold and the carburetor to break up the mixture. No matter how imperfectly the carburetor does its work, the Triplex equalizes the mixture, producing an explosive gas of even, uniform quality that will burn clean to the last atom. This means that the user **gets all the power all the time**—that every fraction of energy to be obtained from the gasoline is produced and used. There is absolutely no waste. High proof gasoline is made out of low, and over 25% saved on every gallon.

ECONOMIZES FUEL
INCREASES MILEAGE
PROMOTES FLEXIBILITY
MAKES PERFECT MIXTURE
PREVENTS BACK FIRING
ADAPTED TO ANY CAR

The Triplex is sold with the understanding that if it does not do as we claim, we will gladly refund your money at the end of 60 days.
For further information write us.

BENZ

Since the introduction of BENZ cars to the motoring public of America no car has attained such world-wide supremacy as to its construction, standing up quality, and material. The new type of 35 and 50 H. P. BENZ models are the last word in automobile construction.

The noticeable features of this type of BENZ cars include the offset crank shaft, smokeless oiler, and SILENT CHAINS instead of timing gears.

The BENZ Carrosseries are noted for their beautiful lines and thorough comfort.

To those desiring AGENCY of this car the Benz Company will offer special terms. We want RELIABLE, ENERGETIC agents to further our interests for both BENZ pleasure cars and BENZ-GAGGENAU trucks, which today stand recognized by those who know, as the leading 6-ton truck. Wire or write us, no matter where you are.

Our PRICES compete with LEADING AMERICAN makes.

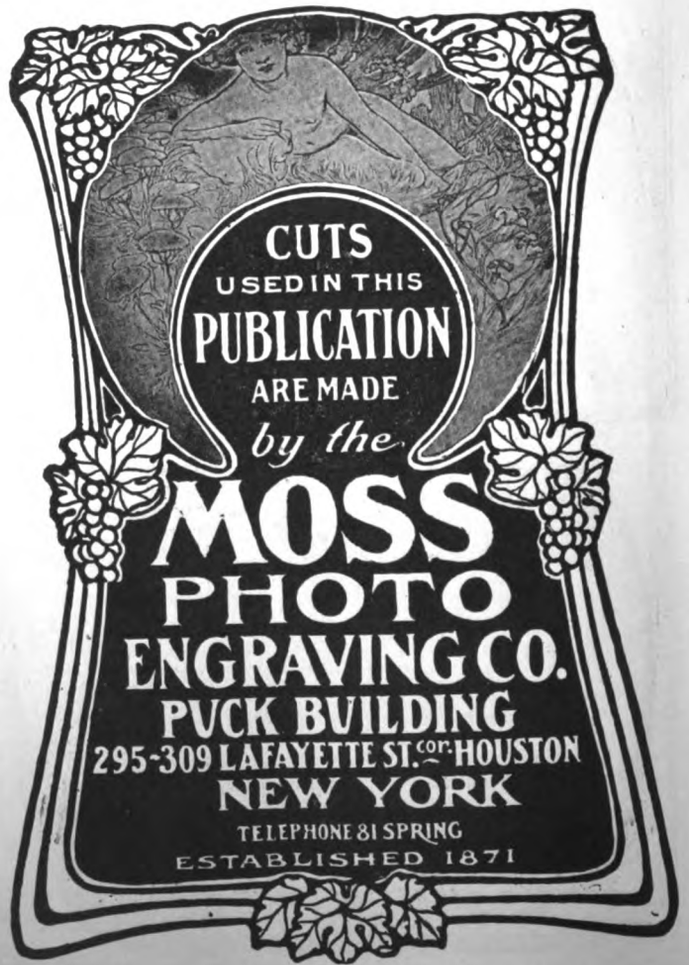
INTERLOCK INNER TIRES
Stop Tire Troubles

INVESTIGATE AND LEARN WHY SO MANY THOUSANDS OF MOTORISTS ARE DISCARDING INNER SHOES, RELINERS, FILLERS, AND OTHER MAKESHIFTS FOR INTERLOCK INNER TIRES—AND WHY INTERLOCKS ARE HANDLED AND RECOMMENDED BY THE BEST SUPPLY DEALERS AND TIRE HOUSES ALL OVER THE COUNTRY.

One weak point of the automobile to-day is that you can't depend on its tires. INTERLOCKS revolutionize this condition by making your tires so strong that blowouts become practically impossible. INTERLOCKS save half your tire expense—save repair bills—double your mileage—prevent punctures and completely free you from all fear of tire trouble.

What INTERLOCKS Are.—The INTERLOCK is a complete inner tire (not an inner shoe) which is placed between the outer casing and the inner tube to strengthen the outer casing and protect the tube. It is the only reinforcement which is locked by air pressure to the rim and which becomes an integral part of the tires, and, therefore, cannot heat or chafe. Even if the tire is broken the INTERLOCK will hold.

INTERLOCKS Insure Safety.—You know that the sudden blowing out of a tire may easily ditch any car when going at fair speed—the safety of INTERLOCKS should appeal to you.



Reduce Your Tire Expense.—You can have the tires on your new car equipped with INTERLOCKS if you specify them. INTERLOCKS are the only perfect tire reinforcement. They cost a little more but are cheapest in the long run.

For your present car—ask any dealer or supply house, or write to us for the name of your nearest supply source. INTERLOCKS will make any fairly sound tire more than carry you through the season. They are easily placed and are made in all sizes.

We Want Dealers Everywhere.—Write for Special 30 Day Offer. Booklets, Prices, Records of Road Tests and Testimonials of users.

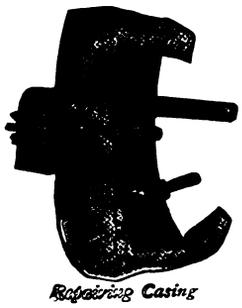
GYREX
·THE MIXER·

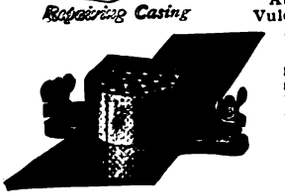
HELPS THE MOTOR

GYREX helps the engine run smoothly and powerfully because it makes a better mixture. It also saves gasoline. Send $3.00 ($3.50 foreign) and we will mail you a GYREX on trial. If not satisfactory, money cheerfully refunded.

THE ROYAL EQUIPMENT COMPANY
436 Housatonic Avenue Bridgeport, Conn.
We also make Duplex and Raymond Brakes and Raybestos Friction Facing



Standard Universal Rims



fit any style or make of tires. The side rings are reversible, they curve outward on one side to fit a straight side tire, inward on the other to accommodate a clincher. Two turns of a nut unlocks the rim for demounting, two more turns locks the rim in place. Write for catalog 607, which explains fully.

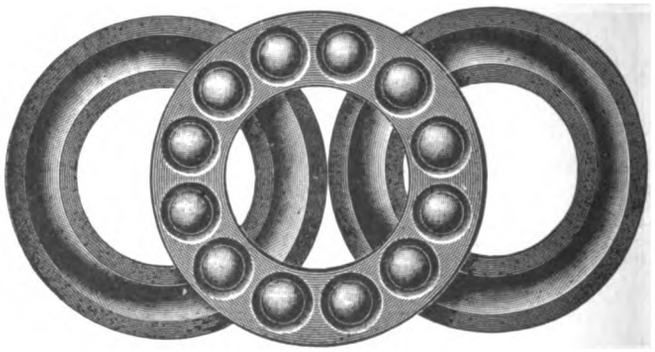
THE UNITED RIM COMPANY, Akron, Ohio

Repairing Casing

TIRE CUTS ruin casings. They admit moisture to the carcass, cause the fabric to rot and weaken, grow larger—end in blowouts.

You can repair **CASINGS** and **INNER TUBES** anywhere in 15 minutes, better than a Repair Shop can do—and for *one cent.*

Universal Auto-Vulcanizer
Patented



A practical vulcanizing outfit complete, with enough repair gum to make 40 patches. It weighs 3 pounds and can be carried in the tool box. **Simplest and most satisfactory device for eliminating tire troubles that has ever been devised.**

Absolutely automatic. Place the patch—attach the Vulcanizer—put in the gasoline—light it. No further attention required. In 15 minutes the job is done.

It *can't burn, scorch* or *injure* tube or casing. It *can't* get out of order. It *can't* fail to do its work. So simple, anyone can operate it. The Universal Auto-Vulcanizer saves its cost a *hundred times* over in trouble and expense.

Price Complete. **$4.00** Ready for Instant Use
Guaranteed Satisfactory or Money Refunded

If You Need Motor Lamps

You Need This Catalog

We want you to write for the Solar Catalog before you decide on your motor lamps, for this is the most complete line of lamps on the market. Solar Lamps have been preferred by most motorists for the past fourteen years because of their brilliancy, their style, their strength and their several exclusive advantages—their special short focus lead glass lens mirror reflectors—the patented double ray light projection (in the Solarclipse), giving two distinct fields of light, for city and country use—the new black finish, the only such finish that's proof against heat and moisture—and other features that other lamps lack.

To fail to see Solars before you buy is to fail to include in your consideration the very finest lamps in existence. Solars are made for oil, electricity, gas and in combination, for pleasure cars, motor trucks, carriages, motor boats and airships. Write for catalog now—while you think of it. (136)

Weed Chains
The Great Anti-Skid DEVICE

Nine-tenths of all accidents to automobiles are caused by skidding or slipping.

Either you skid into the "other fellow" or the "other fellow" skids into you.

No matter how careful a driver you may be, you **cannot prevent skidding** or slipping on wet, muddy snow-covered roads or on icy, slippery greasy pavements unless you equip your car with **Weed Chains.**

Cannot Injure Tires
Because They Creep

An absolute necessity on both rear wheels and if you want to know what real steering steadiness means put them **on the front wheels too.**

For your own safety—for the safety of the public, **fully equip** your car with **Weed Chains.** Make it **your business** to get a set today.

We'll exhibit a complete line of vulcanizers for motorists and garages.
Booth 237, Balcony — January 11-18.

Something brand new that every motorist needs

A real Shaler Vulcanizer for only two dollars. A vulcanizer that will make tube repairs equal to those made by the most elaborate plant. Anybody can use it on the road or in the garage without experience. Made by the largest vulcanizer manufacturers in this country, by men who know the requirements of such an appliance.

Don't ever use another unreliable cemented patch. Make permanent repairs with the quick-cure

VULCANIZER REPAIR KIT — little brother to the SHALER

The only low priced vulcanizer that actually **vulcanizes** a tube repair clear through because it generates its fuel, gasoline, into a gas and distributes the flame all over the vulcanizing surface. This causes the vulcanizing temperature to be **maintained** long enough to cure the repair A gradual heating and cooling only results in a superficial cure—does not vulcanize.

Other exclusive features show the only improvements made since the first crude gasoline heated repair kit was marketed. A universal clamping device insures the equal pressure that makes smooth, uniform repairs. An asbestos pad, inlaid in the plate on which tubes are repaired, retains the heat and prevents pinching the tube. Handle—always cool—permits vulcanizer to be removed from tube while hot.

No complication about it. Everything automatic. Simply fill the puncture with raw rubber, clamp down the vulcanizer, fill the generator and light it. The repair will be perfect and outlast the tire.

Eliminates delay and repair bills Makes your repairs when you want them at a tenth of the expense you've been accustomed to.

Furnished with a supply of repair material and full instructions. Nickel-plated—will last a lifetime.

A Real SHALER VULCANIZER $2

Dealers **Get our 1913 Proposition on the Vul-Kit and other Shaler Vulcanizers for motorists and garages. We have vulcanizers for every requirement.**

DEALERS—

Out of EUROPE Comes The Aristocratic

METALLURGIQUE

The Car You Can Sell to Men of Means and Fine Discrimination

¶ Are you in a position to locate and interest men of means, social standing and ability to recognize a car of impressive individuality, tremendous prestige and sterling performance.

¶ If so, we will use our sales organization to assist you in selling the Metallurgique, Europe's most talked of car and the one most sought after.

¶ This automobile is the product of fifty years steel making near Brussels, the Pittsburgh of Europe. In materials, it stands alone in quality. Its chassis is a revelation in construction that has given it a proven title, "The unbreakable car." In body design it is a model of sensational European originality that causes even the blase New Yorker to turn to admire.

¶ Metallurgique dealers have as sales ammunition a list of owners that reads like the International Social Register. Write for our beautiful brochure—it will introduce us.

FORTY-EIGHT

DIFFERENT MAKES OF CARS ARE NOW KLAXON-EQUIPPED

An Editorial from MOTOR WORLD:—

ACCESSORIES THAT ASSIST CAR SALES.

Although the time never may come when the accessories that constitute the equipment of a car will of themselves sell cars, the fact remains that the item of equipment now is being made so much of, that he who does not turn it to advantage is permitting good "ammunition" to go to waste.

In many cases, the names of many of the devices which go to make up the equipment list are better known than the names of the cars themselves. Nor is it difficult to understand why a particular accessory should have become better known than the name of the car upon which it is mounted. The manufacturer of the device has widely advertised it and built up a reputation, and because it is a good device the manufacturer of the car and the dealer also advertise it—if they are wise—for they realize that in linking the name of a well-known and well-tried product with the name of their car a certain prestige thereby is added to the car. The automobile buying public has come to know that certain accessories have made names for themselves and it is but a step further to attach real importance to a car that carries one or more meritorious devices.

Horns and lamps and electric lighting systems and starters and a hundred and one other items of equipment which not so very long ago were listed as "extras"—all these serve as cases in point.

As Regular Equipment:

A. E. C.
Alco
Armleder
Autocar
Babcock Electric Roadster
H. H. Babcock
Bailey
Benz

Studebaker

A Studebaker Dealer Can Offer—

a car—that in material, workmanship and easy running qualities—is the peer of any car built—and you pay less money for it.

And when you have admired the mechanical excellencies of the Studebaker car, the long wheelbase, the special get-attable Studebaker motor, the clean cut, artistic lines of the body, you'll be ready to enthuse over details of elegance that make for perfection in a motor car.

Where can you find a car that compares in mechanical excellence and luxurious appointments with the Studebaker "35"?

It carries comfortably six passengers, has more power than the standard "35" and with its 116-inch wheelbase is distinctively in the big car class.

A comparison between this car and any other car of like character in the market is all in favor of the Studebaker "35." Full floating rear axle, long stroke motor, electric self-starter and lighting system, valves enclosed. Pump and magneto set on cross shaft directly in front of cylinders, which runs silently from the camshaft gear. The entire design is for the utmost convenience of the owner, and illustrates at every point the most modern and approved engineering practice. The wheels are of the quick demountable rim type with 34 x 4 inch Goodrich quick detachable tires. Then there's the deep full tufted upholstery, the heavily nickeled metal parts, the simple, elegant windshield, clear-vision, self-ventilating type, Studebaker Jiffy curtains. Extra rim and tire irons and all equipment for comfort, safety and use.

Take it all together, the Studebaker "35" is a car that cannot be bought elsewhere for several hundred dollars more.

The price of the Studebaker "35" is $1290.

In addition to the "35" there is the Studebaker "25," a light, desirable, four cylinder car for $885, and the Studebaker "Six," the last word in motor elegance and luxury for $1550.

First Impression—First Aid to Sales

Inferentially, a car that is well finished is well made. The best way to sell a good car is to finish it beautifully. And the best way to finish any car beautifully is to use Berry Brothers Automobile Varnishes and Baking Enamels. Every dealer has to stand back of his sale for a long time. That's where the permanency as well as the beauty of Berry Brothers Automobile finishes counts twice in every sale.

Any car of any type at any price can have this double selling help by the right use of our special finishes.

BERRY BROTHERS

Largest Manufacturers of Varnishes, Shellacs, Air Drying and Baking Japans, Lacquers, Stains, Fillers and Dryers.

FACTORIES—Detroit, Mich., and Walkerville, Ont.

Mr. Car Agent—YOU add to your Sales Arguments—

—when the car YOU sell has Truffault-Hartford Shock Absorbers as part of its equipment.

Buyers know what this equipment does for a car. Years of persistent advertising has taught them. They know how this device saves the engine and tires—how it prolongs the life of the car—what it accomplishes in cutting down up-keep expense. And knowing these things they expect the car they buy to include this equipment.

It is so much to the dealer's advantage to have the car he handles Truffault-Hartford-equipped that there are now 27 leading automobile manufacturers installing Truffault-Hartfords as part of their regular equipment.

Insist on this equipment from the manufacturer you represent. It furnishes you additional sales-arguments. It is an aid to bigger car sales—it is an acknowledged necessity for comfortable, safe and economical motoring.

SPRINGFIELD
CONVERTIBLE BODIES

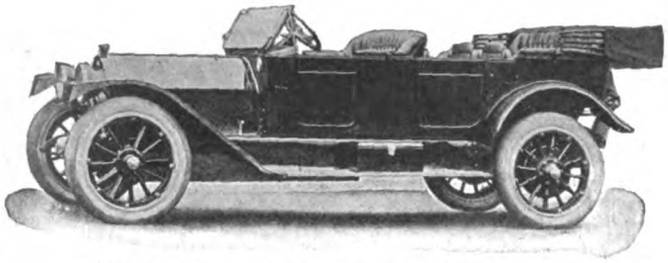
Springfield Metal Bodies are standard on the majority of America's leading cars for the very good reason that they embody all the quality made possible by years of experience in the art of aluminum and steel body construction. This illustration shows one of the many body designs turned out by our factory.

With a Springfield Convertible Body it is actually possible to convert an open car into a glass enclosed car, luxurious in appointments and beautiful both inside and out.

The operation takes but a few moments—the result should be actually seen to be appreciated.

Weight is important in considering the ordinary closed body. Excessive weight of such a body reduces speed and adds to tire weight. Springfield Convertible Bodies, as compared with the common type, increase the weight of the open car only 50 or 75 pounds.

Springfield Convertible Bodies are noiseless. There is no rattle or squeak, and owing to the absence of a solid roof there are no reverberations so noticeable in limousines and landaulets.



There is much more to be said. Your inquiry will bring the details.

LONDONER BUYS AMERICAN PARTS FOR BRITISH CAR

Without Heralding, Vickers Prepares to Meet "American Invasion" by Assembling $600 Model—Ritz "Tea Party" Recalled.

Apparently having no reference to the more or less famous Ritz "tea party" in London, at which means were discussed to combat the so-called "American invasion," the firm Vickers, Bristow & Co., Ltd., of London, have taken to themselves one of the "weapons" which was talked of on that occasion—i. e., the use of American parts in the assembling of a low-priced car.

The first that was known of the London firm's intention in this regard was the appearance in this country of Laurence Vickers himself, who, without fuss or fireworks, has been making the rounds of the parts trade and placing orders for the necessary material which will permit of the assembling in England of a four-cylinder runabout which will sell for $600. He has contracted for engines, transmissions, frames, axles and most of the necessary smaller parts.

When the chassis is assembled in London it will, of course, be fitted with a body of English design and manufacture and will enter the lists as an active competitor of the Ford car, which has attained a great vogue in Great Britain, where it sells for $650.

At the Ritz "tea," which was given by an aroused London editor last September, and which was attended by a number of the best known English tradesmen, they talked of forming a syndicate composed of motor car manufacturers, each of whom would contribute a specified sum and add to his line a popular priced model, which it was proposed to produce first of American parts and later of wholly English manufacture.

W. M. Letts, who has represented several American cars in London, was the originator of the rather Utopian idea, which, however, has ended in talk. Since that time it has been stated that the agitation which led to the Ritz "tea" was merely an ingenious means of masking and paving the way for the exploitation of a company which already had been well planned and which purposed turning to advantage the main idea which had been exploited. Whether Vickers, Bristow & Co. is the company or firm in question is something that remains to be seen.

To Manufacture Tires in Kentucky.

The Speedway Tyre Co. is the title of the $250,000 corporation which just has been formed in Louisville, Ky., and which represents the most ambitious effort to establish a tire factory in the south. Three factory sites are under consideration, and when one is selected an eight-story concrete building will be put up. The officers of the company are: Harry L. Lewman, of Louisville, president; L. D. Lewman, of Atlanta, vice-president; Fred Haupt, of Louisville, second vice-president; W. N. Cox, president of the Louisville Public Warehouse Co., treasurer; Dr. Fred L. Koontz, secretary. G. W. Greene, an experienced rubber man, will be manager of the company. The president of the company, in which Eastern capital is interested, is also the head of the Lewman-Cox Realty Co., of Louisville.

Midgley Tread Before Highest Court.

Although the United States Supreme Court rarely takes cognizance of patent litigation, the Hartford Rubber Works Co. has appealed to that tribunal for a rehearing of the suit involving its Midgley wire tread. In the United States Circuit Court of Appeals for the Second Circuit, sitting in New York in November last, the tread was held to infringe the Calvin T. Adams patent, No. 609,320, owned by the Metallic Rubber Tire Co., of Jersey City, N. J., after the lower court in Hartford had declared the patent invalid. The result of this move is awaited with no little interest.

LYONS-ATLAS OBJECTS TO BIDS OFFERED FOR U.S. MOTOR

Indiana Creditor Upsets Cut-and-Dried Sale of Property—Court Will Decide To-Morrow—Two Bids by Reorganizers.

The sale of the assets of the United States Motor Co. in the United States District Court for the Southern District of New York on Wednesday last, 8th inst., was not exactly the cut-and-dried affair that was expected, due to the unlooked for appearance in the Federal building in New York City of J. W. Lyons of the Lyons-Atlas Engine Works, of Indianapolis, and his attorney, Henry Wollman, who proved a thorn in the side of the reorganizers when he arose in meeting several times and expressed emphatic opinions of the whole proceedings. Wollman declared that the bids submitted, and one of which probably will be accepted, were ridiculously low and that the property should not be disposed of for such sums as were offered.

Before he left he indicated that, should the opinion which Judge Hough will hand down to-morrow, 10th inst., authorize the acceptance of one of the bids, he would appeal from the order confirming the sale and move to have the sale set aside. The Lyons-Atlas company, which purchased the Atlas Engine Works after the latter failed owing to the large amount owed it by the United States Motor organization, claims that it is owed $95,000 by the Dayton Motor Co., and that the claim is secured by the United States Motor Co., which, if true, will about double the amount the Lyons-Atlas may receive under the reorganization plan. If, however, the claim, or part of it, is against the United States Motor Co. only, the Lyons-Atlas payment would shrink perceptibly.

When court opened there were about 30 interested persons on the spectators' benches, among whom were Walter E.

Digitized by Google

anders, who will become president of e new company; W. F. McGuire, its sected vice-president, and several other adesmen of note. Inside the rail which parated the spectators from those who id business there were Lyons and Wollan, Roberts Walker and W. E. S. Strong, ie receivers; James N. Rosenberg, of osenberg & Levis, receivers' attorneys; lbert Rathbone and Henry V. Poor, of ie attorneys for the creditors and reorganizers; Harold Remington, an attorney, epresenting the Cincinnati (O.) Ball Crank o. and the Troy (N. Y.) Carriage Shade o., and one or two other attorneys.

Check for $300,000 With Bids.

As soon as Judge Hough took his seat, t 11 A. M., Roberts Walker, one of the eceivers, opened an envelope and removed irst a certified check for $300,000 on the Merchants' National Bank of New York City, and then proceeded to read the accompanying bids, which were made by Henry C. Holt and William McAllister, Jr., epresenting the reorganization committee. The first was for the whole, as follows:

No.		
1	The United States Motor Co....	$3,700,000
2	Alden-Sampson Mfg. Co.....	265,000
3	Brush Runabout Co.....	350,000
4	Columbia Motor Car Co.....	390,000
5	Dayton Motor Car Co.....	975,000
6	Maxwell-Briscoe Motor Co.....	1,400,000
	Total	$7,080,000

The second bid was for the purchase separately of each company and is the bid which the court is believed to view with greatest favor; in this case lump sums were not quoted, but $50,000 was given as a deposit on each of the six parcels and the bidders agreed to pay a certain per cent. of the obligations of each company, as follows: United States Motor Co., 32½ per cent.; Alden-Sampson, 24 per cent.; Brush, 33 per cent.; Columbia, 91 per cent.; Dayton, 39 per cent.; Maxwell-Briscoe, 60 per cent. The latter bid is said to be the better for the creditors, in that it guarantees them a certain percent of their claims, whereas under the lump sum bid, No. 1, the receivership expenses must be met from the price, which will make the percent received by the creditors less than the percentages in the second offer.

Receivers' Report Explains Action.

After the bids were submitted, the Court asked Walker to read the receivers' report; in this document Walker stated that the receivers, when they took over the management of the big concern, had open to them three courses: To shut down the plants, to manufacture on an enlarged scale, or to conserve the assets in as great a degree as possible. The latter course was chosen and the receivers, as well as they could, finished the plan of manufacture laid out for the year of 1912. Day by day employes who were not needed were dismissed and as certain work was completed by a department that department was shut down. This meant that no preparations could be made for the 1913 selling season, which therefore has gone to waste.

Operating Loss Amounts to $380,000.

Whole plants eventually were shut down; the Maxwell shops in Auburn, R. I., were closed and certain unfinished cars were shipped to the plant in Newcastle, Ind., which plant is the only one rated as a going business. In the Dayton and Columbia shops at the present time certain large cars are being completed, but the activity is near the minimum. The receivers saw no way of avoiding some loss, and considered themselves fortunate in that quick assets, between September and the day of sale, decreased only $380,000. In all, 1,638 cars were completed at a cost of $2,350,000 and 1,514 cars and a quantity of parts were sold at a price of $1,970,000 to the big motor company, a loss of $126,821 to the subsidiaries and accounting for the $380,000 loss.

Attorney Wollman had been sitting quietly ever since court opened, and about this time he wanted to know the relation of the bids to the value of the properties. It was explained that the receivers had had estimates made of the "auction values" of the properties of the various companies and that, using these in part and in part using their own judgment, they had fixed certain values as those which the parcels would bring at auction; generally it was 27 per cent. of the original cost. The comparison of the bids with these values showed them to be from 85 to 87 per cent. of the estimated figures, which is 85 to 87 per cent. of 27 per cent. of the original cost. The comparisons were:

	Appraisement.	Bid.
U. S. Motor Co.	$4,590,742.32	$3,700,000.00
Alden-Sampson..	308,238.00	265,000.00
Brush	409,842.00	350,000.00
Columbia	402,439.00	390,000.00
Dayton	1,125,504.00	975,000.00
Maxwell-Briscoe	1,590,881.00	1,400,000.00
Totals	$8,427,646.32	$7,080,000.00

The appraisements exceed the bids by $1,347,646.32. Cash in hand amounts to $354,176.76.

Claims of $1,000,000 Not On Books.

The Court, in looking over papers submitted by the receivers, noticed the inclusion among the claims of some $1,000,000 which was not on the books of the company and, remarking that nothing was so open to suspicion as such items, asked Walker to read publicly the various amounts. The largest was a claim of $500,000 by the Carlson Motor Truck Co., which several months ago succeeded in court in proving that the long-used opposed Maxwell motor infringed the Carlson patent. Other claims were for materials furnished and for broken leases.

Wollman then voiced another protest and asked why, in a reorganization pamphlet gotten out by the committee, certain real estate was priced at $7,850,000, was finally appraised by the receivers at $2,600,000 and was made the subject of a bid of $2,300,000 when the Standard Motor Co., which has been incorporated to take over the reorganized company, is incorporated at $31,000,000. It was explained that the first figure was that at which the property was carried on the United States Motor books and that the $31,000,000 capitalization was not a point at issue.

When things had again subsided the receivers stated that the liabilities filed against the various companies amounted to: United States Motor Co. and subsidiaries, $12,750,000; Dayton Motor Car Co., $2,653,000; Columbia Motor Car Co., $430,000; Brush Runabout Co., $1,081,000; Alden-Sampson Mfg. Co., $1,133,000. Maxwell-Broscoe showed assets of $490,800 above liabilities.

Little Worry Over Bankruptcy Cases.

The fact that creditors last week filed a petition in bankruptcy in Indianapolis against the Maxwell-Briscoe Motor Co. does not seem to worry the reorganizers, who state that the dispute is merely a question of whether the claims are owed by the Maxwell or the big Motor company, the reorganizers claiming the latter and stating they will be able so to prove and thereby upset this action. The claimants and claims are: Kahler Co., New Albany, $15,951.14; Newcastle Lumber Co., $3,745.46; Newcastle Foundry Co., $2,647.75; National Spring Co., Newcastle, $23,502; Whiteley Malleable Iron & Casting Co., Muncie, $7,947.54; Muncie Foundry & Machine Co., $13,864.84; Muncie Wheel Co., $2,693—all are Indiana companies, and among those in the $1,000,000 not on the company's books. These creditors are the same who just before their petition in bankruptcy asked the court to order the Newcastle plant sold separately on the grounds that it is solvent and a going concern, and the present action is but another means toward the same end. They allege preferential payments and fraudulent transfer of property. The bankruptcy petition filed some time ago in Trenton, N. J., against the parent company, likewise, is not seriously considered.

In order that the general meeting of creditors, of which the court proceedings are a part, might not terminate with any detail unfinished, the meeting was adjourned to 10 A. M., January 29, but the sale is not adjourned.

DECLARES PREST-O-LITE PATENT EXPIRED IN 1910

Disagreeing with Other Tribunals, Federal Court of Appeals Settles Vexed Question—Victory for Searchlight.

After having been successful in seven United States District Courts and one United States Circuit Court of Appeals in its litigation for infringement of the Claude and Hess patent, No. 664,383, under which it operates, the Prest-O-Lite Co., of Indianapolis, received a setback in the United States Circuit Court of Appeals in Chicago, which on Tuesday last, 7th inst., held with Judge Kohlsaat, then of the District Court in that city, that the Prest-O-Lite patent "died" nearly three years ago. Judge Kohlsaat's decision was the first against the Prest-O-Lite Co. and, because of the long string of favorable decisions, the appellant hoped it would succeed in reversing this verdict. The defendant in the action was the Searchlight Gas Co., of Chicago, whose operations are similar to those of the Prest-O-Lite.

The question which was considered was one of patent law relating to the expiration of American grants of foreign patents. The law prior to 1897 was that a foreign patent taken out in America expired when the foreign grant became void, but this limtaoni was removed in 1897, the restriction, however, still applying to those for which application had been made prior to the change in the law.

The Claude and Hess patent, the British number of which is 29,750, was applied for prior to the change of statute but was not granted until December 25, 1900, wherefore the Prest-O-Lite Co. claimed its patent did not expire with the English grant, which ended its term June 30, 1910. The Appellate Court ruled against the Prest-O-Lite company on this point, which makes the patent useless since June 30, 1910.

Another construction of the case is that while the British patent covers a "process" the American grant, even if it has expired, is a separate patent in that it covers an "apparatus" in which a needle valve was designated as coming within that portion of the letters which call for a "regulating valve." The court also held with the Searchlight company that the needle valve does not meet the specifications of the patent and that it was the same as the English patent.

The overthrowing of the patent does not mean that the Prest-O-Lite company will appear in the courts no longer, for much of its previous litigation has been under the trade-marked receptacle law, which statute forbids the refilling of such a receptacle by a company other than the manufacturer. Numerous violations under this law have been prosecuted, and nothing thus far has disturbed the company's right to continue that form of litigation.

Teaboldt's Suit Reacts for Mezger.

Whatever C. R. Teaboldt & Co., one-time metropolitan dealer in Everitt cars, expected to get when it brought suit in the Supreme Court for New York county against the Metzger Motor Car Co., of Detroit, Mich., for $14,520 because of trouble over a dealership contract, it apparently was disappointed this week, when the case was decided against it; in fact, instead of securing a verdict, Teaboldt & Co. were condemned to pay a counterclaim of $4,499.44 set up by the defendant Metger company.

The substance of the Teaboldt complaint was that its contract was revoked in 1911 after it had booked 111 orders and was about to cash in on a goodly amount of business. The Metzger story is that the dealer was short of funds and that another dealer therefore was engaged. Counterclaims of the Metzger company were $4,179.44 for parts unpaid for, and $3,902.83 due on an advertising contract. Both concerns are no longer in the lists of business houses; Teaboldt is now in the West and the Metzger company recently became the Flanders Motor Co.

Mason Stock Seller Sued for Fraud.

Alleging fraud, the Mason Motor Co., of Waterloo, Ia., has instituted suit in that city against J. J. Slicer for the sum of $186.60. The complaint declares that in November, 1911, Slicer was engaged to sell Mason stock and bonds, and while in St. Louis for that purpose he wired the factory for $60 to cover the expenses of a party of four which, he stated, he desired to escort to Waterloo to investigate the Mason property. The money was wired to Slicer, but according to the Mason allegements, he acted fraudulently in the matter and never rendered the service for which the money was forwarded.

Franklin Declares 200 per Cent. Dividend.

At a stockholders' meeting held on Friday last, 3rd inst., the capital stock of the H. H. Franklin Mfg. Co. of Syracuse, N. Y., was increased from $300,000 to $1,500,000. The new stock consists of 9,000 shares of common stock of par value of $100 each and 6,000 shares of preferred stock, 7 per cent. accumulative, of par value of $100 each. The increase in the common stock was brought about by the declaration of a 200 per cent. stock dividend upon the present capital stock.

U. S. MOTOR REORGANIZERS DECIDE TO DROP TRUCKS

Their Manufacture Will not be Continued by New Company—To Utilize Sampson Plant for Four-Cylinder Car.

When the Standard Motor Co. takes over the assets of the United States Motor Co., one of the departments of the business which will be wiped out will be that of truck manufacture, which heretofore has been carried on in the Alden-Sampson plant in Detroit.

The decision to discontinue the production of trucks has been one of the knotty internal problems with which the reorganizers of the big corporation have had to do. They were divided into two camps, so to speak, one for and the other against the truck, and the "against" finally won the day.

The Alden-Sampson engineering staff, of which Preston H. Breed was the head, has been discontinued and the Sampson factory, it is understood, probably will be used for the production of a $1,075 four-cylinder touring car which now is being developed in Detroit. The former Brush runabout plant also will be used for the same purpose, as it is the intention to produce the new model on a large scale.

Chief Engineer Breed, who is now at liberty, is one of the veterans of the motor truck industry, his first experience dating back some 12 years. He was with Alden-Sampson when the first Sampson truck was brought out, in 1907, and has followed its fortunes ever since.

Friendship and Business Tangle Suit.

Whether Frank P. Anderson, an automobile dealer in Syracuse, N. Y., borrowed $1,600 from Miss Mary H. Walsh or failed to deliver a car for which she paid, is the point at issue in an action which she has brought against Anderson in the Municipal Court in that city; John S. Munro of Camillus, N. Y., who advanced $34,000 to set up Anderson in business, is named as co-defendant. Miss Walsh claims Anderson agreed to sell her a car for $900 and that on June 16 last he went to her and asked her for $1,600, saying he had her car and another at the freight station and needed that amount to get them, agreeing to repay $700 as soon as he saw Munro. Anderson's claim is that when he and Miss Walsh were returning from a North Side restaurant one night she agreed to loan him the $1,600, to be repaid when he could do so, and that he never entered into an agreement to give her a car.

FREIGHT CAR SHORTAGE IS PRIMARY CAUSE OF A SUIT

Buick Chassis Damaged in Transit Fall into Hands of Used Car Dealer —Exporters Seek to Prevent Sale for Speculation.

One of the unusual effects of the freight car shortage which has inconvenienced automobile manufacturers in Michigan and elsewhere is reflected in an action filed in the Supreme Court for New York county wherein the General Motor Export Co., exporter of Buick cars, seeks to enjoin the Rodney K. Haines Co., a used car dealer in New York City, from selling fourteen Buick chassis; how the chassis came into the possession of the Haines company and are classed as "used" is a part of the car shortage story.

The incident had its inception last spring when the Buick Motor Co. began to ship from Flint, Mich., to its exporting agent in New York City a number of chassis which by fall had totaled fourteen. All might have been well had freight cars been available, but they were not, and the dozen and two chassis were loaded onto flat cars and sent eastward. Even this might not have been so bad, but after they arrived in New York they frequently were stored in exposed places by the railroad company, and the whole experience was such, according to the complaint of the exporting company, that the dashes warped, coils and magnetos were practically ruined, gears, motors, wheels, bearings, flywheels and other metal parts rusted, the veneer blistered and chipped and the one coat of paint that the chassis had been given had trouble in withstanding the weather, and the goods were in anything but good condition when the exporters received them.

Believing that damage might accrue to the reputation of the Buick company and the exporting company if these chassis were sent abroad, it was decided to sell them in New York, and as similar injury was thought possible if they were sold through a used car trader, search was made for a buyer who would agree to put them to service for his own and not use them for speculative purposes. The claim is that the Haines company acted as the broker in this deal and secured as a customer Walter J. Connell, who operates a garage and taxicab service in Flushing, L. I. A price of $6,000 with an additional $15 for lighterage was made to him for the fourteen chassis, and it is claimed Connell bought them on November 12 last with the knowledge of their condition and agreed to fit them with taxicab bodies and place them in service, expressly agreeing not to sell them for speculation.

The complaint further recites that Connell directed that the chassis be delivered to the Haines company that the latter might fit bodies and equip the cars for taxicab service; the delivery was made to the Haines company and not many days thereafter the New York branch of the Buick company began to write letters to the export company berating the latter for having offered the chassis for sale to the trade and public as used. The Yonkers Buick dealer is said to have lost a sale because a prospective buyer picked up a bargain from the Haines company, and documents are submitted by the plaintiff in support of its claim that the Haines company offered the chassis for general sale, admitted it was so doing and refused to desist.

The export company's reply to the Buick people was that it could not understand the situation, since its contract of sale forbade the sale of the chassis, but when the Buick branch continued to complain of the damage the resale was doing, in the way of originating stories of misrepresentation and similar practice, the export company sued for an injunction. A temporary order was granted December 24 restraining Haines from selling what he had left of the fourteen and restraining Connell from violating the terms of his contract. The matter was to have been argued Monday last, 6th inst., but was adjourned to Monday, 13th inst.

Assignee to Sell Canadian Plant.

The Harding Motor Car Co., Ltd., of London, Ont., which undertook to build cars in that Canadian city about a year ago, is to be sold by the assignee on January 14th next. The assets are appraised at $24,176, of which plant, machinery, patterns, tools and equipment are valued at $14,583.90, and stock in trade, which includes finished and unfinished parts, $9,190.71. The remaining $400 represents a demonstrating runabout.

Warner-Stewart Litigation Ended.

Following the purchase of the Warner Instrument Co. by the Stewart & Clark Mfg. Co. and the formation of the new Stewart-Warner Speedometer Corporation, patent litigation between the two companies has been ended; the case of Warner vs. Stewart & Clark involving patent No. 823,237, which had been for some time in the United States District Court for the Southern District of New York, was formally withdrawn this week.

Branch for Long Horn in Chicago.

The G. Piel Co., Long Island City, N. Y., manufacturers of the Long horn, have opened a branch in Chicago at 1322 Michigan avenue. It is in charge of R. G. Ames.

CHANNING FAILS TO UPSET WEED CHAIN'S INJUNCTION

Court of Appeals Sustains Lower Court's Grant of Temporary Restraining Order—"Anchored" Chains the Issue.

In what has proved one of the most stubbornly fought of the many actions involving the Parsons patent, No. 723,299, in which the Weed Chain Tire Grip Co. has engaged, that against the H. Channon Co., of Chicago, the Weed interests scored another victory on Tuesday last, 7th inst., although it by no means decides the main point at issue.

It took the form of a decision by the United States Circuit Court of Appeals for the Seventh Circuit, sitting in Chicago, sustaining the action of Judge Sanborn in the lower court in granting a preliminary injunction against the Channon company. Judges Baker, Seaman and Kohlsaat, who constituted a Court of Appeals, held that Judge Sanborn had not erred or abused judicial discretion in granting the preliminary injunction.

The case involves the right of the Channon company, and all others, to manufacture so-called "anchored" tire chains, and really grows out of the decision of the same Court of Appeals in the Excelsior Supply case, in which it was ruled that the Parsons patent covered the creeping type of chain. Thereafter the Channon company, which manufactures Gripwell, Ruffshod and other chain grips, developed an "anchored" chain, the "anchoring" being effected by means of strips of chain or leather which were accompanied by instruction cards directing the purchaser to "anchor" the grips on the wheel so as to prevent creeping around the tire, which, the Weed company claims, is but an attempt to disclaim infringement.

Soon after these chains made their appearance on the market, and in response to a challenge issued by the Channon company, the Weed people instituted the suit which on April 25th last resulted in Judge Sanborn's issuance of a preliminary injunction. He held that the "anchoring" was an obvious subterfuge by which it was hoped to evade the Parsons patent without reasonable expectation that the "anchors" would be used.

The Channon company promptly appealed, with the result, as stated, that on Monday last the Sanborn preliminary injunction was sustained. In due course the fight on the merits of the Parsons patent's application to "anchored" grips will be taken up and settled.

The Week's Incorporations

Racine, Wis.—Perfex Radiator Co., under Wisconsin laws; authorized capital, $15,000; to manufacture radiators.

Portland, Me.—Apperson Automobile Co., under Maine laws; authorized capital, $10,000; to deal in motor cars.

Barnsville, Minn.—Broadway Garage Co., under Minnesota laws; authorized capital, $5,000; to operate a garage.

Des Moines, Ia.—Des Moines Motor Car Co., under Iowa laws; authorized capital, $25,000; to deal in motor cars.

Grand Rapids, Mich.—Valley City Supply Co., under Michigan laws; authorized capital, $25,000; to deal in motor car supplies.

Grand Rapids, Mich.—Grand Rapids Taxicab Co., under Michigan laws; authorized capital, $1,000; to operate a taxicab service.

Camden, N. J.—Starr Garage, under New Jersey laws; authorized capital, $50,000; to operate a garage. Corporators—H. H. Grace, and others.

Jersey City, N. J.—Wheel of Fortune Co., under New Jersey laws; authorized capital, $600,000; to deal in motor cars. Corporators—J. R. Turner, L. H. Gunther, H. A. Block.

St. Louis, Mo.—J. T. Moss Motor Car Co., under Missouri laws; authorized capital, $10,000; to deal in motor vehicles. Corporators—T. J. Moss, J. W. Fristow, E. J. Dykstra.

Tulsa, Okla.—Western Auto Supply Co., under Oklahoma laws; authorized capital, $50,000; to deal in motor car supplies. Corporators—Frank Walfe, R. J. Meyers, F. W. Dye.

Rockford, Ill.—Rockford Motor Truck Co., under Illinois laws; authorized capital, $10,000; to manufacture motor vehicles. Corporators—P. A. Peterson, Levin Faust, John Ledin.

Detroit, Mich.—Detroit Tractor Co., under Michigan laws; authorized capital, $50,000; to manufacture tractors. Corporators—George J. Baker, Frank E. Baker, Mary J. Baker.

Milwaukee, Wis.—William H. Wegner Co., under Wisconsin laws; authorized capital, $5,000 to deal in motor car supplies. Corporators—W. C. Wegner, W. H. Wegner, I. H. Kurz.

Bridgeport, Conn.—Jones Pneumatic Tire Spring Co., under Connecticut laws; authorized capital, $100,000; to manufacture motor car parts. Corporators—Lyman D. Jones and others.

Turon, Kan.—Turon Motor & Implement Co., under Kansas laws; authorized capital, $6,000; to deal in motor cars and implements. Corporators—Al. Sprout, E. O. Allmon, G. E. Farney.

Somerville, Mass.—Caverly Automobile Co., under Massachusetts laws; authorized capital, $5,000; to deal in motor cars. Corporators—Irvin C. Caverly, William Thibodeau, Edna C. Caverly.

New Haven, Conn.—Motor Truck Sales Co., under Connecticut laws; authorized capital, $10,000; to deal in motor vehicles. Corporators—Julian Denison, Jessie F. Mabry, Howard W. Beach.

Canton, Ohio—Original Puncturefix Co., under Ohio laws; authorized capital, $50,000; to manufacture tire filler. Corporators—William E. Steinmetz, Edwin D. Meyers, Edward L. Hang.

Quincy, Ill.—Machinery & Motor Co., under Illinois laws; authorized capital, $25,000; to operate a motor car repair shop. Corporators—Benner Kinsey, Fred H. Wilms, Harry V. C. Tingley.

Cleveland, Ohio—Standard Castings Co., under Ohio laws; authorized capital, $100,000; to manufacture tire fillers. Corpora—Julius F. Janes, S. C. Cutler, E. H. Janes, M. M. Feidner, N. N. Calfee.

Painesville, O.—Vulcan Mfg. Co., under Ohio laws; authorized capital, $300,000; to manufacture motor cars. Corporators—E. B. Heartwell, F. H. Murray, J. C. Ward, Wm. F. Truby, H. E. Hammer.

Robinson, Ill.—Associated Auto & Supply Co., under Illinois laws; authorized capital, $2,500; to deal in motor cars and supplies. Corporators—J. M. White, J. W. Carlisle, R. J. Hunter, V. S. Welsh.

Newark, N. J.—Service Incorporation of New Jersey, under New Jersey laws; authorized capital, $25,000; to deal in motor cars Corporators—Stephen C. Renssaelaer, Francis Child, Jr., George Allen Dewey.

Rochester, N. Y.—Ball-Washburne Motor Co., Inc., under New York laws; authorized capital, $25,000; to deal in motor cars. Corporators—Ward H. Ball, Charles H. Washburn, Asa R. Ball, all of Rochester.

Lowell, Mass.—Ruggles Motor Sales & Repair Co., under Massachusetts laws; authorized capital, $3,000; to deal in motor cars. Corporators—Frederick W. Coburn, Winthrop A. Parkhurst, Alfred B. Ruggles.

New York, N. Y.—Electro Coach Co., under New York laws; authorized capital, $500,000; to deal in motor vehicles. Corporations—John Larkin, Alexander Andrews, Richard J. Lynch, all of 44 Wall street.

Robinson, Ill.—Associated Auto & Supply Co., under Illinois laws; authorized capital, $2,500; to deal in motor cars and supplies. Corporators—J. M. White, J. W. Carlisle, R. J. Hunter, V. S. Welch, D. McCarty.

Detroit, Mich.—Ostdyke Gear Shifting Co., under Michigan laws; authorized capital, $50,000; to manufacture gearsets. Corporators—Charles A. Ostdyke, Fred E. Holmes, Wilfred W. Campbell, John B. Whalen.

Indianapolis, Ind.—Wizard Motor Co., under Indiana laws; authorized capital, $50,000; to manufacture motors for cyclecars. Corporators—Orlando C. Forbes, Edward H. Habig, Park S. Florea, all of Indianapolis.

New York, N. Y.—E. J. Sullivan Corp., under New York laws; authorized capital, $5,000; to deal in motor cars. Corporators—Robert G. Ballantine, Rye, N. Y.; Eugene J. Sullivan, Walter F. Hopper, both of 590 West 174th street.

Jamestown, N. Y.—Eagle Garage Co. of Jamestown, Inc., under New York laws; authorized capital, $25,000; to operate a garage. Corporators—Samuel B. Robbins, Olive M. Spencer, Jamestown; George Rappole, Bemus Point.

New York, N. Y.—Wholesale Auto Tire Co., under New York laws; authorized capital, $1,000; to deal in motor car tires. Corporators—Wm. P. Cole, 83 Chambers street; David Morris, 26 Oliver street; Abraham Levy, 277 Broadway.

Buffalo, N. Y.—United States Rubber Reclaiming Co., Inc., under New York laws; authorized capital, $2,400,000; to reclaim rubber. Corporators—Theodore W. Bassett, Rudolph A. Lowenthal, 277 Broadway, New York City; Cornelia Beebe, Ellenville, N. Y.

West Seneca, N. Y.—George Schuster Garage & Sales Co., Inc., under New York

Digitized by Google

laws; authorized capital, $5,000; to operate a garage and deal in motor cars. Corporators—Jacob F. Berner, Reinhold C. Berner, George Schuster, all of Buffalo, N. Y.

New York, N. Y.—General Interboro Auto Express Co., under New York laws; authorized capital, $3,000; to operate a motor delivery. Corporators—George I. Pound, 920 Bryant avenue; John Pallett, 509 East 79th street; P. Pound, 543 East 85th street.

New York, N. Y.—Haverty's Taxicabs, Inc., under New York laws; authorized capital, $1,000; to operate taxicabs. Corporators—Charles O'Brien, 227 East 57th street; Charles O'Brien, Jr., 233 Alexander avenue; Margaret V. Curran, 332 East 58th street.

New York, N. Y.—Drouet & Page Co., under New York laws; authorized capital, $10,000; to manufacture motors. Corporators—Conrad Milliken, 421 West 114th street; Ingrid E. Larsen, 17 Marion avenue, Tompkinsville, S. I.; Martin B. Hoffman, 38 Park Row.

New York, N. Y.—Stewart-Warner Speedometer Corp., under New York laws; authorized capital, $25,000; to deal in motor car accessories. Corporators—Elmer E. Holmes, 327 Sterling place, Brooklyn; J. K. Stewart and C. B. Smith, both of 1828 Diversey Boulevard, Chicago, Ill.

New York, N. Y.—New York Motor Speedway Association, Inc., under New York laws; authorized capital, $1,000,000; to conduct motor contests. Corporators—William B. Allen, Seattle, Wash.; Herbert J. Carter, 368 East 158th street; Alfred B. Casner, 263 Madison street, Brooklyn.

New York, N. Y.—Frank M. Randall Mfg. Corp., under New York laws; authorized capital, $5,000; to manufacture motors. Corporators—Frank M. Randall, 148 West 52nd street; Philip K. Stern, 521 West 187th street; Louis B. Rosenberg, 113 West 42nd street; J. Chas. Weschler, 527 West 110th street.

Tiffin Trucks Nearly Ready for Market.

Having decided to engage in the manufacture of motor trucks, the Tiffin Wagon Co. of Tiffin, O., has moved much more rapidly than first had been thought possible. As a result, its first two models have been thoroughly tested out and it is expected that its trucks will be ready for the market not later than the middle of February.

Increases of Capitalization.

Richmond, Ind.—Pilot Motor Car Co., from $5.000 to $150,000.

Moline, Ill.—Velie Motor Vehicle Co., from $600,000 to $800,000.

Syracuse, N. Y.—H. H. Franklin Mfg. Co., from $300,000 to $1,500,000.

USE OF TIRE FILLERS MAY ANNUL CAR GUARANTEES

N. A. A. M. Recommends Such Action —Also Takes Steps to Erect Special Automobile Building at Panama-Pacific Exposition.

Hereafter motorists who treat their tires with any of the thousand-and-one so-called "tire fillers" may pay a high price for it. It is probable that the use of such tire fillers automatically will terminate the guarantee covering the car itself. It is certain, at any rate, that the executive committee of the National Association of Automobile Manufacturers, at its monthly meeting, held in New York yesterday, formally decided to recommend to its members that such action be taken.

Practically all of the tire manufacturers long since provided that the "doctoring" of their tires with any of the so-called tire filling concoctions abrogated their guarantees. Like action by the car makers, therefore, is not wholly surprising. The action of the National Association of Automobile Manufacturers grew out of a conference with the tire committee of the Motor and Accessory Manufacturers, Inc.

At yesterday's meeting of the N. A. A. M. committee, the first step was taken toward the housing, in a special building, of all automobile exhibits at the Panama-Pacific Exposition in San Francisco in 1915. Representatives of the exposition were in attendance and the consultation was of an extended nature. The show committee presented a plan for the erection of a special building for the purpose, which plan will be submitted to all members of the association for approval. It provides for the erection of a structure 360 x 600 feet, which probably will be styled the "Automobile Palace," and in which will be staged not only all exhibits of cars but of motorcycles and accessories.

The N. A. A. M. contest committee reported a tentative agreement with the contest board of the American Automobile Association relative to the control of contests, under which it is contemplated that the N. A. A. M. will take the place and perform most of the functions formerly exercised by the Manufacturers' Contest Association.

Indianapolis was added to the N. A. A. M. circuit of local shows. It was assigned the week covering the dates March 24th to 29th, inclusive.

Among other business transacted was the election of C. B. Warren as representative of the Haynes Automobile Co., E. O. Sutton as representative of the Knox Automobile Co. and J. T. Ranier as representative of the Garford Co.

Weed Adjuster Infringers Settle.

When the Weed Chain Tire Grip Co. instituted suits in the United States District Court for the Southern District of New York against the 35% Automobile Supply Co. and its owner, Albert B. Norwalk, in one suit, and Charles Weiland, in another action, all of New York City, charging infringement of patent No. 953,673, under which Weed tire chain adjusters are made, opposition was expected, and the complainants were much surprised last week when both defendants backed down and agreed to make substantial settlements for past infringements. The adjusters in question are a combination of springs and chains which extend over the face of the wheel and hold the grips tightly against the tire. The action of the defendants resulted in the issuance of perpetual injunctions. The two defendants had been selling the alleged infringements.

Remington Standard in Bankruptcy.

Involuntary proceedings in bankruptcy were instituted in the Federal court in Brooklyn, N. Y., on Tuesday last, 7th inst., against the Remington Standard Motor Co., a West Virginia corporation, whose principal place of business is Farmingdale, L. I. The petitioning creditors are Charles P. Hollister, $1,530.77; George J. Mercer, $176.89; and J. H. Rooney, $86. About a year ago the Remington company acquired a license to use the Manly hydraulic drive and built one truck in which it was employed. It got no further, however, and only last month inventor Manly himself instituted proceedings against the company for royalty and other debts.

Secures Judgment for Kilgore Advertising.

Final papers in an action brought in the New York City Court by the Frank Presbrey Co., an advertising agency, against the Kilgore Mfg. Co., of Boston, Mass., a manufacturer of shock absorbers, were filed this week, the agency taking judgment for $1,148.75; the action was based upon advertising service rendered between December, 1909, and June, 1910, in connection with space in newspapers in a number of the large Eastern cities.

Moores to Make Trucks in Michigan.

The Moore Truck & Mfg. Co. has been organized in Wyandotte, Mich., to manufacture the Moore patent self-loading barrel truck. It has acquired manufacturing facilities in the Debo building. Its officers are as follows: President and general manager, F. A. Moore; vice-president, E. Moore; treasurer, Dr. C. W. McColl; secretary, T. E. Moore.

In the RETAIL WORLD

Wickland & Britton have opened a garage in San Jose, Cal.

Donald R. Macfarlane is building a repair shop in Berkeley, Cal.

The Knox Automobile Co. of Illinois, located in Chicago, has dissolved.

G. A. Lewis is about to have a garage built in Mankato, Minn. It will cost $9,800.

E. M. Parsons is about to enter the trade in Carnarvon, Ia. He will sell Abbott-Detroits.

Under the style Dow & Green Garage, a new firm has entered the trade in San Francisco.

M. Kroon has taken over the interest of his partner, L. Johnson, in the Craig (Ia.) Auto Co.

Salyers & Kayton have taken over the business of the Ribbins Auto Co., in Malvern, Ia.

The Oconto Falls (Wis.) Motor Car Co. has taken possession of a new garage, 36 x 58 feet.

A garage is being erected in Sacramento, Cal., on K street, for J. D. Lauppe; it will cost $11,500.

William Walterskirchen has had plans prepared for a new garage to be constructed in Missoula, Mont.

J. B. Hanlon has leased the W. F. Nott Garage in Galva, Ill. William Soderburg will act as manager.

H. O. Spencer and Merle Parsons, of Bangor, Me., have leased the Grange Stables and will open a garage.

Frank B. Ridgway has asked authority to erect a garage in Bridgeton, N. J., at Atlantic and Hampton streets.

Behlin & Sons, of Cincinnati, O., have let the contract for a new garage; it will be erected on Rockdale avenue.

The Beloit (Wis.) Auto & Machinery Co. has been formed in that city; it will handle the goods indicated by its title.

Ray Cleveland, of Albany, Minn., has transferred his garage business to Anton Gruenke; the latter will continue it.

Ash & Philips, dealers in West Union, Ia., have dissolved partnership; Ash will continue the business, Philips retiring.

E. A. Walden and A. C. Gray have had plans drawn for a new garage in Hollywood, Cal. The estimated cost is $5,500.

Under the style Burke Garage a new business is about to be established in Lincoln, Ill. A garage is now being erected.

A. F. Francis has sold his interest in a garage, located on 10th street, Moundsville, W. Va. H. W. Perkins was the purchaser.

Newton B. Smith has opened a garage in New Brunswick, N. J., at 222 Nelson street; he also will handle Marion and Studebaker cars.

The Elliot Motor Car Co. has been formed in Salt Lake City, Utah, with Harry Elliot as manager; Oakland cars will be stocked.

Roy Golden and Percy A. Collins have opened a garage and repair shop in Petoskey, Mich. They also will conduct a livery business.

Harry McCurdy has bought an interest in the Western Slope Auto Works, in Grand Junction, Col. The company's garage is to be improved.

Simeon Kimmell has sold his interest in the Hoffman & Kimmell Garage, on 5th street, Marysville, O. Hoffman's son was the purchaser.

The Garrison Garage Co. is about to build a new garage in the Walbrook section of Baltimore, Md. The cost will be approximately $12,000.

Bartlett W. Shryock is about to enter the trade in Fort Wayne, Ind. He will locate in the Phillips Garage and will handle Studebaker cars.

Perl W. DeVendorf, of Watertown, N. Y., has bought out the Warner Automobile Co., of 155 Arsenal street; he will take with him the Ford agency.

Centre Avenue Garage is the style of a new business in Reading, Pa., at 93 Rose street; storage will constitute the main portion of the business.

The Colonial Motor Co., of Baltimore, Md., is about to open a new garage on North avenue; Studebaker cars and Universal trucks are handled.

C. C. McNeer, farmer and auctioneer, has purchased an interest in the Blue Grass Garage, of Chariton, Ia. The style hereafter will be Vaughn & McNeer.

C. O. Donner, of Alexandria, Minn., has purchased the interest of his partner, J. A. Bailey, in the Alexandria Auto Co. Donner will conduct the business alone.

J. Duecker of Louis Corners, Wis., has inaugurated an automobile passenger service between Manitowoc and Kiel, in the same State; his car seats 32 passengers.

Maxfield & Southwick, of Mofille, Ia., have established a second agency, in Sioux City; they have located in the Bennett Motor Mart and will distribute Pullman cars.

The Broadway Garage, of Harrisburg, Pa., which recently became the Mt. Pleasant Garage, has returned to its old name under another change in management; it is located at 1358 Thompson street.

Zinnel & Daehler, a new firm, have opened up in Clinton, Ia., at 120-24 Sixth avenue; besides operating a garage, the firm will sell Ford cars. Both members formerly lived in Mt. Carroll, Ill.

Martin E. Hon, formerly president of the Tennant Motor Co., Ltd., of Chicago, has become manager of the Marmon Chicago Co. New quarters for the Marmon have been taken at 2429 Michigan avenue.

J. F. Sanchez, of Syracuse, N. Y., is about to establish a garage and agency in Calgary, Alta. He will stock Moyer cars. In Syracuse, he was connected with the Chalmers-Syracuse Co., formerly the John H. Valentine Co.

Samuel A. Yout has purchased the business of the Reinman & Wolfort Auto Co., in Little Rock, Ark., and will continue it under the style Arkansas Auto Exchange; the garage, at 3d and Louisiana streets, will be remodeled.

C. A. Herberg Rubber Co. is the style of a new concern which just has been organized in Wichita, Kan., to handle Fisk tires; C. A. Herberg, the company's head, formerly was a member of the Auto Supply & Tire Co. in that city.

The Hippe Motor Car Co., which was formed by business men of Chilton, Wis., in response to a demand, has opened for business in a garage, 50 x 80 feet, with two stories and a basement; it is well equipped. Robert Hippe is manager

M. E. Humbarger, formerly manager of the Collingwood Garage in Toledo, O., has sold his interest in that business and will open up for himself at 238 Erie street; his future business will consist of the sale of Apperson cars and repairing.

Digitized by Google

E. F. Morgan, of St. Paul, Minn., has purchased the interest of his partner in the Morgan-Bond Motor Car Co. and will continue the business as the E. F. Morgan Co. As heretofore, it will consist of a truck transfer line and the Rauch & Lang electric agency.

Following the recent reincorporation of the G. W. Hawkins Automobile Co., of Houston, Tex., as the Hawkins-Halff Co., a new building has been completed at Dallas avenue and Main street; it contains salesrooms, 65 x 85 feet, and a garage, 65 x 130 feet, separated from the salesrooms by fireproof doors.

Joseph Hallett and Bert Miller, who have conducted the Toonen & Barlament Garage in De Pere, Wis., have dissolved partnership; Hallett will continue the business.

Bruce Gray and Bert Horton have purchased the E. T. Remmert Garage in Geneseo, Kan. They have increased the garage's livery equipment.

H. M. Duyckinck, who has been manager of a branch of Duyckinck, Sterrett & Co., on South Queen street, Rising Sun, Md., has entered the trade for himself; he has taken over the branch, removed to a new garage on East Main street and will carry on the business under the style Rising Sun Garage. The plant has a well equipped machine shop.

"Garage de Luxe" is the term which the Warren Automobile Co., of St. Louis, Mo., applies to the new salesrooms and service station which it opened up with the new year; it is located at 3048 Locust street and is unusually attractive, the walls being white brick, the floors white tile and the woodwork mahogany. The company handles Warren gas cars and Argo electrics.

The Hughes-MacDonald Motor Car Co., recently formed in Milwaukee, Wis., has leased the Johnson Garage at 239-41 Wisconsin street and will remodel the building; the concern will handle the Ohio electric, Garford trucks and pleasure cars and Flanders "sixes." John MacDonald, Jr., who will act as manager, formerly was connected with the Kopmeier Motor Car Co. in that city.

Minor Business Troubles.

Margaret A. Devine of Brookline, Mass., a dealer in automobile supplies, is in the bankruptcy court; the liabilities are $875 and the assets $75.

An involuntary petition in bankruptcy has been filed against the Acme Motor Car Co., of Worcester, Mass., by creditors whose claims aggregate $1,467; preferential payments are alleged.

An involuntary petition in bankruptcy has been filed against the Knoxville (Tenn.) Auto & Garage Co. It is claimed that the company owed the defunct Knoxville Banking & Trust Co. about $20,000. Edward Akers was named receiver.

Alvie G. Williams, formerly an automobile dealer in Syracuse, N. Y., has filed a petition in bankruptcy in the Federal court in Utica, in the same State; his 21 creditors include: Syracuse Rubber Co., $45; William Cronin, $25; William Marshall, $47, and J. P. Miller, $113.

Because the petitioning creditors failed to appear when the case was called in the Federal court in New York City, the petition in bankruptcy, filed against Alexander Goldner October 6, 1911, was dismissed last week; Goldner traded as the Broadway Auto Top & Body Co., at 136 West 54th street.

An accumulation of financial difficulties caused the Simpson Automobile Supply Co., of 251 Division avenue, South, Grand Rapids, Mich., to file a trust mortgage last week; an indebtedness of $14,000 is acknowledged. Prior to this action, seven judgments were taken against the concern, amounting to $1,193.75.

A receiver in bankruptcy has been appointed in the Federal court for the North Main Street Garage Co. of Decatur, Ill. The liabilities are estimated at from $12,000 to $14,000, with assets of from $4,000 to $5,000. The petitioning creditors are Decatur concerns or individuals, the largest claims being $642.61, by D. W. Tilson, and $587.03, by the Decatur Railway & Light Co.

The Wright Rye Motor Co. of Sheridan avenue and Chapel street, Albany, N. Y., for which a receiver was appointed by the New York Supreme Court for Albany county, December 14, when the directors admitted insolvency, has been made the object of a petition in bankruptcy, filed in the Federal court in Utica, N. Y., by creditors who allege that mismanagement by the directors, Albert E. Grant, Sr., of Troy; Albert E. Grant, Jr., Horace A. Raynor and Walter E. Ward, caused the embarrassed condition. The Federal court appointed a receiver who will take the business from the hands of the appointee of the Supreme Court.

Changes Among Prominent Tradesmen.

Richard Ferguson has been appointed factory manager of the Grant-Lees Machine Co., of Cleveland. Previously he was in charge of one of the Buick plants in Flint, Mich.

L. B. Sanders, former sales manager of the Lion Motor Car Co., has been appointed to a similar post in the Abbott Motor Co. of Detroit. He succeeds W. P. Bush, resigned.

L. I. Stewart, for the past two years chief purchasing agent for the Warner Mfg. Co. of Toledo, O., has been promoted to the post of sales and advertising manager. The vacancy created by his elevation has been filled by the appointment of W. L. Rowe, his former assistant.

W. M. Roberts, former sales manager of the Packers Motor Truck Co. of Wheeling, W. Va., and latterly manager of the New York branch, has resigned that connection to become sales manager of the Mais Motor Truck Co. of Indianapolis. He, of course, will make his headquarters at the Mais factory in that city.

H. P. Ziegler, manager of the Goodyear Tire & Rubber Co.'s Milwaukee branch, has been promoted to the post of district manager with headquarters in Chicago. His appointment carries with it supervision of the Goodyear branches in Chicago, Milwaukee, St. Paul, Minneapolis, Omaha, Des Moines and Sioux City.

Chester S. Ricker, chief engineer of the Henderson Motor Car Co. of Indianapolis, and designer of the Henderson car, has resigned that office to set up for himself as a consulting engineer. Before leaving the Henderson employ he completed the design of an electric engine starter, and will be retained in an advisory capacity to design a Henderson "six."

Harry J. Galvin, for several years chief accountant and later auditor of the Remy Electric Co. of Anderson, Ind., has resigned that position to become president and general manager of the Galvin Specialty Co., which recently was organized in Anderson and with which W. R. Poland, at one time general manager of the Remy company, is identified. The new company, however, will not have anything to do with automobile productions; it will make tailoring and laundry machines.

Recent Losses by Fire.

Pomeroy, Ia.—J. W. Lockie, garage destroyed. Loss, $10,000.

Centerville, Ia.—King Auto Co., 12th street, garage damaged. Loss, $6,500.

Lowell, Mass.—Moody Bridge Garage, Joseph Marion, owner, destroyed. Loss, $20,000.

Roanoke, Va.—Valley Motor Vehicle Co., 115 Luck avenue, garage and cars damaged. Loss, $20,000.

Calgary, Alta.—Motor Transportation Co., 11th avenue, garage and 12 cars destroyed. Loss, $21,000.

Washington, Pa.—Union Motor Car Co., garage destroyed by fire which followed explosion of gasolene. Loss, $25,000.

Los Angeles, Cal.—Vance-Canavan Motor Co., 1122 South Olive street, salesrooms and garage damaged and several cars destroyed. Loss, $10,000.

GASOLENE SITUATION CALLS FOR ACTION.

It does not seem possible that the National Association of Automobile Manufacturers, the Automobile Board of Trade, the Society of Automobile Engineers, the American Automobile Association, or any of the other organizations which seek to promote the welfare of the automobile industry, much longer can afford to permit what has come to be known as the gasolene situation to pass without official recognition and official action of some sort.

After the brief lull which marked the meteoric rise in the price of the fuel last year, the producers have returned to the attack again and the cost has been increased and, according to indications, there now is no telling when or where it will stop. It is reasonably certain, at any rate, that unless those concerned with the well-being of the automobile industry seek some avenue of relief "the high cost of motoring" soon may vie with the much-mooted "high cost of living." As Motor World pointed out many months ago, the rising cost of fuel constitutes a truly serious menace to the sale and operation of commercial vehicles, and apparently it is approaching a cost which will give pause even to intending purchasers of pleasure cars.

While supply and demand affords the readiest explanation, and while there is no doubt that the demand has increased in greater ratio than has the supply, the inequitable prices which have prevailed in various parts of the country during the past year indicate that, however ready, the supply and demand explanation is not a sufficient one. Also the fact that the chief producers of gasolene have continued to pay exorbitant dividends on exorbitant capitalizations suggests strongly that the money-mad men higher up are more concerned with pyramiding millions than with doing real justice to the public.

It is in these directions that the automobile organizations should promote inquiry. The most notable contribution to the subject which has seen the light was published in Motor World of September 19th last, when a calorific engineer who had intimately served one of the large oil companies, pointed out avenues which promised relief.

He suggested what technically are known as "long cuts" as one solution of the problem. He also suggested that engine designers may assist in relieving the situation by creating a greater vacuum or increasing the compression in order that engines may make use of fuels of lower gravity than gasolene. Likewise he indicated that prices are being increased not wholly by the law of supply and demand, but because the chief producers of gasolene fear to undersell each other because of the probability of a price war which may affect the products of petroleum other than gasolene in which the profits of one company or the other are particularly handsome.

There is much that can be done by the automobile organizations, if they will but do it, and where the interests for which they stand are so seriously menaced, there appears to exist the best reason in the world why they should do something without delay.

AMERICAN WAYS AND FOREIGN WAYS.

It may or may not be of particular significance one way or the other, but it is an interesting fact, which an inspection of the exhibits at the Importers' Salon brings somewhat sharply to mind, that it is some time since American manufacturers of automobiles gave up trying to accomplish certain results through complex and roundabout methods, making mechanical sacrifices for the sake of theoretical gains that, in most cases, remained in the realms of theory.

The fact that some of the foreign manufacturers have been able, through the employment of extremely high grade materials and the finest kind of workmanship—all of which is very expensive—to obtain excellent results from a rear axle construction, for instance, which involves the use of numerous universal joints and the transmission of power through many angles, when the same result might be accomplished through simple bevel gears and straight shafts, or from a control system with many adjustments constantly at the mercy of the driver, when equally good average results doubtless could be obtained by means of less easily upset mechanism, speaks volumes for the manner in which the designs have been worked out and the kind of workmanship that has been employed. In fact, it is highly probable that with less attention to detail disaster would result.

It is impossible to help wondering, however, if better results could not have been obtained by applying an equal amount of skill and care to the perfection of direct and simple ways of doing the same things. A feature of the American car now is its simplicity, and it is difficult to comprehend why the simple method is not the best method.

January 4-11, Montreal, Can.—Annual automobile show in the Drill Hall and Armory, under the auspices of the Automobile Club of Canada.

January 6-11, Cleveland, Ohio—Cleveland Automobile Show Co.'s exhibit in the Central Armory.

January 11-17, Milwaukee, Wis.—Annual Show of the Milwaukee Automobile Show Co. and the Milwaukee Progressive Automobile Dealers' Association in the Auditorium.

January 11-18, New York, N. Y.—Automobile Board of Trade's 13th annual show in Madison Square Garden and Grand Central Palace. Pleasure cars only.

January 13, New York, N. Y.—Meeting of the Executive Board of the American Automobile Association in Hotel Belmont, 2 P. M.

January 14, New York, N. Y.—Annual meeting of the Automobile Board of Trade in New York offices, 7 East 42nd street.

January 15, New York, N. Y.—Tenth annual meeting and fifth annual banquet of the Motor and Accessory Manufacturers' Association in the Waldorf-Astoria, 5:30 and 8 P. M.

January 16, 17, 18, New York, N. Y.—Midwinter meeting of the Society of Automobile Engineers, in Hotel McAlpin.

January 17, New York, N. Y.—Annual Dinner of the Society of Automobile Engineers, in the Hotel McAlpin, 8 P. M.

January 20-25, Philadelphia, Pa.—Philadelphia Automobile Trade Association's exhibit in the First and Third Regiment Armories.

January 20-25, New York, N. Y.—Automobile Board of Trade's 13th annual show in Madison Square Garden and Grand Central Palace. Commercial vehicles only.

January 21-26, Toledo, Ohio—Annual show in the Exposition building under the auspices of the Toledo Automobile Shows Co.

January 25-February 1, Providence, R. I.—Annual show of the Rhode Island Automobile Dealers' Association in the Providence State Armory.

January 27-February 1, Ottawa, Can.—Annual show of the Ottawa Valley Motor Car Association in Howick Hall.

January 27-February 1, Scranton, Pa.—Third annual show of the Scranton Automobile Dealers' Association in the 13th Regiment Armory.

January 27-February 1, Detroit, Mich.—Detroit Automobile Dealers' Association's Show in the State Armory.

February 1-8, Chicago, Ill.—National Association of Automobile Manufacturers' 12th annual show in the Coliseum and 1st Regiment Armory. Pleasure cars only.

February 3-8, Washington, D. C.—Washington Automobile Show Co.'s exhibit in Convention Hall.

February 8-15, St. John, N. B.—First annual show of the New Brunswick Automobile Association in the Drill Hall.

February 8-15, Youngstown, Ohio—Annual show of the Youngstown Automobile Show Co. in the Auditorium and Annex.

February 8-15, Hartford, Conn.—Sixth annual show of the Hartford Automobile Dealers' Association in the State Armory.

February 10-15, Minneapolis, Minn.—Minneapolis Automobile Show Co.'s show in the National Guard Armory.

February 10-15, Chicago, Ill.—National Association of Automobile Manufacturers' 12th annual show in the Coliseum and 1st Regiment Armory. Commercial vehicles only.

February 12-15, Geneva, N. Y.—Annual show in the State Armory, under the auspices of the Ottawa Valley Motor Car Association.

February 15-22, Albany, N. Y.—Annual show of the Albany Automobile Dealers' Association in the State Armory.

February 15-22, Newark, N. J.—New Jersey Exhibition Co.'s Sixth annual exhibit in the First Regiment Armory.

February 16-23, Richmond, Va.—Richmond Automobile Dealers' Shows Co.'s exhibit in the Horse Show building.

February 17-27, Kansas City, Mo.—Kansas City Automobile Dealers' Association's show in Convention Hall. First week pleasure cars; second week commercial vehicles.

February 19-22, Davenport, Ia.—Annual show of the Tri-City Automobile Dealers' Association in the Coliseum.

February 19-22, Oshkosh, Wis.—Oshkosh Automobile Dealers' Association's second annual show in Armory B.

February 20-22, Canandaigua, N. Y.—Motor Car show in Hawley's Garage, under the management of A. Blumenstein.

February 22-March 1, Brooklyn, N. Y.—Brooklyn Motor Dealers' Association's third annual show in the 23rd Regiment Armory.

February 24-March 1, Omaha, Neb.—Omaha Autmobile Dealers' Association's annual show.

February 24-March 1, Cincinnati, Ohio—Third annual show of the Cincinnati Automobile Dealers' Association in the Cincinnati Music Hall.

February 25-28, Topeka, Kan.—First annual show of the Kansas Motor Show Co.

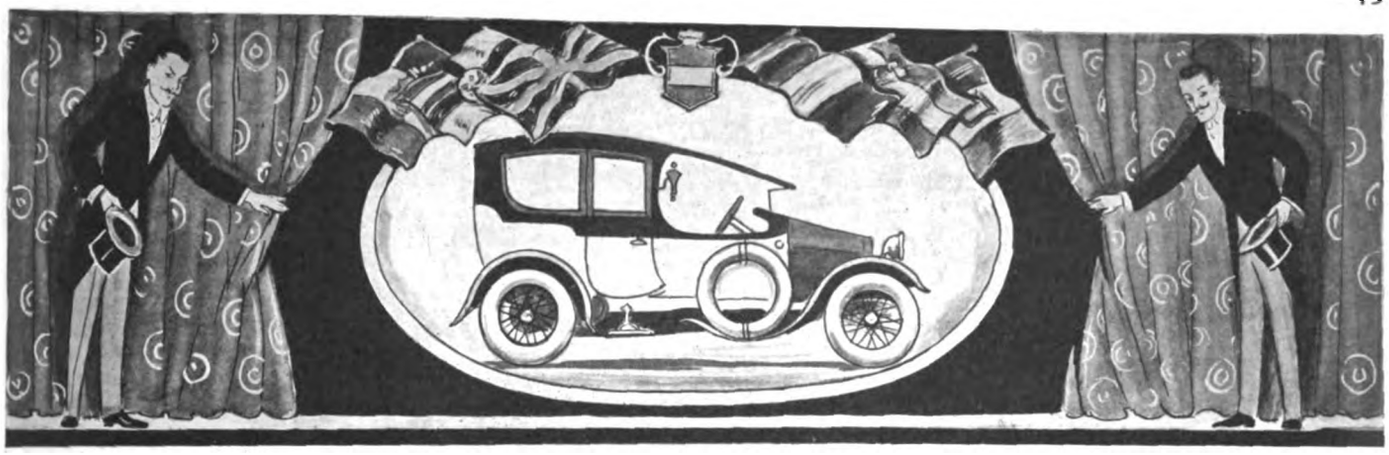
February 26-March 1, Fort Dodge, Ia.—Second Annual show of the Fort Dodge Dealers' Association in Armory.

January 27-February 1, Rochester, N. Y.—Fifth annual show of the Rochester Automobile Dealers' Association in Exposition Park.

March 1-8, Paterson, N. J.—Second annual show of the Paterson Automobile Dealers' Association.

March 3-8, Pittsburgh, Pa.—Pittsburgh Automobile Dealers' Association's show in Duquesne Garden.

March 3-15, Des Moines, Ia.—Des Moines Automobile Dealers' Association's fourth annual show in the Coliseum. First week pleasure cars; second week commercial vehicles.



March 10-15, Dallas, Tex.—Annual show of the Dallas Automobile Dealers' Association in the Fair Grounds Coliseum.

March 20-24, New Orleans, La.—Annual show of the New Orleans Automobile Dealers' Association.

Four "Private Shows" in New York.

Inability to procure space adequate, or sufficiently well located, either in Madison Square Garden or in the Grand Central Palace properly to display their lines, is responsible for the non-appearance at the impending show of four accessory exhibitors who have been prominent figures in shows of yesteryear—the Bosch Magneto Co., Jones Speedometer, Eisemann Magneto Co., and the J. S. Bretz Co., importer of F & S ball bearings. A more than ordinarily comprehensive display of the various Bosch products, with special emphasis on that portion dealing with the new oil and waterproof ZR types of instruments, will be staged at the salesrooms of the Bosch company, 223 West 46th street; at the Eisemann salesrooms, 225-227 West 57th street, a display equally interesting will be made in which Eisemann types E. M. and E. A. with bascual and automatic advance, respectively, and the newer low priced instrument, type E. B., with separate transformer coil, will figure largely. Several new models of the Jones instrument in combination with clocks will be on view throughout "show week" at the Prince George Hotel, 27th street, between Madison and Fifth avenues; naturally, the older models also will be shown. The J. S. Bretz Co., 250 West 54th street, will display the newer series of F & S ball bearings which utilize the new and impressively simple "blue ribbon" ball retainers.

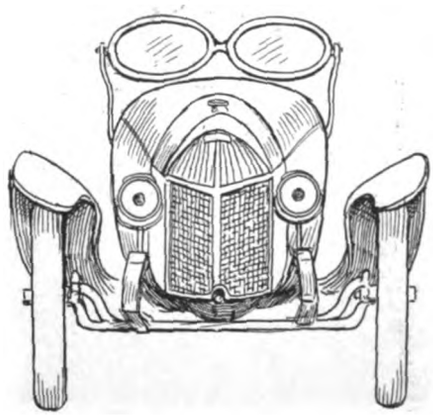
FOREIGN CARS IN AN AMERICAN SETTING



Machines in Keeping with Surroundings at Importer's Salon in Astor Ballroom—Indications of Unusual Attention to American Requirements—Starters Getting a Foothold—Body Work of Home Builders a Feature.

It is not likely that the atmosphere of the Importers' Salon ever can be anything but foreign, broadly speaking. There are too many characteristics of other nationalities to permit anything different.

To begin with, the dignified, not to say magnificent, setting provided by the grand ball-room of Hotel Astor in New York is so different from the surroundings of any of the simon-pure American automobile shows that one instinctively associates it with things that are imported and expensive, and the modest banners bearing names that, for the most part, no two people pronounce alike, help not a little to strengthen the impression of un-Americanism.

To go a little deeper, but still keeping to the superficial, there is an undeniable richness of finish that characterizes the mechanical portions of the exhibits and shows through dull, quiet colors as well as taking the glare from the more brilliant hues which, however, are sparingly used. Look at that dark-colored cylinder, for instance. At a little distance it looks rather ordinary; but on closer view it exhibits a smoothness and high finish that almost makes one doubt that the substance under the finish is cold, hard, cast iron. There are indescribable touches in the machines as a whole and in the separate details that somehow proclaim foreign workmanship.

Go still a little deeper. There's a magnificent car—that Isotta, finished in white. What a perfect piece of body-work! It certainly is remarkable, the way these Italians can build really artistic bodies. Now, why can't American builders do work like that? Look at the body-builder's name plate for the answer and, behold! the body is an American body, built by Burr & Co., New York—and the knowledge that it is does not take the edge off one's appreciation of its beauty. Then pick out a real foreign body. One ought to be able to tell it if he is on the lookout for it. That's one, surely — that curious, narrow-hooded, round-backed runabout with individual windshields

DAIMLER TERRAPLANE BODY

that look like a pair of spectacles and wide, flaring mudguards that look like wings. That's the Austrian Daimler with a "terraplane" body. Oh, distinctly foreign, even to the curious metallic brown finish. Nevertheless, the body was built by Healey & Co., of New York! No end of those little "foreign touches" came straight out of Yankee workshops, and the foreigners themselves will "point with pride" to the American bodies on their imported chassis.

But not all of the exhibitors care to have their wares illustrated. At the Austrian Daimler stand, for instance, a special watchman is stationed to "shoo away" photographers and artists who seek to "take" the odd looking car on display.

Here's an innovation, for an importers' show: Look at that Hartford starter on the front of an Isotta Fraschinni car. But that was put on by special order, explains the attendant; it is not regular equipment; starters are not fitted except on order. Right across the aisle, however, there is a starter that is fitted as regular equipment. No less a car than the Renault is regularly equipped with a Ward Leonard electric lighting and starting system. That is, the cars brought to the United States are so equipped. But the only other car in the show with a starter is the Canadian Keeton, which has the Jesco electric system (made in Chicago) and a crankless front.

Just here is where one gets an impression. It is a show of foreign cars—yes; but more than ever before there is American influence at work. American workmanship and ideas are visible not only in body work, but in wheel diameters, in clearances, in springing for rough roads, and so on. Foreigners here appreciate some, at least, of the good things that are American, and make use of them. The result is that one leaves with a feeling that there is a good deal that is American about the Salon.

Of the various nations whose cars were exhibited at last year's Importers' Salon two are missing from the Astor ball-room, in which the show will hold the boards until Saturday next—England and Switzerland, which showed, respectively, the Napier and the Pic-Pic. The 1913 Salon holds the product of Austria (Daimler), Canada (Canadian Keeton), France (De Dion, Renault and Panhard), Germany (Mercedes), Italy

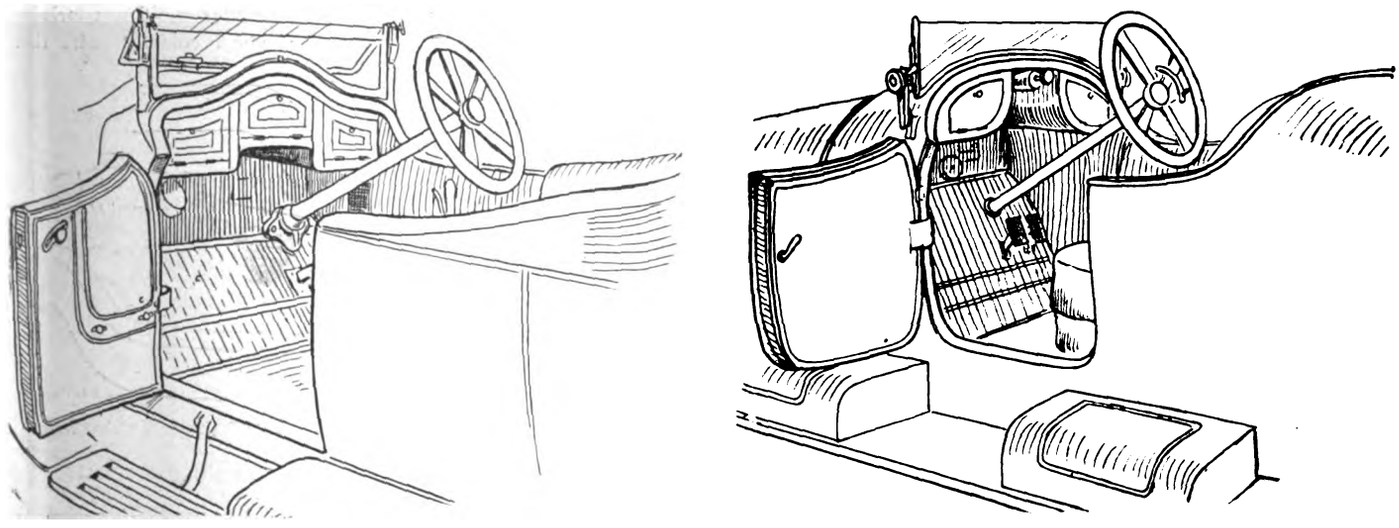
VIEW LOOKING DOWN THE MAIN AISLE AT THE IMPORTERS' SALON IN THE BALLROOM OF THE HOTEL ASTOR

Digitized by Google

(Lancia and Isotta Fraschini) and Belgium (Metallurgique and Minerva). Canada is a newcomer. Cars that were shown last year but have not returned to the ball-room are the Benz, Charron, Darracq, Napier, Peugeot, Pic-Pic and S. P. A.

The promise of the last Salon of motors of the so-called valveless types, or of types in which the valves were other than poppets has not been fulfilled, for there were but two representatives of the poppetless schools —Panhard and Mercedes — both using Knight motors. The Panhard exhibit, however, is a whole-souled poppetless one, for every model has a Knight engine. A number of new features are embodied in the two chassis models shown, not the least interesting of which was the 20-horsepower four-cylinder Knight with unit power plant construction.

Final drive is through propeller shaft and bevel gears, the shaft being enclosed in a long, heavy torque tube which extends to the universal joint at the rear end of the gearbox. Three-quarters floating construction is employed in the rear axle.

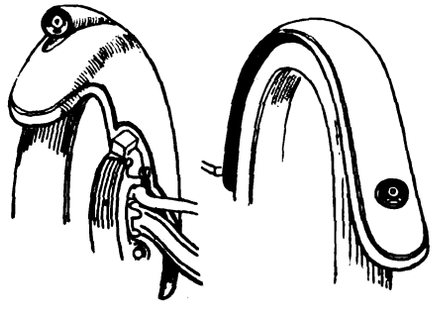


PANHARD ⅞-ELLIPTIC SPRINGS

The rear springs are of the rather rare type known as seven-eighths elliptic cantilever springs. As the term implies, they lack but an eighth of being full elliptics. There are no rigid connections, except where the springs are clipped to the axle. As the accommpanying illustration shows, the two front ends are shackled to the frame, the two rear ends are shackled together and the top member is pivoted to the sharply raised rear frame member. The springs thus have the utmost freedom of movement and transmit no driving strains. The front springs are semi-elliptic.

Control is exceedingly simple. There are neither spark or throttle levers on the steering wheel. Ignition is by high tension magneto with set spark, while throttle control is by foot accelerator only, though a lever on the dashboard is provided to limit the minimum speed of the motor.

The 30-horsepower Panhard chassis differs from the 20-horsepower chiefly in the fact that the Knight engine, which has a bore and stroke of 100 x 140 millimeters, about 3.93 x 5.5 inches, respectively, has separately cast cylinders and is not a unit with the four-speed gearset, which is carried well back and connected with the rear axle through a short propeller shaft. Rear springs are three-quarter elliptic. The familiar Panhard throttle and spark spools are mounted on the steering wheel.



No little interest was manifested at last year's Salon in the De Dion chassis with 8-cylinder V-type motor. This year the same motor appears, but in a new setting—that is to say, in a new chassis, which has worm drive instead of bevel gears. The shaft system is complex and peculiar, and exhibits the kind of workmanship that is necessary to get good results from such arrangements —and there is no question but that the De Dion gets results. The propeller shaft is in two sections with two universal joints, which at once attract attention because of their size, and on closer inspection prove to be ball-bearing, there being four ball bearings in each joint. The first joint is directly back of the flange-cooled transmission brake, and the shaft defies precedent by taking an upward slant to the second joint, while the second section takes a still sharper upward shoot to bring it to the top of the worm-and-gear housing. The worm section of the propeller shaft is enclosed in a torque tube which terminates, at its forward end, at a round cross-piece to which it is clipped by a block which is free to rock with the motion of the car on its springs. The second universal, counting

CONTRASTS IN DASHES—RENAULT TOURING CAR AND METALLURGIQUE "BROOKLANDS STREAMLINE" BODY

The 20-horsepower Panhard chassis which occupies the place of honor at the front of the space, on the aisle, is of the polished exhibition kind, including the four-cylinder Knight engine, which, curiously enough, in most cars is left rather unfinished as to exterior. In fact, in the 30-horsepower Panhard chassis, further back, the Knight engine is of "regular" finish and is decidedly rough. Which may be said to point the moral that genuinely fine birds can get along very well without fine feathers. Nothing but Knight-engined Panhards are exhibited, and these only in 20-horsepower and 30-horsepower sizes.

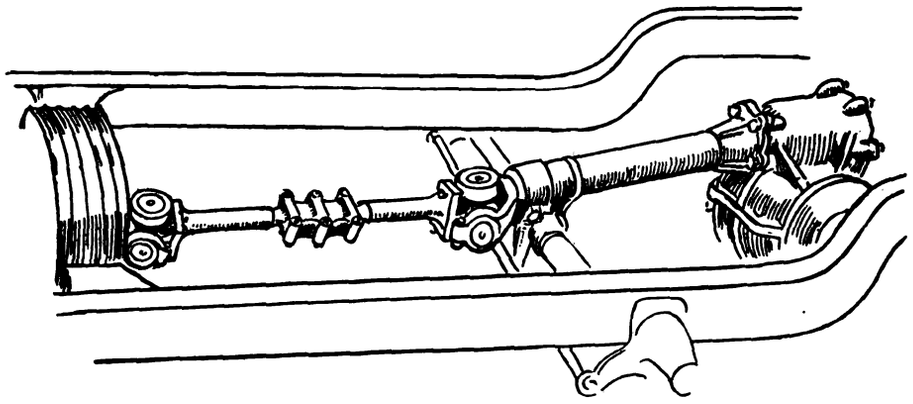
The 20-horsepower motor has four cylinders, cast in pairs, the bore and stroke being 80 x 130 millimeters, or about 3.1 x 5.1 inches respectively both crankshaft and camshaft having three bearings. The casing which encloses the four-speed gearset is bolted to the crankcase making a unit power plant which is supported at three points. Lubrication is by splash from individual troughs; there is no oil pump.

I-F MUDGUARDS AND LAMPS

Digitized by Google

from front to rear, is just forward of this cross shaft. The inevitable varying of length of the forward section of the shaft is taken care of by a telescoping joint of the feather-and-groove type.

The biggest thing in the ball-room, in point of power, is the enormous Isotta Fraschini 120-horsepower motor. Two of these are shown, one in a bare chassis and the other in a touring car which is the most conspicuous object of the I-F space. The body, which is finished in white and is the work of Burr & Co., is of the more or less conventional touring type exteriorly; but notwithstanding its enormous power it has room for but four passengers, who occupy individual seats. The mudguards of this machine are peculiar in that on all wheels they are of the narrow, curved type, following quite closely the tire contour, which is made possible in the case of the front guards by mounting them on the steering knuckles, so that they swing with the front wheels in steering. Broad aprons extend from the front guards to their supports, preventing the throwing of mud on the body. In the tops of the front guards and in the lower ends of the rear guards there are formed little hoods in which are enclosed small electric lights, those in the rear being red and the front ones white. Two demountable wire wheels are carried, complete with tires, one on each side of the huge engine hood, where they find plenty of room notwithstanding their considerable size. This particular machine has no crank, being fitted with a Hartford starting system, applied to the forward end, outside.



Another feature of the I-F exhibit is the Sankey steel wheel, which is supplied on order. This wheel is made up of two halves of pressed steel, which, before being put together, look like a hollow wheel that has been split edgewise, hub and all. The pressed-up sections are joined by a welding process, forming a wheel that is light—surprisingly light—strong, and free from bolts and nuts. These wheels are made only with clincher rims and are intended to be removed bodily in case of tire trouble, there being a quick-detachable feature in the hub which permits very rapid removal. The Isottas make a feature of the leather disk universal joints that were shown last year, and, incidentally, they are the only cars in the Salon that show final drive by side chains—excepting the big Mercedes racing car.

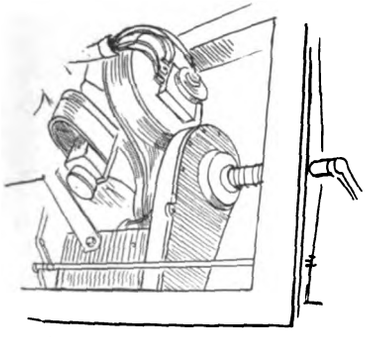
Dashboards at the Salon present the widest possible range of arrangement, running from a deeply cowled board with almost every available inch filled with instruments and what-not, to a straight, plain expanse of polished wood without a curve and without a break in its smooth expanse. The last is a feature of the new Renault chassis with 22-35 horsepower six-cylinder engine. The chassis is a beautiful one, and is of a type constructed especially with a view to use on American roads, having high clearance, re-enforced axles and special spring construction; Renault shock absorbers are fitted on the rear, and the rear springs are underslung.

The modest horsepower rating is a little surprising when compared with the outward size of the motor, which has its cylinder cast in threes. The bore and stroke are 3 5/16 x 6 inches, respectively—truly a long-stroke motor. The length of the cylinders and the liberal water jacket dimensions make the cylinders seem very large, while the big radiator, generous pipes and the wide-spreading blades on the rim of the flywheel, all familiar in connection with the Renault thermo-syphon cooling system, look together big enough for a much larger motor. The impression is in no wise diminished by the fact that the cylinders are considerably offset. The Renault is the only foreign car shown with an electric lighting and starting system as part of its regular outfit. A chassis is shown with the Ward Leonard two-unit system installed and working. The dynamo is in the engine space, while the starting motor is at the rear, driving to the flywheel through a large gear ring bolted to the rear side of the rim. Judging by the constantly recurring hum of the starter, and the continual stream of requests for information, such a system is by no means out of place on an imported car, and doubtless the next Salon will see an extension of the idea.

One of the most attractive dashboards at the show is on a Renault touring car; its peculiarity is in the attractive and convenient arrangement of three little lockers built on the top of the dash, following its contour, with doors opening downward. The wood is a light color with a handsome grain, well brought out, and the general appearance is as pleasing as the arrangement is useful.

It is, perhaps, just a little hard to decide whether the Canadian Keeton car ought to be regarded as a foreign product or not, for it is of American origin, and, anyway, Canada does not seem very "foreign." However, as the Keeton is shown in an importers' show and its price is quoted as including duty, it must be concluded that it is an importation, at least. The car is distinctly a big one, with a wheelbase of 136 inches, and has an extremely neat-looking 48-horsepower motor with six block-cast cylinders, a Renault type radiator, and is cooled by the thermo-syphon system. Drive is by propeller shaft through a four-speed gearset in which direct drive is on the third speed, the fourth being an overstep. The "Jesco" electric lighting and starting system is fitted as regular equipment; a single unit, running alternately as motor and dynamo, is carried at the forward end of the motor and is connected to the crankshaft by "silent" chain. Wire wheels are fitted exclusively, and the regular equipment includes an extra wire wheel complete with tire.

DE DION WORM DRIVE TRANSMISSION ELEMENTS, SHOWING UNIVERSALS



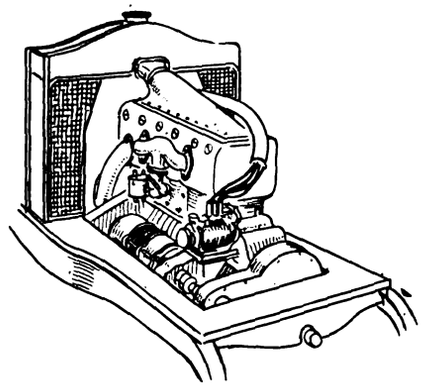
Among other features, this car has left side steering and center control, and is the only machine in the show to depart from the time-honored right side position. Incidentally, questions as to this style of control elicited from the foreign contingent superior smiles, an occasional shrug and such remarks as "What's the use?" "No; we do not want it," "Why should we make changes for no good reason?" etc.

The Metallurgique exhibit is a good example of the existing foreign attitude with regard to cars—that is to say, it is assumed that beyond a few generalities the public is little interested in mechanism. Consequently, not even a stripped chassis is on view. There are, however, some exceedingly interesting examples of foreign body work, which, it cannot be gainsaid, is deserving of more than casual attention. One, a six-passenger car of what is known as the torpedo "sporting" type, is built on a 56-60 horsepower chassis and is peculiar in that the entire body space is a single compartment, with a fixed rear seat for two, a fixed seat—an extremely comfortable looking one, by the way—for the driver, and three

Digitized by Google

folding seats, one beside the driver's seat and the two others just forward of the rear seat. The whole arrangement gives an idea of sociability and a total lack of stiffness and formality, which is just what is intended, for the machine is designed to be driven by the owner. Another body, on an 85-90 horsepower chassis, is a roadster of the Brooklands type, with stream-line formation. This is a very striking turnout, and it includes a number of neat little details. The rear end of the turtle-back, for instance, is removable, revealing a space where a spare wheel is carried, and a little wash-basin in which the owner can remove the signs of toil from his hands after changing a wheel—for this, too, is an owner-driven car, and, like the other, is finished in white.

In the Mercedes space the center of attraction is the 90-horsepower four-cylinder racing car, with a big "22" on its narrow-ended hood, in which Ralph De Palma won the Elgin Trophy and the Vanderbilt Cup; the huge silver trophies at either end of the



RENAULT DYNAMO DRIVE

machine provide an eminently suitable garnishment. Like many of the foreign makers, the Mercedes people have made no mechanical changes in their chassis. Many visitors to the show have asked to see the Mercedes-Knight engine, but are informed that none are being exhibited—in fact, Knight engines are fitted to imported machines only on special order. A big limousine is shown which has a carrying capacity of no less than eight passengers, there being sufficient width to allow the use of three extra seats; the third folds against the front of the rear compartment.

The Austrian Daimler exhibit may be said to center around the "terraplane" roadster—a "long, low, rakish" craft of the most pronounced type. It is mounted on an 80-horsepower four-cylinder chassis and is credited with enormous speed, and certainly the cut of the car is calculated to give an impression of the next thing to flying. The hood is extremely narrow and the rear tapers off to a stream-line point; the dash is cavernously cowled and the seating space is small. With very wide, spreading mudguards, heavily brass rimmed individual windshields of oval outline and a color that somehow suggests smoothness and absence of air friction, the car is unique—at least, so far as the Salon is concerned.

The stripped chassis shown in the Lancia exhibit serves the double purpose of exposing the mechanism and of proving that there has been no change in the construction of the machine, which is equivalent to saying that no change is required. Extremely clean-lined, block-cast, four-cylinder motors, with four-speed gearsets, are used in both 20-horsepower and 30-horsepower models. The Lancia makers give an option of steering column rake—either 38 or 50 degrees.

KEETON DYNAMO POSITION

The Belgian car, Minerva, shares with the Panhard the honor of exhibiting the Knight motor, though no stripped chassis is shown, and the exhibit centers around the bodies, which are of the most luxurious types. A particularly striking model is what the French call an "evening car," though just how it differs from a day car is not apparent. A five-passenger limousine "evening car" is upholstered gorgeously in what those who know refer to as Du Barry rose brocade. Not only are there cushions—or rather, pillows—and robes to match, but there are gold-mounted toilet articles and a little folding table upon which they may be spread.

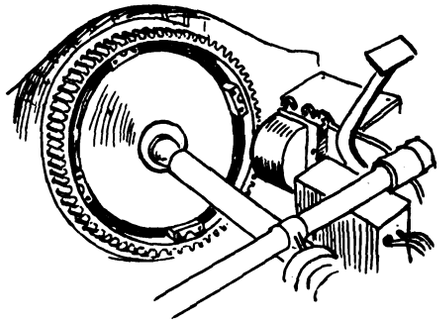
Following is a summary of the exhibitors and the cars that are shown:

Adams-Lancia Co., New York City—Four four-cylinder, block-cast, Lancia cars; one each seven-passenger touring car, limousine, landaulet and roadster and one four-cylinder chassis.

W. C. & H. N. Allen, New York City—Five four-cylinder, pair-cast, Metallurgique cars; one each seven-passenger touring car, roadster and landaulet and two limousines.

De Dion Bouton Selling Branch, New York City—Seven De Dion Bouton cars; two four-cylinder coupes, one each four-cylinder six-passenger touring car and limousine, two eight-cylinder, seven-passenger touring cars, one eight-cylinder limousine, and three eight-cylinder chassis.

Distributing & Importing Co., New York City—Four four-cylinder, pair-cast, Mercedes cars; one each seven-passenger touring car and landaulet and two limousines and one four-cylinder racing car.



Healy & Co., New York City—Three four-cylinder Austrian Daimler cars; one roadster with individually cast cylinders, one limousine with pair-cast cylinders, and a seven-passenger touring car with a block-cast motor. Bodies Healy built.

Holbrook Co., New York City—Limousine and coupe bodies mounted on Minerva chassis and a coupe mounted on a Lancia chassis.

Isotta-Fraschini Motor Co., New York City—Five four-cylinder, block-cast, Isotta-Fraschini cars; one each seven-passenger touring car, coupe and limousine, and two landaulets, and three four-cylinder chassis.

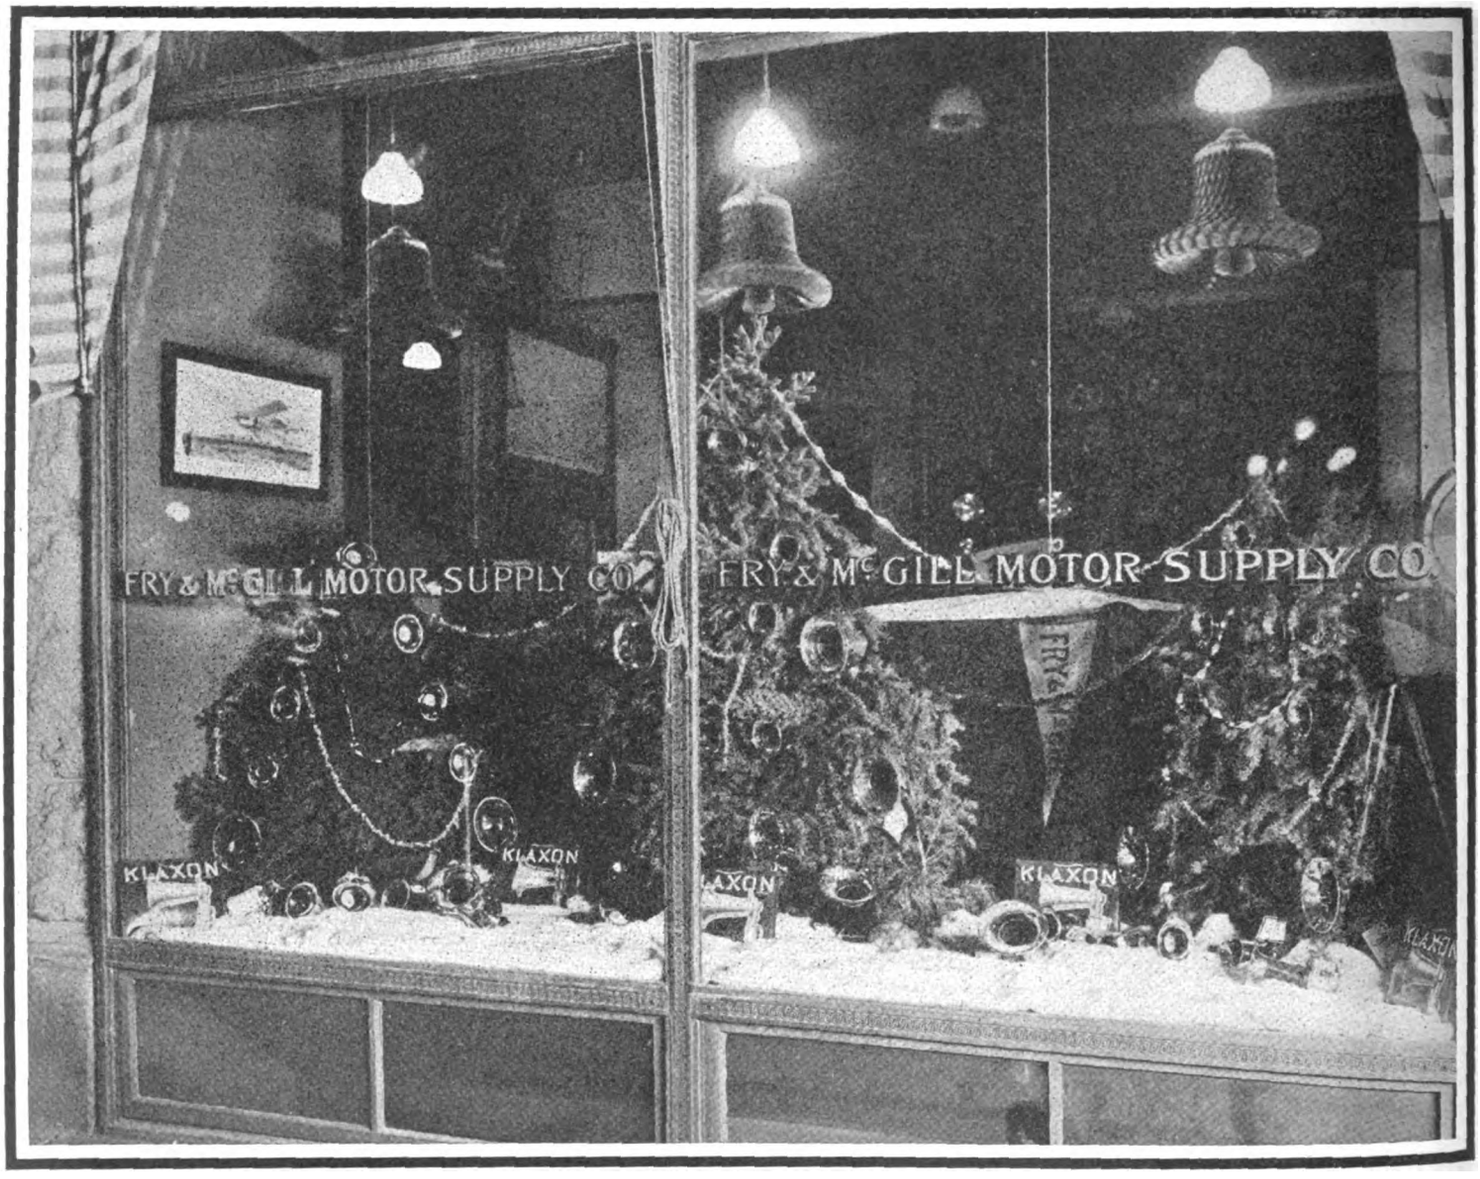
Keeton Motor Co., Ltd., Brantford, Canada—One six-cylinder, seven-passenger Canadian Keeton touring car and one six-cylinder chassis; both with block-cast motors.

Locke & Co., New York City—Seven-passenger touring car and coupe bodies, both mounted on Renault chassis.

RENAULT STARTER GEAR

Panhard & Levassor Selling Branch, New York City—Three four-cylinder, Knight-engined Panhard cars; one each landaulet with separate cast cylinders, seven-passenger touring car and limousine with pair-cast cylinders and two four-cylinder Knight-engined chassis with separate and pair-cast cylinders, respectively.

J. M. Quinby & Co., Newark, N. J.—Seven-passenger touring car and landaulet bodies mounted on Minerva chassis and one coupe and one landaulet body mounted on Renault and Isotta-Fraschini chassis.



Renault Freres Selling Branch, New York City—Four four-cylinder Renault cars; one each seven-passenger touring car, coupe, limousine and landaulet; one six-cylinder, seven-passenger touring car and one each four-cylinder and six-cylinder chassis. Cylinders on fours and sixes cast in pairs and threes, respectively.

F. W. Sewell, New York City—Six four-cylinder, Knight-engined Minerva cars; one each coupe, landaulet and Berlin and three limousines.

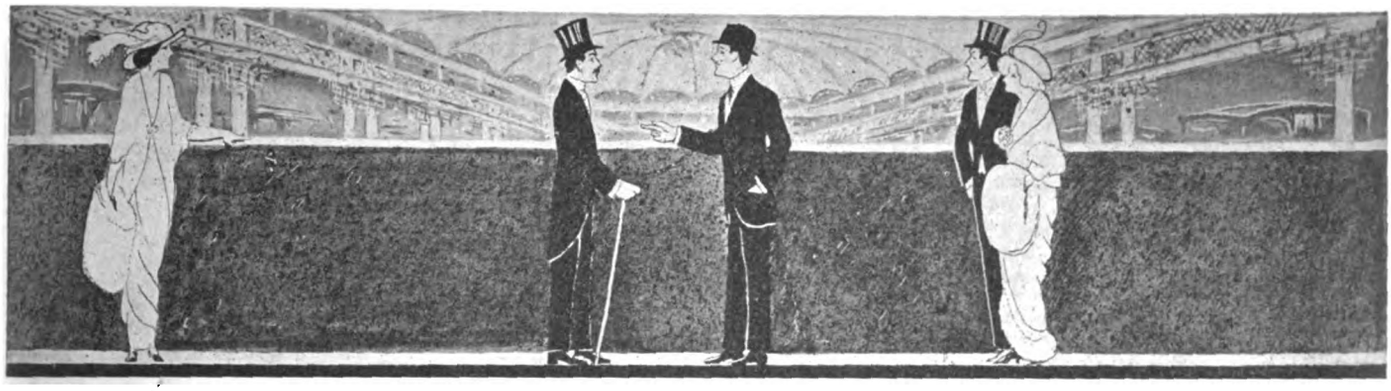
MAKING SHOW WINDOW IMPRESS PUBLIC'S EYE

One-article Display as One Means of Causing Some One Part of Store's Stock to be Remembered—Method Employed by Denver Accessory Dealer During Christmas Season.

ATTRACTIVE YULETIDE SHOW WINDOW DRESSING CENTERING ABOUT A SINGLE ACCESSORY—KLAXON HORNS



How to fix in the mind of the observer the fact that he has seen something in a show window and how to have him carry away in his memory a picture of some article which he may need, is a problem which window dressers have made the subject of long study and, as a result, many and varied have been the methods evolved; one of these, designed to fix some one object in the brain cells of the man who stops to look, or passes by without stopping but nevertheless looks, is the one-article window in which the display is built up of some one piece of stock. This, to be effective, requires a little decorative skill, and oftentimes the merchant who thinks he is not cut out for a window trimmer will surprise himself once he tries out his ability.

What one accessory dealer accomplished in the one-article line is shown by the accompanying photograph of the store front of the Fry & McGill Motor Supply Co., of 16th street and Broadway, Denver, Col. This company chose Klaxon horns as the article and to give a Christmas setting three evergreen trees, which are not scarce about Denver, a little cotton batting, some Christmas tree decorations and the horns were the principal necessities in the design.

Like every good Yuletide exhibit, there was snow; this was the cotton with a glittering covering on the floor of the window.

The trees, the largest in the center, were fixed in place at the back of the window and the horns were arranged thereon; the larger horns found suitable places nearest the bottoms of the trees and the Klaxets were fixed on the upper part, while in the "snow" lay other horns, the black and brass standing out in contrast against the white of the cotton and the green of the trees. Klaxon cards, a company banner, a picture of an aeroplane on the side wall and electric lights to show things up at night were the remainder of the design.

DOORS OF NEW YORK'S TWIN SHOW ALMOST AJAR

Madison Square Garden and Grand Central Palace Made Ready for "13th Annual"—Surprises Developed Since Motor World's Mammoth Before-Shows Number—Wealth of Cars and Accessories to be Displayed.

When the doors of Madison Square Garden—in which goodby tears were shed last year—and Grand Central Palace are opened on Saturday night, 11th inst., it will be on such an automobile show as never was before; it will be a twin show, so to speak. Nearly 500 separate exhibits will be set out for the wondering gaze of the thousands who will pass the portals of the two buildings to view them: In the Garden, some 43 automobile manufacturers and 272 makers of accessories will hold forth; in the Palace, there will be 46 makes of pleasure cars and more than 100 accessory exhibits, to say nothing of the 20 motorcycle exhibits.

Until Saturday night, 18th inst., pleasure car manufacturers and makers of accessories will occupy the boards in both buildings, when a quick shift will be made and the pleasure cars will make way for the more ponderous though scarcely less interesting commercial vehicles, which will continue the "run" for another week, or from the 20th to the 25th. With comparatively few exceptions, accessory makers who have taken space for the first week will remain for the second.

Two Shows for the One Admission.

Despite the fact that the show is held in both buildings, and that nearly a mile separates them, a single admission ticket—50 cents, please—will admit to the "whole show." That is to say, it will admit nearly always. On Tuesday and Thursday, 16th and 18th insts., the tax has been raised to $1, ostensibly to reduce the crush slightly that members of the "400" may view the exhibits in comparative comfort. As is usual, these two days have been styled "society days," though it is doubtful, in view of past experience, whether either the designation or the increase in the price of the ticket will operate to keep very many persons away.

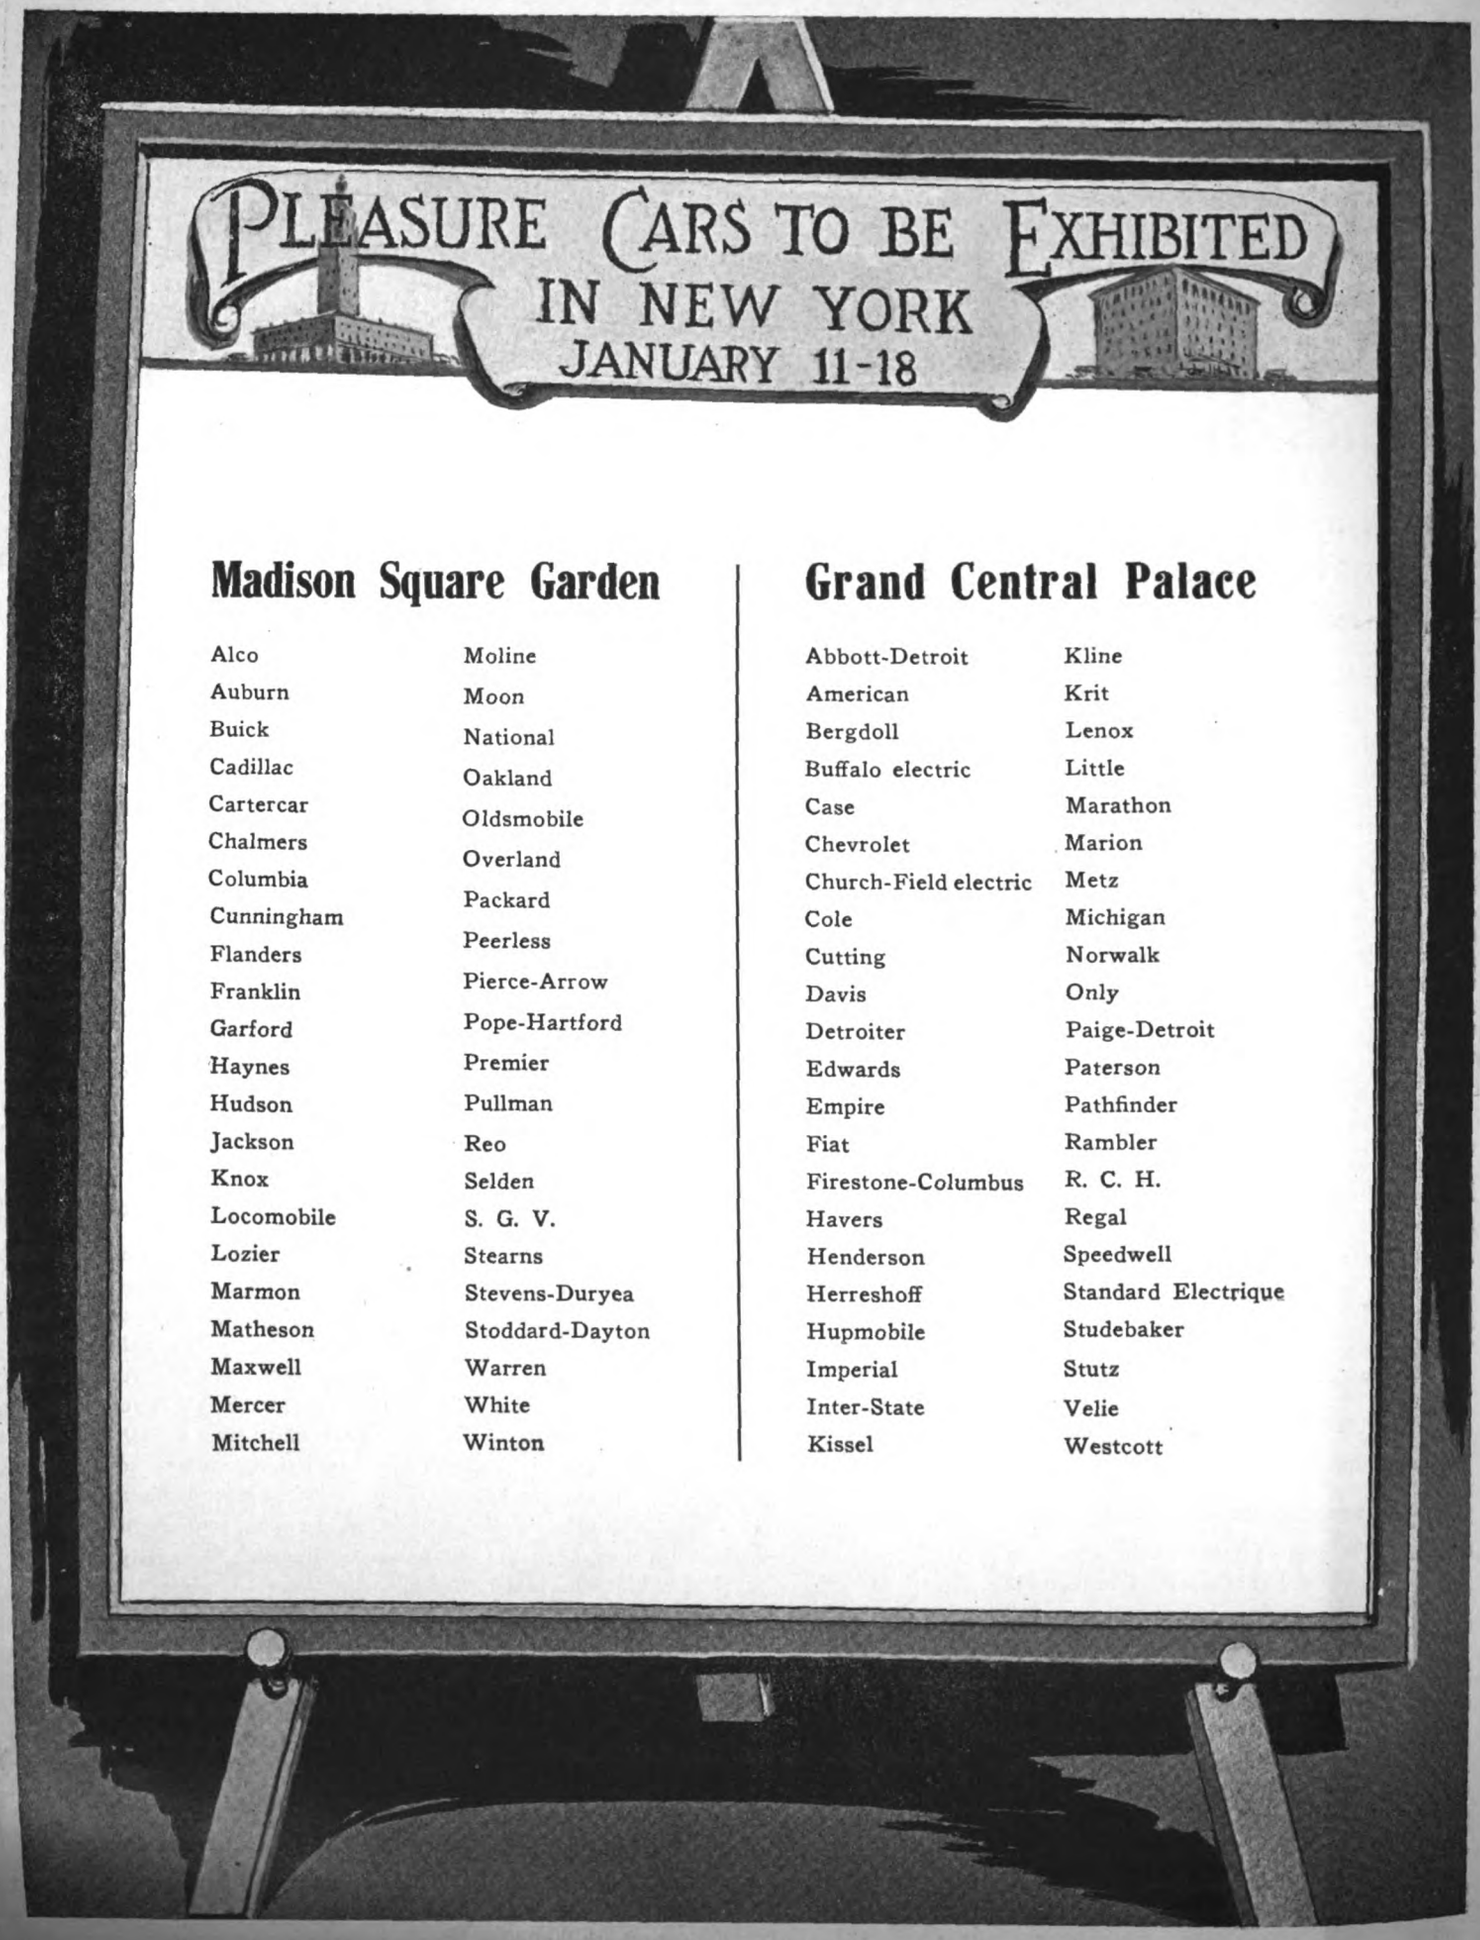
Already the work of practically reconstructing and decorating and otherwise metamorphizing the Garden has been completed, and when the ticket choppers commence to chop tickets on Saturday night on the inside of the big building there will be mirrors—mirrors everywhere, that will reflect the myriad electric lights, the statuary and the remainder of the decorative scheme that will prevail.

Thousand Men at Work on Garden.

All of which requires an immense amount of labor, of course. Just how much it does require may be gathered from the information that no less than 800 men are now working in night and day shifts to get the Garden ready for its host; altogether there are some 1,200 persons employed in making ready for the opening night. Some of them are building the clever network of steel cables and girders that will support the temporary balconies, which, as was the case last year, will encircle the big amphitheater. Two hundred tons of steel is a whole lot of steel, but it is none too much for the purpose. Others are cunningly covering the steel work with the veneer of color and "effect" that is to hide the reality of the structure and make of it a veritable fair garden, or, as those who have the decorating in hand term it, a "Crystal Palace."

Landscape Artists Beautify Palace.

Uptown further, at Grand Central Palace, which is just about a mile from the Garden, although the exhibits it houses are part and parcel of the one big show in the two buildings, which is proven by the fact that one ticket will admit to both buildings, if by nothing else, there is evident very nearly, but not quite, so much activity. The Palace is new and it does not require the "fixing" required by the Garden, although it will be none the less resplendent. There won't be any Louis "the cans" effect, nor yet will it be Louis "the quince," as it has been mispronounced by some. It will be just a good old American effect, and it will be obtained with the aid of a corps of landscape artists whose names are a power. Alec. Grinager, the noted Norwegian artist; Walter Burridge, the scenic artist whose fame has spread further than New York City; Walter Shaffner—all these men have contributed to make of the walls of the Palace a veritable picture gallery.



Natural Growths Part of Scheme.

Probably no person who visits an automobile show merely to look has any idea of the tremendous amount of work that is necessary in preparing for the occasion, though those who revel in statistics may take small comfort in the knowledge that in the Palace more than 18,000 feet of natural vines will be needed to cover the lattice work; 9,000 poinsetta blooms will blossom on the vines; and some 500 large branches of live oak, specially treated to make them fireproof, have been brought up from the sunny South to help out the decorative scheme. One hundred and fifty men will do the work, and, last but not least, 100 expert carpet layers will stretch the floor coverings, aggregating some 12,000 square feet, just before the doors are opened.

Shows of the Past and Present.

What a contrast between the coming show and the shows of yesteryear! To those who have memories that stretch back

far enough, there will be visible a small corner in the basement of Madison Square Garden in which there were huddled three makes of "horseless carriages." The year was 1899, and the occasion was the annual bicycle show. Those three makes of automobiles, which have proven the nucleus of the present tremendous shows, were the Pope, the Oakman and the Riker electric. Of them all, the Pope is the only one that has survived the intervening years, though those who knew only the first Pope would be unable to recognize its successor.

Show of 1900 First of Moment.

Few paid much attention to "horseless carriages" in those days, except as curiosities, and it was not until the following year—1900—that the automobile industry had made such strides as to make it more than ordinarily apparent. At the show in Madison Square Garden that year, 33 automobile manufacturers exhibited cars and 24 accessory makers occupied intervening spaces and the balcony. That is to say, they occupied part of the balcony. Of course, 57 exhibits filled not more than a small part of the amount of available space, and it was as much to fill the remaining space as for any other reason that the center of the Garden was occupied in part by a small oval track which served to demonstrate the cars.

Test Hill that Tried Out Cars.

Another of the curious and almost forgotten features of one of the earlier shows was the "test hill" that was erected on the roof of the Garden. In those days it was quite a task for many of the cars to climb even a moderately steep grade, and as a result the hill-climbing ability of a car constituted for a time a comparative measure of its worth in the eyes of the purchaser. The "test hill" was narrow and was constructed of boards, the arrangement being shown by the accompanying picture.

Advance Rapid in Last Twelve Years.

From 1900 up to date the march of the automobile has been triumphant, as is indicated by the statistics of the shows that intervene: In 1901, there were 41 automobile and 76 accessory exhibits; in 1903, the 1902 show having been set forward six weeks from November 1902, there were 60 car exhibits, the accessory exhibits remaining practically stationary; in 1904, the number of cars exhibited rose to 64, nearly all of which were gasolene, thus marking the demise of the steam car, which up to that time had held up its head fairly well. From then up to 1911, which saw the inauguration of the "two weeks" shows, at which the first week was devoted to pleasure vehicles and the second to commercials, the number of manufacturers represented steadily has increased, until, with the opening of the doors of the Garden and the Palace on Saturday night, 89 automobile manufacturers will be represented. And all this from a beginning in the basement of the Garden as a "side show" to an exhibition of bicycles!

As to what will be new at the forthcoming shows, that, as Kipling says, is quite another story. It is a long story—a very long one—that already has been told with a thoroughness and a minuteness never before attempted or accomplished, in the 400-page "Before Shows" issue of Motor World that bore date of December 26. Still, to quote an old saw that is none the less trite for its age, "A good tale bears telling twice," and besides, there invariably is a number of "last minute" developments and surprises that have been held up commodious sleeves to be sprung with the opening of the doors of the shows.

Exhibits' Distinguishing Features.

The show will simply serve to make clearer the already well-defined tendencies that were pointed out in the "Before Shows Issue" of Motor World, than which no show forecast ever was more complete. "Greater value" is the expression which best describes the cars as a whole, though specifically the more pronounced leanings will be found in the increase in the number of "sixes" and limousines, the fullness of equipment, the widespread adoption of electric lighting and engine starting systems, the tendency toward long stroke block cast motors, the increasing popularity of wire wheels, the longer springs and larger tires and demountable rims, the longer wheelbases, the increase in the number of cars equipped with left steer and center control, the generally deeper upholstery, the V-type radiators and clean running boards, the cowl dashboards and gasolene tanks, the dirt-proof construction and the improvement in lubrication systems, the generally greater quietness of motors and mechanisms in the accomplishment of which the adoption of "silent" chain camshaft drives and worm driven magnetos has played an important part.

Rotary Valve Motor in Speedwell.

Not the least important of the "surprises" that are held in readiness to be sprung, is the formal display of the Mead rotary valve engine in a stock model by a recognized manufacturer of repute which heretofore has confined its efforts to the production of poppet valve engines—the Speedwell Motor Car Co., of Dayton, O. However, that is only half the surprise; the other half is that the Mead engine with which at least one of the new Speedwell models will be equipped is a "six." The Mead engine, be

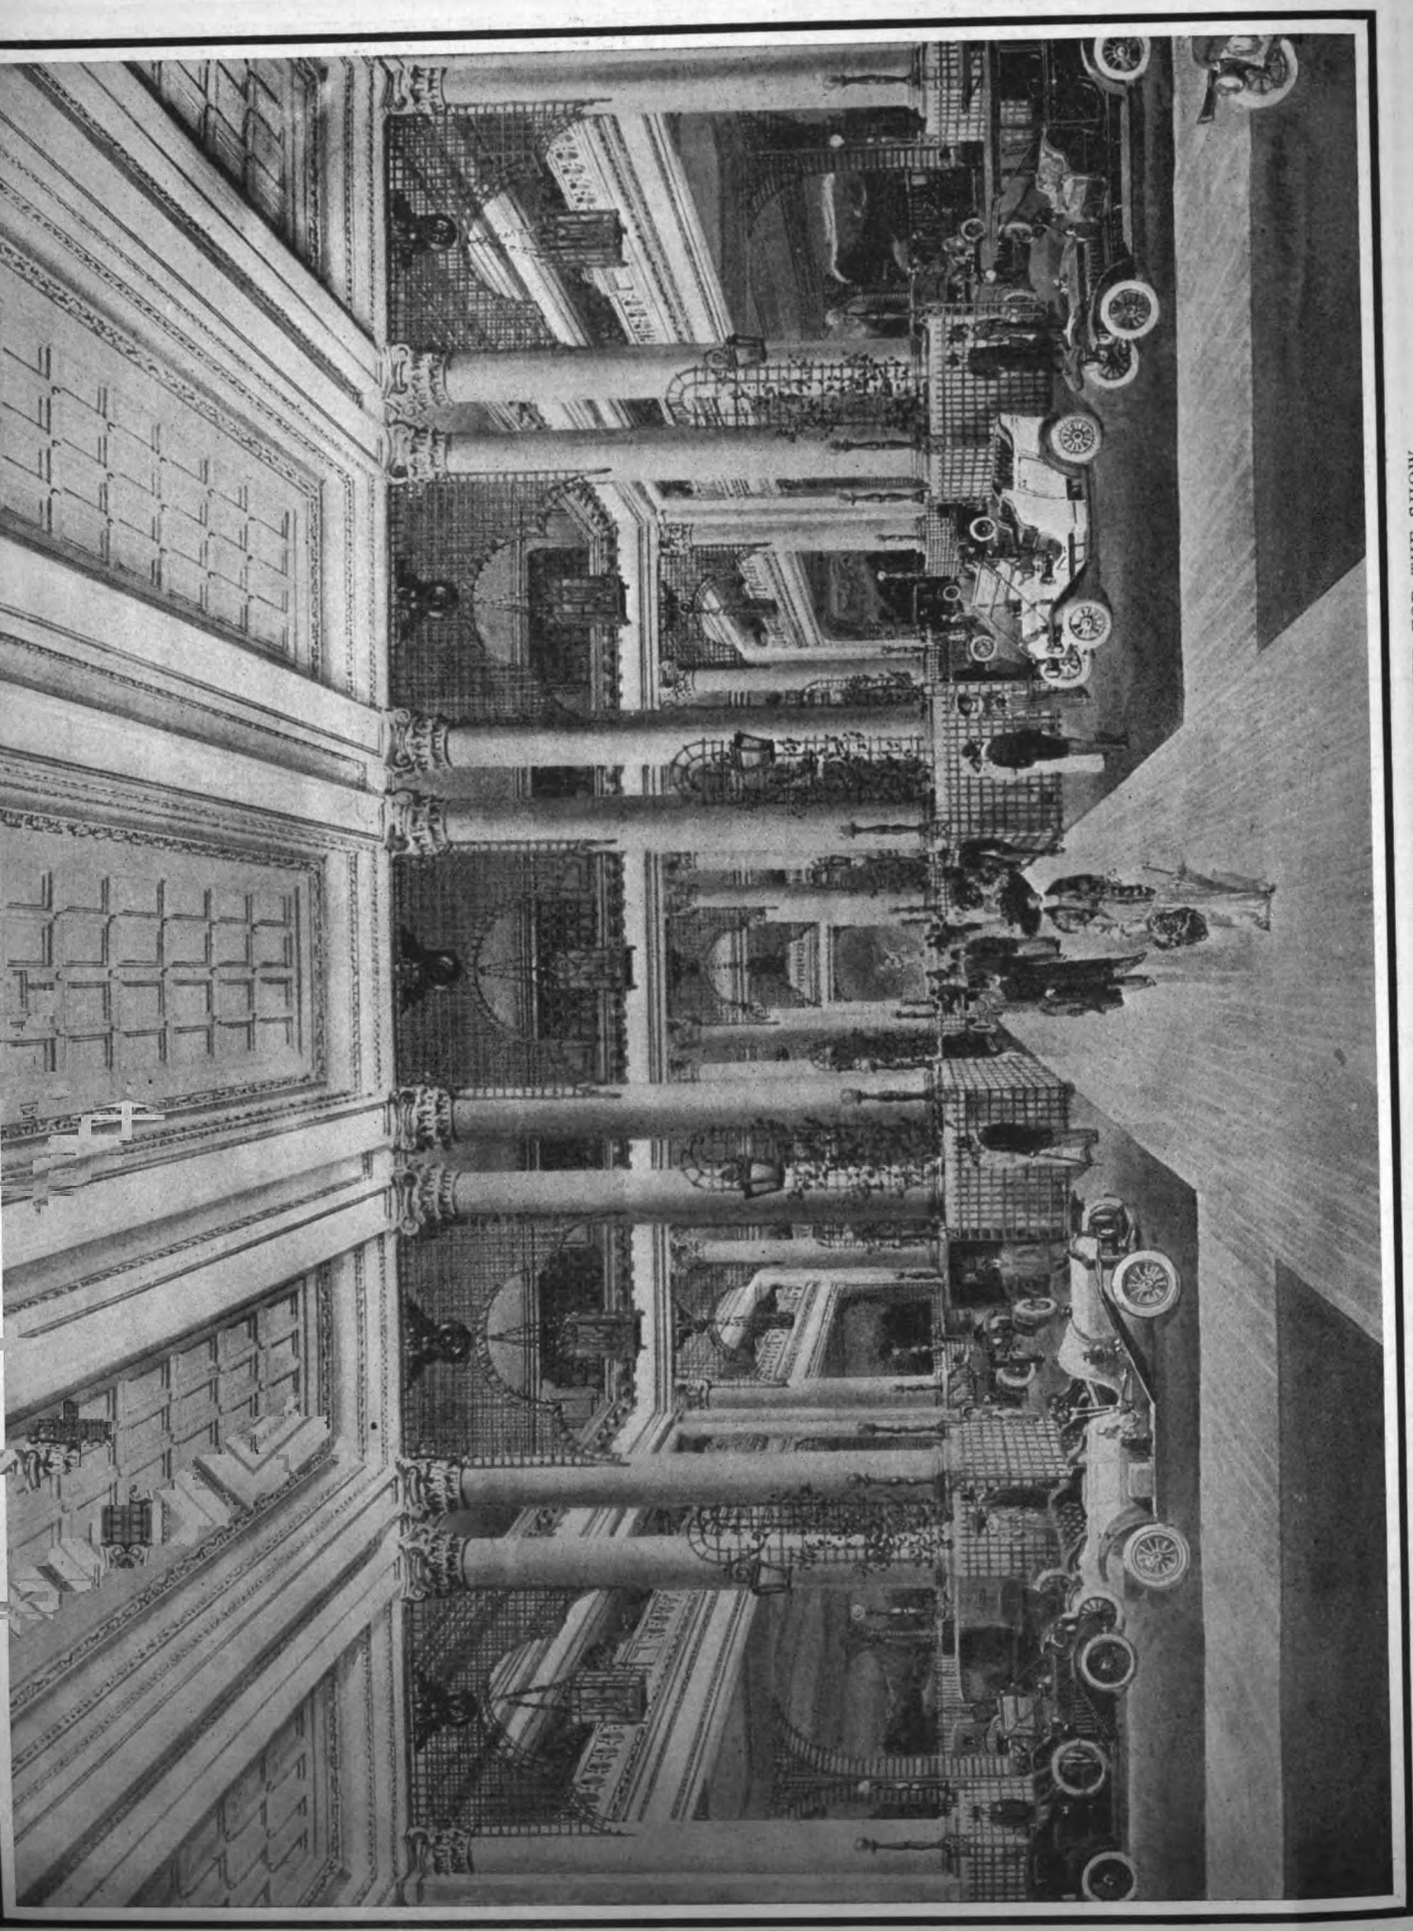
PERSPECTIVE VIEW OF MADISON SQUARE GARDEN AS IT WILL APPEAR FOR THE OPENING, SATURDAY NIGHT

Digitized by Google

SECTION OF THE DECORATIVE SCHEME FOR THE PALACE SHOWING LATTICE WORK AND A ROMAN EXEDRA

it remembered, first was formally introduced at the June, 1911, meeting of the Society of Automobile Engineers held in Dayton, at which time a long paper describing it was read before the society and the engine itself was demonstrated. Since then it has been refined in minor details and subjected to rigorous testing, though it retains all of its original characteristics. Its valves, for which it is primarily distinctive, are long, cylindrical members mounted in longitudinal pockets near the cylinder heads and driven by spiral gearing, one member opening and closing all the exhaust ports in proper rotation and one member serving the same purpose on the intake side. Incidentally, a new six-cylinder Speedwell poppet valve motor has been added to the Speedwell line, the chassis for either the Mead engine or the poppet valve engine being identical.

Another of the surprises that will be sprung is a new Jackson model styled "The Duck" and described best as four cars in one. It is unusual in that it is driven from what is usually considered to be the tonneau, seats being arranged at the back, beside the steering wheel and in front of it.



"Sixes" that Show for First Time.

To the long list of new "sixes" that are exhibited for the first time—the Flanders, the Studebaker, the Havers, the Lenox, the Cole, Crow, Herreshoff, Hudson, Marmon, Stearns-Knight, Stutz, Warren, Little, Chevrolet, Premier, Packard, Knox, Franklin, Lozier, Kissel, Firestone-Columbus, McIntyre, Garford, and others—there has been added another, though it still is shrouded in much mystery. It is the Krit, and little is known about it except that it is hinted it will sell for close to $1,300, thus marking another addition to the class of low-priced "sixes" that has sprung into such prominence within the past twelvemonth.

Of new "fours" there also is a representative list, some of them—as, for instance, the Oakland, Abbott-Detroit, Bergdoll, Case, Fiat, and Haynes—being brothers to older models and therefore reflecting many of their birthmarks, and some of them being brand new all the way through and therefore making their first formal appearance. Among the latter are the Little and the Henderson, the Detroiter and the Paige and the Edwards, the latter being a Knight-engined car that incorporates an unusually large number of distinctive features.

In several instances, prominent among which are Studebaker, Michigan and Mitchell, whole lines have been virtually reconstructed, root and branch, and in the products that are to be placed on view there will be found very little by which to recognize the new cars as the successors of older

Digitized by Google

GENERAL VIEW OF GRAND CENTRAL PALACE AS IT WILL BE DRESSED FOR THE SHOW

Digitized by Google

ones. In both cases, the reconstruction has been drastic and gives evidence of well-directed efforts to supplant older models with new ones in which the last word in automobile construction has been incorporated. Other lines, of course, have been more or less reconstructed, though in no case has the metamorphosis been as complete as it has in these two.

Among the cars that continue year in and year out with scarcely a change worthy of an adjective more qualifying than minor, there are the Alco and the American, the Buick and the Chalmers, the Winton and the White, the Locomobile and the Pope-Hartford, and the other four "P's"—the Pierce-Arrow, the Peerless, the Packard, and the Premier—the Cunningham, the Fiat, the Knox, the Kline, and the Kissel. They will all be there—the roll is very nearly complete.

Altogether there will be just seven brands of cars exhibited in New York that failed to put in an appearance at either of the New York shows last year, though some of them were exhibited in Chicago. The list of seven includes the Cunningham, the Davis, the Lenox, which last year was shown only in its home town, which is Boston; the Marathon, the Norwalk, and the Pathfinder. The last one, which is the Only, is exhibited for the first time in its new form with a four-cylinder motor—it has the longest stroke of any on exhibition, by the way. At its last appearance in New York it had a single cylinder motor, for which great claims were made and which was chiefly conspicuous by reason of its exceptionally long stroke.

Electric cars will be comparatively scarce at the New York shows, only three makes being scheduled to appear. Of them, the Standard is the only one that has appeared at a show in New York before, with the possible exception of the Buffalo, which was shown for the first time at the recent electrical show in Grand Central Palace; this is the first time it has appeared at a real automobile show, however. The third of the trio is the radical Church-Field, which was placed on the market almost simultaneously with the last shows, though it found a place in neither of them. It is "gasolenish," even to the use of a planetary gearset.

New Things in Parts and Accessories.

In the realm of accessories and parts, it goes without saying that there will be a great deal that is new and interesting. Electrical equipment, embraced by the phrase "electric lighting and engine starting systems," of course will be prominent—few things will be more prominent, either as a development of the cars on view themselves or as accessories. Tires and rims quite naturally have come in for improvement, though the most noticeable alteration to the purely casual observer quite likely will be the great increase in variety of non-skid treads. In artillery wheels there has been little change, for the good and sufficient reason that there remains little chance for improvement. Wire wheels, however, rapidly are coming to the fore, and there is a new steel wheel for commercial vehicles from the Sheldon factories. Sheldon also is responsible for a new worm drive axle, as also is the Timken-Detroit Axle Co.

As heretofore, ignition apparatus in general has been considerably improved in the past twelvemonth, though there is little that is brand new in conception. There are a number of new spark plugs of the priming type, and in the realm of spark producers the Hi-Fre-Co. system is exhibited for the first time. Added impetus also has been given single spark systems, new systems of the kind having been brought out by both the New York Spark Coil Co. and the Atwater Kent company. In the realm of signalling devices, there are several new horns, among which there is the new "baby" Klaxon, which has been christened Klaxet; the "baby" Newtone; the Sparton, but recently brought out by the Sparks-Withington Co., and a new smaller edition of the hand-operated Long horn. Similarly, there is quite a little that is new in carburetters—the Motsinger, the Feps, the A. B. C. and others—the greatest tendency apparently being toward multiplication of jets. Speedometers have changed but little, except for a well-defined effort on the part of most manufacturers to increase the legibility of the dials. Both the Elyria-Dean and the Stewart, which incorporates a gradometer are new, though the former is virtually a refinement of the Forse instrument, manufacturing rights for which recently were acquired by the Dean Electric Co.

Summary of Cars to be Exhibited in New York, January 11-18

* Denotes Exhibit in Grand Central Palace; Without Such Notation, in Madison Square Garden.

Abbott Motor Co., Detroit, Mich.—Abbott-Detroit; fours; $1,700-$2,150.*

American Locomotive Co., Providence, R. I.—Alco; sixes; $6,000-$7,250.

American Motors Co., Indianapolis, Ind.—American; fours; $1,475-$6,000.*

Auburn Automobile Co., Auburn, Ind.—Auburn; fours and sixes; $1,250-$3,000.

Bergdoll Motor Co., Louis J., Philadelphia, Pa.—Bergdoll; fours; $1,600-$3,250.*

Briggs Detroiter Co., Detroit Mich.—Detroiter; fours; $850-$900.*

Buffalo Electric Vehicle Co., Buffalo, N. Y.—Buffalo electric; $2,600-$3,400.*

Buick Motor Co., Flint, Mich.—Buick; fours; $950-$1,650.

Cadillac Motor Car Co., Detroit, Mich.—Cadillac; fours; $1,975-$3,250.

Cartercar Co., Pontiac, Mich.—Cartercar; fours; $1,600-$2000.

Case Threshing Machine Co., J. I., Racine, Wis.—Case; fours; $1,435-$2,400.*

Chalmers Motor Co., Detroit, Mich.—Chalmers; sixes; $1,950-$3,700.

Church-Field Motor Co., Sibley, Mich.—Church-Field electric; $2,300-$2,800.*

Cole Motor Car Co., Indianapolis, Ind.—Cole; fours and sixes; $1,685-$3,750.*

Columbia Motor Car Co., Hartford, Conn.—Columbia; fours; $3,300-$5,900.

Columbus Buggy Co., Columbus, Ohio—Firestone-Columbus; fours and sixes; not quoted.*

Cunningham, Son & Co., James, Rochester, N. Y.—Cunningham; fours; $3,250-$4,600.

Cutting Motor Car Co., Jackson, Mich.—Cutting; fours; $1,475-$1,625.*

Davis Carriage Co., George W., Richmond, Ind.—Davis; fours; $2,000-$2,100.*

Dayton Motor Car Co., Dayton, Ohio—Stoddard-Dayton; fours and sixes; $1,350-$6,250.

Edwards Motor Car Co., New York City—Edwards-Knight; fours; $3,500-$4,700.*

Empire Automobile Co., Indianapolis, Ind.—Empire; fours; $950.*

F. I. A. T., Poughkeepsie, N. Y.—Fiat; fours and sixes; $4,000-$6,100.*

Flanders Motor Co., Detroit, Mich.—Flanders; sixes; $1,550-$2,250.

Franklin Mfg. Co., H. H., Syracuse, N. Y.—Franklin; fours and sixes; $1,650-$4,850.

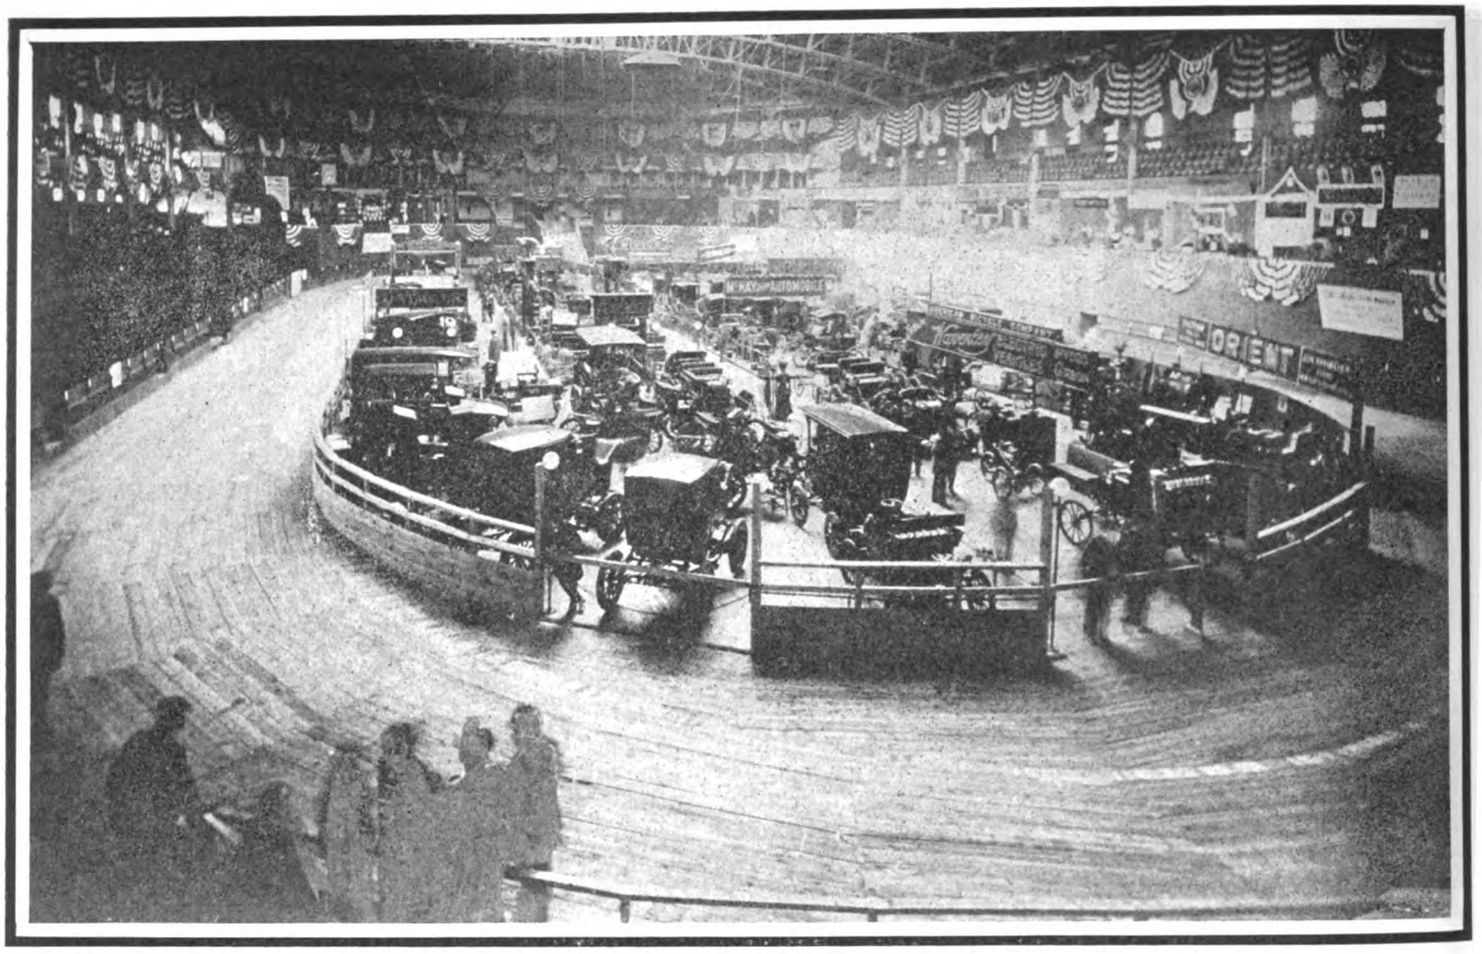
Garford Co., Elyria, Ohio—Garford; sixes; $2,750-$3,750.

Havers Motor Car Co., Port Huron, Mich.—Havers; fours and sixes; $1,850-$2,250.*

Haynes Automobile Co., Kokomo, Ind.—Haynes; fours; $1,785-$3,500.

Henderson Motor Car Co., Indianapolis, Ind.—Henderson; fours; $1,285-$1,385.*

Herreshoff Motor Car Co., Detroit, Mich.—Herreshoff; fours and sixes; $1,250-$1,700.*



Hudson Motor Car Co., Detroit, Mich.—Hudson; fours and sixes; $1,875-$3,750.

Hupp Motor Car Co., Detroit, Mich.—Hupmobile; fours; $975-$1,350.*

Ideal Motor Car Co., Indianapolis, Ind.—Stutz; fours and sixes; $2,000-$2,300.*

Imperial Automobile Co., Jackson, Mich.—Imperial; four and sixes; $1,285-$2,500.*

MADISON SQUARE GARDEN AS IT APPEARED FOR THE 1900 SHOW WITH ITS OVAL "DEMONSTRATING" TRACK

Inter-State Automobile Co., Munice, Ind.—Inter-State; fours and sixes; $2,400-$3,400.*

Jackson Automobile Co., Jackson, Mich.—Jackson; fours and sixes; $1,500-$2,650.

Jeffery Co., Thomas B., Kenosha, Wis.—Rambler; fours; $1,815-$2,825.*

Kissel Motor Car Co., Hartford, Wis.—Kissel; fours and sixes; $1,750-$4,900.*

Kline Motor Car Corporation, York, Pa.—Kline; fours and sixes; $1,750-$3,750.*

Knox Automobile Co., Springfield, Mass.—Knox; fours and sixes; $3,300-$6,450.

Krit Motor Car Co., Detroit, Mich.—Krit; fours and sixes; $900 (four).*

Lenox Motor Car Co., Inc., Boston, Mass.—Lenox; fours and sixes; $2,000-$4,050.*

Locomobile Co. of America, Bridgeport, Conn.—Locomobile; fours and sixes; $3,600-$6,100.

Lozier Motor Co., Detroit, Mich.—Lozier; sixes; $3,250-$6,500.

Marathon Motor Works, Nashville, Tenn.—Marathon; fours; $875-$1,800.*

Marion Motor Car Co., Indianapolis, Ind.—Marion; fours; $1,425-$1,850.*

Matheson Automobile Co., Wilkes-Barre, Pa.—Matheson; sixes; $3,750-$4,800.

Maxwell-Brisco Motor Co., Tarrytown, N. Y.—Maxwell; fours; $785-$1,675.

Mercer Automobile Co., Trenton, N. J.—Mercer; fours; $2,600-$2,900.

Metz Co., Waltham, Mass.—Metz; fours; $395.*

Michigan Motor Car Co., Kalamazoo, Mich.—Michigan; fours; $1,400-$1,585.*

Mitchell-Lewis Motor Co., Racine, Wis.—Mitchell; fours and sixes; $1,500-$2,500.

Moline Automobile Co., East Moline, Ill.—Moline; fours; $1,950.

Moon Motor Car Co., St. Louis, Mo.—Moon; fours; $1,650-$2,500.

Motor Car Mfg. Co., Indianapolis, Ind.—Pathfinder; fours; $2,000-$2,185.*

National Motor Vehicle Co., Indianapolis, Ind.—National; fours; $2,750-$3,400.

Nordyke & Marmon Co., Indianapolis, Ind.—Marmon; fours and sixes; $2,850-$6,450.

Norwalk Motor Car Co., Martinsburg, Va.—Norwalk; sixes; $2,750-$3,750.*

Oakland Motor Car Co., Pontiac, Mich.—Oakland; fours and sixes; $1,000-$3,000.

Olds Motor Works, Lansing, Mich.—Oldsmobile; sixes; $3,200-$3,350.

Only Motor Car Co., Port Jefferson, N. Y.—Only; fours; $1,000-$1,250.*

Packard Motor Car Co., Detroit, Mich.—Packard; sixes; $4,050-$6,050.

Paige-Detroit Motor Car Co., Detroit, Mich.—Paige-Detroit; fours; $1,000-$1,600.*

Paterson Co., W. A., Flint, Mich.—Paterson; fours; $1,500-$1,985.*

Peerless Motor Car Co., Cleveland, Ohio—Peerless; fours and sixes; $4,300-$7,200.

Pierce-Arrow Motor Car Co., Buffalo, N. Y.—Pierce-Arrow; sixes; $4,300-$7,300.

Pope Mfg. Co., Hartford, Conn.—Pope-Hartford; fours and sixes; $2,250-$5,550.

Premier Motor Mfg. Co., Indianapolis, Ind.—Premier; sixes; $2,600-$4,000.

Pullman Motor Car Co., York, Pa.—Pullman; fours and sixes; $1,875-$2,750.

R. C. H. Corp., Detroit, Mich.—R. C. H.; fours; $1,095-$1,600.

Regal Motor Car Co., Detroit, Mich.—Regal; fours; $900-$1,400.*

Reo Motor Car Co., Lansing, Mich.—Reo; fours; $1,000-$1,750.

Republic Motor Co. of New York, New York City—Little; fours and sixes; $690-$1,285. Chevrolet; sixes; $2,100.*

Selden Motor Vehicle Co., Rochester, N. Y.—Selden; fours; $2,500-$3,750.

S. G. V. Co., Reading, Pa.—S. G. V.; fours; $2,500-$4,000.

Speedwell Motor Car Co., Dayton, Ohio—Speedwell; sixes; $2,850-$2,950.*

THE "TEST HILL" THAT WAS ERECTED ON THE ROOF OF THE GARDEN AT ONE OF THE FIRST SHOWS

Standard Electric Car Co., Jackson, Mich.—Standard Electricque; $1,885.*

Stearns Co., F. B., Cleveland, Ohio—Stearns-Knight; fours and sixes; $3,750-$6,200.

Stevens-Duryea Co., Chicopee Falls, Mass.—Stevens-Duryea; sixes; $4,500-$5,950.

Studebaker Corp., Detroit, Mich.—Studebaker; fours and sixes; $885-$2,500.*

Velie Motor Vehicle Co., Moline, Ill.—Velie; fours; $1,350-$3,400.*

Warren Motor Car Co., Detroit, Mich.—Warren; fours and sixes; $1,800-$2,500.

Westcott Motor Car Co., Richmond, Ind.—Westcott; fours and sixes; $1,975-$2,475.*

White Co., Cleveland, Ohio—White; fours and sixes; $2,500-$6,300.

Willys-Overland Co., Toledo, Ohio; fours; $985-$1,500.

Winton Motor Carriage Co., Cleveland, Ohio; sixes; $3,000-$4,500.

Summary of Accessories to be Exhibited in New York, January 11-25

* Denotes Exhibit in Grand Central Palace; without such notation, in Madison Square Garden.

Adams & Westlake Co., Chicago, Ill.—Adlake electric lighting system.

Ajax Trunk and Sample Case Co., New York City—Trunks and bags.

Ajax-Grieb Rubber Co., New York City—Ajax tires.

Allen Wrench & Tool Co., Providence, R. I.—Allen friction wrenches.

Alexander Mfg. Co., J., New York City—Jaco electric signals, mirrors and brass fittings.*

American Ball Bearing Co., Cleveland, Ohio—American axles and worm gearing.

American Bronze Co., Berwyn, Pa.—Non-Gran bearing metal.

American Hardware Corp., New Britain, Conn.—Corbin-Brown speedometers.*

American Metal Hose Co., Waterbury, Conn.—Flexible metal exhaust pipe, pump and lamp connections.*

American Kushion Kore Tire Co., New York City—Tire filler.

American Tire & Rubber Co., Akron, Ohio—American inner tubes.*

American Tank & Pump Co., New York City—American fuel pumps and storage systems.

American Taximeter Co., New York City—Jones and Popp taximeters and Speedograph truck recorders.

Arnold, N. B., Brooklyn, N. Y.—Slickup cleaning specialties.

Asbestos & Rubber Works of America, Brooklyn, N. Y.—Motobestos and Ajax brake linings.

Ashley, James, New York City—Portable garages.

Auburn Auto Pump Co., Boston, Mass.—Ten Eyck tire pumps.

Automobile Supply Mfg. Co., Brooklyn, N. Y.—Newtone signals and Rubes horns.

Aristos Co., New York City—Magic motors and transmissions, Mondex shock absorbers and Mondex-Helix mixers.

Badger Brass Mfg. Co., Kenosha, Wis.—Solar lamps.

B. & L. Auto Lamp Co., New York City—B. & L. lamps and fittings.

Baldwin Chain & Mfg. Co., Worcester, Mass.—Baldwin chains.

Baldwin Steel Co., New York City—Baldwin steels.

Baker Rim Co., New York City—Baker rims.

Barthel, Daly & Miller, New York City—Schaefer ball bearings.

Baums Castorine Co., Rome, N. Y.—Body soaps.*

Batavia Rubber Co., Batavia, N. Y.—Batavia tires.

Benford Mfg. Co., Mt. Vernon, N. Y.—Monarch plugs and headlight lighters.

Berg Auto Trunk & Specialty Co., New York City—Berg trunks and carriers.

Bijur Motor Lighting Co., New York City—Bijur starting and lighting systems.

Digitized by Google

Blackledge Mfg. Co., John W., Chicago, Ill. —Velvet auxiliary springs.

Borne-Scrymser Co., New York City—Colonial and Silex lubricants.

Bower Roller Bearing Co., Detroit, Mich.—Bower roller bearings.

Bowser & Co., S. F., Ft. Wayne, Ind.—Fuel pumps and storage systems.

Braender Rubber & Tire Co., Rutherford, N. J.—Braender tires.

Briggs Magneto Co., Elkhart, Ind.—Briggs magnetos.

Brown Co., Syracuse, N. Y.—B'Co. pumps and specialties.

Brown-Lipe Gear Co., Syracuse, N. Y.—Brown-Lipe gears and gearsets.

Buda Co., Harvey, Ill.—Buda motors and gearsets.*

Budd Mfg. Co., Edward G., Philadelphia, Pa.—Pressed steel bodies.

Burke Valve Co., Cleveland, Ohio—Valves and fittings.

Byrne, Kingston & Co., Kokomo, Ind.—Kingston carburetters.

Carnegie Steel Co., Pittsburg, Pa.—Steels.

Carpenter Steel Co., Reading, Pa.—Steels.

Carron & Co., New York City—Electrically warmed gloves.*

Champion Ignition Co., Flint, Mich.—A-C spark plugs.

Chicago Drop Forge & Foundry Co., Chicago, Ill.—Drop forgings.

Chase & Co., L. C., Boston, Mass.—Top fabrics.

Cleveland Worm & Gear Co., Cleveland, Ohio—Worm gears.*

Clucker & Hickson, New York City—Sundries.

Cleveland Hardware Co., Cleveland, Ohio—Drop forgings.

Coes Wrench Co., Worcester, Mass.—Wrenches.

Columbia Nut & Bolt Co., Bridgeport, Conn.—Lock nuts and bolts.

Columbia Lubricants Co., New York City—Monogram lubricants.

Connecticut Telephone & Electric Co., Meriden, Conn.—Connecticut shock absorbers, magnetos and ignition devices.

Consolidated Rubber Tire Co., New York City—Kelly-Springfield tires.

Continental Rubber Works Co., Erie, Pa.—Continental tires.*

Cooks Sons, Adam, New York City—Albany grease and lubricating oils.

Cotta Transmission Co., Rockford, Ill.—Gearsets.

Cox Brass Mfg. Co., Albany, N. Y.—Clear Vision windshields.

Cowles & Co., C., New Haven, Conn.—Lamps, heaters and body fittings.

Cramp & Sons Ship & Engine Bldg. Co., Wm., Philadelphia, Pa.—Parsons's white brass and bronze bearing metals, bearings and worm gears.*

Cross & Co., C. J., Boston, Mass.—Top and cover fabrics.*

C. R. G. Mfg. Co., Saugus, Mass.—C. R. G. carburetters.

Dayton Rubber Mfg. Co., Dayton, Ohio—Dayton Airless tires.

Daniels, Smalley, Detroit, Mich.—Sundries.

Dean Electric Co., Elyria, Ohio—Tuto and Rexo signals, Dynalux electric lighting systems, Otho and Elyria-Dean electric lighting and starting systems, Elyria-Dean speedometers, Hi-Fre-Co ignition systems.*

Diamond Chain & Mfg. Co., Indianapolis, Ind.—Diamond chains.

Detroit Electric Appliance Co., Detroit, Mich.—Deaco electric lighting systems.

Diamond Rubber Co., Akron, Ohio—Diamond tires.

Dixon Crucible Co., Jos., Jersey City, N. J. —Graphite lubricants.

Doehler Die Casting Co., Brooklyn, N. Y.—Die cast parts.

Donnelly Motor Equipment Co., New York City—National tire pumps and vulcanizers and sundries.

Double Fabric Tire Co., Auburn, Ind.—Tires and inner tubes.

Dover Stamping & Mfg. Co., Cambridge, Mass.—Drip pans, funnels and sheet metal goods.

Driggs-Seabury Ordnance Co., Sharon, Pa. —Axles, gearsets, frames and assemblies.

Dykes Co., John L., Chicago, Ill.—Tire protectors.

Eavenson Sons, Inc., J., Camden, N. J.—Soaps and polishes.*

Edison Storage Battery Co., West Orange, N. J.—Edison storage batteries and rectifiers.

Eclipse Machine Co., Elmira, N. Y.—Motorcycle fittings.*

Edmunds & Jones Mfg. Co., Detroit, Mich. —Lamps.

Electric Auto Lite Co., Toledo, Ohio—Auto Lite lighting systems.

Electric Storage Battery Co., Philadelphia, Pa.—Exide storage batteries.

Elliot, H. A., Detroit, Mich.—Forged parts, Derhion and Bishoff steels.

Empire Tire Co., Trenton, N. J.—Empire tires.

Endurance Tire & Rubber Co., New York City—Endurance red inner tubes.

Englebert Tire Co., New York City—Tires.

English & Mersick Co., New Haven, Conn. —Metal trimmings.

Esterline Co., Lafayette, Ind.—Berdon electric lighting and starting system.*

Essex Rubber Co., Trenton, N. J.—Rubber sundries.

Eureka Non-Skid Mfg. Co., Brooklyn, N. Y. —Anti-skidding devices.*

Faw, F. W., New York City—Gaskets, blowout patches, reliners and sundries.

Favary Tire & Cushion Co., New York City —Favary cushion tires.

Federal Chain & Mfg. Co., Springfield, Mass.—Federal chains.

Findeisen & Kropf Mfg. Co., Chicago, Ill. —Rayfield carburetters.

Federal Rubber Mfg. Co., Milwaukee, Wis. —Federal tires.

Fisher Steel & Iron Works Co., Switzerland—Steels.

Firestone Tire & Rubber Co., Akron, Ohio —Firestone tires.

Fisk Rubber Co., Chicopee Falls, Mass.—Fisk tires.

Flentje, Ernest, Cambridge, Mass.—Flentje recoil checks.*

Fletcher & Co., L. V., New York City—American Locomotive carburetters.

Flex-O-Fill Core Co., New York City—Tire fillers.

Franklin Mfg. Co., H. H., Syracuse, N. Y.—Die cast parts.

G. & J. Tire Co., Indianapolis, Ind.—United States tires.

Gabriel Horn Mfg. Co., Cleveland, Ohio—Gabriel horns and rebound snubbers.

Garage Equipment Co., Milwaukee, Wis.—Universal bumpers, tire holders, windshields, vulcanizers, jacks and lamps.

Gasolene Filter Co., New York City—Perfect gasolene filters.

Gemmer Mfg. Co., Detroit, Mich.—Gemmer steering gears.

General Rim Co., New York City—Rims.

Gilmer, G. W., Jr., Philadelphia, Pa.—Gilmer tire repair patches and tools.

Gibney Rubber Co., J. L., Philadelphia, Pa. —Tires and vulcanizers.

Globe Machine & Stamping Co., Cleveland, Ohio—Steel tool boxes, metal hampers, fenders and sheet metal parts.

Golde Patent Mfg. Co., New York City—Golde tops.

General Electric Co., Schenectady, N. Y.—Electric motors, rectifiers and apparatus and cloth pinions.*

Goodrich Co., B. F., Akron, Ohio—Goodrich tires.

Goodyear Tire & Rubber Co., Akron, Ohio —Goodyear tires.

Gould Storage Battery Co., New York City —Gould batteries.*

Gray Specialty Co., Newark, N. J.—Sundries.*

Grossman Co., Emil, New York City—Redhead spark plugs, E-G bumpers and sundries.

Gray & Davis, Amesbury, Mass.—Lamps and electric starting and lighting systems.*

Grip Nut Co., Chicago, Ill.—Lock nuts.

Harris Oil Co., A. W., Providence, R. I.—Lubricants.

Hagerstown Legging Co., Hagerstown, Pa. —Apparel.

Digitized by Google

Hartford Rubber Works Co., Hartford, Conn.—United States tires.

Hartford Suspension Co., Jersey City, N. J.—Truffault-Hartford shock absorbers, Hartford electric starting and lighting systems and jacks and bumpers.*

Hartford Machine Screw Co., Hartford, Conn.—Screw machine parts, spark plugs and tire pumps.

Haws, George A., New York City—Panhard lubricants.

Hawthorne Mfg. Co., Bridgeport, Conn.—Old Sol lamps.

Havoline Oil Co., New York City—Havoline lubricants.

Hayes Mfg. Co., Detroit, Mich.—Metal bodies, tool boxes, running boards and sheet metal parts.

Hess Steel Castings Co., Bridgeton, N. J.—Steel castings.*

Hess-Bright Mfg. Co., Philadelphia, Pa.—Hess-Bright ball bearings.

Hess Spring & Axle Co., Carthage, Ohio—Springs and axles.

Heinze Electric Co., Lowell, Mass.—Magnetos and coils.

Hoffecker Co., Boston, Mass.—Hoffecker Steady Hand speedometers.

Herz & Co., New York City—Herz magnetos, timers, spark plugs and ignition supplies.*

Hoffman Co., Geo. W., New York City—Metal polishes.*

Homo Co. of America, Philadelphia, Pa.—Homo carburetters.*

Houpert Machine Co., New York City—Motor parts, machine work, rotary motors.

Huston Multiple Car Springs Co., Philadelphia, Pa.—Springs.*

Hyatt Roller Bearing Co., Newark, N. J.—Hyatt flexible spiral steel roller bearings.

Ingersoll-Rand Co., New York City—Pumps.

Ignition Starter Co., Detroit, Mich.—Disco acetylene and electric starting and lighting systems.

International Acheson Graphite Co., Niagara Falls, N. Y.—Oildag and Gredag lubricants.

International Accessories Mfg. Co., New York City—A. B. C. carburetters.

International Metal Polish Co., New York City—Blue Ribbon polishes.

Janney-Steinmetz & Co., Philadelphia, Pa.—Cold drawn, seamless steel tanks.

J-M Shock Absorber Co., Philadelphia, Pa.—J-M shock absorbers.

Jeffery-Dewitt Co., Detroit, Mich.—Reliance and J-D Visible spark plugs.*

Jones & Co., Phineas, Newark, N. J.—Wood wheels.

Kahnweiler Sons, David, New York City—Simplex fire extinguishers.

Kellogg Mfg. Co., Rochester, N. Y.—Hand and power pumps and air engine starters.

Kent Mfg. Works, Atwater, Philadelphia, Pa.—Unisparker ignition systems and Monoplex horns.

Kells Mfg. Co., W. J., New York City—Radiators.

Kelly-Springfield Tire Co., New York City—Kelly-Springfield tires.

K-W Ignition Co., Cleveland, Ohio—K-W magnetos and coils.

Kokomo Electric Co., Kokomo, Ind.—Kingston magnetos, coils and timers.

Laidlaw, Jr., Wm. B., New York City—Top and cover fabrics.

Leather Tire Goods Co., Niagara Falls, N. Y.—Woodworth tire treads, Kant Skid tire bands, repair boots, etc.

Leeds & Northrup Co., Philadelphia, Pa.*

Lee Tire & Rubber Co., Conschohocken, Pa.—Lee and Leeland tires and Waymaker exhaust horns.

Lefevre Arms Co., Syracuse, N. Y.—Gearsets.

Linde Shim Co., Brooklyn, N. Y.—Patent shims.

Light Mfg. & Foundry Co., Pottstown, Pa.—Aluminum parts and castings.

Link Belt Co., Philadelphia, Pa.—Silent chains.

Lovell-McConnell Mfg. Co., Newark, N. J.—Klaxon horns, Conover safeguards.

Marathon Tire & Rubber Co., Cuyahoga Falls, Ohio—Marathon tires.

Marburg Bros., Inc., New York City—Mea magnetos, S. R. O. bearings.

Manufacturers Foundry Co., Waterbury, Conn.—Castings.

Mayo Mfg. Co., Chicago, Ill.—Pumps and gauges.

McCord Mfg. Co., Detroit, Mich.—Radiators, lubricators, fans and McKim gaskets.

McCue Co., Buffalo, N. Y.—McCue axles and wire wheels.*

Merchant & Evans Co., Philadelphia, Pa.—Hele Shaw clutches, gearsets, Star tire cases.

Mezger, C. A., New York City—Sootproof spark plugs.

Metal Stamping Co., Long Island City, N. Y.—Stampings.

Michelin Tire Co., Milltown, N. J.—Tires.

Miller, Chas. E., New York City—Brampton chains, Miller spark plugs and spring lubricators, Pan American lubricants and sundries.*

Miller Rubber Co., Buffalo, N. Y.—Miller tires.

Morgan & Wright, Detroit, Mich.—United States tires.

Mosler & Co., A. R., Mt. Vernon, N. Y.—Spitfire spark plugs and Umph timers.

Mossberg, Frank, Attleboro, Mass.—Wrenches.

Motsinger Devices Mfg. Co., Pendleton, Ind.—Motsinger autosparkers and carburetters.

Motometer Co., New York City—Motometer temperature indicator.

Motor Car Equipment Co., Akron, Ohio—Supplies.

Motz Tire & Rubber Co., Akron, Ohio—Motz cushion tires.

Muncie Gear Works, Muncie, Ind.—Gears, wheels and gearsets.*

Mutty Co., L. J., Boston, Mass.—Upholstery materials.

Nathan Novelty Mfg. Co., New York City—Leather sundries.

National Coil Co., Lansing, Mich.—Spark coils.

National Motor Supply Co., Cleveland, O.—National pumps and vulcanizers.

National Rubber Co., St. Louis, Mo.—Tire preservative.*

National Tube Co., Pittsburgh, Pa.—Seamless steel tubing.

Never Skid Mfg. Co., New York City—Nonskid grips.*

New Departure Mfg. Co., Bristol, Conn.—New Departure ball bearings.*

New Jersey Car Spring & Rubber Co., Jersey City, N. J.—Carspring tires.

Newmastic Tire Co., New York City—Newmastic tire filler and demountable rims.*

New Miller Carburetter Co., Indianapolis, Ind.—New Miller carburetters.

New York Coil Co., New York City—Rhodes unit spark system.

New York & New Jersey Lubricants Co., New York City—Columbia lubricants.

Noera Mfg. Co., Waterbury, Conn.—Pumps and oil cans.

Norma Co. of America, New York City—Norma ball bearings.

North East Electric Co., Rochester, N. Y.—North East electric lighting and starting systems.

Northway Motor & Mfg. Co., Detroit, Mich.—Northway motors.

Nonpareil Horn Mfg. Co., New York City—Nonpareil bulb horns.

Oliver Mfg. Co., Chicago, Ill.—Oliver jacks.

Overman Tire Co., New York City—Overman tires.

Pantasote Co., New York City—Pantasote top and seat coverings.

Pennsylvania Rubber Co., Jeannette, Pa.—Pennsylvania tires.

Perfect Tire Sales Co., Philadelphia, Pa.—Tires.

Perfection Spring Co., Cleveland, Ohio—Krupp steel springs.

Perfecto Wind Deflector Co.,—Boston, Mass.—Windshields.

Philadelphia Storage Battery Co., Philadelphia, Pa.—Philadelphia batteries.*

Piel Co., G., Long Island City, N. Y.—Long horns and G-P muffler cut-outs.

Pioneer Steel & Block Tire Co., St. Louis, Mo.—Truck tires.

REILLY DEFINES TRUE TEST OF SALESMANSHIP

Says the Real Salesman Is He Whose Customers "Come Back for More"—Makes the Principle Apply to Goods as Well as to Men —Deprecates Attitude Displayed at Shows.

Whooping exultingly at having regained a supremacy it had not enjoyed since the preceding spring, a real wintry blizzard was dashing the snow against the windows and making outdoor life about the most unpleasant vocation imaginable. Reilly had been a half hour longer than usual in getting home through the storm, for railway lines of all description were badly handicapped and the warmth of the house was a real pleasure once he gained his destination. But with supper over and his smoking jacket donned, he had settled himself in a deep Morris chair and was enjoying a fat and black cigar and the evening paper in an "I should worry" manner.

REILLY LEISURELY SAT DOWN ON THE WINDOW SEAT BEFORE HE ANSWERED

Reilly's Evening Is Interrupted.

When the telephone bell buzzed he leisurely pulled himself from his comfortable position and crossed the room to the window seat whereon this modern invention reposed; also, he was in such a leisurely and I'm - comfortable - what - do - I - care - if-it-does-storm mood that he actually sat down on the window seat before he answered the insistent ringing of the little bell.

"Hello! . . . Yes, this is Reilly. . . O, hello, Jim! Where are you and why on a night like this? . . . Snowbound! Spent two hours coming twenty miles! I can imagine it. Shoot me a game of pinochle to see if you can stay all night, will you? Well, if you can persuade a taxi driver to bring you up to the house I'll lodge you gratis. . . . Sure! Come up."

Sales Manager Stopped by Storm.

Mrs. Reilly, dishcloth in hand, listened to this one-sided conversation and, as her husband hung up, she asked, "Who is it—the Sales Manager?"

"Yes," he replied, "he's been out of town and got this far on his way back and it's storming so he doesn't want to try to go any further. He's coming up. Guess he wants to try to get even for the last trimming I gave him at pinochle."

It was many minutes before the Sales Manager put in an appearance, but it was not more than fifteen minutes before the two men were deep in that game which is best known of the Fatherland's amusements. Reilly was triumphant in the first session and was shuffling for the second when the Sales Manager asked: "Going to the New York show?"

"I think I will," was the answer.

"I believe that every dealer ought to see one of the big shows," added the Sales Manager. "It does a man good to see the best efforts of other people and size up the differences in cars; generally you can find something to help out your salesmanship."

"Yes, all except salesmanship," interrupted Reilly as he turned the nine of diamonds.

"You may criticize the methods of salesmen," asserted the Sales Manager, "but if you were directed to define perfection in selling, or to designate the true test of salesmanship, what would you say?"

An Opinion on Selling Ability.

"Well," was the slow response, as Reilly melded a wedding in trumps and marked it down, "I have often thought of that; the best expression I know of is that true salesmanship is the kind that induces a man to come back for more."

"Some men can't 'come back,'" joked the guest. "Jim Jeffries couldn't."

"Now you're trying to be funny," reproved Reilly, "and you're just as funny as some forms of so-called salesmanship. But this coming back business is pretty sound, as you will discover if you look into it. And so far as learning salesmanship at the shows, I doubt it. You will find a whole lot of men in dress suits standing around among a fine bunch of cars and a good share of them will exert their ability to keep you from asking them questions they can't answer. They are exceptionally well posted on the handsome appearance of the cars and the depth of the upholstery and can tell you offhand how easily the car rides; but if you ask them why the bore is four and stroke five instead of the stroke being four and the bore five, they'll try to make an appointment for you to meet the chief engineer who'll 'be there in about an hour.'

Learning a Line Thoroughly.

"One of the best suit goods salesmen I ever knew went out and studied cotton and

Digitized by Google

wool from the plantation and the sheeps' backs to the suit that has been worn a year; he learned his line, but what some salesmen don't know would make them dizzy if they had to have it crowded into their heads over night. I don't mean that there won't be real salesmen at the shows, but along with them will be some of the half-baked variety; they're like half-baked potatoes—superficially done."

Reilly was interrupted to chalk down one hundred aces for the Sales Manager, who said: "Then according to your 'come back' theory it will take a year or so to test a salesman thoroughly."

Test Applies to Goods as Well.

"Can you test a car in less time?" was the interrogative answer. "This 'coming back' is not a question of men alone; it applies to goods as well. A car may look fine and run all right on the start, but if a man doesn't buy the same make the second time it looks a little bit as if there was some weak selling point about the car. A car may be an average car and hold its own and the owner may change makes on his second purchase just because he likes to change, but if the car is above average and suited him in every paarticular he ought not to be hard to sell when he is ready for another car.

"The car has considerable to do with it, but nevertheless the best application is to the salesman himself. Salesmanship will sell but salesmanship alone will not retain permanent patronage, is a rather pithy way of expressing it, and it means a lot when analyzed. A man may be well-dressed, he may be suave and polite in manner and may have all those exterior qualifications which are essential to the salesman; but if he isn't able to hold a line of customers he is short somewhere.

"Take, for instance, any dealer who is a good first-time salesman. We will go that far into his ability for a starter and concede that he can follow up a new prospect, arouse interest in him and finally get his name on a contract; that man thus far is a customer. He is suited with the car—or thinks he is—or he wouldn't have bought it. Also, making him think he is suited is the result of the salesman's work; when the salesman began on him the buyer had yet to be brought to the point where he wanted the car bad enough to let his desire make a hole in his bank balance.

Keeping the Car Owner Satisfied.

"Now, take the same salesman and the same owner; if the salesman is the right kind, and this applies especially to the dealer-salesman, the customer will be kept satisfied. No hired salesman without his employer back of him can accomplish the full result; but the dealer who is selling for himself and running his own business can do it. Selling the first car is a small part, but it is the beginning. Supposing the owner has a little trouble and is inclined to become dissatisfied; right there is where the dealer rounds out his salesmanship to the full. He doesn't adopt a To-hell-with-you-I've-got-your-money attitude, but does his best to get the owner back into his happy frame of mind. Having once persuaded the man that he would be satisfied with the car, it is up to the salesman to make good; real salesmanship consists not alone in making a man believe he wants a car but in making him believe afterwards that he is glad he bought it."

"THERE ISN'T A BETTER 'AD' THAN A REPEAT ORDER," DECLARED REILLY

"Come on, come on!" broke in the Sales Manager, "mark down that forty pinochle!" Reilly did so, and continued:

Liked Car But Didn't Buy Second.

"Most men who can afford cars can afford them in the full sense of the word; they do not want a car unless they can be fully satisfied, and they are willing to pay their good money for that satisfaction. I know a man right in this town who bought a certain make of car, and on the start was a red-hot booster for it. To this day he has nothing but good to say of the car, but when he bought his second machine he bought another make and it cost him about $1,000 more than it would had he bought the same make as his first car.

"The trouble was with the dealer, whose chief stock in trade is a mouthful of ready-made excuses which he calls explanations. The owner, after the car had been running for some time, went back to the dealer one day for something and, while the dealer wasn't frigid, he wasn't as agreeable as he should have been. Through all the following months the owner encountered a sort of lax and don't-care reception whenever he went to the dealer, and he began to believe that all the dealer wanted was his money—that the dealer didn't care what became of the car or owner thereafter. I don't think he was entirely right, for the real trouble was that the dealer didn't realize the value of keeping a satisfied clientele. It wasn't any one big thing but a succession of little things coupled with the dealer's general attitude. The owner could have traded for a good price when he bought his second car had he gone back to this dealer, but rather than deal with the man again he bought a new car outright, and in the spring had to sell his old car for almost nothing. It cost him something, but the satisfaction he is getting now was worth it."

"Who sold him the second car?" asked the Sales Manager.

"I didn't try to get myself into this discussion, but I sold it to him," admitted Reilly. "I would rather sell a second car to a man than win a reliability run; luck may win the reliability, but it isn't luck that brings a customer back for more. It's the true test of salesmanship. You'll find it in every trade; salesmen of the best type are forever taking care of their customers in some way, keeping them satisfied and causing them to give repeat orders. Especially in the automobile business, there isn't a better advertisement than a repeat order.

Superficiality Damaging Quality.

"The superficiality in some salesmen is beyond my comprehension. They must know, if they know anything, that they can-

Digitized by Google

not forever gather trade from new customers; new customers will build the trade and make it bigger, but the heart of the business must be the customers who stay with the house. Big department stores are among the leaders in winning and holding trade. They advertise and bring new customers, give a money's worth to show their desire to please the customer and go even further in furnishing comfort rooms and little conveniences that cost money to maintain and that are of value only as a means of taking care of their trade. This is partly included in service in the automobile business, but service is not all of it; there is more than one kind of service, and the kind that counts the most is the kind that you give as if it were a pleasure."

"Just to show you that you're a good salesman, I will now proceed to come back," said the Sales Manager, as he melded the second one hundred and fifty trumps he had laid down in the game then in progress.

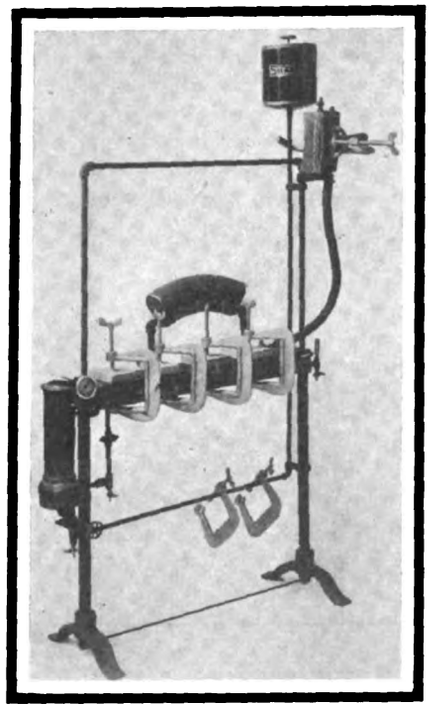
"You must be getting good service," suggested Reilly, examining the scores.

"I am; I declare out," exclaimed the Sales Manager as he threw down his hand and began to count his cards.

"That's the only way you can win a game," taunted Reilly. "Get a man into an argument so he won't watch the score."

"Perhaps," causally suggested the Sales Manager, "you might classify that as that first-time or one-time salesmanship that you were talking about; I may not get you twice in succession, but I got you that time."

To Refinance the American-La France.



Plans for the refinancing of the American-La France Fire Engine Co. of Elmira, N. Y., which, in addition to fire engines, manufactures the La France hydraulic motor truck, have been carried to a point where they are about ready to be put into practice. They provide for the introduction of $600,000 of new money, the need for which has been made imperative by the expansion of the business.

A year ago all of the assets of the American-La France Fire Engine Co. were sold to a new corporation of the same name. The capitalization of the old company consisted of $900,000 of first mortgage bonds, $1,000,000 preferred stock, and $1,000,000 of common stock, besides which there was a floating indebtedness of $500,000. The new company has a capitalization of $2,000,000 of 7 per cent. cumulative preferred stock and $1,450,000 of common, the indebtedness having been paid from the sale of new stock. Earnings of the new company are said to be running at the rate of 10 per cent. on the common stock, after allowing for the preferred dividend.

SHALER GARAGE VULCANIZER ELIMINATES BRAIN WORK

Designed To Do Big Jobs and Little Ones, Too—Regulating Thermostat and Special Clamps Minimize Trouble.

Vulcanizing a tire or a tube repair so that the job will stand real use is work that must depend largely upon the application and maintenance of the right degree of heat; and to this particular phase of the work the C. A. Shaler Co., of Waupun, Wis., has given special study, having evolved a thermostat that answers the purpose admirably.

SHALER AUTOMATIC VULCANIZER

The most recent of the well-known Shaler vulcanizers to which the thermostat has been applied is a steam-heated garage model, which not only will do a considerable amount of work all at once, but is sufficiently economical in operation so that it can be started up to make a but single tube repair with profit.

The steam generator is a copper coil boiler heated by gasolene at an expense of about a cent an hour; steam can be brought to the required temperature in 20 minutes, and the tank holds enough for a full day's work. Once steam has been raised, the thermostat automatically regulates both temperature and pressure. For repairing blow-outs there is a pair of heaters or moulds, one of which goes inside the casing and the other outside, both being connected to the steam supply; these moulds are pressed together by means of special clamps, and the vulcanizing process is carried on from both sides simultaneously. A tape-wrapping process and the arrangement of the clamps results in the forcing together and the perfect union of the new rubber and the old. The moulds are so shaped that tires of practically any size can be handled.

One of the features of the new vulcanizer, and one to which special attention is called, is that its operation has been reduced to the utmost simplicity. The thermostat eliminates the necessity for watching the pressure and temperature, so that the only factor to be considered is the time. The mechanical parts are simple enough for a boy to handle and adjustments are rapidly effected. The tube plate used for the repair of inner tubes is 30 inches long and will carry six tubes at once, while the casing attachments are ample to handle blow-outs in the largest casings.

Many Rambler Men go Higher up.

New Year's presents in the form of substantial promotions were given by the Thomas B. Jeffery Co., of Kenosha, Wis., to a number of the men who had been tried and found true in Rambler service. Louis H. Bill, for many years in charge of the Rambler interests on the Pacific Coast, was appointed assistant general manager in charge of both factory and sales, and Harry E. Field, for three years manager of the Eastern branch, was elevated to the general sales management of the company; George H. Cox will be his assistant. Both Bill and Field are graduates from the bicycle industry. George H. Berry, former sales manager, was elected second vice-president and treasurer of the Jeffery company, and Edward S. Jordan, advertising manager, was made secretary; Jordan, however, will continue to handle the Rambler advertising. Charles T. Jeffery remains president and Harold W. Jeffery vice-president; previously the latter also served as treasurer. In the factory proper several promotions also were made, J. W. De Cou being appointed factory manager and John Bjorn assistant factory manager and general superintendent, while Geo. N. Bliss and M. Mattson were designated assistant superintendents. All of these men have been from nine to 23 years in the Jeffery service, having served the late Thomas B. Jeffery when he made Rambler bicycles.

Firestone Branch in Cincinnati.

The Firestone Tire & Rubber Co. has opened a branch in Cincinnati, at Ninth and Sycamore streets. It will be in charge of E. S. Firestone.

WIDE-A MERCHA In the MOTOR

TO PUT FINGER ON WEAK SPOTS

Methods That Permit of Its Being Done—Conclusions Must Be Drawn from Facts, Not from Hopes.

The closer one gets to the automobile business and the more exhaustively he studies its various angles the more quickly he sees that in its essentials it is exactly the same as any other business and that it differs only in kind. The same qualities that will make a success in any other business will help a man to make a success in the automobile business.

Necessity of Up-to-date Records.

A lazy man is not likely to make a success, nor is the procrastinator—all of which is another way of saying that we must not only hustle but must also cultivate the habit of doing things when they should be done—not several days, or weeks, or months after it is too late.

It does no good to sit down and figure that during the last two years you have lost $20,000. Records should be up-to-date and should be immediate, adequate and reliable; that is, they should be daily summarized in such form that you can tell instantly "where you are at"; this, of course, means completeness that permits you at once to put your finger on the weak spot and proceed to build it up or perform a surgical operation; coequal with the other two essentials is the quality of reliability. If your records can be described as immediate, adequate and reliable, then brains and business judgment will steer the bark of business straight.

Know Why Profits Fail to Come.

If business is not good, if you are not making money, get down to brass tacks and learn the reason why. To learn that you have not made money after your money is gone is neither good business nor good sense; neither is it so uncommon as to cause remark.

Business is a science. Science does not guess. It analyzes causes and effects. It classifies facts. Science concerns itself with the known. It does not dream nor wonder; it weighs; it measures; it compares; it draws conclusions from facts, not from intangible optimistic hopes. Its logic is the logic of facts.

The closer business is shaped to meet the facts in the case and the more persistently and constantly facts are dealt with the less cause there will be to dread the final showing of the trial balance sheet.

TO MAKE WINDOW DISPLAYS BRING QUICK RETURNS.

The object of a window display is to sell goods. It is a form of advertising; therefore each window display, if possible, should be complete in itself. That is to say, it should contain all the elements that make a complete advertisement. It should not only attract attention, but interest, convinec, and create a desire for ownership.

One way to excite attention is by quantity display. A grocer might put a barrel of apples in his window and it would arouse no comment; but, let him fill the window with apples so that there appears to be an immense quantity and at once interest is created in apples; you look to see what sort they are; you wonder how they taste, and if they will keep, and so on; and if the price is right, and the apples look good, and you are fond of apples, it is more than likely you will buy.

The same principle holds good in a window display of accessories. Suppose you want to push spark plugs. It is only a small item, but you figure that the man who can get the spark plug business of your locality can keep most of the rest of it. The first move then is to have a good line of spark plugs; types to fit all motors, and a stock sufficiently large to make an impressive display—to fill the windows—and to have cards telling the feature of the plug and back it up with the price in plain figures. Then you will make sales because your advertisement is complete.

Some people think that the only time to feature a price is when it is a cut price. That is certainly not the case. If the article by its appearance, construction, quality and serviceability as told by your printed cards justifies the price, you need have no fear of printing it. Too many sales are lost by lack of this important feature of window display. Desire is created in an instant, and that's the time to cash in on it.

RISING TO AN OCCASION.

An interested organization from manager to porter appears to exist in the Metzger-Herrington Co., of Chicago, whose porter is credited with having brought about the sale of an Argo electric a few days ago when it would have been easier for him to have said "I don't know anything about it; everybody's out; you'll have to come again." The porter in question was alone in the establishment on New Year's Day, he being left to care for calls for service. During the day Dr. B. W. Sippy walked in and said he wanted to buy a car, pointed to one which stood on the floor, and said that if the porter would give him a lesson of about five minutes' duration he would write a check for the price —$2,800—and would take the car immediately.

The porter did not announce his inability to make the sale, but said: "Wait a minute; I'll get a salesman here in ten minutes." He telephoned to a salesman's residence and the sale was made shortly after this individual arrived. At latest accounts the porter was not patting himself on the back but was busy at work, the same efficient porter he had been before; which is as much as saying that he will not always be a porter.

SMALL SALE WITH LARGE MORAL

It Was Only a Hood Cover But It Illustrates Three Sorts of Salesmanship—What Impressed the Buyer.

He wanted to buy a hood cover for his car. He did not know much about them—did not know their prices, their make-up, nor anything about them except that many of them were being used. A friend in whom he had confidence had told him that morning that hood covers were a great thing, not only because they made starting easier, but because they kept the engine radiator warm and made winter driving easier on the engine because of that warmth.

Indifference and Insufficiency.

At the first place he visited they told him the prices were from $7 to $12, and it would take two days to deliver the hood after they had measured his car. No effort was made to close a sale and get the order. The salesman felt he was through when he had named the prices.

The motorist made up his mind that he would inquire further. Perhaps there would be a difference in prices. So he went to an accessory store a couple of blocks away.

"Yes, we have hood covers—here they are," said the clerk, showing two miniature samples on a counter. "We can give you a hood cover for $7, plain like this, or a quilted one which wears better for $9, or a real good hood cover for $12."

"What's the difference between them?" asked the motorist.

"A difference in quality," replied the clerk.

"That's pretty vague—supposing you tell me just what you mean; in other words, what more do I get when I pay $12 than when I pay $7? Will it keep my car any warmer? Will it last any longer? Is there any difference in materials? Is it heavier, or what?"

The clerk got mad because the customer wanted to know so many things and told him he would have to take their word that the quality was there. The customer decided to go elsewhere.

On the next corner was a place where many accessories were sold. As he entered a pleasant-faced salesman met him.

Definiteness and Courtesy.

"Hood covers? Yes, we make quite a lot of them. What car do you drive? A 'Sphinx'? We have had mighty good luck fitting up a number of them—it's a fine car, isn't it? We will make you a cover for a 'Sphinx' for $10—it will be as heavy as you will ever need—made of the best—heavy waterproof duck, lined with two layers of thick felt; we will fix it so you can lift either side of the hood, and we will make it so it fits your car exactly—and it will take us just a day and a half to get it out."

When the customer protested that his price was too high this salesman went into details and showed how he could leave off the quilting and save a dollar or so—how he could cheapen the duck and save a few cents and in less than fifteen minutes he had a man at the curb measuring the car.

The story of the hood cover is worth studying. It illustrates the indifferent clerk, the half-interested, antagonistic style and the salesman who is ready to tell the customer anything he desires to know and who is glad to explain the "reasons why" behind his price.

INCREASING GARAGE SALES.

The Gillespie Auto Sales Co. of Detroit, which conducts a service station for trucks, does a regular garaging business and makes a specialty of selling gasolene and oil at a few cents less than the other fellow, is wideawake when it comes to selling accessories and oil and grease. Right near the door is a series of cards, about 11 x 22 inches, calling attention to bargains in tire tubes, grease in five-pound cans, Prest-O-Lite tank service, storage batteries and dry cells. The cards are about the size of the conventional street car card and are mounted one above another in interesting array. Some of the signs are hand lettered with marking brush, others are painted by a good sign writer and some are printed, but all of them are readable and nearly all quote prices.

The signs hit you squarely in the eye while your gasolene supply is being replenished, and if you escape buying something it must be because you are very well supplied with everything. And the signs are changed often. They do not remain the same day in and day out, as in some garages. Of course, it is just a common-sense merchandising method, but too many garages do not make use of such methods. The idea is exactly the same as that of the druggist who sells you a tooth brush and then suggests a good dentrifice. The more things you can sell your customers the more of their money you can get and the greater the profit you can make.

LENDING A HELPING HAND TO THE NEW OWNER.

The foresighted dealer will follow with closest interest the experiences of the new car owner at this season of the year, and if he is wise indeed, he will forestall many of the possibly unpleasant experiences of his customers by a kindly word of advice and caution. The man who sells a car has a responsibility far deeper than the delivery of it to the right address, and part of that responsibility is to teach the new owner the proper care of his machine.

These things become so common that many men are prone to think everybody else knows all about them. But, think over the list of those to whom you sold cars and can sell them that will make their winter can tell them that will make their winter motoring experiences pleasanter or otherwise more satisfying.

HEEDING THE BOY AS ONE METHOD OF MAKING SALES

Willys - Overland Cites Instances Where Juveniles Have Influenced Purchases—Advises Dealers to "Take Notice."

Absence of courtesy in a thorough form may cause a salesman to discriminate between individuals because of their clothes and thereby lose a sale to a not well-dressed man who may, nevertheless, be able to buy and sell the salesman several times, but a disregard of children probably in the majority of instances is due to rather pardonable unappreciation of the possible sales that may be gained through juvenile influence; many an automobile salesman has never stopped to consider that just because a questioner is young in years he may nevertheless be the means of bringing a commission into the pockets of the motor car merchant.

How important it is that the childlike questions of children be answered and that they be not dismissed with a "Don't bother me! I'm busy," has been emphasized before in Motor World and doubtless will be again; the story has been told of the Brooklyn dealer who makes friends with the boys in "pushmobiles" and gets them to paint the name of his car on the bonnets of their little vehicles and instances have been cited by boys and girls, who have walked into salesrooms and made purchases of their own initiative without the formality of calling in a parent to close the sale. And at least one great big automobile manufacturing company has recognized the value of the small boy as a selling aid and has gone so far as to urge its dealers to do likewise.

The company is the Willys-Overland Co., of Toledo, O., and its urging is contained in a communication issued by the advertising department, which, in large measure, is as follows:

"We maintain—and every old-timer in the business will bear us out—that the inquiries of boys concerning motor cars are much too important to overlook or ignore. In the average family the most 'up-to-the-minute' member, and the one who will most insistently urge his father to buy an automobile, is the boy. It is the boy who collects and reads the catalogs and who knows much more about automobiles in general than his father. Have you ever noticed how often, when you pass him in your car, the boy of to-day will say, 'It's an Overland' Ten to one his father wouldn't have known it from any other car.

"A boy on roller skates recently rolled into the Overland salesroom in Cleveland, shouting at the head of a concern, 'Mister, please gimme an Overland catalog.' He got the desired book, and before closing time that night the firm had sold the youngster's mother an Overland car. Our Denver dealer tells of driving 72 miles to a ranch to investigate a prospect disclosed in a remarkably well written letter asking for a catalog. He found only the ranchman's son, a boy of 14 years, who admitted writing the letter without consulting his father. Though at first inclined to be 'peeved' at what he considered a wild goose chase, the dealer explained to the lad the features of the car and gave him a ride over the prairie. Within a week the boy's father had purchased an Overland, and to-day two other sons and the rancher's brother are Overland owners.

A negro boy recently asked the New York dealer for a catalog, explaining that while he couldn't buy a wheelbarrow, he hoped some day to be a 'shoffah.' The dealer gave the youngster all the information and literature he had and a demonstration ride. Within a few days a New Jersey farmer entered the salesrooms and declared he wanted to buy an Overland car. 'It must be the popular car, for all the darkies on my farm are talking about it,' said the farmer. A little questioning disclosed the fact that the negro boy with ambitions to become a 'shoffah' was employed on the New Jerseyite's farm.

"These instances are enough to remind you that the boy is not to be slighted. The boy of to-day is the man of to-morrow, and even now his voice is loud and insistent in the family council. Not infrequently the boy is the only member of the family who has read your advertisement and is therefore the only path by which you will be able to reach the father, who, generally, is the one who has the money to spend on a new car."

"Honey Fitz" Tackles Gasolene Sitaution.

Not content with idly protesting against the soaring price of gasolene, though he has gone to the length of writing to several Massachusetts congressmen to urge drastic legislation against the conduct of the Standard Oil Co., Mayor Fitzgerald of Boston, familiarly known as "Honey Fitz," has a plan which he hopes will effect at least temporary relief. He proposes to establish a municipal gasolene supply station somewhere near the heart of the city, where a large tank can be placed so that Boston's motorists can purchase their fuel from the city at wholesale rates. Already, he has requested Commissioner Rourke of the Public Works Department to choose a suitable location for the depot and to prepare an estimate of the cost of erecting the necessary tank.

SELLING PROBLEMS IN THE LAND OF QUEUES AND FANS

Persuading the Chinaman to Buy a Car Differs Widely from Approaching an American—Much Tea Drinking Involved.

How to sell a car to a Chinaman may become a course in schools of automobile salesmanship, and if M. A. Greenfield, agent in Shanghai, China, for the Michigan car has the wily Celestial correctly measured, such instruction would fill a need which is felt by those Americans who migrate to the Heavenly Empire with the expectation of getting a series of Chinese hieroglyphics at the bottom of an order blank. Putting in preliminary sales talk over a tea table or some other form of table is falling into disrepute in this country, but in China, Greenfield says, the ability of the salesman is partly gauged by the amount of tea he can drink. It all goes back to the Celestial's disinclination to hurry, which is not in accordance with methods in America.

"The Chinese will not be hurried," said Greenfield in telling the salesmanship troubles of the country in which he now is working. "When you have picked the customer for your car, you must call on him two or three times before you close the deal. You must spend hours with him, and sometimes days. You will discuss politics, progress, business, clothes, family—everything except the automobile. You will drink his tea and scrupulously exchange all the courtesies with him.

"If you attempt to rush matters, he will think you are trying to perpetrate some sort of a swindle, otherwise you would not be in such a hurry to get away. When at the last you finally get around to the sale of the automobile, it will be a comparatively easy matter, for your customer will have been silently making up his mind. Once his mind is made up, nothing can shake it. He puts his faith in the 'chop'—that is, the trademark. In the case of the automobile, it is the name plate on the radiator.

"Your mandarin purchaser is a loyal advertiser for you. It will not be a week before all his friends know all about his car. They will ask for a car with the same 'chop' as that on their friend's, and cannot be persuaded to look at any other. If the mandarin has bought a medium-priced car, and someone should come along and offer him the highest-priced car made, he cannot make a step of progress, because his car does not show the preferred 'chop.'

"In Shanghai, a city of about a million population, there are to-day, I should say, about 800 automobiles."

KEEPING ABREAST OF STARTERS AND LIGHTERS

The Aid to a Thorough Knowledge of Electrical Equipment That May Be Found in Instruction Books—Practice That Can Be Gained Without Them—Esterline System as an Example of Compact Simplicity.

(This is the fifteenth of a series of articles designed to make clear the electric lighting and engine-starting systems in use and to render easier their care and repair by the dealer and owner alike.)

It is a lamentable fact that not a few automobile dealers may be likened to the old codger who, though religious enough on occasion, was just plain lazy when it came to repeating his prayers. He laboriously wrote them out on a sheet of paper and tacked the paper to the head of the bed. It was his habit each night before blowing out his candle carelessly to nod in the direction of the paper with the injunction: "Lord, them's my sentiments." Devotion of the kind was sufficient, to his mind, and it is altogether likely that he "slept the sleep of the just."

ESTERLINE STARTING MOTOR DISASSEMBLED, SHOWING COMPONENT PARTS

When Instruction Books May Work Harm.

"You'll find it all in the book," not infrequently is the dealer's substitute for "Lord, them's my sentiments," when an owner comes back at him for more information, the book in question being the printed instructions usually supplied by the manufacturer. It is good, of course, that the manufacturer does supply concise information for distribution in printed form by the dealer, and it is only fair to add that it generally is possible "to find it all in the book." That is to say, it generally is possible to find out all about the car in the book, without reference to the accessories. In very few cases have manufacturers remembered that the electric lighting and engine starting system with which the car is equipped now is as much a part of the car itself as is the engine or the gearset or the axles. And though quite a number of manufacturers of electrical equipment supply their own instruction books, which undoubtedly serve a useful purpose, a warning should be noted in the fact that they also serve as a ready excuse for the oft-reiterated saying, "You'll find it all in the book."

Analogy Between Laziness and Ignorance.

That phrase, to many a dealer, is all-sufficient. Though he may excuse his laziness in undertaking a first-hand explanation by stating that "the book tells it so much better than I can tell it," the fact remains that if it is not laziness, it is ignorance, neither of which is calculated to inspire confidence or to further trade. If there is a "book," there can be no excuse for ignorance, unless the book is so incomplete as to make a thorough understanding of the system impossible when there is still less excuse for ignorance, for the very incompleteness of the book should serve to stimulate the dealer into educating himself with the aid of the equipment under his care. Plain laziness can be dismissed as a disease that generally is incurable.

The Value of Practical Training.

As a matter of cold fact, it is not possible always "to find it all in the book." Books are complete insofar as they go, but it scarcely is possible fully to cover every portion of a system and every slight derangement that is at all likely to happen to every portion, under one cover. Individual systems from the same manufacturer may have individual characteristics, particularly where they are fitted to different makes of cars, and no one is better able to become familiar with their idiosyncrasies than is the dealer, who comes in contact with a large number of owners operating a large number of systems under actual service conditions that may differ widely. To put it in expressive English, the dealer has a grand little chance to become thoroughly familiar with the apparatus fitted to the cars he sells, and it is his duty to do so, for the information which will be gained represents that phase of service which makes friends and makes business; it spells death to the apparent indifference which lurks in the saying "You'll find it all in the book."

Prevailing Desire for Enlightenment.

The mere existence of such instruction books, brought out only recently in the majority of cases to fill a well-defined demand, makes it just so much easier, of course, for the dealer to become familiar with his equipment, though it never has been difficult, as has been made plain in the articles which have appeared in the fourteen preceding issues of Motor World. Quite naturally, every one whose car is equipped with an electric lighting and engine starting system wants to know exactly what to do in case of trouble, for though it is realized that, with the present efficient equipment trouble is the exception rather than the rule, the feeling that to be forewarned is to be forearmed is very nearly as strong to-day as it was in the days of primeval warfare; it represents a measure of security that is comforting, at least, and may prove to be salvation.

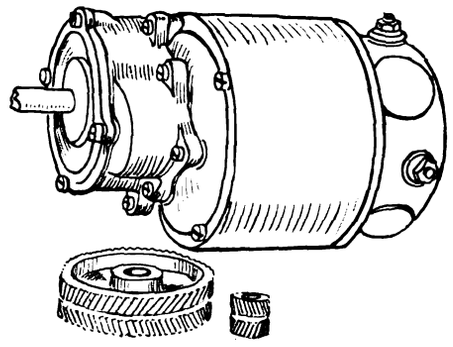
Importance of Proper Mountings.

In the actual method of mounting or driving either a dynamo or causing an electric motor to drive the gasolene motor until it picks up its own cycle of operations, there should be, and experience has proven that there is, very little that need concern the dealer or the owner, much less cause either one any trouble. Still, the method of mounting and connecting constitutes an important subject to which comparatively little attention has been paid. In the first place, considerably more power is required to "spin" the average motor than generally is supposed, and it follows therefore that the

Digitized by Google

mounting must be substantial and that the bearings must be sufficiently large to withstand the wear and tear of continuous service. Manifestly, drives which are suitable for dynamos are not suitable for motors.

The next consideration, which in view of present trends is perhaps just as important as the first, is that the drive must be practically silent. Despite the fact that starting motors are operated at best for but a moment or two at a time, and it might be conceivable that the prospective purchaser would be willing to "put up with" a slight noise in view of the convenience and safety of the apparatus, quietness is a factor which cannot be overlooked; it is one of the first things the prospective purchaser looks for, or, to be more accurate, listens for.



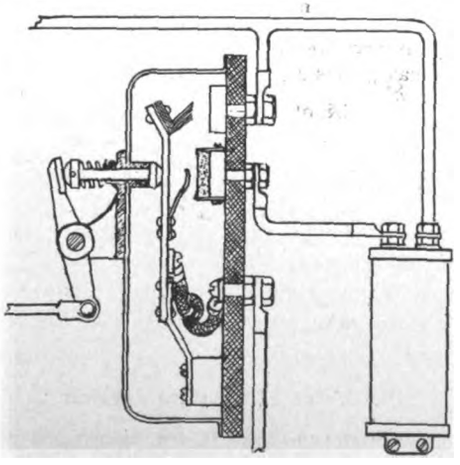
Combined Herringbone and Spur Gears.

There are several ways in which the electric motor can be geared to the gasolene engine: By "silent" chain, by direct coupling, by spur gearing, by worm gearing, and by herringbone gearings; combinations of two forms of gearing, such, for instance, as worm and spur or spur and herringbone, are not very common, there being but one exponent of each system. The former is the Hartford, which already has been illustrated and described in one of the previous articles of the present series, and the latter is the Esterline, the generating and accumulator portions of which also have been illustrated and described in an earlier issue.

In the Esterline starting system, which but recently has been added to supplement the lighting system that has been on the market for several years, the necessary reduction between the starting motor and the gasolene engine is obtained through the intermediary of a combined spur and herringbone gear arrangement, which is an exclusive feature. The herringbone gears are of the Weiss type, and though they are not calculated to run entirely without lubrication, it is one of their peculiarities that they may be run dry without noise almost for indefinite periods without danger of serious consequences. The pinion is made of bronze and the large gear of high carbon steel, which, considering the fact that the armature shaft is mounted in liberal sized S.K.F. self-aligning ball bearings, reduces the amount of lubrication necessary for efficient operation to the minimum. The starting motor is shown by the accompanying picture in a partly disassembled condition, the better to make plain its construction.

Enclosure That Prevents Dust Collection.

The field of the motor, which, by the way, operates on the purely nominal pressure of six volts and is capable of "spinning" a heavy motor at from 70 to 90 revolutions a minute, is cylindrical in shape, and when the assembly is complete the whole of the mechanism is completely enclosed and dust proof. Small inspection plates are provided over the brushes; they are sprung into place and may be easily and quickly removed without the necessity for tools of any kind. The gear box, as may be seen by the illustration, is made separate from the motor end casing, to which it is attached



ESTERLINE STARTING MOTOR

by means of six heavy screws; like the armature, the gearing shafts are self-aligning. The field is of the series wound type, the four poles with their windings being plainly visible in the picture. The armature is of the drum type with the slots slightly skewed in order to permit of smoother running and reduce the noise of operation; windings are held in place by four heavy bands, thus obviating the possibility of centrifugal force deranging the wires and causing short circuits or breaks.

Operation of the Starting Switch.

The Esterline starting switch is of the double contact type and is operated simultaneously with the mechanism which shifts the starting motor pinion into mesh with the gearing cut in the periphery of the fly-

ESTERLINE STARTER SWITCH

wheel; the motor may be geared to the gasolene engine through the intermediary of a "silent" chain to the crankshaft, however, in which case the arrangement differs slightly, though in principle it is the same.

In operation, pressure on the starting button, which may be located either on the dash or in the foot boards, simultaneously moves the gears into mesh and closes the circuit between the battery and the motor. Before the gears come into mesh, however, the starting switch is closed first through a resistance which permits the motor to operate at slow speed and with little power, thus facilitating the meshing of the gears. Further depression of the pedal fully meshes the gears, and at the same time connects the battery around the resistance, permitting its full strength to pass to the motor. Immediately the gasoline engine commences to operate under its own power, the gears automatically are "kicked" out of engagement by the roller starting clutch.

Why Firm Pressure Is Necessary.

The starting switch is simple in the extreme, as may be seen by the accompanying picture, and should never require to be touched. It should be remembered, however, that the pedal should be depressed with a firm, unfaltering motion, for the main contacts carry heavy currents—from 100 amperes for a small four-cylinder motor to 175 amperes for a large "six"—that are likely to cause burning unless the switch is closed quickly and completely. If the contacts are permitted merely to touch together without sufficient pressure, there may not be enough metal in contact to carry the current and burning is likely to result. It will do no harm occasionally to remove the switch cover and clean the contacts, using for the purpose a piece of fine emery cloth. The contacts should be rubbed with the emery cloth until they present a uniformally bright surface all over. Needless to add, loose connections will work havoc with the operation of the system and always should be carefully looked for when occasion demands inspection for any other purpose. Dirt also is a natural enemy to efficient operation, and the opportunity to remove it from any part of the mechanism never should be lost.

How to Care for the Motor.

In the care of the motor itself, there is little that will require attention, for the reason that it is used only at long intervals and receives the minimum of wear. Incidentally, as it is in operation only a very small part of the time, there is a proportionately smaller chance of its mechanism becoming deranged. As the armature shaft is mounted in large ball bearings it is to all intents and purposes wear proof, and its demands in the way of lubrication will be exceedingly moderate—probably a few drops of very fine machine oil about once every two weeks unless it is used continually when the oil should be applied about once a week. In any case, more than a few drops never

Digitized by Google

should be applied at one time, as otherwise it will collect on the winding and on the brushes, where it will cause sparking and poor commutation.

Cleanliness Absolutely Necessary.

The brushes and the commutator virtually are the only parts that need ever require real attention. Although they come into use but seldom, they carry very heavy currents for short periods, and for this reason great care should be taken to see that they are kept perfectly clean; foreign matter will tend to cause sparking, which will burn the comparatively soft copper of the commutator and reduce the efficiency of the starter. Though the motor is completely enclosed and theoretically is dust-proof, there generally will be found a small amount of dust within the casing when the caps over the brushes are removed. Some of it probably will be carbon dust from the brushes, which is no less harmful as foreign matter than ordinary dust. All such accumulations should be cleaned away preferably with a soft brush, though if caked on by reason of the use of too much coil a cloth dampened with goselene will serve to remove them.

All four brushes are fitted with what in electrical engineers' parlance are styled "pig tails' 'and consequently no attempt should be made to remove them entirely from the motor. It will suffice to take them out of their sockets to the length of the "pig tails" and wipe them clean of dust or oil. Make sure that they slip easily in their sockets and that the spring tension upon them has not been disturbed. If their ends exhibit accumulations of grease, they should be gently sandpapered until they appear clean, care being taken not to disturb the curvature any more than is necessary. If the brushes appear very dirty, it is altogether likely that the commutator also will require cleaning, though if it appears glazed and brownish it should not be touched. If it is sticky or oily, however, a cloth wrapped around the finger and dipped in gasolene should be applied while the armature is rotating.

"Pig Tails" That Need To Be Watched.

When the dirt has been removed, excess gasolene will dry quickly if the machine is permitted to run for a few minutes, when it will be possible to determine by inspection whether further treatment is necessary. The presence of cuts or scratches will make it necessary to apply sandpaper, which should not be coarser than No. 00 and must not be applied with any degree of force; a long, light application is better than a short, heavy one. When the scratches have been removed, apply a minute quantity of the best quality vaseline either with the finger tip (while the armature is rotating) or on a small piece of felt, afterward reassembling the brushes.

If, after the motor has been cleaned and reassembled, it should fail to operate properly or at all, the wiring connections first should be gone over to make sure that none of them have been disturbed during the cleaning process. Examine particularly the brush leads and the battery connections to the motor, as these are prone to loosen themselves and should be tightened carefully at every opportunity. If the wiring connections appear tight, examine the brushes to make sure that all of them touch the commutator properly; occasionally a "pig tail" may become twisted when the brushes are replaced and prevent the brush touching the commutator. Sometimes, also, "pig tails" may become loosened where they are attached to the brushes; care should be taken to remedy such breaks.

Diagnosing Minor Starter Troubles.

It has been assumed, of course, that the battery is properly charged, for it is quite obvious that if it has been permitted to become partly discharged the starting motor will not be as responsive as it should be. If all the connections are tight and the motor cannot be made to start the engine, it may be assumed that the battery is not properly charged, provided no meter is included in the circuit; burned out fuses, of course, would prevent the passage of current, and if fuses are employed they should be examined first. If a fuse has burned out, careful search for the cause of the failure should be made before a new one is put in its place, or the new one may be burned out immediately the current is turned on again.

The burning out of a fuse always should be taken as prima facie evidence that something is wrong—either that there is a short circuit or that the gasolene motor has stuck in some manner, preventing the electric motor from "turning it over." The freezing of the cooling water in winter, or the sticking of the pistons due to the use of oil that is too heavy and congeals in cold weather, both might be considered as contributing factors. It is advantageous, of course, to maintain the gasolene engine in such condition that it starts easily, for it then will require less current to set it in motion.

Balanced Field in Generating Unit.

As the generating portion of the Esterline system already has been described and illustrated in an earlier article in the same series, it will suffice merely to outline its features in order to refresh the memories of those who may have forgotten it. The generator is of the combined permanent magnet and electro-magnet type in which current regulation is obtained by balancing the strength of the one field against the other in such a way the field "builds up" rapidly at low speeds and the output remains practically constant over a wide range of speeds. The use of permanent magnets also insures against the possibility of the polarity of the generator inadvertently being reversed. The cut-out is of the electro-magnetic type and is completely enclosed in a housing. The battery employed is of 120 ampere hour capacity and furnishes six volts for both the lighting and starting circuits.

Julian Making Lower-Priced Motor.

Supplementing its only other product—a six-cylinder motor—which at the time of its formal presentation some three months ago was styled with pardonable pride "the highest priced stock motor made in America," the Julian Motor Co. of Syracuse, N. Y., has developed and is preparing to market a second six-cylinder motor which is not only radically different from the first in several particulars but is radically different from everything else of its kind as well. Incidentally, and in common with the first Julian motor, the newcomer exhibits a number of features that give evidence of more than ordinarily careful thought in design.

Unlike its predecessor, the new Julian motor has been brought out to fill the demand for a medium priced engine incorporating the latest most up-to-date engineering practice. It is like the older one in appearance only, in that every moving part is completely enclosed and the single casting is as "clean" as it is possible to make it; otherwise it is totally different as regards its design. Whereas the first motor is of the T-head type, the new one is of the L-head type, or rather of a modified L-head type, the arrangement of the valves being peculiar and an exclusive feature of the motor.

Instead of being placed side by side, as is usual in the orthodox type of L-head motor, the intake and exhaust valves in the Julian are placed one before the other, or very nearly so, with the exhaust valve innermost. The immediate effect obtained, of course, is that the inflowing gas is forced to pass directly over, and to come into contact with, the head of the exhaust valve, with the result that the latter is maintained at a practically constant temperature, thus minimizing the danger of warping. Incidentally, its temperature cannot rise to the point where pre-ignition is possible. By way of obtaining high efficiency, fairly high compression is employed. The bore and stroke of the motor are 4 inches and 5¾ inches, respectively, leaving little room for doubt regarding the aptness of the designation "long-stroke."

FINES AND JAIL SENTENCES PROVIDED BY NEW SPEED LAW

New Ordinance Permitting Fifteen Miles in New York City Adopted —Owner and Chauffeur Made Jointly Responsible.

After having blinked at the regulation prescribing an impossible vehicular rate of speed of eight miles an hour for so many years that the blinking had become almost an irremedial habit, New York City, which under the Callan law is one of the cities of the first class that can make its own speed regulations, at length has seen the light, and on Monday, 6th inst., the Board of Aldermen unanimously passed the Folks ordinance raising the limit to 15 miles, thereby formally recognizing the ridiculousness of the existing law, which has been habitually broken by nearly every form of vehicle since the limit first was set. The measure goes now to the Mayor, and there is little doubt but that he will set the seal of approval upon it, in which case it will take effect March 1st.

As a whole it is fair and liberal, and in addition to raising the legal rate of speed to 15 miles an hour in general, with certain exceptions where the rate may be increased to 18, 20 or 25 miles an hour, the law also provides for fines and imprisonment for violations; and, what is even more important, it makes the owner jointly responsible with the chauffeur in the event of conviction for infraction of the law. Consequently, the owner of a car needs must keep an eye glued on his speedometer if he would keep out of court.

The first section of the law is a general provision against the reckless operation of bicycles, tricycles, velocipedes, motorcycles, horse-drawn vehicles and every kind of automobile, and the second prescribes a limit of 15 miles an hour, except on Broadway and Amsterdam avenue north of 125th street, in the Bronx, on the Grand Boulevard and Concourse and on Atlantic avenue, Eighteenth avenue, Flatbush avenue, Fourth avenue, Fifteenth avenue, and Kings Highway in Brooklyn, where it may be 18 miles an hour; on the Queens Boulevard, where it may be 20 miles an hour, and in rural sections of the city, where it may be 25 miles an hour.

Under the new law, the penalty for a first offense may be a fine of from $25 to $100, or 10 days' imprisonment, or both; a second offense will draw down a fine of from $50 to $100, 20 days' imprisonment, or both, and a third offense a fine of $100 or imprisonment for 30 days, or both. Excepting the first section, which merely applies the law to all vehicles, the ordinance is as follows:

2. Specific Rates of Speed—No person shall operate, drive or propel, and no owner thereof riding thereon or therein, shall cause or permit to be operated, driven or propelled, any vehicle subject to the provisions of Section one (1) of this article, on any public highway in The City of New York at a greater rate of speed than fifteen (15) miles per hour. Provided, however, that a rate of speed of eighteen (18) miles per hour may be maintained, but not exceeded on the following highways, namely: In the Borough of Manhattan, Broadway north of 125th street, Amsterdam avenue north of 125th street; in the Borough of The Bronx, the Grand Concourse and Boulevard; in the Borough of Brooklyn, Atlantic avenue, Eighteenth avenue, Flatbush avenue, Fourth avenue, Fifteenth avenue, Kings Highway. And provided further, that a rate of speed of twenty (20) miles per hour may be maintained but not exceeded, on Queens (Hoffman) boulevard, in the Borough of Queens. And provided further, that a speed of twenty-five (25) miles per hour may be maintained, but not exceeded, on public highways where the same pass through country sections which are substantially undeveloped and sparsely settled.

But nothing in this section contained shall be construed as in any manner of degree limiting or restricting the operation or effect of any of the provisions of section one (1) of this article.

3. Approaching Bridges, Turning Corners, Passing Public Schools, Meeting Street Cars—Upon approaching a bridge, or in turning a corner of intersecting public highways, or in passing a public school on school days between the hours of eight (8) o'clock ante-meridian and four (4) o'clock post-meridian, the person operating, driving or propelling any vehicle subject to the provisions of section one (1) of this article, shall not proceed, nor shall the owner of any such vehicle riding thereon or therein, cause or permit the same to proceed, at a rate of speed greater than ten (10) miles per hour, and in meeting, overtaking or approaching a street passenger car which has been stopped for the purpose of receiving or discharging passengers, every such vehicle aforesaid shall be brought to a full stop at a point not less than six feet from such street passenger car, and shall not proceed and pass such street passenger car between said car and the near curb or sidewalk until such street passenger car shall have proceeded.

But nothing in this section contained shall be construed as in any manner or degree limiting or restricting the operation or effect of any of the provisions of section one (1) of this article.

4. Application of Sections 2 and 3—Nothing contained in either section two (2) or section three (3) of this article shall apply to any of the following vehicles, to wit: Vehicles carrying United States mails, wagons, trucks and apparatus of the Fire Department, of the Police Department and of the military, emergency repair wagons of public service corporations, and ambulances, when in the performance of duty, and vehicles which run only on rails and tracks.

5. Violations. Punishment for First, Second, Third and Subsequent Offences—Jurisdiction—Any person who shall operate, drive or propel, and also any owner thereof riding thereon or therein who shall cause or permit any vehicle subject to the provisions of section one (1) of this article, to be operated, driven or propelled, in violation of any of the provisions of this article, shall be guilty of a misdemeanor, and shall, upon conviction for the first offense, be punished by a fine of not less than twenty-five (25) dollars nor more than one hundred (100) dollars, or by imprisonment not to exceed fifteen (15) days, or by both; and shall, upon conviction for the second offense, within one (1) year from the commission of the first offense, be punished by a fine of not less than fifty (50) dollars, nor more than one hundred (100) dollars, or by imprisonment not to exceed thirty (30) days, or by both; and shall, upon conviction for the third offense, and for each and every offense subsequent thereto, within one (1) year from the commission of the first offense, be punished by a fine of one hundred (100) dollars, or by imprisonment for a term not to exceed sixty (60) days, or by both.

Provided, however, in construing this section the unit of any one year shall be the basis for determining "first," "second" or "third" offense, the numerical order changing when succeeding convictions occur, and more than one year has elapsed after an original "first," "second" or "third" offense.

6. Ordinances Repealed—All ordinances and parts of ordinances of The City of New York inconsistent with, or contrary to, the provisions of this article, are hereby expressly repealed, except that no ordinance regulating or prescribing the rate of speed of street passenger cars shall be impaired or affected in any manner by anything herein contained.

In addition, three resolutions also were adopted, the first of which requests that the Park Board of the City of New York consider the advisability of revising its regulations to conform with the new law; the second requests that Justices of Special Sessions and City Magistrates notify the Secretary of State of violations of the law in order to facilitate the identification of offenders; the third requests that the Police Commissioner establish and maintain at headquarters a suitable card system in which to enter for future reference the names and descriptions of offenders.

Petrol Price Causes Another Taxicab Strike

Despite the amicable settlement of the recent taxicab drivers' strike in London to the apparent satisfaction of both the drivers and their employers, the drivers again have become dissatisfied and have "walked out," the result being that London once more is at the mercy of the once ousted hansom cab driver and his brother independent taxicab operators. Altogether, some 6,000 cabs are idle. The rise in the price of fuel and recent action of the principal companies in deciding to supply their drivers with "petrol" and to charge them for it, paying them a commission out of their weekly "takings," is directly responsible for the strike, according to the strikers, who maintain that it is impossible to earn a decent living under the low fares and high fuel price.

R. E. Brown has been elected president of the Mankato (Minn.) Automobile Club. The other officers are: Vice-president, C. H. Saulpaugh; treasurer, B. Bangerter; secretary, C. A. Ingwalson.

CALIFORNIA "INSURGENTS" ADOPT A "CONSTITUTION"

Take Another Step Toward "Outlawry" and "Local Interpretation" of Rules—Peculiar Logic Brought to Bear.

Frank A. Garbutt and the 20-odd other Los Angeles motorists who believe that rules designed to apply in all parts of the country should not apply to California and Californians, and expressed their belief by the tentative formation of what originally was styled the Automobile Contest Association of America, have remained unconvinced despite the efforts which have been made since first they undertook their insurrectionary movement against the A. A. A.

They now are calling their organization the Western Automobile Association, and have gone so far as to adopt a constitution and by-laws, and if they succeed in their ends California will become an "outlaw" State and thereby will be closed to the rest of the country, and Californians must perforce race only in their own back yards, so to speak.

Although one of the vice-presidents of the A. A. A. is a Californian, and although Californians are represented on the A. A. A. contest board, Garbutt, who apparently never had heard of the Supreme Court of the United States, insists that the West "be given its own administrative officials, whose duties shall be to interpret and enforce the laws locally," and that "these officials be representative of the people they govern."

Apparently unable to distinguish that the A. A. A. is in the nature of a supreme court, Garbutt rather amusingly illustrates the situation by declaring that "an exactly parallel case would exist if our California State laws were enacted in New York and all of our courts also removed to that State. If such were the case our people here would be justified in asking for local courts to interpret and enforce the laws enacted for our local guidance."

This logic makes appear that when the Western Automobile Association formulates its rules each locality will be permitted to interpret them as it may desire, or as may meet any occasion which may arise.

Bay Staters Re-elect All Officers.

E. A. Gilmore was re-elected president of the Bay State Automobile Association at the annual meeting held at the Hotel Lenox, Boston, on Monday last, January 6th. With the exception of M. H. Guelsian, who resigned as a director and was replaced by W. H. Stevens, the entire governing board was re-elected. The other officers are: Vice-president, Harry W. Knights; secretary, C. P. Rockwell; treasurer, J. S. Hathaway; directors, A. B. Henley, B. G. Ellis, H. G. Kemp, Chase Langmaid.

Wetmore Heads Dealers' Contest Ass'n.

As was to be expected, in view of the fact that he was chiefly responsible for the birth of the association and has been the moving spirit behind it since its inception, John C. Wetmore, who is automobile editor of the New York Evening Mail, was elected president of the recently formed Motor Dealers' Contest Association of New York, at the first annual meeting, which was held at the Elks Club on Monday night, 6th inst. The other officers chosen were Wm. C. Poertner, vice-president; J. C. Nichols, treasurer, and Edw. F. Korbel, secretary. Prior to the election of officers, a board of 15 directors was elected, which, with the officers, consists of: A. J. Interrieden, I. M. Uppercu, George Robertson, E. J. McShane, C. H. Larson, Emanuel Lescaris, A. B. Cordner, W. J. Morgan, S. S. Toback, C. A. Stewart and H. M. Bronner. The decision as to who should hold the one-, two- and three-year terms, to conform to the by-laws of the association, was made by lot. The election of the executive and other committees was deferred until the meeting of the board of directors, which is scheduled for the evening of January 24th and will be held at George Rector's Broadway hostelry.

Hill Wins San Diego Road Race.

George Hill, driving a Fiat car, won the San Diego road race, which was run over a triangular course 91.7 miles in extent, on New Year's Day, Wednesday, January 1st, under the auspices of the San Diego Auto Owners' Club. Hill's time for twice around the circuit, or 183.4 miles, was 3:58:12, or at an average of 46.2 miles an hour. Second place went to W. H. Smith in a Mercer, who finished 14 minutes later than the winner, and third place to W. H. Carlson, Jr., in a Stutz, who covered the distance in 4:16:15.

Thirteen, including Robert Burman (Cutting), who experienced a broken steering knuckle and was forced to drop out, lined up for the start. The course, which was in none too good condition, led through Escondido and Oceanside and back to San Diego.

Unusual Rule for "Towed" Cars.

A somewhat curious regulation that is in force in England makes it compulsory for a car being towed to carry a number plate that is a duplicate of the plate of the car that is doing the towing. One of the two plates of the leading car can be used for the purpose.

SAVANNAH COURSE AGAIN FOR VANDERBILT AND GRAND PRIZE

Milwaukee "Passed by" in Favor of Georgians Who Once Cried "Enough"—Dates Not Yet Decided Upon.

Milwaukee will not supply the setting for the next Vanderbilt Cup and Grand Prize road races. The Motor Cups Holding Co., which has to do with the awarding of the "classics," heard on Monday last, 6th inst., the claims of Savannah as voiced by a committee comprising Harvey Granger, F. C. Battey and A. W. Solomon, and without more ado the Georgia city was given what it asked for.

Quite naturally, the management of the speed carnival will be vested in the Savannah Automobile Club, which already has run the Grand Prize contest three times—in 1909, 1910 and 1911—and the Vanderbilt race twice—in 1910 and 1911. If things go according to the tentative program, the races will be run over a ten-mile circuit having but four turns; and dates will be set sometime between November 1st and February 23rd next. Before it is certain that the race will go to Savannah, sanctions for the Vanderbilt and Grand Prize races must be obtained from the contest boards of the A. A. A. and the Automobile Club of America, respectively.

That the Milwaukee Automobile Dealers' Association had had hopes of again fathering the carnival is indicated by the fact that a committee was to have been sent to New York to meet the members of the Motor Cups Holding Co. after the conclusion of the Milwaukee Automobile show. And, according to Bart Ruddle, who managed the more recent races, the Holding company was petitioned by telegraph to give Milwaukee a chance to be heard. For all of which the name of the Western City was not mentioned at the Monday's session.

Henry Sanderson, Colgate Hoyt and Henry B. Anderson acted for the Motor Cups Holding Co. Wm. K. Vanderbilt, Jr., himself is across the "pond."

How to Cross Streets in Berlin.

That Berlin which is in Germany is about to have still another traffic regulation which is calcualted materially to reduce the chance of accidents to pedestrians. The police authorities of the fashionable Schoenberg and Charlottenburg residential sections of the city are preparing to issue printed instructions in the "legal" way to cross the streets. Hereafter, it will not be permissible to cross public thoroughfares diagonally; an angle of 90 degrees will be insisted upon.

The Warm Hand Wheel is an appeal to reason, good judgment and common sense and every dealer who reads this can realize its practical worth without extended argument.

The Warm Hand Wheel robs winter driving of half its unpleasantness by giving a rich, warm glow to hands that grow cold and numb even in heavy gloves. Think what this would mean to car owners in your territory if you would simply demonstrate it.

Now don't get the idea that it is impractical or complicated. Quite the reverse. It is just as simple as the electric iron, cook stove or the hundreds of devices that are heated by the current.

The Warm Hand Wheel is an economical consumer of electricity. It operates equally well from lighting systems or storage batteries. Ford owners will get splendid results from the current from the "built in" fly-wheel magneto. In brief, the Warm Hand Wheel is adapted to any modern car.

You, Mr. Dealer, can install it in a short time without interfering with any working parts of the car. Its installation is as simple as its function.

The Warm Hand Wheel sells at retail for $15. Write and let us tell you how well you will fare in the transaction.

Elyria-Dean

Elyria-Dean Magneto--A Better Kind Than You Have Known

The new Elyria-Dean ignition system gives a kind of service to the car owner unknown with any other system. The Elyria-Dean magneto employs high frequency, high tension, electrical discharges, instead of the ordinary high tension discharges used in other ignition systems.

This high frequency spark gives a new life and energy to the ignition, a feature much sought after by the intelligent car purchaser or owner.

It ignites the gas instantly, even with poor mixtures and gives complete and rapid combustion of large volumes. This means more power from your motor; it means quicker and more reliable power and a satisfaction that comes only with the best kind of ignition.

With the Elyria-Dean ignition system, wider spark plug gaps are permissible than with other systems and the disruptive action of the spark prevents fouling of the plugs. Ordinarily, plugs never have to be removed, except for mechanical breakage.

High cylinder pressures have less effect on this spark than on other ignition sparks.

"Self starters" are made successful on magneto ignition as effective sparks are obtained at very low speeds, below 50 R. P. M.

No missing of the motor with the Elyria-Dean, even at the lowest speeds. All wiring carries low voltage currents, as the little resonator coils at the plugs step-up the pressure just where it is used. This obviates leakages and the maintaining of high insulation in the magneto, switch and connecting wiring.

The exclusive manufacturing license has been granted us under the Seeley patents and pending applications, giving us the legal rights and only practical methods of applying high frequency currents to automobile ignition.

REXO HORN
Electric Warning Signal
GUARANTEED

A "Standard Equipment Horn"

We have already sold over 65,000 Rexo Horns for 1913 cars. When you see a REXO on a car it means that the maker of that car is willing to hitch up his car's reputation with REXO reputation and take our word for it.

45,000 REXO Electric Horns of special design are specified by one car maker, the largest electric horn order ever placed.

The Electric Warning Signal will be standard equipment on practically every automobile marketed in 1913, and most of the earlier models will be brought up to date by the installation of an efficient electric horn by the car owners. We know this to be a fact for our mammoth sales of the Rexo, Tuto and Tuto-Ette Electric Horns to automobile manufacturers and jobbers is the most conclusive evidence.

Rexo Features

The sound of the REXO is loud, abrupt, clear and unlike the motor driven horn; it is **instantly responsive.**

The standard REXO horn is designed to operate from any 6-volt battery and the current required is never over 1.8 amperes. The REXO does not contain **any moving parts which require tri-weekly lubrication, monthly overhauling, washing in gasoline, greasing, etc., nor is there any danger in clogging from dust or moisture.** The operation is equally as positive in winter as in summer, as there is no oil or grease to congeal, etc.

The REXO requires no care or attention during the full season of running and only a very slight adjustment is necessary to overcome a full season's wear, and this can be done in a few minutes and with an ordinary screw driver, as there are no delicate parts which can be damaged.

Rexo Horn—complete with button and cord, **$8.**

At the New York Shows

REXO Horns and other Elyria-Dean products will be exhibited in space 305, Concert Hall, Madison Square Garden, and in Space 225, Balcony, Grand Central Palace.

Elyria-Dean

Elyria-Dean Speedometer

Simple and Always Accurate

The Elyria-Dean Speedometer has the most modern features of any speed measuring device on the market.

It has real speedometer value, easy reading, steady hand, permanent accuracy, lasting strength, neat design and handsome finish.

The dial is black with white markings; the case is beautifully finished in baked black enamel with nickel trimmings.

The hand is steady and shows the speed at a glance by its position. No need of laboriously deciphering the figures or markings as in other speedometers.

The cup is shaped so that a long scale of uniform division is obtained direct. No need to guess at the reading or doctor the scale.

The Odometer—Geneva type—is exceptionally reliable. **Trip scale** reset to the tenth mile, which facilitates following **guide book markings.**

It always adds mileage whether the car goes forward or backward, or whether shaft is driven from right or left hand **wheel.**

The Elyria-Dean Speedometer operates on **the unvarying** principle of direct centrifugal force. No compensating **gears, springs** or other parts to hamper or reduce accuracy.

The accuracy is unaffected by weather conditions. **It registers the** same in winter and in summer, in rain or in shine. **No regulation or** compensation required.

This elegant instrument is the proper equipment for the highest-priced and most luxurious motor cars. See it and other Elyria-Dean Products at the New York Shows.

The Atwater Kent Ignition System

DEALERS and REPAIRMEN

HERE are a few good Atwater Kent "talking points." You can make them make you money.

Its simplicity of mechanism—no vibrators, relays, or commutator—just one contact point regardless of the number of cylinders and only three moving parts, none of which are subjected to excessive wear.

Its single adjustment easily and quickly made and seldom requiring attention.

Its adaptability and easy installation on any standard make of motor, new or old.

It is ideal for use in connection with lighting and starting equipment as it produces a hot dynamic spark, perfectly timed regardless of the engine speed.

While the Atwater Kent System is high in value and reputation, it is not high in price. In fact, it will cost less than half as much as a good magneto and will give superior results at a much less cost of upkeep.

There are now two types of Atwater Kent Ignition equipment—standard **Type F** and the new **Type K,** the latter having the automatic spark control and insulated primary circuit features.

PRICES OF THE TYPE F SYSTEM

	Standard Coil.	Kick Switch Coil.
1-cylinder	$17,00	
2-cylinder opposed	18.00	
2-cylinder distributor type	22.00	$24.00
3-cylinder distributor type	25.00	27.00
4-cylinder distributor type	25.00	27.00
6-cylinder distributor type	27.00	29.00

PRICES OF THE TYPE K SYSTEM

	Standard Coil.	Kick Switch Coil.
2-cylinder	$32.00	$35.00
3-cylinder	35.00	38.00
4-cylinder	35.00	38.00
6-cylinder	37.00	40.00

In substituting the Atwater Kent System for the magneto or for driving it from any horizontal shaft or gear, we furnish a special magneto gear mounting, the additional price of which is $5.00.

You will have many inquiries for ignition equipment during the coming year and should be in a position to recommend the Atwater Kent whenever the most efficient ignition is desired.

Seize the opportunity and post yourself by a visit to our exhibit No. 140 Madison Square Garden Show, New York City, or write for our booklet "D."

The Gearless Transmission!

This is the car that will give you the best possible service under all conditions, because of the efficient and strong transmission. The Cartercar is strong just where the ordinary car is weak. Your Cartercar is simple, easy to drive, and always ready to go.

Greater Efficiency

A Cartercar has an unlimited number of speeds—one lever control—and will easily climb a 50 per cent. grade. The transmission is composed of only two unit parts—which must mean great reliability. Just consider what these features must mean to you.

Greater Tire Mileage

The Tires on your Cartercar will wear about twice as long as on a gear car. This is because the transmission eliminates all jerks and jars in starting and changing speeds.

Electric Starting

Whether the weather is warm or cold, all you have to do to crank the motor is merely push down a small knob. Then turn this same knob and you light all or just as many of the lamps as desired.

Four Excellent Models

The new Cartercar line includes four extremely good models—Touring Car, Roadster, Coupe and Sedan. They are finished elegantly, with unusually deep upholstering and attractive lines. The prices range from $1600 to $2000—with complete equipment.

Hyatt Quiet Bearings

LINE CONTACT is the basic principle of the Roller Bearing as against Point Contact of the Ball. There results a vastly increased surface to support the load, reducing the duty per unit section of the operating parts and increasing their life in a like proportion.

To insure this condition, uniform distribution of load is essential. This necessitates perfection in the manufacture and mounting of the bearing. Perfection is unattainable under manufacturing conditions.

The flexibility of the Hyatt Roller absolutely insures full line contact, hence guarantees uniform distribution of the load.

Flexibility is an exclusive feature of the Hyatt Roller.

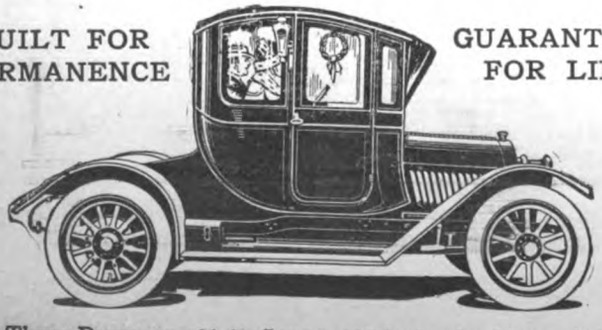
IDEAL WINTER CARS

Beauty, Style, Luxury and Comfort Unsurpassed

The 44-50 Limousine and 34-40 Coupe are designed along rational lines. They are inherently beautiful. They possess the natural, easy grace that characterizes all Abbott-Detroit models. Beauty is not found in extravagant lines and designs. The beauty of a perfect horse could not be improved by giving it a camel's back or some other exaggerated form. The artist finds the simplest lines the most beautiful.



Seven-Passenger 44-50 Limousine, 121-inch wheel-base, $3050

Abbott-Detroit cars show the highest good taste. In keeping with our slogan, "Built For Permanence" and "Guaranteed For Life," they will remain the ideal car season after season. Like a man's derby hat, they will mark the standard of good taste while other styles come and go. Abbott-Detroit models are to the automobile world what Grecian architecture has always been to the world of art. They are the ambition and exasperation of countless imitators.

BUILT FOR PERMANENCE

GUARANTEED FOR LIFE

Three-Passenger 34-40 Coupe, 116-inch wheel-base, $2000

To sink in the luxuriant 12-inch cushions is equal to the greatest comforts of the home. Nothing in the way of convenience and comfort has been overlooked. The equipment is the latest and best that money can buy. You have everything that can be found in the highest priced foreign cars.

Remember that the Abbott-Detroit leads in every mechanical perfection. It is the one car with unfailing stand-up qualities. The closed cars are built to withstand the severest weather conditions. To ride in them is like being in a palace on wheels.

Powerful, Silent—Long Stroke—Continental Motors, Electric Lights and Generator, Electric Self-Starter, Underslung Spring Construction, Oversize No-Rim-Cut Goodyear Tires, Booth Demountable Rims, 12-inch Turkish Roll Cushions, Piano Finish and Scores of Other No Less Important Features.

Let us tell you about these splendid winter cars.

The Most Practical Chain for Motor Trucks

Because the "Whitney" Cotter Detachable Chain can be easily separated at any link and lengthened, shortened, or repaired without the use of any special tool. This is of great advantage to truck builders, owners and drivers.

"Whitney" Chains are used by the leaders because they are strong, accurate, dependable and above all long lived. They are made right and they're made from the right kind of material, thus giving highest efficiency. When making replacements insist on a "Whitney."

AMERICAN UNDERSLUNG

Electrically Started

The "American Tourist"---$2,350 Complete

The most practical car to drive

"AMERICAN UNDERSLUNG"

Ninety-six per cent of the motor's power is transmitted by direct drive to the rear system.

The center of gravity is only 21.9 inches off the ground. Sidesway is decreased over 50 per cent. Strains are divided equally and control made positive at high speeds.

No danger of turning turtle. Right angle turns may be taken at 45 miles an hour.

"American Underslung" big wheels guarantee maximum comfort. Experiment on wooden floor cracks with a castor and a bicycle wheel.

"American Underslung" tires have a contact surface of 6 inches. The greater the contact surface the less tire wear.

Road clearance is 12¼ inches.

CONVENTIONAL OVERHUNG CAR

One-fifth—20 per cent—of the motor's strength is actually wasted by indirect drive.

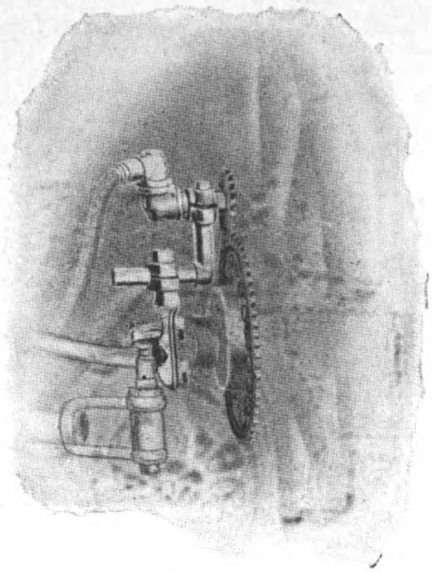
The center of gravity is 30.2 inches off the ground —8.3 higher than in the underslung. Control at high speeds is extremely hazardous—strains unevenly divided.

Speed from 10 to 20 miles an hour less in order to guarantee equal safety.

Wheel size is limited. Therefore, comfort is a finite quantity.

Overhung cars have an average tire contact surface of only 4½ inches—30 per cent less than those on the "American Underslung."

Road clearance of 85 per cent of all overhung cars is 11¼ inches.



This is a bigger "American Underslung" year than ever. Get into communication with us today. See our big exhibits at the New York and Chicago shows.

The "American Traveler"---$4,500 Complete

BOYCE
MOTOMETER
PAT'S PEND'G

1913's TRADE SENSATION

Know the Exact Heat of Your Motor While Driving

(Front view ½ actual size.)

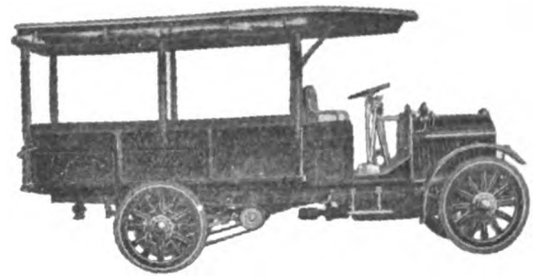
The Motometer is a watchlike instrument fitted to the radiator cap, protecting the motor from damage caused by improper lubrication, overheating, defective cooling, etc. By means of a red fluid indicator it warns you.

When the Radiator Needs Water

When Oil Supply Is Insufficient

In short, it tells whatever excessive heat tells—a broken water pump, a clogged pipe, a broken fan belt, etc., and tells before the damage is done. Attached the same as an ornament, readily visible from the seat day or night. It will prevent frozen radiators in winter and cracked cylinders in summer.

Finished in black enamel with gold plated or nickel rims.



Price $10

The Selden Truck

$2000

(Price includes chassis with driver's seat, lamps and tools—body extra)

Don't be satisfied with only a moderately good truck, but get the best you can for your money.

The Selden One-Ton Truck affords infinitely greater value than any truck in its class. A detailed comparison with other trucks will convince you of this fact.

The Selden Truck, like any structure which is the product of skillful, competent engineers, is built with a large factor of safety. In other words, the Selden Truck is built without any structural weaknesses, and is made to withstand the stresses and strains of hard, constant service without injury or undue wear.

It can be bought on time payments by those who do not find it convenient to pay cash, and is therefore, available to thousands of concerns that have been waiting for just such an opportunity to add to their business organization, the only efficient and economical means of distribution and delivery.

We have some valuable territory open for live responsible dealers who want to increase their profits by taking on the best selling proposition ever offered.

Write at once and get the details of the Selden Truck and of our selling plan, and give us particulars regarding your sales and service facilities.

We will exhibit at New York and Chicago Shows
NEW YORK, January 20-25, Madison Square Garden, space 111 A.

HENDERSON

Every Henderson Car Must Pass These Rigid Tests

When you buy a Henderson, you can be assured that it is **right**—that it has passed the rigid scrutiny of the Henderson Engineering Corps—and that the Hendersons of Indianapolis stand back of it.

Every part of the Henderson is carefully examined and tested and the result noted on production tags as shown herewith. The foreman in charge of each department is responsible for seeing that each car leaves his hands in a thoroughly satisfactory condition. Then the car complete is tested—and each and every detail of construction and finish is gone over carefully. You know what a rigid examination of this kind means.

One of the SHELDON FRONT AXLES for Heavy Service

Another member of the famous Sheldon line, even more perfect than its predecessors—this is one of the Sheldon Front Axles for heavy service.

No better forging has ever been turned out in any plant. The spring pads are ample in area and are forged integral with the axle. This axle is not welded in the middle. The steering knuckles are reinforced to ensure greatest strength and safety, and perfect lubrication has been attained by efficient oil cups. We offer this axle to manufacturers with their choice of the following bearing equipment:

New Departure Double Row Annular
Standard Taper Roller
Bower Straight Roller
Rhineland Double Row Annular
Any standard double or single row annular bearing is interchangeable with these axles and hubs.

BENZ

Since the introduction of BENZ cars to the motoring public of America no car has attained such world-wide supremacy as to its construction, standing up quality, and material. The new type of 35 and 50 H. P. BENZ models are the last word in automobile construction.

The noticeable features of this type of BENZ cars include the offset crank shaft, smokeless oiler, and SILENT CHAINS instead of timing gears.

The BENZ Carrosseries are noted for their beautiful lines and thorough comfort.

To those desiring AGENCY of this car the Benz Company will offer special terms. We want RELIABLE, ENERGETIC agents to further our interests for both BENZ pleasure cars and BENZ-GAGGENAU trucks, which today stand recognized by those who know, as the leading 6-ton truck. Wire or write us, no matter where you are.

Our PRICES compete with LEADING AMERICAN makes.

A Certainty In Transmissions!

Because experience teaches, we are, unquestionably, at the head of the Transmission class. It would be a severe reflection upon our mechanical aptitude to doubt our ability to build the very best possible transmission.

Our pre-eminent position today as transmission specialists was not attained without travail. We, like all who must learn largely by experience, have had our problems. Why should you go over the same road when the finished product can be had for less than it would cost you to build?

Also, we have our triumphs, and the greatest of these is the fact that once secured, we do not lose an account. Our 1913 business is now actually twice that of the past year, which was a record breaker.

Prest-O-Starter

Starts your engine (old or new) quickly and easily in coldest weather

For Four Cylinders $20

For Six Cylinders $25

$1.50 extra for two-way valve necessary when the same tank is used for both starting and lighting.

Here's a starter that adds practically no weight to your car, is perfectly simple and is as durable as the engine itself. Easily applied to any engine, old or new, very economical in the use of gas, and requires no expert repairing.

How Prest-O-Starter Works

The principle of starting a motor with Prest-O-Starter is the same as "starting on compression." A measure of acetylene, at low pressure, is pumped from your Prest-O-Lite tank into the cylinders.

Touch your spark—your engine starts

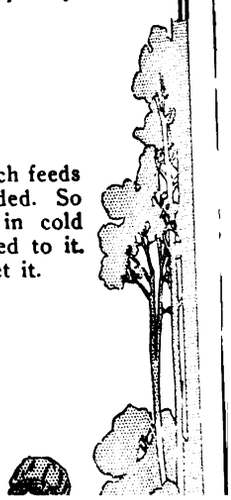
Unlike "gasoline priming," it is not affected by heat or cold. It is certain.

In cool weather, by opening a valve on the dash, you can feed gas at low pressure into the intake manifold. This allows your engine to run on acetylene until it is warm enough to run on gasoline.

If the Prest-O-Starter did no more than prime your engine in this way during cold weather, this convenience would be well worth the price.

But Prest-O-Starter is more than a primer. When installed properly, it will start your engine, summer or winter, almost invariably without recourse to the crank.

Make Sure Your Starter Is Installed CORRECTLY—Look It Over



The Prest-O-Starter is easy to install correctly. In fact, it's so very easy to install that some good factories and garages install it with utter carelessness, overlooking the one or two simple features vital to success in operation. Fortunately this is an easy matter for the car owner to correct, even if he isn't a mechanic.

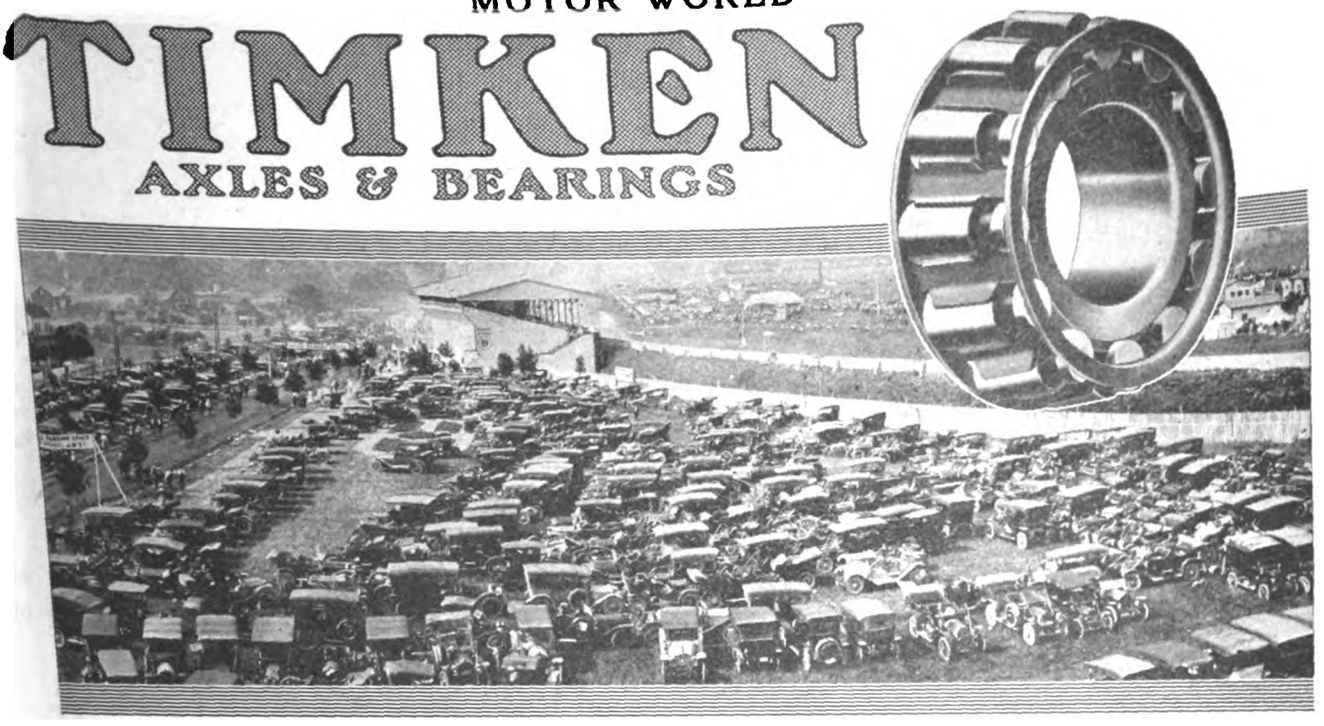
Our literature tells you exactly how the Prest-O-Starter is installed, and how to adjust it. Anyone can give it the slight attention it may need or quickly tell a dealer where the trouble lies.

Every Prest-O-Starter is sold with the assurance of satisfactory service. The entire Prest-O-Lite Organization is back of every one. If you have any trouble, report it to us or to our nearest branch. We'll wipe it out quickly.

Insist Upon GETTING the Outfit COMPLETE

During warm weather the connection which feeds acetylene into the intake manifold is not needed. So some dealers are not installing it. But in cold weather this feature is vital. You're entitled to it. It's included in the price, so see that you get it.

Now—More Than Ever—You Need One



Your Prest-O-Starter, properly installed will average better than 95 starts out of 100 attempts. The few failures are caused by your motor stopping on dead center, or cylinders filled with burnt gas. Both of these conditions can be easily avoided when stopping your motor. But should either or both happen, an eighth or a quarter turn of the crank, with the switch at neutral, will remedy the trouble at once, with all the danger and labor of

MOTOR WORLD

TIMKEN
AXLES & BEARINGS

Read Your Answer in the Cars

DO Timken principles of axle and bearing construction work out in practise? Are their merits acknowledged by the leading motor-car builders?

These questions are natural and just. You have read the Timken stories of axle and bearing importance in previous advertisements.

You have felt, as you read, that Timken principles were right, that they must have proved right on many a steep hill and stony road.

Nor did you err, for hundreds of thousands of Timken-equipped motor-cars, pleasure and commercial, are daily demonstrating the worth of Timken principles and Timken construction.

At the points of severest service—there you are most likely to find Timken Equipment

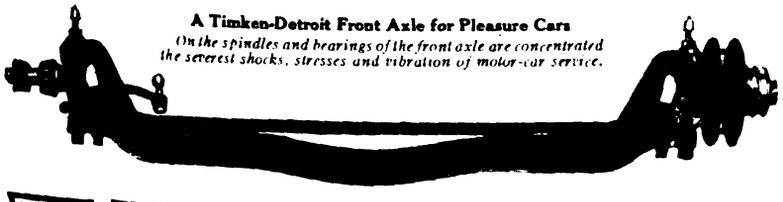
Because front axles and the bearings on their spindles *must* stand up to the tests of every day travel and meet the emergencies, builders of good cars dare not take chances at these vital points.

On the right are listed nearly all of the cars using Timken Tapered Roller Bearings and Timken-Detroit Axles. Among them, you will agree, are most of the best known and highest grade cars made in the country.

All of the makes of cars listed here use Timken Bearings or Axles on one or more models, throughout or in part.

To be specific, 97¼% of all these cars have Timken Bearings at the points of severest service—on the spindles of the front axle.

In addition to that, 93½% of the entire list have Timken Axles or Bearings at all or some of the following points: rear axle, rear wheel bearings, differential and pinion-shaft bearings, transmission bearings, commercial rear axle and jackshaft, and their hubs and bearings.



Also 61¼% of the pleasure cars and 72¼% of the commercial cars listed at the right have Timken-Detroit Axles, front or rear or both.

Coming back, then, to the questions, "Do Timken principles of axle and bearing construction work out in practise? Are their merits acknowledged by the leading car builders?"

You can read your answer in the cars.

A Timken-Detroit Front Axle for Pleasure Cars

On the spindles and bearings of the front axle are concentrated the severest shocks, stresses and vibration of motor-car service.

The FEPS CARBURETOR

"A GIANT IN POWER — A MISER IN FUEL"

THE Feps is a radical step forward in carburetor design. It involves a new principle of auxiliary air supply that produces a wonderful increase in flexibility, economy, power, and speed. It contains no springs, balls, cams, or reeds, and all adjustments once made are permanent.

The Feps delivers a mixture so accurately proportioned, and so thoroughly uniform at all speeds that an increase of from 25 per cent. to 50 per cent. in miles per gallon of fuel is easily attainable. The Feps embodies a new and efficient automatic priming device for quick-starting. Write today for interesting illustrative booklet.

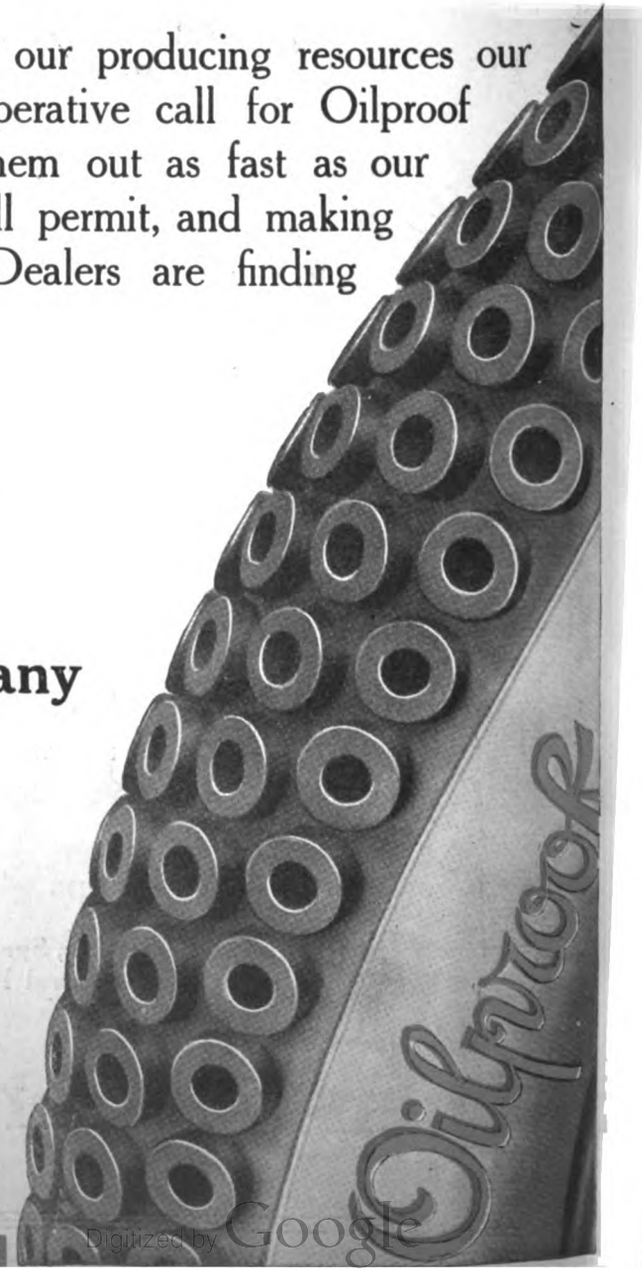
SINCE our announcement of the greatest of all tire improvements, THE OILPROOF FEATURE, last Fall, the demand for Pennsylvania Vacuum Cup Tires has forced us to forget that there is such a thing as a "dull season."



Following the previous waves of ever increasing popularity which had already doubled the season's business, came this greater wave in response to our Oilproof announcement.

The enthusiastic reception accorded to these improved tires by the motoring public and the trade alike was no surprise to us. But we did not expect the insistent demand to continue in increasing force right through these ordinarily lean months.

In spite of the energetic development of our producing resources our capacity is being taxed to meet this imperative call for Oilproof Vacuum Cup Tires. We are turning them out as fast as our stringent policy of careful manufacture will permit, and making extraordinary preparations for Spring. Dealers are finding "Oilproof" the magic sales word.

To Dealers: Get in your orders.

Champion Priming Plugs

Start Any Motor—In Any Kind of Weather

No matter how cold your car's cylinders,

CHAMPION PRIMING PLUGS

will start your motor on the first quarter turn.

Open needle valve slightly (you needn't remove glove) and inject gasoline. Passing through its own channel to plug base, it vaporizes directly at spark point.

You must prime your motor in the winter—there's no alternative.

Cold chills the gasoline; it won't expand upward.

You can't send the best possible spark down far enough to fire it.

Present low test gasoline makes the problem still harder.

Champion Priming Plugs produce a rich mixture **right at the firing points**—then shoot a hot, sizzling spark right into it.

You can't get the same results with priming cups: they can't be placed close enough to the spark plug.

The Champion Priming Plug combines a perfect prime-r and a perfect spark plug.

And it won't "soot up" or leak compression.

Champion Spark Plugs are regular equipment on nearly 70 per cent of the American cars today.

You can trust the good judgment that demands them for all the Fords, Overlands, Michigans, etc., etc.

The illustration shows the simplicity of the **Champion Priming Plug.** It is guaranteed to work perfectly **or your money back.**

FOR SALE EVERYWHERE AT $1.25 PER PLUG

Trial Set of Four Champion Priming Plugs, fully guaranteed, prepaid to any car owner for $5. Give name of car and year of make—also name of your dealer.

All jobbers and most dealers are already supplied. Write today Liberal trade discount to dealers. Be ready to supply your trade while our big campaign is calling the attention of car owners everywhere to these priming plugs.

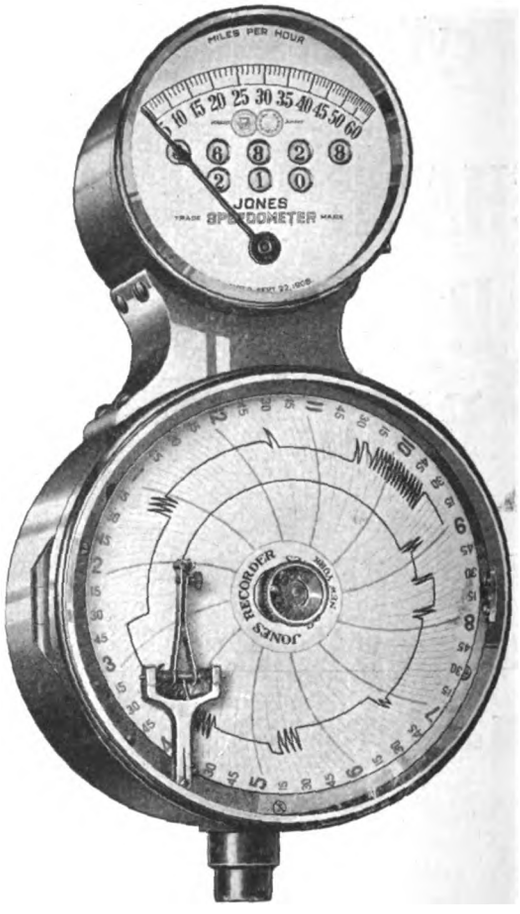
Prevents Unauthorized Use of Car

Jones Speedometer-Recorder



The Great Step Forward in Speedometer Construction

What It Does

Records every movement of car, and gives a record of momentary speed. In other words, it is a speedometer of highest quality and puts the record in black on white. Shows when car left garage. How fast it traveled. When it stopped. How long and how often. It shows the distance traveled in total and between each stop, and the time consumed. And it shows when the car returned to the garage.

What It Is

The JONES SPEEDOMETER-RECORDER is attached to the dash. It is driven by shaft and gears identical with a speedometer. The handsome JONES SPEEDOMETER surmounts the RECORDER, sufficiently ornamental to grace any dash. The RECORDER has an open glass front and chart is always visible—it is fascinating to watch the development of the record as the minutes pass.

Why It Is Absolutely Necessary

Joy riding is an unnecessary evil of motoring—it can be stopped with the JONES SPEEDOMETER-RECORDER. No joy-rider will dare remove a car if he knows that the record of such movement will be shown and indicated to the owner.

Computes Cost of Car Maintenance

It is a necessity to the man who wants to know how much tires, oil and gasoline cost. It is the only accurate method of computing cost of car maintenance. This instrument adds a new element of interest to motoring.

Write for Complete Information.

You can't afford to overlook the

HAYNES

in selecting your line for 1913

This new

Model 24, $1785

Left Side Drive—Center Control
Electric Starting and Electric Lighting

puts every Haynes dealer on the offensive and beyond competition, even in these strenuous days in the automobile business.

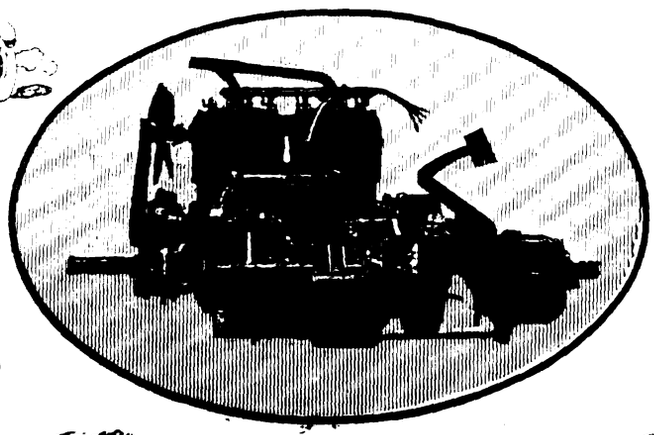
That's why it's more than ever to your interest to consider the Haynes NOW

Digitized by Google

Consider first what a magnificent car this is, backed by Haynes merit, satisfaction, tradition and service

Front View Model 24

THIS NEW MODEL is worthy of the name Haynes—if it were not, we would not offer it. The new low price doesn't mean that Haynes standards have been cut.



There are some noteworthy departures from former Haynes construction in Model 24—all designed for greater efficiency. Model 24 has left side drive—in step with the designs of the latest models in nearly all high grade cars—and a center control, which is especially convenient.

The new car has the same electric starting and electric lighting system we adopted for Model 22 six months ago—the type of electric starting and lighting equipment which has since become the standard for first class cars.

Furthermore, it has the famous Haynes contracting steel band clutch — Haynes transmission, spring suspension, lubrication system and a sturdy, flexible power-unit support.

Model 24 is a big car—118 inch wheel base—it has wide, roomy seats with upholstery 12 inches deep, covered with finest hand-buffed leather.

Left Side View—Haynes Motor Model 24

This Haynes for $1785 means a broader field for every Haynes dealer. It places a Haynes car in reach of thousands of buyers who have long wanted a car at this price, backed by such standards of merit and service as have kept the Haynes — America's first car — always its foremost.

Digitized by Google

Haynes Model 24 is a new Standard in the $1800 class. It means big sales for Haynes dealers

A HAYNES CAR at $1,785 is made possible only by the efficiency of the Haynes plant, by its use of only the latest and most approved methods of automobile construction—it is the culmination of twenty years' experience in automobile building.

The standards which have made the Haynes pacemaker most of the time—and have kept it up with the leaders all the time—are new standards in a car selling for less than $1800. There's no room for argument on this point.

The buying public knows what Haynes standards mean—it knows that Haynes reputation was not built on catch-phrases in advertising. The best advertising the Haynes has had, and is having, is the unqualified satisfaction of Haynes owners e v e r y w h e r e. This satisfaction of Haynes owners is the greatest assurance Haynes dealers have of a successful future.

Specifications

Read carefully what the Haynes Model 24 offers. Bear in mind that Haynes character stands behind these specifications. And ask yourself what demand there is today for such a car at such a price.

Frame—Pressed steel 4" deep, double drop.

Wheel Base—118 inches.

Motor—4¼ inches bore by 5½ inches stroke. L-head cylinders cast in pairs, offset ½ inch. Flexible 4-point suspension.

Ignition—Dual type magneto.

Carburetion—Stromberg Model B Special.

Lubrication—Splash and force feed, oil reservoir in lower half of crank case and filled through feather pipe on side of crank case.

Control—Steering wheel on left side—Center control.

Steering Column—Worm gear type, corrugated rim, aluminum spider, 18-inch wheel.

Clutch—Haynes contracting steel band on hardened steel drum. Supported by crank shaft. Easily adjusted and lubricated.

Transmission—Selective type, three speeds forward, one reverse. Roller bearings. Operated through H-slotted bracket, center control. Supported from two rear arms on engine base.

Propeller Shaft—Forged. Two universal joints, metal enclosed and packed with hard grease.

Rear Axle—Full floating type, pressed steel housing, supporting full weight of car. Shaft, nickel steel.

Front Axle—Single piece I-beam, drop-forged. Spring seats forged integral. Roller bearings.

Wheels—Artillery type, wood, twelve spokes front and rear. Bossed spokes alternating in rear wheels. Demountable rims.

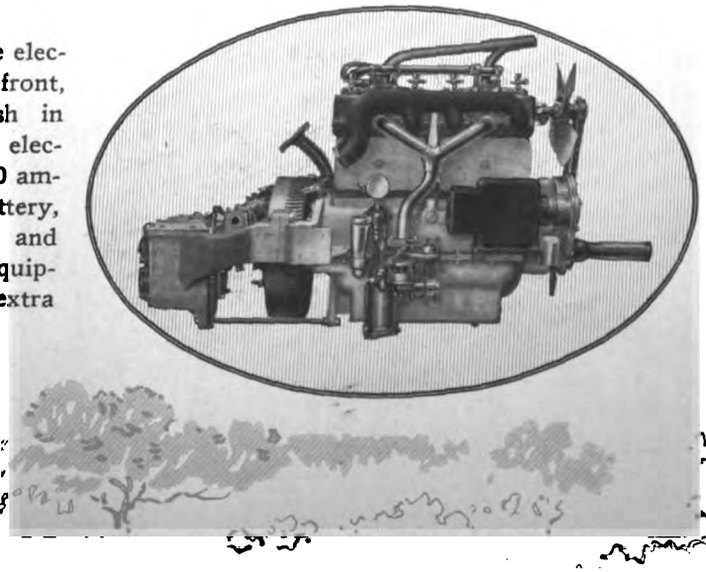
Tires—34x4, front and rear.

Springs—Front, semi-elliptic, 40 inches long, 2 inches wide, 7 leaves; rear, three-quarter elliptic, 48 inches long. 2 inches wide, 7 leaves. Fitted with grease cups both front and rear.

Brakes—Internal and external on rear wheels. Drum 14x2½-inch face. Disappearing foot pedal operates external service brakes, and lever on right of driver's seat operates internal emergency brakes.

Body—Sheet metal, fore door. Black, hand buffed upholstery, spring backs to both seats filled with super extra curled hair.

Colors—Body black. Wheels black, same as body. Special colors to order. All metal equipment black enamel and nickel.

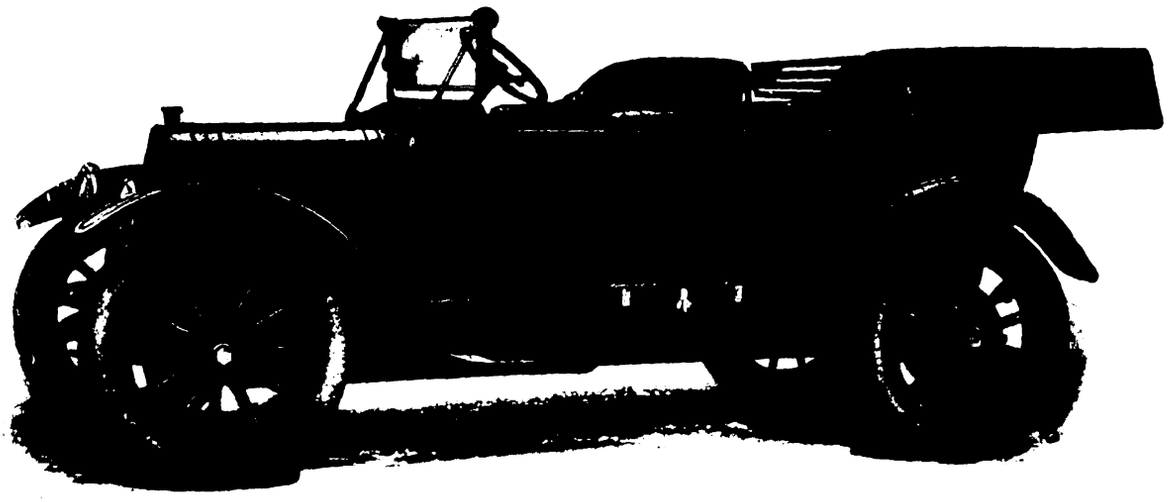


Gasoline Tank—18 gallons capacity.

Road Clearance—10 inches.

Equipment

Top, top cover, two large electric head lights, glass front, electric side lights, flush in dash, electric cowl lamp, electric starter, generator, 100 ampere hour storage battery, speedometer, horn, coat and foot rails, tire irons, full equipment tools, etc., also one extra demountable rim.



Right Side View—Haynes Motor Model 24

Digitized by Google

The Big Haynes, Model 22—The Complete Car—which has met with success everywhere, is continued as a Haynes Leader

The big Model 22, full 40-horse power, marks the highest development of the Haynes Car. It is in every way The Complete Car—durable and dependable, comfortable and handsome, powerful and quiet—everything a car should be. It is the very maximum of automobile efficiency at the very minimum of cost.

Model 22, Detail Specifications

Motor, 4½ in. x 5½ in., 40 h. p.; wheel base 120 in.; fine hair upholstery, 12 in. deep; tires 36x4½ in.; absolutely 100% efficient electric starting equipment of utmost simplicity; Eisemann dual magneto, Stromberg carburetor, Warner autometer, demountable rims, top, windshield, electric signal horn, electric cowl lamp, standard bumper, etc., etc. Touring car models $2250; Roadster $2250; Coupe $2750; Limousine $3400; Berlin $3500; f. o. b. factory.

Trade-Bringers

Sell Stewart Trucks in Winter Months

No let-up in business for the dealer who handles Stewart Delivery Trucks. Cold weather only increases the need for motor delivery. Merchants are already worrying over their holiday deliveries. They know that their horse equipment will be inadequate during the cold, snowy days and the rush and long hours of the Xmas trade and special sales.

We can guarantee prompt deliveries of Stewart Delivery Trucks in time for the winter business. We can furnish dealers their demonstrators almost immediately. Now is the time to go out and get this desirable business. Merchants are looking for the right car; one that is scientifically designed for hard delivery service. You can get their orders for Stewart Trucks now. Write for our literature and liberal proposition to dealers.

TRIPLEX

A FUEL SAVER and A MONEY SAVER

Increases Power Decreases Cost

The Triplex is a device placed between the manifold and the carburetor to break up the mixture. No matter how imperfectly the carburetor does its work, the Triplex equalizes the mixture, producing an explosive gas of even, uniform quality that will burn clean to the last atom. This means that the user gets all the power all the time—that every fraction of energy to be obtained from the gasoline is produced and used. There is absolutely no waste. High proof gasoline is made out of low, and over 25% is saved on every gallon. For further information write us.

INTERLOCK INNER TIRES
Stop Tire Troubles
The one weak point of the automobile is that you cannot depend on the tires. Thousands of motorists have solved their tire problem by discarding inner shoes, reliners, fillers and other makeshifts and equipping their tires with **Interlock Inner Tires.**

Interlocks are complete inner tires (not inner shoes) placed between the outer casing and inner tube to strengthen the casing and protect the tube from punctures. They double the mileage of new tires and add 1,000 to 5,000 miles to old ones—save half your tire expense—and make tires trouble proof.

Dealers and Motorists—Investigate Interlocks

Don't delay—write now for booklets, data, prices, testimonials of users, road tests, etc. Mention size and kind of tires you use.

This *Visible* Burroughs $225

This complete, visible, low keyboard, 7-column Burroughs at $225 is the biggest adding machine value ever offered for the business requiring totals not exceeding $100,000.00

For adding, subtracting, multiplying, and dividing, and tabulating wide sheets up to 12½ inches—for *any* kind of figure work within the capacity of a seven-column adding-listing machine.

The illustration shows the big features—*all* the printing always visible in *easy reading range*, adding dials directly *under* the *eye*, low keyboard, and the speediest, most efficient typewriter carriage ever put on an adding machine.

This machine is a *Burroughs* from the designing room to the user's office, built in the Burroughs factory, of the same material, with the same wonderful machine tools and by the same trained workmen who have built a reputation for lifetime service into other Burroughs models.

Write for "A Better Day's Profits" and let us ship a machine, express prepaid, from our nearest office, for free trial. No cost or obligation.

The Motor Lamps with Distinctive Features

There are no other motor lamps on the market with the advantages of Solar Lamps. Solars are always exclusive in style and in quality. They are the strongest lamps as well as the most effective.

In no other lamps can you obtain the Solar Special Short Focus Lead Glass Lens Mirror Reflector—the patented system of double ray light projection which gives two distinct fields of light for town and country use—or the new and exclusive black finish with a metallic lustre which is unaffected by heat or moisture. All of these features are exclusively "Solar."

Do not equip your car or specify equipment to the maker until you have seen all of the Solar advantages. See Solars at any live dealer's or write for the catalog.

Solars are made in all styles for oil, electricity, gas and in combinations.

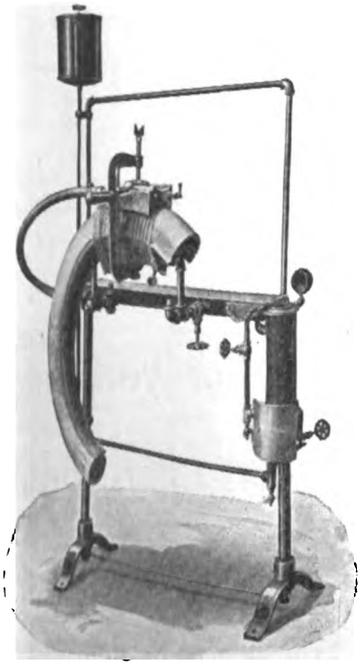
Complete Steam Vulcanizing Plant—$45

Get that extra 80 per cent. that you have been paying to some fellow who has had foresight enough to install a vulcanizer. If he can afford to maintain a plant and **split the profits,** how in Sam Hill can you afford not to do your own vulcanizing?



A school boy can turn out enough work with the Shaler Steam Garage Vulcanizer to pay for it in a week or two. Not a get-rich-quick proposition, but a practical, simple vulcanizer that will handle your work and let you in on the most profitable part of the automobile business.

The Ideal Garage Outfit

Will do every kind of vulcanizing that you want to handle, tube punctures—or large casing blow-outs. Steam is raised in twenty minutes in a copper coil boiler, so the machine can be profitably heated even if only a single tube repair is to be made. Gasoline or gas used for fuel. A gallon of gasoline will run the whole outfit all day long.

It's a SHALER Vulcanizer

and has the exclusive Shaler feature of a temperature control that is automatic. No watching or regulating. Start the burner and a thermostat automatically adjusts the flame and keeps the steam pressure exactly right for vulcanizing. As a check on this mechanism a safety valve relieves the pressure should it accidentally run above the vulcanizing point.

Tube plate can be heated independently of the casing forms if desired. Handles six tubes as quickly as one.

Casings are repaired by the approved Shaler wrapped tread method, which makes stronger repairs at less expense than any other way, and requires no extra moulds for different sized tires.

Write Today for Full Description

Ask for NPR circular. It tells in detail how this vulcanizer will make money for you.

C. A. SHALER CO., 401 4th Street, Waupun, Wis.

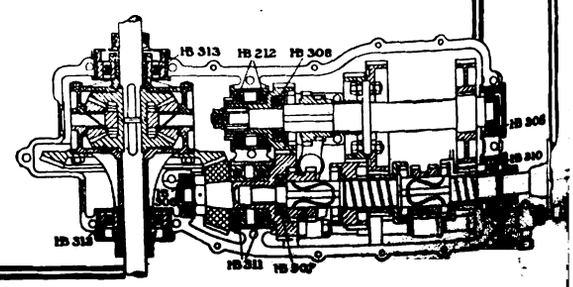
Hess-Bright Ball Bearings
throughout transmission

Hess-Bright Accuracy
and its Reasons

We have frequently mentioned the necessity of extreme hardness of balls and races in order to secure durability in a ball bearing. Hess-Bright balls are file-hard.

We have mentioned also the need of toughness in order that balls and races so hard shall not break from shock or from the strain due to hardening. Two weeks ago we gave some instances which showed the wonderful toughness of Hess-Bright balls.



Such hardness and toughness necessitate exceeding accuracy in size and form, else one ball will bear alone the load that it should divide with its neighbors.

Even the hardest material is not wholly incompressible. Let us suppose a ball to compress 4-10,000 of an inch under its normal load. It is clear that, unless the variation in size between this ball and its mates is considerably less than 4-10,000 of an inch, some of the balls will carry less than their share of the load, and the overloaded balls will wear out too rapidly. The life of a bearing is the life of its most heavily loaded ball.

The limit of variation of the balls in a Hess-Bright bearing is 1-10,000 of an inch. This limit was not adopted as a talking point, but as a necessity. Without such close limits of error, the users of Hess-Bright Ball Bearings could not enjoy the durability to which they are entitled, and which has made Hess-Brights the standard of quality in ball bearings the world over.

MOTOR WORLD

A Trade Paper Giving the World's Motor News

Vol. XXXIV
No. 4

New York, January 16, 1913

Ten cents a copy
Two dollars a year

See It At The Shows

The First Perfect Starter

For 1913, we offer the Automobilists of America the **Electric** Disco Starter.

This is, we believe, the first and only **perfect** Starter, and for that reason you should be sure to see it and inspect it at the Automobile Shows.

In the **Electric** Disco, you'll see a Starter that actually **SPINS** the motor.

It doesn't merely turn over the engine or crank it. By pressing a button, the engine instantly begins to **SPIN.**

It turns the engine at from **110 to 150 revolutions per minute.**

That's 50 per cent. faster than any other Starter.

And it's so fast that no matter how **large** or how **cold** your engine may be, it sucks up and vaporizes the gasoline so that the car is under way a moment after pressing the button.

Even though the **Electric** Disco costs more than any other, leading auto makers are glad to build it into their cars. They are delighted at being able to secure a really **dependable** Starter. Ask for it.

The "Electric" Disco

not only **starts** the car but supplies an **abundance** of electric lighting power for all lamps.

It consists essentially of a small, compact Motor, a Generator af approximately the same size and a Storage Battery.

The Generator produces ample current for Starting and Lighting any car.

The entire System is a marvel of **efficiency** and **simplicity.**

Don't fail to see the Electric Disco at the Shows.

We promise you a genuine Sensation.

Remember, a good car **isn't** a good car nowadays unless it has an absolutely **reliable** Starter.

At the New York Show, January 11-20—BOOTH 261, Madison Square Garden.
At the Chicago Show, February 1-15—BOOTH 149-150, Coliseum Annex.

Truffault-Hartford SHOCK ABSORBER

Why should YOU pay for equipment that rightly belongs on the car YOU sell?

How often have YOU consented to a demanded piece of equipment to be paid for at your own expense rather than have a dissatisfied customer?

You no more overstep your rights in insisting that the manufacturer YOU represent fully equip his cars at the factory—than do your customers who have learned that certain equipment belongs on every car, to be looked for and demanded.

Thousands of cars come from their factories equipped with the Truffault-Hartford Shock Absorbers in response to a strong, broad, ever-growing demand from car buyers.

Twenty-seven car manufacturers hold that it is essential to complete comfort, safety, and economy—consequently to the very reputation of their product. And they protect their dealers' interests by including it as standard equipment.

YOU are entitled to this consideration from YOUR manufacturer and the right kind of insistence gets it.

DEALERS

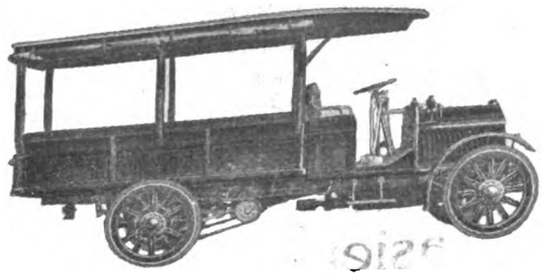
Bearings of Recognized Worth are Ear Marks of Car Quality

DEALERS

Are the Cars You Represent R.I.V Equipped?

Year by year more conservative car manufacturers are backing their belief in R. I. V. super-quality by using these bearings on their entire outputs.

Dealers who are investigating the ball bearing situation can assure themselves that R. I. V. Ball Bearings must measure up to the highest standards of uniformity of materials, structural perfection and accuracy of workmanship.



In reaching and holding to these standards, the R. I. V. Company maintain chemical and physical laboratories where every ball, retainer and raceway undergoes inspection from start to completion and where quality of material is proved from raw to finished product.

Get the facts that prove our contention that R. I. V. Ball Bearings are accurate, durable and almost frictionless. Then, recommend them more! Boast of them as equipment on the cars you sell.

R. I. V. COMPANY, 1771 Broadway, New York

The Selden Truck

$2000

(Price includes chassis with driver's seat, lamps and tools (body extra)

Don't be satisfied with only a moderately good truck, but get the best you can for your money.

The Selden One-Ton Truck affords infinitely greater value than any truck in its class. A detailed comparison with other trucks will convince you of this fact.

The Selden Truck, like any structure which is the product of skillful, competent engineers, is built with a large factor of safety. In other words, the Selden Truck is built without any structural weaknesses, and is made to withstand the stresses and strains of hard, constant service without injury or undue wear.

It can be bought on time payments by those who do not find it convenient to pay cash, and is therefore, available to thousands of concerns that have been waiting for just such an opportunity to add to their business organization, the only efficient and economical means of distribution and delivery.

We have some valuable territory open for live responsible dealers who want to increase their profits by taking on the best selling proposition ever offered.

Write at once and get the details of the Selden Truck and of our selling plan, and give us particulars regarding your sales and service facilities.

We will exhibit at New York and Chicago Shows
NEW YORK, January 20-25, Madison Square Garden, space 111 A.
CHICAGO, February 10-15, Coliseum, Section A.

Overland

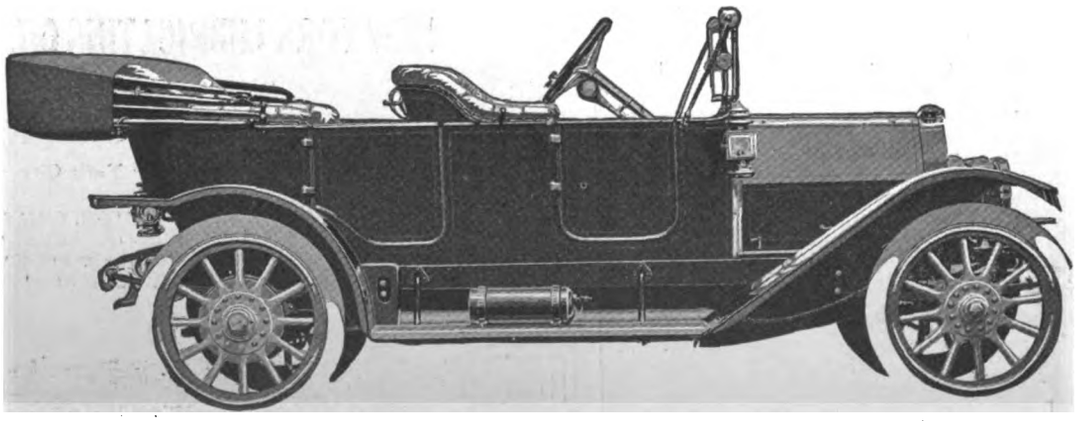
$985 *Completely Equipped*

High-Priced Feature No. 11

Every operation on every part and every assembly of parts of an Overland Model 69T is rigidly inspected at each step in the progress of the car's creation.

After the parts are thoroughly completed and machined ready for assembly they are tested:—

To determine physical properties pertaining to tensile strength, elasticity, hardness, ductility, size, shape, angularity, etc.



All gears are tested not only for dimensions, but also as to bores and centers. Each single cylinder is accurately gauged, thus assuring interchangeability.

Every camshaft is tested out by means of more special testing equipment. And so it is with every part which goes in the Model 69T.

Such high priced workmanship is available in the 69T for $985—only because we make 40,000 a year.

Let us mail you some interesting literature. Please address Dept. 50.

MOTOR WORLD

Vol. XXXIV New York, U. S. A., Thursday, January 16, 1913 No. 4

REORGANIZED U.S. MOTOR ASSUMES MAXWELL NAME; ADDS $6,000,000

Standard, Name First Chosen, Found to Conflict with Titles of Many Other Companies—Accepted Bid Nets $7,693,000—Flanders Cars to Become Maxwells—Columbias Discontinued.

Not the $31,000,000 Standard Motor Co. but the Maxwell Motor Co., capitalized at $37,000,000, will succeed the United States Motor Co. It was found that the name first selected conflicted with the titles of existing corporations in other States, and the name Standard, therefore, could not be employed. The Delaware charter, however, will be retained.

Also, the Maxwell and the Stoddard-Dayton cars will be the only ones of which the manufacture will be continued by the new company. Even the Flanders "sixes" which will be acquired when the deal for the Flanders Motor Co., of Detroit, is formally ratified, will lose their identity and become Maxwells. The Columbia, Brush and all other cars, as Motor World exclusively stated, will be discontinued.

The sale of the assets of the United States States Motor Co. and its subsidiaries was approved by Judge Hough in the United States District Court on Friday last, 10th inst., when he accepted the alternative offer of the only bidders, H. G. Holt and William McAllister, Jr., representing the reorganization committee, the alternative bid being on a percentage basis. The first bid was in the nature of an offer of a lump sum of $7,080,000, from which certain expenses of the receivership, which was instituted September 14th last, must have been met. On the percentage basis, the offer—which was accepted—was 32½ per cent. of its liabilities for the United States Motor Co.; 24 per cent. for the Alden Sampson Mfg. Co.; 33 per cent. for the Brush Runabout Co.; 91 per cent. for the Columbia Motor Car Co.; 39 per cent. for the Dayton Motor Car Co., and 60 per cent. for the Maxwell-Briscoe Motor Co.

On this basis, the amount paid for the several properties foots up $7,693,080 ,as follows:

Company.	Liabilities	Assets.	Per Cent.
U. S. Motor.....	$12,800,000	$4,590,724	$4,160,000
Alden Sampson ..	1,133,020	308,238	271,924
Brush Runabout..	1,081,146	409,842	248,663
Columbia Motor..	430,940	452,439	392,155
Dayton Motor....	2,653,633	1,125,504	1,038,086
Maxwell-Briscoe .	2,637,088	1,590,881	1,582,252
	$20,735,827	$8,477,628	$7,693,080

Henry Wollman, the attorney who represented the Lyons-Atlas Engine Works, of Indianapolis, and who protested against the

(Continued on page 6.)

Nonpareil Goes into Electric Horns.

The Nonpareil Horn Mfg. Co., of New York, which has been one of the large factors in the bulb horn industry, has seen a light and, having seen it, is preparing to cut a figure in the electric horn business also. To that end it has acquired the Eastern representation of the Cubit $3 vibrator horn, made by the Kosmak Electrical Co., of Jersey City. The transaction carries with it an order for 100,000 Cubit horns.

Bid of $56,000 for Halladay Assets.

At the trustees' sale on Tuesday last, 14th inst., of the assets of the Streator Motor Car Co. of Streator, Ill., maker of the Halladay car, the Merchants' Realization Co. of Chicago offered $56,000 for the finished cars and parts on hand and the machinery. The purchase, however, does not include the factory buildings nor any part of the real estate.

AMALGAMATION OF BOARD OF TRADE AND N.A.A.M. NEAR CONSUMMATION

Board of Trade Gives Definite Approval and N. A. A. M. is Also Committed—Automobile Chamber of Commerce to be Title of New Body—Board of Trade Re-elects Clifton for Ninth Time.

After more than a year of negotiations between committees representing the respective organizations, the amalgamation of the National Association of Automobile Manufacturers and the Automobile Board of Trade has reached the point where its consummation is beyond shadow of doubt.

Since the movement first took form in the appointment of conference committees, there has been small question that ultimately the consolidation would be brought about, as it was known that the sentiment of both associations favored it, but the getting together on a mutually satisfactory basis proved far more difficult than appeared on the surface.

The conference committees — Messrs. Waldon, Bennett and Pope, representing the N. A. A. M., and Messrs. Hanch, Davis and Kittredge, representing the A. B. T.—have held a number of meetings, formal and otherwise, during the year, but it was not until two months ago that the more serious obstacles were removed and amalgamation practically assured. It was made certain on Tuesday last, 14th inst., at the annual meeting of the Board of Trade, when, by a unanimous vote, that body approved the recommendations of its committee and placed itself on record as favoring the creation of a new organization to be known as the Automobile Chamber of Commerce.

The amalgamation plan is now being presented by mail to the members of the N. A. A. M., whose ratification of it already is assured, the entire executive committee speaking for itself and for the members of the N. A. A. M., already having agreed to the conditions.

Digitized by Google

The plans provide that the Chamber of Commerce, which will be incorporated under the laws of New York, shall take over all assets of both organizations, which includes the Associated Patents Co. controlled by the Board of Trade.

The membership scale will be the same as now prevails in the Board of Trade: i. e., one-tenth of one per cent. of the wholesale price of the cars produced each year, all profits derived from shows being rebated pro rata to the members. The membership dues was one of the knots which required considerable time to unravel. The N. A. A. M. fee is but $25 per year, but the receipts from the shows are retained in the treasury, and those who favored the Board of Trade plan, and who finally prevailed, maintained that it is undesirable to bank up a lot of idle money.

When the amalgamation formally is consummated, the Chamber of Commerce will have a membership of 110. Practically all of the members of the Board of Trade are already members of the National Association; in fact, they have dominated its affairs for many years past.

At Tuesday's meeting of the Board of Trade, Charles Clifton, of the Pierce-Arrow Motor Car Co., for the ninth time was re-elected president, all of the other incumbent officers also being retained, as follows: Vice-president, C. C. Hanch, Nordyke & Marmon Co.; secretary, R. D. Chapin, Hudson Motor Car Co.; treasurer, George Pope, Pope Mfg. Co. These officers and S. T. Davis, Jr., Locomobile Co. of America, and Hugh Chalmers, Chalmers Motor Co., constitute the board of directors. H. A. Bonnell was retained as general manager.

New Empire Incorporates for Million.

The Empire Tire & Rubber Co., of Trenton, N. J., which grew out of the consolidation of the Empire Tire Co. and the Empire Rubber Mfg. Co., has been incorporated under the laws of New Jersey with a capitalization of $1,000,000, consisting of $500,000 preferred and the same amount of common stock. The old companies were incorporated at $250,000 each, all common stock, and the new common is divided among the holders of the old stock on a share-for-share basis. The preferred is held largely by members of the new company, C. Edward Murray, the treasurer and general manager, holding a block of nearly $200,000. The other officers are: President, C. H. Baker, former president of the Empire Rubber Mfg. Co.; vice-president, J. Cornell Murray; secretary, A. Boyd Cornell, former secretary of both companies. C. Edward Murray was treasurer of both companies and he now will combine those duties with the general management.

REORGANIZED U. S. MOTOR ASSUMES MAXWELL NAME

(Continued from page 5.)

acceptance of the bids when they first were submitted to the court on the 8th inst., renewed his objection at the later hearing. He repeated his opinion that even the percentage offer was insufficient and pointed out that the reorganizers were about to issue $31,000,000 of stock against property which it had purchased for about $7,000,000, plus $3,000,000 in cash. He also drew attention to the fact that real estate carried at $7,850,000 had been appraised by the receivers at only $2,600,000.

Judge Hough remarked that the condition of the corporation was one of the most peculiar and involved with which he ever had to do, because of the inter-relations of the various companies and the cross-claims growing out of the two-name notes which had been issued.

Attorney Wollman asked the court to direct the reorganizers to bid at least as high as the appraisers' price, $8,427,000. Judge Hough, however, refused to do so, and finally ordered the acceptance of the percentage bid, but he remarked that if he had reason to believe that the creditors who had assented to the reorganization plan would benefit to a greater degree than the non-assenting creditors he would reject the bid. He, however, thought that no such reason existed, stating as his conviction that the percentages quoted by the bidders represented the extreme gross value of any given claim. Attorney Wollman subsided and, although he at one time had intimated that he might apply for an injunction restraining the transfer of the property, he since has decided to permit things to take their course. Judge Hough set January 29th as the date for the consideration of the distribution of the assets of the company.

The property acquired by the reorganizers comprises the Maxwell-Briscoe plants in Auburn, R. I., Tarrytown, N. Y., and Newcastle, Ind.; the Brush and Alden Sampson plants in Detroit; the Stoddard-Dayton factory in Dayton, O., and the Columbia plant at Hartford, Conn.

After the readjustment is completed, the originally contemplated capitalization, $31,000,000, will be increased to $37,000,000 to pay for the Flanders Motor Co. when it is formally taken over. The transaction will be purely in the nature of a stock deal.

It is certain that not all of the plants acquired will be continued, and among those whose future is shrouded in doubt is the Columbia plant in Hartford. The Maxwell plant in New Castle, Ind., it is stated, will be converted into a parts replacement plant —that is, it will be devoted solely to the manufacture of spare parts for all of the many cars which were produced by the United States Motor Co.

As is already known, the officers of the new Maxwell Motor Co. will be Walter E. Flanders, president and general manager; William F. McGuire, first vice-president and assistant general manager; Carl Tucker, second vice-president and treasurer; M. B. Anthony, comptroller.

Flanders, as is well known, is the head of the Flanders Motor Co., in which he was joined several months since by McGuire, who previously was production manager for the Ford Motor Co.; Carl Tucker, the treasurer, is a relative of Anthony N. Brady, the New York financier, who was as deeply interested in the old company as he is in the new one; M. B. Anthony, the comptroller, is a former member of a firm of chartered accountants. All save the treasurer, who will remain in New York, will be located in Detroit, to which city the headquarters of the big company already have been removed.

According to the terms of the reorganization plan, the merchandise and banking creditors will receive 25 per cent. in cash and 25 per cent. first preferred, 25 per cent. in second preferred and 15 per cent. common stock, a total of 90 per cent. The holders of preferred stock will receive 24 per cent. in first preferred shares, 25 per cent. second preferred and 30 per cent. common, a total of 77 per cent. Holders of common stock will receive 24 per cent. in first preferred, 17½ per cent. second preferred and 30 per cent. common, a total of 71½ per cent.

The holders of the $6,161,000 debentures will receive 50 per cent. in first preferred, 50 per cent. in second preferred and 40 per cent. in common, which makes a total of 140 per cent.

On the basis of the bid accepted by the Court, an attorney for one of the largest creditors of the United States Motor Co. estimates that the 90 per cent. settlement will be equivalent to about $49 in real money on each $100 merchandise claim, the amount figuring out as follows:

$25 in cash	$25.00
$25 1st pref. at 60%	15.00
$25 2nd pref at 30%	7.50
$15 common at 7%	1.50
$90	$49.00

Hughes to Manage Buick Sales Abroad.

Herbert Hughes, for the past six years with the Packard Motor Car Co., has transferred his allegiance to the Buick Motor Co. and will assume charge of its European sales. He will sail from New York to London on January 22nd. As Hughes had two years' experience as manager of Packard sales in Paris, he is no stranger to his duties.

Digitized by Google

SPEEDOMETER PROFITS FOR FOUR YEARS EXCEED $801,000

Figures Brought Out by Offer of Stewart-Warner Stock to Public —Combined Assets Total $1,750,000.

Having completed all of the requirements, White, Weld & Co. are offering for sale 7 per cent. cumulative preferred stock of the Stewart-Warner Speedometer Corporation, which only last month took over the properties of the Stewart & Clark Mfg. Co. in Chicago and the Warner Instrument Co. of Beloit, Wis. It is offered at par and accrued dividends and is redeemable three years after issue as a whole or in part at 110 and accrued dividends.

The total capitalization of the Stewart-Warner Speedometer Corporation is $11,000,000, of which $10,000,000 is represented by common shares. Only the preferred, however, is being offered for public subscription. It is preferred both as to assets and dividends, the latter of which are payable quarterly.

The conditions provide that no further issue of preferred stock may be made without the consent of the holders of at least the majority of the outstanding preferred, and that no mortgage may be placed on the property without the approval of the holders of at least 75 per cent. of preferred stock outstanding, such approval, however, not being necessary for the issue of debenture bonds.

If the corporation sells or otherwise disposes of any of its substantial manufacturing plants the proceeds of the sale must be applied to the redemption of as much of the preferred stock as possible. Also it must pay into the sinking fund on or before December 31st next the sum of $65,000, and semi-annually thereafter the sum of $32,000. The money paid into the sinking fund will be used for the redemption of the preferred stock at or under $110 per share and accrued dividends, the redemption to be made by invited sealed offers from all preferred stockholders, the lowest offering, of course, to be accepted.

The preferred stock has equal voting power with the common stock, but the certificate of incorporation provides that no dividends shall be paid on the common which shall reduce the amount of the net quick assets below 80 per cent. of the par value of the outstanding preferred.

According to the report of the certified accountants, the combined net earnings of the Stewart & Clark and Warner companies for the four years ending October 31st last averaged more than $801,000 per year, the earnings each year being as shown by the following table:

1909	$585,000
1910	825,000
1911	870,000
1912	925,000

It is estimated that as a result of the settlement of the patent litigation between the two companies, the earnings for the calendar year of 1913 will be in excess of $1,100,000. The combined net tangible assets of the two companies on October 31st last were in excess of $1,750,000, no allowance being made for goodwill or the patents, which it is believed dominate the production of speedometers employing the magnetic principle. On the same date, the combined net quick assets were in excess of $850,000.

The Stewart-Warner Speedometer Corporation has no bonded debt and all of its property is free from mortgage.

Keeton Acquires a Plant in Detroit.

The Keeton Motor Car Co. has purchased four buildings, comprising the former Oliver Motor Car plant and occupying about 1½ acres, at Beckinbridge street and Lawton avenue, Detroit, of which immediate possession was taken. The business offices already have been moved to the new location, and it is expected that before the end of the month the factory itself will be in operation. Three of the buildings are 220 x 80 feet each and the fourth 140 x 80 feet; a fifth, 220 x 80 feet, will be erected at once. Temporarily, the Keeton car has been produced in a plant located in the city of Wyandotte, Mich.

Briscoe's New Car Assuming Shape.

Benjamin Briscoe, former president of the United States Motor Co. and the Maxwell-Briscoe Motor Co., who is now in Paris developing a low-priced touring car with the aid of a corps of European experts, expects to return to America during May next, when the plans of his new company and the details of the car itself will be announced. He predicts that the newcomer "will revolutionize present motor car values for a car of first quality at a remarkably low price."

Ford Repudiates a Silly Rumor.

Although it was so silly as to cause wonder that it ever was put into print, a report that the Standard Oil Co. had purchased the Ford Motor Co. of Detroit aroused such extensive inquiry that the Ford company has been compelled to issue a sweeping denial, as was to have been expected. Not only was there no truth in the report, but there have been no negotiations with Standard Oil people, or with anyone else, for the sale of all or any part of the Ford company or its stock.

$14,000,000 IS TOTAL OF PACKARD'S 1912 BUSINESS

Gain Over Volume of Sales for 1911 is $3,000,000—Gross Earnings Exceed $3,000,000—Heroic Action Reduces the Surplus.

During the fiscal year which ended August 31, 1912, according to the financial report which just has been made public, the gross sales of the Packard Motor Car Co. of Detroit, Mich., including commercial vehicles, amounted to $14,613,057.27, as against $11,624,588.37 during the previous twelvemonth. The gross earnings for 1912 were $3,412,862.05 and the net $2,182,376.20, there having been charged off for depreciation on buildings, machinery, tools and developments the sum of $1,230,485.85. The depreciation account for the previous year aggregated $572,001.37.

Despite the greatly increased sales and earnings, the surplus of the Packard company was reduced from $2,984,021.81 to $1,198,783.82. It is partly accounted for by the increased sum charged to depreciation, but more particularly by the sum of $3,274,958.89, which had been carried on the books for "rights, privileges, franchises, developments, patents, etc.," and which was cut to the nominal sum of $1 by heroic decision of the board of directors. Similarly $342,656.30 was deducted "to adjust books to inventory taken December 31, 1911."

Although the company has regularly met the dividends on its preferred stock issue of $5,000,000, no dividends on common stock have been paid for the last three years, all of the Packard earnings in excess of the preferred stock dividend going into the capital account. In his report to the stockholders, however, Henry B. Joy, president of the company, says he "feels confident that the current year will see the resumption of payments of a small dividend rate on the common stock," but he adds that the "largest share of the earnings must be, however, added to the working capital to meet added requirements of increased volume of business."

The total receipts during the fiscal year amounted to $17,328,472.51 and the total disbursements to $16,464,930.09. On August 31, 1912, the cash on hand amounted to $1,030,513.95, as against $106,971.53 on the same date of the previous year.

The total resources aggregated $14,663,298.86, which compares with $16,110,756.28 at the same period in 1911.

The current assets increased from $1,160,474.71 to $2,493,999.46, the greater portion being accounted for by the increased cash on hand and by vehicles in transit to deal-

Digitized by Google

ers and branches, the former representing a valuation of $340,090.27 and the latter $672,136.23, as against $372,712.36 and $352,973.93, respectively, at the same period of the year 1911.

The liabilities, including reserves and surplus, equal the resources, the chief item being comprised of the capital stock, $10,000,000, and $2,000,000 of five-year debenture notes which were issued at the beginning of the fiscal year for the purpose of funding the floating debt. The issue authorized was $3,000,000, but $1,000,000 is held in reserve in the treasury. President Joy remarks, however, that "our inventory is increasing on account of greater volume of business which necessarily limits our margin of free cash and we, therefore, may be borrowers again during the year."

The detailed report of the treasurer, Philip H. McMillan, is as follows:

GENERAL BALANCE SHEET

Resources:

Plant—		
Real Estate (at cost).	$285,312.49	
Buildings	2,084,865.81*

From which the Board of Directors has authorized that the following deductions be made:		
To reduce the amount at which "Rights, Privileges, Franchises, etc." has been carried on the Books of the Company from $3,274,958.89 to $1.00	$3,274,957.89	
To adjust Books to Inventory taken December 31, 1911	342,656.30	3,617,614.19
Leaving a Net Surplus at August 31, 1912		$1,198,783.82

Hartz Becomes President of R. C. H.

At the annual meeting of the directors in Detroit, on Friday last, J. F. Hartz was elected president and treasurer of the R. C. H. Corporation. He first entered the company in November last, when he was elected treasurer, which office he also will retain. R. C. Hupp, the former president, was elected vice-president, and C. P. Seider, who entered the company at the same time as Hartz, was chosen secretary. These officers and the following constitute the board of directors: G. W. Rogers and J. G. Robertson, of Akron, O.; John Kelsey and Joseph Clark, of Detroit, Mich.; C. C. McCutcheon, of Jackson, Mich.; G. Jahn, of New York. Jahn succeeds F. M. Randall, of Detroit, who resigned.

The new president is the head of the C. M. Hall Lamp Co., of Detroit, and is interested in a number of other Michigan enterprises. Peyton R. Janney, who became general manager of the R. C. H. Corporation on January 1st, will continue in that office, and Fred R. Bump will remain assistant general manager.

The R. C. H. Corporation has executed a mortgage on its property which will render available the sum of $300,000.

Tate to Build Factory for Electrics.

Tate Electric, Ltd., which was formed several months ago to produce electric vehicles in Walkerville, Ont., has accepted plans for a factory which will be erected on St. Luke road; it will comprise a two-story brick and steel building which will afford 42,000 square feet of floor space. Albert Kaltschmidt has been engaged as factory and production manager. The directors of the company are Henry and N. A. Timmins, W. Scott Hutchinson, C. E. Archibold and S. Carsley, of Montreal, and D. A. Dunlap and A. O. Tate of Toronto.

Brown Interests Form Castings Company.

To facilitate their operations, the principals of the Brown Commercial Car Co. of Peru, Ind., organized the Peru Castings Machine Co. and purchased the former plant of the Otis Elevator Co., in which the castings will be produced. The main building of the newly acquired plant is 300 x 88 feet and is of brick and modern foundry construction. It will be under the immediate direction of J. H. Barbee, mechanical engineer, E. E. McCampbell and R. A. Carter, who, like Barbee, are practical foundrymen from Milwaukee.

Car Exports Gain 30 per Cent. in Value.

The exportation of automobiles from the United States for the month of November last showed a gain of 24 per cent. in number over the same month of 1911 and a gain of 30 per cent. in value; the comparative shipments were: November, 1911, 1,364 cars valued at $1,382,804; November, 1912, 1,689 cars valued at $1,807,066, gains of 325 in number and $424,262 in value. The value of the parts for these same months, not including engines and tires, was $214,638 and $300,655. Of the 1,689 cars exported in the latter November 31 were commercial vehicles, valued at $56,176, an average of $1,812.

The engine exports were: November, 1911, 318 engines valued at $38,248; November, 1912, 480 engines valued at $92,719. The total of cars, parts and engines for the first 11 months of 1911 was $17,088,692, and for the same period of 1912, $26,916,574. For the former period engine figures are available only after July, because of the method of keeping statistics in use prior to that time.

Demory to Interview the Sphinx.

A. R. Demory, second vice-president and factory manager of the Timken-Detroit Axle Co., is booked to sail on the Cedric January 21st "to consult the Sphinx on tendencies in axle construction," as one of his associates entertainingly expressed it. After his interview with the silent sentinel of the Pyramids he will accompany his wife and brother-in-law to Naples, Rome and the Riviera. From thence the Timken tourists will proceed to Vienna and Berlin, concluding their travels with a motor car tour through England.

Out of Diamond Into Miller Tires.

H. C. Miller and H. C. Mills, both of whom were long in the service of the Diamond Rubber Co.—the former for 13 years, the latter for eight—have formed the Miller Tire Sales Co., of New York, for the purpose of handling Miller tires in this part of the country. They will open for business February 1st.

Fisk to Locate Branch in Winnipeg.

On February 1st, the Fisk Rubber Co. will open a branch in Winnipeg, Manitoba, at 307 Fort street, which it is promised will be the most complete tire house in the Dominion. It will be in charge of R. Phillips.

The Week's Incorporations

Hartford, Conn.—Capitol City Electric Garage Co., under Connecticut laws; to operate a garage.

Norwich, Conn.—Uncas Garage Co., under Connecticut laws; authorized capital, $2,000; to operate a garage.

Harrisburg, Pa.—Fischer Auto Supply Co., under Pennsylvania laws; authorized capital, $5,000; to deal in motor car supplies.

Ottawa, Can.—League of Canadian Automobilists, under Ontario laws; authorized capital, $1,000,000; to deal in motor cars and supplies.

Jackson, Mich.—McByrne Garage Co., under Michigan laws; authorized capital, $15,000; to operate a garage. Corporators J. M. Byrne and others.

Spokane, Wash.—Fox Co., under Washington laws; authorized capital, $1,000,000; to manufacture spring wheels. Corporators—P. C. Fox and others.

Richmond, Ky.—Madison Garage, under Kentucky laws; authorized capital, $2,000; to operate a garage. Corporators—Roy Montgomery and others.

Cincinnati, Ohio—Herman Motor Co., under Ohio laws; authorized capital, $30,000; to manufacture motor cars. Corporators—Charles Eissen and others.

Elyria, Ohio—J. & H. Taxicab Co., under Ohio laws; authorized capital, $2,500; to operate taxicabs. Corporators—A. L. Jackson, M. F. Harrison, L. B. Fauver.

Minden, Ia.—John Ehlers & Co., under Iowa laws; authorized capital, $12,000; to deal in motor cars. Corporators—John Turk, John F. Reimers, John Ehlers.

Omaha, Neb.—Paige Co. of Nebraska, under Nebraska laws; authorized capital, $10,000; to deal in motor cars. Corporators—Byron M. Burbank, E. S. Burbank.

Mt. Vernon, Wash.—Pacific Auto Co., under Washington laws; authorized capital, $6,000; to deal in motor cars. Corporators—W. J. Stanhope, Ernest Peterson and others.

Toledo, Ohio—Kero-Carburetter Co., under Ohio laws; authorized capital, $25,000; to manufacture carburetters. Corporators—M. O. Rettig, H. C. Lyon, W. J. Brunn.

Kansas City, Mo.—Hanna Motor Mfg. Co., under Missouri laws; authorized capital, $60,000; to manufacture motor cars. Corporators—John M. Frank, Roy J. Hanna.

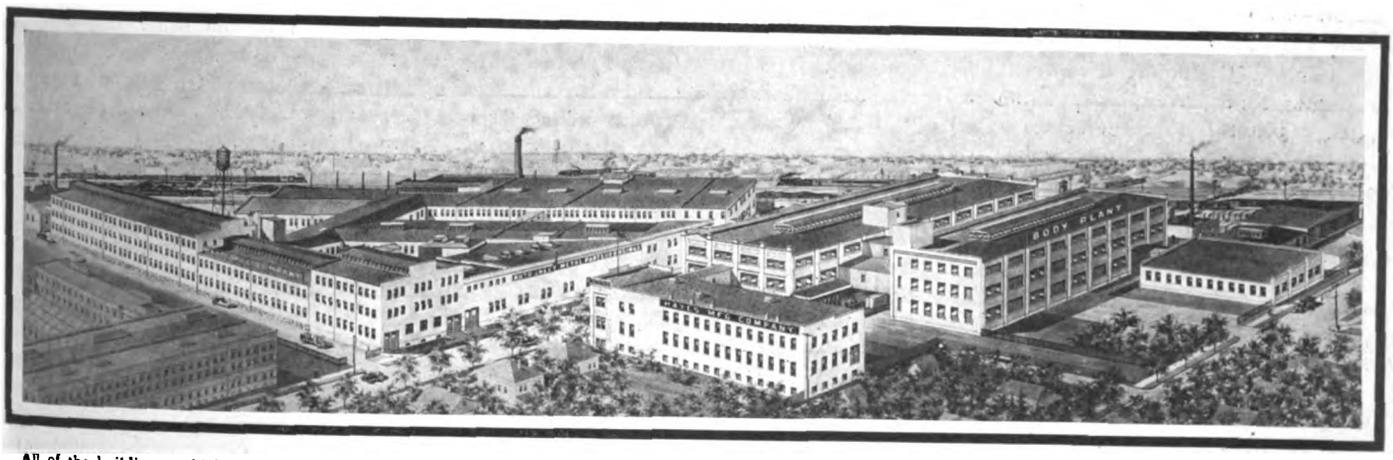
Louisville, Ky.—Standard Auto Co., Kentucky laws; authorized capital, $25,000; to deal in motor cars. Corporators—Geo. A. Dunham, Clifford L. Alderson, J. H. Alderson.

Louisville, Ky.—Speedway Tire Co., under Delaware laws; authorized capital, $250,000; to manufacture tires. Corporators—H. L. Lewman, F. Haunt, W. N. Cox, all of Louisville.

Spokane, Wash.—Spokane Taxicab Sales Co., under Washington laws; authorized capital, $10,000; to deal in motor cars. Corporators—B. B. Riblet, Walter J. Nichols, and others.

Wilmington, Del.—Universal Motor Truck Co., under Delaware laws; authorized capital, $1,200,000; to manufacture motor trucks.

Corporators—H. E. Latter, W. J. Maloney, N. P. Coffin.



Cleveland, Ohio—Anderson Roller Gear Co., under Ohio laws; authorized capital, $100,000; to manufacture gearsets. Corporators—F. A. Barker, D. H. Foster, H. N. Anderson.

Cleveland, Ohio—Forest City Garage Co., under Ohio laws; authorized capital, $5,000; to operate a garage. Corporators—Christian Hertz, Emil C. Hertz, James T. Harding John W. Weld.

New York, N. Y.—Standard Motor Co., under Delaware laws; authorized capital, $31,000,000; to manufacture motor vehicles. Corporators—D. C. Muhleman, W. J. Maloney, H. E. Latter.

Tacoma, Wash.—Automobile Supply Co., under Washington laws; authorized capital, $20,000; to deal in motor car supplies. Corporators—John W. Reynolds, Earl C. Reynolds, and others.

EXTENSIVE PLANT OF THE HAYES MFG. CO. IN DETROIT, MICH.

All of the buildings, which cover an area of more than four acres, are employed for the manufacture of sheet metal parts that enter into automobile construction. A smaller branch factory is maintained in Indianapolis, Ind.

Newark, N. J.—I. H. C. Motor Express Co., under New Jersey laws; authorized capital, $25,000; to operate a motor delivery. Corporators—J. B. Furber, M. F. O'Neil, H. C. Herman.

New Haven, Conn.—National Garage Co., under Connecticut laws; authorized capital, $15,000; to operate a garage. Corporators—Charles W. Lowe, Gemaro DeLucia, Christopher W. White.

Newark, N. J.—Universal Motor Truck Co. of New Jersey, under New Jersey laws; authorized capital, $50,000; to deal in motor trucks. Corporators—John Kramer, Grace Cleveland, Pasquale Mauan.

Minneapolis, Minn.—Northwestern Oakland Motor Co., under Minnesota laws; authorized capital, $100,000; to deal in motor cars. Corporators—J. W. Martin, St. Paul; M. T. Trow, A. N. Smith, Detroit.

Boston, Mass.—Pope Mfg. Co., under Massachusetts laws; authorized capital, $6,500,000; to manufacture motor cars. Corporators—A. L. Pope, G. Pope, Hartford, Conn.; P. Clapp, Lexington, Mass.

Trenton, N. J.—Empire Tire & Rubber Co., under New Jersey laws; authorized capital, $1,000,000; to manufacture motor car tires. Corporators—C. H. Baker, C. E. Murray, J. C. Murray, all of Trenton.

Phillipsburg, N. J.—Berntson Steel Wheel Co., under New Jersey laws; authorized capital, $100,000; to manufacture wheels. Corporators—J. E. Boatrite, D. H. Brillhart, F. B. Vanderstucken, all of Bethlehem, Pa.

New Albany Venture to Change Name.

The American Automobile Corporation of New Albany, Ind., which acquired the assets of the more or less famous "clink of gold" American Automobile Mfg. Co., will change its name to the Ohio Falls Motor Car Co., under which title it expects to begin active operations. F. Kahler, a New Albany manufacturer, is now president of the company, O. E. South secretary and A. C. Brock treasurer, the last two men being former residents of Cincinnati. The negotiations looking toward the amalgamation of the American Automobile Corporation with the Advance Power Co., of Chicago, which have been pending for several months, have been abandoned.

Import of Cars Again Decreases.

November last marked another drop in the importation of cars into this country. Only 87 cars, of a value of $198,351, were received, as against 96 cars, valued at $214,133, in November, 1911. The shipments for the first eleven months of 1911 and 1912 were, respectively, $1,871,414 and $1,771,935. The parts imports for the two Novembers were: 1911, $30,450; 1912, $21,863.

APPELLATE COURT CONDEMNS "CHARITY" PRICE CUTTING

Denounces Buffalo "League's" Scheme as "a Very Flimsy Device"—Terms of Klaxon Injunction Are Enlarged Accordingly.

Charity may cover a multitude of sins, but the United States Circuit Court of Appeals in New York City this week decided that that form of charity dispensed by the International Automobile League of Buffalo, N. Y., in an effort to cut list prices, constitutes "a severe strain on one's credulity." Judge Lacombe, who wrote the opinion of the court, characterized the "charity" as "a very flimsy device for evading obedience" to an injunction.

The decision was the result of an appeal filed by the Lovell-McConnell Mfg. Co. of Newark, N. J., who, in the United States District Court in Buffalo had obtained an injunction restraining the "League" from cutting the price of Klaxon horns. The Klaxon makers had asked also that the "League" be restrained from handling Klaxon horns in any way, but that part of its petition being denied, it appealed to the higher court, which, while it did not grant all that Lovell-McConnell asked, nevertheless ordered the injunction so enlarged as specifically to cover the "charity" scheme evolved by the "League" to dodge the decree.

The scheme, which was described in Motor World several months since, consisted of the "League" announcing to its "members" that while the Klaxon people insisted upon the maintenance of list prices, they did not prevent the "League" giving its profits to charity. It, therefore, announced that to all purchasers of Klaxons who would give the names of "two charitable institutions deserving of assistance" it would "select one of them and draw a check to its order for the difference between the cost to us and the retail price," the check to be sent through the purchaser in order that "it may be sure to reach its proper destination."

It was this scheme that Judge Lacombe characterized as "a very flimsy device." In his opinion, he said:

"Most of the individuals whose condition in life is such that they can afford to own and use automobiles are presumably in the habit of making regular contributions at stated periods to one or more worthy charitable institutions. When defendant tells them that if they will buy from it Klaxon horns at the price they must pay everywhere else, it will send them a cheque for $8 or $9 on each horn drawn to the order of such charitable institution as they may designate, it is naturally to be expected that they will accept the offer, will take the draft, add to it sufficient to make up their usual contribution and pass the same on to the institution.

"Probably there are other persons whose charitable vision is bounded by the horizon of themselves and their individual families. It would be an easy thing for one of them to send on two fictitious titles of what seemingly are charitable institutions, but which in reality represent merely the distress produced in this family by the payment of the full list price for a Klaxon horn. Upon receiving the draft he could write the fictitious name of the payee, and then endorse, deposit and collect it in his own name. The suggestion that defendant would undertake any investigation to discover whether or not the selected 'charitable institution' is real or fictitious puts a severe strain on one's credulity. We think this devotion of the discount from list price to 'charitable institutions' is a mere evasion of the order and that the present injunction should be modified by inserting a clause, which will put a stop to the practice. As thus modified the order is affirmed without costs."

Credit Association Chooses Directors.

At the annual meeting of the Automobile Trade Credit Association, which was held yesterday (Wednesday) at the Hotel Imperial, in New York City, F. J. Barnes, of the New York & New Jersey Lubricants Co., and D. D. Martin, of the Martin-Evans Co., were elected to the Board of Directors to take the places of J. J. Cohn, of the Nonpareil Horn Co., and Carl Kaufman, of the Motor Car Equipment Co., whose terms had expired. The directors who hold over are: U. S. Kolby, of the American Ever Ready Co.; F. A. Lemal, of the United States Tire Co.; M. J. Martin, of the Geo. A. Haws Co.; W. O. Turner,, of the Lovell-McConnell Mfg. Co., and A. Waterman, of the Hartford Suspension Co.

The following firms were added to the membership roll: American Electric Co., Chicago, Ill.; Jenkins Mfg. Co., St. Louis, Mo.; Wagner Electric Mfg. Co., St. Louis, Mo.; Penn Rubber & Supply Co., Cleveland, O.

There was considerable discussion regarding the prevalence of fraudulent failures, and several methods of stamping out the evil were suggested, but no action was taken

The Crescent Air System Co. of Detroit, Mich., which manufactures the compressed air starting system of that name, has removed from the Ford building to 1199 Woodward avenue.

In the RETAIL WORLD

R. M. Gilbert has opened a repair shop in Warren, Minn.

Lang & Fox have opened a garage in Rochester, N. Y.

Clifford Perrin, of Ashaway, R. I., is about to open a garage.

Harvey Miller is about to open a garage and repair shop in Jet, Okla.

Robert Menzie has opened a garage and repair shop in Lake Mills, Ia.

A new garage is being built in Titusville, Pa., for the Modern Garage Co.

J. H. Houser and William Gilliland have opened a garage in Ottawa, Kan.

L. Guy Dennet is building a garage on Burnham street, Cambridge, Mass.

The Thomas-Williamson Co., of Jacksonville, Fla., is erecting a new garage.

The Prouty Auto Co., of Richland Center, Wis., has completed a new garage.

The Van Motor Co. is preparing to inaugurate a taxicab service in Warren, Pa.

Jacob Gruber of Bernville, Pa., has entered the trade; he has the Ford agency.

E. C. Dow has established a garage business in San Francisco, Cal., on Dow street.

J. E. Harris plans to open a garage in Mena, Ark. He will carry the Overland line.

When completed, a garage which is being erected in Mankato, Minn., will be occupied by Alba Lewis.

H. A. Storer is about to erect a garage in Cambridge, Mass., on West street; it will cost $15,000.

The Marlboro (Mass.) Electric Co. just has completed a new garage; it is located on Garfield street.

W. G. Dandy, of Fresno, Cal., is about to enter the lists of dealers; he has secured the Haynes agency.

Samuel H. Friend has opened up in Kent, O., under the style Kent Auto Shop; the business is repairing.

Louis W. Boughton is erecting a brick garage on Clausson avenue, Brooklyn, N. Y. The estimated cost is $8,000.

Fred Lang has taken over the Panhard Garage in Carbondale, Pa. Agencies for several cars go with the business.

J. C. Williams has succeeded J. W. Adams as Cartercar dealer in Tampa, Fla. The latter has retired from the business.

Reissinger Bros. are about to construct a new garage in Louisville, Ky., at 1064 Bardstown road; it will cost $2,500.

George H. Bergstrom is about to open a garage on South Broadway, in Milwaukee, Wis. He also will secure an agency.

Charles L. Newcomb, of Anaheim, Cal., is about to build a garage; he has taken the agencies for Auburn and Hupmobile cars.

Clifford Coggins is building a garage and salesrooms in El Cantro, Cal. Its cost will be $6,000; he will handle the Buick line.

The Helmsch Automobile Co., of St. Louis, Mo., is building a new garage on North Grand avenue; it will cost $15,000.

A. H. Meester has purchased the Ellsworth (Minn.) Garage; Herman Nolte, the former owner, has retired from the business.

Walter Priester has withdrawn from the Iowa Auto & Tire Co., of Davenport, Ia. He was its secretary and treasurer for ten years.

A. C. Porcher, formerly a salesman, has entered the trade for himself in Cocoa, Fla. He has the Cadillac agency for Brevard county.

The J. S. Hoffman Motor Car Co., of Sharon, Pa., has built a new garage at Vine street; Chalmers and Overland cars are handled.

Jones & Williams, owners of the Beaumont (Cal.) Garage, have had plans drawn for a new structure; it will be located on D street.

E. Richard Meinig has accepted plans for a garage to be built in Reading, Pa., on Madison avenue; the contract names $3,000 as the cost.

P. M. Lafferty has purchased the garage business of L. E. Boger of Concord, N. C. He has changed the style to Cabarrus Automobile Co.

The Atlantic Hupmobile Co. has been formed in Atlantic, Ia. The company has the Hupmobile agency in several surrounding counties.

T. L. Longworth has purchased the repair department of the Anaheim (Cal.) Garage; he will conduct that part of the business in his own name.

Watson & Newell, of Washington, Pa., have let the contract for a brick and tile garage, 40 x 80 feet; it will stand on East Walnut street.

M. W. Skinner, of Anaheim, Cal., has entered the trade as dealer in Apperson and Reo cars; formerly he was connected with the Anaheim Garage.

McGraw & Currie are about to open a repair shop on Center street, Hibbing, Minn. They will also continue their wagon and blacksmithing business.

The Clark Summers Auto Co. has opened a garage in Sioux Falls, S. D., at 230 North Main avenue; Lambert, Cartercar and Metz cars will be represented.

The Motor Car Supply Co., of 714 South Spring street, Los Angeles, has opened a branch at 920 South Broadway; it will be kept open day and night.

The Milwaukee (Wis.) Specialty Co. has purchased a site on 7th street and will build a garage in the spring; the plans call for an expenditure of $40,000.

B. F. Sparks, of Tina, Mo., and Randall Waggaman, of Carrollton, Mo., are making ready to establish a garage buisness in Braymer, in the same State.

The Central Auto & Supply Co., of Mitchell, S. D., is erecting a new garage on 1st street; the company sells Buick, American, Moon and Hupmobile cars.

Edward Newell is about to establish a garage, repair and agency business in Grand Forks, N. D. Formerly he was a dealer in Pembina, in the same State.

C. W. Moody and John Clark plan to establish a garage business in Anderson, Ind., in the Ziegler building; both have been connected with the Nyberg Auto Works.

Curtis & Hausman, owners of the Oklah Garage, in Bartlesville, Okla., have decided to discontinue the garage trade and open an automobile supply store; cars also will be handled.

Clarence Caldwell, of Frankfort, Ind., has sold a part interest in the Caldwell Auto Garage to Harry Worlins; the style hereafter will be Service Garage. Hupmobiles are carried.

The Pugh Motor Car Co.'s garage at 584 Market street, Kingston, Pa., has been leased by W. R. Buckley and H. E. Drews; they will operate under the style Kingston Motor Car Co.

Smithling Bros., of Herkimer, N. Y., have sold their garage business, on Bellinger street, to John Murphy, of Little Falls, and

Digitized by Google

George Lewis, of Middleville, both of which towns are in the same State.

Arthur McNall of Rochester, N. Y., has sold his garage at 14 South Union street to A. H. Dudley and has removed to larger quarters in an adjoining building. McNall deals in Peerless, Chalmers and Rauch & Lang cars.

John E. O'Neil, who conducts a sporting goods business in Lawrence, Mass., at 290 Essex street, has purchased the Metropolitan Garage, on Methuen street; Franklin Butler, Jr., the former owner, gave immeate possession.

E. Y. Jones, owner of the Joplin (Mo.) Service Co., located at 616 Joplin street, has purchased C. B. Serage's garage at No. 518, the same thoroughfare; the business hereafter will be conducted under the style Square Deal Auto Co.

Will J. Benson, who resigned as a member of the San Jose (Cal.) Improvement Co. November 1 last, has re-engaged in business in that city; he has purchased the Blanchard Garage at 434 South 1st street and will deal in Flanders cars.

R. C. Kennedy and Walter C. Morris have formed the Morris-Kennedy Co. in San Francisco; the new organization will handle the Marmon, for which Kennedy previously was dealer. Morris was connected with the marketing of Autocars.

The Columbia Supply Co., of Los Angeles, has been purchased by W. D. Newerf, the well-known tire jobber; R. Van Zandt, who was head of the Columbia company, has been made manager of the supply and accessory department of the Newerf business.

Dixon & Evans is the style of a garage and repair firm which just has been established in San Jose, Cal., at 1st and Julian streets; a car agency also will be secured. Dixon formerly was located in Warm Springs and Evans in Vallejo, in the same State.
